CYCLOPÆDIA OF INDIA

AND OF

EASTERN AND SOUTHERN ASIA,

Commercial, Industrial and Scientific :

PRODUCTS OF THE

MINERAL, VEGETABLE AND ANIMAL KINGDOMS,
USEFUL ARTS AND MANUFACTURES ;

EDITED BY

EDWARD BALFOUR, L. R. C. S. E.,

INSPECTOR GENERAL OF HOSPITALS, MADRAS ARMY,

CORRESPONDING MEMBER OF THE IMPERIAL GEOLOGICAL INSTITUTE, VIENNA.

SECOND EDITION.

VOL. III.

MADRAS :

PRINTED AT THE SCOTTISH, LAWRENCE AND FOSTER PRESSES.

1873.

INDIAN, a term employed to designate plants, and animals peculiar to India as.

INDIAN AILANTUS. *Ailanthus excelsa*.

—*Willd.*

INDIAN AFGHANS. See Afghanistan.

INDIAN ALMOND, *Terminalia catappa*.

—*Linn.*

INDIAN ALOE, *Aloe Indica*.—*Royle*.

INDIAN APPLE TREE, *Feronia elephantum*.—*Corr.*

INDIAN ARCHIPELAGO, the eastern archipelago or Malayanesia. See Archipelago : India. *Indouesia*.

INDIAN BACCHUS. See Rama.

INDIAN BERRY. *Cocculus Indicus*.

INDIAN BIRTHWORT. *Aristolochia Indica*.

INDIAN BLACKWOOD, *Dalbergia* *sp.*

INDIAN BLISTERING FLY. *Mylabris* *sp.*

INDIAN BORAGE. *Ch'hota kalpa*, *Hind.*

INDIAN BUCKBEAN. *Menyanthes Indica*.

Syn. of *Villarsia Indica*.—*Vent.*

INDIAN BUTTER-TREE. *Bassia butyrosa*.

INDIAN CADABA, *Cadaba Indica*.—*Lam.*

INDIAN CALICOES. See Calicut ; Cotton manufacture.

INDIAN CAUCASUS. See Koh.

INDIAN CEDER. See Cedar ; Deodar.

INDIAN CELOSIA. *Celosia Asiatica*.

INDIAN CHESNUT, *Pavia Indica*.—*Royle*

III.

INDIAN CLOVER. See Clover.

INDIAN COPAL TREE. *Vateria Indica*.—

Linn.

INDIAN CORAL TREE. *Erythrina Indica*.

—*L.*

INDIAN CORK TREE. *Bignonia suberosa*.

INDIAN CORN. *Zea mays*. See Maize. Climate.

INDIAN COTTONS. See Cotton.

INDIAN CRESS. *Nasturtium*. See *Tropaeolaceae*.

INDIAN CROCODILE. See *Crocodilidae*.

INDIAN DAMMER WOOD. *Choloroxylon lupada*.

INDIAN DUGONG, *Halicornes dugong*.

INDIANE. *fr.* Chintz.

INDIAN ELM. *Ulmus integrifolius*.—*Royle*.

INDIAN ELEM. See *Colaphonia*.

INDIAN EMPIRE. British India it extends over 1,250, square miles from 8° to 30° N. L. and from 68° to 92° E. See British India.

INDIAN FEVER FEW. *Anthemis pyrebrum*.—*H. Kunth*.

INDIAN FIGS. *Ficus indica*.—*Linn.*

INDIAN GUM ANIME TREE. *Vateria Indica*.—*Royle*.

INDIAN GUM ARABIC TREE, *Acacia arabica*.—*Willd.*

INDIAN GUTTA TREE. *ENG.* *Isonandra acuminata*.—*Lind.*

INDIAN HEMP. *Cannabis sativa*. See Hemp.

INDIAN HOUBARA OR BUSTARD. *Houbara Macqueenii*.—*Gray*.

INDIAN-INK, a black pigment used for water-colour painting. See China ink.

INDIANISCHER ROHR, *GER.*, Bamboo.

INDIANISCHE-VOGELNESTER. *GER.* Edible bird-nests.

INDIANISCHE-VOGELNESTJES. *DUT.*

Edible bird-nests.

INDIAN ISIS. See Lakshmi.

INDIAN ISLANDERS. See India.

INDIANITE. This mineral occurs in granular masses: It has a hardness 5·5 to 5·5. It scratches glass. The colour is white or greyish ; lustre shining ; translucent ; specific gravity 2·64. It is infusible by the blow-pipe, and gelatinises in acids. It occurs associated with garnet, felspar, fibrolite, and hornblende.

INDIAN JACK-TREE. *Artocarpus integrifolia*.

INDIAN JALAP. *Ipomoea turpethum*.

INDIAN-KINO. Dried juice of *Butea frondosa*.

INDIAN LABURNUM, *Cassia fistula*.—*Linn.*

INDIAN LILAC. *Azadirachta Indica*.—*A. Juss.*

INDIAN LITERATURE. See Javan.

INDIAN MADDER, *LAM.* *Hedyotes umbellata* *Lam.*—*R.* See Dyes Munjit.

INDIAN MAHOGANY. *Cedrela tuns*.—*Royle*.

INDIAN MALLOW. *Abutilon Indicum*.—*Don.* Country Mallow. See Chay.

INDIAN MAYA. See Rama.

INDIAN MOUNTAIN ASH, *Cotoneaster baccillaris*.

INDIAN MULBERRY, *Morinda citrifolia*.—*Linn.*

INDIAN MYRRH., in Europe a commercial name to a substance surmised to be produced from a species of *Amyris*. It is supposed to be the guggul of the bazars.

INDIAN NAVY.—The first name was that of Bombay Marine, and they were employed in

INDIAN NAVY.

INDIAN OCEAN.

suppressing piracy and slavery and in conducting all political questions in the Persian Gulf, Red Sea, and African coasts.

The Indian Navy was abolished in 1862. In consequence of the refusal of the Admiralty to receive Indian officers into the Royal Navy, a Bombay marine was formed for the transport of troops and stores, and other civil duties, on the same footing as the Bengal marine and not under martial law. Captains of seven years' standing and all officers who had completed 30 years' service according to the old, or 26 years in India under the new furlough regulations, retired upon a pension of £450, retaining their right to succeed to the Senior List Pension of £800 in their turn, or upon a present pension of £350, giving up their right to the higher annuity. Captains of less standing £400, with the right to succeed to the higher pension or £450, waving that right. Commanders whose appointments dated prior to 1831, £450, after 1831, £400, all officers thus retiring to have the honorary rank of Captain in the Indian Navy. The 2 Senior Lieutenants retired with the rank of Commander, and received £300 per annum. The next 24 Lieutenants £250; and the remaining 20 Lieutenants £200. The 12 Senior Mates £150 each. All Mates who have been three years on the List, £125; these officers take rank as Lieutenants. All other Mates, £10 each. Each Midshipman £60. The six Senior Pursers retired on £300; the next six on £250; and the remaining 11 on £200. Each Captain's Clerk received a pension of £60.

INDIAN NETTLE TREE, *Celtis orientalis*: *Sponia orientalis*, *Voigt*.

INDIAN OCEAN.—The Gulf Stream, the Eastern Sea, issues from the Bay of Bengal, passes through the Straits of Malacca, and sweeps to the north along the Asiatic coast, modifying the climate. It is called by the Japanese Kuro-Siwo and debouches into the Philippine islands, and thence rushes into the great Pacific describing an arc of a great circle as far as the Aleutian Isles, on which it leaves strange woods. The waters of this eastern Gulf Stream are of an indigo tint. The Sargasso weed occupies the centre of the stream. One of the large currents of water which have their origin

in the Indian Ocean, is the well known Mozambique current, called at the Cape of Good Hope the Lagullas current. Another makes its way through the Straits of Malacca, and being joined by other warm streams from the Java and China Seas, flows out into the Pacific like another Gulf Stream, between the Philippines and the shores of Asia. Thence it attempts the great circle route for the Aleutian Islands tempering climates and losing itself in the sea on its route towards the N. W. Coast of America. There is a counter current of cold water between it and the China shore.

INDIAN PYRACANTHA, *Cratægus crenulata*.—Roxb.

INDIA RUBBER, or Caoutchouc, the common name of a vegetable compound which is found in all plants with a milky juice. The families of plants which furnish this milky juice in the greatest abundance are—Moraceæ, Euphorbiaceæ, Artocarpaceæ, Apocynaceæ, Cichoraceæ, Papaveraceæ, Campanulaceæ, and Lobeliaceæ. India rubber has long been known to the natives of the East Indies and South America. It was not, however, till the expedition of the French Academicians to South America in 1735 that its properties and nature were made known in Europe by a memoir upon it by M. de la Condamine. And subsequent notices of it were sent to the French Academy in 1751 by M. Fresneau, and in 1768 by M. Macquer. The plants employed for procuring India-Rubber are very numerous, but the tree which, in Continental India, supplies most is the *Ficus elastica*, a tree exceedingly abundant in Assam. All the species of *Ficus* yield Caoutchouc to a greater or less extent in their juices, and even the Common Fig (*Ficus Carica*) of Europe contains it. Species of *Ficus* produce the Caoutchouc brought from Java; and *F. radula*, *F. elliptica*, and *F. prinoides* are amongst those mentioned as affording a portion of that brought from America. Next to the Moraceæ the order Euphorbiaceæ yields the largest quantity of Caoutchouc. The *Siphonia elastica*, a plant found in Gayalla, Brazil, and extending over a large district of Central America, yields the best kinds of India-Rubber that are brought into

the markets of Europe and America. The caoutchouc which is brought from the islands of the Indian Archipelago, is from the *Urceola elastica*, a climbing plant of very rapid growth and gigantic dimensions. A single plant is said to yield, by tapping, from 50 to 60 lbs. annually. It is also obtained from the juices of *Callophora utilis* and *Cameraria latifolia*, plants of South America; *Vahea gummifera*, of Madagascar; and *Willughbia edulis*, in the East Indies. Caoutchouc, whilst it is in the tissues of the plant, is evidently in a fluid condition, but, after its separation from the other fluid parts, it forms a solid mass similar in its external characters to vegetable albumen. In this state it is dense and hard, but may be separated and rolled out so as to form a sheet resembling leather. The greater part of the Caoutchouc of commerce is obtained in the form of shapeless masses, collected at the foot of the tree which has been incised or cut for the purpose of extracting the juice from it, or solidified in a trench made in the earth, and coagulated in this rude mould in voluminous masses, which often resemble the trunk of a large tree. A part of it, however, possesses other forms which the rude art of the natives attempt to communicate to it. They model with plastic clay figures of animals, imitations of the human foot, and pear-shaped bodies; and repeatedly dipping these moulds in the thickened caoutchouc, they remove the mould through an opening and thus obtain hollow flasks, figures of animals, rough slippers, &c. The East Indies supplied the original specimens seen in Europe, and have ever since been a source of supply to the British markets. It comes principally from Java, but is often glutinous, and is less esteemed in commerce than that furnished by the equatorial regions of America. India Rubber from Para, on the Amazon, in 1857, was in value £139,000. The imports into England in 1850 were on the average 250 tons, value £32,500. Caoutchouc employed to rub out pencilmarks, made on paper. When distilled, it yields oils which have a composition similar to oil of turpentine.—In north west India, an India Rubber tree, probably the *Ficus elastica*, grows to some seventy to ninety feet high. Immense forests of it are found on the west side of the Burampooter, extending along the Meere and Abor mountains. It is a stately tree—it is said some are 100 feet high. The rubber from this tree has not answered for exporting from India. The expense of making is a mere trifle; but, whether it is owing to the tree having been accustomed to a colder climate, or from some chemical property in the rubber, it cannot bear the heat of a passage to Europe. It becomes a fluid during the voyage. Otherwise in cold climate, it is equal to other rubbers.—

The plants which afford Indigo dye are grown chiefly in the East and West Indies, in the middle regions of America, in Africa, and in Europe, and are mostly species of the genera *Indigofera*, *Isatis*, *Tephrosia* and *Nerium*. *Indigofera tinctoria* furnishes the chief indigo of commerce, produced in Bengal, Malabar, Madagascar, the Isle of France, and St. Domingo. The *Indigofera disperma*, a plant cultivated in the East Indies and America, grows higher than the preceding, is woody, and furnishes a superior dye-stuff. The Guatamala Indigo comes from this species. *Indigofera anil* grows in the same countries, and also in the West Indies. The *Indigofera argentea*, which flourishes in Africa yields little indigo, but it is of an excellent quality. According to Mr. Simmonds, *I. pseudotinctoria*, cultivated in the East Indies, furnishes the best of all. *I. glauca* is the Egyptian and Arabian species. There are also the *I. cinerea*, *I. erecta* (a native of Guinea), *I. hirsuta*, *I. glabra*, and several others, common to the East, Indigo of an excellent quality has been obtained in the East from *Gymnema tingens* or *Asclepias tingens*, a twining plant. The *Cicer arietinum* or gram plant is also a source. Species of *Ruellia* furnish the well known Room dye of Assam and the Chinese obtain a blue dye from the *Ruellia indigotica*, another species of this genus, as also from the *Isatis indigotica* of Mr. Fortune. The *Wrightia tinctoria*, of the East Indies, an evergreen, with white blossoms, affords some indigo, as do the *Isatis tinctoria*, or Woad, in Europe, and the *Polygonum tinctorium*, with red flowers, a native of China. *Baptista tinctoria* furnishes a blue dye, and is the wild indigo of the United States. Plants of other genera are also employed for obtaining Indigo—as *Marsdenia tinctoria*, *Galega tinctoria*, but especially the former. Dr. Bancroft (vol. i. p. 190) also adduces *Spilanthes tinctoria*, *Scabiosa succisa*, *cheiranthus fenestralis* also a species of *Bignonia* and a *Tabernæmontana*, on the African coast, with *Anorpha fruticosa* and *Saphora tinctoria*, as all yielding a blue dye, or coarse sorts of indigo. Indigo is at present grown for commercial purposes largely in Bengal, and the other provinces of that Presidency, from the 20th to the 30th deg. of north latitude; in the provinces of Tinnevely, Cud-dapah and the two Arcots of the Madras Presidency; in Java, in the largest of the Philippine islands, in Guatemala, Caraccas, Central America and Brazil. It is also still cultivated

in some of the West India islands, especially St. Domingo, but not in large quantities. Indigo grows wild in several parts of Palestine, but attention seems not to have been given to its cultivation or collection. On the eastern and western coasts of Africa, it is indigenous; at Sierra Leone, Natal, and other places it is found abundant.—Bengal is, however, the chief mart for indigo, and the quantity produced in other places is comparatively inconsiderable:—When America became known to Europeans, its indigo became to them a principal object of cultivation, and against their skill the native of Hindostan had nothing to oppose, but the cheapness of his simple process of manufacture. The profit and extent of the trade early induced Europeans to cultivate the plant in Hindostan; but the superior article manufactured by the French and Spaniards in the West Indies, would long have held the produce of India in subordination, if the anarchy and wars incident to the French Revolution, especially when they reached St. Domingo, had not almost annihilated the trade from the West, and consequently proportionally fostered that in the East. The indigo produce of St. Domingo was nearly as large as that of all the other West India islands together. From the time that the negroes revolted in that island, the cultivation of indigo increased in Hindostan. Since the year 1833, in Bengal, the cultivation of the Indigo plant and manufacture of Indigo have greatly fallen off, for Indigo planting, is now hunted out of the Lower Provinces, though once the pet scheme of Revenue Boards and Governors General in Council. In the troubles which followed the famine of 1769, the cultivation had declined; during the years which followed 1786, Lord Cornwallis, and with him Sir John Shore, re-established it under extraordinary privileges. Minute accounts of how the plant should be grown and the drug beaten out, written by high officials, appeared in the public prints; the Company's servants were permitted,—nay, encouraged,—to remit their savings in Indigo investments, in spite of the croakings of an alarmist who foretold the failure of such efforts by reason of the manufacture having been successfully introduced into the Brazils, which were nearer the European market. For a time, indeed, the Government was shy of actually engaging in the cultivation and contented itself with winking hard at its officers who were willing to venture on their own account. But the revival of the Indigo Planting, which took place in the ten years subsequent to 1786, was conducted, under the auspices of Government, though at the risk of its Commercial Residents. For long it continued to be the most profitable part of these officers' private trade, and

more than one great Calcutta House owes its origin to their operations. The valleys of the Damoodah and of the Adjie, and indeed all Burdwan, are dotted with factories belonging to an ancient firm, whose Indigo still bears the initials of Mr. Cheap, Commercial Resident at Soonamookey. As independent merchants gradually found entrance into the country, the secrets of Indigo planting became better known, and the old Residents found what they had long been accustomed to consider their private preserve, intruded upon by strangers. The first kind of cultivation which they yielded seems to have been sugar-cane, but in defence of their monopoly as Indigo Planters they made a determined stand. The few who understood the signs of the times compromised matters by taking a private capitalist into partnership, but the majority could hit upon no better plan for preserving their rights than harrassing their rivals. But individual jealousies and penal enactments were alike powerless to stop the advancing rush of British enterprise, and in 1813 the restrictive system finally broke down. Englishmen could not buy lands in Bengal in their own names, but they could trade where they pleased, and it was easy enough to own land in the name of another. The private trade of the Commercial Residents, like the more magnificent operations of their masters, collapsed and Indigo Planting entered on the second stage of its history.

Indigo is peculiarly Indian in its origin and takes its name from India. It was known to, and in constant use, amongst the Greeks and Romans; and is mentioned especially by Arrian in his *Periplus* as imported by way of Egypt from the country in the vicinity of the Indus. It was known to the ancients as a product of the country. "Indicum," says Pliny, "comes from India, and is obtained from a slime adhering to reeds, it is black when rubbed but a fine mixture of purple and blue when dissolved. He adds, "that the genuine Indicum may be known by the vapour it emits on being heated," and that it "emits a smell like the sea, whence some have supposed it to be obtained from rocks. So soon as the Cape route was discovered, the Venetians, the Portuguese, the Dutch, and subsequently the English imported indigo amongst other articles of the dye and dry-saltary trade. Before the introduction of indigo, woad was used for dyeing blue, and the cultivators of this plant in England and on the Continent endeavoured to prevent the use of indigo, which, by a decree of the German Diet in 1577, was declared to be "a pernicious, deceitful, eating, and corrosive dye." Early in the seventeenth century it became of increasing consumption among the dyers; so much so indeed as to interfere seriously with the trade in woad. But so jealous were the

INDIGO.

authorities of that age of any commercial innovation, or of any encroachment upon vested rights, that, in the year 1654, the use of this article, which was called "the Devil's dye," was, by imperial proclamation strictly forbidden within the Austrian dominions, and the people of Nuremberg compelled the dyers of their city to take oath each year, that they would employ no indigo in their work. Despite imperial edicts and Nurembergers' oaths, this dye continued to find favour generally throughout Europe; and indifferent as was the article produced in those days, the trade became one of considerable value until the close of the seventeenth century, when the Eastern Indigo was driven from the European markets by the active competition of the West Indian planters and the colonists of America. Subsequently, however, when the States declared their independence, and the culture of the West Indian plant was neglected for other articles, the English E. I. Company resumed their dealings in it, and by giving all the encouragement in their power, not only to Native but to European planters, they succeeded, after a number of years, in establishing the manufacture of indigo on such a firm footing, that the Bengal article at last ranked the highest in public estimation, having fairly driven all competition from the field. It is highly problematical, however, if the manufacture of indigo in British India would have arrived at its present state of prosperity but for the spirit evinced by the Directors of the East India Company, who, in the teeth of losing markets, continued to make extensive purchases of the article from the European planters, shipping their investment to a certain loss, until, after a series of years, the agriculture of the plant, and the chemistry of the manufacture, became so thoroughly investigated, and received so many improvements, as to place the trade beyond the necessity for any further fostering. The first, or London East India Company, carried on a very profitable trade in this dye for upwards of a century; purchasing it from the native makers at about a shilling the pound and selling it at five times that price. Between the years 1664 and 1694 their imports of the article into Great Britain did not exceed 60,000 lbs. annually. In those days the scene of the native manufacture of indigo of the finest quality was at Agra. Lahore contributed a good article, as did the Golconda country. The inferior sorts came from Surat, Berhampoor, Indore, Oudh, and Bengal. At the present time the finest indigo is manufactured in the Bengal presidency, where it has been found that both soil and season are highly favourable for the culture and development of the plant. A considerable quantity, about 4,000 chests, is produced in and about the vicinity of Madras,

INDIGO.

some of which is of superior quality. Towards the close of the last century, about 1786, the shipments of indigo to Great Britain amounted to 345,000 lbs. the quantity for 1795 shipped was 2,644,710 lbs.; for 1799, at 4,571,420 lbs.; for 1810, at 5,520,874 lbs.; and for 1848-9, at 9,920,000 lbs., of which three-fourths were sent to Great Britain. During the nine years which preceded the opening of the trade with India in 1814, the annual average produce of indigo in Bengal, for exportation, was nearly 5,600,000 lbs. But the exports during the sixteen years ending with 1829-30, were above 7,400,000 lbs. a year. The consumption in the United Kingdom has averaged, during the ten years ending 1852, about 2,500,000 lbs. a year. In 1839-40 the export of indigo from Madras amounted to 1,383,808 lbs. A small quantity is also exported from the French settlement of Pondicherry. In 1837 the export from Manilla amounted to about 250,000 lbs. The export from Batavia in 1841 amounted to 913,693 lbs. and the production in 1843 was double that amount. The annual exports of indigo, from all parts of Asia and the Indian Archipelago, were taken by M'Culloch, in 1840, to be 12,440,000 lbs. The imports are about 20,000 chests of Bengal, and 8,000 from Madras annually, of which 9,000 or 10,000 are used for home consumption, and the rest re-exported. The total crop of indigo in the Bengal Presidency ranged, between 1835 and 1855, at from 100,000 to 172,000 factory maunds; the highest crop was in 1845. The factory maund of indigo in India is about 78 lbs. In the delta of the Ganges, where the best and largest quantity of indigo is produced, the plant lasts only for a single season, being destroyed by the periodical inundation, but in the dry central and western provinces, one or two ratoon crops are obtained.

But though Great Britain largely imports Indigo, it only retains a small part of it for its own consumption.

The culture of indigo is very precarious, not only in so far as respects the growth of the plant from year to year, but also as regards the quantity and quality of the drug which the same amount of plant will afford in the same season. The fixed capital required in the manufacture consists simply of a few vats of common masonry for steeping the plant, and precipitating the coloring matter ; a boiling and drying house, and a dwelling for the planter. Thus a factory of ten pairs of vats, capable of producing, at an average, 12,500 lbs. of indigo, worth on the spot £2,500, will not cost above £1,500 sterling. The buildings and machinery necessary to produce an equal value in sugar and rum, would probably cost about £4,000. The indigo of Bengal is divided into two classes, called, in commercial language, Bengal and Oudh ; the first being the produce of the southern provinces of Bengal and Behar, and the last that of the northern provinces, and of Benares. The first class is in point of quality much superior to the other. The inferiority of the Oudh indigo is thought to be more the result of soil and climate, than of any difference in the skill with which the manufacture is conducted. The indigo of Madras, which is superior to that of Manila, is about equal to ordinary Bengal indigo. The produce of Java is superior to these. Large quantities of indigo, of a very fine quality, are grown in Sindh. Mr. Wood, Deputy Collector of Sukkur, is of opinion that Sindh is much

INDIGO.

better suited than Bengal for the production of this dye-stuff—the alluvial soil on the banks of the Indus is equal in richness to that on those of the Ganges, and the climate seems equally well suited for the growth of the plant. But in two years out of three, the crops of the Bengal plants are injured by excessive inundations, while the work of gathering and manipulation is necessarily performed during the rainy season under the greatest imaginable disadvantages. In Sindh, on the other hand, the inundation of the river is produced almost solely from the melting of the snows in the Himalayas, and it is not liable to those excessive fluctuations in amount, or that suddenness in appearance peculiar to inundations chiefly arising from falls of rain. The Ganges sometimes rises ten feet in four-and-twenty hours, and at some part of its course its depth is at times forty feet greater during a flood than in fair weather, while the Indus rarely rises above a foot a day, its extreme flood never exceeding fifteen feet, the limits and amount of the inundation being singularly uniform over a succession of years. Moreover, as rain hardly ever falls in Sindh, and when it does so, only continues over a few days, and extends to the amount of three or four inches, no danger or inconvenience from this need be apprehended. Mr. Wood mentions that hemp may be grown in profusion on the indigo grounds. The districts of Kishnagur, Jessore and Moorshedabad, in Bengal ranging from 88° to 90° E. longitude, and 22½ to 24 of N. latitude, produce the finest indigo. That from the districts about Burdwan and Benares is of a coarser or harsher grain. Tirhoot, in latitude 26 degrees, yields a tolerably good article. The portion of Bengal most propitious to the cultivation of indigo, lies between the river Hooghly and the main stream of the Ganges. In the East Indies after having ploughed the ground in October, November, and the beginning of December, they sow the seed in the last half of March and the beginning of April, while the soil being neither too hot nor too dry, is most propitious to its germination. A light mould answers best ; and sunshine, with occasional light showers, are most favorable to its growth. Twelve pounds of seed are sufficient for sowing an acre of land. The plants grow rapidly, and will bear to be cut for the first time at the beginning of July ; nay, in some districts so early as the middle of June. The indications of maturity are the bursting forth of the flower buds, and the expansion of the blossoms, at which period the plant abounds most in the dyeing principle. Another indication is taken from the leaves, which, if they break across when doubled flat, denote a state of maturity. But this character is somewhat fallacious, and depends upon the poverty or richness of the

soil. When much rain falls, the plants grow too rapidly, and do not sufficiently elaborate the blue pigment. Bright sunshine is most advantageous to its production. The first cropping of the plants is the best; after two months a second is made; after another interval a third, and even a fourth; but each of these is of diminished value.

Good indigo is known by its fine purple blue color and by its fracture, which, when rubbed with a hard smooth substance, exhibits a copper red lustre. The quality of indigo depends upon the species of the plant, its ripeness, the soil and climate of its growth, and the mode of manufacture. The East India and Brazilian indigo arrives in England packed in chests, the Guatemala in ox-hides, called serous. The indigo imported from the western hemisphere was for some time considered superior in quality to that of the East. Its cultivation, however, has been neglected there and the Bengal indigo is preferred at present to any imported from South America, where it is now only cultivated by the Brazilians and Colombians. But as it thrives best in a moist climate, the interior of Guiana, chiefly newly-cleared land would be well adapted for it.

In India, indigo is produced from *Indigofera tinctoria* and *Wrightia tinctoria*. In Nubia, from the *Tephrosia apollinea*, and on the banks of the Niger, from the *T. toxicaria*. Cuddapah indigo is not chiefly grown by Europeans on lands held by them in direct connection with their factories, or cultivated either with their own or hired stock. It is grown by ryots on contract to deliver so much indigo plant at the factory at a fixed rate per bundle. The agents of the Madras firms avoid occupying the same talooks: so that there is no system of forcing the cultivation upon the ryots, who are much too independent to submit to such a process. The trade is quite free and the system of advances to the tenantry has done a great deal to improve their condition, as well as facilitated the collection of the revenue. The cultivation of indigo is not fixed; it extends or contracts with the demand for the article. It has, however, been steadily increasing of late years, many of the richer ryots cultivate it and manufacture it on their own account. Native capitalists also engage in the trade. Mr. Wedderburn estimated the cultivation and manufacture of indigo by natives, without European superintendence, in the ratio of 10 to 1 of that produced under European management. Eight lakhs of rupees were drawn by bills in 1859 on the Cuddapah Treasury by Madras mercantile houses. And eight lakhs scarcely represent one-half of the sum paid for indigo, the outturn of which, on 36,000 acres, cultivated in the year 1860, at an average profit of Rupees 50

per acre will show a value of eighteen lakhs of Rupees.

Mr. Rohde in a MS. which he furnished, mentions that two methods of preparing indigo are in use in the Madras territories—that called “Karpa” indigo and which is known in the market as Madras indigo, is prepared from the dried leaves, the Bimlipatam indigo is from the recent leaves upon the Bengal plan. In the indigo factories of Bengal, using the recent leaves, there are two large stone built cisterns, the bottom of the first being nearly upon a level with the top of the second, in order to allow the liquid contents to be run out of the one in to the other. The uppermost is called the fermenting vat or the steeper, its area is 20 feet square, and its depth 3 feet, the lowermost, called the beater or beating vat, is as broad as the other but one-third longer. The cuttings of the plant as they come from the field are stratified in the steeper till this be filled within 5 or 6 inches of its brim. In order that the plant during its fermentation may not swell and rise out of the vat, beams of wood and twigs of bamboo are braced light over the surface of the plants, after which water is pumped upon them till it stands within three or four inches of the edge of the vessel, and an active fermentation speedily commences which is completed within 14 or 15 hours; a little longer or shorter according to the temperature of the air, the prevailing winds, the quality of the water and the ripeness of the plants. Nine or ten hours after immersion of the plant the condition of the vat must be examined for, then; bubbles appear which rise like little pyramids, are at first of a white colour, but soon become grey, blue, and then deep purple red. The fermentation is at this time violent, the fluid is in constant commotion innumerable bubbles mount to the surface, and a copper colored dense scum covers the whole. As long as the liquor is agitated the fermentation must not be disturbed; but when it becomes more tranquil the liquor is to be drawn off into the lower cistern. It is of the utmost consequence not to push the fermentation too far, because the quality of the whole indigo is thereby deteriorated, but rather to cut it short, in which case, there is, indeed, a loss of weight, but the article is better. The liquor possesses now a glistening yellow colour, which, when the indigo precipitates, changes to green. The average temperature of the liquor is commonly 85° Fahr. its specific gravity at the surface is 1001.5 and at the bottom 1003. So soon as the liquor has been run into the lower cistern, ten men are set to work to beat it with oars or shovels four feet long, called *basquets*,—paddle wheels have also been employed for the same purpose. Meanwhile two other labourers clear away the com-

pressing beams and bamboos from the surface of the upper vat, remove the exhausted plant, set it to dry for fuel, clean out the vessel and stratify fresh plants in it. The fermented plant appears still green, but it has lost three-fourths of its bulk in the process, or from 12 to 14 per cent. of its weight, chiefly water and extractive matter. The liquor in the lower vat must be strongly beaten for an hour and a half, when the indigo begins to agglomerate in flocks, and to precipitate. This is the moment for judging whether there has been any error committed in the fermentation; which, if so, must be corrected by the operation of beating. If the fermentation has been defective, much froth rises in the beating, which must be allayed with a little oil, and then a reddish tinge appears. If large round granulations are formed the beating is continued, in order to see if they will grow smaller. If they become as small as fine sand, and if the water clear up, the indigo is allowed quietly to subside. Should the vat have been over fermented a thick fat looking crust covers the liquor which does not disappear by the introduction of the flask of oil. In such a case the beating must be moderated. Whenever the granulations become round and begin to subside and the liquor clears up, the beating must be discontinued. The froth or scum diffuses itself spontaneously into separate minute particles, that move about the surface of the liquor, which are marks of an excessive fermentation. On the other hand a rightly fermented vat is easy to work; the froth, though abundant, vanishes whenever the granulations make their appearance. The colour of the liquor when drawn out of the steeper into the beater is bright green but so soon as the agglomerations of the indigo commence it assumes the color of Madeira wine and speedily afterwards, in the course of beating, a small round grain is formed which on separating makes the water transparent and falls down when all the turbidity and froth vanish. The object of beating is threefold, first it tends to disengage a great quantity of carbonic acid present in the fermented liquor; secondly to give the newly developed indigo its requisite dose of oxygen by the most extensive exposure of its particles to the atmosphere; thirdly, to agglomerate the indigo in distinct flocks or granulations. In order to hasten the precipitation, lime water is occasionally added to the fermented liquor in the progress of beating, but it is not indispensable and has been supposed capable of deteriorating the indigo. In the front of the beater a beam is fixed upright in which three or more holes are pierced a few inches diameter. These are closed with plugs during the beating, but two or three hours after it, as the indigo subsides, the upper plug is

withdrawn, to run off the supernatant liquor, and then the lower plugs in succession. The state of this liquor being examined, affords an indication of the success of both the processes. When the whole liquor is run off, a labourer enters the vat, and sweeps all the precipitate into one corner and empties the thinner part into a spout which leads into a cistern alongside of a boiler 20 feet long, 3 feet wide and 3 deep. When all the liquor is once collected it is pumped through a bag for retaining the impurities into the boiler and heated to ebullition. The froth soon subsides and shows an oily looking film upon the liquor. The indigo is by this process not only freed from the yellow extractive matter but is enriched in the intensity of its colour and increased in weight. From the boiler the mixture is run, after two or three hours, into a general receiver called the dripping vat, or table, which for a factory of twelve pairs of preparation vats, is 20 feet long, 10 feet wide and 8 feet deep, having a false bottom 2 feet under the top edge. This cistern stands in a basin of masonry made water tight with chunam hydraulic cement, the bottom of which slopes to one end in order to facilitate the drainage, a thick woollen well is stretched along the bottom of the inner vessel to act as a filter, so long as the liquor passes through turbid it is pumped back into the receiver. Whenever it runs clear the receiver is covered with another piece of cloth to exclude the dust and allowed to drain at its leisure. Next morning the drained indigo is put into a strong bag and squeezed in a press. The indigo is then carefully taken out of the bag and cut with a brass wire into bits about 3 inches cube, which are dried in an airy house upon shelves of wicker work. During the drying a whitish efflorescence comes upon the pieces, which must be carefully removed with a brush, in some places, particularly on the coast of Coromandel, the dried indigo lumps are allowed to effloresce in a cask for some time and when they become hard they are wiped and packed for exportation.

In preparing indigo from dried leaves, the ripe plant being cropped is to be dried in sunshine from 9 o'clock in the morning till 4 in the afternoon during two days and threshed to separate the stems from the leaves which are then stored up in magazines till a sufficient quantity be collected for manufacturing operations. The newly dried leaves must be free from spots and friable between the fingers. When kept dry, the leaves undergo in the course of 4 weeks, a material change, their beautiful green tint turning into a pale blue grey previous to which the leaves afford no indigo by maceration in water, but subsequently a large quantity. Afterwards the product becomes less considerable. The dried leaves are infused in the

steeping vat with six times their bulk of water, and allowed to macerate for two hours with continual stirring till all the floating leaves sink. The fine green liquor is then drawn off into the beater vat for if it stood longer in the steeper some of the indigo would settle among the leaves and be lost. Hot water as employed by some manufacturers, is not necessary. The process with dry leaves possesses these advantages that a provision of the plant may be made at the most suitable times independently of the vicissitudes of the weather, the indigo may be uniformly made and the fermentation of the fresh leaves, often capricious in its course, is superseded by a much shorter period of simple maceration.

In his account of the productions of Humamkoonda in the Deccan, Dr. Walker mentions that only one species, *Indigofera tinctoria*, is there used for the preparation of indigo, and it is collected in the rains when the dye is commonly made. A strong decoction is made of the plant, leaves, flowers, pods and twigs being all indiscriminately thrust into a pot; when this is hot an infusion of *Eugenia jambolana* (rose apple tree) is added, the indigo is immediately precipitated and the superincumbent water being drawn off, is dried in the sun.

The native plan of mounting the indigo vat merits attention. A potash ley is prepared from the ashes of the *Euphorbia tirucalli* (milk bush hedge) and lime by mixing them together and then filtering—in this ley seeds of the *Trigonella fœnum-græcum* and *Cassia tora* are boiled and the liquor being strained is poured into the water drawn off after the precipitation of the indigo and the indigo itself is then put in and some more potash ley is added.

In three or four hours the fermentation is perfected and the vat filled for the purposes of the dyer. The theory of this vat is very obvious: extractive matter derived from the liquor in which the indigo was first boiled, with the sugar, starch and mucilage of the two leguminous seeds cause a fermentation by which the indigo is rendered soluble in the alkaline solution. The process is more simple than that usually followed by dyers in Europe, and is in perfect accordance with every rule of practical chemistry. There is no superfluity and no waste, and on the whole it is a most favorable specimen of native ingenuity and skill. Indigo is now, 1871, largely cultivated in the North Arcot and Cuddapah and South Arcot Districts of the Madras Presidency, and the dye is prepared both from the wet or green and the dry plant.

Indigo has been manufactured from time immemorial in the districts of Moozaffergurh, Mooltan, and the country west of the river Indus called the Derajat. It is exported, but

not to any great extent, in the direction of Afghanistan. The article, as at present prepared in the Western Punjab, is quite unfitted for the European market, but under proper superintendence it might be produced of the finest quality, and to an almost unlimited extent.

Indigo might be cultivated in Ulwar, but there is a great, though by no means insuperable disinclination on the part of the people generally against its cultivation, as it is looked upon as 'napak,' unclean. The cost of the production is about two seers for the rupee.

The plant is sold in Bengal by the bundle, which is measured by a chain. In the Doab it is sold for 1 rupee, (50 cents), for 5 to 6 maunds. 200 to 225 maunds of plant to a maund (75 lbs.) of indigo, is a fair average produce. Therefore it would cost about 38 to 40 rupees, or 18 to 20 dollars, for the plant necessary to make 75 lbs. of indigo. The expense of manufacturing would be but little.—*Bonyne America*, page 136.

Blancard's Manual of Trade of India, mentions what Europeans call *Green Indigo*. M. Lefevre, Vicar Apostolic of Lower Cochinchina, was acquainted with the green dye, and Quang-due, one of his Cochinchinese interpreters at Touranne, informed him that the green dye plant grows in the provinces of *Quang-nam* and *Quang-due*, but especially in the latter in the vicinity of Houë-fou—and that it imparts a green dye both to silk and cotton, and he supposes it possible that the *fecula* of the *dinh-xanh* (xang in Cochinchinese means green yellow) may be identical with the "tsai," of Poivre and Father Horta. In 1779, Charpentier de Cossigny when noticing the *dinh-xanh* asserted that the Indigo plant, when boiled by a process differing from that followed to obtain the blue also yields a green *fecula*. Neither Loureiro, in his *Flora*, nor Pigneaux and Taberd in their dictionary, make any allusion to the "*dinh-xanh*," green dye of Cochinchina. M. Rondot seems to think that the "*Tsai*" and "*Dinh-xanh*" are identical: and that the plant belongs to the genus *Melissa* or is identical with the *Mercurialis perennis*. He adds, however, that Correa considers the "*Tsai*" of Poivre to be from the *Justicia tinctoria* of Nees. About 1780, Loureiro noticed the green dye of Cochinchina, called *Kim-long-nhuom*, a product of this plant, the leaves of which he describes as saturated with a green dye, and used in dyeing cloths of a beautiful colour, and MM. Pigneaux and Taberd agree with Loureiro in this account of its properties. The *Kai-loung-boung*, and the *Cham-lon-la* were also noticed by Loureiro as green dye plants of Cochinchina. The *Agri-*

INDIGOFERA.

boung-boung, is the *Aletris Cochinchinensis* of Loureiro and the *Sansevieria luteo-virens* of Haworth in his *Hortus floridæ cochinchinæ*. The other plant, the *Cham-lon-la* is *Spilanthus tinctorius* of Loureiro, the *Adenostemma tinctorium* of Cassini, and both a blue and a green colour are stated by Loureiro to be obtained from the pounded leaves, *optimam tincturam cæruleam viridemque*. He adds that this colouring matter is also obtained and equally brilliant from the indigo plant.

The indigo plant is cultivated in China to a great extent, as well as a species of polygonum from the leaves of which a colour is procured which nearly equals the blue obtained from indigo; from the buds and young leaves of a minute delicate plant, apparently of the *Columnea* genus, a most delicate but brilliant green is obtained; a most exquisite black dye is prepared from the cup of the acorn, and the finest and most brilliant scarlet from the *Carthamus*.

Althea rosea, the parent of the many beautiful varieties of hollyhock, a native of China, yields a blue coloring matter equal to indigo. Indigo of an excellent quality has been obtained in the East from a twining plant, *Gymnema tingens* or *Asclepias tingens*.

The Javanese, who of all the Malayan race, have certainly made the highest progress in all the useful arts, have a specific term for dyeing or tinting,—“madall,” but the Malays express it only by the word for dipping, “*Chalup*.” Yet the only generic words which either of them possesses for “colour,” are the Sanscrit, *warna*; and the Portuguese, *tinta*. Their colours are usually sombre,—little varied, but generally fast. Blues are always produced from indigo, yielded for the most part by the *Indigofera tinctoria*, as in other parts of India, but in Sumatra, occasionally, from the *Marsdenia tinctoria*, a plant of the natural order of the *Asclepiadaceæ*, “*Kulaf*” or “*vasma*,” in the Panjab, is the pounded dried leaves of indigo plant used principally as a hair dye after the previous application of “*henna*” (*Lawsonia inermis*.) The powdered leaf of *Indigofera anil* is used in the cure of hepatitis.—*Capper's three Presidencies of India. Powell's Hand-book for the Punjab*, vi. p. 461. *Mr. Rohde MSS. Dictionary. Simmond's Commercial Dictionary, Royle's Illustrations of Himalayan Botany. Annals Indian Administration* 1870. *Bosnyke, America*, p. 136. *Tomlinson's Dictionary*, p. 63. *Sirr's China and the Chinese*, Vol. I. p. 339. *Cal. Cat. Ex.* 1862.

INDIGOFERA, a genus of plants some of which are of great economic value, of the natural

INDIGOFERA ARGENTEA.

order Fabaceæ, about 150 species are known, many of which grow in the East Indies.

arbores.	echinata	pentaphylla.

brunonia.	hirsuta.	trifoliata.
cærulea.	linifolia.	uncinata.
cinerascens.	mucronata.	uniflora.
disperma.	pauciflora.	violacea.
dosua.	pedicellata.	viscosa.

There are also several undetermined species the “*dug kenti*” and the “*Kenti*” of kaghan; the “*doun-daloun*” of Burmah the latter a tree four or five feet in girth, found both in the Rangoon and Tounghoo districts, though it is scarce. Its white colored wood, is adapted to every purpose of house building.—An indigenous shrub, a species of indigo, is sometimes, in Tenasserim, used in forming a blue dye and a wild indigo is found abundant in the Suttel valley between Rampur and Sungnam at an elevation of 7,000 feet, in rocky hills. The species are indigenous in the equinoctial parts of Asia, Africa, and America, but there is some difficulty in ascertaining all the cultivated species, as the subject is usually neglected both by naturalists and cultivators.—*Mason's Tenasserim. Wight's Icones. Eng. Cyc. Cleyhorn. Punjab Report. Voigt. Roxb. Fl. Ind. McClelland.*

INDIGOFERA ANIL—is said by De Candolle to grow wild in America, and to be cultivated in both Indies, as also along the Gambia in Africa. The name Anil, which has passed into the Spanish, has evidently the same origin as the Arabic *Neel*, or Nil “blue,” the Spaniards and Portuguese, who had found the way to India by two opposite courses, must there have become acquainted with Indigo, and adopted its Indian name: they were the first to manufacture it in America—the Portuguese in Brazil, and the Spaniards in Mexico. Drs. Wight and Arnott state, they have not sufficient materials to determine if *I. Anil* be a distinct species. The author of the “*Flore de Senegambie*” consider them distinct, as do most botanists. According to Dr. Honigberger, anil is cultivated in some provinces of the Punjab, but more for dye, than for medicine, the leaf (*Vishaso Danie, Sans.*) being used by the natives in hepatitis and powdered indigo has been employed in Germany in the treatment of epilepsy, but with very uncertain results.—*O' Shaughnessy*, p. 292. *Honigberger*, p. 289. See Dyes.

INDIGOFERA ARGENTEA.

I. Colorata.—Roxb.

A species usually stated to be a native of India and the authority of Dr. Roxburgh might be cited for the fact; but

INDIGOFERA ENNEAPHYLLA.

Drs. Wight and Arnott state that it is the species cultivated in Egypt and Barbary for the sake of its Indigo, and, according to Humboldt, also in America. The Indian species which has been confounded with it is *I. paucifolia* of Delille, which has alternate leaflets, and linear, slightly compressed, torulose legumes. *I. argentea* is shrubby, with round branches, which appear of a silky whiteness from appressed pubescence; See Dyes.

INDIGOFERA ASPALATHIFOLIA.—Roxb. Syn. of *Indigofera aspalathoides*.—Vahl.

INDIGOFERA ASPALATHOIDES.—Vahl.

Indigofera aspalathifolia.—Roxb.

Aspalathus indicus.—Linn.

Lespedeza juncea.—Wall.

Small flowered aspalathus, ENG. Manili, MALEAL, Shiva niaba, SANSO.

A shrubby low growing plant of the peninsula of India employed in medicine. The small leaves, flowers and tender shoots being supposed to possess cooling demulcent and alterative properties, are prescribed in decoction in leprosy and cancerous affections. This plant appears to be the Manneli of the Hortus Malabaricus. Rhede tells us, that from the root of it an oil is extracted which is of use in erysipelas.—*Ainslie's Mat. Med.* page 113. Voigt.

INDIGOFERA CÆRULEA.—Roxb.

I. tinctoria, | I. brachycarpa, D. C.

Kar-nili, TEL.

This plant grows in the Dindigul Hills and the Rajahmundry Circars and Dr. Roxburgh states that it comes near to *I. argentea*, Linn. DeCandolle inquires whether this be sufficiently distinct from *I. tinctoria*. It is an erect shrubby species, growing in dry barren uncultivated ground to the height of 3 feet, and higher in good garden soil. It flowers during the wet and cold seasons. The leaves are pinnate; Dr. Roxburgh states that he had often extracted a most beautiful light indigo, from the leaves of this plant more so than he ever could from the common Indigo plant, or even from *Nerium tinctorium*, and in a large proportion. The process he adopted was similar to that practised with the leaves of *Nerium tinctorium*, or the scalding process.—*Eng. Cyc.*

This, the commonest of the Himalayan species, is a shrub which is abundant in many places in the hills and the eastern skirts of the Suliman Range from 2,500 to 8,000 feet. In Kashmir and elsewhere the twigs are largely used for making baskets, &c., and in some cases they form part of the twig-bridges. In Kangra the flowers are used as a pot-herb.—*Drs. Stewart and Cleghorn*. See Patroia.

This species of *Indigofera* is generally cultivated in India, whence it has been introduced both into Africa and America. It is suffruticose, erect, branched; leaves pinnate; Legumes approximated towards the base of the rachis, nearly cylindrical, slightly torulose, deflexed, and more or less curved upwards

INDIJIRKA BASIN.

sutures thickened; seeds about 10, cylindrical, truncated at both ends. This species is sometimes in the West Indies, called Indigo Frano, or French Indigo. It is said to be found wild along the sands of Senegal. It is grown occasionally by Karens and Burmese, but not extensively. It is not very commonly cultivated in the Punjab although indigo from the Indus is said to be mentioned in Arriana Periplus, and many traces of an export of it by the same river to Europe are found in the historical records as early as the middle of the 17th century. At present the chief tracts for its cultivation are in the Southern Punjab, near Multan, largely in lower Bengal, in the Northern Circars, and throughout the North Arcot and the Cuddapah collectorates of the Peninsula of India.—*Riddell's Gardening. Eng. Cyc. Dr. J. L. Stewart Panjab plants. Dr. Mason's Tenasserim. Eng. Cyc. quoting Flora de Senegambie, vol. i. p. 178.*

INDIGOFERA TRITA.—*Linn. Roab.*

Indigofera chinensis—*Roab. Rhed.*

A common herbaceous plant, with trifoliate leaves and small reddish green flowers.

INDIVARA, or Nalla Kalava, TEL. *Nymphaea stellata*.—*Willd.* "The blue lotus."

INDIJIRKA BASIN.—The great divisions of Asia are North, Mid, and South-Asia, the 1st comprising all the river basins that discharge their waters into the North Sea, and also the N. E. Peninsula, — the Indijirka basin and the other countries beyond it to the E. being termed N. E. Asia; the 2nd embracing Central Asia with the western basins that have outlets into the Caspian, Black Sea and Mediterranean and the eastern basins from the sea of Okhotsk to the Gulf of Leatung; the 3rd embracing all the remainder of Asia from that Gulf to the Red Sea, the countries to the W. of the Indus being designated S. W. Asia and the term, S. E. Asia, is used for the countries between China and India. The ancients termed the last of these India beyond the Ganges. Leyden included it and the Indian Archipelago under the name of the Hindu-Chinese countries. Malte Brun calls it Chin-Indiu. Ritter, the greatest of geographers, preserves the German name Hinter-Indies. Instead of Farther India, Transgangetic India, the Eastern Peninsula of India, &c., the single words Ultraindia and Transindia have been proposed by Mr. Logan, as they admit of the ethnic and adjective forms of Ultraindia and Ultraindian or Transindian. The Indian ethnic influence has been considerable to the S. E. and he thinks that the whole Indian region consisting of the continental portion bisected by the Bay of Bengal, and the eastern islands as far as Indian influence reached directly, may thus be compressed under the three names of India,

INDO-EUROPEAN.

Ultraindia or Transindia, and Indonesia. The earlier and wider connection of Ultraindia with China being best indicated by embracing both under the term S. E. Asia.—*Logan in J. N. Archip.*

INDIKE. BURN. Ebony.

INDO-ATLANTIC.—A designation of the Caucasian race of mankind, and of their language, usually styled Indo-European. See India; Iran; Indo-European.

INDO-AUSTRALIAN.—A name applied by Mr. Logan to the semi-negro type of men occupying the southern shores of Asia. See India.

INDO-BACTRIAN. See India.

INDO-CHINESE races occupy the low lands near the Brahmaputra; but the term is applied strictly to the people occupying the countries between India and China.—*Campbell, p. 49.* See Maha Radza weng.

INDO-EUROPEAN.—Dr. Prichard arranges the languages of the old world into

1. The Indo-European, sometimes termed Indo-Germanic, and by late writers the Arian or Iranian languages.
2. The Turanian, or as he terms them, Ugro-Tartarian languages, or the languages of High-Asia and other regions.
3. The Chinese and Indo-Chinese, or the monosyllabic and uninflected languages.
4. The Syro-Arabian, often termed Semitic, languages.

The three first of these dynasties of languages are confined to Europe and Asia, the fourth is common to Africa and those parts of Asia which are nearer to Africa. He states that the Indo-European languages are the natural idioms of all those races who at the time of the Great Cyrus became and have ever since continued to be the dominant nations of the world. He only excepts from this remark those instances in which certain Syro-Arabian or Ugro-Tartarian nations, under some extraordinary impulse, as the outbreak of the mahomedan fanaticism, assumed or recovered a partial sway over some of the weaker divisions of the Indo-European race. He considers that the Indo-European languages and nations may be arranged into many different groups. They might be distributed in the order of their affinities, but he regards the most obvious division to be a geographical one, and he styles his first, as the eastern group. This by many writers has been termed exclusively the Arian family. It includes all the idioms of the ancient Medes and Persians, who named themselves Arian, and their country Eerene, or Iran, and likewise the Sanskrit with all the Prakrits, properly so termed, and the Pali of India. Among the former was that ancient Persian language in which one particular set of the

cuneiform inscriptions was written. This dialect was so near the Sanskrit that the inscriptions have been interpreted through the medium of that language. The Zend lays claim to a still higher antiquity, since the Zend is said by Burnouf, Professor Wilson and others, who have studied it most successfully, to be more nearly allied to the very ancient dialect of the Vedas, which preceded the classical Sanskrit, than it is to this last more cultivated speech. But how this claim is to be reconciled with the comparatively recent date of all extant compositions in the Zendish language, remains to be explained. That the high castes or twice born classes of the Indian race were of the same stock as the ancient Persians, may be considered as a fact established by the affinity of their languages. The twice born classes, as they term themselves, are the brahmins, the chetiyas, and the vaisyas, or the three higher of the four classes of hindus. They also have the name of Arian, which means noble or dignified, and this is doubtless the origin of the epithet which, as we learn from Herodotus, the ancient Medes assumed. The Arian hindus must have crossed the Indus and have driven the aboriginal Indians across the Vindhya mountains and the Nerbudda into the Dekhan, where they still exist and speak their native languages, though mixed more or less with the Sanskrit of their Arian conquerors, for we know that the Arian hindus emigrated into the Dekhan and Ceylon at an early period. Some other Asiatic nations, however, of inferior note, speak dialects more remotely connected with the same group of the Indo-European languages. Among these are the Pushtaneh or Afghans, the Armenians and the Ossetes, and some other nations of the chain of Mount Caucasus. Dr. Prichard observes that the principal branches of the Indo-European stock of languages are,

1. The Greek language and its dialects. It is probable that the Lydian and other languages of lesser Asia, and perhaps also the Thracian and Macedonian were altered to the Hellenic or Pelasgic Greek.

2. The old Eperotic and Illyrian. The language is still well known. It is the Skipetarian or Albanian or Arnaut. It is a distinct Indo-European idiom.

3. The old Italic languages, comprehending the Latin, Umbrian, Oscan, Sicilian and excluding the Rasenic or Etruscan.

4. Probably the Etruscan was an Indo-European dialect, though distinct from the Italic. But very little is known about the Etruscan language.

5. The old Prussian, including the Lettish and Lithuanian, said to resemble the Sanscrit more nearly than any other language.

6. The Germanic family of languages.

7. Slavonian and Sarmatian dialects which comprehend the languages of eastern Europe, Russian, Polish, Bohemian and the dialects in the greater part of Europe subject to the Turkish Empire.

8. Celtic: The Teutonic and Scandinavian tribes of the German race, were known to Pytheas who sailed on the Baltic in the times of Aristotle; and the Brahmins probably spoke Sanskrit at the court of Palibothra, when they were visited by Megasthenes in the age of the first Seleucus. All ancient Germany, Scandinavia, Sarmatia, Gaul, and Britain, Italy, Greece, Persia, and a great part of India, were then inhabited by nations separate and independent of each other, speaking different languages, but languages analogous and palpably derived from the same original.

Dr. Prichard prefers the term Ugro-Tartarian to that used by other writers. He groups this class of languages into

1. The Ugrian tribes dwelling in northern Europe eastwards to the North Cape of Asia.

2. His second group of nations belonging to the same great family, includes the various hordes who have been known under the names of Tartar, Turk, Mongol, Mandshurian, and Tungusian. All these nations appear, from the result of late researches, to be allied in descent, though long supposed to be quite separate. In the vast wilderness extending from the chain of Altai to that of the Himalaya are the pasture-lands, where, during immemorial ages, the nomadic tribes of High Asia fed their flocks and multiplied into those hordes which from time to time descended in immense swarms on the fertile regions of Asia and of Europe. Perhaps the earliest of these invasions of the civilized world was that of the Hiong-nu, expelled from the borders of China by the powerful dynasty of the Han. These were the people who, after their inroad on the Gothic empire of Hermanrich, made their way, under Etzel or Attila, into the heart of France. Hordes from the same regions under Toghrul Beg, and Seljuk, and Mahmud of Ghizni, and Chengiz, and Timur and Othman, overwhelmed the kalifat and the empires of China, of Byzantium, and of Hindustan, and lineal descendants of the shepherds of High Asia still sit on the throne of Cyrus, and on that of the Great Constantine. As a branch of the Ugro-Tartarian, he speaks of some of the insular nations to the eastward, of Asia and near the coast of the Pacific Ocean. The idiom of the islands comprised in the empire of Nippon, as well as that of the independent Liu-kiu Archipelago, bears some signs of affinity to those of the Ugro-Tartarian nations, and he adds that Mr. Norris, who has studied the Japanese, and whose very extensive knowledge of languages renders him a great authority in

such questions, had assured him that the principle of vocalic harmony and other phenomena, of the Tartar languages prevail in the idiom of the Japanese and Liukiu islands.

As a group of his Ugro-Tartarian, he classes the aboriginal inhabitants of India, who were expelled from Hindustan by the brahmins and the Arian people who accompanied them across the Indus, and retired, as it is supposed on apparently insufficient proof, into the Dekhan. They still occupy the greater part of that peninsula, and a portion, at least, of the island of Ceylon. Their idioms—the Tamil, the Telugu and the Karnataka of the Mysora,—are sister dialects of one speech, and he considers it likely that the languages of the mountain tribes of India, the Bhil, the Gond, the Toda and others, belong to the same stock. Dr. Prichard adds that professor Rask had conjectured that these nations are also of the Tartar stock. Their languages have some of the peculiarities of structure which have been pointed out. He also observes that there are some curious analogies between the Tamulian and other dialects of the Dekhan and the languages of Australia, with which we have obtained some acquaintance through the labours of Mr. Threlkeld and several other missionaries, and from the able researches of Captain Gray.

Dr. Prichard's THIRD family of languages belonging to the great continent, are the Chinese and Indo-Chinese idioms. They are associated by the resemblance of their structure, consisting of monosyllabic words and not by any considerable number of common vocables. Other languages have monosyllabic roots, as the Sanskrit, but the words of the Sanskrit become polysyllabic in construction; not so the Chinese, which are incapable of inflection, and do not admit the use of particles as a supplement to this defect—the position of words and sentences being the principal means of determining their relation to each other and the meaning intended to be conveyed. Baron William von Humboldt has observed, that conversation in these languages therefore requires a greater intellectual effort than is necessary to comprehend the meaning of sentences spoken in the inflected languages. He remarks that all the nations who speak these languages bear a considerable resemblance to each other in their mental character and disposition, and still more obviously in their physical characters, in which, however, some varieties are observable. Strongly marked as the peculiarity of the monosyllabic languages undoubtedly is, they are not as a class so completely insulated as many persons imagine. The Bhotia or Tibetan language belongs to this family, but it is in some respects intermediate between the monosyllabic languages in general and the Mongolian, which is one of the Tartarian group.

His FOURTH family, the Syro-Arabian languages, he says, appear to have been spoken from the very earliest times by the various nations who inhabited that part of Asia lying to the westward of the Tigris.

In briefly remarking on the progress of ethnology in Oceania and America, he mentions that besides much other valuable information, the great work of Baron William von Humboldt, on the Kavi speech, has afforded the important result that the resemblances known to exist between the nations of the islands in the Pacific Ocean termed Polynesian, and the tribes of the Indian Archipelago, Malacca and Madagascar, are not, as some persons have thought, the effect of casual intercourse, but are essential affinities, deeply rooted in the construction of these languages. For the proofs of this assertion, and of the ultimate fact in ethnology which results upon it, viz. that the races of people are themselves of one origin, he refers to M. de Humboldt's work. The Papua languages, or those spoken by the black and woolly-haired nations, are for the most part as yet unexplored. One observation to be made respecting them is, that the dialects of the Papuan races often partake more or less of the Polynesian. Whether this arises from the adoption by the Papuas of the Polynesian vocabulary has not been determined, though most persons incline to this last opinion. It is however now well known that some black nations have Polynesian dialects. The idiom of the Fijian islanders, for example, is properly a dialect of the Polynesian language.

Chevalier Bunsen's names differ from those of Dr. Prichard. He classes one group as the great Asiatic European stock of languages, which he subdivides into eight families, v. z. 1. Celts, 2. Thracian or Illyrian, 3. Armenian, 4. Asiatic—Iranian; 5. Hellenico-Italic, 6. Slavonic, 7. Lithuanian tribes and 8. Teutonic. His fourth or Asiatic Iranian, or the Iranian stock as represented in Asia, he again subdivides into:—

1. The nations of Iran proper or the Arian stock, the languages of Media and Persia. It includes the Zend of the cuneiform inscriptions and the Zend Avesta. The younger Pehlevi of the Sassanians and the Pazend the mother of the present or modern Persian tongue. The Pushtu or language of the Afghans belongs to the same branch.

2 The second sub-division embraces the Iranian languages of India, represented by the Sanscrit and its daughters.

His Semitic stock of languages he constructs from the following nations who form another compact mass, and represent one physiologically and historically connected family.

The Hebrews, with the other tribes of Canaan or Palestine, inclusive of the Phœnicians, who

spread their language, through their colonization, as that of the Carthaginians.

The *Aramaic* tribes, or the historical nations of Aram, Syria, Mesopotamia and Babylonia, speaking Syrian in the west, and the so-called Chaldaic in the east.

Finally, the *Arabians*, whose language is connected (through the Himyaritic) with the *Ethiopic*, the ancient (now the sacred) language of Abyssinia. He calls this second family, by the name now generally adopted among German Hebrew scholars, the Semitic.—Chevalier Bunsen further remarks, as the first lesson which the knowledge of the Egyptian language teaches, that all the nations which from the dawn of history to our days have been the leaders of civilization in Asia, Europe and Africa, must have had one beginning. He adds that the researches of our days have very considerably enlarged the sphere of such languages of historical nations, as are united by the ties of primitive affinity. Those researches have made it more than probable that the Tartars, Mandshu and Tungusians belong to one great stock; that the Turkomans, as well as the Tshudes, Fins, Laplanders and Magyars (Hungarians) present another stock closely united, and that both these families are originally connected with each other. These nations, who probably may be reduced to two families, one centring in the Altai and the pasture land towards the Himalaya, and the other having its centre in the Ural mountains, have acted in the history of civilization a most powerful episode by conquest and destruction. They appeared in the fifth century as the Huns, a scourge to Romans and German; they produced Chengiz Khan, Timurlang and Mahomed II.: they destroyed the Persian empire, subdued Hindustan, and they still sit upon the throne of Byzantium and upon that of China. They seem destined to partake only by conquest in the higher civilization of the surrounding nations, older or younger ones, the Chinese presenting the one extreme, the Iranians the other. Little disposed to learn from them as neighbours or subjects, they become more or less civilized by being their masters. They cannot resist the inward force of the civilization of their subjects, although they repel it, as an outward power. These tribes appear also as the once subdued substratum of Iranian civilization. So in the north of Europe, where the Finnic race preceded the Scandinavians. But the same great family appears also in Asia as the subdued or primary element. It seems probable, that the aboriginal languages of India, which attained their full development in the Dekhan dialects, belong to this stock, not only by a general analogy of structure, but also by an original and traceable

connexion.—He remarks that colonies may either preserve the ancient form, or become the occasion of a great change. Thus the ancient language of Tibet, which is in the Chinese traditions the land of their earliest recollections, may have been preserved by the colonists, who formed the Chinese empire, while Tibet went further in its development.

In a similar position we find another member of that family in western Europe. It there preceded the Celts, in the Iberians and Cantabrians, whose language is preserved in the Basque (Biscayans). Those tribes were once prevalent in France and Spain, probably also in Italy. Their language has the same structure and certainly some signs or vestiges of a material conversion in roots, with the Altai-Ural idioms. He concludes by remarking that his historical formula respecting this formation will therefore be as follows:—all the nations, who in the history of Asia and Europe occupy the second rank as to the civilizing power they have *hitherto* displayed, are probably as much of one Asiatic origin as the Iranian nations are. They centre on the northern borders of the Himalaya, and everywhere in central Asia are the hostile, savage neighbours of the agricultural Iranian people whom they have disturbed and dispossessed in different ages of history, having probably themselves been primitively driven by them, as nomades by agriculturists, from a more genial common home.—He indicates, summarily the relation of this great family with the three great families, into which the leading nations of civilization, as children of one stock, appear to be divided. The names of Cham, Shem and Japhet (the last equivalent with Indo-Germanic) represent to us scientifically three steps of development of the same stock. He asks with which of these leading nations is that great Altai-Ural family originally connected, and to which of these three great divisions, Chamism, Semitism and Japhetism do these secondary families more particularly approach. He considers there is no doubt of such a connexion but adds that at the same time we find these languages, although very inferior to those Indo-Germanic tongues, more nearly allied to them than to Chamism and Semitism. They represent like Cham and Shem, a lower degree of development, if compared with the Iranian languages, but a degree of their own, starting as it were from the opposite pole. The tongues of High Asia, form with these most perfect languages, a decided opposition to the Chamitic and Semitic branches. They are more advanced than these and therefore later, but so to say, advanced in a wrong or less imperfect way. He therefore proposes to call this whole family the Turanian, and the Indo-Germanic or Indo-

European the Iranian, following the antitheses of Iran and Turan established by Heeren and Carl Ritter. And, indeed, the more we go back to the most ancient historical traditions of the Japhetic family, particularly in India and Persia, the more we see how the two branches, the Iranian and the Turanian, though always in opposition to each other are to be considered but as diverging lines from the common centre. (See Lassen, *Indische Alterthumskunde*, p. 723.) In a note, he adds that Doctor Max Muller, the editor of the *Rig Veda*, gave him the following data for this assertion: "In the hymns of the *Rig Veda* we find still the clearest traces, that the five principal tribes, the Yadu, Turvasha, Druhyu, Anu, and Puru, were closely connected by the ties of nationality, and had their gods in common. In the succeeding age, that of the epic poetry of the Mahabharata, these five nations are represented as the sons of Yayati one of the old fathers of mankind. Yayati curses four of his sons, and the curse of Turvasha is, to live without laws and attached to beastly vices in the land of barbarians in the North. In this name of Tur-vasa, as well as afterwards in the name given to the Indo-Scythian kings in the history of Kashmir, Turushka, we find the same root as in the Zend Tura, the name of the nations in the north. But tura itself means quick, from *tvnr*, to run, to fly, and thus the very name of these tribes gives the same characteristic of these nomadic equestrian tribes, which afterwards is ascribed to them by Firdusi, and which makes them always appear in India, as well as on the Sassanian inscrip-

tions of Persia, as the An-iran, or non-Arian people; that is, as the enemies of the agricultural and civilizing nations."

And further on, he expresses his belief that Wilhelm von Humboldt has established the connexion between the Polynesian languages and the Malay or the language of Malacca, Java and Sumatra, and that this Malay language itself bears the character of the non-Iranian branch of the Japhetic family. Whether the Papua languages, spoken in Australia and New Guinea and by the aborigines of Borneo, of the Peninsula of Malacca and of some small Polynesian islands, be a primitive type of the same stock as the Malay which afterwards in many parts superseded it,—is a point which must remain uncertain until we receive from the hands of the missionaries a Papua grammar. We thus see that Asia (with the exception of China and Tibet), the whole of Europe and probably of America and the Polynesian islands (at least in their secondary stock) belong to one great original family, divided into the Iranian and Turanian branches. Bunsen calls this definitively the Japhetic race. In many parts we know that the Turanian race has preceded the Iranian: its language certainly represents an anterior step or preceding degree of development. In some parts we find that the Turanian race succeeded to a still older native element. By the method of examining languages through their grammatic forms rather than by separate words Frederick Schlegel showed the intimate historical connexion between the Sanscrit, the Persian, the Greek, the Roman, and the Germanic languages.

Grim, the philologist, discovered as the law of transposition of sounds in the Sanscrit, Greek, Roman and Gothic words, that the letters P. B. F. are interchangeable; also T. D. and H. also K. G. and X or H.

Leibnitz and Lacepede divide the human race into Europeans, Laplanders, Mongols and Negroes; Linnæus into white, red yellow and black :—Kant into white, copper-coloured, black and olive-coloured races; Blumenbach into Caucasians, Æthiopians, Mongols, Americans; and Malays; Buffon into Northern (viz. Laplanders) Tartarian, South Asiatic, black, European, and American races; Prichard into Iranians (also Indo-Atlantics or Caucasians) Turanians (Mongolians) Americans, Hottentots and Bushmen, Negroes, Papuas (or wool-haired tribes of Polynesia) and Alfourous (or Australians); and Pickering divides them into whites, Mongolians, Malays, Indians, Negroes, Æthiopians, Abyssinians, Papuas, Negritos, Australians and Hottentots. Many of these classifications are framed from external, and for the most part unessential, marks of distinction, as colour of the skin, colour and form of the hair, or with reference to their probable origin-

al geographical position. But the imperfection of such a classification will be evident when it is remembered that a negro, even though the colour of his skin and his woolly hair were to be changed, would not become a European, an Indian or a Malay; and a child of European parents begotten and born on one of the isles of the Malayan Archipelago or in Æthiopia will not be a Malay or an Ethiopian, but an European, by race, although the colour of its skin might possibly approach, by climatical or local influences to that of the indigenous race. —C. C. Bunsen, *Rep. Brit. Ass.* 1847, p. 263.

INDO-GERMANIC.—A term employed to designate the Indo-Atlantic, Indo-European or Caucasian race of man and the family of languages spoken by them. See Hindu; India.

INDO-GETIC.—The term in use to designate the Scythic Getic race who settled in India and on its N. W. borders. See Kathi; Krishna,

INDO-MALAYA, a name suggested by Mr. Logan to designate the Eastern Archipelago. See Mammalia.

INDONESIA, a name suggested by Mr. Logan to designate the Eastern Archipelago. Writing in the *Journal of the Indian Archipelago*, Mr. Logan remarks that amongst the sea basins whose ethnic influence has been in operation during all historic times and is uninterrupted at the present day, are the China, Malacca, Java, Mangkasar, Solo, Mindoro, Molucca, Banda, Papua, Jilolo, Papuan, Papua-Australian and Papua-Micronesian Seas, and the Archipelagian Seas of Johore, the Trans-Javan or Timoreean Chain, the Bisayan group, the Moluccas, Eastern Melanesia and the different Polynesian and Micronesian groups. All these basins exert a two-fold influence. They provoke a constant intercourse between the rivers of their opposite margins or the islets scattered through them, they bring the whole under the operation of foreign civilizations and, opening as they do into each other, they are as broad highways traversing the whole Archipelago in different directions, and uniting it, both for foreign navigators and for the more advanced and enterprising of its native communities. Instead of the name "Indian Archipelago" which is too long to admit of being used in an adjective or in an ethnographical form, Mr. Earl at first suggested the term *Indu-nesian* but rejected it also in favour of *Malaynesian*. The purely geographical term, *Indonesia*, is suggested by Mr. Logan as a short synonym for the Indian Islands or the Indian Archipelago, as we thus get *Indonesian* for Indian Archipelagian or Archipelagic, and *Indonesians* for Indian Archipelagians or Indian Islanders. By Mr. Logan's term *Malayu-land* is understood all districts, whether geographically united or not, that are possessed by communities of Malays, and by Malays or Malays is understood men of the Malay race and language. So by his *Jawa-land* is understood all the lands of the Jawa race; so *Sunda land*, *Wugli-land*, *Batta-land*, &c.

For compound insular districts it is very desirable that single geographical names should be used. Until unexceptionable ones are suggested we must continue to speak of the *Sumatra-Philippine islands*; the *Moluko-Timorean*, &c. The Indian Archipelago must remain, but the shorter form *Indonesia* might be usefully employed on many occasions. The principal divisions may be designated, 1st, *Western or W. Indonesia*, *i. e.* Sumatra, the Malay Peninsula, Borneo, Java, and the intermediate islands; 2nd, *North Eastern or N. E. Indonesia*, *i. e.* Formosa to the Solo Archipelago and Mindanao, all included, and embracing the Philippine and Bisayan groups,

&c. 3rd, *South Eastern or S. E. Indonesia*, from the East coast of Borneo to New Guinea, including the Western Papua islands and the Keh and Aru Archipelagoes; 4th, *Southern or S. Indonesia*, the great Southern or Trans-Javan chain between Java and New Guinea or from Bali to the Timor Laut group. The different portions of the first division are sufficiently distinguished by the names of the great islands of which it is composed. The only portion of the 2nd division which has not a distinctive name is the Southern chain which has a close ethnic connection. As it is throughout the great seat of piracy in the Indian Archipelago it has been proposed to term it *Piratania*, including under that name Mindanao, Solo, and the crowd of other islands extending from Mindanao, to the N. E. coast of Borneo and separating the Mindoro from the Solo sea. In the 3rd division, *S. E. Indonesia*, may be distinguished as subordinate groups, the Moluks, Halamahera, Ternate, Tidore, &c. (N. Moluks, Banda, Ceram, &c. S. Moluks and the Keh Arus.) The sea basins, that is the seas with the marginal basins of their affluent rivers, which are districts of the greatest importance physically as well as ethnographically, he would name after the seas. The basin of the Java sea will be the Java basin, so the Mangkasar basin, Celebes basin, China basin—or better China Malayan, &c. Mr. Logan is of opinion that the post-fix "*nesia*" should be confined to the great divisions of the Indo-Pacific insular region, *Indonesia*; *Melanesia* (New Guinea, Australia and all the eastern Papua islands); *Micronesia* (all the islands between Melanesia and the Luchu and Japanese chain); and *Polynesia*, all the islands of the Pacific to the east of Micronesia and Melanesia as far as Easter island. *Papunesia* may be occasionally used to distinguish the northern Melanesian islands inhabited chiefly by spiral haired tribes, from Australia.

As *Oceanica* includes all the Indo-Pacific islands, he proposes to use the word *Asianesia* to indicate the great S. E. insular region, which has intimate connexions, geographical and ethnic, with Asia. It would include *Indonesia*, *Melanesia*, *Micronesia* and *Polynesia*, but not the N. E. chain that lies along the continent, because, it forms a distinct and well defined geographic and ethnic group. He would therefore call it *Aino-Japanesia*, and it will include all the Japanese and Aino islands from Formosa to Kamtschatka. He remarks that these great basins have several subordinate ethnic regions to which it is necessary to advert, if we desire to trace to their sources the successive foreign elements that have been introduced into the Archipelago. The principal one in the North Pacific is that which is surrounded by the Japanese, Luchuan,

Malakosima, Formosa, Philippine, Palos, Oluthy, Marianne, and Bonin groups. On the S. E. it merges in the Muro-Polynesian band; on the S. W. it constitutes a portion of the Indian Archipelago; on the N. W. it forms the outer boundary of the China-Corean basin on the N. it connects itself with the basins of the Japanese and Okhotsk seas, and is thus brought into direct ethnic union or close connection with the E. districts of M. and N. Asia. The China Sea unites the Indian Archipelago primitively with the great ethnic region of S. E. Asia by the districts of the Hongkian, Tongkin, Mekong and Menam basins, and the marginal Chinese and Anam districts,—the Malay Peninsula, which forms the western bounding district, being ethnically a common portion of the Archipelago and the continent.

This Peninsular district again enters on the west into the twin basins of the Salwin and Irawadi, which are themselves closely connected more inland with all the previous basins, as well as with the great eastern one of the Yang-tse-Kiang. The latter is intimately connected with that of the Hoang-ho, and forms with it the twin basin to which the most advanced and powerful eastern civilization owes its development.

The Tibetan district, the relations of which important district is central ethnically as well as geographically to all S. E. Asia and to Asiaeina, unites all the preceding ones, connects them with the great plateau of mid-Asia, and abuts on the eastern extremity of the primitive Iranian region. The next ethnic region of the Indian Oceanic basin is that of the Bay of Bengal or Indo-Malayan sea which unites the western margin of the China Malayan basin with the eastern seaboard of India. As the rivers of the Indian Peninsula connect it closely with the western marginal districts, the watershed being near the Indo-African sea, while the basin of the Ganges has its head nearly in the same longitude, we may consider the whole of India as a portion of this region. It contains therefore the district of the Malacca Straits, the marginal districts of the northern part of the Malay Peninsula, and the basins of the Salwin, Irawadi and Kolandan all which appertain also to the eastern region. The districts that are peculiar to the Indo-Malayan basin, some however being common to it with the Indo-African basin, are those of the Brahmaputra, Ganges, Godavery, Kishna and Nerbudda, with the secondary districts between the Ganges on the one side and the Nerbudda and Godavery on the other, the great Dekhan and Singalese projection and the western marginal districts. India is connected with the Tibeto-Indonesian region,—landward by the passes of the Himalaya, the Assamese valley,

and the eastern margin of the lower Brahmaputra basin, and oceanically by the coasts and winds of the Bay of Bengal. By the latter it has also a direct and independent connection with the insular portion of the first region.

The Indo-African Sea, is that portion of the Indian Ocean extending from its N. W. boundary to the Mozambik Channel and including the Persian Gulf, Arabian Sea and Red Sea. It has had much influence on the ethnology of Eastern Africa. The corresponding eastern portion of the Indian Ocean may be termed the Indo-Australian sea. Important ethnic considerations—relating to the Oceanic winds,—make it necessary to distinguish these two regions from the middle one; this with the districts of the Indus basin, the marginal district of Beluchistan, the great longitudinal one formed by the Persian Gulf and the basin of the Euphrates, the southern Arabian district, that of the Red Sea, and the marginal or Trans-Nilotic one of E. Africa, forms the next region. Of these, the Euphrates and the Red Sea are of especial importance, for by them the ancient civilization of the Mediterranean and the Nile spread their influence into the Indian region, while the former was itself the seat of a great archaic development of intellect and art. He considers that the shores of the Indian ocean were surrounded by races in an advanced stage before the seeds of a higher civilization germinated in the basins of the Nile and the Euphrates, and that they were influenced by the more powerful and populous nations of the Nile and southern India long before the later and slowly descending Iranian civilization touched them. These races included navigating tribes, otherwise they could not have spread themselves over every habitable island of the Eastern Ocean from Madagascar to the Fiji group, if not throughout Polynesia also. To account for this extension, it is not necessary to suppose that they had larger boats than those in which in modern times the Papuas have been accustomed to make descents on Ceram, and the Sakalavas on Camore and the Coast of Africa. But the far higher maritime art of southern India appears to be one of the most ancient in the world. It was certainly not derived from the brahmanical tribes of the north-west and it was too much in advance of the Himyaritic to have been borrowed from them. There are abundant reasons for believing that India, before the prevalence of brahmanism, was at least as civilized as Africa, and nations who had reached this stage, were as capable of perfecting a navigation of their own as the Chinese, and far more so than the Arabs, who wanted the nurseries which the large eastern rivers gave to India. The earliest glimpse we have of the vessels of the east coast of

India is at a comparatively recent period, 1800 years ago, but it is strongly in favour of an indigenous art. Amongst all these foreign influences of which the presence can be clearly traced, two are of the widest extent and greatest importance. The first is entirely African and Indo-African in its character, it embraced the whole Indian Archipelago, Australia and Papuanesia. Whether it extended to Polynesia and Micronesia Mr. Logan regards as still doubtful, but it certainly included a portion of Micronesia. Along the shores and islands of the Indian Ocean the races to which it must be referred appear to have prevailed. Their limits were those of monsoons, or from Africa to Polynesia. When they thus spread themselves over Africa, India, and the Indian Archipelago, the great outlying regions of the old world, there could have been no civilized Semitic, Iranian, Burmese or Siamese races on that sea to hinder them.

The language of their population belonged to a state intermediate between the monotonous and the inflectional, and had strong and direct affinities to the other families of language of this stage,—the Ugro-Tartarian, Japanese, old Indian and African, and to a certain extent too the American, which last may be considered as constituting a peculiar family. Amongst the best preserved examples of these languages are the Formosan, the Philippine and the Australian. It is probable that some of the eastern Melanesian languages will be found to be equally characteristic.

The second of the great insular families is Tibeto-Indian and Mayama-Anam. It connects itself with all the races and languages from Tibet to Anam, but it chiefly flowed in through the ethnic basin of the Malacca sea. By a long continued influx this family spread itself over the Malayan Peninsula, Sumatra, Java, Borneo, and Celebes, but its further progress, over the many islands to the north and East appears to have been long checked by the older races.—*Jour. of the Indian Arch.* Vol. IV, Nos. V. and VI. May and June, 1850, page 310.

INDOOR-KANEE PANA. BENG. *Salvinia cucullata*.

INDONG MOOTIARA. MALAY. Mother of Pearl.

INDO-PARTHIAN DYNASTY. See Greeks of Asia.

INDORE, is the capital of the maharajah Holkar. Of the feudatory territory, consisting of 71 states, supervised by the Central Indian Agency, the head quarters is Indore, but it has three grand divisions. The North East division comprises the native states of Bundelcund and Rewah. The Northern division consists of the Northern and Central districts of the Gwalior States. The South West

division comprises the table-land known in modern times as Malwa, though far within the ancient limits of the province of that name, and the submontane territory between it and the Nerbudda, as also a considerable tract south of that river, extending to the Kandesh frontier. The first or N. East division, extending from the Bengal Presidency in the east to the Gwalior State in the west, includes Rewah and 35 other states and petty chiefships. Its area is about 22,400 square miles; its population about 3,170,000 souls, and its public revenues aggregate about Rs. 63,58,000. The 2nd or Northern division extends from Bundelcund and the Saugor district, and has an area of about 19,505 square miles; its population is about 1,180,000 souls, and its public revenue about Rupees 67,65,000. The 3rd or South West division goes on westward, to the Bombay Presidency, and contains the remainder of Gwalior, Holkar's states, Bhopal, Dhar and Dewas and other small states. The area of this division is about 41,700 square miles, its population about 3,320,000 souls and its public revenues about Rupees 1,30,00,000. The states and petty chiefships in Central India, form a political, and are in a natural, division of British India, and include an area of 83,600 square miles and a population of 7,670,000. This territory is divided thus,—viz.

	Principal states.	Secondary.	Minor and Petty.	Total.
Mahratta.	2	2	..	4
Mahomedan..	1	2	4	7
Bundela.....	...	6	11	1
Rajput.....	1	12	10	...
Brahmins, &c.	...	1	3	...
	4	23	44	71

with a total revenue of Rupees 26,123,000.

The Indore Central Agency controls the

Pirtharee thakoor who receives a tunkha of Rupees 4,835 from Dewas under a settlement mediated by Captain Borthwick and Sir John Malcolm in 1818 with Mahbut Sing. The two chiefs of Dewas are in the habit of making certain deductions from this amount.

Baglee thakoor who is a dependent of Sindia. Under a settlement effected by Sir John Malcolm, in A. D. 1819, thakoor Salim Sing received Peepia and eight other villages on a quit-rent of Rupees 5,562 a year, and five other villages on a quit-rent of Rupees 909.

Haroidia, a vakeel on the part of the thakoor remains in attendance on the Agent to the Governor General.

Tenk thakoor, receives *tunkhas* under sunnids from Sindia and Holkar.

Pathavea thakoor obtained the village of Patharea in the pergunnah of Oonchode from Sumbhaje Rao Angria on a quit-rent of Rupees 701.

Dhungong, and *Singhana* settlements were mediated by Major Henley who admitted a claim to Rupees 352.

Bayee, settlement made by Sir John Malcolm in 1819. Purbut Sing and Bughoonath Sing were to maintain the security of the Simrol Pass and to receive the taxes on merchandize levied in Alia Bai's time.

Mayne. Settlement of the Taiza Turwees claim was effected by Sir John Malcolm on 25th January 1819.

Dhawra Kunjara, was settled by Sir John Malcolm and was similar to the settlement with the Taiza Turwee of Mayne.

Rugogurth (Dewas). An engagement with thakoor Zalim Sing was mediated by Sir John Malcolm under which he held nine villages from Tookjee Rao Puar of Dewas subject to an annual payment of Rupees 2,887-8, and eleven villages from Anund Rao Puar for which he paid Rupees 4,287-8 a year. He was succeeded by his son Dowlut Sing who rebelled in 1857 for which his estates were confiscated by Dewas at the request of the Agent to the Governor-General.

Kaytha.—By an engagement mediated by Captain Borthwick in 1818 the thakoor receives Rupees 1,227 a year from the two chiefs of Dewas.

Khursee Jhaluria.—Under an engagement thakoors Suroop Sing and Futteh Sing received annually Rupees 225 from Tukejee Rao Puar of Dewas.

Poonghat.—Piem Sing received from Sindia a tunkha of Rupees 112 also a grant of Poonghat and twelve villages subject to an annual payment of Rupees 401.

Bhojkheree was granted to Rawut Doorjun Sing the village of Seedra on payment of Rupees 160 a year to Kotah.

Indoro was captured by the British on the 24th August 1804. As a city, it is of modern date. That part of the Holkar capital called Old Indore, was a small village, the site of which pleased Alia Bai, who encamped at it after the death of Mulhar Row Holkar.—*Treaties, Engagements and Sunnids. Malcolm Central India, Vol. I. p. 11.*

INDO-SCYTHI, and Indo-scythian are terms employed to designate a race who became early occupants of N. W. India. The *Fuchi*, established in Bactria and along the Jihoon, eventually bore the name of Jeta or Yetan, that is to say, Getes. Their empire subsisted a long time

in this part of Asia, and extended even into India. These are the people whom the Greeks knew under the name of Indo-Scythi. The period allowed by all authorities for the migration of these Scythic hordes into Europe, is also that for their entry into India. The sixth century is that calculated for the Takshac from Sehesnagdesa; and it is on this event and reign that the Pooranas declare, that from this period "no prince of pure blood would be found, but that the Soodra, the Turshka, and the Yavan, would prevail. All the Indo-Scythic invaders held the religion of Budha; and hence the conformity of manners and mythology between the Scandinavian or German tribes and the Rajpoots, increased by comparing their martial poetry. The Indo-Scythi of Arrian were a Scythic tribe who settled along the Indus. They attempted to penetrate Eastward by way of Kandesh and Malwah, but were opposed by Vikramaditya. The Indo-Scythia of the Greeks was therefore the valley of the Indus, Northern Indo-Scythia being the Punjab proper, and occupied by the Med race, and Southern Indo-Scythia being Sind, occupied by the Jat, a tribe of the Abar hordes. Pliny calls the western region of the Caucasus, Scythia Sendica, and about this were congregated the Maidi, next to the Sindi and Kerketa; a tribe of Arii or Arichi, who gave their name to an island of Aria, or Arietas, or river Arius; a tribe of Maetes or Maotai with towns named Madia and Matium; a tribe of Matiani with a town of Mateta; a tribe of Kottæ, with a country called Kutais and cities called Kuta, and Kutaina; a tribe named Kolchi, with a mountain and a district called Koli; a tribe of Iberes with a town called Iberia, a tribe called Buonomai, a district of Minyas, a city of Male, and a tribe of Baterna with a river called Batlys and a port named Bata, reminding the investigator of the Med, Kathi, Kol, Abhir, Mina, Mallina and Bhatti of the valley of the Indus. The bulk of the inhabitants of British India, in the Peninsula and Hindustan, are of the Turanian (Mongolian or Scythic) race, and are regarded by Europeans as the earlier inhabitants of the country. They are styled by Mr. Hodgson the Tamulian races, to distinguish them from those Arians (Iranians, Indo-Atlantics or Caucasians) who subsequently followed the Mongolian tribes and who are now to be found in all posts of honour from the snowy mountains in the north to the southern-most point of the Peninsula of India; Humboldt calls these the East Arians or the Brahminic Indians, to distinguish them from the West Arians, or Persians, who migrated into the northern country of the Zend, and were originally disposed to combine with the dualistic belief in Ormuzd and Ahrimanes a spiritualized

[veneration of nature. Mr. Hodgson briefly sums up his views as to the groups to which the races in South Eastern Asia belong, when remarking that the latest investigators of the general subject of human affinities include in the great mongolian family, not merely the high Asian nomades or the Turks, the Mongols and the Tangus, but also the Tibetans, the Chinese, the Indo-Chinese, and the Tamulians. Under the term, Tamulian, he includes the whole of the aborigines of India, whether civilized, or uncivilized, from Cape Comorin to the snows, except the inhabitants of the great mountainous belt confining the plains of India towards Tibet, China and Ava. These last he thinks are, in the North West, derived from the Tibetan stock; and in the South-East from the Indo-Chinese stock; the 92° of East Longitude, or the Dhansiri river of Assam, apparently forming the dividing line of the two races, which are each vastly numerous, and strikingly diversified, yet essentially one, just as are the no less numerous and varied races of the single Tamulian stock, and Mr. Hislop took a similar view as the result of his philological investigations. The great Turanian or Tartar family of languages is spoken by all the tribes from the Himalayans to Okhotsk and to Lapland and includes the Hungarian, Crimean and Turkish tongues. In British India and on its borders are four distinct branches of this family of languages spoken by members of the Turanian race. *In the North*, are the Himalayan tribes, with their dialects, occupying from the Kunawars on the Sutlej to the Bots of Bhutan in the extreme east. *Then* there are the *Lohitic class* of languages, comprising with the Burmese and others of the Malay Peninsula the dialects of the Naga tribes and of the Mikir in Assam, and of the Bodo, Kachari, Kuki and Garo in Eastern Bengal. Nearly related to this class is the *Kol or Munda family* of languages, including the Kol, Southal and Bhumi of Sin'bhhum and Western Bengal and the Mundala of Chota Nagpur, the Kur or Muasi and the Korku in Hushangabad, and westwards in the forests of the Tapti and Nerbudda until they come in contact with the Bhil of the Vindhya Hills, and the Nahal of Khandesh belong to this family;—indeed Mr. Hislop held that the word Kur is identical with Kol. The *fourth* branch is Tamulic or Dravidian, to which belong the Brahui of Baluchistan, the Gondi, the Tuluva of Kanada, the Karnata of the Southern Mahratta country, the Todava of the Neilgherries; the Malayalam of Travancore the Tamil and the Telugu. The Kur and Southal are closely related and are separated from the Dravidian. The Kur or Muasi and the Korku or Kurku to the North-West and West of the Mahadeva hills, are, in language

at least, quite distinct from the Gond tribes. Mr. Hodgson is of opinion that the Tamulian Tibetan, Indo-Chinese, Tangus, Chinese, Mongol and Turk are so many branches of the Turanian family, and he regards the aborigines of British India, as Northern of the Scythic stem, but he remains undecided whether they owe their Scythic physiognomy to the Tangus, the Mongol or the Turk branch of the Tartars or Scythians, and whether they immigrated from beyond the Himalayas at one period and at one point, or at several periods and at as many points. All writers are of opinion that when the Aryan race entered India, they found the country occupied by the prior Scythic races, to whom their writings applied contemptuous expressions, Dasya, M'hlecha. These prior races seem to have been driven largely out of Northern India into and through the Vindhyan mountains into the Peninsula of India and Ceylon, where their idiom the Tamil, Telugu and Karnatica are sister dialects of one speech, and Dr. Prichard concurs in opinion with Professor Rask who regards the languages of the mountain tribes of India, the Bhil, the Gond, the Toda and others as also of the Tartar stock, and mentions that some curious analogies have been observed between the Tamulian and other dialects of the Peninsula and the languages of Australia. Mr. Logan, however, who has had great opportunities of contrasting and comparing the Dravidians from various parts of India, inclines to call them South-Indian. He remarks that, physically, the population of Southern India, is one of the most variable and mixed which any ethnic province displays. A glance at a considerable number of Kling (Telugu) and Tamular of different castes and occupations, shows that the varieties when compared with those of a similar assemblages of men of other races such as Europeans, Ultra-Indians or Indonesians (including negroes in the last two cases) are too great to allow of their being referred to a single race of pure blood. Some are exceedingly Iranian; some are Semitic, others Australian, some remind us of Egyptians, while others again have Malaya-Polynesian and even Simang and Papuan features. Yet when the eye takes in the whole group at once, they are seen to have all something in common. They are not Iranians, Polynesians, Papuans, &c., but South Indians. The Dravidian language, however, or one of its principal elements, was probably an extension of a Mid or W. Asiatic formation, and it may be inferred that the common element of the Dravidian, the Fin and Japanese languages, must be much more ancient than the occupation of Japan by the Japanese, India by the Dravidians and Finland by the Fins.

The peculiarities in the Dravidian physical type, when compared with the Scythic, are African and Africo-Semitic.

The main affinities of the Dravidian formation, thus point two ways,—the linguistic chiefly to a Scythic, and the physical chiefly to an African origin or fraternity. The geographical position of the Brahui would lead us to explain the double alliance by placing the native land of the Dravidian stock in Beluchistan and including it with Arabia, or the southern portion of the latter,—in the archaic African or Africo-Semitic era. That the African physical element prevailed over the Scythic, while a Scythic language has entirely superseded one of an African character, finds explanation in the fact that the Scythic races and languages, have in themselves an intimate archaic connection with the African, and the Dravidian language, although Scythic more than African, has special Africo-Semitic affinities. He is further of opinion that races may blend without the different types being effaced and that, while certain exclusive or excluded castes, or sequestered geographical sections of the population, may preserve one type better than another all may continue for some thousands of years, to be reproduced in softened and modified forms even in the least secluded portions, and to this he refers his explanation of the variety of physical types visible in south peninsular India. That the Dravidian race did not bring with it into India, the civilization which the present great southern nations possess, as the Arian did theirs, appears, he thinks, to be little questionable when we consider the antique character and affinities of the dialects of the Male, Orond, Khond and Toda, the very archaic and barbarous character of many of the customs of the widely separated tribes which bespeak them a prior race, and above all, the nature of the relationship of the dialects to those of the civilized nations. The known ethnic facts lead directly to the conclusion that the uncivilized Dravidian speaking tribes are genuine Dravidians who have in a great measure escaped the culture which the more exposed tribes have received and thus preserve a condition of the race, certainly not more barbarous than that which characterised it when it first entered.

The Dravidian race, every-where in India, has been long in contact with other races and shows the influence which the intermixture has produced. If the formation of their language be taken as a test, it leaves no doubt that one tribe carried a large batch of its native glossary over all India from the Himalaya to Ceylon. In the Himalaya and in Northern India, the old race has long been in contact with ultra-Indians, Tibetans and Arians. But if their physical appearance be examined even in the extreme South the diversity which prevails shows that

there has been great intermixture, but there are nevertheless widely prevalent characters most of which are not Arian, nor Tibetan, and are even distinct from Ultra-Indian.

The more important of these characters are a pointed, and frequently hooked, pyramidal nose, with conspicuous nares, more long and round; a marked sinking in of the orbital line, producing a strongly defined orbital ridge: eyes brilliant and varying from small to middle sized; mouth large, lips thick and frequently turgid; lower jaw not heavy, its lateral expansion greater than in the Arian and less than in the Turanian type; cheek bones broad and large rather than projecting, as in the Turanian type, giving to the middle part of the face a marked development and breadth and to the general contour an obtuse oval shape, somewhat bulging at the sides; forehead well formed but receding, inclining to flattish and seldom high; occiput somewhat projecting; hair fine, beard considerable and often strong, colour of skin very dark, frequently approaching to black.

We may, he adds, conclude from the ethnic character and position of the ancient Indian population, that it belonged to the small Turano-African type. But successive modifications of race, seem to have been going on in India from times long anterior to the Arian or even Tartar eras and imply linguistic changes also.

The above is the higher and much improved type. But as in Africa, Ultra-India and Asia, a smaller, more Turanian, and less Semiticised type is still preserved although variously crossed. The successive Turanian predominant races and formations and the Irano-Semitic have in turn influenced all the great outlying southern provinces, Africa, India, Ultra-India, and America, the last in general indirectly, through Ultra-India, India and Africa. From the formation of the language, there was seemingly a still older intrusive people, the Scythico-Semitic and pastoral who found India less Scythic and more African than it became under their influence, but the same evidence shows that the Dravidian race and linguistic formation preceded the Ultra Indian, Tibetan and Arian in India, and prevailed everywhere to the southward of the Himalayas. Their route seems to have been from the N. W. where, from time immemorial, the region between the Indus and Euphrates has been occupied by the Turanian, Iranian and Semitic races. Physically the Dravidians are somewhat Turanian, and the linguistic formation of their language has a strong and unequivocal affinity to the great Asiatic-Turanian, or Ugro-Japanese alliance. The Turanian formation, physical and linguistic, evidently long preceded the Iranian and Semitic, as an expansive and dominant one and it is certain that the

Turanian was migratory and diffusive on a great scale, long before the Semitic and Iranian, which must have remained sequestered in some portions of the mountain band of Asia Minor, Armenia, and Irania and the adjacent S. W. region which includes the basin of the Euphrates, during the great era that must have been occupied while the Turanian linguistic formation spread to Lapland and Japan, to North Cape and Ceylon.

The peculiarities in the variable physical character of the Dravidian physical types, when compared with the Scythic, are African and Africo-Semitic. The very exaggerated occipital and maxillary protuberances are not characteristic of the typical African head, but of a debasement of it confined to certain localities. Several east and mid-African nations have the so-called African traits much softened, and differ little from the Dravidian. Even woolly or spiral hair is not a universal feature in Africa, some tribes having fine silky hair. The Dravidian pyramidal nose, the sharp depression at its root, the slight maxillary and occipital projection, the turgid lips, the oval contour and the beard are all African. Mr. Logan thinks there is reason to believe that the strong Africanism of some of the lower South Indian castes is really the remnant of an archaic formation of a more decided African character. The position of India between two great negro provinces, that on the west being still mainly negro, even in most of its improved races, and that on the east preserving the ancient negro basis in points so near India as the Andamans and Kidah. It is therefore highly probable that the African element in the population of the peninsula of India, has been transmitted from an archaic period, before the Semitic, Turanian and Iranian races entered India, and when the Indian ocean had negro tribes along its northern as well as its eastern and western shores. On this point it may be remarked that Dr. Pritchard mentions as the result of Baron W. Humboldt's researches into the Kavi language, that the resemblances between the nations of the Polynesian islands and the tribes of the Indian Archipelago, Malacca and Madagascar, are not, as some have supposed, the effect of casual intercourse, but essential affinities, deeply rooted in the construction of these languages, and that the races of people are themselves of one origin.

Mr. W. W. Hunter describes India as partly peopled by races distinct from the Aryan population, some of whom he says, have preserved their ethnical identity in sequestered wilds, whilst others have merged as helots or low castes into the lowland hindus, and he also regards these now fragmentary peoples as the debris of a widely spread primitive race. In his dictionary of the non-Aryan languages of

India and High Asia, he classes all languages as under—

1. *Reflecting types*.—Arabic, Sanscrit.
 2. *Compounding types*.—Baak; Finnic; Magyar; Turkish; Circassian; Georgian; Mongolian Mantshu; Javanese; Ngoko-Javanese; Krama; Malay-Javanese.
 3. *Isolating types*.—Chinese of Nankin; Amoy, Peking, Shanghai and Canton; Japanese.
 4. *Chinese frontier and Thibet*.—Gyami; Gyarang; Takpa; Manyak; Thoehu; Sokpa; Horpa; Tibetan.
 5. *Nepal (West to East)* Serpa; Sunwar; Gurung; Murmi; Magar; Thakya; Pakhya; Newar; Limbu.
 6. *Kiranti Group, East Nepal*.—Kiranti; Rodong; Kungchenbung; Chingtangya; Nachhereng; Waling; Yakha; Choarasya; Kulungya; Thulungya; Bahingya; Lohorong; Limbichhong; Balali; Sang-pang; Dami; Khaling; Dungmali.
 7. *Broken tribes of Nepal*.—Darhi; Denwar; Pahri; Chepang; Bhramu; Vayu; Kuswar; Kusunda; Tharu. Lepcha (Sikkim). Bhutani or Lhopa.
 8. *N. E. Bengal*.—Bodo; Dhimal; Kocch Garo; Kachari.

- And when writing on the non-Aryan languages of India and High Asia, Mr. Hunter states (p. 22) that his book contains primeval roots common to both Aryan and non-Aryan speech, in a far more definite manner than the similar indications by which scholars have sought to reduce the Semitic and Indo-Germanic families to a cognate source. In support of this view he remarks that many of the non-Aryan peoples of India, he tells us, take their tribal designations

from the word for "man," in their respective dialects and the very general term *mi* (man) with some prefixed or supposed syllable, supplies the basis of the race name to not less than forty ascertained tribes. Thus, Du-mi, Kami, Kumi, Angami Naga, Mithan Naga. And if we recognize the non-Aryan phonetic displacements of *m* and *l* and of *l* and *r*, the list can be greatly increased, —thus, in the Sak, *lu*; Toug, *mru*; *murmi*, *mi*, Thaksya, *mli*; and the root *li* affords the generic term *homo*, man, to a whole series of tribal names. Thus Bala-li; Ma-li, the people of Rajmahal; Dhima-li; Santa-li; Banga-li, meaning the people of Bala, Banga, and so fourth. *Li* is thus often added to specific names for man to form names for aboriginal tribes. In Santali, *li* furnishes the nomenclature connected with the propagation of our species, such as *lai*, *laia* &c. and appears in *li* diu, a child; *le-daka* or *lad ko*, children; *Khi li* a generation of men, (*ho-li*) and the hitherto unexplained terms, *Che-la*, *Che-li* (= *Khi-li* = *holi*) for son and daughter, used by all the semi-aboriginal castes of Lower Bengal. The root *Ko*, with the generic suffix *li*, is met with in all periods of history and in all India. The Mahabharata and Vishnu Purana, speak of *Ko-li* tribes in connection with Mikala, Dravida, Kirata and others, and the Aitareya Brahmana speaks of the *Koli* as *Dasya*. Among a section of the non-Aryan races of India, or aborigines as Mr. Hunter styles them, the root *ho*, shortening into *ko*, *ku* and *ka*, furnishes the specific word for man amongst the *Kol* tribes of Central India and is one of the oldest and most widely spread roots for man. In the Sanscrit play, the *Mricchaka* kati, *go-ho* is man; among the *Kur*, near Ellichpore, it is *ho-ko*. Amongst the Siamese it is *khon* or *kun*, which is the same form as it takes amongst *Khond*.—*History of the Tartars. Histoire des Huns*, Vol. I. p. 42. *Tod's Rajasthan*, Vol. I. p. 65. Dr. W. W. Hunter, on the Languages of India, p. 22. *Logan in Journ. Indian Archipelago Report Brit. Association* 1847, pp. 241-250. —*Tod's Rajasthan. Elliot's History of India*,—pp. 507-8, 417. *Cosmos V*, II. p. 40. See *Jat*, *Med*.

INDRA, the hindoo god of thunder, a personification of the sky, the chief of the Devata, or Sura (vide Devata), also the yoga star of the 26th Nachatra, 7 Pegasi. The attributes of Indra correspond to those of the Jupiter of the Greeks and Romans and the Thor of Scandinavia. Indra is nothing more than the impersonation of the commonest phenomena of the skies above our heads. He is the king of immortals and the lord of the firmament. He is represented as a white man sitting upon his celestial *vahan*, the elephant Airavati, produced at the churning of the ocean,

and holding in his hand the *vajra* or thunder-bolt. He is depicted, like Argus, covered with eyes and is thus called the thousand-eyed god: which distinction was not conferred upon him in consequence of his good deeds, but having become enamoured of Ahilya, the wife of the pious rishi Satama, he endeavoured to seduce her. The rishi having discovered his intentions in time, bestowed on the god his curse that his body should be covered in a very extraordinary manner, which, on the contrition of the offending deity, he changed into eyes. The heaven of Indra is *swarga* or *swarga-lokam* an interesting description of which has been given, in the English language by Kasi-prasad Ghose. In Indra's heaven, this poet makes flowers of delightful perfume shed their fragrance around, and enumerates all that can fascinate the orientalist.

"Great Surya smiles with lustre gay,
And flings through azure skies his ray;
The golden mountain's glittering brow
Is decked with many a sparkling gem,
Which shines, by Surya's brightness, now,
As if a halo circled them;
And on the mount beneath his beam,
The king of Swarga's garden smiles,
In which by many a gurgling stream,
The God his time in pleasure whiles.
Here Vayu through the charming wood,
For ever creeps in gentlest mood:
Now o'er the blowing grass he goes,
Now stirs the fragrance of the rose.
Here many a flower of lovely hue,
Famed in the loves of former time
Blooms glittering with the diamond dew,
And sweetening the heavenly clime.
Young roses through the passing breeze,
To taste their sweets invite the bees.
Here fountains round the heavenly bowers
Perpetual fall, and glittering showers
Of diamonds, pearls, and stars descend,
And sweet celestial music lend
Unto the ears of mortals, blessed,
For pious deeds, with heavenly rest.
The garden's edge is compassed round
With trees with lasting verdure crowned,
And in the garden's centre stands
A palace built by heavenly hands,
With sapphires decked, the golden walls
Of Satakruta's courtly halls,
Reflecting all their beauteous light,
And glistening round all fair and bright.
The snow-white pavements made have been
Of chrysolites of brightest sheen,
Where sweetest flowers of lovely hue
Are sparkling bright with drops of dew;
The outer wall is smooth all o'er
With rubies glittering more and more,
And through the gardens, trees appear
Like morning's light in winter's sky,
Ere the resplendent Surya rears

His glorious face of light on high.
 As if in floods of ruby light,
 The court is bathed and shines so bright.
 But lo ! a throng afar appears,
 Like vanished joys of former years ;
 So indistinct, that scarce the eye
 Its faint progression can descry.
 As when at morn's dubious light,
 A star or two appears in sight ;
 And now behold, and now no more,
 Their glimmer in the growing shine ;
 So like a mass of dim light o'er
 The garden move the gods divine ;
 And midst them those who greater are
 Shine like so many stars afar ;
 Now more and more advance they nigh
 With breast erect and statures high,
 With steps majestically slow,
 With looks cast on the ground below,
 Before them Indra, dignified
 With royal mien and royal pride,
 Proceeds."

It is related that on one occasion, the ceremony of *Aśwamedha*, or sacrifice of a horse, for the hundredth time, was commenced which would have deposed Indra, and elevated king Suguru to the sovereignty of the immortals in his place. On another occasion, in the form of a shepherd boy, Indra robbed the garden of a peasant. In this theft he was detected and bound with cords, but released by the aid of the subordinate genii of the winds,

The peasant seized, and with cordage strong
 Shackled the god, who gave him showers.
 Straight from seven winds immortal genii flew,
 Vartana green, whom foamy waves obey,
 Bright Vahni, flaming like the lamp of day ;
 Kuvera, sought, by all, enjoyed by few ;
 Stern Yama, ruthless judge, and Isa, cold ;
 With Nairit, mildly told, [thunder,
 They, with the ruddy flash, that points his
 Rend his vain bands asunder :
 Th' exulting god resumes his thousand eyes
 Four arms divine, and robes of changing dyes."

Fully to understand these allusions, it must be remembered that the hindus have assigned regents to each cardinal and intermediate point of the compass. Indra being esteemed the first of firmamental deities, and especially the ruler of the east, that point is reckoned first, and the others are thus ruled : Agni, south-east ; Yama south ; Nairit, south-west ; Varuna, west ; Vayu, north-west ; Kuvera, north ; Isa or Isani, north-east. To which are sometimes added three other quarters, or points, viz above, governed by Brahma ; below, by Naga or Sesh Naga, the king of serpents, otherwise named Vauki ; and the centre, ruled by Rudra, or Siva. According to Coleman's Mythology, Indra is the regent of showers and of the east wind ; Varuna, regent of the west ; Vahni, of the south-east ; Kuvera, of the north ; Yama, of

the south, Isa, or Isani, of the north-east, Nairit, of the south-west. This account will be found to vary slightly from other descriptions of the regents of the winds or eight points of the earth ; but the several accounts differ in a very trifling degree, introducing Agni instead of Vahni ; instead of Nairit ; Chandra for Kuvera ; and Chandra also, or Prithivi, for Isa. Vayu, in hindu poetry, is the north-west wind. Indra has a variety of names. He is called Śakra in consequence of being the evil adviser of the demons or asura, by whom he was so often driven from heaven ; and, with true mythological inconsistency, Pakushasani, he who governs the gods with justice ; Shatkratu, he to whom a hundred sacrifices are made ; Vajra pani, the bearer of the thunder bolt ; Vitraha ; Bularati, and Numuchisadana, the destroyer of the giants ; Uriha the holy ; Meghusadama, he who is borne on the clouds, &c. &c. Indra possesses the following blessings, produced at the churning of the ocean. Kamdenu, the all-yielding cow ; Pariyataka, the tree of plenty ; and Uchisrava, the eight-headed horse. The princes of Kangti, the rajahs of Asam, and other chiefs in the eastern parts of India, pretend to have derived their origin from Indra.— Indra, as the king of immortals, corresponds with one of the ancient Jupiters, for several of that name were worshipped in Europe ; and particularly with Jupiter the conductor, whose attributes are so nobly described by the Platonic philosophers. One of his numerous names is Dyupeti, or, in the nominative case, before certain letters, Dyupetir ; which means the Lord of Heaven, and seems a more probable origin of the Hetruscan word than Juvaus Pater, as Dies pater was probably not the Father, but the Lord of Day. He may be considered as the Jove of Ennius, in his memorable line.

Aspicet hoc sublime candens, quem invocant omnes Jovem,

where the poet clearly means the firmament, of which Indra is the personification. He is the god of thunder and of nature's elements, with inferior genii under his command and is conceived to govern the eastern quarter of the world, but to preside, like the genius or agathodæmon of the ancients, over the celestial bands, which are stationed on the summit of Meru, or the north pole, where he solaces the gods with nectar and heavenly music. Hence perhaps, the hindus, when giving evidence, and the magistrate who receives it, are directed to stand fronting the east or north. The genii, named Cinnara, are the male dancers in swarga, the heaven of Indra ; and the Apsara are his dancing girls, answering to the fairies of the Persians, and dæmels, called in the Koran, hur-ul-aiun or with antelopes, eyes.—

Indra is fabled to reside in the celestial city of Amravati, where his palace, Vajjanta, is situated, in the garden Nandana, which contains the all-yielding trees Pariyataka, Kalpadruma and three others similarly bountiful. The hindus make drawings of a tree (Bhima?) yielding, if not all sorts, a curious sort of fruit, viz. men; with a man of larger mould climbing up its stem; a second, with a bow at his back, is looking on, encouraging him. Fifteen men are hanging on the boughs like fruit. Although these, or even one of them, might suffice, and qualify its owner for the title which Indra bears of Lord of Wealth, he is sometimes represented to possess likewise the all-prolific cow, Kamdena, above alluded to, as well as Uchisrava the eight-headed horse, that arose with the cow and first named tree from the churned ocean, as related in another place. His consort is Indrani: he rides the elephant Airavati driven by his charioteer Matali and he holds the weapon Vajra, or the thunder-bolt, and is hence named Vajrapani. His chief musician is named Chitra-ratha, who rides in a painted car, which on one occasion was burned by Arjun, the confidential friend and agent of Krishna, or the sun. Indra is more especially the regent of winds and showers: the water-spout is said to be the trunk of his elephant; and the iris is appropriately called his bow, which it is not deemed auspicious to point out. Menu says "Let not him, who knows right from wrong, and sees in the sky the bow of Indra, show it to any man. His consort, is Indrani or Aindri, also named Pulomaya, sometimes Powlumi and Saki; and she is very virtuous as well as beautiful.

In hindu mythology the guardians of the world are eight deities who now rank next below the hindu triad. They are, 1 Indra, 2 Agni or fire, 3 Surya the sun, 4 Chandra the moon, 5 Pavana the wind, 6 Yama the god of Justice and lord of the infernal regions, 7 Varuna the god of water, and 8 Kuvera the god of wealth. Indra takes a very important position in each of the three periods of hindu mythology. In the Vedic period he is the great Being who inhabits the firmament, guides the winds and clouds, dispenses rain, and hurls the thunderbolt. In the Epic period he is still a principal deity, taking precedence of Agni, Varuna, and Yama. In the Puranic period he is still a chief deity, only inferior in rank to the great triad, Brahma, Vishnu, and Siva. His heaven is called Swarga-loka or Indraloka, and his pleasure garden or elysium, his city (sometimes placed on mount Meru, the Olympus of the Greeks, his charioteer, his thunderbolt, his elephant; his bow (the rainbow) are all famed. In the present state of hinduism, in which, however,

every hindu has a separate belief and hero-worship, the worship of incarnated beings, devil-worship, the worship of the lingam are the prevailing forms, Indra is almost unheard of and unknown.

Amongst the earliest dissenters from Indra, were the Yadu race under Krishna's influence. The reasons leading him to the change are not known, but the Maha Bharata makes him say to Nanda his father, why worship Indra as the Supreme God? O father we are Vaisiyas and our cattle live upon the pastures, let us therefore cease to worship Indra, pay our devotions to the mountain Govardhana. Up to that time, it was to the heaven of Indra, that the good who died were believed to proceed.

The two gods, Indra and Agni, Rain and Fire, were the chief deities worshipped by the Vedic Aryans; the sovereign of the gods, Indra, the most powerful of the Vedic deities, was the god of the firmament, the hurler of the thunderbolt, who smote the rain cloud, and brought down waters, who delighted in the Soma juice, in eating, drinking, and war, strong and drunk with wine. Indra is now never invoked, but has been succeeded by Vishnu and Siva.

Agni, another Vedic deity, is the personification of fire and was worshipped as the destroyer of forests, as useful in the sacrifice and in the household.

"When generated from the rubbing of sticks, the radiant Agni bursts forth from the wood like a fleet coursers."

"When excited by the wind, he rushes amongst the trees like a bull, and consumes the forest as a rajah destroys his enemies."

"Such as thou art, Agni, men preserve thee constantly kindled in their dwellings, and offer upon thee abundant food" (*Rig Veda* I, 73.)

Varuna was the Vedic god of the waters, and god of the ocean, but the name was sometimes applied to the sun and sometimes used as a personification of day. As with other gods, when addressed, he was regarded as supreme, and capable of forgiving sin:—

"Let me not yet, O Varuna, enter the house of clay; have mercy, Almighty, have mercy!"

"If I go along trembling, like a cloud driven by the wind; have mercy, Almighty, have mercy!"

"Thirst came upon the worshipper, though he stood in the midst of waters, have mercy Almighty, have mercy."

Surya or the sun, called also Savitra, Mitra, Aryaman and other names, was a Vedic god, who continues to be worshipped down to the present day, by brahmins and zoroastrians. The solar race of Kshetrya who appear in the Ramayana, derive their origin from the sun; but in the higher spirit, the sun is regarded as divine, as pervading all things, as the soul of the world and supporter of the universe. In 8

verse of the Rig Veda (iii. 62, v. 10) this idea is supposed to be indicated. It is O'm! Bhurbhuvassuvāḥ, O'm. Tatas vit'hrvarennyaṁ. B'hargo dévasyā dhimahi dhiyo yonaha prachodayāth : O'm, earth, air, heaven, O'm let us meditate on the supreme splendour of the divine sun, may he illuminate our minds : and, at the present day, the enlightened brahmins regard this verse as an invocation to the several deities who are implored by the worshipper to aid his intellect in the apprehension and adoration of God.

In connection with the sun are the 12 Aditya sons of Aditi, the universe. In the latter vedic age, they were identified with the 12 signs of the Zodiac, or the sun in its twelve successive signs:

Soma, also Chandra, the moon is chiefly celebrated in the vedas in connection with the Soma plant, but in the Maha Bharata, Soma is the mythical progenitor of the great lunar race of Bharata.

The Asvini, apparently a personification of light and moisture as sons of the sun, also as the sun's rays, and noticed as the physicians of the gods. They are described as young and handsome and riding on horses.

Vayu or the air, and the Maruts as winds are personified and invoked. The Maruts are depicted as roaring amongst the forests and compared to youthful warriors bearing lances on their shoulders, delighting in the soma juice, like Indra, and like him, the bestowers of benefits on their worshippers.

Ushas, or the dawn, the early morning, the first pale flush of light : Ushas is compared to a mother awakening her children to a loving maiden awakening a sleeping world : to a young married maiden, "like a youthful bride before her husband thou uncoverest thy bosom with a smile." As a goddess, she is styled (Rig Veda I. 23, v. 2) the mighty, the giver of light : 'from on high she beholds all things ; ever youthful, ever reviving, she comes first to the invocation.' Indra, according to Bunsen (iii. 587, 8, iv. 459), is the prototype of Zeus, and was a personification of Ether, Soma was offered to him in sacrifice. as the regent of the east, identical with Devandra, the king of the Devas. The Erythrina fulgens, the Pari-jata, or fairylocks, is supposed to bloom in Indra's gardens, and an episode in the Puranas, relates the quarrelling of Rukmini and Satyabhama, the two wives of Krishna, to the exclusive possession of this flower which Krishna had stolen from the garden. The Gandharva, in hindu mythology, a shade, a spirit, a ghost, a celestial musician, are demigods or angels who inhabit Indra's heaven and form the orchestra at the banquets of the gods. They are described as witnesses of the actions of men, and

are sixty millions in number. *William's Story of Nala*, p. 126, 142, 212. *Cole. Myth. INDRANI. SANS. Vitex negundo.

INDRANI, the wife of Indra ;

A sweeter strain the sage musician chose :
He told, how Sachi, soft as morning light,
Blythe Sachi, from her Lord Indrani hight,
When through clear skies their car ethereal
rose,
Fix'd on a garden trim her wand'ring sight,
Where gay pomegranates, fresh with early dew,
Vaunted their blossoms new :
"Oh ! pluck, she said, yon gems, which nature
dresses

To grace my darker tresses."
In form a shepherd's boy, a god in soul,
He hasten'd, and the bloomy treasure stole.
The reckless peasant, who those glowing
flow'rs,
Hopeful of rabied fruit, had foster'd long,
Seiz'd and with cordage strong
Shackled the god who gave him show'rs.
'Straight from sev'n winds immortal Genii
flew,

Green Varuna, whom foamy waves obey,
Bright Vahni flaming like the lamp of day,
Cuvera sought by all, enjoyed by few,
Marut, who bids the winged breezes play,
Stern Bama, ruthless judge, and Isa cold
With Nairrit mildly bold :
They with the ruddy flash, that points his
thunder,

Rend his vain bands asunder.
Th' exulting God resumes his thousand eyes,
Four arms divine, and robes of changing dyes !

—*Sir W. Jones's Hymn to Indra, Vol. XIII.*
p. 275.

INDRAPRESTHA, an Aryan town in Pandava, Kaurava and Yadava times. Its ruins are pointed out between Delhi and the Kutub. *Indraprestha* and Delhi were two different cities, situated about five miles apart, the one on the Jumna, and the other on a rocky hill to the south-west in the interior. Indraprestha does not appear to have been a famous place in the history of Buddha.

The historians of Alexander and Seleucus, also make no allusion to the princes of *Indraprestha* which, however, was one of the five pat or prastha which had been demanded by Judishthira as the price of peace between the rival Kuru and Pandawa races and which old Dhritarashtra gave away from his kingdom to his turbulent nephews. The principality assigned to them was a bit of forest-land, then known under the name of Khandava-vana. The existence of both Delhi and Indraprastha in the second century, are recognized in the Daidala and Indabara of Ptolemy. The mention of Daidala may possibly be found in Ptolemy's Daidala, which is placed close to Indrabara (perhaps Indrapat), and midway between Modura, or Mathura, and Batan Kaisara or Sthanawara. The close proximity of Daidala to Indrabara, joined to the curious resemblance of their names of Delhi and Indrapat seems to offer very fair grounds for assuming their probable identity with these two famous Indian cities. The date of the occupation of Indraprestha as a capital by Judishthira may be attributed, with some confidence to the latter half of the 15th century before Christ. Posterity can now hardly trace its site. The only spot that has any claim to have belonged to that ancient city, is a place of pilgrimage on the Jumna called the Negumbode Ghaut immediately outside the northern wall of the present city. Popular tradition regards this ghaut as the place where Judishthira, after his performance of the aswamedha, or the horse sacrifice, celebrated the 'Hom.' There is a fair held at the ghaut whenever the new moon falls on a Monday. Local tradition, however, in this instance, contradicts the Mahabharata, which states the aswamedha to have been performed at Hastinapura on the Ganges. The Negumbode ghaut may be the spot where Prithi raj celebrated his aswamedha. But it had acquired a sacredness from before the time of that prince, and was a place of resort where his grandfather Visal Deva had put up an inscription to transmit the fame of his conquests. In vain did Humayoon try to do away with the name of Indrapat and substitute that of Deenpannah. None but pedantic or bigotted mahomedans make use of this name. The common people either call it Indrapat or Poorannah Killah. Neither could Shere shah have it called after him as Shereghur, the voice of tradition is not easily silenced. The Poorannah Killah, as it now stands is nearly rectangular in shape and its walls are over a mile in circuit. In the interior of the Poorannah Killah is the Keelar Kona mosque said to have been commenced by Humayoon and completed by Shere shah. It has five horse-shoe arches decorated with blue tiles and marble, and is a favorable specimen of the architecture of the

Afghan period. It is perhaps one of the most tasteful mosques in or near Delhi and is remarkable for its richly inlaid work and graceful pendentives. The prevailing material of the centre arch is red cut sandstone and black slate and towards the ground white marble and black slate, the carving throughout being very ornate. The two side arches are composed of simple redstone, picked out with yellow glaze and black slate finely carved, the outermost arches are still plainer in construction, the outer walls changing from red to grey stone.—*Tr. of Hind. This magnificent river runs to some extent through the British dominions in India, rising about lat. 32° N. about 17,000 feet above the level of the sea, and it disembogues near Kurrachee in Lower Sind. The whole length of its mountain course, from its source to Attock, is about 1,035 miles and the whole fall is 16,000 feet or 15'4 per mile. From Attock to the sea, the length is 942 miles, making its whole length from the Kailas mountain to the Indian ocean 1,977 miles. Its maximum discharge, above the confluence of the Punjab or five rivers, occurs in July and August, when it is swollen by the seasonal rains, and it then reaches 135,000 cubic feet,

falling to its minimum of 15,000, in December. In Ladak, it is commonly designated Tsang-po. Tsb., or the river, and is the Sam-po-ho of the Chinese pilgrim Hwan Tsaang, who travelled in the middle of the seventh century. From its source to Le, it has hitherto been less known than any other part in Tibet. It takes its rise from the Gangri or Kailas range, a short way to the eastward of Gartop (Garo). The Garo river is the Singge-chu or Indus and there is no great eastern branch. The true source of the Indus, is in $31^{\circ} 20' N.$ lat. and $80^{\circ} 30' E.$ long. at an estimated height of 17,000 feet, to the north-west of the holy lakes of Manasarovara and Rawan H'rad in the southern slopes of the Gangri or Kailas mountains. Indeed from the lofty mountains round lake Manasarovara, spring four celebrated rivers, the Indus, the Sutlej, the Gogra and the Brahmaputra. A few miles from Le, about a mile above Nimo, the Indus is joined by the Zaskar river. The valley where the two rivers unite, is very rocky and precipitous, and bends a long way to the south. From this point the course of the Indus, in front of Le and to the south-east for many miles, runs through a wide valley, but the range of mountains to the north sends down many rugged spurs, which, in the shape of low rocky hills, advance close to the river. On the south or west bank, a little lower, the Indus is a tranquil but somewhat rapid stream, divided into several branches by gravelly islands, generally swampy, and covered with low *Hippophae* scrub. The size of the river there is very much less than below the junction of the river of Zaskar. The bed of the Indus at Pitak, below Le, has an elevation of about 10,500 feet above the level of the sea, but the town is at least 1,800 feet higher. From its rise in the mountains north of the lakes of Manasarovara and Rawan H'rad, it runs in general towards the north-east. Moorcroft has described its appearance at Garo or Gartop, where it is a very insignificant stream; but the intervening country is so little known, except by native report, that we can scarcely be said to have an exact knowledge of the upper part of its course. There is in some maps an eastern branch laid down, but of that we have no definite information. From the arid and snowless nature of the country through which it must flow, it is probably a very small stream, but its length may be considerable. Immediately above the open plain in which Dr. Thomson joined the Indus, it would appear to have a very rocky and rugged channel. He followed up the left bank of the Indus, which gradually assumed a more northerly direction. The mountains on both sides approached more closely to the river and those on the right continued extremely lofty. The

river now flowed more rapidly, and was often wider and more shallow, one rapid was not less than 150 yards in width. Banks of alluvial clayey conglomerate were usually interposed between the mountains and the river, forming cliffs which attained not unfrequently an elevation of fifty feet. Advancing up the stream he found that numerous hot springs rose on its banks, and sometimes under the water. The hottest of these had a temperature of 174° . From these springs gas was copiously evolved, smelling strongly of sulphur; he noticed fish in the water of Pughra, at an elevation of nearly 15,500 feet above the level of the sea, thus indicating that air at that elevation is not, from its rarity, insufficient for the support of life in animals breathing by gills. The whole of the lake plain of Pughra is covered, to the depth of several feet at least, with white salts, principally borax, which is obtained in a tolerably pure state by digging, the superficial layer, which contains a little mixture of other saline matters, being rejected. There is at present little export of borax from Pughra, the demand for the salt in upper India being very limited, and the export to Europe almost at an end. It has long been known that borax is produced naturally in different parts of Thibet, and the salt imported thence into India was at one time the principal source of supply of the European market. Dr. Thomson quotes Mr. Saunders (Turner's Thibet, p. 406.) as describing from hearsay the borax lake north of Jigatzi as twenty miles in circumference, and says that the borax is dug from its margins, the deeper and more central parts producing common salt. From the account of Mr. Blane (Ph. Trans. 1787, p. 297), who described, from the information of the natives, the borax district north of Lucknow, and, therefore, in the more western part of the course of the Senpu, it would appear that the lake there contains boracic acid, and that the borax is artificially prepared by saturating the sesquicarbonate of soda, which is so universally produced on the surface of Tibet, with the acid. At least, the statement, that the production of borax is dependent on the amount of soda, leads to this conclusion. Mr. Saunders does not notice any hot springs in the neighbourhood of the borax, but in the more western district, described by Mr. Blane, hot springs seem to accompany the borax lake as at Pughra. It is not impossible that the three districts in which the occurrence of borax has been noticed, which are only a very small portion of those which exist, may represent three stages of one and the same phenomenon. The boracic acid lake may, by the gradual influx of soda, be gradually converted into borax, which, from its great insolubility, will be deposited as it is formed. On the drainage

or drying-up of such a lake, a borax plain, similar to that of Puga, would be left behind.

In every part of the Himalaya, and of Western Tibet, wherever the mountains attain a sufficient elevation to be covered with perpetual snow, glaciers are to be found. In the lofty chain of the cis- and trans-Sutlej Himalaya, and of the Houen-lun, whose peaks rise to a very great height, and collect in winter enormous depths of snow, they are of great length. In the central parts of Thibet which are often lower, and even in their loftiest parts are less snowy than the bounding chains, the glaciers are of inferior dimensions where the snow-bed is at once cut off abruptly in an ice cliff, which can hardly be said to be in motion or rather whose motion must be almost entirely from above downwards. Moraines, which, on the larger glaciers and among mountains of easily decaying rocks are of astonishing dimensions, form the margins of each glacier, and also occur longitudinally on different parts of their surface, increasing in number as the glacier advances, till at last the different series whose origin can long be traced to the different ramifications of the glacier, become blended into one. En route to Karakoram, after leaving the Nubra valley, when a sufficient elevation above his encampment had been gained, Dr. Thomson obtained a commanding view of the glacier which occupied the continuation of the main valley. It was nearly straight, and he believes, at least five or six miles long; distances, however, are so difficult to estimate on snow, that this must be regarded as a mere guess. The inclination of its surface was considerable; but, while the distance remained doubtful, no just estimate of the height of the ridge from which it descended could be made. On each side, two or three lateral glaciers, descending from the mountains by which it was enclosed, contributed to increase its size, all loaded with heaps of stones, which had at the lower end of the central glacier so accumulated as completely to cover its whole surface. One day at starting, he proceeded along the edge of the small plain close to which he had been encamped. On the right hand was an ancient moraine, which prevented him from seeing the road in advance. At the upper end of the plain he found a small streamlet running parallel to the moraine; and about a mile from camp reached the end of a small glacier, from which the streamlet had its origin. Crossing the latter, which was still partially frozen, he ascended in a deep hollow between the left side of the glacier and the moraine. The icy mass had not yet begun to thaw, the temperature being still below freezing. After half a mile he ascended on the surface of the ice, and so soon as he did so, was enabled to see that the glacier had its

origin in a ravine on the south, and entered the main valley almost opposite to him. The great body of the ice took a westerly direction, forming the glacier along which he had been travelling; but a portion formed a cliff to the eastward, which dipped abruptly into a small, apparently deep, lake. At the distance of perhaps five hundred yards there was another glacier, which descended from a valley in the northern range of mountains, and like the one on which he stood, presented a perpendicular wall to the little lake. Right and left of the lake were enormous piles of boulders, occupying the interval between its margin and the mountains, or rather filling up a portion of the space which it would otherwise have occupied. Into this very singular hollow he descended, on a steep icy slope, and passing along the northern margin of the lake, ascended on the glacier beyond; as before, between the ice and on reaching the surface of the second glacier, he found that a similar but smaller depression lay beyond it to the east, in which also there was a small lake, with another mass of ice beyond it. This third glacier also came from the north, and was a much more formidable mass than those which had already been crossed. It was very steep, and was covered with snow, which was beginning to thaw more than was convenient. When at the highest part, he found that though apparently nearly level, it sloped downwards sensibly though very slightly for nearly half a mile, in an easterly direction. It was evident to him that he had now reached the highest part of the ascent, which he assumed to be 17,600 feet, and that the crest of the pass was covered by this glacier. (*Dr. Thomson's Travels in Western Himalaya and Thibet.*) In the mouths of the Indus the tides rise about 9 feet at full moon and flow and ebb with great violence particularly near the sea, when they flood and abandon the banks with equal and incredible velocity. At 75 miles from the ocean, they cease to be perceptible. See Floods; Glaciers.

Below the junction of the Panjab rivers down to Sehwan, the Indus takes the name of Sar, Siro or Sira; from below Hyderabad to the sea, it is called Lar, and the intermediate portion is called Wicholo (bich, hindi), or Central, representing the district lying immediately around Hyderabad, just as, on the Nile, the Wustani, or Midlands of the Arabs, represented the tract between Upper and Lower Egypt. Sir A. Burnes mentions that Sar and Lar are two Baluch words for North and South. The Indus, or Sindh, has been called by that name from time immemorial to the present day, by the races on its banks. The ancients knew that this was the native appellation. Pliny (lib. 6 vi.) says: "Indus incolis Sindus appellatus." The Greeks wrote

the name.—The Chinese call the river Sin-ton. After traversing the country of Chan-than, from the South-East to the North-west, it enters Ladakh, on its eastern frontier about thirty miles east of Leh, its capital, it bends more to the north, then inclines to the west, and having been joined by several large streams and mountain torrents, turns to the south, towards the plains, constituting the great receptacle of the masses of melted snow, which are periodically brought from the lofty ridges of Tibet, to fertilize the alluvial tracts of Western India. From the sudden melting of these vast accumulations of ice, and from temporary obstacles, occasioned by glaciers and avalanches in its upper course, this river is subject to irregularities, and especially to debacles, or cataclysms, one of which, attributed to a land slip, in 1841, produced terrific devastation along its course, down even to Attock.

At the confluence of Sinh-ka-bab with the Shayuk, the principal river which joins it on the north from the Karakorum mountains, the river takes the name of Aba Sin, 'Father Sindh,' or Indus proper, and flowing then between lofty rocks, which confine its furious waters, receiving the tribute of various streams, and at Acho expanding into a broader surface, it reaches Derbend, the north-western angle of the Punjab, where (about 850 miles from its source) it is 100 yards wide in August, its fullest season. From Derbend it traverses a plain, in a broad channel of no great depth to Attock, in $33^{\circ} 54' N.$ lat., $72^{\circ} 18' E.$ long., having, about 200 yards above this place, received the river of Cabul, almost equal in breadth and volume, and attains a width of 858 feet, with a rapid boiling current, running (in August) at the rate of six miles an hour. Various accounts, however, are given of the breadth of the Indus at Attock, which depends not only upon the season but the state of the river upwards. The breadth was found by Mr. Elphinstone, in June to be 360 yards; by Mr. Trebeck, in November about 100 yards; by Sir A. Burnes, in March, 120 yards. But Lieutenant Barr found the river at Attock, in March, swollen with rain, had split into various branches, and bounded with resistless speed, dashing its waters into foam against the rocks. Its violence had swept away the bridge of boats. The river of Cabul is considered to be the Cophones of Arrian, and the Cophas of Strabo.

Attock is the limit of the upward navigation of the Indus. From Attock the course of the Indus to the sea, 940 miles, is south and south-west, sometimes along a rocky channel, between high perpendicular cliffs, or forcing its way, tumbling and roaring, amidst huge boulders, the immense body of water being pent within a narrow channel, causing occasional

whirlpools, dangerous to navigation, to Kalabagh, in lat., $32^{\circ} 57' N.$ long., $71^{\circ} 36' E.$ situated in a gorge of the great Salt Range, through which the river rushes forth into the plain. In this part of its course it has acquired the name of Nil-ab, or 'Blue water,' from the colour imparted to it by the blue limestone hills through which it flows. There are some remains of a town on the bank of the river, named Nilab (where Timur crossed the Indus), supposed to be the Naulibus or Naullibe of Ptolemy. From the middle of May to September, the upward navigation from Kalabagh to Attock is impracticable; the downward voyage may be performed at all seasons. The villages in this section of the river are perched on the verge of its banks, standing on the bare rock, without a blade of vegetation near them. At Kalabagh, the Indus enters a level country, having, for a short time, the Khusooree hills, which rise abruptly, on the right. It now becomes muddy, and as far as Mittunkote, about 350 miles, the banks being low, the river, when it rises, inundates the country sometimes as far as the eye can reach. Hence the channels are continually changing, and the soil of the country being soft, a "mud basin" as Lieutenant Wood terms it, the banks and bed of the river are undergoing constant alterations. These variations, added to the shoals, and the terrific blasts occasionally encountered in this part of the river, are great impediments to navigation. The population on its banks are almost amphibious; they launch upon its surface, sustained by inflated skins or mussuks, dried gourds, and empty jars used for catching the celebrated pulla fish.

At Mittunkote, the Indus is often 2,000 yards broad, and near this place, in lat., $28^{\circ} 55' N.$ long., $70^{\circ} 23' E.$ it is joined, without violence, by the Punjnad, a large navigable stream, the collected waters of the Sutlej, Beas, Ravi, Chenab, and Jelum. Its true channel, then a mile and a quarter wide, flows thence through Sind, sometimes severed into distinct streams, and discharges its different branches by various mouths into the Indian Ocean after a course of 1,650 miles. The Indus when joined by the Punjnad, never shallows, in the dry season, to less than fifteen feet, and seldom preserves so great a breadth as half a mile. Keel boats are not suited to its navigation, as they are liable to be up-set. The Zohruk, or native boat, is flat bottomed. (See Boats.) Gold is found in some parts of the sands of the Indus.

The languages spoken on the North-western border of India are dialects of Hindi, but sufficiently distinct to be called Sindi, Panjabi and Kashmiri. Lieutenant Leech indeed has given vocabularies of seven languages spoken on the west of the Indus. The

western border tribes are still mostly under patriarchal governments. In the more southerly, are the various Baluch tribes in the territories to which they give their name, and whose language is said by Captain Raverty to be a mixture of Persian, Sindi, Punjabi, Hindi and Sanscrit. The Brahui tribes in Saharawan and Jhalawan, whose great chief is the khan of Khilat, ethnologists consider to be of the same Scythic stock as the Dravidian races in the peninsula, and infer from this that the passage of the Dravidian tribes from Turan was along the valley of the Indus. The Brahui physical type is Scythic and the language has strong Dravidian affinities. The Brahui is a genuine representative of the pre-Iranian population of S. E. Irania or Beluchistan. The Jat of the lower Indus, appear to be of the same race as the Brahui and are almost black—*Elliot*, p. 525. *History of the Punjab*, Vol. I. p. 3, 9. INDUS COAL. See Coal.

INDUVANSA, or Lunar race in the Raj-Tarringini and Rajaoli, the Induvansa family are shown to be descendants of Pandu through his eldest son Yoodishtra. These works, celebrated in Rajwarra as collections of genealogies and historical facts, by the pundits Vedyadhra and Ragonath, were compiled under the eye of the most learned prince of his period, Sowae Jey Sing of Amber, and give the various dynasties which ruled at Indraprestha, or Delhi, from Yoodishtra to Vieramaditya. The Tarringini commences with Adinath, or Rishubdeva, being the Jain theogony. Rapidly noticing the leading princes of the dynasties discussed, they pass to the birth of the kings Dhritarashtra and Pandu, and their offspring, detailing the causes of their civil strife to that conflict termed the Mahabharat, or great War. The origin of every family, whether of east or west, is involved in fable. That of the Pandu is entitled to as much credence as the birth of Romulus, or other founders of a race. Their traditions were probably invented to cover some great disgrace in the Pandu family, and have relation to the story already related of Vyasa, and the debasement of this branch of the Hericula. Accordingly, on the death of Pandu, Duryodhana, nephew of Pandu (son of Dhritarashtra, who from blindness could not inherit), asserted their illegitimacy before the assembled kin at Hastinapoor. With the aid, however, of the priesthood, and the blind Dhritarashtra, his nephew, Yoodishtra, elder son of Pandu, was invested by him with the seal of royalty, in the capital of Hastinapoor. Duryodhana's plots against the Pandu and his partizans were so numerous, that the five

brothers determined to leave for a while their ancestral abodes on the Ganges. They sought shelter in foreign countries about the Indus and were first protected by Droopdeva, king of Panchalica, at whose capital, Kampilnagara, the surrounding princes had arrived as suitors for the hand of his daughter, Droopdevi. But the prize was destined for the exiled Pandu, and the skill of Arjoona in archery obtained him the fair, who "threw round his neck the burmala or garland of marriage." The disappointed princes indulged their resentment against the exile; but from Arjoona's bow they suffered the fate of Penelope's suitors, and the Pandu brought home his bride, who became the wife in common of the five brothers—manners decisively Scythic. This marriage, so inconsistent with hindu delicacy, is glossed over. Admitting the polyandrisim, but in ignorance of its being a national custom—puerile reasons are interpolated. In the early annals of the same race, predecessors of the Jessulmer family, the younger son is made to succeed: also a Scythic or Tatar custom.—*Tod's Rajasthan*, Vol. I. pp. 47, 48.

INFANTE, Don Henrique. See Marco Palo.

INFANTICIDE. Children are greatly longed for by all the races inhabiting the south and east of Asia. A prevailing feeling regarding them is such as is expressed in Psalm cxxvii. 4, 5, "as arrows are in the hand of a mighty man, so are the children of the youth. Happy is the man that hath his quiver full of them, they shall not be ashamed, but they shall speak with the enemies in the gate," for, most persons will hesitate to attack a large united family. But the longing is for male children. Amongst hindus and Chinese, with whom spirit worship largely prevails, sons are particularly longed for in order to obtain from them duties to the manes of their parents. The eastern custom of nursing a child from the hip or side, as in Isaiah lx. 4, is still continued, and a child born after vows, is still, as in Proverbs xxxi, 2, called the son of a vow. As in Genesis xxv. 6, the children of mahomedans, born of a wife of humbler birth, or of a harem woman, are not deemed equal in social rank to the children of a high-born wife. Infanticide is still continued amongst certain rajpoot races, not however for the fulfilment of any vow or from any religious duty, but pride or poverty induce them to destroy their female children, and many rajput tribes have the utmost difficulty in obtaining wives. The Chinese have complete power over their offspring

even to life, but in no country of the south-east of Asia is the sacrificing of children on religious grounds, continued, though down to comparatively recent historic times, the Phœnicians, Carthaginians, Aramœans; Syrians, Babylonians and even Israelites and their neighbours on both sides of the Jordan, sacrificed their children with the hoped for object of averting any great and serious misfortune. A Phœnician legend is of El, the strong, offering up his son Yedud or Yedid, the beloved. El being the Kronos. (*Bunsen*, iii. 286.) Malekh Bel was the same as the Tyrian Hercules, or Moloch or Bal-Moloch, to whom, as also to Hecate and Melekhet Artemis, dogs were sacrificed. In Babylonia (Is. lxvi. 3, Ez. xiii. 18, xxxiv. 20) their neck or backbone had to be broken unless redeemed. The principal sacrifices offered to Hercules Usoo, as well as to his mythical companion, were human beings, which in Laodicia of Phœnicia might be ransomed by a doe. At Carthage, the practice of sacrificing their favourite children, and those of the highest rank in honour of Hercules, continued down to their latest wars. The legend of the Grecian Hercules is that he became insane, burned his own children, as well as those of his twin brother Iphicles, and murdered his guest Iphitus. (*Bunsen*, iv. 212, 213.) The Greeks exposed their children on the highways to perish with hunger, or to be devoured by beasts of prey, and had their barbarous practice sanctioned by some of their most celebrated lawgivers. Among the Romans the custom of infanticide also prevailed as it did on the first discovery of America, among some of the savage tribes of that continent. It is probable, says Malthus, that the practice of infanticide had prevailed from the earliest of ages in Greece.—And when Solon permitted the exposing of children, it is probable that he only gave the sanction of law to a custom already prevalent. Of all the state of Greece, the Thebans are mentioned by Ælian, as the only exception to the general practice of exposing infants at the will of their parents. By the other states of Greece, infanticide was sanctioned and regulated by law, under legal provisions, for the regulation of this practice. Malthus, vol. I. p. 291, in a note says: how completely the laws relating to the encouragement of marriage and of children were despised, appears from a speech of Minucius Felix, in Octavio. *Cep.* 30. "Vos enim video procreatos filios nunc feris et avibus exponere, nunc adstrangulatos misero mortis genere elidere: Sunt quæ in ipsis visceribus medicamentibus epotis originem futuri hominis extinguunt et parricidium faciunt ante quam pariant." This crime, he adds had grown so much into a custom in Rome, that even Pliny attempts to excuse it; quoniam aliquarum

secunditas plena liberis tali venia indiget, 4. xxix. c. 4.

Among the Canaanites, the Phœnicians and the Carthaginians, the sacrifice of children was prescribed as a propitiation to their sanguinary deities Moloch and Kronos. In India, infanticide was long supposed to have been confined to the tribes of Rajkumar or Rajavansa, who inhabit districts in the neighbourhood of Benares, but a larger knowledge disclosed the existence of a similar practice among several tribes in Guzerat, all through Rjputana, and in many other parts of India. The Rajkumar and Rajavansa, in a portion of the territories of Oude and the adjoining provinces; and others, the Jharajah, in the countries of Kutch and Guzerat on the western side of the peninsula of India alleged that the practice of female infanticide had existed for 4,900 years, and the late General Walker in an account published by Major Moor, in an interesting work on this subject, estimated the number of deaths of female children annually, in Kutch and Guzerat only, at no less than thirty thousand.

When Captain Wallis visited Otaheite and the neighbouring islands in the South Sea, the practice was unhesitatingly avowed by the lascivious Eerœœic societies in these islands. In China, and also in Japan, infant murder is at the present time prevalent; the horrid practice of female infanticide was common over all Arabia, in the time of Mahomed and is frequently reprobated in the Koran.

It was the custom of the Talpur dynasty of Sind to put to death all children born to the princes of slave women. Dr. Burnes was informed that one member of the family alone had destroyed 27 of his illegitimate offspring. Dr. Cooke saw mummy like bodies of infants in a cave in Bhagwana in Beluchistan, some of which had a comparatively recent appearance. Infanticide of girl infants was common in Sauradah, by entombing them alive, or wrapping them in cloth and so burying them. It was put an end to by Colonel John Campbell about the year 1848. In the great cities of Pekin and Canton, Sir George Staunton found the exposure of children to be very common. Among the Chinese, however, it is to be ascribed to their extreme poverty. In India, the practice of infanticide obtains under two sets of circumstances: 1st, in cases of illegitimacy when widows and their paramours are the instigators, and the sex of the victim is not of much moment in determining the crime; 2nd, in the case of female infants among Rajputs, Sikhs, Jats and some mahomedan tribes. The motives to this crime are complex, though mainly, the small value and low estimate of the female sex, and the fear that women will bring disgrace on the family, but other collateral feel-

ings contribute, such as the expenses of marriage, the sense of being under a moral and pecuniary obligation to a son-in-law who, aware of the disgrace entailed by religious and traditional feelings, upon a daughter's attaining puberty unmarried, practises upon the feelings of the father for purposes of extortion; the insane sense of honor which will not brook the thought of a daughter marrying beneath her, or remaining unmarried; and the conceit and exclusiveness of a small tribe or caste which disdains intermarriage with another. The law of population which provides for an excess of the female sex, coupled with the necessity of marriage before puberty, constitute another fundamental ground of infanticide. Polygamy also, especially among the Kulin brahmins, and polyandry, as among the Koonds, prompt to the crime, because both practices abolish a mutual and reciprocal sense in the parent of the duty of supporting the offspring. But irrepressible sexual passion in the male remains, and leads to two consequent crimes—child-stealing and barter, and unnatural crimes.

Infanticide was greatly condemned by the Sikh guru Govind who says "With the slayers of daughters whoever has intercourse, him do I curse. And, again, 'Whosoever takes food from the slayers of daughters, shall die unabsolved.'"

Female infanticide, by violent measures, has greatly decreased amongst the Jat tribes; but many children are allowed to die by neglect. The great cause of the crime was the excessive expenditure for their marriage, but this has been greatly curtailed. Mr. Duncan was the first who brought the prevalence of infanticide to the notice of the British rulers of India. He became acquainted with its existence in 1785 while at Juanpore, and he induced the Rajkumar tribe who practised it to enter into a covenant to discontinue the horrid practice, which the covenant recognized to be condemned in the Brahma Bywar Purana as a great crime. After the conquest of the Panjab, by the British, Mr. C. Raikes, called a public meeting of the sirdars and chiefs at Amritsar; the meeting recognized as the causes for killing their female children the expenses of marriage for dowers and for the exactions of the Bhat, the Rai, the Dut, the Bhand, the Nai, the Merasi and other beggars, and the meeting resolved to discontinue, and suppress the practice. Indeed among the many pressing measures of reform stopped by the mutiny, was the passing of an Act, actually draughted, to prevent and punish the crime of female infanticide. In 1856, Mr. Moore, a special commissioner, had made the most startling revelations as to the prevalence of the crime in the Bustee district.

The subject was overlooked till 1867, when Mr. Hobart, a young civilian, was sent into the same district to report whether, as was supposed, the practice had abated since 1856. Instead of this he discovered that the houses of certain Rajpoot clans were floored with skulls and the tanks choked with infants' bones. Sir William Muir, at once put repressive measures in force, and applied to the Government of India for immediate legislation; the Hon'ble Mr. Strachey accordingly moved for leave to introduce a Bill, and took occasion to trace the history of our relation to the crime from the days of Jonathan Duncan. If Suttee was bad, the continued prevalence of female infanticide, in our oldest districts is much worse. The races in British India, with whom it has been customary to sacrifice their female children are the Jut or Jat, the Rahtore rajputs of Jeypore and Joudpore, the Jahrejs rajputs of Cutch and the Rajkomar race, the Sourah of Ganjam and the polyadric Todah race on the Neilgherries.—*Browne on Infanticide. INFANTS.—*Luke xviii.* 15. They brought unto Him also infants, that He would touch them. When a hindu spiritual guide (gooroo) visits a disciple, the latter takes his child to him for his blessing; placing the infant before the gooroo, and forcing its head down to his feet, the parent solicits his blessing, which he gives in some such words as these:—'Live long; Be learned; or, 'Be rich.' The usual blessing of a mahomedan faqir, or of a mahomedan man or woman, is Jio-baba, Live my child, Jio sahib. Live sir. Jio bibi sahib, hazrat Maryam ka saya, Live, lady, under the protection of the Lady Mary.

This tree grows in the Konkans, Nepal, Assam and Pegu. It is of smaller girth than the *I. xylocarpa*, but grows to a great height, and has a black wood. Like the *I. xylocarpa*, it is called Iron wood by the English in Pegu and Tenasserim. In native gardens it is an ornamental tree, with sweet scented blossoms and affording a thick beautiful shade. Its seeds are poisonous when taken internally, notwithstanding.

This valuable timber tree is remarkable for its thick woody legume; it grows to a large size is a stately tree which blossoms during the hot season, at which period it is nearly destitute of foliage, and is met with in many parts of Southern India, in varying abundance. It is abundant in the Walliar forests of Coimbatore, it is also abundant in North Canara, particularly between Sirce and Yellapore, and is not uncommon in the sea board forests of the Bombay Presidency, south of Panwell. In Canara and Sunda, it grows chiefly above the ghats in Soopeh and Dandeleer, where it grows large; and, there, its tough and strong wood is very useful in house building. It is met with in the Godavery forests where it grows very large on the mountains, and there is much of it in the Vizagapatam district. Dr. McClelland says, that in the Southern forests of Pegu, it is a plentiful large tree, fifteen to eighteen inches in diameter, very lofty and straight, and would afford excellent spars for naval purposes, if not too heavy. It is most plentiful in Prome, especially near the forks of the Tenasserim, and very abundant in Amherst, Mergui and Tavoy. In the Prome forests, it is usually about 6 feet in girth, but in all the other branches of the

INGA XYLOCARPA.

Tenasserim, it attains a larger size, frequently 8 or 9 feet. Dr. Brandis says it is abundant throughout the forests on and near the hills of British Burmah, and is, there, a magnificent tree. The sap wood is attacked by white ants and decays easily, but it is very limited in large trees. The heart wood of full grown trees is of a chocolate colour and is said to last as long as teak. This wood would be invaluable if it were not for its weight. It is of a very superior quality, is dark coloured, very hard, and dense, strong and durable, &c. It is used, however, for house and bridge posts, ploughs, boat anchors, in the construction of carts for naves of wheels and for all purposes demanding great strength, such as crooks for ships—knees and bends, posts, piles, and bridges: it is excellent for railway sleepers and is recommended for handles of chisels, gauges, &c., but is too heavy for other ordnance purposes. A cubic foot weighs lbs. 60 to 66. In a full grown tree on good soil, the average length of the trunk to the first branch is 50 feet and average girth, measured at 6 feet from the ground is 9 feet. It sells, there, at 12 annas per cubic foot. In the Bombay Presidency, the tree does not grow straight to any size, and there it is not available for house or ship building. An inch bar, of the Coimbatore wood, sustained lbs. 550. It is one of the Iron woods of the Arracan and Pegu provinces, the other being the *I. bigemina*. Nails cannot be driven into it. The hard wood is as impervious to white ants as teak and is even more durable in the ground. Natives assured Dr. Mason that they had seen house posts of this wood taken up after having stood forty years, and that the part which had been buried was as sound as new timber. Mr. Rohde did not meet with it in the Circars exceeding a foot or 14 inches in diameter, and, then, always faulty in the centre, he thinks it a good wood for screens, framing of furniture, linings of drawers, tool handles, and generally for all purposes, for which a moderately hard, strong wood, not liable to split or cast about, is required. In the Madras Gun Carriage Manufactory, it is used for poles, axle cases, and braces for transport limbers, poles and yokes for water carts, cheeks, axle cases for transport carriages, light mortar carts. In Mysore, it is used for furniture, shafts, plough heads and knees, and crooked timbers in ship building, and railway sleepers. It has been largely used on the Madras Railway, the sleepers exhibit a very fair durability, and it has been employed extensively for piles, transoms and walling pieces. In small scantlings, it is liable to split and warp under exposure to the weather.—*Drs. Wight, McClelland, Brandis, Mason, Gibson, and Olegghorn, in Conservator's Report. Captain Dance, Mr. Rohde, Oakuttu and Madras Cata-*

logues of the Exhibition of 1862. Captain Puckle and Colonel Maitland. Report of Acting Chief Engineer, Madras Railway, Records of the Consulting Engineer, favoured through Mr. Elwin and Captain Prendergast. Ainslie's Mat. Med. p. 213.

INGANI, or Injni. Oxide of manganese.

INJAS, a Java wood of a brownish red colour, and very brittle, used for household furniture, cabinet-ware, &c.

INGHILIKAM. TAM. Cinnabar.

INGHULAM. SANS. Cinnabar.

INGHURDI. SANS. Amygdalus communis. The almond.

INGHURU. SING. Ginger.

INGINIGAHA. SING. Strychnos potatorum, J.

INGIE OR ENGIE. BURM. A white linen jacket used as an article of dress by Burmans.—*Winter's Burma*, p. 54.

INGIVI. SING. Strychnos potatorum.

ING LEET-MEN. BURM. An ambiguous expression adopted by Burmese, as a salve to their pride, for use when compelled to hold intercourse with a dignitary who is not in their view an anointed king. It may apply to the queen of England or to the Governor General.—*Fule's Embassy*.

INGLIS. HIND., a pensioner. The word is a corruption of "Invalids."

INGOMAS. See *Dolichos bulbosus*.

INGOT, a small wedge-shaped mass of tin, copper, gold or silver, &c. of an indefinite size and weight. About 40 ingots of tin go to the ton. In some countries ingots of the precious metals pass current, as silver in China. In Burmah gold and silver ingots, of half an ounce weight avoirdupois, form part of the local currency.—*Simmond's Dict.*

INGOULETZ, on leaving its banks and travelling eastward over the steppe, are to be observed innumerable tumuli of a breadth and height hardly credible. The different mounds in this immense region of the dead, vary greatly in size; and, where one of unusual magnitude presents itself, it is generally surrounded by several of smaller dimensions. There can be no doubt that the larger tumuli are raised over the bodies of princes and heroes; and the minor sort cover the remains of the followers of their armies, or of their state. The expanse occupied by monuments of the dead, extend regularly to the very farthest stretch of sight. Herodotus does not allow us to appropriate these remote regions of sepulture to the casual circumstance of war. He declares them regular places of interment for whole nations, and particularly mentions, that whenever the Scythians lost a king, or a chief, they assembled in great multitudes to solemnize his obsequies; and, after making the tour of certain districts of the kingdom with the corpse

they stopped in the country of the Gerghi, a people who lived in the most distant parts of Scythia, and over whose lands the sepulchres were spread. A large quadrangular excavation was then made in the earth (in dimensions more like a hall of banquet than a grave), and within it was placed a sort of bier bearing the body of the deceased prince. Daggers were laid at various distances around him, and the whole covered with pieces of wood and branches of the willow tree. In another part of the same immense tomb, were deposited the remains of one of the late sovereign's concubines, who had been previously strangled; also his favorite servant, his baker, cook, horsekeeper, and even the horses themselves, all followed him to the grave, and were laid in the same tomb, with his most valuable property, and above all, a sufficient number of golden goblets. This done, the hollow was soon filled and surmounted with earth; each person present being ambitious to do his part in raising the pile that was to honour his departed lord. About six miles from the ancient city of Sardis, near the lake Gygaens, is still to be seen part of the great tumulus erected in memory of Alyattes, father of Cræsus. It is described by Herodotus as of prodigious height, having a base of stones, on which three classes of people were employed to heap up its enormous bulk. In the time of Strabo the remains were two hundred feet high, and the circumference three quarters of a mile. Several other tumuli surrounded it. This form of sepulture may be found all over the world; and, how lasting it is, as a monument, may be gathered from the date of this very mound of Alyattes, which could not have been erected much less than two thousand four hundred years ago, Alyattes having been contemporary with Nebuchadnezzar, the king of Babylon who destroyed Jerusalem about six hundred years before the birth of Christ. Probably the smaller tumuli, commonly seen encircling a large one, may contain the bodies of certain self-devoted members of the deceased great man's family, who yet did not consider themselves high enough to share his actual grave; or, perhaps, of his guards, who held it their duty to follow their master into the other world. And, as the fashion of these human immolations would, likely, prevail through all degrees of rank, we may easily account for the graduated sizes of other mounds which undulate these dismal deserts, even to the very horizon. In some parts, we find tumuli in distinct groups wide of each other; and in other places they appear singly, like solitary and silent watch towers at distant stations.—*Porter's Travels, Vol. I. p. from 18 to 20. See Burial; Cairns.*

INGRACH, also Yang, also Tush of Kan-gra. *Fragaria vesca*.—*Linn.*

INGROMANIYUS. See Ahriman; Ariana.

INGU. MALAY. Assafœtida.

INGUDI. TEL. Assafœtida.

INGUDI. SANS. Terminalia catappa, *Linna.*

INGUDI BADAM. Fruit of Terminalia catappa.

INGUDI-TAILAM. TEL? Almond oil.

INGUGA CHETTU? TEL. Strychnos potatorum.

INGUVA, also Hingupatri chettu. TEL. Ferula assafœtida, L. Assafœtida. This word is also generally applied to several kinds of Gardenia, some of which yield a medicinal gum, particularly the G. gummifera, from which is produced the resin called Dikamali.

INGWER. GER. Ginger.

INGYA. TEL. Assafœtida.

INHAYON? A tree plentiful, of Akyab, furnishing a moderate sized wood, not much used.—*Cal. Cat. Ex.* 1862.

INIANE. POL. Flax seed.

INJANI. HIND. Cymbopogon iwarancusa.

IN-JEEN. BURM. A large tree, common in the upper provinces of Burmah, flowers, small, pinkish yellow, very fragrant, growing in clusters, and celebrated in Burman poetry. Gaudama, is said to have died near one of these trees.—*Malcolm*, v. i, p. 192.

INJI SHUKKU. TAM. Green ginger, Zingiber officinalis.

INJI NAR. MALEAL. Fibre of Mimosa intia.

INJIRAR. Bistort root.

INJINI-GASS. SINGH., Strychnos potatorum.—*L.*

INJIN PEWOO. BURM. White Injin.

ANALO-BURM. Found in abundance all over the provinces of Amherst, Tavoy and Mergui, of a maximum length of 22 feet and maximum girth of 2 cubits. It is very light and perishable and only fit for firewood.—*Captain Dance.*

INJUBIN, AR. Honey.

The ordinary ink of the Chinese, composed of lamp black and glue, is sufficiently pure to be used in the arts. There are several varieties of ink, such as printing ink, writing ink, marking ink, India ink, &c, composed of different ingredients, gall-nuts, copperas, gum, and logwood, according to the purposes to which it is applied. The ink of China is in small oblong cakes, readily diffusible in water. It is made of very fine lamp black, prepared with a

peculiar glue, or jelly. The Tamools occasionally make ink with nearly the same materials as in Europe, but that which is used by the writers in the Cutcherries is thus prepared. First, a burnt rice water is to be made in this way; half a seer of rice burnt black is to be well boiled in a seer and a half of water, till but one seer remains then strain off the dregs. To this seer of burnt rice water is to be added two pollams Komburruck or Lac, boil them well together and strain off the dregs. Half a seer of Carpool veruum or Lamp black and half a pollam of Vullam pisin or gum arabic are then to be well rubbed into a fine powder, and gradually added to the decoction of Komburruck and burnt rice water, when the whole are to be rubbed together and well shaken, at different intervals for the space of three days. The mahomedans thus prepare their ink, Take of Lamp black and gum arabic equal quantities and pound them together into a very fine powder. This powder is then to be moistened with the juice of the pulp of the Kuttalay or small Aloe, and well rubbed at intervals for two days together, after which it is to be formed into little cakes that are to be put on plantain leaves, and dried in the sun for use.

For a good writing Ink take of Nut galls 2 lbs. Sulphate of Iron 13 oz. Gum Arabic 13 oz. pound the galls, and take 14 bottles of water, of which take $\frac{2}{3}$ and boil the galls in it for 3 hours, in a large pot, cool, and pour off the clear liquid and strain the remainder (careful and repeated straining, is the great secret of successful ink making)—take the remaining, $\frac{1}{3}$ of water and dissolve the iron and gum, boil cloves in it to prevent fungi, make all to 15 bottles of fluid. Strain every thing well.—*Ain's, Mat. Med.* p. 175.

INK, BLACK, for printers, is made of lamp black, linseed oil, rosin, brown soap, and a small quantity of indigo.

INK BLUE, is made with indigo.

INK, RED.

Segapoo Mye...TAM.

Is prepared by adding a little water to Shem pungie (red cotton) luttooka doodi, TEL. also by steeping and afterwards boiling chips of red dye woods in vinegar; that formed by lake is not permanent. Red ink, is also made with brazil wood infused in vinegar adding alcohol, alum and gum.—*Ain's, Mat. Med.* p. 175. *Rohde MS. S.*

INKITRIUN. ARAB. Amber,

INLAID WORK of Bombay, has been carried on in Bombay since the commencement of the nineteenth century having been originally introduced from Hyderabad in Sind. It is said to have been introduced into Sind about twenty years previously from Persia; its native seat is supposed to be Shiraz. From Bombay the work has been carried to Surat. The

INLAID WORK.

materials used in the work are :—

A mineral green dye for dyeing the stag's horn.

Tin Wire (Kylacenotur) used in the ornamental veneering.

Sandalwood, ebony and sappanwood used in the frame work, and sometimes entering into the ornamental veneer.

Ivory, do.

Stag's Horn, do, dyed green with mineral dye.

Glue, for binding. Ahmedabad glue being esteemed far above all other kinds, including English.

The tools employed are a wheel for drawing the tin wire into different shapes for the preparation of the ornamental patterns ;—Saws of different kinds, files, chisels, drills, planes, and a square. The only mystery is in the portion of the work which appears inlaid, but which is not inlaid in the first sense of the term. The patterns are veneered on, and may be applied to any flat or gently rounded surface. The ornamental veneer is prepared by binding together the rods of ivory, tin, sappan, ebony and green dyed stags' horn, of different shapes. These rods are usually three sided, cylindrical and obliquely four-sided. They are arranged so as when cut across to exhibit definite patterns and in the mass present either the appearance of rods or of thin boards, the latter being to be sliced down into borders. The primary rods are sometimes bound together before being sliced, so as to form more complex patterns. The patterns commonly found in Bombay ready prepared for use are :—

1st. Chakra (*i. e.* wheel), the smaller being of the diameter of a four penny bit, and the larger of a shilling.

2nd. Kutkee or hexagonal, being composed of obliquely four sided rods, of ivory, ebony or sandalwood, and of ebony, tin wire, puttung, and green dyed stags' horn mixed.

3rd. Trenkoonia gool (*i. e.* three-sided flower), a three-sided pattern composed of tin wire, ebony, ivory, puttung, and green dyed stag's horn.

4th. Gool (flower), obliquely four-sided, and compounded as last. These are all for the central veneer. The border patterns are :—

5th. Teekee, round and varying in size from a two penny bit to a large pin's head, and used for the central patterns as well as for bordering.

6th. Gundeerio (plumb, full), composed of all the materials used in this work.

7th. Ekdana (one grain), having the appearance of a single row of tin beads set in ebony.

8th. 9th and 10th, Poree lehur, 'Sansoo-hansio' and 'Porohansio,' varieties of border

INSCRIPTIONS.

ornaments not easy to distinguish from one another by mere description.

In 1860, about fifty manufacturers were established in Bombay, six, had been settled there from periods varying from twenty-five to forty-six years. A few employ workmen, but the majority work for themselves, with the aid in many cases, of a brother or son. The inlaid work resembles Tunbridge ware.—*Dr. Birdwood.*

INOCARPUS. See *Hernandacem*.

INOCULATION, is still practiced in the S. and East of Asia.

INSCHI or Inschikua. *Zingiber officinalis*.

INSCRIPTIONS. Nearly all that we know of ancient India, and of the countries on its N. Western borders, with their former conquerors and rulers, has been obtained by the investigations of learned men into the legends on the numerous ancient coins found in Afghanistan, the Panjab and India ; and from the inscriptions found engraved on rocks and pillars and in caves, in various places in India, in Kabul, and throughout the ancient empires of Iran and Assyria ; through Hadramaut and Oman, in several districts of Arabia, and through the north of Africa. These, with the more celebrated remains of Egypt, prove that literature was cultivated in those countries at a time when Europe was inhabited by painted or tattooed barbarians. In all those countries, inscriptions which have been gazed at with stupid wonder by the descendants of the people who engraved them and ascribed to the workmanship of imps and genii, have been at length explained. Many curious facts in history have been made known by the coin legends and rock inscriptions, and among others the extension of a Macedonian empire over a great part of north-Western India, and the conquest of the island of Ceylon by a buddhist sovereign of India, three centuries before the Christian era.

Not less interesting are the inscriptions in the ancient Persian language, in the Assyrian or cuneiform character, spread through the empire of the great Cyrus, which are likely to throw an important light on sacred as well as profane history. The clue to the discovery of the sense of these Persian records was obtained by Grotefend, Lassen and Burnouf, and partly aided by it, though much more by his own ingenuity, Sir Henry Rawlinson was able to decipher many of these ancient historical engravings. The records on the rocks and pillars and caves of north-Western India and in India itself, are in two characters, styled the Arian or Bactrian and the Lat or Budh. The term "Lat" has been given because found on certain pillars ("Lat, Sansc. a pillar") in Delhi, Allahabad, &c. The Lat or Budh or early Pali character is the same

as the Arian, but the forms of the letters differ from the Arian, and the letters are larger. Inscriptions in these characters are engraved on rocks at Kapurdigiri in Afghanistan, at Cuttack, at Delhi on a pillar, also on pillars at Allahabad, Betiah, Mutiah and Radhia.

One Delhi pillar is square with its faces to the cardinal points. On each face is a framed inscription. Another pillar near Delhi, has been called the pillar of Feroz, because it stands on the summit of a large building supposed to have been erected by Feroz shah who reigned in Delhi A. D. 1351 to A. D. 1388. It is 37 feet high, is a single stone, hard and round. Its circumference, where it joins the building, is 10½ feet, it has a more ancient inscription and one with a more recent character, below, in Sanscrit, to the effect that rajah Vighra or Visala Deva had, in 1169 A. D., caused this pillar to be inscribed afresh to declare that the said raja who reigned over the Sikambari, had subdued all the regions between the Himavat and Vindhya. This pillar was erected to enjoin the doctrines of Buddha, but the reading of it somewhat differs from that of the others. Though resembling the Girnari inscription in general purport, these inscriptions differ considerably in the structure of certain sentences. The Delhi Feroz pillar was found in a temple, and both Mr. James Prinsep and Professor Wilson have attempted translations of it. In a work by Dr. George Moore, M. D. on the "Lost Tribes" published in London in 1861, the author mentions that he has translated all these rock and pillar and cave inscriptions, after transliterating them in Hebrew, and that this one is a lamentation to the Almighty on ruin and calamity.

The same Lat or Bud'h characters found on the pillars at Delhi, Allahabad and elsewhere, are also found engraved on rocks. The ancient Budh alphabet is really the simpler and more elegant form of the refined Sanscrit.

The Allahabad inscription is similar to that at Delhi but has four short lines additional, which, according to Dr. Moore's mode of translating, treat on Ruin, Vanity, Equality, and the Wrath of God.

There is a stone now lodged in the museum of the Asiatic Society at Calcutta, which was found at Bairath near Bhabra, between Delhi and Jeypur, and has an inscription in the Budh character.

The same character is also found in two inscriptions at Junir, of which one is on the Naneh ghat. It is in keeping with the inscription on the Delhi pillar and on the rock at Girnari.

The Girnari inscription was supposed by Mr. James Prinsep to be in the Pali language. But Dr. Moore states that it is in Hebrew and has allusion to some calamity or catas-

trophe. It is said also to contain the doctrine of Sakya, and in the first section to make mention of the Arab, of the Greek in the fourth section, and of the Getæ in the twelfth, as all involved in the same trouble.

The Arian or Bactrian character is that used in the inscriptions at Jellalabad, Manikhyala, and at Kapurdigiri on topes or tumuli said to be numerous for about 300 miles around.

Jellalabad is in the valley of Kabul, and contains many sepulchral topes, which also occur at Daranta and at Hidda or Idda in its neighbourhood. That at Jellalabad was opened by Mr. Masson and the inscription makes mention of Kadiphes.

Manikhyala is situated near Jhelum, on the banks of the river of that name, called by the Greeks, the Hydaspes. There are many topes there, one of which is 80 feet high with a circumference of 320 feet.

These topes or tumuli, it is now admitted are only cairns regularly built, and this mode of sepulture is supposed to be alluded to in the "heaps" and "graves" and "tombs" spoken of in Job xxi and 32, also xxx and 24, and in Jeremiah xxxi and 21, and cairns are still found scattered over all the northern parts of Europe and Asia and down to Cape Comorin in Peninsular India.

According to Dr. Moore, the Arian or Bactrian language in which character the inscriptions at Kapurdigiri, Jellalabad, and Manikhyala are engraved, was the language of Afghanistan in the times of the Kanerki kings, in A. D. 80 and subsequently. He states that this Arian language was Hebrew, and the people of Afghanistan used the Hebrew in the period extending from the commencement of the Greco-Bactrian dominion to the commencement of the third century of our era. It was employed, he says, with some Greek, in Kabul, Bamean, the Hazara country, Lagman and the Panjab; was the vernacular language of the predominant people of the Paramisian range, Afghanistan and part of the Panjab, at least up to the third or fourth century of the christian era.

The Kapurdigiri inscription is on a rock on the side of a rocky and abrupt hill near a village of that name in the district inhabited by the Yuzufzye. It reads from right to left, is in the Arian or Bactrian character, and is nearly a transliteration of that of Girnari, and the mode of reading it was discovered by Mr. E. Norris. The language, he says, was in use for several centuries throughout that extensive line of country over which the Seleucidæ and their successors held dominion,—that is to say, from the Paramisus or Caucasus to the upper part of the

Panjab, including all Bactria, Hindu Kush and Afghanistan.

Dr. Moore sums up his observations by remarking that at least two classes of people employed the language expressed in this character, the one using the Arian or Bactrian, of Bamian, kapurdigiri, &c., the other using the Budh or Lat character, found on the Girnar rock and on the pillar and in the cave temple inscriptions: that these two classes of people seem to be the Getæ and Sakæ, the so-called Arian character being that used by the Getæ, while the so-called Lat character was that of the Sakæ.

Inscriptions on stones and on copper plates have also been met with all over southern India, but few of them are of a date prior to the year 1000 of our era and the larger portion are much later. Some give valuable facts and the names of kings, but the bulk of them record matters of little importance. The Lat character occurs rarely in the southern part of the peninsula; still it is the only one used on the sculptures at Ameravati, which have been described by the Rev. Mr. Taylor, and Mr. G. Fergusson and while in charge of the Government Central Museum at Madras, we dispatched a large collection of its marbles to England.

An extensive collection of inscriptions was made by the late Colonel McKenzie, Surveyor General, which also, the Rev. Mr. Taylor described.

In Malayala, as in other parts of southern India, inscriptions occur, in various ancient characters as well as in modern letters. The translation of the copper plate grant to the Syrian Christians, which is still in their possession, made considerable noise, some years since. It will be found in the Journal of the Madras Literary Society.

Compared with other nations, the use of letters in India, is recent. Though, as Professor Muller mentions, we read in the Old Testament of writings, engravings, pens and books—in Exodus xxiv, 7; xxv. 16, and xxxii, 15, and 16; at least 1500 B. C.; in Job xiii, 26, xix, 23 and 24; perhaps about the same age, and subsequently in Psalms xl, 7; xlv, 1; lvi, 8, and lxix, 28, and in Proverbs iii, 3, at least 1000 years B. C.—The first authenticated inscriptions in India are those of the third century before Christ, engraved at Kapurdigiri, Dhauli, Girnar, &c. In the ten books (Maudala) of 1017 hymns in the Rig Veda, the art of writing is not even alluded to. At the time when the songs of the Rishis were collected there is no allusion to writing materials, whether of paper (papyrus) or bark (liber) or skins, nor is there any allusion to writing during the whole of the Brahmana period of Vedic literature. Even during the Sutra period all the evidence obtained from them, but

leads to the supposition that though the art of writing then began to be known, the whole literature of India was still preserved by oral tradition. The statements of Megasthenes and Strabo and Nearchus, however, show that in their times, the art of writing was known in India, and that it was practised before the time of Alexander's conquest, nevertheless the origin of the Indian alphabet cannot be traced back much beyond the date of Alexander's invasion. The Lahta vistara, however, one of the canonical books of the buddhists, describes Sakyā Sinha's entry into the writing school (li-pi-sala) and the alphabet that he is described as learning is the common sanscrit alphabet. But in the times even of Nearchus and Megasthenes, letters do not seem to have been a vehicle of literature. Nearchus describes the people as writing on compressed cotton, Megasthenes as making inscriptions on mile-stones, and Curtius says they wrote on the soft rind of trees. The inscriptions generally supposed to have been engraved by Asoka, three hundred years before the present era, with a view to promulgate the doctrines of Buddha, are therefore the oldest literary remains of India but are upwards of a thousand years later than the era when the tablets were engraved on mount Sinai.

The following is a list of ancient inscriptions published in the volumes of the Journal of the Asiatic Society of Bengal, from January, 1834, to March 1841, compiled by Lieutenant Colonel W. H. Sykes, F. R. S. (Journal R. A. S. Vol. VI. pp. 482) brought up to the end of 1854, by Babu Rajendralal Mitra.

1 Allahabad Column.

Language of Inscription.—Sanskrit, but not pure.

Date.—About A. D. 800, from the character of the inscription and internal and extraneous evidence. Many of the letters are identical, and have the same phonic value with the Tibetan alphabet, adopted in the seventh century. Many letters, eight consonants and three vowels are wanting of the modern Deva Nagari, and similarly in Tibetan.

Character used in inscription.—Deva Nagari in transitu, identical with that of the Gaya inscription, and also, like Mr. Wathen's inscriptions from Gujarat, and that of Mahabulpur, which was of great use in deciphering the present.

Religion; or Divinities or Sages mentioned.—Siva, Ganesa, Brahma, Varuna, Vishnu, Rudra, Chandra, Agni, Nandi, Kama, Garuda, Balarama, Indra, Kuvera, Yama, Gandharvas, Nareda, Arjuna, Pandu, Bhishma, Gauga. No mention of Tantras.

Kings or Princes mentioned.—Gupta, father of Ghatotkacha, father of Chandragupta, who is maternal grandson of Likhavi and son of

Kumara Devi who is the father of the King of Kings Samudra Gupta.

Remarks.—This inscription of a sudra family is engraved upon a pillar which had been previously raised in honour of buddhism, and bore a buddhist inscription upon it. Dr. Mill, the translator, in consequence of numerous lacunæ, was obliged to supply the sense occasionally. The character is that of the Deva Nagari in transitu, and approaches that of the Gaya inscription, which is known to be of the eleventh century. A fallen king, Samudra Gupta, by means of his able minister, Giri Kahla Raka, restores the fortunes of his house; but it is only his father, Chandra Gupta, and himself, who actually attain royalty. Mr. Mill says that Brahmans have that honor as spiritual superiors, which we find assigned to them in the Ramayana and Mahabharata—not that excessive superiority and extravagant homage which in subsequent ages they claimed from princes; the Brahman here contributes to the honor of the king, not as in some later inscriptions, the king to the honor of the Brahmans.—*Vol. III, p. 263 and 339—Vol. VI, p. 970.*

2. *Oujein.*

Language of Inscription.—Jain inscription. Pali?

Date.—A. D. 371, but if the Jain era of Mahavira be intended, the date is B. C. 106.

Character used in Inscription.—Old character, but intelligible to the Jains.

Religion; or Divinities or Sages mentioned.—Not mentioned.

Kings or Princes mentioned.—Chandra-Gupta.

Remarks.—The Mahabharata is alluded to; Nepal and Assam mentioned: and Dhananjaya was ruler of the north country.

This is an inscription mentioned by Col. Todd, but not published: it was obtained from Jain authorities. The character required a key, but was known to the Jain hierarchs. King Chandra Gupta reigning at Oujein is unexpected.—*T. R. A. S. Vol. I. pp. 140 and 211.*

But Chandra Gupta is also the name of one of the Chohan princes of Ajmeer, grandson of Manikya Rai whose date is fixed A. D. 695, and his descendant, Prithu Rai, was the last Hindu King who reigned in Indraprestha, or Delhi.—*Vol. III. p. 342.*

3. a. *Mathiah near Bettiah.*

b. *Bahra,*

c. *Rediah.*

Language of Inscription.—Pali.

Date.—315. B. C.

Character used in Inscription.—Old Pali.

Religion; or Princes or Sages mentioned.—Buddhist.

Kings or Princes mentioned.—Piadasai, or Asoka.

Remarks.—These are notices, by Mr. Hodgson of Nepal, of three tall pillars, or columns, in north Behar, two of the pillars surmounted by a lion, and each having an inscription upon the shaft, which was unintelligible at the time Mr. Hodgson wrote, 24th April, 1834. The Bettiah inscription is precisely the same as that of Delhi and Allahabad, No. 1.—*Vol. III. p. 482. Vol. IV. p. 125.*

4. *Sanchi.*

Language of Inscription.—Pali.

Date.—B. C. 40? but the Samvat 18 may not be of the era of Vicramaditya.

Character used in Inscriptions.—Between Allahabad No. 2, or Kanouj Nagari and Delhi Lat, or old Pali.

Religion; or Divinities or Sages mentioned.—Buddhist.

Kings or Princes mentioned.—Chandagutto in Pali; Chandra Gupta in Sanskrit.

Remarks.—Very numerous inscriptions are upon the basement of a prodigious chaitya, or relic temple, of an hemispherical form, built without cement, whose circumference is 554 feet, and fallen as it is, its height is still 112 feet. There are three gateways, each 40 feet high. Capt. Fell thinks the date to be samvat, 18, or B. C.—? The splendid bas-reliefs represent the dedication of a chaitya. The Emperor Chandagutto buys land for the Buddhist temple, and pays for it in dinars; and killing a Brahman is not so great a crime by five-fold as the taking away the land from the temple. It is to be observed of the figures making offerings to the chaitya that their appearance is exactly that of most modern Hindus; dressed in a dhotee round the loins and thighs, and naked from the waist upward, with a turband upon the head.—*Vol. III. p. 488.*

5. *Iron pillar at Delhi.*

Date.—No date, but scarcely earlier than A. D. 800, the character looking more modern than Kanouj Nagari.

Character used in Inscription.—Many letters agree with the Kanouj Nagari but the general aspect is more modern.

Religion; or Divinities or Sages mentioned.—Vaishnava, but no invocation or names of Gods.

Kings or Princes mentioned.—Prince Dhava, an usurper, at Hastinapur,

Remarks.—The inscription is punched upon an iron pillar, and the only thing remarkable in it is the mention of the Bactrians called Vallekhas, being still in Sindh. From the compound letters used, inscription must be long after the fifth century.—*Vol. III. p. 494. Vol. VII. p. 629.*

6. *Karli near Poona.*

Language of Inscription.—Sanskrit.

Numerous inscriptions in the caves.

Language of Inscriptions.—Pali.

Date.—B. D. 543, by Dr. Wilson, but if the *Salivahana* era be intended, then A. D. 176, Dr. Stevenson.

Character used in Inscriptions.—Slightly modified Lat.

Religion, or Divinities or Sages mentioned.—Buddhist; the invocation is to the Triad; no doubt meaning Buddha, Dharma, Sangha.

Kings or Princes mentioned.—Dr. Wilson says Vijaya. Dr. Stevenson, Arodhana, lord of India, Garga, ruler of the Shaka.

Remarks.—These are some of the numerous Buddhist inscriptions in the cave temple at Karli. Drs. Wilson and Stevenson are not quite agreed about the reading. Garga, the "ruler of the Shaka" (Sakyas, Buddha's tribe) is mentioned. Dr. Stevenson mistakes the language for Sanskrit, which Mr. Prinsep proves to be Pali, from copies sent by Col. Sykes. The excavation of the temples, and gifts by individuals in aid, are mentioned.—*Vol. III, p. 499.*

7. *On images of Buddha from the temple of Sarnath at Benares, and on an image from Bakhra, in Tirhut.*

Language of Inscription.—Sanskrit, but not pure.

Date.—After A. D. 800, and that of Sarnath, probably of the eleventh century.

Character used in Inscription.—More modern than Kanouj Nagari; approaching the modern character.

Religion; or Divinities or Sages mentioned.—Buddhist. Tathagata, Samanas, Buddha.

Kings or Princes mentioned.—None.

Remarks.—These inscriptions upon images of Buddha, although in a comparatively modern form of the Deva Nagari, the Brahmans of Benares could not read. They contain the quaint compendium of Buddhist doctrines, commencing with Ye dharma hetuprabhava, &c.; but the Sanskrit text of the moral maxim has not been found in the Tibetan Pragna Paramita. These are the first Buddhist inscriptions in Sanskrit met with, and they are most remarkable, showing at their late date that Sanskrit was still imperfect! The mounds and remains near Bakhra testify to a former Buddhist city. From copper-plate inscriptions found near Sarnath it is conjectured the Buddhist temple was erected by the sons of Bhupala, a rajah of Gaur, in the eleventh century. The image and inscription would probably be of the same date, and the character of the inscription corresponds to that date.—*Vol. IV, p. 135, 181, 211, and 713.*

8. *Kesariah mound, 20 miles north of Bakhra, in sight of the Gundak River.*

Language of Inscription.—Sanskrit.

Date.—About the date of the Bakhra image inscription.

Character used in Inscription.—Same as Sarnath and Bakhra character.

Religion; or Divinities or Sages mentioned.—Brahmanical. The Avatars. The Sakta hymn of the Rig Veda mentioned but no invocation or Hindu gods named.

Kings or Princes mentioned. Chandradatta, son of Suryadatta.

Remarks.—The inscription is imperfect, but Dr. Mill says that the ever-living Chandradatta was born on the Sunday appropriated to the reading of the Sakta by his father Suryadatta. The Sakta has for one of its verses the holy "gayatri." *Vol. IV, p. 128 and 286.*

9. *The mountain temple of Karsha of Shekavati.*

Languages of Inscription.—Grammatical Sanskrit, but with some unusual terms, and some inexplicable words.

Date.—Erected A. D. 961, finished A. D. 973.

Character used in Inscription.—More modern than that of the Kanouj Deva Nagari, or Allahabad inscription, No. 2.

Religion; or Divinities or Sages mentioned.—Mythology of the Puranas, Siva. The Pramahtes Munies, and Yaties are called immortal Indra, Kama, Nandi. The Nagas, Rama, Bala Rama, Vishnu, Krishna, Sambhu, Visvakarma. The portico of the temple is graced with the presence of Ganga, the holy Asura. Gayatri is called the wife of Brahma.

Kings or Princes mentioned.—Gavaka of the Chauhan family, A. D. 800. Chandra Raja, his son, A. D. 830. Gavaka, his son, A. D. 860. Chandra, his son, A. D. 890. Vakpata, his son, A. D. 920. Sinha Raja who appears to have lost his kingdom of Shakavati A. D. 961. Vighraha Raja of the Solar race not related to Sinha Raja, and probably of Kanouj.

Vakpata appears to have had a hostile opponent, Tantra Pala, whom he defeated; his younger brother was Durlabha. Ajaya Sri Raja gives grant of village.

Remarks.—The inscription is at a temple of the Linga (Siva), and Dr. Mill says "the character furnishes a definite standard from which the ages of other monuments, of similar or more remotely resembling characters, may be inferred with tolerable accuracy." The temple was built to commemorate the destruction of the Asura, or demon Tripura, who had expelled Indra and the gods from heaven; and, on the mountain, Siva was solicited by the gods, whence the name Harsha (joy). The princes are but donors and benefactors; the Brahmans are represented as the real builders; their spiritual genealogy is traced; one of them is made an incarnation of Nandi, similar in splendour to the great deity himself,

and they are called "Lords of the Earth." Indra is called Bharata in the inscriptions. Siva is identified with his phallic emblem, and he is also called the eight formed one. The sandal-wood of Malabar mentioned. Nudity, clotted hair, and ashes, characterize the Brahman teachers. The revenues of numerous villages are given for the support of the temple. It is singular that Ganapati, the son of Siva, is not mentioned; seeming to indicate that his worship was not yet established. *Vol. IV. p. 367.*

10. *Balabhi, in Gujarat Copper plates.*

Character used in Inscription.—Resembles Dr. Wilkins's Gaya inscriptions of eleventh century, but near Kanouj Nagari of eighth.

Religion or Divinities or Sages mentioned.—No invocation to the gods. Mahesvara, Menu, Dhurma Raja, or Yudhisthira, Bhagavata (or Vishnu) Surya. Savara (or cupid) Kuvera, Ganga. Mahabharata, is quoted.

Kings or Princes mentioned.—Generals, Bhatarka. Dhara Senna. Maharajas, Drona Sinha. Dhruva Senna 1st. Dharapattah. Griha Senna. Sridhara Senna 1st, Siladitya 1st, Charagriha 1st, Sridhara Senna 2nd, Dhruva Senna 2nd, Sridhara Senna 3rd, Siladitya, 2nd. Two Princes. Charagriha 2nd, Siladitya, 3rd. Date.—A. D. 328.

Remarks.—These are grants of land to Brahman priests. Mr. Wathen, like Mr. Prinsep, refers the modern Deva Nagari, through various changes which he shows in inscriptions of different ages, to the old Pali, Lat, or column character. The era used in the inscription is the Valabhi era, corresponding to the 375th of Vikramaditya, or A. D. 319. Balabhi, or Balharra, is represented to have been destroyed under Siladitya 3rd, A. D. 524, by a Bactro-Indian Army; it is supposed to be the Byzantium of Ptolemy. In the first inscription, Dhruva Senna is a follower of Bhagavata, and Dharapattah of the sun; all the rest worship Siva. The Brahmans are not spoken of with any respect or veneration, as the grants simply say, I give to such and such a Brahman. Very considerable doubt exists with respect to the accuracy of the date of the inscription. The character corresponds to that of the eighth century. When Hiuen tseang was at Balabhi in the seventh century, there were 100 Buddhist monasteries, and 600 Buddhist priests; and the king, although a Kshatriya, was a Buddhist.

11. *Sindhapura Copper-plates much defaced.*

Date.—A. D. 559?

Kings or Princes mentioned.—Siladitya Musabla.

12. *Stone slab in the fort of Chunar, near Benares.*

Language of Inscription.—Sanskrit, and no mention of it being ungrammatical.

Date.—A. D. 1333.

Character used in Inscriptions.—Modern Deva Nagari, very slightly altered.

Religion, or Divinities or Sages mentioned.—Opens with a salutation to Ganapati, Shambhu, Bhagavati (the goddess Anna Purna Devi).

Kings or Princes mentioned.—Devaka father of Devana, father of Chandragana, elder brother of Swami Raja.

Remarks.—The inscription records the attacks on the fort of Chunar by Mahommed Shah, Emperor of Delhi, defended by Swami, a Raja of Benares, who together with his progenitors, are unknown in history. The inscription is valuable as showing the state of the Deva Nagari in the fourteenth century. The invocation to Ganapati shows that his worship was now established, which probably was not the case at the time of the Harsha inscription.—*Vol. V. p. 341.*

13. *Caves at Adjunta.*

Language of Inscriptions.—Pali?

Date.—Not mentioned.

Character used in Inscriptions.—One resembling Balibhi and one in the Seoni parallelogram headed character, which is of the eleventh and twelfth centuries.

Religion, or Divinities or Sages mentioned.—Buddhist.

Kings or Princes mentioned.—None; but the sculptures and paintings evidently represent royal personages and royal doings.

The first is one of the numerous inscriptions in the Buddhist caves at Adjunta, and is of interest from the character resembling that of Wathen's Balibhi inscription, which with others show the gradations of the character upwards into antiquity. The caves are remarkable for their paintings as well as sculpture. Capt. Gresley says amongst the paintings there are three Chinese figures!—*Vol. p. 558.*

14. *Piplianagar in Bhopal, on copper plates.*

Language of Inscriptions.—Sanskrit.

Date.—A. D. 1210.

Character used in inscriptions.—Deva Nagari, little altered.

Religion, or Divinities or Sages mentioned.—Instead of the usual Hindu invocation, it is to Virtue. The snake Shesha, Parasurama, Rama, Sita, Yudhisthira, Bhima, Kansa, Indra, Saraswati, Sambhu.

Kings or princes mentioned.—Raja Bhoja Deva, son, Udayaditya. Naravarma. Yashavarma, 1137. A. D. Ajayavarma, 1143, A. D. Vindhayavarma son Amushyavarma, son, Arjuna, living.

The inscription was communicated by Mr. L. Wilkinson. It gives away the revenues of a village to a Brahman family by the young Raja Arjuna. It is remarkable for the fre-

quent reference to the heroes of the poems, and the absence of the usual reverential notices of the now popular Hindu gods. Firearms in the thirteenth century could not have been used, for the successes in war of the princes are owing to flights of arrows. Subhatavarma appears to have destroyed Patan in Gujarat. The term Pergannah being used, the Mahomedans must have previously arranged the districts. The capital of the Princes was Mandu or Onjein.—*Vol. V. p. 377.*

15. *Asirgar, a fort in Kandesh; on a seal.* Language of Inscriptions.—Sanskrit, but not quite grammatical.

Date.—Tenth or eleventh century, by the character.

Character used in Inscriptions.—Deva Nagari, resembling the Gaya or Gour, approaching Allahabad No. 2.

Religion or Divinities or Sages mentioned.—There is not any invocation, or any mention of gods, but only munis; but there is a bull on the seal, and two men, one with a sceptre and axe, and the other with umbrella and axe.

Kings or princes mentioned.—The great Kings Hari Varma, son, Aditya Varma; do, Isvara Varma; do, Sinha Varma; do, Kharva Varma, who is called King of Kings.

Remarks.—Mention is made that the Rajas Aditya Varma and Isvara Varma were married to the eldest daughters of the Gupta race, which may be that of the Allahabad inscriptions and Kanouj coins. If so, the Deva Nagari of the inscription would confirm the belief of the Guptas being of the ninth and tenth centuries. The Rajas were probably Princes of Kandesh.—*Vol. V. p. 482.*

16. *Barahut and Gopesvara in Garkwal, upon two bronze tridents respectively twenty-one and sixteen feet high.*

Language of Inscriptions.—Semi-barbarous Sanskrit.

Date.—Not mentioned.

Character used in Inscriptions.—The oldest inscriptions approaching Allahabad No. 2, and the others nearly modern Deva Nagari.

Religion, or Divinities or Sages mentioned.—No religious invocation beyond Svastis, and no mention of Hindu gods whatever in the more recent inscription on the Gopesvara trident, the invocation is Aum Svasti, and the spot is called sacred to Mahadeva.

Kings or Princes mentioned.—Names not made out in the old inscription; but in the recent Sanskrit inscription from Gopesvara, the name of prince Anic Mall occurs.

Remarks.—The tridents with their inscriptions are instructive: they are precisely of the form of the trident on the Indo-Scythic coins, with the axe attached to the shaft; the oldest inscriptions—which, however, from the form of

the Deva Nagari, cannot be before the seventh century—are in relief upon the shaft, and make no mention of Mahadeva or Hinduism; but the more recent are cut into the trident, which must have been taken down to admit of the incision. In one of these is the Aum and the name of Mahadeva, which had no association originally with the tridents. The facts strengthen the inference that the trident on the coins has nothing to do with Hinduism.—*Vol. V. p. 347 and 485.*

17. *Harburenni and other places in Ceylon: numerous rock inscriptions.*

Language of Inscriptions.—Pali.

Date.—From 104 B. C. to twelfth century.

Character used in Inscriptions.—From the Lat to the modern Tamil character.

Religion; or Divinities or Sages mentioned.—Buddhist.

Kings or Princes mentioned.—Not stated.

Remarks.—Sir Wilmot Horton says, there are thousands of these inscriptions in Ceylon and they exhibit the Deva Nagari in all its transitions. The inscriptions would appear to be much defaced, and little is yet made of them.—*Vol. V. p. 554.*

18. *Adjunta caves in Kandesh; several inscriptions.*

Language of Inscriptions.—Pali.

Date.—Before the eighth century, A. D.

Character used in inscriptions.—Intermediate, between the Lat and Allahabad, No. 2.

Religion; or Divinities or Sages mentioned.

—Buddhists; one of the inscriptions commencing with the formula, "Ye dharmas."

Kings or Princes mentioned.—Not stated.

Remarks.—These inscriptions appear to be of different ages, from variations in the character; but owing to mutilations, Mr. Prinsep had done little with them. One of them is in the Seoni parallelogram headed characters. It is very curious that the figures of Chinese are represented in the fresco paintings in the caves. The paintings are admirable for their spirit and variety of subjects.—*Vol. V. p. 556.*

19. *Nagarjuna Cave, Buddha Gaya, numerous inscriptions.*

Language of inscriptions.—Sanskrit; but requiring the aid of a Pali scholar to translate it.

Date.—Samvat 73 or 74 of the Gupala or Bhupala dynasty of Gaur, corresponding to 1197 A D, or 1140?

Character used in Inscriptions.—Gaur alphabet, the immediate parent of the modern Bengali, and like the Harsha.

Religion; or Divinities or Sages mentioned.—Salutation to Buddha, Mahvira Swami, Sahasrapada, the treasurer of the raja, is called a conscientious Bodhisatwa.

Kings or princes mentioned.—Asoka Chandra Deva; his brother, Dasaratha Kumara, and Sri Mat Lakshmana. Seva Deva.

Remarks.—This inscription is of considerable importance as, by its era of 73, it confirms Mr. Colebrooke's correction by a thousand years of Dr. Wilkin's date of the Gaya inscription translated by the latter. It is of great importance, also, as it distinctly shows the Buddhist impression in those days, of what Nibutti or Nirvana meant, namely—as expressed in the inscription—"the absorption of his (the writer's) soul in the Supreme Being," disposing of the question of Buddhist atheism. The inscription shows that the Buddhists had still a hold in India in the twelfth century. It was recorded by Sahasrapada, the treasurer of the Raja Dasarath, Kumara. The Princes are not met with in Hindu history.—*Vol. V. p. 660.*

20. *Nagayuna, at Gaya.*

Language of Inscription.—Sanskrit.

Date.—Eleventh century.

Character used in Inscription.—Gaur.

Religion : or Divinities or Sages mentioned.—Buddhist.

King or Princes mentioned.—Yagna Varma, and his grandson Ananta Varma.

Remarks.—The cave called Nagarjuna, after a celebrated Buddhist patriarch, is said in the inscription to have been excavated by Ananta Varma—*Vol. V. p. 657.*

21. *On images of Buddha at Gaya.*

Language of Inscription.—Not stated.

Date.—Not stated.

Character used in Inscription.—Not stated.

Religion ; or Divinities or Sages mentioned.—Buddhist.

Kings or Princes mentioned.—Raja Vijaya-bhadra.

Remarks.—By the inscription on the images, one of them was raised by the Rajah Vijaya-bhadra, and the other by Jagasen and Kumara Sen, sons of Panyabhadra, private persons. The Brahmans now call a figure of Buddha—of course a male—and with the Buddhist text "Ye dharma-hetu," &c, upon it, the Hindu goddess Saraswati!—*Vol. V. p. 138.*

22. *On a stone at Buddha-Gaya.*

Language of Inscription.—Sanskrit.

Date.—Samvat 1005 or A. D. 948.

Character used in Inscription.—Allahabad No. 2.

Religion ; or Divinities or Sages mentioned.—Buddhist.

Kings or Princes mentioned.—Not stated.

Remarks.—The inscription is said, by Dr. Wilkins, to support that the temple of Buddha, at Buddha-Gaya, was built by Amara Deva, the author of the Amara Kosha : but it must mean restored, as it was seen before Amara Deva's time by Fa-hian.—*Vol. V. p. 189.*

23. *On a stone at Buddha-Gaya.*

Language of Inscription.—Burmese.

Date.—A. D. 1305.

Character used in Inscription.—Pali.

Religion ; or Divinities or Sages mentioned.—Buddhist.

Kings or Princes mentioned.—The Burmese King is mentioned.

Remarks.—The Burmese inscription says the Chaitya, or temple, was first built by Asoka, 218 years after Buddha, or B. C. 325 ; often restored and finally restored by the Burmese Envoys, A. D. 1305.—*Vol. V. p. 157.*

24. *Bhitari Lat or Pillar, Ghazipur.*

Language of Inscription.—Not pure Sanskrit, nor easily intelligible.

Date subsequent to Allahabad No. 2 ; and Dr. Mill says, not earlier than Charlemagne in Europe, A. D. 800, if the Guptas be those of the Puranas. Moreover, the mention of the sectarian worship of the Bhagavata and Tantras makes the date comparatively modern.

Character used in Inscription.—Same as Allahabad No. 2, or Kanauj Nagari, with numerous mis-spellings.

Religion ; or Divinities or Sages mentioned.—No invocation. Indra, Varuna, Yama, Krishna, Siva, Sita, the Tantras, Devaki, the mother of Krishna, Rudra ; but loads of forest timber are collected for the completion of sacrifices for Indra, Varuna, and Yama only ; and not for Siva or Vishnu. These last, therefore, may have had honour, but not sacrifice.

Kings or Princes mentioned.—The great King, Gupta. His son, do, Ghatot Kacba : do. King of kings, Chandra Gupta, do. King of kings, Samudra Gupta, do. Chandra Gupta 2nd : do. Kumara Gupta, do. Skanda Gupta a minor, Mahendra Gupta ?

Remarks.—This inscription, like that of Allahabad, No. 2, is intruded on a Buddhist column, and is subsequent to it, as it carries on the Gupta family from Samudra to the boy Mahendra. Chandra Gupta 2nd, and Kumara Gupta followed Vishnu worship, but Skanda Gupta attached himself to the opposite doctrines, now so prevalent, of the mysterious and sanguinary Tantras. Skanda Gupta was dispossessed of his kingdom, for a time, by a treacherous minister. This was the case when the Chinese traveller, Hsuan-thsang reached Behar, in the seventh century, and he may refer to the event mentioned in the inscription ; but he calls the king by a name construed to be Siladitya, and no king of this name reigned in Behar ; nor nearer than in Gujerat. The Guptas, probably, succeeded the Buddhist kings of Behar. The absence of the insertion of the Tantras in the Allahabad inscription, and their insertion here, would seem to indicate the period of the origin, of this worship.—*Vol. V. p. 661.*

25. *Stone slab in the Museum of the Asiatic Society of Bengal.*

Language of inscription.—Not Sanskrit; or so ungrammatical as to be scarcely intelligible.

Date.—No date, but after eleventh century, from the character.

Character used in Inscription.—Deva Nagari of the Harsha inscription nearly.

Religion, or Divinities or Sages mentioned.

—Invocation to Krishna, as son of Vasu-Deva, Narayana, as Lord of lords and Creator, Vedas, Vishnu.

Kings or Princes mentioned.—None mentioned.

Remarks.—The inscription defines the boundaries of lands, apparently belonging to a temple of Vishnu. The inscription is only valuable as showing the variation in the form of the letters, kh, gh, and a.—*Vol. V. p. 726.*

26. *Seoni, in the Nerbudda or Narmada district, on five Copper plates.*

Language of Inscriptions.—Questionable Sanskrit, often unintelligible.

Date.—Eighteenth year of Pravara dhamanrajya Samvat, a local era, after Mahendra Gupta of Kanauj.

Character used in Inscription.—Allahabad No. 2, with an open parallelogram at the head of each letter.

Religion; or Divinities or Sages mentioned.—No invocation. Bhairava, Sivalinga, Mahesvara, Yudhisthira, Vishnu, Sama Veda, Vyas.

Kings or Princes mentioned.—Rajas Pravara Sena, Sri Rudra Sena, Prithivi Sena, Rudra Sena 2nd: Pravara Sena 2nd.

Remarks.—None of the princes are known in history; but the inscription adds another Gupta (Deva) who is called "Paramount Sovereign," and whose daughter was the mother of Rudra Sena 2nd. The Deva Nagari is curious, having an open parallelogram at the head of each letter. The Vikramaditya era not used in this; nor commonly in early inscriptions. Gives a village to a Brahman, but without any eulogy of Brahmins. Begar, or forced labour, is mentioned. Similar Deva Nagari is met with at Chattisgarh.—*Vol. V. p. 727.*

27. *Slab in the Museum of the Asiatic Society of Bengal.*

Language of Inscription.—Sanskrit, but scarcely intelligible.

Date.—Samvat 1093, or A. D. 1035.

Character used in Inscription.—Deva Nagari, of Sarnath inscriptions.

Religion; or Divinities or Sages mentioned.—Not mentioned.

Kings or Princes mentioned. The great King Yaso Pala.

Remarks.—Yaso Pala, as king of Delhi, issues orders to his officers, but for what purpose is not made out.—*Vol. V. p. 731.*

28. *On a slab at Warra, in the Konkan, Bombay.*

Language of Inscription.—Not mentioned.

Date.—None.

Character used in Inscription.—Saurashtra coins, and long tailed Deva Nagari.

Religion; or Divinities or Sages mentioned.—No gods mentioned, but there is a trisula on the slab.

Kings or Princes mentioned.—None.

Remarks.—The inscription is a fragment, and cannot be fully translated; but Mr. Prinsep says it may be as old as the Gujarat coins with Greek heads upon them. The trisul, without the mention of Hindu gods, would seem to indicate that it is not necessarily an exclusive emblem of Siva.—*Vol. V. p. 340.*

29. *Slab in the Museum of the Asiatic Society, Bengal; from Bhubaneswar, Orissa.*

Language of Inscription.—Grammatical Sanskrit, with double meanings.

Date.—Samvat 32 of the Gaur era. A. D. 1174?

Character used in Inscription.—Gaur, or Harsha.

Religion; or Divinities or Sages mentioned.—Invocation "Om." Vasu Deva, Krishna, Hari, Kamala, Saraswati, Bhava, Brahma, and Siva, Mahasa, Garuda, Shaktis, Lakshmi, three Vedas only named.

Kings or Princes mentioned.—Private family one of whom, was minister to a raja Karivarman Deva. The rajahs of Banga and Gaur.

Remarks.—This inscription dedicates a stone image of Vishnu, and is in praise of a Brahman and his ancestors, for building a temple, and is full of Puranic fable. One of the worthy Brahmins, Bhava Deva, gave 100 damsels, "bright-eyed," to a temple. The sea of Buddhism is spoken of, and Bhava Deva, the Brahman, as equal to the Omniscient, and skilful at annihilating the opinions of heretics.—*Vol. VI. p. 88.*

30. *From the ruins of a magnificent Buddhist Chaitya at Amaravati (Omravati) in Berar? Museum of A. S. B. in Manuscript.*

Language of Inscription.—Sanskrit, but neither pure nor of correct orthography.

Date.—Not mentioned, but of the transition period to modern Deva Nagari A. D. 600, to A. D. 1000.

Character used in Inscription.—Ceylon, Seoni, and Andhra, passing to florid Southern Indian, and has much resemblance to that of some of the rock inscriptions at Mahabalipur.

Religion; or Divinities or Sages mentioned. Buddhism is called the kingdom preserving and

a very excellent religion of the people which is hoped will endure for ever.

Kings or Princes mentioned.—Not made

Remarks.—The inscription, which is imperfect, refers to the foundation and endowment of some Buddhist institution. It says, "place is not to be given to the disputer of Buddhism;" nevertheless praises those who relieve the guest and the Brahman, and considers injuries to the gods and Brahmans as great sins!! At the date of the inscription, therefore, there was not any hostility between Buddhists and Brahmans.—*Vol. VI. p. 218.*

31. *Slab in Museum A. S. B. from Bhubaneswar. Companion Slab of the one before noticed from the same place.*

Language of Inscription.—Polished Sanskrit, and exceedingly inflated.

Date.—A. D. 1174, is the date of Aniyanka Bhima's ascent of the throne, in the annals of Orissa.

Character used in Inscriptions.—Haraha, or Shekwatti, almost modern Deva Nagari.

Religion; or Divinities or Sages mentioned.—Salutation to Siva, and Gautama is called the chief of Sages, Indra, Vishnu, Brahma, Rama, Kamadeva, Ananta.

Kings or Princes mentioned.—Aniyanka Bhima.

Remarks.—This prince was celebrated in Orissa and endowed Jagannatha. He had the misfortune to kill a Brahman, and raised numerous temples in expiation of his offence at one of which was the slab; and the slab led to the identification of the preceding at Bhubaneswar; but that inscription was Vaishnava, this Saiva.—*Vol. VI. p. 277.*

32. *Sanchi, near Bhilsa, Bhopal, on the Buddhist temple Gateway.*

Language of Inscription.—Sanskrit prose.

Date.—Samvat 403, or 1009 or 18? The same, Samvat 18, is mentioned in the inscription at Brahmeswara, but the character is of the tenth century.

Character used in Inscription.—Evidently later than Allahabad, No. 2.

Religion; or Divinities or Sages mentioned.—Buddhist. The inscription is addressed to the Sramanas, or buddhist priests, and salutation is offered to the eternal gods or goddess.

Kings or Princes mentioned.—The great emperor Chandragupta, called by his subjects Deva Raja or Indra. Possibly Chandragupta 2nd, of the Bhitari column inscription. But he must have deserted the religion of his family.

Remarks.—The inscription records a money contribution, the coin being called "Dinar," and a grant of land by the great Emperor Chandra Gupta, for the embellishing of the chaitya and the support of five Buddhist priests

for ever, and it records the remarkable fact of the purchase of the ground by the Emperor for the purpose at the legal rate. It is uncertain whether the Samvat in the inscription is that of Vikramaditya; it is much more likely to be a Buddhist family era. It is said, "whoso shall destroy the structure, his sin shall be as great, yea five times as great, as that of the murder of a Brahman." So that the Brahman was at a discount of five hundred per cent. compared with the Buddhist chaitya! From the corruption indicated by the salutation of the Eternal Gods and Goddesses and the alphabet used, the inscription is probably not older than the eighth century.—*Vol. VI. p. 454.*

33. *Second inscription, ditto, ditto, on the Buddhists temple at Sanchi*

Language of Inscription.—Ditto.

Date.—Numerals unintelligible.

Character used in Inscription.—Ditto.

Religion; or Divinities or Sages mentioned.

—Buddhist. Mentions the holy monastery of Kakunada Spola; and the four Buddhas are thrice named; and images of four Buddhas are in niches.

Kings or Princes mentioned.—Not mentioned.

Remarks.—This inscription records that a female devotee, Hariswmini, to prevent begging, caused an almshouse to be erected, and money was given for the lamps of the four Buddhas; so that, at this period, as Fa-hian states, more than one Buddha was worshipped. The numerals of the date are not understood.—*Vol. VII. p. 459.*

34. *Inscriptions 3 to 25, on the Buddhist temple at Sanchi.*

Language of Inscriptions.—Old Pali.

Date.—Ditto, but before the fifth century.

Character used in Inscriptions.—Varying from Lat to Allahabad No. 2, or Gaya.

Religion; or Divinities or Sages mentioned.—Gifts to the chaitya recorded.

Kings or Princes mentioned.—Not mentioned.

Remarks.—All the inscriptions are in the character before the Allahabad No. 2, or Gaya, therefore before the eighth century, and they are of different ages: they record small gifts by Buddhists to the chaitya—particularly by different communities of Buddhists from Ougein; and there is a regular progression in the form of the letters, from the simple outline to the more embellished type of the second alphabet of Allahabad.—*Vol. VI. p. 461.*

35. *Columns at Delhi, Allahabad, Mattiah, Radhial.*

Language of Inscriptions.—Pali, but of an old character, between Pali and Sanskrit, possibly the original of both. The phraseology simple and straightforward, opposed to Sanskrit hyperbolic eulogy and extravagant exaggeration.

Date.—By the Mahawanso, the fourteenth year of Asoka's reign corresponds to the 232nd year after the death of Buddha, and therefore to B. C. 311 and the inscription being in the 27th year of his reign, the date is B. C. 298. The Dipawanso says, Asoka was inaugurated 218 years after the death of Sakya, therefore B. C. 325.

Character used in Inscriptions.—Lat, or oldest form of Deva Nagari, which latter is deducible from it, letter by letter through successive ages, excepting the new or additional Sanskrit letters.

Religion ; or Divinities or Sages mentioned.—Buddhist, of this there can be no doubt from the injunctions to teach, "Dharma" under the sacred tree, and turning the wheel of the law, the mention of the ascetic disciples ; certain dogmas, and the observance of the three holy days, monthly, mentioned by Fahian, preachings, &c., and Bahana or (Brahmans) are to be converted, and kindness and condescension shown to Brahmans and Sramans.

Kings or Princes mentioned.—Piyadasi or Asoka, emperor of all India, identified as Asoka by the Hon. Mr. Turnour, from the Pali Dipawanso, which states that he was the grandson of Chandagutto, and viceroy of Ougein.—*J. A. S. B. Vol. VI. p. 791.*

Remarks.—The inscriptions are the same on all the columns. Five hundred years ago, the author of the Haft Aklm, Mahomed Amin, said the character was unintelligible to the learned of all religions. No images of Buddha, no temples or relics mentioned. But Dharma (the doctrine) is to be taught under the sacred tree. The chief object is the interdiction of the slaughter or destruction of any living creature, and the abolishment of torture in punishments, and the punishment of death for criminals, and the exempting animals from work on the stated days. But the days, 8th, 14th, and 15th of the moon, do not quite accord with modern Buddhist practices. The name of Buddha, Gotama, or Sakya Muni, not mentioned ; but the expression, Sukatam Kachhato, which Mr. Prinsep supposes is intended for Sugatam Gachhato, or Sugato (well come) a name of Buddha ; and the inscriptions have frequent references to the acts to be done under the holy fig-tree, Buddha's Ficus Indica. The inscription opens in the twenty-seventh year of the king, Devanampiya Piyadasi's anointment. Asoka distinctly says, the object of his doctrines is to increase the mercy and charity, the truth and purity, the kindness and honesty, of the world. The King, says he, prays for those of every creed that they, with him, may attain eternal salvation. This is not atheism.

36. *The above stone pillar at Delhi.*

Language of Inscriptions.—Sanskrit.

Date.—Samvat 1220, or A. D. 1163.

Character used in Inscriptions.—Almost modern Deva Nagari.

Religion ; or Divinities or Sages mentioned.—Hindu.

Kings or Princes mentioned.—Vesala Deva. **Remarks.**—This inscription was cut upon one of the old lats, or Buddhist columns, to record Vesala's victories, but not against the Buddhists, because they were gone.—*Vol. VI. p. 576.*

37. *Slab from Kurgooda, in Canara.*

Language of Inscriptions.—Canarese, but invocation Sanskrit.

Date.—Zalivahana 909, A. D. 987 ; and there is an era of the family Machmal, 710, corresponding to the above.

Character used in Inscriptions.—Hala Canara.

Religion ; or Divinities or Sages mentioned.

—Invocation to Siva as Swayambhuuath, Parbate, Sambhu.

Kings or Princes mentioned.—Machmal Deva and his son Bachwan.

Remarks.—The inscription is remarkable, adverting to the date, for the terms "suppressor of the pride of the Daityas," applied to Sambhu (Siva), having relation apparently to the extermination of the Buddhists, not long previously, by the Saivas. The inscription gives lands to a temple of Sambhu, and h uses to the native priesthood. Not a word about Brahmans, and the mention of "native priesthood" would seem to confirm the belief of the modern introduction of the Brahmans into Southern India.—*Vol. VI. p. 664.*

38. *Fort of Kalinjar in Bundelkand, on a black marble slab.*

Language of Inscriptions.—Sanskrit.

Date.—A. D. 1246 ?

Character used in Inscriptions.—Peculiar elongated and narrow Deva Nagari, not unlike Seoni, or the Lower Kanouj coins.

Religion ; or Divinities or Sages mentioned.

—Invocation to Siva, Sambhu, Parbate, Ganga, Puranic imagery.

Kings or Princes mentioned.—Parmalik, or the Milleki rajas of the mussulman historians.

Remarks.—The inscription is mutilated. It was from a temple of Mahadeva. The Raja was defeated by the Delhi monarch, Mahomed bin Altamsh, A. D. 1216.—*Vol. VI. p. 665.*

39. *Gumsur, Outlack, on Copper-plate.*

Language of Inscriptions.—Mixture of Sanskrit, Uriya and Tamil.

Date.—Nalgulliera Samvat 1 ; unknown, but the writing is after the tenth century.

Character used in Inscriptions.—Gaur or Bhubaneswar of tenth century.

Religion ; or Divinities or Sages mentioned.

—Invocation to Kara, Kama, Ganga, Seenag.

The Yajur Veda and the Raja Dharma Sastra mentioned.

Kings or Princes mentioned.—Kalyana Kulasa of the Bhanjamalla family, or Sri Netri Bhanja grandson of Shatra Deva, son of Rana Bhanja.

Remarks.—This inscription gives a village to a Brahman, resembling the god of the Bhanja mountain. It concludes with the usual quotation from the Dharma, that he who disturbs the grant, and all his ancestors, shall become loathsome maggots in dung.

40. *Buddha Gaya, Vaulted cavern, or Nagarjuni. Other inscriptions twenty-three. Inscript. No. 1.*

Language of Inscriptions.—Sanskrit.

Date.—After Allahabad No. 2, and of the ninth or tenth century.

Character used in inscriptions.—Gaya; and differs slightly from the Gujarat alphabet of Wathen, having many compound letters, and is therefore more modern than it.

Religion; or Divinities or Sages mentioned.—Devi Maheshasura The image of Katyayni, is placed in this cavern of the Vindhya mountains, so that this part must have been considered part of the Vindhya.

Kings or Princes mentioned.—Yajna Varma, Sardula Varma, Ananta Varma.

Remarks. This is the inscription translated by Dr. Wilkins, but subsequently more literally done by a boy educated in the Sanscrit College at Calcutta. The inscription gives the village of Dandi to Devi; but there is not a word about Brahmins, nor Puranic fables, unless the word Mahishasura implies it.—*Vol. VI. p. 671.*

41. *Buddha Gaya, Vaulted cavern, or Nagarjuni. Other inscriptions 15, inscription No. 1.*

Language of Inscription.—Sanskrit.

Date.—After Allahabad No. 2, and of the ninth or tenth century.

Character used in Inscriptions.—Gaya; and differs slightly from the Gujarat alphabet of Mr. Wathen, having many compound letters, and is therefore more modern than it.

Religion; or Divinities or Sages mentioned.—No gods mentioned.

Kings or princes mentioned.—Sardhula Varma, Krishna.

42. *Buddha Gaya, Vaulted cavern or Nagarjuni. Other inscriptions 16 and 17.*

Language of Inscription.—Sanskrit.

Date.—After Allahabad No. 2. and of the ninth or tenth century.

Character used in inscriptions.—Gaya; and differs slightly from the Gujarat alphabet of Mr. Wathen, having many compound letters, and is therefore more modern than it.

Religion; or Divinities or Sages mentioned.—No gods mentioned. Yama.

Kings or princes mentioned.—Son of Ananta Varma.

Remarks.—These inscriptions, in the same character as the preceding, only contain praises of the Varma princes, who, Mr. J. Prinsep thinks, were of the Gupta family. They are all in the Buddha cave of Nagarjuna.

43. *Buddha Gaya, Vaulted cavern, or Nagarjuni. Other inscriptions 2 and 3.*

Language of Inscription.—Old Pali.

Date.—B. C. 280 to B. C. 247.

Character used in inscriptions.—Old Lat.

Religion; or Divinities or Sages mentioned.—Buddhist, Buddha, Ascetics mentioned, for whose use the cave was formed.

Kings or Princes mentioned.—The beloved of the gods, Dasalathana, in Pali, Dasaratha, in Sanscrit.

Remarks.—The title of raja not applied, but the terms are “immediately upon his receiving regal anointment.” These inscriptions are of great moment. In the Puranic prophecy Dasaratha is placed next but one below Asoka, and the character and language make him nearly the contemporary of Agathocles in Bactria and Mahasewa Surattisa in Ceylon. The inscriptions record that the Brahmin girl's cave and the milkmaid's cave were excavated by the Buddhist ascetics, and devoted to them in perpetuity by Dasaratha, who, like Asoka, is called “Beloved of heaven.” The Mitras of the Sunga family are identified from these caves, and from coins.—*Vol. VI. p. 671.*

44. *Buddha Gaya, Vaulted cavern or Nagarjuni. Other inscriptions 4, 5, 6, &c., &c. including all the remaining to No. 23.*

Language of Inscriptions.—Various.

Date.—Various.

Character used in inscriptions.—Various, but none of them Lat.

Religion; or Divinities or Sages mentioned.—Various.

Kings or Princes mentioned.—None mentioned.

Remarks.—The remaining inscriptions are all short, and in every variety of the Deva Nagari, from Allahabad No. 2, to modern Deva Nagari, and notice the Buddhist Bo-tree or Hindu images subsequently introduced.—*Vol. VI. p. 671.*

45. *An inscription on a seal Sri Vati (or Bhati) Khuddak from Ougein.*

Language of Inscription.—Sanskrit.

Date.—None.

Character used in Inscription.—Saurashtra legend coins.

Religion; or Divinities or Sages mentioned.—Not mentioned.

Kings or Princes mentioned.—Sri Vati (or Bhati) Khudda, upon a seal from Ougein.

46. *Bureilly; Village of Allahabad. At the ancient village of Mayuta, district of Bha-shana, on a stone slab.*

Language of Inscriptions.—Sanskrit verse the language and poetry superior to any thing of the previous date, seen by the Society's Pandit, Kamalakanta.

Date.—Samvat, 1042; A. D. 992.

Character used in Inscriptions.—In the Inscription it is called the Kulda, and is midway between the Deva Nagari and the Gauri. Some of the vowel inflections wanting.

Religion; or Divinities or Sages mentioned.—Brahmanical: Ananta, Ravana, Lakshmi, Indra, Rama, Siva, Gunga, Isvara Madhu, and Sambhu, Parbati, Devi. The Vedantas mentioned.

Kings or Princes mentioned.—The founder Chyavan, a Maha rishi, son Viravarma, son Marschanda, Paratapa, brother, Malhana, son Lalla.

Remarks.—The inscription dedicates a temple to Siva and Parbati by Lalla, whose fathers are all of the royal race of Chhinda. The inscription inflated and highly poetic, and the language polished; nevertheless, there are variations in spelling and inflections from modern Sanskrit. The inscription was found at a temple in the jungle, and there were the appearance of the ruins of a town about. A gift of villages and trees to Brahmans. None of the names occur in Hindu works, although the petty princes are called masters of the world.—*Vol. VI. p. 778.*

47. *Mallay; Baitool, near the source of the Tapti river, Copper plate grants.*

Language of Inscriptions.—Sanskrit.

Date.—Mr. Ommaney says A. D. 1573, Mr. Prinsep says A. D. 709 or 909; but the character is rather that of 909.

Character used in Inscriptions.—After the Allahabad No. 2 and Gujarati.

Religion; or Divinities or Sages mentioned.—No invocation, but simply Svasti, Vyasa; and the donor pronounces himself a firm Brahmanist, and a firm Bhagavata, or disciple of Vishnu.

Kings or Princes mentioned.—Sri Darga Raja, son Govinda Raja, son Maswamika Raja, son Sri Nanda Raja, Sri Yuddhasura.

Remarks.—The Raja Yuddhasura, of Rahtore Rajput origin, gives a village to Brahmans; but the inscription is remarkable for the absence of the display of Puranic gods and goddesses. The usual threat about resuming lands is quoted from the Vedas. The inscription is otherwise curious for using the era of the Buddhist Salivahana. None of the princes are in the lists of the Garha Mandala Rajas.—*Vol. VI. p. 869.*

48. *Hunda, near Attock, on the Indus, on marble Slab.*

Language of Inscriptions.—Sanskrit mixed with Hindi.

Date.—Seventh or eighth century probably, or later.

Character used in Inscriptions.—Deva Nagari in transitu.

Religion; or Divinities or Sages mentioned.

—Deva, the husband of Parbati.

Kings or Princes mentioned.—Not made out.

Remarks.—Too mutilated to be useful, speaks of the chief having bland speech for superiors and Brahmans, and talks of his kindly and priestly rule. The flesh-eating Turushcas (Turks) mentioned.—*Vol. VI. p. 879.*

49. *Kalinjar, in Bundelkund. Stone Slab in the Museum of the Asiatic Society*

Language of Inscriptions.—Sanskrit verse, but language and poetry of low estimate.

Date.—A. D. 1288; Samvat 1345.

Character used in Inscription.—Bundelkund, Deva Nagari.

Religion; or Divinities or Sages mentioned.

—Deva as Vishnu, Lakshmi, and all the Avatars of Vishnu, Ganapati, Rama, and the Rakshshas. Kashyapa is called the first expounder of the Vedas.

Kings or Princes mentioned.—Family names of chief, the last of whom, Nanda, married daughter of the king of Ougein.

Remarks.—The inscription is full of poetical and labored images, but the Sanskrit is bad, and Kamalakanta, who translated it with Mr. J. Prinsep, protested against Mr. Prinsep retaining the original errors of the text. The inscription was recorded to dedicate an image of Vishnu.—*Vol. VI. p. 881.*

50. *Allahabad column, Inscription 2.*

Language of Inscriptions.—Not pure Sanskrit; seventy lines metrical, the rest prose.

Date.—Seventh or eighth century.

Character used in Inscriptions.—Allahabad or Gya.

Religion; or Divinities or Sages mentioned.

—Five lines wanting, Dhanada (Kuvera), Varuna, Indra and Autaka (Yama) Vrihaspati. Tumburu Narada. The Ganges coming from the hair of the Lord of men (Siva) noticed. The Shastras, so far from any of the kings being made to worship Hindu gods, Samudra Gupta is said to put to shame Indra, Yama, Kuvera, and Varuna.

Kings or Princes mentioned.—Sri Gupta son, Sri Ghatot Kacha, son Chandra Gupta, son Samudra Gupta, son Chandra Gupta, the second; living.

Remarks.—This is the last revised reading of new impression by Mr. J. Prinsep. The column was raised again by the dewan of Chandra Gupta 2nd, probably. A curious thing in the inscription is the use of ka, the prototype of the modern genitive sign in Hindi. None of the numerous kings named

are met with in the Purnnas, and few of the countries even. No mention of Brahmanas whatever. The poet Dhruva Bhuta calls himself the slave of the feet of the great king and hopes it will be acceptable to the dewan Hari Sena. It is professed to be executed by the slave of the feet of the supreme sovereign, the criminal magistrate Tala Bhatta. Uses the terms Shuhan Shahi, king of kings, which applies to the Sassanian dynasty of Persia, extinct in the seventh century. The Scythians and Huns mentioned. By this inscription the power of Brahmanism was plainly only incipient.—*Vol. VI. p. 970 to 980.*

51. *Junir and Karli caves and other places in Deccan. Collected by Col. Sykes, Seven inscriptions.*

Language of Inscriptions.—Old Pali.

Date.—Second to third century before Christ.

Character used in Inscriptions.—Old Lat, but not so old as Delhi Lat character.

Religion or Divinities or Sages mentioned.—Buddhist. The inscriptions narrate by whom the caves were excavated, and for what objects. That at Kurli is for foreign pilgrims: the great Chaitya cave excavation at Junir is for the comfort of the attendants at the temple, &c.

Kings or Princes mentioned.—Dharmika Seni is called the author of the 100 caves at Junir, but is not called King. Vira Senaka excavated the Delgope temple. Sulisadatta is called Lord of the City of Thaka.

Remarks.—The curious fact connected with these seven inscriptions, in the multitudinous cave temples of the Dekkan, is that they do not record positively the titles of any princes, nor name Samanas and others of the priesthood; but it must be borne in mind that the moment a prince became a "Samana" he abandoned his titles. The inscriptions are remarkable, also, for having [initial or final] many of the emblems on the coins, Nos. 8, 12, 34, 35, and 36—*Journ. Rl. As. Soc. VI. p. 454—Vol. VI. p. 564 and 1038.*

52. *Udayagiri and Khandgiri caves in Cuttack 5 miles west of Bhuvanewar, Numerous inscriptions. But the more modern inscriptions on the same rocks are Sanskrit.*

a. Language of Inscriptions.—Old Pali.

Date.—Before the second or third century before Christ.

Character used in Inscriptions.—Old Lat.

Religion or Divinities or Sages mentioned.—Buddhist Arhantas, or Buddhist saints. Gotama? and Buddha is understood.

Kings or Princes mentioned.—The mighty sovereign of Kalings, but not named. Prince Vattaka.

Remarks.—Caves are stated to be excavated by Kalinga Rajas. Five of the emblems found

on the Buddhist coins are met with in these inscriptions of the forms, 9th, 6th, 35th, 8th, and a new form of the bo-tree.—*J. Rl. As. Soc. Vol. VI p. 454*

The moment an approach to modern Deva Nagari is seen, there is an association with Hindu gods, and not before—*Vol. VI. p. 1072.*

b. Language of Inscriptions.—Sanskrit.

Date.—Some of fifth or sixth century, A. D. One of the tenth century, Samvat 9, which, if of the Gaur era, would be A. D. 1132.

Character used in Inscriptions.—Kutilla.

Religion; or Divinities or Sages mentioned.—Brahmanical, Holy ascetics, Prabhaswara, or Jagannath.

Kings or Princes mentioned.—None mentioned.

Remarks.—This inscription of the tenth century, in Sanskrit, speaks of an equitable prince having the cave excavated within the holy precincts of the Lord of Gods (Jagannath,) for the holy ascetics. In the tenth and eleventh centuries, therefore, Jagannath was worshipped.—*Vol. VI. p. 1075.*

53. *Khandgiri rock in Cuttack, in ancient kingdom of Kalinga.*

Language of Inscriptions.—Old Pali.

Date.—The great inscription is after the Raja Dasalath, 2nd of the Gaya inscription, but before the Junir inscriptions, therefore third or fourth century before Christ. The year 1300 is twice mentioned in words and if this be the Buddhist era mentioned by Fa-Hian in Ceylon, then the date is A. D. 215.

Character used in Inscriptions.—Old Lat.

Religion; or Divinities or Sages mentioned.—Buddhist; and opens with salutations to the Arhantas, or Buddhist saints, and the sculptures represent figures of Buddha, the worship of the Bo-tree, processions, &c. &c. Merry dancing girls spoken of, and a chaitya temple and pillars. The Kalinga Raja, at Buddha's death, got the left canine tooth, which was afterwards transferred to Ceylon, and is now in British custody.

Kings or Princes mentioned.—Aira, the great King; and speaks of a Raja who was in his 85th year, and just dead, Raja Khuravela Sanda, (King of the ocean shore,) Nanda Raja. Note.] Bhamadatta is on one of the coins of the Ramadatta series and Brahmadatta is said by Mr. Turnour to have received the tooth relic at Buddha's death at Remarks.—The inscription makes the young prince learn navigation, commerce, and law, as well as other school matters. At his accession, in his twenty-fourth year, he chose the Brahmanical faith, but afterwards called about him the Buddhist priests who had been settled there under the ancient kings. Subsequent breaks in the inscription interrupt the sense, but the dedication of chaityas is mentioned.

Benares is noticed under its Pali name, and it evidently must have been Buddhist, as the king, Arias, distributes much gold there.

The Brahman caste is written Paiman caste. — *Vol. VI. p. 1085.*

54. *Kuhaon, Gorakhpur on a column.*

Language of Inscriptions. — Imperfect Sanskrit with errors of orthography.

Date. — Not before tenth century.

Character used in Inscriptions. — The Gupta or Allahabad No. 2, a little before the Gaya alphabet.

Religion ; or Divinities or Sages mentioned. — No invocation. No Hindu gods named. Indra mentioned ; and five images of him are set up by the road side, which the pillar records. The naked figure on the column, backed by the seven headed snake, is the same as a drawing presents from the Buddha cave at Ellora. Vide Appendix (J. R. A. S. Vol. VI.

Kings or Princes mentioned. — Mentions the death of Skanda Gupta, [of Allahabad ?] 134 years before the date of the inscription, but the recorder of the inscription belonged to a wealthy private family.

Remarks. — This is an inscription on a column, by a wealthy individual (Madra), in honor of himself and family, son of Rudra Soma, son of Bhatta Soma, son of Anala. Madra professes to be the friend and patron of Brahmins, Gurus, and Yatis ; but there are not any Hindu gods named in the inscription and all the naked figures cut on the pillar are evidently the same as are found in some of the Buddhist caves of Ellora. The translator speaks of the errors in the text. The chances are, that the inscription, like the Gupta inscriptions of Allahabad and Bhitari, was cut on a previously existing Buddhist column. — *Vol. VII. p. 32.*

55. *Bakerganj, Bengal 120 miles east of Calcutta. On Copper plates.*

Language of inscriptions. — Sanskrit verse, inflated, eulogistic, and punning.

Date. — Samvat 3, of Kesava Sena's reign, which, from the Aiyu Akberi list, makes the year A. D. 1136.

Character used in Inscriptions. — Gaur ; a little less simple than the earlier alphabets of the Pala dynasty.

Religion ; or Divinities or Sages mentioned. — Aum, salutation to Narayana, Vedas, Haru (Siva) Saraswati, Kama, Rudra, Indra. The seal of Siva is called Sadasiva. Ravana, Lakshmi, Sesnag, Ganga, Balarama, Jaganath, Satis, mentioned.

Kings or Princes mentioned. — Vijaya Sena, son Ballaha Sena, son Laksmama Sena, son raja Kesava Sena.

Remarks. — This inscription is on copper plates, in a singular state of preservation. The Sena dynasty was of low origin, calling

themselves Sankaya Gauriswara, or Lord of Gaur. The inscription gives a grant of three villages to a Brahman, called Iswara Deva Sarma, but uses no terms of reverence. In referring to the numerous battles of the princes there is not any mention of fire-arms, but of bows, arrows, swords, &c. The founder of the family was a Doctor. The inscription says that Lakshmana Sena erected pillars of victory and altars at Benares, Allahabad, and Jagannath. — *Vol. VII. p. 42.*

56. *Jain images, in marble, dug up at Ajmir.*

Language of Inscription. — Prakrit, derived from the Pali.

Date. — Twelfth century A. D. 1182 is an image.

Character used in Inscriptions. — Deva Nagari.

Religion ; or Divinities or Sages mentioned. — Jain, of the Digamberi class. The name of one of the images Prajnanath.

Kings or Princes mentioned. — None.

Remarks. — Five images of naked Jain saints were dug up at Ajmir, in a Mussulman burial ground ; and the inscriptions on them are curious for showing the Prakrit (not Pali) of the twelfth century. — *Vol. VII. page 53.*

57. *Girnar, on the coast of Gujerat, at Junaghur ; and the inscription occurs at Dhauli, in Cutlack, on the opposite side of India, with the addition of three local edicts, one of which would seem to have been done by Asoka's father, as it enjoins the young prince at Ougain to issue similar ordinances to his own.*

Language of Inscriptions. — Old Pali, or intermediate between Sanskrit and Pali, but supposed to represent the Pali of the West of India of the fourth century B. C. and the inflexions at Dhauli and Girnar are not quite the same ; and there is a difference in the grammar of the two series of inscriptions. From Mr. Prinsep having referred a Sanskrit inscription at Girnar to the third century before Christ, instead of the fourth or seventh A. D. (which he afterwards rectifies), he was induced to derive the Pali from the Sanskrit.

Date. — B. C. 330, by the Buddhist Chinese and Burmese chronology ; but the Greek notices, will make it B. C. 280, and the Mahawanso makes the accession of Asoka B. C. 325.

Character in Inscriptions. — Old Lat.

Religion ; or Divinities or Sages mentioned. — Buddhist, Upholds Dhammo, or the law, mentions days and periods for humiliation, prayers, &c. ; the sending of the missionaries ; preachings, expatiates on the sources of true happiness, virtue, benevolence, peace, charity, reverence, &c., reward with temporary blessings in this world, and endless moral merit in the next ; and the victory of victories is that which overcometh the passions. It speaks of the wicked being punished in the nethermost

regions of hell, and the good having final emancipation, and they are to hope ardently for heaven. The promotion of the King's salvation, and the salvation of all unbelievers, and another existence, are expressly spoken of; also the propitiation of heaven, and the King's immortality. Where is atheism here?

Kings or Princes mentioned.—Asoka, or Piyadasi. The Great King Antiochus, and one of the Ptolemies of Egypt, and Antigonus.

Remarks.—These inscriptions are on a rock at Girnar, a celebrated Buddhist locality, and are edicts of Piyadasi, in the tenth and twelfth years of his reign, and are, therefore, older than those of the Delhi and Allahabad Lats, which are in the twenty-seventh year of his reign. The chief object is to prohibit the slaughter of animals, both for food and in religious assemblies. The second edict provides medical aid for men and animals. The third orders the quinquennial assemblies (vide Fabian) for prayer and preaching. The sixth appoints custodes morum (Vide Arrian and Buddha's Sermon.) In all, there are fourteen edicts inculcating Buddhism. The remarkable fact of the mention of the name of Antiochus and Ptolemy of Egypt in the thirteenth occurs. In Asoka's zeal for proselytism he sent to those Greek Princes. In the first edict Asoka distinctly says—formerly hundreds of thousands of animals were sacrificed for food in the refectory and temple; but that not one should be killed for the future. The third edict enjoys kindness to Brahmans and Sramanas, and forbids slaughter of animals. The Raja Tarangini mentions King Mahavahana, a Buddhist sovereign of Kashmir of the third or fourth century, issuing an edict against the slaughter of animals, similar to those of Asoka.—*Vol. VII. p. 217 to 262.*

58. *Brahmeswara in Cuttack, not far from Bhubaneswara, on a slab in the Museum of the Asiatic Society of Bengal.*

Language of Inscription.—Sanskrit verse.

Date.—No intelligible date, but the character is after the tenth century 1141? certainly after Salat Indra Kesari, A. D. 617.

Character used in Inscriptions.—Gaur alphabet, or Harsha.

Religion; or Divinities or Sages mentioned.—No invocation. Brahma, Upendra (Vishnu), Maheswara, Indra, Bali, Siva. Vedas, grammar, poetry, logic, &c., mentioned, but no Puranas. No eulogy of Brahmans.

Kings or Princes mentioned.—Janamejaya, Lord of Telinga, son, Dirghadeva, son Apavara, raja Vichitravira, son, Abhimanya, son, Chandihara, raja Udyotaka Kesari Deva.

Remarks.—Commemorates the temple of Brahmeswara being erected to Siva by Kolavati, the mother of Udyotaka. The era Samvat 18 is used. The temple was no doubt

erected after that to Siva at Bhubanesar, which Mr. Sterling says was completed A. D. 657, and that at Kanarak, A. D. 1241. If the Samvat era 18 be that of Gaur of the dynasty that subverted the Bhupals, it corresponds to A. D. 1141.—Vide *J. A. S. B. Vol. V. p. 600, Vol. VII. p. 557.*

59. *Naneh Ghat, Deccan, in a cave chamber.*

From Colonel Sykes' collection.

Language of Inscriptions.—Old Pali.

Date.—Before Christ.

Character used in Inscriptions.—Old Lat.

Religion; or Divinities or Sages mentioned.

—Buddhist. Lats to Dharina, Indra, the Lords of Sakra, sun and moon, sanctified saints. Yama, Varuna, and spirits of the air, and Lokapala, or upholders of the world.

Kings or Princes mentioned.—Young Prince Rakesa. The great warrior Tunakayiko. Prince Hakusaro, connected with the house of Amara Pala.

Remarks.—This is part of a long inscription in the chamber cut in the rock overlooking the Konkan in one of the passes, which was evidently the high road from Adjunta, Ellora, Junir, to Kalian and the cave temples in Salsette. The inscriptions in all these localities are very numerous, and call for translation.—*Vol. VII. p. 565.*

60. *Piplianagur in Bhopal, on copper, being one of the four plates formerly noticed by Mr. L. Wilkinson.*

Language of Inscription.—Sanskrit.

Date.—Samvat 1235; A. D. 1178.

Character used in Inscriptions.—Peculiar open parallelogram attached to Deva Nagari letters.

Religion; or Divinities or Sages mentioned. Glory to Sri Ganesa. Siva, Kamadeva, Indra, Varuna, Ramachandra. No mention of Puranas.

Kings or Princes mentioned.—Great King Sri Uddyaditta, son Great King Sri Nara Varma Deva. Son Great King Sri Yaso Varma Deva. Son Great King Sri Jaya Varma Deva, Prince Sri Harischandra Deva.

Remarks.—Gives shares of Government of villages to Brahmans. The Patels of villages mentioned. The capital was Nilagiri. Harischandra was the son of the great Sri Lakshmi-varma Deva. The Paramar, Ponwar, or Powar tribe spoken off, evidently the ancestors of the present Mahratta Powars of Dhar.—*Vol. VII. p. 737.*

61. *Kaira, Gujarat. Copper plate. There is only an analysis of the inscription given.*

Language of Inscriptions.—Sanskrit prose, each word having a double meaning.

Date.—Samvat 380; A. D. 323; but if the Balibhi era be used, three hundred and nineteen years must be added.

Character used in Inscriptions.—Before Allahabad No. 2, but not quite Lat.

Religion ; or Divinities or Sages mentioned.—Four Vedas mentioned; but not one name of the Puranic gods.

Kings or Princes mentioned.—Prasanga Raja, grandson of Samanta Datta.

Remarks.—The grant is of a village; and the donees are designated "those who are versed in the four Vedas," and the term Brahman is not used. The grant was for the worship of the five Jagnas, Bali, Charu, Baiswadeva, and Agnihotra. There is the usual quotation about the resumption of lands.

62. *Junaghar, near Girnar, in Gujarat, on a rock with the Pali edicts of Asoka.*

Language of Inscriptions.—Sanskrit Prose, but with grammatical errors, and punning.

Date.—If after Wathen's inscription or the Andhra kings, then between the third and end of the sixth century, A. D. On the coins of some of the princes of this dynasty are the dates 283, 323, 360, 385 and 390, but of what era is not known. Rudra Dama mentioned in the inscription is the father of the Rudra Sah of the coins, with the Samvat 385.

Character used in Inscriptions.—Altered Lat approaching Wathen's plates. Old Deva Nagari, nearly Wathen's.

Religion ; or Divinities or Sages mentioned.—Buddhist. The invocation is Sidham, and there is not the slightest trace or allusion to Brahmanism. On the coins of the princes, the chaitya is impressed, and one of the princes is called Jina Dama, Dama or votary of Buddha.

Kings or princes mentioned.—Rajah Maha Kshatrapa, or Swami Chastana, his son was Raja Aridama. Chandragupta Maurya of Magadha is referred to, and his grandson Asoka. The following names of the Rudra Sah family appears on the coins: Rudra Sah, his son Aga Dama. Dama Sah (no coins.) His son Vijaya Sah. His brother Vira Dama. His son Rudra Sah date 283. His brother, Viswasah, date 324. Rudra Sah 332? His son Utri Dama, date 360? His son Siwa Sah. Swami Rudra Dama (no coins). His son Swami Rudra Sah, Samvat 385 and 390.

Remarks.—Records the repeated repairs of a bridge,—by Pupyā Gupta, treasurer of Raja Chandra Gupta, Maurya; then by the Greek (Yavana) Raja of Asoka, Tushaspa; and, lastly, by Rudra Dama. The names of eleven sovereigns of this dynasty have been made out from their silver coins, which are unquestionably Buddhist, the chief and central emblem on the reverse being the chaitya. Rudra Sah is called the son of Jina Dama, the votary of Buddha. One of the completion of the bridge, is in the seventy-second year of the son of the Raja Swami Chastana, called the Raja Aridama, although

this inscription be in Sanskrit, there is not the slightest relation to Brahmanism in it. Both by the inscription and coins the princes are Buddhists and Swami Rudra Sah has the Samvat date 385, which if of Vikramaditya, places him in the fourth century of the Christian era, but if the era be the Balibhi, the date is A. D. 704. The inscription mentions the election of a king Rudra Dama by the people who did not permit the sacrifice of animal life; and he is called the Lord of the country of Ougein. Mathura, Sindh, &c., and the conquered Satkarini, King of the Dekkan.—*Vol. VII. p. 339.*

63. *Dhauri two separate local edicts, at Dhauri in Outtack, the remaining edicts corresponding with those at Girnar in Gujerat.*

Language of Inscriptions.—Old Pali.

Date.—Third or fourth century before Christ; but the year of the King's reign is not stated, as in the other edicts. B. C 306?

Character used in Inscriptions.—Old Lat.

Religion ; or Divinities or Sages mentioned.—Buddhist. Commands the non-destruction of life, non-influcion of cruelty; charity, kindness, virtue. The King says, for my subjects I desire this only, that they may be possessed of every benefit and happiness as to things of this world and of the world beyond.

Kings or Princes mentioned.—Devanampiya, or the beloved of the gods; and, as the young Prince of Ougein is named, the king is probably the father of Asoka, who was regent at Ougein.

Remarks.—The first edict is addressed to the public officers of the city of Tosali, and commands murderers to be imprisoned. Both edicts appoint two Tuphas, or colleges for meditation and the propitiation of Heaven. The question of atheism in ancient Buddhism is set at rest by these edicts, which repeatedly speak of this world and the world hereafter; and the people are expressly commanded to propitiate Heaven, and to "confess and believe in God, who is the worthy object of obedience;" or more literally, Him the eternal, ye shall propitiate by prayer.—*Vol. VI. p. 442.*

64. *Airun, in Bhopal, on an image of the Boar Avatar in a temple to Vishnu.*

Language of Inscriptions.—Sanskrit; but with words written corruptly.

Date.—Of the same period as the following inscription. Dhanya Vishnu being alive at the time both were written. Probably about the eighth century, A. D.

Character used in inscriptions.—Subsequent to Kanouj Nagari, or Allahabad, No. 2, but before the Gaur or Harsha character.

Religion ; or Divinities or Sages mentioned.—Invocation to Vishnu as the Boar Avatar or incarnation. Vedas Bhagavan, The Sakta hymn of the Rig Veda. Vishnu

is called Jagan Narayana. Narayana in the form of Varaha, or the boar.

Kings or Princes mentioned.—Raja Indra Vishnu, his son, Varuna Vishnu, his son Hari-Vishnu, his son, Matri Vishnu, also Raja Tarapani, of Surashtra, who is called King of Kings and governing the earth.

Remarks.—The temple was built in the first year of the reign of Raja Tarapani, by Dhanya Vishnu, the confidential minister and brother of Raja Matri Vishnu. The inscription is the first in honor of the boar incarnation of Vishnu, and the boar coins probably belonged to this family of princes, who worshipped Vishnu as the boar. The minister Dhanya obtained his office by public election and through the grace of God ! Dhanya is called a Rishi amongst the Brahmans and the devoted worshipper of Bhagavan ; but there is not any preposterous eulogy of Brahmans.—*Vol. VII, p. 633.*

65. *Airun, in Bhopal, on a pillar in front of the temple.*

Language of Inscriptions.—Same as the last inscription.

Date.—The year 165 of the era of some dynasty, which, from the mention of Buddha Gupta, is possibly of the Kanouj family. Probably about the eighth century A. D.

Character used in Inscriptions.—Same as last.

Religion ; or Divinities or Sages mentioned.—Vishnu, Garuda, Lokapalas, Bhagavan, Janardana or Vishnu Punyajanas or Rakshas.

Kings or Princes mentioned.—The King Buddha Gupta, who governed the country between the Jumna and the Narmada.

Remarks.—The pillar was raised, at the expense of Dhanya Vishnu, before the temple of the preceding inscription, by Vaidala Vishnu, who had been elected to the Regency. The notice of a new Gupta, and a date of the dynasty, 165, is of great interest, as Buddha Gupta necessarily followed those mentioned on the Allahabad and Bhitari columns, and up to Buddha Gupta's time, if he belonged to the Kanouj dynasty, its duration had been only 165 years. In the early part of the fifth century, A. D. Fa-Hian found a buddhist king at Kanouj ; and in the early part of the seventh century Hian Tsaang found a Hindu king reigning. The dynasties, therefore had been changed between the fifth and seventh centuries, and the Gupta family had sprung up in the interval.—*Vol. VII, p. 634.*

66. *Arnakunda, or Warangal, in Telingana, on a slab.*

Language of Inscriptions.—Telugu and Oorya, with Sanskrit slokas.

Date.—Saka 1054, or A. D. 1132, being the year Chetrabhanu of the Vrihaspati Chakkar, or sixty years' cycle of Jupiter.

Character used in Inscriptions.—Not mentioned.

Religion ; or Divinities or Sages mentioned.—Kari, Ganesa, Saraswati, Siva, Maheswar, Ravi, Sourî (or Vishnu).

Kings or Princes mentioned.—Raja Rudra Deva.

Remarks.—Rudra Deva is the Raja mentioned in the Jagannath temple annals as Churang or Chorzunga, and was the founder of the Gunga Vansa dynasty. He was a benefactor to Jagannath, adorned it, and populated its neighbourhood. The inscription contains a long account of Rudra Deva's genealogy and of his battles. There are not any praises of Brahmans, or even mention of them ! From the mention of Ganesa, his worship must have been used in the twelfth century.—*Vol. VII, p. 901.*

67. *Kaira, in Gujarat. Copper plate, one of four, from Dr. Burn.*

Language of Inscriptions.—Sanskrit prose, each word having a double meaning,—and incapable of being closely rendered into English.

Date.—Samvat 390, or A. D. 323, if the era that of Vikramaditya, but if of the Balibhi era, then A. D. 640.

Character used in Inscriptions.—Closely allied to the Kanouj Nagari, or Allahabad No. 2,—possibly a little earlier.

Religion ; or Divinities or Sages mentioned.—The four Vedas mentioned ; but not one word of Brahmanical gods or Brahmans.

Kings or Princes mentioned.—Raja Samanta Datta. His son, Vijaya Bhatta, or Vita Raja. His son, Prasanga Raja Datta.

Remarks.—The Raja Prasanga, of the royal race of Gajjara, gives a village to those who are versed in the four Vedas, not for the worship of Brahma, Vishnu, or Siva, or their offsets, but for the worship of the five Jagnas, Bali, Charu, Baswadeva, and Agnihotra. Brahmans, although alluded to, are not even named ; even the writer Bewa is not called a Brahman.—*Vol. VII, p. 900.*

No. 1, *From a temple at Oodypur, from Dr. Burn.*

Language of Inscriptions.—Sanskrit prose.

Date.—Samvat 386, or A. D. 309 ; but if of the Valibhi era, then 319 years must be added.

Character used in Inscriptions.—The same as the last.

Religion ; or Divinities or Sages mentioned.—Opens simply with " Glory," instead of other invocation. Ganges river, Lakshmi, Saraawati (as wealth and knowledge), Upen, dra, Swayambhu, four Vedas.

Kings or Princes mentioned.—Bhatarka Senapati. Guha or Griha Sena. Sridhara Sena 1st. Chara Griha, or Iswara Guha, Sridhara Sena 2nd. Dharuva Sena 2nd. Sridhara Sena 3rd. Dharuva Sena 3rd, or Dharmaditya.

Remarks.—This is No. 1 of four plates found by Dr. Burn at Kaira, and is similar to one published by Mr. Wathen in the J. A. S. B. It confirms the order of the reigns given by Mr. Wathen, and affords additional dates and circumstances of high interest, respecting the Valabhi, or Balhara dynasty of Gujarat. This plate omits four princes between Bhatarka and Griha Sena, and terminates with Dharuva Sena 3rd, the grantor. Mr. Wathen's plate gives one prince more Siladitya 2nd. Although six reigns intervened between Mr. Wathen's and Dr. Burn's plates, the son, named Madana Hila, of the minister Skauna Bhatta, who prepared the first plate, is a witness of the present grant. The bow the chief military weapon. No fire-arms; chariots used. From the absence of all mention of the gods of the modern Hindu Pantheon, it is plain they could not have been respected in Gujarat in the fourth century A. D. Dharuva Sena 3rd, indeed says he is liberal to Brahmins (but without mentioning them with respect) and to the temples of the gods. The grant gives a field to a Brahman, for the sake of the donor's father's and mother's virtue. On the seal is "Sri Bhatarka," under a bull, as in Mr. Wathen's plate.—*Vol. VII. p. 986.*

69 *Kaira, in Gujarat. Copperplate.*

Language of Inscriptions.—Sanskrit; with gross errors of grammar and incorrectness of expression.

Date.—Samvat of Vikramaditya 1116, corresponding to 981 Salivahana, and to 446 of the era of Udyaditya, A. D. 1059.

Character used in Inscriptions.—Almost modern Deva Nagari.

Religion; or Divinities or Sages mentioned.—Salutation to Ganesa, Parvati Siva, with five faces! Vedas, Swaha, Meru, Sastras.

Kings or Princes mentioned.—Raja Suravirana, of the Pavara (Powar?) line Gondala, his son. Arevalamathana, son. Udayaditya, his son. Salivahana, his son.

Remarks.—This inscription is of importance, as it discloses a new era, that of the family of Udyaditya, the probable founder of Oodypur, corresponding to the era of Vikramaditya 1116, and of Salivahana 981; and Kaliyoga 4160. This would place the foundation of Oodypur A. D. 614. The Raja's name is not in the chronological tables of the Sesodi Rajputs, or of any other dynasty. Arevalamathana went to Malava, and recovered his former kingdom of Nadhyadesa.

70. *Khajrao, eighteen miles from Ohtar-pur, in Bundelkand.*

Language of Inscriptions.—Sanskrit verse in an ambitious inflated style; the verses polished and elaborate, but some obscure, and abounding with quaint pedantry and punning.

Date.—The first part of inscription, Samvat, 1019, A. D. 962; last part, Samvat 1173 or 1068.

Character used in Inscriptions.—Allahabad No. 3, and therefore resembling the Harsha and Bhabaneswar. In the inscription it is called the Kakuda character, and in the eleventh and twelfth centuries appears to have prevailed from Cuttack to Shekavati.

Religion; or Divinities or Sages mentioned.—Invocation to Siva, Maheswara, Shambhu, Bharati, Pasupati, Brahma, Marioba and Brahma's other sons, the Munis, Atri, Chandratriya, Vayvarma, Arjuna; and the Puranic heroes Prithuka and Kunda, Sumitra, Bhishma, Upendra Sagar, and the Puranic origin of the ocean noticed; Liuga, Yuddhistira, Viswakarma, Rudra, Vedas. The temple is dedicated to Pramatha Nath.

Kings or Princes mentioned.—Rajas Nanuka, Vag Yate, Vijaya, Vahila, Sriharsa, Yaso, Dharma Deva, Banga, Jaya Varma Deva.

Remarks.—The inscription is chiefly in honor of Banga (by his son), who as is usual, is elevated into a great king. The kings of Oudh and Ceylon attend to do him homage, and his captives are the wives of the kings of Andra, Radha, and Anga! Banga, of course, eulogized by the Brahmins, because he built dwellings for them, and gave them lands, and piously ended his days, aged 109, by drowning himself at the junction of the Jumna and Ganges, as did also the Brahman minister of his father and grand-father. It is to be remarked, that the inscription had twice before been engraved in irregular characters, and it was only in A. D. 1016 that it was put into proper Deva Nagari. The story of creation from Brahma and the eggs is told. The influence of the moon on the tides is alluded to. The inscription alludes to a passage in the Mahabharata, in which Siva is represented to have given his own flesh to a hawk, instead of a bird which had sought refuge with him. This story is told of Buddha, more than 1500 years before this time, and is much more suitable to his human and life-sparing character than to the bloody Siva. Here again we have got a Brahman (Sri Rama), whose feet earthly kings adored.—*Vol. VIII. p. 170.*

71 *Baroda in Gujarat; found in digging the foundations of a house. Copper plates.*

Language of inscriptions.—Sanskrit, with punning; but the grammatical structure not stated.

INSCRIPTIONS.

Date.—Saka 734, or A. D. 812.

Character used in Inscriptions.—Not exactly resembling any other character, but sufficiently near Wathen's plates to admit of its being easily made out by Kamalakanta of Calcutta, though not by all the Brahmans of Gujarat.

Religion ; or Divinities or Sages mentioned. Brahma, Siva is called the god of gods, Dharma, Vishnu, Swayambhu Sambhu, Ganga Yamuna river, Partha, Indra. The gods, Kinnaras, Siddhas to Seddhyas and Vedyadharas, Hara, Four Vedas, Cows are called the daughters of the sun, Ramchandra.

Kings or Princes mentioned.—Govind Raja, Karka, his son Krishna, his son Dhruva, his son Govind 2nd, his son, Indra, his brother, Karka 2nd son of Indra, and his brother, Danti Varma, is heir presumptive. These are of the Lateswara dynasty.

Remarks.—At the time of this inscription (the period of Charlemagne in Europe), Hindustan and the Dekkan were divided into four Kingdoms,—that of Gujara (Gujarat) westward ; that of Malwa central ; to the east Gourha Raj, including Bengal and Behar ; and the Lateswara Raj to the south. The Surashtra kingdom spoken of ; but, in Karka's reign, it is expressly stated to have been called, before his time, Sowenjya, the identical name of the Sattarah sovereignty at this day. Krishna Raja was devoted to Brahmans, and the nominal Brahmans, through their greediness for his gifts, resumed their former rites. His fort was Elapur, Indra Raja, who ruled the Lateshara kingdom conquered that of Gujarat ; and he aided the owner of Malava against the King of Gourea (Bengal). The inscription gives a village to the Brahman Bhanu, but without expressions of veneration, for the sake of his father and mother's memory. It is curious for enumerating the privileges consequent on possession ; fishing, fruit, marriage and other fees ; fines for petty offences ; free labour ; treasure trove ; mines, &c. It concludes with the denunciation from Veda Vyasa, against resumers of lands, in the story of the Sagara Raja. The grant is confirmed by the counter-signature of Danti Varma, the heir presumptive, —Vol. VIII. p. 300.

72. *Dug up at Kumbhi, in the Saugor territory thirty-five miles north-east of Jabalpur, on Copper plates.*

Language of Inscriptions.—Sanskrit verse and prose, quaint, and with obsolete names, and punning, and orthographical errors.

Date.—Samvat 982, or A. D. 876.

Character used in Inscriptions.—Nearly the same as the Chhattarpur inscriptions, and therefore like the Haraha and Allahabad No. 3.

Religion ; or Divinities or Sages mentioned.—Invocation "Om," and glory to Brahma, Vishnu, Atri, Bodhana, the Sun,

INSCRIPTIONS.

Puruvaras, Arvasi, Bharata, Yamana, Purandava or Indra, Prayang, Parasavaram, Indra, Varina Deva, Mahadeva, Samaveda.

Kings or Princes mentioned.—Yuva Raja Deva, Kokalla, his son, Gangaya Deva, his son, Karma Deva, his son, Yacus Karma, Deva, his son, Gaya Karma, his son, Nar Sinha Deva, his brother, Vijaya Sinha, his brother. These princes are called of the Kulachuri dynasty.

Remarks.—The grant gives a village to a Brahman, Sitha Sarma, but without expressions of veneration. Karna Deva's wife, Aralla Devi, is stated to have been of a Hun family. The 21st verse likens the king Nara Sinha, to Parasarama, making the world the dominion of Brahmans by the destruction of the Kshetriyas. The inscription is curious for enumerating the chief officers of the king, Vijaya Sinha, namely the prime minister, chief priest, the chief scribe or secretary of state, the chief councillor, the chief judge, the powerful secretary for foreign affairs, the great chamberlain, the incorruptible superintendent of police, the treasurer, and the master of the horse and elephants. The usual interdiction of resuming lands and the story of Sagara are quoted.

73. *Dabra, three marches from Jeypur, on the road to Delhi, on a block of stone or rock on a hill.*

Language of Inscriptions.—Old Pali, with two or three grammatical errors.

Date.—B. C. 309, because the inscription evidently refers to the first convocation at Pataliputra, or Patna, in that year, in the 17th of the reign of Asoka.

Character used in Inscriptions.—Oldest Lat or column character, or Delhi No. 1.

Religion ; or Divinities or Sages mentioned.—Buddhist, the supreme Buddha, Dharma, or the law, or faith,

Kings or Princes mentioned.—Asoka as Piyadasi Raja.

Remarks.—This is another of Asoka's edicts, from a new locality, showing the wide extent of his domain. It differs somewhat in style and language from the pillar and rock edicts. The subject is the Buddhist commandment, forbidding the sacrifice of four-footed animals. The Vedas are alluded to, but not named, and condemned as, "mean, and false in their doctrine, and not to be obeyed." The scriptures of the Munis (which must be the Vedas) are spoken of as directing blood-offspring and the sacrifice of animals. Priest and priestesses, religious men and religious women, amongst the Buddhists, are commanded to obey the edict, and bear it in their hearts.—Vol. XI. p. 617.

74. *Mahamalaipur rock inscription.*

Language of Inscriptions.—Sanskrit.

INSCRIPTIONS.

Date.—Eighth to tenth century.
Character used in Inscriptions.—Kutila Gaur character.

Religion ; or Divinities or Sages mentioned.—Siva.

Kings or Princes mentioned.—None named.

Remarks.—These inscriptions related to the well known sculptures at Mahamalaipur, and are little more than names applied to the figures in the sculptures. They are described in the Transactions of the Royal Asiatic Society.—*Vol. II. p. 617.*

75. *Dug up near Tespur in the Durrung division, lower Assam ; copper plates.*

Language of Inscription.—Sanskrit.

Date.—None : 10th century.

Character used in Inscriptions.—Slightly modified Kutila.

Religion ; or Divinities or Sages mentioned.—Invocation to Siva and the Brahmaputra River. The boar incarnation and his descendants, also Vishnu, Krishna and Lakshmi.

Kings or Princes mentioned.—Yudhisthira, Bhima, Karna, Arjuna, Bhagadatta king of Kamrup and his descendants Pralambha, Hajara, and Vanamala.

Remarks.—This inscription records the grant of a village called Abisuravataka on the West of the Ganges, to a Brahman of the Sandilya race named Indoka. The donor is Vanamala of the dynasty of Bhagadatta.—*Vol. IV. p. 766.*

76. *To the west of the northern gate of the old Fort of Behar on a broken stone pillar.*

Language of Inscriptions.—Sanskrit.

Date.—None : 10th century.

Character used in inscriptions.—Not exactly resembling any other character : allied to the Kutila.

Remarks.—The translation is wrong throughout.—*Vol. IX. p. 65.*

77. *Found in the relic chamber of one of the Keneri caves : Copper plate.*

Language of Inscriptions.—Old Pali

Date.—2nd century B. C. about 100 years of the reign of the Trukudaka dynasty.

Character used in Inscriptions.—No. 2 cave character.

Religion ; or Divinities or Sages mentioned.—Buddhist, Salutation to Sarvajna, Bhagaven Sakya Muni and chaitya mentioned.

Kings or Princes mentioned.—Trukudaka.

Remarks.—Pushya Barma of the conquered country called Taroni, dedicates a chaitya. Mention is made of the forests around Bardhamana, a country noticed in the Prataprudra inscription.—*Vol. X. p. 97.*

78. *Fyzabad in Oudh : Copper plate.*

Language of Inscriptions.—Sanskrit.

Date.—S. 1243. A. C. 1187.

Character used in Inscriptions.—Not mentioned.

INSCRIPTIONS.

Religion ; or Divinities or Sages mentioned.—Vaishnava, Lakshmi.

Kings or Princes mentioned.—Yasovigraha, Mahi Chandra, Chandra Deva, Madana Pala, Govinda Chandra, Vijaya Chandra, Jaya Chandra.

Remarks.—The last prince, on the 7th day of the moon in the month of Asadha 1243, grants in fee simple to Alonga Auda Rayata, son of Atala Rayuta of the Bharaddaja line the village of Kemali in the district Ashwata Pattana. The grant concludes with the usual anathema against the resusers of rent-free tenures. The genealogy is of the Rahtore princes of Kanauj.—*Vol. X. p. 98.*

79. *Baolee at Bhasuntgah at the foot of the Southern range of Hills running parallel to Mount Aboo.*

Language of Inscriptions.—Sanskrit.

Date.—S. 1099 A. C. 1042.

Religion ; or Divinities or Sages mentioned.—Salutation to Vani, goddess of wisdom, and Ilari.

Kings or Princes mentioned.—Utpala, Aranya, Adphuta Krishna, Srinath Ghosi, Mahi Pala, Vandhuka, Purna Pala alias Baladarpada. His sister Lahini married to Vighraha son Bora, son of Chara, son of Ballabha, son of Sangana of the line of Bhahagupta of the line of Kashiswara. Of the former line was Vasistha.

Remarks.—Lahini, wife of Vighraha, on the death of her husband, takes shelter with her brother and causes the temple of the sun in the Aravalli range to be repaired and a Baolee to be excavated. The recorder is Maitri Sharma, a Brahman poet, and the engraver Sirapala, engraver ordinary to Raja Aswapati.—*Vol. X. p. 664.*

80. *Temple at Basantogurh.*

Language of Inscriptions.—Sanskrit.

Date.—27 Magh 1053 S.

Religion ; or Divinities or Sages mentioned.—Salutation to the sun.

Kings or Princes mentioned.—Harivarna, Viswavarna, Arona, Dhavala.

Remarks.—This inscription is very imperfect, several entire stanzas and many words being effaced. From what remains, appears to be the record of the consecration, by Dhavalha, of a temple at a village called Mahid-dhaja.

81. *Aden.*

Character used in Inscriptions.—Ilmyariatic.

Remarks.—This record has not yet been deciphered.—*Vol. XI. p. 958.*

82. *Ningpo.*

Character used in Inscriptions.—Uchen ?

Religion ; or Divinities or Sages mentioned.—Buddhist.

INSCRIPTIONS.

Remarks.—This record has not yet been deciphered.—*Vol. XIII, p. 113.*

83. *Caves of Burabur.*

Language of Inscriptions.—Pali.

Character used in Inscriptions.—Old Pali No. 1, Lat.

Religion ; or Divinities or Sages mentioned.—Buddhist.

Remarks.—Very imperfectly deciphered.—*Vol. XVI, p. 412.*

84. *Moorshedabad, on a gun.*

Language of Inscriptions.—Persian.

Date.—1047 Hegira.

Character used in Inscriptions.—Persian.

Religion ; or Divinities or Sages mentioned.—Mahomedan.

Kings or Princes mentioned.—Shah Jehan.

Remarks.—The gun on which this inscription is recorded, was constructed at Jahangirnagar, otherwise called Dacca, under the Darogaship of Sher Mohammed.—*Vol. XVI, p. 592.*

85. *Nagarjuni cave.*

Language of Inscriptions.—Sanskrit.

Date.—1st century B. C.

Character used in Inscriptions.—No. 2 Lat.

Religion ; or divinities or Sages mentioned.

—Saiva.

Kings or Princes mentioned.—Yajna Varma. Ananta Varma.

Remarks.—This remarkable inscription, found inscribed in a Buddhist cave, records the consecration of the Saiva images, Dheetapati and Devi.—*Vol. XVI, p. 595.*

86. *In a temple at Oomga.*

Language of Inscriptions.—Sanskrit.

Date.—S. 1496 A. D. 1439.

Character used in Inscriptions.—Kutila.

Religion ; or Divinities or Sages mentioned.

—Vaishnava.

Kings or Princes mentioned.—Durdama, Kumara Pala, Lakshmana Pala, Chandra Pala, Nayana Pala, Sandha Pala, Abhaya Deva, Mala, Deva, Kashiraja, Barasinha Deva, Bhanu Deva.

Remarks.—Bhairavendra records the consecration of the images of Jagannath, Balarama and Subhadra. The princes recorded evidently belong to the Pala dynasty of Gaur.
Vol. XVI, p. 1220.

87. *Ranode, on a stone slab in a temple.*

Language of Inscriptions.—Sanskrit.

Date.—10th century.

Character used in inscriptions.—Kutila.

Religion ; or Divinities or Sages mentioned.—Siva.

Kings or Princes mentioned.—Someswara, Bhairavendra.

Remarks.—There are several names in this inscription, but as the reading and the translation are both incorrect, I have not thought proper to insert them here.—*Vol. XVI, p. 1081.*

INSCRIPTIONS.

88. *Behar, near the village of Pasterawa.*

Language of Inscriptions.—Sanskrit.

Date.—9th century.

Character used in Inscriptions.—Kutila.

Religion ; or Divinities or Sages mentioned.

—Buddhist

Kings or Princes mentioned.—Yasoverma Dava Pala.

Remarks.—Record the raising of two topes, and a temple.—*Vol. XVII, p. 492.*

89. *Kalinger.*

Language of Inscriptions.—Sanskrit.

Date.—S. 1298. 10 Kartik.

Character used in Inscriptions.—Not known.

Religion ; or Divinities or Sages mentioned.

—Siva.

Kings or Princes mentioned.—Paramardi.

Remarks.—A poetical eulogium.—*Vol. XVII, p. 316.*

90. *Kalinger.*

Language of Inscriptions.—Sanskrit.

Date.—Not known.

Character used in Inscriptions.—Not known.

Religion ; or Divinities or Sages mentioned.

—Siva.

Kings or Princes mentioned.—Vijaya Pala, Bhumi Pala, Jaya Varma, Deva Varma, Madana Varma, Pratapa Varma.

Remarks.—The subject of the record is probably the consecration of certain images of Siva, Kamala and Kali, the inscription however is too imperfect to admit of satisfactory decipherment.—*Vol. XVII, p. 317.*

91. *Kalinger.*

Language of Inscriptions.—Sanskrit.

Date.—Not known.

Character used in Inscriptions.—Not known.

Religion ; or Divinities or Sages mentioned.

—Siva.

Kings or Princes mentioned.—Jatiladhi, Sri Bachchha.

Remarks.—Very imperfect.—*Vol. VII, p. 320.*

92. *Kalinger.*

Language of Inscriptions.—Sanskrit.

Date.—Not known.

Character used in Inscriptions.—Not known.

Religion ; or Divinities or Sages mentioned.

—Siva.

Kings or Princes mentioned.—Raja Deva, son of Kamalenda, son of Madana Varma Deva, king of Kalinjer.

Remarks.—Record of the consecration of an image of Varada.—*Vol. XVII, p. 321.*

93. *Kalinger.*

Language of Inscription.—Sanskrit.

Date.—Not known.

Character used in Inscription.—Not known.

Religion ; or Divinities or Sages mentioned.

—Not known.

Remarks.—Five very imperfect modern inscriptions, from Kalinjer of no value.—*Vol. XVII, p. 68.*

INSCRIPTIONS.

94. *Vijaya mandir, Udayapur.*
Language of Inscriptions.—Sanskrit.
Date.—Not known.
Character used in Inscriptions.—Kutilla.
Religion ; or Divinities or Sages mentioned.—Salutation to the sun.
Kings or Princes mentioned.—None.
Remarks.—An eulogium on the sun.—*Vol. XVII. p. 68.*

95. *Not known, on Copper plate.*
Language of Inscriptions.—Sanskrit.
Date.—65 of some local era.
Character used in Inscriptions.—Gaur.
Religion ; or Divinities or Sages mentioned.—Vaishnava.

Kings or Princes mentioned.—Deva Sacti Deva, Vanya Raja Deva, Naga Bhatta Deva, Rama Chandra Deva, Bhoja Deva, Mahendra Pala Deva, Bhoja Deva, Vinayaka Pala Deva.
Remarks.—Vinayaka Bala, the nephew of Bhoja Deva II. grants to his class-fellow Bhulluka Bhatta the village of Tikkarika in the district of Benares. The place is to this day known under the name of Tikkari. The donor is evidently a scion of the well known Pala dynasty of Gaur.—*Vol. XVII. p. 71.*

96. *Singapur.*
Language of Inscriptions.—Pali.
Character used in Inscriptions.—Rather peculiar, allied to No. 2.
Religion ; or Divinities or Sages mentioned.—Buddhist.
Remarks.—Buddhist maxim.—*Vol. XVII. p. 66.*

97. *Keddah.*
Language of Inscriptions.—Pali.
Character used in Inscriptions.—Rather peculiar, allied to No. 2.
Religion ; or Divinities or Sages mentioned.—Buddhist.
Remarks.—Buddhist maxim. *Vol. XVIII. p. 247.*

98. *Jaunpur on a burnt brick.*
Language of Inscriptions.—Sanskrit.
Date.—S. 1273.
Character used in Inscriptions.—Gaur, of Raja Jayachandra's time.
Religion ; or Divinities or Sages mentioned.—Not known.

Remarks.—This is a deed of mortgage executed in favor of two bankers, Ra Sri Bahma and Ra Sri Maha ditya by Ra Gangadevi to ensure the liquidation of a debt for 2,250 drammae.—*Vol. XIX. p. 454.*

99. *Oojein.*
Language of Inscriptions.—Sanskrit.
Date.—S. 1036 A. C. 980.
Character used in Inscriptions.—Kutilla.
Religion ; or Divinities or Sages mentioned.—Vaishnava.

INSECTS.

Kings or Princes mentioned.—Kriehna Raja, Vairi Sinha, Siyaka, Amoghavara alias Vakpati, alias Valabha Narendra.

Remarks.—The gift of the village Sem-bhalapura to a priest in order to defray the expenses of a temple.—*Vol. XIX. p. 476.*

100. *Pheva in Thansewar, on a slab of sandstone in a temple.*

Language of Inscriptions.—Sanskrit.
Date.—279 Samvat, probably of the Valabhi era
Character used in Inscriptions.—A variety of Kutilla.

Kings or Princes mentioned.—Mahendrapala, Jatula—Vajrata, Yajnika, Sagga, Purna, Devaraja, Ramachandra Bhoja.

Remarks.—This inscription is very imperfect, but interesting, as throwing some light on a dark period of Indian history. If we may assume the Bhoja of the document to be the first of that name noticed by Abul Fazel and Prinsep, his era is definitely fixed. *Vol. XXII. p. 673.*

101. *Khunniara in Kangra.*

Language of Inscriptions.—Old Pali.
Date.—1st century A. C.
Character used in Inscriptions.—Arian Pali.
Remarks.—Of Pallographic importance as shewing the transition state of the Arian-Pali character.—*Vol. XXIII. p. 57.*

INSECTS.

Insecte	FR.	Insecta	Lat.
Insect...	GER.	Puchi	TAM.
Entoma...	GR.	Purbu...	TEL.

Insects are a class of invertebrate animals, belonging to the articulata, with little joints. They are six legged, air-breathing, articulate animals. Invertebrate animals are divided by Lamarck into two groups, which he calls Animaux Apathiques, and Animaux Sensibles. The latter, or the Sensitive Animals, contain six classes, of which Insects are the first. According to Latreille's arrangement, in the 'Regne Animal,' the class *Insecta* forms the third great division of articulated animals—articulated referring to the numerous joints of which this class of animals is composed.

The following is another classification of the Articulata.

Articulata, with little joints :—

1. Rotifera, wheel animalcules.

Examples, animals with ciliated jaws.

2. Cirripedia, cirrpeda.

Examples, barnacles, sea acorns.

3. Crustacea, ten-legged, aquatic family.

Examples, crabs, lobsters, shrimps, prawns.

4. Insecta, six-legged, air breathing, articulate animals.

Examples, the wasp, the bee, the butterfly, the beetle, the flea.

5. Arachnida, eight-legged, air breathing articulate animals.

Examples, mites, spiders, scorpions.

Insects have also been classified by other naturalists as under:—

- 1 Aptera, *example* fleas and lice.
- 2 Diptera, *example* gnats, flies, &c.
- 3 Hemiptera, *example* bugs, &c.
- 4 Lepidoptera, *example* butterflies, moths.
- 5 Orthoptera, *example* grasshoppers, crickets, &c.
- 6 Hymenoptera, *example* bees, wasps, &c.
- 7 Neuroptera, *example* Libellula or dragon-fly Ephemerera or may-fly, Phryganea or alderfly.
- 8 Sirepsiptera, *example*, parasites on various hymenoptera.
- 9 Coleoptera, *example*, cockchafers and beetles

The insect or Insecta class of animals, is now generally arranged into seven orders, viz.

- | | |
|-----------------------------|--------------------------|
| i. Coleoptera | v. Homopterous hemiptera |
| ii. Hymenoptera | vi. tera |
| iii. Orthoptera | vii. Lepidoptera |
| iv. Heteropterous hemiptera | viii. Diptera |

True Insects may be thus defined:—Articulated animals possessing six legs, two antennæ, two compound eyes, a small brain at the anterior extremity of a double medullary chord. Circulation effected by a pulsating dorsal vessel provided with numerous valves. Respiration by tracheæ, which form two lateral trunks and ramify through the body; generation oviparous; two distinct sexes; adult state attained through a series of metamorphoses. Insects generally possess two pairs of wings; the trunk in the adult animal is usually composed of three chief parts, the head (or caput), thorax, and abdomen; or the trunk of an insect may be described as consisting of thirteen segments, of which one constitutes the head, three form the thorax, and the remaining nine compose the abdomen. The head includes the organs of sensation and mandication, and its principal parts have received the following names:—the clypeus, vertex, occiput, lensæ, canthus, gula, oculi, stemmata, antennæ and the trophi.

Some insects are hurtful, but some are useful to man and his industries, some are of wonderful beauty or are of interest from peculiarity of structure.

The Greeks ate grasshoppers, and liked them amazingly; the aborigines of New South Wales eat them raw, first taking off their wings. The Chinese thriftilly eat the chrysalis of the silkworm, after making use of the silk; the larvæ of a hawk-moth are also much relished. The negroes in Jamaica eat the Bagong butterflies, after removing the wings, and store them up by pounding and smoking

them. The Hottentots and the peoples in the East Indies eat the termites, or white ants, boiled, fried and raw, the female white ant in particular is eaten in India and Broughton, in his "Letters written in a Maharatta Camp in 1809," tells us that they were carefully sought after, and preserved for the use of the debilitated Lurjee Rao, prime minister of Scindia. The natives mix them with flour, and make a variety of pastry; or they parch them in pots over a gentle fire, stirring them about as is done in roasting coffee. They eat them by handfuls, as we do comfits; "I have discoursed with several gentlemen," observes Smeathman, "upon the taste of the white ants, and on comparing notes we have always agreed that they are most delicious and delicate eating." Dr. Livingstone says:—"The white ants, when roasted, are said to be good, somewhat resembling grains of boiled rice. An idea may, he adds, be formed of this dish by what once occurred on the banks of the Zouga. The Bayeiye chief, Palauti, visiting us while eating, I gave him a piece of bread and preserved apricots, and as he seemed to relish it much, I asked him if he had any food equal to it in his country? 'Ah!' said he, 'did you ever taste white ants?' As I never had, he replied, 'Well, if you had, you would never have desired to eat anything better.'" Humboldt mentions ants as being eaten by the Marivintunos and Marqueratales, qualified with resin as a sauce. Bees are eaten in Ceylon. Mites in myriads are consumed in cheese. The grub of the palm-weevil, which is the size of a thumb, is a favourite dish in some parts of India. Elian relates of an Indian king, who, for a dessert, instead of fruit, set before his guests a roasted worm taken from a plant, (probably the larva of this insect,) which was thought very delicious.—

In nature, the Helopidæ devour agarics under bark.

Scarabæus atlas, one of the Prionidæ is a native of Java.

Therates, a genus of Coleoptera, of the tribe Cicindelidæ, is confined to South Eastern Asia. The following genera, belonging to the Cicindelidæ, are not uncommon in India, viz. *Therates*, *Tricondyla*, and *Colliuris*: the two former are characteristic of a southern range, while the latter is abundant throughout the eastern continent. More than sixty species of Indian Cicindelidæ, had fallen under Mr. Hope's notice: the most splendid of the race abound in Nepal. Among various species, however, peculiar to the Himalayas, only one approaches the form of the European Germanica.

Dytiscus griseus, one of the aquatic Coleoptera, is found in Europe and in Bengal.

Ateuchus sacer, the sacred beetle of the Egyptians, is found in Egypt and Western Asia.

The *Lampyrides*, are a tribe of the Malacodermous Coleoptera, including the glow worm and fire-fly. The *Fire-fly* is the name given to species of *Elater* and *Lampyris*, of the order Coleoptera, and to the *Fulgora* of the tropics. *F. lateralis* is of South America, *F. candelaria* of S. E. Asia. The latter resort to moist places.

The *Lampyris* Fire-fly is the *Mouche lumineuse* of the French. The Romans styled the luminous insects by the common names *noctiluca*, and *luciola*.

The Phasma or spectre insects are found in Asia, Africa, S. America, and Australia, and from their varied shapes are called Spectres, Phantom, Devils Horse, Soldiers of Cayenne, Walking Leaves, (Phylidium) animated sticks, &c. The *Mantia religiosa*, amongst the peasants of Languedoc is held almost sacred; they call it the *Prega Deori*, or *Prie Dieu*.

Three new species of *Pausus* have been found under stones in Hongkong in the nest of a small yellow ant at upwards of seventeen hundred feet. The three species all crepitate, and at least one of them has a discharge staining like that of a *Brachinus*. The *Passalus* genus abounds over India and the Archipelago. Bees are useful in producing honey, and in Afghanistan they are semi-domesticated as in Europe. The *Langeh* bee of Borneo, and one of smaller size called *Nuang*, produce valuable honey. They generally place their nests underneath the larger branches and the Dyaks ascend the trees by means of a rail of bamboos. Amongst the insects which infest books in India are two genera, which are usually regarded as accomplices in the work of destruction, but which on the contrary pursue and greedily feed on the larvæ of the death watch and the numerous acari which are believed to be the chief depredators that prey upon books. One of these maligned genera, is a tiny tailless scorpion (*Chelifer*) of which three species have been noticed in Ceylon, the *Ch. librorum Temp.* *Ch. oblongum Temp.* and *Ch. scaroides Herman*, the last of which it is believed had been introduced from Europe in Dutch and Portuguese books. Another genus of book insects is the *Lepisma*, the fish insect genus, and called so by Fabricius from its fish-like scales, tiny silvery creatures which feast on the acari and soft bodied insects that infest books. There have only been two species described, viz., the *L. niveo-fasciatus* and *L. niger Temp.* It has 6 legs. As insects are very destructive to books in India and the pastes or gums employed in the bindings, form special objects for the attacks of certain tribes; it may be useful to be

known, that insects refuse to attack the gum of the cashewnut fruit.

Bugs belong to the family Hemiptera, several genera of which occur in India; amongst others are *Cantuo ocellatus*, *Leptoscelia marginalis*, *Callidea Stoeckeri*, &c. Of the aquatic species, the gigantic *Belostoma Indicum*, attains a size of nearly three inches. Some of them are most attractive in colour: a green one is often seen on leaves. They are quite inoffensive, if unmolested, but if irritated exhale an offensive odour. Insects known as bugs have in recent years attracted much attention from the anxiety and losses they have occasioned to the Coffee planting interests. The Coffee plant has very many enemies to contend with, and the following is a list of them by Mr. Nietner.

1 *Pseudococcus adonidum*, White or Mealy bug.

Parasites; *Seymnus rotundata*, *Motch.*
Encyrtus Nietneri, *Motch.*

Chartocerus musciformis, *Motch.*

Acarus translucens, *N.*

2 *Lecanium Coffee*, *Walk.* Brown or scaly bug.

Parasites; *Scutellista cyanea*, *Motch*

Cephaleta purpureiventris, *Motch.*

„ *brunneiventris*, *Motch.*

„ *fusciventris*, *Motch.*

Encyrtus paradisiacus, *Motch.*

„ *Nietneri*, *Motch.*

Cirrospilus coccivorus, *Motch.*

Marietta leopardinus, *N.*

Chilocorus circumdatus, *Schönh.*

Acarus translucens, *N.*

3 *Lecanium nigrum*, *N.* Black bug.

4 *Syncladium Nietneri*, *Rabh.*, *Dresd.*
Hedwig, 1858.

Trisposporium Gardneri, *Berk.* *J. Hort.*
Soc. Lond. 1849.

A fungus.

5 *Aphis coffee*, *N.* Coffee-louse.

Parasites: *Syrphus Nietneri*, *Schiner* in
litt.

„ *splendens*, *Dolensch.*

Mycromus australis, *Hag.* *Verz Wien.*

Strachia geometrica, *Motch.*

Lepidoptera.

7 *Alon lactinea*, *Cram.*

8 *Orgyia Ceylancia*, *N.*

9 *Euprocitis virguncula*, *Walk.*

10 *Trichia exigua*, *Feld.*

11 *Narosa conspersa*, *Walk.*

12 *Limacodes graciosa*, *Westo.* *Ent. cat.*

13 *Drepana* ?

14 *Zeuzera Coffee*, *N.*

15 *Agrotis segetum*, *Wien* V. Black grub.

16 *Galleriomorpha lichenoides*, *Feld.*

17 *Boarmia Ceylanica*, *Feld.*

18 „ *leucostigmata*, *Feld.*

19 *Eupithecia coffearia*, *Feld.*

- 20 Tortrix coffearia. *Feld.*
 21 Gracilaria ? coffeifoliella. *Motch.*

Diptera

- 12 Anthomyia ? coffeae, *N.* in *Motch.*

Orthoptera.

- 13 Phymatea punctata, *D.*

Coleoptera.

- 14 Ancyloscypha spec ? White grub.
 15 Arhines ? destructor. *N.*

Aptera.

- 16 Acaus coffeae. *N.*

Mammalia.

- 17 Golunda Elliott. *Gray.* Coffee-rat.

The "rat" does much mischief by gnawing off the young branches, apparently to get at the tender pith; it is called "Daddewedda" by the Singalese, is as large as a weasel and of a greyish black colour. The rat, monkeys, and squirrels commit great depredations in fruit time; they are partial to the sweet pulp which they digest but evacuate the beans whole.

Of the locusts which, at intervals, devastate some countries, the Acridium (Gryllus) migratorium is that of Africa and the south of Asia and G. gregarius that of Sinai. The Migratory Locust, Acridium (or Edipodium) migratorium, which occurs in Africa and the south of Asia is greenish, with transparent elytra, of a dirty grey, whitish wings and pink legs. They have the power of inflating themselves with air and of travelling about 18 miles a day. They are bred in the deserts of Arabia and Tartary. The Cephalæmia ovis (syn æstrus ovis) is found in Europe and the E. Indies, it lays its eggs in the nostrils of the sheep and the worm from it occupies the frontal sinuses.

Æstrus equi occurs in the south of Europe and in Persia. It is a dipterous insect. Its eggs are deposited on the hair of the horse and licked into the stomach, and when complete the insects pass through the canal.

The Butocera rubus, Curuminya, of Ceylon, is a beetle of the south of India which penetrates the trunk of the cocoanut tree near the ground and there deposits its eggs, and its grubs, when hatched, eat their way upwards through the centre of the tree, to the top, where they pierce the young leaf buds and do incredible damage.

Beetles, belong to the class of insects called Coleoptera: they are very numerous in tropical India, and the blistering beetles of India, are several species of mylabris, the market value of which in Britain is only 5s. 8d. the pound.

From other Indian Beetles is obtained an article of commerce in the beautiful wing cases or elytra of the Buprestis they are of a brilliant metallic green colour and are imported into

England principally from Calcutta, as ornaments of khushkhus fans, baskets, &c., and on muslins to enrich the embroidery. The beetles wings of Akyab, of Burmah are called Chenk Poorie, and Thungon Poorie.

The name *kavdapa* was applied by the Greeks to a species of Coleopterous Insect which was distinguished by yellow transverse bands. This is the characteristic of species of Mylabris, one of which, M. Fusseloni, occurs in the south of Europe, and another, M. Cichorii in Syria, and throughout the east. In India it is called *teles* and *teles mukhee*, or the Oily Fly, no doubt from the oil-like exudation which the insects of this genus give out from the articulations of their legs when seized. Another species, M. Trianthema, is mentioned by Dr. Fleming, and the Lytta gigas, *Fab.* is found there as well as in Senegal. One is mentioned by the Arabs under the name of zurareh. It is not known when the official Blistering Fly came to be used, but it has had a variety of names. It was called Meloe vesicatorius by Linnaeus, Lytta vesicatoria by Fabricius, and Cantharis vesicatoria by Geoffroy. Geoffroy grouped the Vesicatory Beetles in a small tribe corresponding nearly with the Linnean genus Meloe, and distinguished it by the title Cantharidæ. This he divides into eleven genera, among which are Cantharis, Mylabris, and Meloe, all of which species have been employed as vesicatories. Meloe majalis, or Mayworm, is a specimen of the genus.

The blistering flies of India are chiefly the Mylabris or Meloe cichorii the Cantharis gigas, and the Cantharis violacea. Mylabris cichorii is common in the neighbourhood of Dacca, in the Hyderabad country, in Kurnool, and numerous other localities. Dr. Hunter published a good account of it in the 5th vol. of the Transactions of the Asiatic Society, p. 216. The insect is about an inch long, and 3rd broad; the elytra or wing covers are marked with six cross stripes of deep blue and russet brown. The Buprestis of ancient writers is met with in the bazars under the name of the golden fly (sonamukki). The Cantharis violacea is often mixed with specimens of Meloe in the bazars. The Telini fly, if procured before the mites have commenced its destruction, yields on an average one-third more of cantharidin than the Spanish fly of the European shops. The blue fly is of uncertain strength; Meloe trianthema, is so called from its being usually found on the plant named Trianthema decandra (biscopra, Hind.) At the Madras Exhibition of 1855, specimens of the Indian blistering beetles, Mylabris pustulata, and M. punctum were exhibited. Both insects are found in large quantities at certain seasons all over Southern India. M. Cichorei and M. Pustulatus

are used by the Chinese.—*Figuer. Tennent's Ceylon. Hooker's Hm. Jour., Vol. II. p. 65. Boyle. O'Shaughnessy, page 684.*

The *Coccus* genus of insects belongs to the order Hemiptera. The species known in India are the *C. cacti*, the cochineal insect; the *C. lacca* that yields the stick lac of commerce, and the *C. maniparus* of Arabia, which punctures the *Tamarix gallica*, and causes the exudation of the Arabian manna. There are two varieties of *Coccus cacti*, the true or grana fina, and the grana sylvestris, and after prolonged efforts on the part of Drs. James Anderson and Berry of Madras, in 1795, the *C. sylvestris* or wild species of the cochineal insect was introduced into Bengal by Captain Neilson of H. M. 74th Regiment. It thrives rapidly on the *Cactus indicus*, indigenous opuntia, the country nopal, and between 1800 and 1807, 74,366½ lbs. of the cochineal amounting to Rupees 142,916 in value was shipped to England, but at a loss, as the wild species was greatly inferior to the true. The cochineal insect was introduced into Java about the year 1825, as a Government experiment, and apparently with more success in its production than in British India, for so long ago as 1844 it was exported from Batavia to the estimated value of 93,319 guilders. The species introduced into India swarms at certain seasons, and settles on one of the species of *Cactus*, which they immediately destroy. The whole neighbourhood of Ilomanabad near Beder in 1865, was surrounded with prickly pear which then disappeared under one of these swarms. The *Coccus lacca*, produces the substance called lac, it inhabits India, is found on various trees in great abundance (*Ficus religiosa* and *F. indica*, *Butea frondosa*, *croton* trees and *Rhamnus jujuba*). When the females of this *Coccus* have fixed themselves to a part of the branch of the trees on which they feed, a pellucid and glutinous substance begins to exude from the margins of the body, and in the end covers the whole insect with a cell of this substance, which, when hardened by exposure to the air, becomes lac. So numerous are these insects, and so closely crowded together, that they often entirely cover a branch; and the groups take different shapes, as squares, hexagons, &c., according to the space left round the insect which first began to form its cell. Under these cells, the females deposit their eggs, which, after a certain period are hatched, and the young ones eat their way out. It is found encircling twigs and branches. The broken twigs covered with these incrustations are called 'stick lac' in commerce. After the colour has been extracted and further purified shell lac results. *Coccus polonicus* is a species which is used in dyeing a red colour. It is now chiefly employed by the Turks for dyeing wool,

silk, and hair, and for staining the nails of women's fingers.

Lac lake was first made in Calcutta in the beginning of the 19th century and afterwards the lac dye. *Coccus sinensis* of China secretes a wax from which candles are made.

Silk.—M. P. Mailla in his *Histoire generale de la Chine*, mentions that B. C. 2,600, Si-ling-chi, wife of the emperor of China, Hoang-ti, was enjoined by him to utilize the thread of the silk worm in which she succeeded. It is produced by several genera of the Bombycidae called Silk worms. Silk worms are liable to several diseases. *Luisettes*, are worms which have not strength to moult. They should be early removed, as they die and infect the room. *Arpians* have exhausted all their strength in the last moult and have not even strength to eat.

The yellow or flat worms easily die. The flat or mous, are soft and indolent worms, become very fat from eating a great deal, soon die and become putrid.

The most severe disease, as the most general, is the *muscadine*. The losses occasioned by it are reckoned in France to be equal to one-sixth of the profits. A worm may be eating as usual, when suddenly it becomes a dull white and not long after dies, becomes reddish and rigid. Twenty-four hours after death, a white efflorescence shows itself round the head and rings and soon after all the body becomes floury. This flour is a fungus, the *Botrytis bassiana* of which the mycelium develops itself in the fatty tissue of the caterpillar, attacks the intestines and fructifies in the exterior. Some suppose this disease to be contagious.

The *Galline ailment* is another epidemic disease which shows itself from the very beginning of the rearing. The losses it has occasioned in Europe in the past ten years are very great, and the countries of the Cevennes, the principal seat of the silk culture in France have been ruined.

Anthera paphia, the Tusseh silk worm, called Bughey in Northern India, is found in Assam, Bengal, Bheerbhoom and Bahar and feeds on the *Zyziphus Jujuba* or Ber and on the Assan. It has not been domesticated.

Saturnia arrundi is the Arrundi Tusseh Silk moth of India. It feeds on the arandi or castor oil plant.

Bombyx Cynthia, is met with in the lower ranges of the Himalaya, at Darjeling, Mussooree and Nepal. It is partial to the leaves of the *Ailanthus glandulosa* but eats also those of the *Xanthophyllum hostile* and *Ricinus comaeas*.

Three species of *Attacus* feed on the oak, in Japan, viz., *A. Yama-Mai*: *A. Pernyi* and *A. Mylitta*. The silk of the *A. Yama-*

Mai, is next to that of the mulberry silk worm. It is as bright, but is less fine and strong. The larvæ are of great size: the cocoon resembles that of the mulberry, and the moth is large and beautiful and of a bright yellow colour. It was introduced into France in 1863.

Attacus Pernyi yields a remarkably beautiful silk, fine, strong and brilliant and which can be spun with great ease. The tissues obtained from it partake of the qualities of ordinary silk, of wool and of cotton. It feeds on the oak in Mantchouria. It has been acclimatized in France and hopes are entertained of it.

Attacus mylitta produces a silk even superior to *A. Pernyi*. This worm is found in various parts of Bengal, and in the Panjab and its brownish silk of bright form texture is the tussah of commerce, which is largely exported.

The *Attacus (Bombyx) cynthia* feeds on the *Ailanthus*. Its silk is a sort of floss silk, holding a middle place between wool and the silk of the mulberry tree worm, and in France the silk has been successfully wound off its cocoon.

The *Attacus (Bombyx) ricini* produces a silk which most resembles that of *A. Cynthia*.

The *Saturnia pavonia major* spins a brown cocoon, with a coarse silk. It inhabits France, but not further north than the latitude of Paris.

Saturnia carpi, the Emperor moth occurs in England.

Bombyx neustria, the Lackey, and *B. processionæ*, the Procession moth occur in Europe.

Himalayan entomology in character is both Asiatic and European, and the intermingling of forms of temperate and tropical climates is one of its most distinguishing peculiarities. In its valleys, probably influenced by the heat and moisture of the jungle, southern forms predominate over northern; and it is not unlikely, that to the uninterrupted belts of jungle stretching along the mountain ranges, we may partly trace several tropical phytivorous genera far beyond their apparent natural limits. Some carnivorous insects are also found ranging far to the north in the Himalayas; an example of which is *Anthia 6-guttata*, a well-known native of the tropics; the specimens, however, are mere dwarfs, compared with those of Peninsular India, a fact which may be regarded as a proof, that *Anthia* has here reached its extreme limits, and consequently will soon disappear (as is the case) and be represented by another type, fulfilling the same functions, only under a difference of form. Among the *Cicindelidæ*, *Colliuris* appears; among the *Carabidæ*, we find *Desera*, *Omphra*, and *Cyclosomus*; among the *Lamellicornes*, *Eucolora*, *Mimela*, and *Dicronocephalus*; and to these may be added, *Anisotelus* belonging to *Telephoridæ*,

and *Podontia* and *Phyllocharis* to the *Chrysomelidæ*; all of these are attached to warm countries, and some, indeed, are seldom found but within the torrid zone. Many genera from the Himalayas evince an affinity to European types; various Himalayan genera closely approximate Siberian forms, and some of the species described by Dr. Gebler from the Altaic chain of mountains, particularly some *Chrysomelidæ*, are believed to be indigenous in both regions, some few, however, are worth noticing, such as *Broschus* and true *Carabus*, *Geotrupes* and *Pimelia*; the two last have been declared by high authority never to be found in India. Regarding identity of insects occurring in the Himalayas, as well as in Europe, there are several species of the following genera of *Coleoptera*, namely, *Elater*, *Melolontha*, *Chrysomela*, *Cassida*, and *Coccinella*, which seem to be the same as those of England; among the carnivorous insects, *Dermestes lardarius*, and *vulpinus*, *Corynetes violaceus*, and *rufipes*, and some of the *Staphilinidæ*, are essentially the same in Europe and the Himalayas. Of *Lepidoptera*, *Papilio machaon*, is evidently the same as that met with in England; the same remark will apply to *Vanessa atalanta*, and *Cynthia cardui*. The pervading character of Indian Entomology is uniformity. It is true that we meet with numerous genera, both of tropical and temperate climates, associated together; the former more abundant, the latter less frequent (as we might naturally expect) than in the Himalayas. There is, however, a greater intermingling of forms than at first sight would be readily imagined; but when we take into consideration, that many of the species resembling those of Europe may have been captured on the mountain ranges, at a considerable elevation we may partly account for it. When we look to the range which genera here enjoy, it is very considerable; in part of the Himalayas, at the extreme southern points of India, in the West, and even in its Eastern Isles, there is one pervading character, evincing every where the prevalence of tropical genera. To speak more specifically, in Nepal and the southernmost extremity of the Mysore, and in Ceylon, at Bombay, and at Madras, at Calcutta and Singapore, in Japan and Java, with the rest of the Polynesian Isles, the majority of the same types abound; and what is of more consequence, a great majority of the same species also occur in most of the abovementioned regions. Having noticed the intermingling of genera belonging to Europe and Asia, if we turn our eyes to Africa, we shall there find a considerable similarity in the entomology of this quarter of the globe with that of Asia; among the *Carabidæ* occur *Anthia*, *Orthogonius*, *Trigonodactyla*, and *Siagona*. Among

the Lamellicornes, Epirinus and Popillia, the conical Buprestidæ and the extraordinary Psephenidæ, which last are chiefly found only in these regions; and to these may be added, as well as many more, the genera Melyris, Megalopus, Sagra, and Adorium; Dorylus, among the Hymenoptera, and Diopsis among the Diptera. Passing from genera to species, we shall find that precisely the same occur in both continents; among the most conspicuous, Coprimidas, Sabæus, and Pithecius, Cetonia cornuta, and Lytta gigas. Even supposing that no identical species occurred, which were common to Asia, and Africa, yet we cannot help observing the very remarkable similarity in the representatives of each; one example of which is, Ateuchus sanctus, which very closely resembles the celebrated Sacred Beetle of the Egyptians, the object of their worship, by some regarded as an emblem of fertility, but more probably that of eternity single species of Indian Casnonia, and Dryptidæ, Drypta is a Nepalese individual of this family belonging to the genus Desera, Leach which is described in General Hardwicke's collection. Five others are also recorded as inhabiting India.

Of the Lebiidæ, Lebia, is of rare occurrence in the East; unicolor, is from the Himalayas; aplosa is found at Poona. Orthogonius is common to Africa and Asia: the gigantic species, however, predominate in the latter country.

Brachinidæ.—The true type of Helluo, exclusively belongs to New Holland: the genus denominated Omphra by Dr. Leach, applies solely to the Indian Helluones. Ozæna and Pseudozæna inhabit Calcutta and Cayenne; while Trigonodactyla appears in Africa and Asia. The Graphiptera of the sandy deserts have no representative in the East. One genus appears to unite Brachinus and Anthia: the latter is found throughout the continent of India. Some of the specimens from Nepal, however, are very diminutive. Aptinus is partly confined to Northern Europe and America; while true Brachinus enjoys the unlimited range of the world. Catascopus is found in Nepal, and resembles in its habits Elaphrus of Europe, and probably occupies its place. Dyscolus, Promecoptera, and Thyropteris, prefer the southern tropical regions, and are not found to range as far north as the Himalayas.

Scaritidæ.—Siagona atrata is met with in Nepal and various parts of India: a specimen from Egypt, if not the self-same, is so exceedingly unlike in size and sculpture, that it is very difficult to distinguish. The Scaritidæ abound in both hemispheres. Scapterus of India is represented by Oxystomus in the Brazils, and in Africa by Acanthoscelis.

Herpalidæ.—Harpali are found dispersed nearly in all the countries of the globe: they abound more in the arctic than antarctic regions. The following genera are recorded as belonging to India, viz. Harpalus, Platymetopus, Selenophorus, Cyclosoemus, and many others. Some species of Ophonus from Bengal and Poona, closely resemble British species.

Pogonidæ.—Some of the genera of this family are not confined to the temperate zones: the major part of them prefer the polar regions. Pogonus and Cardiaderus are met with in Asia and Africa.

Calathidæ.—Pristonychus inhabits Nepal and Europe; while Calathus prefers a northern more than a southern climate.

Feroniadæ.—In India we meet with Trigonotoma, Catadromus, Leaticus, and Distriqus: most of them peculiar to that continent. Argutor antiqua occurs in the East; Omaseus and Platysma in Nepal; and Steropus in the vicinity of Poona. Cephalotes is found in Nepal and Australia; Amara is captured in Japan; Antarctica and Masoreus are equally natives of Europe, Africa and Asia and several nondescript species from the East of the latter genus, are to be found in English cabinets.

Sphodrinidæ.—The genus Sphodrus occurs in Nepal, and the anomalous form of Mormolyce in Java and Singapore; which last has been ranged with this family, but appears to be sadly out of place, as it is most likely a sub-cortical feeder.

Callistidæ.—Epomis and Chelænius abound in the tropics: the maculatus set appear common to Asia and Africa, each country possessing species almost exact representatives of each other. Chelænius nepalensis approaches in form to Lycinus; Oodes is widely dispersed over India, Callistus occurs in the Mysore.

Dicelidæ.—Rembus is found on the Malabar and Coromandel coasts, at Calcutta, and in Nepal: Panagæus has its metropolis in India.

Proceridæ.—Among the Insects collected by Dr. Wallich, there were four or five species of true Carabus. Wherever the oak grows, there Calosoma will be found. C. indicum inhabits Nepal. If caterpillars are necessary to keep in check the luxuriance of tropical vegetation, the Calosomata must be equally necessary to keep within bounds these Insects, which sometimes destroy, in northern climes, nearly the foliage of the year.

Bembididæ.—A single species of Tachys is the only example.

Frichidæ.—Stenolophus, Acupalpus and Tetragonoderus have occurred.

Dyticidæ.—Aquatic coleoptera are apparently not much influenced by climate: the temperature of water not varying like that of

the earth or air, is the reason we meet with the self-same species in the interior of India and the south of France. Dyticæ appear confined to Northern Europe or America, while *Cybister* is dispersed throughout the world. *Eunectes* and *Hydaiticus* belong to Nepal and India, and to the latter country we may add also the following genera, viz. *Colymbetes*, *Laccophilus*, *Noterus*, *Hyphydrus* and *Hydroporus*.

Gyrinidæ.—Many gigantic species of *Gyrinidæ* abound in India. *Dineutus Nepalensis*, *politus*, and *spinosus*, have been found within the Himalayan districts.—*Royle*, page 57. *Crawford Dict.* page 112. *Kirby and Spence*, Vol. I, p. 320. Vol. IV. 142, quoted in *Eng. Cyc.* Vol. II, p. 144. *Royle on the Productive Resources of India*, p. 57. *L. Fiquier*, *Insect life*.

Hydrophilidæ.—Several genera of this family are as widely distributed as the Dyticidæ; and most of those found in India inhabit Nepal.

Necrophagæ.—Carrion feeders abound more in warm countries than is generally believed. The religious prejudices of the Indians not allowing them to touch a dead body, may account for the few species which have hitherto reached Europe from the East. *Necrophorus*, *Neorodes*, *Silpha*, and *Oiceoptoma*, are met with in India and Nepal.

Nitidulidæ, which have been captured in India. In the Engidæ family we find *Triplax*, *Ips*, and *Dacne*; in the *Erotylidæ*, *Erotylus*; and next to this group, *Languiria* and *Eumorphus* should be placed; genera abounding in species in Nepal and India.

Dermestidæ.—This genus, and its congeners, is apparently a predominant group throughout the world. In general Hardwicke's collection, there is a Nepalese specimen of *Dermestes*, similar in every respect to *D. lardarius* of Europe; a second species is closely allied to *D. vulpinus* of Africa. It is scarcely possible that either of them can have been imported into the Himalayas by commerce.

Beyrrhidæ.—Among the drawings of the Nepal collection, made purposely for General Hardwicke, two species of *Anthrenus* are figured; they appear novel in form.

Histeridæ.—This family abounds in India, more than fifty species are known from the East.

Lucanidæ.—Some of the *Lucanidæ* resemble British species very closely, while others are the same as those in Java and Singapore. Forty species had been submitted to Mr. Hope's inspection.

Passalidæ are not equally abundant in the Old, as in the New World.

Lamellicornes.—The celebrated *Atenechus Egyptiorum*, or Sacred Beetle, has almost an

exact representative in India. *Gymnopleurus capicola*, *Hope*, and *G. azureus* *Jab.* both of them African species, are replaced in the East by *G. sinuatus*, *Jab.* and *splendens*, *Hope*. *Staphyphus* is met with in both hemispheres. *Epirinus* is an African, as well as an oriental form. Several Indian *Copridæ* resemble those of Egypt. *Copris midas* of India and Nepal, exactly corresponds with *C. laidis* of Africa. *C. Sabæus* and *C. Pithecus* appear common to both continents, and are equally abundant in Ceylon; and several smaller species of *Copris*, from the eastern part of Africa, if not the same, approach so closely to those of Western Asia, as to induce a belief that they are the same insects, only modified by climate. *Onitis* and *Oniticeilus* have also several representatives in both regions, if not in some instances the self-same species. *Onthophagus* abounds more in India than any other country; some of them unrivalled in size, splendour, and variety of form. More than 120 oriental species may be seen in European cabinets; *Pactolus* of Nepal and India, is represented in Senegal by *Harpax*, *Jab.* *Aphodius*, compared with *Onthophagus*, as an Indian group, is quite insignificant; scarcely twenty species are recorded, including those of *Manilla* and the Eastern Isles: There was only a single specimen of *Trox* in General Hardwicke's collection.

Geotrupidæ.—Of three species of *Geotrupes* one is from Delhi, a second from Japan, a third from the Himalayas. *Bolboceus* appears in some measure to supply the place of *Geotrupes*, which last is not so important a group in the East, as in a northern region. *Orphnus*, *Athyreus*, and *Hybosorus*, occur in India.

Scarabæus.—Under this term, the most gigantic and remarkable insects of the Old World are ranged. Four species, allied to *S. Atlas*, *Jab.* are indigenous to Nepal, there are several genera of *Scarabæidæ*, besides *Oryctes*, found on the Himalayas some of them approaching African types.

Melolonthidæ.—Some of the *Melolonthæ* of Nepal are closely allied to the British *M. vulgaris*; others again, with the margins of the thorax serrated, evince their affinity to tropical species. *Geniatus*, *Apogonia*, &c. are common to the Himalayas, the whole continent of India, and the Southern Isles the genera *Mimela* and *Euchlora* appear peculiar to the East: there are thirteen *Mimela* described; several from Nepal. *Euchlora* appears wherever *Mimela* ranges, and is more abundant in species. The genus *Popillia*, appears nearly equally abundant in Asia and Africa, and is common to the Old and New World. Fourteen species have been collected in Nepal. Also, the following genera of *Melolonthidæ* *Anomala*, *Hoplia*, *Apogonia*, and *Adoretus*.

Trichiidae.—*Acanthurus*, *Triobius*, and *Dicronocephalus*, inhabit the Himalayas. The first of these forms approaches European type, the latter is the representative in India of what *Goliathus* is in Africa, and *Incos* in Southern America. *Goliathidae* is a conspicuous family, and may justly be ranked among the most extraordinary forms of the Insect world.

Cetoniidae.—*Campsiura xanthorhina*, *Hope*, is represented in Africa by *Cetonia scutellata*, *Jab.* *C. cornuta*, *Jab.* is found in Africa, as well as Asia. More than 111 species occur in India, it is evident that the metropolis of *Cetoniidae* is situated in the tropical regions.

Buprestidae.—Of this superb and extensive family, comprising at present more than one thousand species, the most magnificent inhabit India; the splendid *Sternocera* and giant *Catantoxantha* range the equator and the tropics. Ninety species belong to the continent of India, many to Nepal, the isles of Java and Sumatra, among them are forms of temperate as well as of northern climes.

Elateridae.—Several Nepalese *Elateridae* closely resemble British species, in Nepal *Elater cœnosus*, *Hope*; and various species, which in Europe frequent the oak, alder, and willow, have Nepalese species nearly resembling them, and we have stated that there is a correspondence of vegetation between Europe and the Himalayas.

Cebrionidae.—Few examples occur in India.

Lampyridae the East boast of numerous fine species, unsurpassed probably by those of south America. The warm damp of the jungle is peculiarly adapted to the habits of this family. *Lycus* and *Omalysus*, as well as *Lampyrus* abound in the Himalayan range.

Malacodermati.—The families composing this group are more abundant in Nepal than Central India; and yet they are not of rare occurrence. *Anisotelus*, appears to be peculiar to the East. Several species of *Malachius* and *Melyris* enjoy an Asiatic and African climate.

Oleridae.—abound in the East.

Ptinidae; have been found in the Mauritius.

Bostrichidae are abundant, and it is not unlikely that the *Paussidae* commence where the *Ptinidae* terminate.

Circulionidae of the numerous genera of this family, Nepal contains many tropical forms, as well as other, which are peculiar to temperate climes, some of them extending from the Himalayas, even to new Holland, particularly *Sipalus*.

Cucujidae are common to India and Nepal *Prionidae*, *Prionus* loves the torrid and tropical zones; some of the Himalayan species indicate an alliance to European types.

Lamiadae.—The largest, as well as the most beautiful species of this family, are found in Nepal.—*Lamia Roylei*, *Hope*, is unrivalled in size; and *L. Wallichii* surpasses all other in beauty and colouring; it is found in Nepal, Japan, at Singapore, and the Isle of Java. *Cerambyx*, *Callidium*, *Clytus*, and *Saperda*, are predominant groups, and are found in all countries and climates. Many Nepalese species exactly represent European types.

Sagridae.—*Donacia* occurs in Java, several species of *Sagra* are found on the *Nymphaeaceae*. Whether *Sagra* attaches itself to peculiar water-plants or frequents the same as the former genus is doubtful. *Megalopus* is found in Nepal, in Africa, as well as South America. *Cricocoris* also appears to be a predominant group, while *Adorium* is confined more to Asia than Africa.

Gallerucidae.—*Galleruca* and *Auchenia* abound in Nepal, *Halticæ* are found throughout the world, and are intended probably to keep in check particular vegetation. In Europe, the genera *Brassica* and *Sinapis* almost annually suffer from their depredations; they appear to abound more in light and sandy soils; and where lime is used instead of animal manure, the crops are less attacked.

Chrysomelidae.—Many of the Nepalese species resemble those of Siberia; others approximate closely to European forms, so much so, that in many instances if not the same, they are certainly similar representatives of their respective countries, and probably fulfil the same offices and functions. *Podontia* and *Phyllocharis* seem peculiar to Asia and New Holland.

Eumolpidae.—The *Eumolpidae* of India are not surpassed in beauty or splendour by those of South America: they seldom, however, equal the latter in size. *Clythra* and *Cyprocephalus* occur in the east, both of them abounding more in temperate than tropical countries; several species occur in the Himalayas.

Cassididae.—About fifty species of Indian *Cassida* have come under notice; some of the Nepalese species resemble English specimens, and may be parasitic on the thistle.

Coccinellidae.—*Coccinella 7-punctata*, *Fab.* appears common to Europe and Asia.

Hispidæ.—*Hispa erinacea* and two undescribed species are abundant in Nepal.

Tenebrionidae.—*Hegeter* and *Tagenia*, are common to India, *Upis* and *Tenebris* are found in the Himalayas, and are abundant in the tropics.

Pimeliaricæ.—*Pimelia* occurs in the vicinity of Poona. *Sepidium*, *Blaps*, *Eurynotus*, and *Opatrum*, occur in the East; the first prefers the southern tropic; the two next appear at Bombay, Calcutta, and Nepal; and the last is widely dispersed throughout the East.

Diaperidæ and *Cossyphus*, are both common to Asia and Africa, *Cistela* and *Lagria* : the latter apparently a predominant group. *Pyrochroa*, also has been discovered in Java.

Helopidæ.—This family is the grand receptacle for the various forms of the Heteromera. Among the Indian genera we find *Amarygmus*, *Cuodulon*, and *Platyrepis*, with several true *Helopidæ*, rivalling in splendour and magnitude those of the South American Continent.

Mordellidæ.—Most of these Insects are parasites of the Hymenoptera, and abound in tropical climates. Their office is probably to keep in check, and prevent the too rapid increase of *Vespidæ* and *Bombidæ* : they are common to the Old and New World.

Cantharidæ.—This family contains insects which are used in Medicine, and denominated Blister Flies. *Lytta gigas*, *Fab.*, is found abundantly in India, and also in Senegal ; and several species of *Mylabris* common to both continents.

Staphilinidæ.—By the families *Notoxidæ* and *Scydmænidæ*, we arrive at the *Pselaphidæ*, and afterwards at the *Brachelytra*, which terminate the *Coleoptera*. *Anthilephila* and *Notoxus* occur in Nepal, and *Scydmænus* in Java ; various other genera of *Staphilinidæ* are widely dispersed throughout the East.

Lepidoptera.—There appear to be a much greater number of species of *Lepidoptera*, widely disseminated throughout the world, than of any other Order. In Asia and Europe we meet with *Papilio machaon*, *Gonepteryx rhamni* ; with some species of *Colias* and *Pontia*, with *Vanessa Atalanta*, and *Cynthia cardui* ; and to these might be added, several identical *Sphingidæ*, particularly *Acherontia*, *Atropos*, *Deilephila*, *Celerio*, and *Sphinx*. Among the *Noctuidæ*, *Geometridæ*, *Tortricidæ*, and *Tineidæ*, many species will also be found inhabitants of both continents. In the *Orthoptera*, some *Gryllidæ* are common to countries remotely situated, which may partly be accounted for by the migratory habits of these insects ; and the same remarks may be applied to the *Sphingidæ*. Among the *Blattidæ*, several tropical species range widely ; some of them have become naturalized even in a northern climate ; and it is no uncommon occurrence to find Indian, Brazilian, and New Holland species in a high state of perfection alive in the houses of London ; and among the Eastern *Neuroptera*, there occur various *Libellulinæ* and *Hemerobeidæ*, closely resembling English species.

Among the *Hymenoptera*, may be noticed the universal ranger, *Evania appendigaster*, ever attendant on *Blatta* ; some *Ichneumonidæ*, *Crabronidæ*, *Apidæ*, and *Vespidæ*, all of them presenting identical species with those of Britain.

In referring to the *Diptera*, may be mentioned the wide range of the Orange Fly, the same in England, India, and America ; the Gnats and Mosquitoes, common to the four quarters of the globe, alike the pest of the Indian and Laplander ; and, lastly, various species of *Musca*, as widely dispersed as the half-domesticated sparrow of Great Britain. Passing by the *Aptera*, and the various parasites of birds, quadrupeds, and of man himself, we find among the *Hemiptera*, several identical species of *Pentatoma*, *Reduvius*, *Tetyra*, besides *Cimex lectularius*, the scourge of all countries and climates. Asia and Europe have many insects in common, and probably other parts of the world will eventually be found to present not only similar genera and representatives, but also the same identical species, subject to the modifications of climate, and other external circumstances.—*Mr. Hope in Madras Lit. Society's Journal*, 1840.

The coast region of Ceylon, and fully one-third of its northern part, have a much drier atmosphere than that of the rest of its surface ; and their climate and vegetation are nearly similar to those of the Carnatic with which this island may have been connected at no very remote period. The difference of its Fauna from that of Central Hindustan and the peninsula of the Dekkan in its insect-fauna will probably be found to have more resemblance to that of Ceylon than to the insects of northern and western India just as the insect fauna of Malaya appears more to resemble the similar productions of Australasia than those of the more northern continent.

A collection made by Mr. Layard was partly formed in the dry northern province of Ceylon, and among them more Hindustan insects are to be observed than among those collected by Dr. Templeton, and found wholly in the district between Colombo and Kandy. According to this view the faunas of the Neilgherry Mountains, of Central Ceylon, of the peninsula of Malacca, and of Australasia would be found to form one group ; while those of Northern Ceylon, of the western Dekkan, and of the level parts of Central Hindustan would form another of more recent origin. The insect fauna of the Carnatic is also probably similar to that of the low lands of Ceylon ; but it is still unexplored. The regions of Hindustan in which species have been chiefly collected, such as Bengal, Silhet, and the Punjab, are at the distance of from 1,300 to 1,600 miles from Ceylon, and therefore the insects of the latter are fully as different from those of the above regions as they are from those of Australasia to which Ceylon is as near in point of distance, and agrees more with regard to latitude.

Hagen believes the fauna of the mountains of Ceylon to be quite different from that of the plains and of the shores. The south and west district have a very moist climate, and as their vegetation is like that of Malabar, their insect-fauna will probably also resemble that of the latter region.—*Tennent's Sketches of the Nat. Hist. of Ceylon*, p. 442, 443.

Chinese insects were described as far back as 1798 in the times of Fabricius and of Donovan, with this exception, there were very scanty notices of other Chinese insects until Mr. Hope, in March 1842, published half a century of the Coleoptera of Canton and Chusan, collected by Dr. Cantor. Part of Mr. Bowring's Coleoptera and Homoptera of Hong Kong and neighbourhood were published in the *Annals of Natural History*, Vol. IV, December 1844, by Mr. Adam White. The rarer species of the Carabideous genera, frequent marshy localities or the summits of mountains. Several fine species were there captured in tolerable abundance; a fine *Galerita*, several *Chilrenii*, three species of *Hellus*, *Panagæus*, several large *Pherosopii* (*Brachinidae*), a *Clivina*, *Dyschirius*, *Casnonia*, and *Arga* or *Leptotracheilus*. The beetles belonging to *Badister*, the *Amaræ* and *Harpalidae* are of small size. The largest carabideous form has much the appearance of *Omasæus*. It is thirteen lines long. Including the tiger beetles and their allies with carabideous beetles, Hong Kong cannot produce much under sixty species. The carabideous genera are the most abundant of all the insect tribes during winter in Hong Kong, some forms commencing to appear with autumn. In April they are very abundant, and there are still found a few in May. They then, however, give place to the *Cicindelidae*, none of which are found here during winter. Of *Cicindela*, Mr. Bowring mentions ten species; *Colliuris longicollis* is found on the flowers of *Bauhinia Vahlia* (?) *Tricondyla pulchripes* (*White*) on Litchie trees, differing in habit from its congeners by being found on trees, not at their roots. It is apterous, like other species. A small species of *Lebia* and of *Brachinus* is found on flowers, *Scarites* has not hitherto been found in Hong Kong and *Calosoma* and *Carabus* proper occur. The following Ceylon insects, given by Sir J. E. Tennent, will show the Orders and the principal families and genera, which occur in the South and East of Asia.

 Coccus.

There are many small beetles and other insects which come out only at night. These are very interesting to the entomologist, but at the same time very difficult to catch. Toads are not unfrequently turned into beetle-traps, and made to catch these little night insects. A brigade of skirmishing toads is turned loose into the garden in the evening; and in the morning their master makes them eject all their night-work. In this way many curious and rare specimens of minute nocturnal insects have been obtained. To catch the night moths smear the trunk of a tree with sugar and beer boiled together. A lantern is then placed near the trap, the moths attracted by it come flying around, and are caught by the sticky mixture.—*Curiosities of Natural History, by Francis T. Buckland, M. A., 1857. Tennent's Ceylon. Tennent's Sketches of the Natural History of Ceylon, pp. 442-443.*

INULA, a genus of plants belonging to the natural order Compositæ and the sub-order Asteraceæ.

INULA Viscosa and Gravejolens have been lately recommended as diuretics, and as useful in calculous diseases.—Honigberger, p. 290.

INULA HELENIUM. See Confection of black Pepper.

INULA ROYLEANA, grows in the Cashmerean hills, but as the plant is considered poisonous it is not used. Dr. Honigberger is of opinion, that important virtues lie hidden in it, and that it is well worthy of being experimented with.—Honigberger, p. 290.

INULEAULINE. Fr. Elecampane.

INUNDATIONS are of frequent occurrence in India. Those of the Laccadive Islands in a hurricane of April 1847, were described by Captain Biden in Madras Spectator 1st, and Bombay Times, 4th Oct. 1847, and in the Bombay Times, August 13, 1850. An account of remarkable inundations in India in 1849, was given by Dr. Buist, in Bl. As. Trans. 1851: and Edin. Phil. Jl. 1851; singular results of inundations of the Brahmapootra in Assam, were described by Dr. McCosh in Topography of 1837, 1 vol. 8vo. Remarkable inundations occurred of the Ganges in Aug. 21, 1838. It rose at Allahabad 43 feet; and did immense damage at Benares. Hussingabad was on the same occasion flooded by the rise of the Nerbudda. One of the Indus in 1841, supposed to be occasioned by the bursting of a glacier, was described in Bl. As. Trans. 1848, vol. XVIII. Those of the Taptee, for the past 30 years, were described in Bombay Times, 1851. Inundations at the mouth of the Ganges, occasioned by hurricanes, occurred in May 1823, and May 1830. Bl. As. Trans. vol. 1, p. 25. In August and September 1871, much of Central Hindustan was inundated. In the Legends of the peninsula of India, the occurrence of inroads of the ocean, are often mentioned.—Dr. Buist. See Cyclones; Hurricanes; Typhoons; Winds.

(I= 126), from *iodos*, violet, the colour of its vapour, was obtained by M. Courtois in 1812 in the residual liquor of the process for obtaining soda from kelp. Though but lately discovered, its effects have long been obtained in medicine, as it is found in sea and several mineral waters, and in seaweeds, sponge, corals, and some molluscous animals. In the present day, the leaf of a sea-weed (a species of *Laminaria*, Dr. Falconer) is employed in the Himalayas, and called the *goitre-leaf*, *guler-ka-patta*; and in S. America the stems of a sea-weed are sold by the name of *goitre-sticks*, because they are chewed by the inhabitants wherever goitre is prevalent. —Iodine is procurable by burning large quantities of sea-weed or of the *conserva* of the salt water lake near Calcutta: but to prepare it from these, the process is only economical where the weeds yield enough of impure carbonate of soda, to cover the general expense of this operation. This is not the case with the Calcutta *conserva*.—Beng Phar. p. 370. Royle. *Materia Medica*.

IONIA. This name occurs in ancient Sanscrit writings and is supposed to refer to the Bactrian Greeks. See Javan; Kabul.

IPOMŒA CUSPIDATA.

A valuable emetic medicine obtained from the root of *Cephaelis ipecachuanha* and other species. It is a plant of South America.

IPHIGINIA. See India, p. 340.

IPHIS SEPTEMSPINOSA. Edw. One of the crustacea belonging to the Indian seas.

IPI. CAN. *Bassia longifolia*.

IPOMŒA, a genus of plants of the natural family *Convolvulaceæ*. Most of the species are ornamental. Roxburgh in his *Flora Indica* describes eleven species of *Ipomœa*. Dr. Wight in *Icon.* gives *Ipomœa bracteata*, *campanulata*, *chrysoides*, *pes-tigridis*, *pileata*, *pulchella*, *rugosa*, *sessiliflora*, and *Wightii*. The species and varieties of *Ipomœa* are pretty creepers flowering in the morning. They greatly enhance the beauty of Indian gardens, when the various colors are well arranged. The plants are raised from seeds sown at the commencement of the rains, they may be sown whereintended to flower. Any garden soil will suit, if not too heavy. In China, many beautiful species of *Ipomœa* are cultivated for their flowers, especially the *Ipomœa quamoclit*, found about the houses even of the poorest people. It is an elegant little twining species with arrow-headed shaped leaves and also occurs in Burmah. The corolla is cream-coloured with a purple eye. It is in bloom in the hedges of Maulmain at the close of the rains. Other cultivated species are *Ipomœa Bona-nox*; *I. Muricata* (Hairy.) *I. Rudro-Cerulea* (blue and pink.) *I. Tyrianthina* (Bright violet) *I. Violacea*, (Violet Blue.) *I. splendens*, (pale red.) *I. Tuberosa* (yellow species.) *Ipomœa coccinea*, is a beautiful herbaceous and shrubby species well adapted for covering trellis work, walls, or pillars, growing easily from seed, at the commencement of the rains in any good soil, when they produce flowers in profuse abundance—Riddell. *Williams' Middle Kingdom*, page 287. Roxb. *Flor. Ind.* W. Ic. Mason.

IPOMŒA CATESBII.—Meyer. syn. of *Batatas edulis*.—Choisy.

IPOMŒA CŒRULIA. Kæn. Roxb. syn. of *Pharbitis nil*.—Choisy.

IPOMŒA CUSPIDATA, is a creeping weed, its leaves are used medicinally.—Dr. Honigberger, p. 291.

IPOMŒA MACRORHIZA.

IPOMŒA DASYSERMA. Dr. Honigberger received the seeds of this plant from Hindoostan, as an antidote to hydrophobia. It is called Kut'ta ki binj. i. e. the seeds for dogs.—*Honigberger*, p. 291.

IPOMŒA ERIOSPERMA. *Beauv.* syn. of *Batatas paniculata*.—*Choisy*.

IPOMŒA GEMELLA *Rotk.*

Convolvulus gemellus, *Linn.*

Siru Tali ... TAM. | Chinna Tali ... TEL.

These leaves are said to have a pleasant smell and mucilaginous taste. When dried, powdered and boiled with a certain portion of ghee, they are considered as a valuable external application in aphous affections.—*Ains. Mat. Med.* p. 115.

IPOMŒA GOSSIPIFOLIA. *Willd.* syn. of *Batatas paniculata*.—*Choisy*.

IPOMŒA GRANDIFLORA. *Roxb.* syn. of *Calonyction Roxburghii*.—*G. Don*.

IPOMŒA INSIGNIS. *And.* syn. of *Batatas paniculata*.—*Choisy*.

IPOMŒA JALAPA. JALAP PLANT.

Convolvulus jalapa, *Linn.* | *Ipomœa purga*, *Wenderoth*.

A native of South America, Xalappa and on the Eastern declivity of the Mexican Andes. The roots are fleshy, large oval, oblong, rugose, and blackish externally; while recent, in a dry state, and as sold in the shops, they are cut in flakes of variable diameter, sometimes cleft lengthwise and pyriform. If entire they are usually small, wrinkled, heavy, unequal, hard, brittle, deep brown grey externally, of a dirty grey within, fracture smooth and wavy, showing a great number of resinous points, visible to the lens, and often to the naked eye. The odour is peculiarly nauseous, though weak. The taste acrid and disgusting. A brisk cathartic. The powder is of brown grey colour, and must be prepared with caution, as it is exceedingly irritating. The worm-eaten roots are much more active than the sound, as the worms only attack the amylaceous and sweet parts. According to Humboldt 400,000 lbs. weight of jalap roots are annually exported from Vera Cruz. The plant thrives best on cool shady hills, about 2,000 feet above the level of the sea—*O'Shaughnessy*, pages 502, 503.

IPOMŒA LATIFLORA.—*Rom. & Schult.* syn. of *Calonyction grandiflorum*.—*Choisy*.

IPOMŒA MACRORHIZA. A native of Georgia and Carolina. In 1834, Lord Auckland introduced this to the Calcutta Garden. The roots attained such an enormous size that a cluster belonging to one plant weighed 70 lbs. while recent it was fleshy, white, juicy of mild flavour, and altogether devoid of the acrid resin. It had a sweetish taste, and has been eaten by several

IPOMŒA PILEATA.

persons without any ill effect being experienced. To test the applicability of the root as fodder, seven sheep were fed on it, but six of them died suffering from diarrhoea within a month—*O'Shaughnessy*.

IPOMŒA MARITIMA *R. Br.* syn. of *Ipomœa pes-capræ*.—*Sweet*.

Cyprus Vine.	Sweta Kama luta ... "
Crimson Quamoclit.	Alahq pecha (love's ringlets) ... PERS.

The Cyprus Vine or Crimson Quamoclit flowers in the cold weather and of a most beautiful bright crimson colour; tube long slender; in gardens pretty common. The crimson variety is Lal kama-luta or red ringlets of Kama the hindu god of love. Sweta kamaluta, white, is the persian Ishk pecha (love's ringlets).—*Genl. Med. Top. p. 181. Riddell.*

IPOMŒA QUINQUELOBA. WILLD. syn. of *Batatas paniculata*.

IPOMŒA RENIFORMIS.

Perretay-keeray... TAM.

A perennial creeper with yellow flowers; the leaves used as greens mixed with tamarind; very common during the cold months.—*Jaffrey.*

IPOMŒA REPTANS. Poir.

Ganthian ... HIND.	Nall... TAM.
Vellay-keeray... TAM.	Tota-kura... TEL.
Vari... "	

A creeping annual with rose colored flowers, found about the borders of tanks and moist places. The leaves are used as greens, and in places its root also appears to be eaten.—*Jaffrey. J. L. Stewart, M. D.*

IPOMŒA SEPIARIA.

Thalee-keeray... TAM.

A climbing perennial plant with rose colored flowers, found in hedges, the leaves are eaten mixed with others as greens.—*Jaffrey.*

IPOMŒA SESSILIFLORA. Roth.

Bhanwar... HIND.

Occurs sparingly in the Punjab plains, up to the western frontier. It is one of the plants which is eaten in India in famines. *Dr. J. L. Stewart, M. D.*

IPOMŒA SPECIOSA. PERS. Syn. of *Argyreia speciosa*.—*Sw.*

IPOMŒA TRILOBA grows both wild and planted in Japan. The roots of it are either white or black; the latter are used as laxatives.—*Thunb. Travels, Vol. iii. p. 63.*

IPOMŒA TUBEROSA, the Malabar Creeper, a native of tropical America, is a climbing plant with a woody stem; common in gardens; leaves palmated, seven parted. Flowers yellow and showy, appear in October and November. It is in general use for covering old walls, trellises, &c., and for which purpose, from its exceeding rapid growth it is well adapted.—*Riddell.*

The root

Turbid ... HIND. | Nisot ... HIND.

A native of Ceylon, the East Indies, Malayan Archipelago, Australia, Timor, Otaheite, Friendly Islands, Marianne Islands, Tinian, &c. Its root is perennial, and has long been employed in India as a common purgative, rubbing up a slip of the bark with water or milk on a stone and swallowing the emulsion thus formed. A strip six inches in length from a root as thick as the little finger is deemed a sufficient dose. Dr. O'Shaughnessy asserts that the action of the medicine is so extremely uncertain that it does not deserve a place in our Pharmacopœia. Price 18 annas the pound. Dr. Bellew states that it is considered beneficial in diseases of the mucous membrane, in leprosy and paralysis. It contains a purgative resin, resembling that of jalap.—*O'Shaughnessy, page 504 Dr. Roxb. Fl. Ind. Vol. i. p. 476. Carey's edition of Dr. Roxburgh's Fl. Ind. ii. p. 57. Powell Hand Book, Vol. i. p. 367. Dr. J. L. Stewart, M. D.*

IPOMOPSIS, a genus of twining plants requires the same treatment as the Ipomœa.

IPOR, PERS. Thyme; wild Marjoram.

IPOTOXICARIA. PERS. Antiaris toxicaria.

IPPA CHETTU or Ippe Chettu, also Ippa manu. TEL. *Bassin latifolia*.—*Roxb.* This tree furnishes a strong wood, but is never felled by the natives, the flowers yield a toddy, and an oil is extracted from the seeds.—*Captain Beddome.*

'Ippos, GR. Horse.

IPPU, the name of a tree in Borneo from which is obtained the famous Borneo poison, with which the Iddan tribe poison their darts. The poison is collected by this tribe only, and its effects are similar to those of the Llana and Ticiuma of South America.—*Dalrymple's Account of Sulu.*

IRA. See Saraswati.

IRAK also Miswak. PERS. *Salvadora Indica*.

IRAK, in Arabic, a territory which is divided into two portions, Irak-i-Arabi, ancient Babylonia or Chaldaea, and Irak-i-Ajam, Media. Irak-i-arabi of the Persians is also described as the ancient Mesopotamia, the territory known

to the Arabs, as *Al-Jazira*. The province of Fars, as it now stands, is bounded on the north and north-west, by *Irak-i-ajem* and *Luristan*, and a small portion of *Khuzistan*. See *India*; *Iran*; *Kirman*; *Samarcand*; *Tomaun*.

IRAMBU. MAL. See *Pali*.

IRKAMULA. SANS. *Aristolochia Indica*.—*Linn. Rozb.*

IRAN mentioned in the *Vendidad* under the name *Airyanem Vaejo* was a country on the slopes of the *Belur Tagh*, in the highland of *Pamir*, between *L. 37* and *40° N.* and *L. 86°* and *90° E.*—*Bunsen, Vol. iii. pp. 459, 460.*

IRAN. A country situated to the south east of the *Caspian Sea*, which *Dr. Pritchard* considers to be the original seat of the *Iranian* (*Indo-Atlantic* or *Caucasian*) race. In this wide expanse of territory, stretching, with various elevation, at least *25°* from north to south, such extremes may be looked for as will bear out the remarkable description of the younger *Cyrus*: "In the dominions of my father," said the prince, "people perish with cold at the one extremity, whilst they are suffocated with heat at the other." (*Xenophon's Anabasis, Book 1, pp. 67, 68. Ed. Hutch, 1735.*) Thus, the northern and central portions of the plateau of *Iran* and *Arabia*, as well as a great part of *Asia Minor*, enjoy a temperate climate, whilst an intense cold prevails in the northern parts of *Afghanistan*, in nearly the whole of *Kurdistan*, and on the elevated mountain ranges and high valleys on both sides of *Ararat*. Yet, notwithstanding this difference of climate, throughout the whole, a great similarity prevails in the vegetable and animal worlds; and in these respects the valley of the *Nile*, the plains of *Mesopotamia*, and those of *Arabia* southward of *Mecca*, together with the central and southern parts of *Iran*, have much in common. The surface of *Iran* extend for *1,280 miles*, from *Sumeisat* on the upper *Euphrates*, eastward to *Taxila* on the *Indus*, and nearly *900 miles* in breadth from the shores of *Gedrosia*, in *25° N. lat.*, to the banks of the *Oxus* near *Samarcand*, in *40° N. lat.* The latter river and the *Caspian Sea* form the northern limit of this great division; the *Erythrean Sea* is on the southern whilst the rivers *Indus* and *Euphrates* constitute the eastern and western extremities. In the space intervening between the great mountain chains, in most places the surface is largely impregnated with salt and saltpetre, which prevail to some extent on the plains of *Fars* and the coterminous provinces of *Irak* and *Kirman*. Between *Abu-Shehr* and *Dalaki*, crystalized sulphate of lime is found; and, a little westward, (in *Khuzistan*), an abundant supply of sulphur; while rock-salt, alum, antimony, and orpiment, as well as

mineral waters, are found in abundance in different states, from petroleum to the choicest kind of naphtha, and is applied to many useful purposes. The places most known are *Baku* and *Mazanderan* towards the north; *Kerbuk*, *Hir*, *Bandi-Kir*, the *Bactria* mountains, and *Dalaki*, towards the south, and both *Kirman* and *Afghanistan* towards the east. Iron and native steel is met with in *Mazanderan*, *Khorassan*, and *Bactria*. The former, as well as copper and lead ores, prevail in different parts of the eastern provinces, but more abundantly in the pashalics of *Diyar-Bekr* and *Sivas*, with the addition of gold, silver, and precious stones. The ordinary, as well as some of the more precious metals and valuable stones, are likewise found in the eastern provinces, and also in *Azerbaijan*; copper and other ores abound in *Kurdistan*, the *Julamerik*, and other mountain districts. In the *Dumbu Tagh* mountains the granite abounds with interesting minerals, more particularly topaz, beryl, schorl, and disseminated gold. The valleys of the *Oxus*, the *Indus*, and nearly the whole of that of the *Euphrates*, being at the extremities of *Iran*, that territory (in addition to the *Tigris* and *Araxes*, with their tributaries) has only the advantage of the *Salyan*, the *Aji*, *Jeghetu*, and *Safid Rud*, towards the north; the *Zende-rud*, *Indian* and *Bendemir*, in the centre; the *Helmand* with its tributary, and the *Farra-rud*, more eastward. Besides these, there are some inferior streams, which after a short course, are either lost by absorption, or become saline. Extensive salt lakes and streams, impregnated with the same substance, are by no means uncommon. Amongst the former may be mentioned the *Caspian Sea*, the picturesque *Urumiyah*, and *Van*, *Zerrah* or *Durrah*, in *Seistan*, *Buktegan* in *Fars*, and others; the fresh water lakes are only met with in the tracts below *Babylon*, and again between the *Elburz* range on the shores of the *Caspian*. The surface of *Iran* may, in a general way, be described as consisting of a wide-spreading plateau, flanked by mountainous countries on the east and west, and bounded to the north and south by two mountain chains outside of which are two extensive plains, on a much lower level. Of these, *Turcomania*, with the continuous plain westward of it, between the *Caspian Sea* and the *Elburz* mountains, form that which is on the northern extremity; *Arabian Irak* and *Khuzistan*, with the rest of the level tract outside the *Zagros*, form the plain at the southern extremity. Among the domestic animals the horse holds the principal place, and there are four distinct kinds in *Iran*. First, the original *Turkoman* breed, a large, powerful enduring animal; second, the *yaboo*, or common carrying hack, which is stouter and rather larger than

the galloway. Then the smaller Arabian breed (first introduced by Nadir shah); and, lastly, a fourth, between this animal and the Turkoman horse, the *badpai* (wind-footed), which, being the most prized by the Persians, is almost always among the horses of a great man's retinue. But there is an unusual proportion of mules; which, though small, are very much used for caravans. This surprising animal seldom goes so far as 80 miles in a day, though carrying a load of about 3 cwt., and passing over such kuttals or passes, as would appal even a Spanish muleteer. In the gradual diffusion of mankind, the western provinces of Iran appear to have fallen to the share of the Anameans and Elamites, while the mass of the Kossai, Ariani, Mardi and other tribes, composing the earliest inhabitants, moved more eastward, leaving some of their numbers in the mountainous districts, to mix with or become subject to the new comers. The Shemitic people and language having thus become dominant instead of the Cushite, the ethnography of the former rather than that of the latter, becomes an important consideration. From this primitive language, or rather from one of its cognates (as the Himyaritic, may possibly prove to have been) two distinct branches were derived, the original Arabic, with the Musnad, Koreish, and other dialects of that tongue, being one of these, and the Aramaic the other. The latter had two grand sub-divisions, from one of which, known as the Western Aramaic were derived the Amharic, Syriac, Hebrew, &c., and from the other or Eastern Aramaic, came the Assyrian, Babylonian, and Chaldean tongues. From its monosyllabic construction, the eastern seems to be more ancient than the western Aramaic, and it appears likewise to be the root of the Zend, Pehlevi, Sanskrit, and other dialects in use throughout a portion of the territory along which it had spread eastward. Whether the first of these languages was once in general use, or was merely the sacred language of Iran, the affinity of all of them is such as to imply a common origin. Pehlevi was the court language in the time of the Sassanian monarchs, and, according to some authorities as far back as that of Cyrus: it contains many words which belong to the Chaldaic and Syriac tongues, and Sir William Jones was of opinion that one of these must have been its root: but it is now generally presumed that the root of the Pehlevi is the Aramaic itself. The cognates of the latter spread westward and eastward, and one of them, the Chaldee, can scarcely be distinguished from the parent root. Another, the Parsi, being a softer language than the Pehlevi, became general in Persistan, and gave rise to the Deri, or modern Persian. The Pehlevi, how-

ever, is still partially used in their sacred writings, in Shirwan, and also by some of the Gabr of the eastern provinces, as well as by a numerous section of the natives of India, but among the Parsees it is largely intermixed with the Hindustani and other Native dialects, which are less or more connected with the Sanskrit. The affinity of the latter to the Parsi is so great that a learned philologist has pronounced it to be one of its derivatives. The number of words which are identical among the different dialects of Iran and Turan, and some portion of the territory more eastward, goes far to show, that at a period anterior to anything like connected history there must have been some common language, and this was probably the Aramaic. Perhaps one-third of the inhabitants of Iran are nomadic, and this section, by its habits, as well as mode of life, constitutes a race separate from the other or fixed portion, which consists of Persians, Kurds, Armenians, Arabs, Jews, and Parsees.—*Xenophon Anabasis, Euphrates and Tigris, Col. Chesney, p. 38.* See Fars; Arians; Hindoo; India; Kabul; Turan.

IRANIAN LANGUAGES.—In Dr. Pritchard's classification he has four groups or dynasties of language, three of which are confined to Europe and Asia, a fourth being common to Africa and those parts of Asia which are near that continent. The first of his four groups is (1.) the Indo-European, sometimes termed Indo-Germanic, and by late writers the Arian or Iranian languages. He considers that the Indo-European languages and nations may be divided into many different groupes, in the order of their affinities for instance; but he regards the most obvious division to be a geographical one, and he styles his first, the eastern group, which, by many writers has been termed exclusively the Arian family of tongues. It includes all the idioms of the ancient Medes and Persians, who named themselves Arian, and their country Eriene or Iran, and likewise the Sanscrit with all the Prakrita, properly so termed, and the Pali of India. Among the former was that ancient Persian language in which one particular set of the cuneiform inscriptions was written. This dialect was so near the Sanscrit that the inscriptions have been interpreted through the medium of that language.

The Zend lays claim to a still higher antiquity, since the Zend is said by Burnouf, Professor Wilson and others who have studied it most successfully, to be more nearly allied to the very ancient dialect of the vedas, which preceded the classical Sanskrit, than it is to this last more cultivated speech. How this claim is to be reconciled with the comparatively recent date of all extant compositions in the

Zendish language, remains, he considers, to be explained. But that the high castes or "twice born" classes of the Indian race as they term themselves, the brahman the obetria and the vaiya hindu, were of the same stock as the ancient Persians, may be regarded as a fact established by the affinity of their languages.

Chevalier Bunsen's names differ from those of Dr. Pritchard. He classes one group as the great Asiatic European stock of languages, which he sub-divides into eight families, viz. 1. Celts; 2. Thracian or Illyrian; 3. Armenian; 4. Asiatic-Iranian; 5. Hellenico-Italic, 6 Slavonic; 7. Lithuanian tribes, and 8. Teutonic. His fourth or Asiatic Iranian, or the Iranian stock as represented in Asia, he again sub-divides into.

1. The nations of Iran proper or the Arian stock, the languages of Media and Persia. It includes the Zend of the cuneiform inscriptions and the Zend Avesta. The younger Pehlvi of the Sassanians and the Pazend, the mother of the present or modern Persian tongue: The Pushtu or language of the Afghans belongs to the same branch.

2. The second sub-division embraces the Iranian languages of India, represented by the Sanscrit and her daughters.

His Semitic stock of languages he constructs from the following nations who form another compact mass, and represent one physiologically and historically connected family;—the Hebrews, with the other tribes of Canaan or Palestine, inclusive of the Phœnicians, who spread their language, through their colonization, as that of the Carthaginians; the Aramaic tribes, or the historical nations of Aram, Syria, Mesopotamia, and Babylonia, speaking Syrian in the west, and the so-called Chaldaic in the east; finally, the Arabians, whose language is connected (through the Himyaritic) with the Ethiopic, the ancient (now the sacred) language of Abyssinia. He calls this second family, by the name now generally adopted among German Hebrew scholars, the Semitic. Chevalier Bunsen further remarks as the first lesson which the knowledge of the Egyptian language teaches that all the nations which from the dawn of history to our days have been the leaders of civilization in Asia, Europe and Africa, must have had one beginning. He adds that recent researches have very considerably enlarged the sphere of such languages of historical nations, as are united by the ties of primitive affinity. Those researches have made it more than probable that the Tartar, the Mantchu and Tungusan belong to one great stock, that the Turkoman, as well as the Tshude, Fin, Laplander and Magyar (Hungarians) present another stock closely united, and that both these families are originally connected with each other.

The Iranian family of language seems to be called Arian, by Mr. Farrar, it is the Indo-European and Indo-Germanic of some philologists: Pictet and Burnous called it Arian from the Sanscrit word Arya meaning noble; Rask called it Japhetic, and according to Mr. Farrar, it has 8 divisions:

Hindu.	Greek.	Lithuanian.	Tutonic.
Persian.	Latin.	Sclavonic.	Celtic.

Of these it is uncertain whether Celtic or Sanscrit represents the older phase. But it is known that all of them are the daughters of a primeval form of language which has now ceased to exist, but which was spoken by a yet undivided race at a time when Sanscrit and Greek had as yet only implicit existence.

The term Iranian is derived from Arya and the old Persian and old Bactrian or Zend are its oldest representations. Old Persian is the language of the Avesta; Huzvarech or Pehlvi, is the language in which the commentaries and the more recent versions of the Avesta are written: Fardusi's Shahnamah is in Parsi or Pazend. Bunsen says the first cuneiform character on the Besitun was Median or west Iranian and is to be distinguished from the language of the Zend books which is East Iranian or old Bactrian, worn down.—*Dr. Pritchard, in Report of the British Association. Chevalier Bunsen.*

IRANIAN RACES called, also, Indo-Atlantics, also Caucasians, have always been known for their refinement, and high civilization, from which Europe borrowed through the Byzantine and Greek culture, and the Persians have long and faithfully retained the features of its national characteristics. Though overrun by the Semitic and Turanian races, the Iranian has borrowed little or nothing from them but has exerted over them a powerful influence. According to Khnikoff "*Sur l'Ethnographie de la Perse*" the Iranian race of Persia came from the East of modern Persia, about Segestan and Khorassan, and moved to the west in prehistoric ages, and though altered by the attacks of the Turko-Tartar tribes from the north, or, where in contact, on the west and south with Turanian and Semitic elements, the Mede is every where recognisable as the same as described by Herodotus and later Greek writers. The arrow headed writing at Persepolis enumerates the Iranian people of that day.

The form of the Iranian is spare, but elegant, even noble, but there have always been differences between the Eastern and Western Iranians.

The East Iranians are (a) the Segestani or Khafi; —(b) Char Aimak; (c) Tajik and Sart, each of which counts many sub-divisions.

The principal number of the Segestan people occupy Khaf and its neighbourhood Ruy, Tebbes, and Birjan.

The people of Khorassan are greatly intermixed with Turko-Tartar elements.

The language of modern Iran is laden with Arabic and Turkish words; but in the East, the language is much like that in which Ferdusi wrote his poem free from words of Arabic origin.

The *Char Aimak* consist of four peoples the *Timuri*, *Teimani*, *Feroz Kobi* and *Jamshidi*, all of them of Iranian origin and all speaking Persian. The *Aimak* who graze their flocks in the Paropamisus, are brave and relentless, and Afghans when travelling, whether proceeding from Balkh, Kabul, Kandahar or Herat, never enter into the mountain districts of these intrepid nomad tribes.

The *Timuri* dwell at Gorian and Kuh'sun on the western boundary of Herat and in the villages and towns situated east of Iran, from Tarbat Shaikh Jam as far as Khaf. About a thousand of their families dwell near Herat.

The *Teimani* dwell in the Jolga-i-Herat, from Kerrukh to Sahzwar; the few who have extended to Farrah being styled by the Afghans, *Parsivan*. Each member of the *Char Aimak* knows no greater enemy than the Afghan and all attempts to form Afghan colonies amongst them have failed. The *Teimani* are of a wild, warlike nature though agricultural.

The *Feroz Kobi*, a small number of people about 8,000 dwell on the steep hill N. E. of Kale No and from their inaccessible position afflict their whole neighbourhood with their robbing and plundering. Kale No on the summit of the mountain and the fortified places of Darzi Kutch and Chaksaran are considered similar to the whole nests of the Bakhtiari and Luri in the environs of Ispahan. They have a resemblance to the Hazarah, but their forehead, chin, complexion and figure are less Turanian. They are decidedly Iranian. They take their name, the *Feroz Kobi*, after the city of that name about 63 miles from Teheran. Timur settled them by force in Mazenderan, but they soon returned to their own country. They have a few cattle and they sow a little, and plunder the caravans travelling on the Maimani road or make inroads on the scattered tents of the *Jamshidi*.

Jamshidi are the only tribe of Eastern Iranians who are exclusively nomades. They derive their descent from Jamshid, and moved out of Segestan to the shores of the Murghab, which they have occupied from pre-historic times. They live in the neighbourhood of the Salor and Sarik Turkoman and they use the round conical tent of the Tartars, surrounding it with felt and a reed matting, and their clothing and food are Turkoman as also is their occupation, for, they are great man stealers. They excel the other *Aimak* as horsemen and, for a chapao, band themselves with men of Herat or with the tribes of Turkomans. It was this cause that led Allah Kuli Khan to transport them from Khiva to the banks of the Oxus,

after he had conquered them with the allied Sarik Turkoman. After a residence of 12 years, they fled and returned to the town of Murghab. The *Jamshidi* is polite in word and manner. They still retain parts of the Zoroastrian faith, reverence fire, and pitch their tent door to the east.

The *Tajik* is Iranian. He is met with in largest number in the Khanat of Bokhara; and in Badakhshan, but many have settled in the towns of Kokand, Khiva, Chinese Tartary and Afghanistan. The *Tajik* is of a good middle height, has a broad powerful frame of bones, and especially wide shoulder bones, but they diverge from the Iranian, they have the Turanian wider forehead, thick cheeks, thick nose and large mouth. The *Tajik* originally came from the sources of the Oxus in the steppe of Pamir. The term is from *Taj*, a crown, the fire worshippers head dress. But the *Tajik* does not so style himself and regards the term as derogatory. The Turks style the *Tajik*, *Sart*. The *Tajik* is covetous, upwarlike, and given to agriculture and trade; fond of literary pursuits and polished and it is owing to their preponderance in Bokhara that that city has been raised to the position of the Head Quarters of Central Asiatic civilization, for, there, from pre-Islamic times, they have continued their previous exertions in mental culture and notwithstanding the oppressions which they have sustained from a foreign power, have civilized their conquerors. Most of the celebrities in the field of religious knowledge and *belles lettres*, have been *Tajiks*, and at the present day the most conspicuous of the mullah and Ishan are *Tajiks* and the chief men of the Bokhara and Khiva court are *Tajik* or as the Turks style the race *Sart*. Vambery considers the *Tajik* and *Sart* identical, but he recognizes that in their physiognomic peculiarities, the *Sart* differs greatly from the *Tajik*, being more slender, with a larger face, and a higher forehead; but these changes he attributes to frequent intermarriages between *Sart* men and Persian slaves.

In Central Asia, the warrior, the shepherd, the priest and the laymen, youth and old age equally affect poetry and reciting of tales. The literature of the mahomedans or settled nations brought from the south, is filled with exotic metaphor and illustration. In the three Khanats, the mullahs and iehans, have written much on religious subjects, but its mystical allusions are beyond the reach of the people. The *Uzbek*, the Turkoman and Kirghis esteem music as their highest pleasure and often break out in song, singing soft minor airs. The *Uzbek* poetry on religious subjects is exotic, derived from Persian or Arabic sources. The Tartar compositions are tales and relate to heroic deeds, similar to the romances of Europe.

Mr. Farrar (p. 70.) gives B. C. 2000 as the period of the Aryans leaving their common home, but in this he differs greatly from Chevalier Bunsen and other authorities. The Eastern Iranian race, came down the valley of Indus and into India, and Central Hindustan or Central India, was the Madhya-desa of the ancient Aryans, the middle region or Aryavarta, the Aryan country, and a slokam in the Sanscrit work, the Amarakosha, defines its ancient boundaries thus:

“Ariavartaha punia bhumi hi,
Mad'hiam Vindhya Himaiva yoha,

i. e. the Arian country, the sacred land (lies) between the Vindhya and Himalaya,” in this way indicating both the ruling race and the boundaries of the country held by them at the time that Amara Sinha wrote the Amarakosha.

There would seem to have been two migrations into India of the Arians, viz. the Earlier Arians the descendants of the most ancient hindus, a people acute, literary, skilled in arts but not very warlike and rather aristocratic than democratic in their Institutions. The Later Arians a warlike people, probably once Scythians, democratic in their Institutions and rather energetic than refined and literary. The Arians of India have caste and marriage laws, with strict rules of inheritance resulting from their sacred form of marriage, and subject to none of the caprices of mahomedan and similar laws. Arian is the private property in land, as distinguished from the tribal; the property first of the village, then of the family, then of the individual, and a consequence is the attachment of the Arian to his native soil. Especially Arian is the form of what we call constitutional as opposed to patriarchal and arbitrary government. The Indian village or commune is a constitutional Government, common to all the Arians, but there are two great classes of Indian Arians, one with aristocratic communes and one with democratic and recognizing as equal all free citizens to the exclusion of helots only. Among the non-Arians the rule of the chiefs seems to be patriarchal and arbitrary. Property in the soil is tribal rather than individual. There is little local attachment to the soil.—*Vambery's Sketches of Central Asia*, p. 338. *Bunsen, Egypt's place in Universal History*, iii. pp. 457, 570. *Reverend Mr. Farrar. Dr. Pritchard, in the Report of the British Association*. See Arian; India.

IRANI-KORTE of Mahadeva Patnam. See Jews.

IRAOTES. See Saraswati.

IRAQ-I-AJAM, ancient Babylonia. See Jyak.

IRAVAN or ILAVAN MAHR. A caste whose occupation is the extraction of palm wine or tart from palm trees.

IRAWADI. The principal river of Pegu. The main branch of the Irawadi, called the Nam Kyn, has its source in L. 27° 0' N. and in Long. 97° 7' E. amidst mountains, rising probably to a height of 17,000 feet. The snow limit in this district, as in the environs of the Upper Dihong, scarcely descends below 13,600 feet. The springs are reported to be fed by large snow beds and a few glaciers. In March, the river begins to rise and gradually increases its volume till its waters are forty feet above their lowest level. They rapidly subside in October, when the rains cease and the north-east monsoon begins.

It runs nearly N. to S. through Burmah, and Pegu and discharges itself by nine different mouths into the Bay of Bengal, after a course of 1,060 miles. It receives the Khyendwen, 470; Shwely 180, and the Moo 125 miles, and it drains 164,000 sq. m. The Bassein branch affords a passage for the largest ships for 60 miles from its mouth. No river of similar magnitude, presents so few obstructions to navigation.

The Irawadi runs in an almost southerly direction as far as Lat. 27° N. from whence it slightly diverges to the south-west.

From the entrance of the Nam Yang downwards, the valley of the Nam Keng is generally very flat, and of some considerable width, and numerous marshy tracts appear on either side of the river. The average length of the Nam Keng, from the mouth of the Nam Yang down to its junction with the Irawadi at Katikyo Nainmo, including the numerous curves, amount to 52 miles. From the entrance of the Nam Keng to Amarapura, the river has a real length of 269 miles, from Amarapura to the head of the delta at Sakkemun, 370 miles. The delta forms a triangle, nearly equilateral, with sides of 160 miles, the enclosed area consequently amounting to 9,742 square miles.

Towards Pegu and Sitan the Irawadi widens considerably, in consequence of the accession of the Pan lan river, and its limits become less sharply defined.

Of the mountains bordering the course of the Irawadi, the following may particularly be mentioned, although the heights ascribed to them are necessarily only approximations:

a. Upon the right bank of the Irawadi the mountains opposite Than Yun Yova, in Lat. N. 24° 36½' Long E. Gr. 96° 31½' have an average height of from 6,000 to 7,000 feet. One of the highest, the summit of which is visible from the valley, reaches apparently 8,000 feet.

b. Westward of Let pan Zin Yova, at a little distance from the right bank (Lat. N. 24° 27' 2" Long. E. Gr. 95° 56' 15"), the sum-

mits of the mountains attain a height of 3,000 feet.

b. Heights of 800 and even 1,000 feet are also numerous on the right bank of the river, only 20 to 28 miles north of Shwe-mut-tha-phyi Lat. N. 23° 4' Long. E. Gr. 96° 15'.

The character of the whole river district, including the elevations not above from 3,000 to 4,000 feet presents a thoroughly tropical appearance. The declivities of the hills, as well as the valley of the river, are covered with the wildest and most diversified vegetation, in the shape of dense tree and grass jungles.

The bore in this river is often severe, but in the neighbouring Sitang river its fury is great and occasions much loss of life. Burmans name thirty feet as the height to which it occasionally rises and this may perhaps be the case in the bends of the river, where the rush has attained its full speed, before being reflected to the next bend. Even in the Hoogy near the bend at Chandpal-ghat, the pointed curling wave may be seen several feet high. In the Irawadi and Mekong basins, there are remnants of tribes strongly distinguished from the predominant races and tending, with the evidence of language, to show that the ethnic history of Ultra-India is very ancient and has undergone repeated revolutions.

Professor Oldham tells us that in the middle of the Irawadi, about thirty miles above the town of Tsengoo and opposite the small village of Thika-dan, on nearing the island, the head man in the boat called out tet-tet? tet-tet! saying he was calling the fish. On coming down to the boat again, Mr. Oldham found it surrounded on both sides with about fifty large fish, some three or four feet long; a kind of blunt-nosed broad-mouthed dog fish. In one group which he studied more than others there were ten. These were at one side of the boat, nearly half their bodies protruded vertically from the water, their mouths all gaping wide. The boatmen were feeding them with some of the rice prepared for their own dinners, by throwing little pellets down the throats of the fish. Each fish, as it got something to eat, sunk, and having swallowed the portion came back to the boat side for more. The men continued occasionally their cry of tet-tet-tet! and putting their hands over the gunwale of the boat, stroked down the fish on the back precisely as they would stroke a dog. This was kept up for nearly half an hour moving the boat slightly about, and invariably the fish came at call and were fed as before. The only effect which the stroking down or patting on the back seemed to have, was to cause them to gape still wider for their food. The fish are found in the deep pool formed at the back of the island, by the two currents

meeting round its sides; and the phooogyi are in the habit of feeding them daily. It is regarded by the Burmans as quite a sight, which the people come from great distances to see, as well as to visit the pagoda, which is very ancient and much venerated. During an annual March festival, it is not unusual for the visitors to take the fish into their boats, and gild their backs with gold leaf, as they do in the ordinary way to pagodas, and Mr. Oldham observed remains of the gilding visible on one of the fish. He wished to take one of the fish away, but refrained as the people seem to regard the act as sacrilege.

The heights of the mountains, north of the Irawadi from the valley of Assam, probably between 5,000 and 6,000 feet.

The valley of Hukum is stated to be 1,000 feet above the level of the sea. The central branch of the Irawadi, at Manchi in 27° 20' north latitude, where it was visited by Wilcox, has an elevation of 1,800 feet and runs over a pebbly bed. Its elevation at Bhamo, in lat. 21°, is estimated by the same authority to be about 500 feet. The valley of Manipur is drained by the most westerly tributary of the Irawadi and it is separated from Cachar by a mountain range, which is 6,000 or 8,000 feet high, and is pine clad towards the summit. The valley of Hukum or Hook-hoom, was visited by Griffith; it is more open, but is surrounded on the north and east by mountains elevated 5,000 and 6,000 feet, and is traversed by numerous ranges of low hills. Griffith's own accounts of the Irawady above Bhamo is, that it keeps up its magnificent character, as far as he went to the mouth of the Mogoung river, where it is 900 to 1,000 yards across, and he describes the appearance of its vast sheet of water as really grand.

At the beginning of the first defile, about five miles above Bhamo, the river is about 1,000 yards across and its course is defined by low wooded hills which run close to its banks. About two miles farther on, the channel narrows to 500 yards and the hills become even closer and hang more abruptly over the stream than before, and, about another mile beyond, a higher range of hills from the south-west comes in behind the former one, and both terminate on the bank as two head lands. In the delta of the Irawadi there is a maritime vegetation of mangroves, *Sonneratia*, *Heritiera*, *Excoecaria*, and other saline plants, just as in similar salt-marshes along the coast of the tropics.—*Schlagentweit, General Hypsometry of India*, Vol. II. p. 101; *Dr. Oldham in Yule's Embassy*, *Hooker and Thomson's Flora Indica*. A native of Italy and Asia Minor, and its roots are the orris root of European shops. This article contains volatile acrid resin, astringent matter, gum, extractive, starch, and woody fibre; in full doses it is emetic and purgative. Peas turned from the wood are used in issues to support suppuration. Reduced to powder it is a favorite ingredient in hair and tooth powder.

IRON.

Excellent orris root finds its way to India and is procurable in the bazaars under the name of *Beg-banafsha* or violet root. Boyle under this head very confidently refers the *puichuk* of commerce to this article. A species of Iris is cultivated in India. Its roots are used in the same manner as those of the Florentine kind. A broadish leaved species occurs at various places throughout the Punjab Himalaya from 2,500 to 9,500 feet. Mr. Powell says the Iris Florentina, is entirely distinct from the Kashmir variety, which luxuriates over every grave and blooms on many a house top in the far famed valley, a custom resembling that of the ancient Greeks who venerated the Iris as the messenger between God and man. —Powell's Hand-book, Vol. i. pp. 354, 351. IRON. West of Armenia, on the borders of the Caspian Sea, we find the ancient name of Albania. The Armenians call the Albanians Aghovan, and as gh in Armenian stands for or l, it has been conjectured by Boie, that in Aghovan also the name of Aria is contained. This seems doubtful. But in the valleys of the Caucasus we meet with an Arian race speaking an Arian language, the Os of Ossethi, and they call themselves Iron. —Muller's Lectures, p. 230. Iron is found native, when it is supposed to be generally of meteoric origin; extensively in combination with oxygen or sulphur, as a salt of various acids, as carbonate, sulphate, &c. mixed with earths or other metals. It also exists in vegetables, and in the blood of ani-

male. The iron of commerce is extracted from iron ores. Some of the oxides, as magnetic and specular iron ore, are heated only with charcoal, as in Sweden, Elba, and India, when the carbon combining with the oxygen the iron is set free, and melted. The carbonate, iron pyrites, clay iron ore, red and brown hæmatites, and spathose iron, are first roasted, and then exposed to a fierce heat in contact with charcoal, coke, or small coal, and a flux, either lime or calx, according as the ore is argillaceous or calcareous. These earthy matters become vitrified, and form a slag at the surface, while the heavy particles of iron, falling down, run out by a hole at the bottom into moulds, and form pig, or cast iron. This is still impure, from the presence of charcoal, sulphur, and portions of silicon and aluminium. It is again twice fused in the refining and puddling furnaces, and exposed to the influence of a current of air, at a high temperature, when the whole of the charcoal and sulphur are burnt out, and the other impurities form a slag at the surface. The metal is taken out, beaten or pressed, and then drawn into bars, which form the malleable or wrought iron of commerce.

Iron ores abound in almost every district of India, and the prevailing ore is the oxydulous iron, often magnetic, and with polarity, but specular iron ore, hæmatite, clay iron stone and sulphuret of iron, also occur abundantly. In the Malayan Peninsula also, the ores of iron occur in great varieties.

From a passage in Kalidasa's drama of the Hero and the Nymph, (p. 218) it is clear that the art of welding iron was known to the early hindus.

You tell me gentle Nymph, your fair friend pines
With amorous passion. But you do not see
The ardour that consumes this heart for her.
Alike our glowing flame. Then quickly aid
Our union to cement, as close combines—
Iron with iron, when each fiery bar
With equal radiance glows.

A considerable quantity is produced in the Salem district, and two varieties are obtained, one remarkable for its softness and malleability, the other for its steel-like hardness, which adapts it for the formation of edge-tools, cold chisels, &c. The following names are given to this metal in process of adaptation to its finished manufacture. Culties or blooms of iron. Palms or bars of iron. Vutums or pieces of cast steel as it comes from the clay crucibles. Oolies or bars drawn out from the clay crucibles. Iron beads which ooze out from the blooms in the blast furnace. Bloom iron from Palghaut is readily malleable and furnishes a hard steel-like iron. The natives state that it is necessary to subject the bloom to a second fusion and much hammering before they can bring it to the state of the soft malleable iron, in which it is met with as an article of commerce.

This statement seems to correspond with what one might expect from the difference of appearance of two samples; the one of Palghaut, being highly metallic as shown by its bright metallic lustre, while the black cherty look of the other seems to indicate such an excess of oxide, as to unfit it for the hammer.

At the Madras Exhibition of 1857, one of the richest departments of the Exhibition was the collections of the ores of iron and steel from Cuddapah, Hyderabad, Bellary, Coimbatore and Bangalore. The principal ores of the Cuddapah district are red, brown, and purple in colour, which yield iron of excellent quality and very malleable. Some of the magnetic iron ores of the same district are particularly rich in iron, and a few of them contain traces of manganese. Of those from Chemoor and Poolvendalah, the latter is magnetic although earthy and dull red in the fracture and bright red in the streak. The steel grey and granular iron ores of Chitwail, Camalapoor, and Goorumcondah are all rich in the metal and more or less magnetic. The yellow ochre and rusty ores of the Muddenpully talook are said to yield good malleable iron. The steel grey iron sand of Comarole and Yandapully in the Doopaud Talook are highly magnetic and contain a little manganese.

The micaceous iron ore and iron glance of the Doopaud talook are also rich in the metal.

The most prevalent iron ores of the Hyderabad territories seem to be the rusty brown, red and yellow ochres; the iron or steel sands with manganese, and the specular or glance ores: none of the latter however are magnetic. The black, brown, and red cellular iron ores are abundant and a great deal of attention appears to have been bestowed on the minerals of this district and on the iron ores in particular.

The Bellary District yields a variety of iron ores, some of which are very rich in the metal and several of them associate with manganese. The prevailing ores of iron, of this district are the black and grey ores alternating with sandstone, liver colored ores (which has been repeatedly sent to Madras as copper ore) and red jaspery clay iron stones. They are also associated in the same district and in the vicinity of Kurnool and Gooty with magnesian limestone, grits, conglomerates, aluminous shale, fire clay and black dolomite.

The iron ores of Coimbatore are of very fine quality, particularly rich in the metal and highly magnetic.

Magnetic iron glance of fine quality occurs in Coimbatore, Salem, Cuddapah and Vellore. Magnetic hæmatites in Cuddapah.

Magnetic Iron sand also in Cuddapah; none of the iron sands of other districts magnetic.

Magnetic rusty ochrey iron ore from Hyderabad was, like the other ores of Hyderabad

magnetic and magnetic iron ores occur in Bellary, Masulipatam, Bangalore, Mysore, or other districts. Manganese was detected in the iron ores of Hyderabad, Kurnool, Bellary, the Bababooden Hills, Mysore and Vizianagrum.

Meteoric iron was exhibited from Mysore and Pondicherry.

Micaceous iron ores of good quality occur in Cuddapah and Vizianagrum. Brown hæmatite and reddle at the Red Hills, in Bellary and Hyderabad. Common iron pyrites or soorua-mooky stone occurs in magnesian limestone from Kurnool, Cuddapah and Gooty. Radiated pyrites occurs in large pieces in black marble from Nundial and near Cuddapah, and might be used for the manufacture of sulphur, sulphuric acid. Iron pyrites in small quantities in aluminous shale near Bangalore; Dr. Heyne described the manufacture of iron in the Carnatic to the south of the Pennar river, which, when first smelted, is extremely brittle, requiring several operations to bring it into a malleable state. There are two varieties of ore used in the district in which he observed the processes. The one, an iron sand, collected in the beds of rivers, consists of the protoxide, mixed with much of the peroxide; the other, a red schist, is almost entirely composed of red oxide, but in the centre of the mass it affects the magnet.

Iron, which has been ascertained to be superior, for many purposes, to the best German iron, is made on the western coast of India. Ores, powerfully affecting the magnet, exist in great quantity at Taygoor, a village of the Konkan. The magnetic iron ore, employed for ages in the manufacture of the Damask steel used by the Persians for sword blades, is obtained from schist near Kona-Samudram around Deemdoortee where the ore is extensively distributed. The minute grains or scales of iron are diffused in a sandstone-looking gneiss or micaceous schist, passing by insensible degrees into hornblende slate, and sometimes containing amorphous masses of quartz. The strata are much broken up and elevated, so that the dip and direction are in no two places the same, and bear no relation to the mountains in the north. The iron has the remarkable property of being obtained at once in a perfectly tough and malleable state, requiring none of the complicated processes to which English iron must be subjected, previous to its being brought into that state. Mr. Wilkinson found it to be extremely good and tough, and considered it superior to any English iron, and even to the best descriptions of Swedish. The Persian merchants, who frequent the iron furnaces of Kona-Samudram, are aware of the superiority of this iron, and informed Dr. Voysey

that in Persia they had in vain endeavoured to imitate the steel formed from it.

The plan adopted for the production of Indian cast-steel at the Beypore works, by the Bessemer process, was similar to that pursued in Sweden, but differed essentially from the Sheffield method. At Sheffield and elsewhere in Great Britain, where the process is in operation, pig-iron is melted in a reverberatory furnace, and run thence into the converter or Bessemer vessel, which is mounted on axles. But in Sweden, and at the Beypore works in Madras, the crude metal was run direct from the blast-furnace into an ordinary founder's ladle, which is raised to a sufficient height by means of a travelling crane, and then poured into the converter, which is a fixed vessel, lined with a mixture of native fire-clay and sand, and pulverized English firebrick. Steam was raised to about 50 lbs. in the boilers, giving a pressure of blast of about $6\frac{1}{2}$ or 7 lbs. per square inch, and the air was driven into the converter through 11 tuyeres of $\frac{3}{4}$ inch diameter, placed horizontally at the bottom of the vessel. No manganese or other metal was added to temper the steel, the quality of the metal required being regulated by the pressure of blast and the time of blowing. As soon as the metal was sufficiently decarbonised, the vessel was tapped, and the fluid steel run into a ladle provided with an outlet in the bottom. This ladle is swung round over the cast-iron ingot moulds, the fire clay-plug withdrawn, and the steel allowed to flow in a clear stream into the moulds beneath. These ingots are then cogged down under a Nasmyth hammer, and drawn into finished steel bars of various sizes.

The iron ore of the Salem districts of the Madras Presidency is a rich magnetic oxide of iron, very heavy and massive. It is commonly known as loadstone. The yield averages 60 per cent. of metallic iron. Much of the ore being a pure black magnetic oxide, would doubtless yield 73 per cent. The ore is, however, often mixed with quartz, which is a very refractory material in the blast furnace. Limestone, and in some places shell lime is employed as a flux, and the charcoal of some kind of Acacia is the fuel.

The woods used in Southern India for making charcoal for the iron works at Beypore, are the vella-marda, karra-marda, Indian-gooseberry, Poolum; Nux-vomica and cassia.

The qualities of iron vary according as it is smelted at a low or high temperature. Low smelted iron is malleable.

The varieties of Gwalior iron are known as guleri and "kheri."

The spurs of the outer Himalayas contain ferruginous deposits in abundance, and mines are worked along the whole range both on the north and south faces, from the Sutlej to the Ravi,

IRON-BARK TREES.

at Shil and Kot-khai, Kot-kangra, Suket, Chamba, and Mandi. Under the Sikh rule, this iron was extensively used for gun barrels.

Iron exists at Kanigorum in the Waziri hills; it is found also as a hæmatite in several parts of the Salt range and in the Chichalli range, on the other side of the river. The outlery of Nizamabad and Gujrat is, however, exclusively manufactured with imported steel. The iron ores of the Punjab are produced along its north-eastern mountain frontier as well as in the lower hills of the Sulaimani and Waziri ranges, and those to the south-east of the Bunnoo district and to some extent in the Salt Range on the other side of the province in the hilly portions of Gurgon district. In the hills in the Delhi district, is a ferruginous rock, and the Mahruhi hill, which yields iron ore, is one of that group of outliers that forms a continuation as it were of the Aravalli range.

Along the Himalayan frontier, the principal places of production are the Hill States of the Simla district, Jubal, Dhami, Bishahr, and Rampur. Again at Suket and Mandi, iron is largely produced, and the mines at Kot Khai, Fatehpur, and Bhir Bangal of Kangra are famous. Of the ores of the Chamba hills and in the divisions up to the Hazara district included in the Kashmir territories, the best iron is found at Reyasi in Jammu, while the iron found at Souf and Kutyar in Kashmir proper is not so good.

In the hills due north of Peshawur, is the source of the Bajaur iron which is of fine quality, and is used in the manufacture of the gun barrels of Kohat and Jammu; and little also, it may be presumed, in the formation of steel for the blades of Bokhara and Peshawur. In Kamaon, iron ores are abundant and are largely smelted. A company was formed with a capital of Rs. 4,65,000 and furnaces were erected at Kalidoongee, Dichowree, Koopatal, and Ramghur and competent authorities pronounced the iron manufactured to be of unexceptionable quality equal to any charcoal cold blast manufactured in Europe."—*Balfour's Report on the Iron Ores, Iron and Steel of the Madras Presidency*. Sulphate of iron is the sulphate of the protoxide of iron and occurs in the form of green crystals, soluble in water. The salt is found abundantly by natural oxidation of the sulphuret of iron, a mineral especially common in coal districts. The sulphuret, absorbing oxygen from the atmosphere, is converted into the sulphate of the protoxide of iron; this is apt to be changed into the red colored sulphate of the sesquioxide. The sulphate, being soluble, is found in some mineral waters. It is also made artificially on a large scale for use in the arts by exposing moistened pyrites to the air. It occurs in the Indian bazars in large masses of green crystals, and in a state of considerable purity. For medical use the greenest and most transparent crystals should be selected. It was known to the ancients, is mentioned in the *Amera Cosha* of the Hindoos, and it is used by them, as by the Romans in the time of Pliny, in making ink. The natives of India have long known the use of acetate of iron, they prepare by macerating iron in sour palm-wine, or in water in which rice has been boiled.—*Royle Materia Medica*. *O'Shaughnessy, Beng. IRON WOOD.

Pya.....	of AKYAB.	Legno di ferro.....	IT.
Pieng.....	"	Lignum ferreum...	LAT.
Yserhout.....	DUT.	Sideroxydon.....	"
Bois de fer.....	FR.	Naw.....	SINGH.
Eisenholz.....	GER.	Palohierro.....	SP.

Iron wood is a commercial term, applied to a great variety of woods, in consequence of their hardness, and almost every country has an iron-wood of its own. The product of an evergreen tree, *Sideroxydon*, remarkable for the hardness and weight of its timber, which sinks in water, receives this name: it is of a reddish hue, and corrodes like iron. This tree grows chiefly in the West India islands, and is likewise very common in South America. *Mesua ferrea*, a tree furnishing one of the iron woods, and which, also, has received its specific name from the hardness of its wood, is a native of Ceylon and of the peninsulas of India, of Northern India, Malacca and of the islands, and perhaps *M. pedunculata*, likewise, furnishes part of the timber known under this name, but, in Ceylon, the *Maba buxifolia* and *Mimusops indica* also furnish the iron woods of that island. The timber of the *Metrosideros vera* of China, is called true iron-wood: the Chinese are said to make their rudders and anchors of it, and, among the Japanese, it is so scarce and valuable, that it, once, was only allowed to be manufactured for the service of their king. The iron-wood of southern China, however, is *Baryxylum rufum*; of the island of Bourbon, *Stadmannia sideroxydon*, and of the Cape of Good Hope, *Sideroxydon milonophloeum*, which latter is very hard, close grained, and sinks in water. The Ceylonese have also an iron wood tree known under the name of "Naw," of the western provinces of Ceylon, perhaps the *M. ferrea*. It is described as used for bridges and buildings. That of the Canara forests is from two species of *Memecylon*, and, on the Coromandel coast, the term is occasionally applied to the wood of the *Casuarina equisetifolia*: in Tenasserim, the term is applied to the woods of *Inga xylocarpa* and *I. bijemina*; and to that of a species of *Diospyros*. The iron wood of Australia is from a species of *Eucalyptus*, *E. sideroxydon*, and that of Norfolk island from the *Notokea longifolia*. The iron-wood of Guiana is from the *Robinia panacoca* (of Aublet), that of Jamaica is the *Tagaro pterota*, and *Erythroxylon areolatum* which is also called red-wood. *Ægiphile Martinicensis* and *Coccoloba latifolia*, are other. West Indian trees, to the timbers of which the name of iron-wood has been applied, and *Ostrya virginica*, called American hop hornbeam, has wood exceedingly hard and heavy, whence it is generally called iron-wood in America, and in some places lever-wood. Under the name of Iron-wood, two specimens were sent by the Calcutta

Committee to the Exhibition of 1862. One of them *Pya, Vern.*, a tree of Akyab, grows to a moderate size, and is plentiful in the Sandoway and Ramree districts. The other Iron wood, *Pieng, Vern.*, also, a tree of Akyab, grows to a large size, and is very plentiful in Arrakan, its wood is very hard, and used for posts. The Iron wood of the South Sea Islands is the timber of the *Casuarina equisetifolia*. The iron wood of New Zealand is the *Vitex littoralis*. The Aki, or *Lignum Vitæ* of New Zealand, the Rata and the Pohutu Kawa of the same country, are all hard-wooded trees belonging to the genus *Metrosideros* (Lindley) and several other species of *Metrosideros* have been described, natives of Australia and the South Sea Islands as furnishing iron-woods of commerce. The *Metrosideros buxifolia* of Allan Cunningham is the New Zealand plant called Aki, and is a rambling shrub, adhering to trees, and climbing by means of its lateral roots to the summits of the loftiest trees in the forests of Wangaroa and the Bay of Islands.—*Don, Dichlamydeous Plants, Lindley Vegetable Kingdom; Burnett, Outlines of Botany*—quoted in *Eng. Cyc. Holtzappfel. Mr. Faulkner. Mr. McGillivray. Dr. Bennett. Mr. Mendis. Dr. Mason, Cal. Col. Ew. of 1862. Macculloch. Colonel D. Hamilton.*

IRRIGATION.—Generous as the Indian soil usually is, and favourable as are the seasons. In the plains and valleys rain is frequently absent for many weeks, and without some artificial means of supplying the soil with moisture, no crops could at those periods be taken off the ground. Great public works of irrigation have been made in India; but, what is there accomplished on a very large scale by the India governments, is, throughout many parts of the country, performed by the villagers themselves. For miles, the hindoo cultivator will carry his tiny stream of water along the brow of mountains, round steep declivities, and across yawning gulfs or deep valleys, his primitive aqueducts being formed of stones and clay, the scooped out trunks of palm trees and hollow bamboos. Sometimes, in order to bring the supply of water to the necessary height, the picottah or the bucket-wheel is employed, worked by men, by oxen, by buffaloes or by elephants.

In Hindustan, the Ganges Canal has been constructed, a branch of it leading to Cawnpore has been remodelled, and two branches leading to Etawah and Futtehghur have been re-arranged for navigation. When that to Etawah shall be completed, the chief towns of the Doab will be placed in communication with the Jumna at Dehli. A new canal has been projected from the Jumna below Delhi at a cost of £500,000 to water the Muttra and Agra districts.

IRRIGATION.

A canal has been planned from the Ramgunga to irrigate and drain the Rohilcund Terai or Swamp, and the channels of Rohilcund will form a net work with those in Oudh, Goruckpoor and Tirhut all north of the Ganges. The Oudh canal from Sardah has been successful and will aid in the fertilizing of Oudh.

The canal system in Hindoostan will fit in with that of the Punjab. In Burmah, it has been proposed to embank the great rivers, and improve the delta of the Irawadi.

From the upper parts of the Cauvery river, channels have been conducted through the Trichinopoly and Tanjore districts, and the portions within the reach of the waters are cultivated like gardens. The great Coleroon channel, quite like a great river and about a mile broad, is led off from the Cauvery, aids to form the holy island of Srirangam and is exhausted in irrigating the lands to the east.

A dam has been constructed on the Godavery river, another on the Kistna, another on the Girna river in Khandesh, and a similar dam is proposed to be constructed on the Tapti river for the irrigation of the collectorate of Surat.

In Sind there is the great Bigari canal, which it was proposed to enlarge and to convert the inundation canals of that province into perpetually flowing streams.

The Baree Doab Canal is to be extended by a dam at Hureckee on the Sutlej from which water will be taken to irrigate the lower districts as far as Mooltan.

The Western Jumna Canal had objectionable swamps, but is to be improved and enlarged towards Sirsa.

The Sutlej Canal was projected in 1861, and sanctioned in 1867. It is to take up the irrigation where the Jumna ceases to provide for it and will irrigate the tract west of the Markunda, one-third of the water to be assigned to the Putiala State. About two millions sterling was estimated as the amount needed to irrigate the vast extent of country between the Jumna and the Baree Doab systems. And channels are proposed to be cut from the Chenab and the Jhelum and the valley of Peshawar irrigated.

The E. India Irrigation Company's operations in Orissa failed as a profitable concern. The Ganges, Jumna and Baree Doab Canals show that a profit of five per cent has not yet been reached. Moreover, it is not advisable that capitalists should, except as contractors, be employed on public works affecting the water supply and the lives of millions of peasantry. During the administrations of Sir Charles Wood and Earl de Grey, both money and men were kept back. In 1868-69 about half a million sterling was spent on new irrigation works.

IRRIGATION.

In Northern India, Midnapore can be protected from famine by utilizing the waters of the Selye River at a cost of £92,500.

The Damoodah often bursts its banks, and causes devastation. It runs through a rich country, but even in the Hooghly district, one of the wealthiest, much distress was experienced by the artisans and labourers in the famine of 1866. A canal, its head waters at the Raneegunj coal mines, 100 miles to Calcutta has been recommended at a cost of £300,000. The navigation will be as important as the irrigation and coal will be cheapened in Calcutta. The Damoodah valley up to 1868, was devastated by a severe epidemic fever which wasted some of the most populous tracts in Asia and subsequently spread to Bheerbhun.

A canal has been projected to be run from Rajmahal to Calcutta, to cost a million sterling, as the Nuddea district has been subject to inundations and epidemics.

Bengal proper is to have a series of channels from the Gunduk river, to provide irrigating waters for Champaran, Sarun and Tirhout, which suffered much in the famine of 1866.

In the Central Provinces two designs have been sketched for irrigation works from the Pench river north of Nagpore, and from the Wurdah to the south-West. In 1868-69, a project was sanctioned extending the irrigation from the Pennar river of the peninsula of India at a cost of £40,000. In 1867, it was proposed to enlarge the great Chembrambaukuna tank at a cost £40,000. In Mysore, there are anicuts or dams at Nundoor, Sri Ramadwara and Masechully, and a great reservoir is to be established at Mauri Conwai.

In the beginning of 1865, Colonel Strachey recommended an irrigation scheme for India, at a cost of 29 millions sterling. It was Lord Canning's view to employ private companies for irrigation. In Orissa the operation of the East India Irrigation Company were discouraged, but it made noble efforts. The public companies for irrigating India, will never pay a dividend. A committee was appointed by Lord Canning to consider the views as to irrigation held by Colonel Sir Arthur Cotton, and Colonel Crofton and they decided, in favour of Major Crofton's views against those of Sir A. Cotton. Of the reasons given for its decision one was their objection to the construction of a weir across the Ganges, below the confluence of the Solani, at a cost of £1,128,681, but if any member of the Committee had actually constructed weirs across similar rivers, with sandy beds, and low alluvial banks, as in Madras, he would not have estimated the cost of this weir over the Ganges, to pass a volume of water of 30,000,000 cubic yards, at 1,130,000£; when the Godavery weir, to pass

above 200,000,000 or nearly eight times as much, only cost 90,000£; the Cauvery weir, to pass the same volume as the Ganges, 80,000,000 cubic yards, only cost 15,000£; the Kistnah weir, to pass 180,000,000 cubic yards, only 100,000£; the Toomboodra weir, for about double the volume of the Ganges, only 80,000£. The average estimate for weirs on similar rivers in Madras is about 500£ per 1,000,000 cubic yards of volume per hour; while the estimate of the Ganges Canal Committee was nearly 40,000£ per 1,000,000. Though a question at issue for many years, the great irrigation works of Madras have been yielding enormous profits; such profits that, if they were invariable, as Sir A. Cotton says they ought to be, "the Government might, in popular phrase," make its fortune," by constructing such works all over India; borrowing at 5 per cent. to invest in works that yield 50 or 100 per cent. As an instance of the rate of profit, the Godavery works have cost about half a million, and are now watering about 800,000 acres. The expenditure of capital upon them has been 12s. an acre, and for this the people are paying a water-rate of 8s. an acre, or 66 per cent. on the cost.

The Ganges Canal has been a disastrous financial failure up to the present time, after an expenditure of three millions upon it; and the Indian Government, believed that the failure in one case and success in the other is due to a "difference in the conditions" of irrigating the two localities, and therefore that the profits of irrigation works are not invariable. Sir A. Cotton asserted that there is no difference in the principle of damming a river and leading a canal from it in Bengal and in Madras, and he specified a long series of engineering mistakes in the construction of the Ganges Canal which account for its failure and would have ruined any Madras work just as much; and but for which he maintained that the Ganges Canal would have yielded immense profits, like the Madras works. In 1865, Colonel Strachey submitted a scheme to cost 29 millions Stirling, and a reservoir was to be formed near Sholapore in the Deccan, at a cost of £90,000.

IRULAR. At the foot of the Neilgherry mountains, and for a short distance within the forests extending from their base into the plains, live a race of people, commonly known by the name of Erular. They are divided into two classes, one called Urali, the other Kurutalei. The word Eruli means unenlightened or barbarous, from the Tamil word Erul, darkness, and is a term applied to them

by their neighbours. From the wild kind of life which they lead it is difficult to ascertain their number, but Captain Harkness supposed it to be less than a thousand. Urali signifies the rulers of the people and Kurutalei, the common people. Captain Harkness mentions that he met with a group of Erulars, all but naked, men, women, and children, dancing, jumping and amusing themselves. The hair of the men, as well as of the women and children, was bound up in a fantastic manner with wreaths of plaited straw; their necks, ears, wrists, and ancles, decorated with ornaments formed of the same material, and carrying little dried gourds, in which nuts or small stones had been inserted, they rattled them as they moved, and with the rustling of their rural ornaments, gave a sort of rhythm to their motion. His unexpected visit disconcerted them at first, but this was soon got over, and the dance again resumed, in front of a little thatched shed, which he learned was their temple. When it was concluded, they commenced a sacrifice to their deity, or rather deities, of a he-goat and three cocks. This was done by cutting the throats of the victims, and throwing them down at the feet of the idol, the whole assembly at the same time prostrating themselves. Within the temple there was a winnow or fan, which they call Mahri,—evidently the emblem of Ceres; and at a short distance, in front of the former, and some paces in advance one of the other, were two rude stones which they call, the one Moshani, the other Konadi Mari, but which are subordinate to the Mahri or fan, occupying the interior of the temple. No great distance, from this, he passed their places of sepulchre, there being one for the Urali and another for the Kurutalei. These sepulchres are pits, about thirty or forty feet square, and of considerable depth, over which are placed large planks; above is erected a shed covering in the whole, and protecting it from the weather. In the centre of the planks is an opening about a cubit square, over which are placed other pieces of wood, and on these is raised a small mound of earth in the form of an altar, the surface being decorated with pebbles, placed there both as memorials of the departed, and as objects of future worship. When a casualty occurs, and another burial becomes necessary, the mound of earth is removed, and the body thrown in. Some ten or twelve days after, a mound of fresh earth is raised, in room of the one which had been removed; the pebbles, which in the first instance had been carefully put aside, are again replaced, and another one added to them in memory of the deceased. All this is done with much ceremony, the pebbles being anointed with oil, perfumed with frank-

incense, and decorated with flowers. Food is also distributed to the assembly, according to the ability of the relatives of the deceased. The *Irulars* speak a rude Tamil.—*Captain Harkness' Nedgherry Hills*, pp. 29, 88, 92, 93, 128. See Dravidian, also Kurambar.

ISANA. The regent of the north-east, a form of Iswara.

ISANI. Colonel Tod describes a lofty three-peaked Isani mountain, on which is a temple dedicated to Aya-mata also called Isani, the tutelary divinity of the Koli. This and the effigy of the horse are there the only objects of adoration among this aboriginal race. This was the first time he ever saw a personification of Mother Earth, for such is Isani from Isa goddess and Anani earth, the universal nurse-mother (aya-mata) whether the worship of the horse is typical of the sun "the swiftest of created representing the swiftest of uncreated objects" he does not know but in this they resemble the other forest tribes, the Bhil and the Surya. See Sakti.

ISANI.—Among the many remarkable festivals of Rajast'han kept with peculiar brilliancy at Oodipoor, is that, called Gangore in honour of Gouri, or Isani the goddess of abundance, the Isis of Egypt, the Ceres of Greece. Like the Rajpoot saturnalia, [which it follows, it belongs to the

vernal equinox, when nature in these regions proximate to the tropic is in the full expanse of her charms, and the matronly Gouri casts her golden mantle over the beauties of the verdant Vassanti. Then the fruits exhibit their promise to the eye; the kail fills the ear with melody; the air is impregnated with aroma, and the crimson poppy contrasts with the spikes of golden grain, to form a wreath for the beneficent Gouri. *Gouri* is one of the names of Isa or Parvati, wife of the greatest of the hindu gods, Mahadeva or Iswara, who is conjoined with her in these rites, which almost exclusively appertain to the women. The meaning of gouri is 'yellow,' emblematic of the ripened harvest, when the votaries of the goddess adore her effigies, which are those of a matron painted the colour of ripe corn; and though her image is represented with only two hands, in one of which she holds the lotos, which the Egyptians regarded as emblematic of reproduction, yet not unfrequently they equip her with the warlike conch, the discus, and the club, to denote that the goddess, whose gifts sustain life, is likewise accessory to the loss of it: uniting as Gouri and Kali, the characters of life and death, like the Isis and Cybele of the Egyptians. But in the Gangore festival she is only seen as Ana-purana, the benefactress of mankind. The rites commence when the sun enters Aries (the opening of the Hindu year), by a deputation to a spot beyond the city, "to bring earth for the image of Gouri." When this is formed, a smaller one of Iswara is made, and they are placed together; a small trench is then excavated, in which barley is sown; the ground is irrigated and artificial heat supplied till the grain germinates. By rites known only to the initiated, having been performed for several days within doors, they decorate the images, and prepare to carry them in procession to the lake. During these days of preparation, nothing is talked of but Gouri's departure from the palace; whether she will be as sumptuously apparelled as in the year gone by; whether an additional boat will be launched on the occasion; though not a few forget the goddess altogether in the recollection of the gazelle eyes (mirg-ani) and serpentine locks (nagni zoolf) of the beauteous handmaids who are selected to attend her. At length the hour arrives, the martial nakara give the signal "to the cannonier without," and speculation is at rest when the guns on the summit of the castle of Ekling gurl announce that Gouri has commenced her excursion to the lake. The cavalcade assembles on the magnificent terrace, and the rana, surrounded by his nobles, leads the way to the boats, of a form as primitive as that which conveyed the Argonauts to Colchis. The scenery is admirably adapted

for these fêtes, the ascent being gradual from the margin of the lake.

At length the procession is seen winding down the steep, and in the midst, borne on a *pat'h*, or throne, gorgeously arrayed in yellow robes, and blazing with "barbaric pearl and gold," the goddess appears, on either side the two beauties wave the silver *chamra* over her head, while the more favoured damsels act as harbingers, preceding her with wands of silver: the whole chaunting hymns. On her approach, the rana, his chiefs and ministers rise and remain standing till the goddess is seated on her throne close to the water's edge, when all bow, and the prince and court take their seats in the boats. The females then form a circle around the goddess, unite hands, and with a measured step and various graceful inclinations of the body, keeping time by beating the palms at particular cadences, move around the image singing hymns, some in honour of the goddess of abundance, others on love and chivalry and embodying little episodes of national achievements occasionally sprinkled with double entendre, which excite a smile and significant nod from the chiefs, and an inclination of the head of the fair choristers. The festival being entirely female, not a single male mixes in the immense groups, and even Iswara himself, the husband of Gouri, attracts no attention, as appears from his ascetic or mendicant form begging his dole from the bounteous and universal mother. It is taken for granted that the goddess is occupied in bathing all the time she remains, and ancient tradition says death was the penalty of any male intruding on these solemnities; but a late prince deemed them so fitted for amusement, that he even instituted a second Gangore. Some hours are thus consumed, while easy and good humoured conversation is carried on. At length, the ablutions over, the goddess is taken up, and conveyed to the palace with the same forms and state. The rana and his chiefs then unmoor their boats, and are rowed round the margin of the lake, to visit in succession the other images of the goddess, around which female groups are chaunting and worshipping, as already described with which ceremonies the evening closes, when the whole terminates with a grand display of fireworks, the finale of each of the three days dedicated to Gouri. The Ephesian Diana is the twin sister of Gouri, and can have a Sanscrit derivation in *Devi-ana*, 'the goddess of food,' contracted *Deana*, though commonly *Anadeo* or *Ana-devi*, and *Anapurna*, 'filling with food,' or the nourisher, the name applied by "the mother of mankind," when she places the repast before the messenger of heaven.

Considerable resemblance is to be discerned between this festival of Gouri and those in

honour of the Egyptian Diana at Bubastis, and of Isis at Busiris, within the delta of the Nile, of which Herodotus says: "They who celebrate those of Diana embark in vessels; the women strike their tabors, the men their flutes; the rest of both sexes clap their hands and join in chorus. Whatever city they approach, the vessels are brought on shore; the women use ungracious language, dance, and indelicately throw about their garments." Wherever the rites of Isis prevailed, we find the boat introduced as an essential emblem in her worship, whether in the heart of Rajast'hân, on the banks of the Nile, or in the woods of Germany. Bryant furnishes an interesting account from Diodorus and Curtius, illustrated by drawings from Pocock, from the temple of Luxor, near Carnac, in the Thebaid, of the ship of Isis, carrying an ark; and from a male figure therein, this learned person thinks it bears a mysterious allusion to the deluge. Colonel Tod, however, was inclined to deem the personage in the ark *Osiris*, husband of Isis, the type of the sun arrived in the sign of Aries, (of which the ram's heads ornamenting both the prow and stem of the vessel are typical), the harbinger of the annual fertilizing inundation of the Nile, evincing identity of origin as an equinoctial festival with that of Gouri (Isis) of the Indu Scythic races of Rajast'hân.

Heavenly stranger, please to taste
These bounties, which our Nourisher, from whom
All perfect good, unmeasured out, descends,
To us for food and for delight hath caused
The earth to yield.—*Paradise Lost*, Book V.
397, 401.

The German Suevi adored Isis, and also introduced a ship in her worship, for which Tacitus is at a loss to account, and with his usual candour says he has no materials whence to investigate the origin of a worship denoting the foreign origin of the tribe. This Isis of the Suevi was evidently a form of Ertha, the chief divinity of all the Saxon races, who, with her consort Teutates or Hesus (Mercury,) were the chief deities of both the Celtic and early Gothic races: the Budha and Ella of the Rajpoots; in short, the earth, the prolific mother, the Isis of Egypt, the Ceres of Greece, the *Ana-purana* (giver of food) of the Rajpoots. On some ancient temples dedicated to this hindu Ceres, we have sculptured on the frieze and pedestal of the columns the emblem of abundance, termed the *cumacupa*, or vessel of desire, a vase of elegant form, from which branches of the palm are gracefully pendent. Herodotus says that similar water-vessels, filled with wheat and barley, were carried in the festival of Isis; and the Egyptian god Canopus is depicted under the form of a *water jar*, or Nilometer, whose covering bears the head of Osiris.

Colonel Tod thinks it probable that Hesus is derived from Esvara, or Esa, The god Toth was the Egyptian, and Teutates the Scandinavian, Mercury, and he has attempted to trace the origin of the Suevi, Su, or Yeut of Yeutland (Jutland), to the Yute, Gete, or Jit, of Central Asia, who carried thence the religion of Budd'ha into India, as well as to the Baltic. There is little doubt that the races called Jotner, Jæter, Jotun, Jaet, and Yeut, who followed the Asi into Scandinavia, migrated from the Jaxartes, the land of the great Gete (Massagete); the leader was supposed to be endowed with supernatural powers, like the Budd'hists, called Vedianân or magician, whose haunts adjoined Aria, the cradle of the Magi. They are designated Ari-punta, under the sign of a serpent, the type of Budd'ha, or Ari-mânu, the foe of man.—*Tod's Rajast'han*, Vol. 1. pp. 570, 572, 573.

The Greek name for isinglass, *Ichthyocolla*, is derived from *ixthys* a fish and *κόλλα* glue. Isinglass, is derived from the German *Hausenblase*, from *hausen*, the great sturgeon, and *blase*, a bladder, being one of the coats of the swimming-bladder of fishes, chiefly of the genus *Acipenser*, or sturgeon. Fish Maws, or fish-sounds are exported from Calcutta. Mergui, Malabar, and Sind and Shark Fins, from Mergui, Cannanore, and Sind, Bombay Fish-maws are composed of a sac-like membrane, slit open; some are small, thin, and transparent, others three and four inches across in both diameters, something of the shape of short purses with spring clasps, of a light colour, and semi-transparent;—resembling in appearance the ordinary qualities of Isinglass, especially some of the Brazilian kinds. Mr. Yarrell, pronounced both kinds to be the sound of a fish apparently allied to the gurnards, which he thought might perhaps be the same species, but at different ages, and it is interesting here to observe, Cuvier mentions that, in India there are species allied to *Trigla hirundo* (or the sapphirine gurnard). Fish-maws or Fish sounds, have long been carried away by

ISINGLASS.

the Chinese from the vicinity of Calcutta, at the rate of about a shilling a pound. In Bombay also a commerce has long been established in Fish-maws, at about double the price of the former, without its being generally known that it was isinglass which was thus exported, and Madras shares in the trade. The Chinese, therefore, obtain from India, what Europe imports from Russia and Brazil, and in this respect exhibit no greater strangeness of taste than Europeans do. For they give only about the same price (£14) which is obtained in the London Market for Isinglass of the same quality, while Europe give as much as between £60 and £70 for the best kind and between £90 and £100 when it is required for consumption. The official accounts of the export and imports from the three Indian presidencies show that to the value of nearly forty thousand pounds of shark fins and Fish-maws was exported in one year from Bombay to China, being first imported from a great variety of places and sold at

The shipments being to Bombay, United Kingdom and Malacca Straits. But the greater portion doubtless finds its way to China. The fondness of the Chinese for all gelatinous substances is well known, and has been described by all travellers who have visited their country and partaken of their banquets. In addition to employing animals and parts of animals which are rejected in other countries as articles of food, they import various substances which can be valuable only as yielding gelatine of different degrees of purity. Of these we have examples in Agar-Agar, Tripang, Birds-nests, Shark-fins, and Fish-maws.

The swimming bladder of fishes consists of three membranes, the outer or peritoneal coat, the middle membranous and muscular one, and the inner, glossy, highly vascular coat, which has a pulpy appearance and is the membrane which forms the best isinglass. The species of fish which yield the European supplies are the great Sturgeon, Osseter, Sevruga and Sterlet, also the Silurus glanis, Barbil. Cyprinus brama and C. carpio and Perca lucioperca, which do not belong to the tribe of sturgeons. In the fisheries of the Caspian and Volga, where the system is most complete and the division of labour the greatest, the sounds and roes are extracted immediately the fish are caught and delivered over to the isinglass and caviare makers. The fresh sounds are first split open and well washed to separate the blood and any adhering extraneous matter and, on the Lake Baikal, warm water is used according to Georgi ; they are then spread out, and exposed to the air to dry, with the inner silvery white membrane turned upwards. This which is nearly pure gelatine, is carefully stripped off, laid in damp cloths and left in the outer covering, and forcibly kneaded with the hands. It is then taken out of the cloths, dried in the form of leaf isinglass, or rolled up and drawn in a serpentine manner into the form of a

heart, horse-shoe, or lyre (long and short staple), between three pegs on a board covered with them; here they are fixed in their places by wooden skewers. When they are somewhat dried thus, they are hung on lines in the shade till their moisture is entirely dissipated. The oblong pieces sometimes are sold in the form of Book Isinglass. In order to obtain good isinglass, it is necessary to have well arranged rooms to dry it in. But isinglass is not the only product obtained from fish-sounds. According to Pallas, at the lower parts of the Volga, a fine gelatine is boiled out of the fresh swimming-bladder and then poured into all kinds of forms. In Guriéf, a fine boiled Fish-glue is prepared, perfectly transparent, having the colour of amber, which is cast into slabs and plates. Ostiaks also boil their fish-glue in a kettle. The common cake isinglass is formed of fragments of the other sorts, these are put into a flat metallic pan, with a very little water, and heated just enough to make the parts cohere like a pancake, when it is dried. Parts of the sounds of *Silurus glanis* and *Barbel* are also boiled, but as the glue does not entirely dissolve, the liquid is strained to separate filaments from the gelatine. Besides these, the cartilaginous and tendinous part of several fishes are boiled down to form fish-glue. Though isinglass of the finest quality, and in the largest quantities, is yielded by, it is not confined to, the sturgeon tribe; for even in Russia, the *Silurus glanis*, species of *Cyprinus*, and *Barbel* yield it, and we meet in commerce with Brazilian, New York, and Hudson's Bay isinglass. The fishes which produce it on the coast of Brazil, Mr. Yarrell informed Dr. Royle are probably species of the genera *Pimelodus* and *Silurus*, or of closely allied genera. The specimens shown to Mr. Yarrell appeared to him to belong to seven different species of fish. The Brazilian Isinglass is imported from Para and Maranhão. It is very inferior in quality for domestic purposes to the best imported from Russia, which sells for 12s. per lb. and the other from about 3s. to 3s. 6d. but even as low as 9d. per lb. It is in the form of Pipe, Block, Honeycomb, Cake, and Tongue Isinglass, the last formed of a double swimming-bladder. The isinglass obtained from North America in the form of long ribbons, is produced, according to Dr. Mitchell, by *Labrus squalus*, at New York, called weak fish, which is about fifteen inches in length, and above six pounds in weight, forming one of their most abundant fish and furnishing the principal supply for their tables. One author states that its thick silvery swimming bladders are pressed, and another that the sounds of the hake (*Merluccius vulgaris*) are also pressed between iron or wooden rollers to form thin isinglass. The *Labrus squalus* is *Otolithus*

regalis of Cuvier (the *Johnius regalis* of Block), of the tribe *Sciænoides*. These are allied to the *Perches*, but have more variety and a more complicated structure in their natatory bladders; almost all are good for eating, and many of superior flavour. To the genus *Otolithus* also belong some Indian fishes, as *O. versicolor*, Cuv. and *O. ruber*, Cuv., the *perche pierre* of Pondicherry, called there "panan," which is fifteen inches long, and caught in abundance all the year, being esteemed as food. This genus is closely allied to *Sciæna*, of which species, as *S. Aquila* (maigre of the French, and *umbrina* of the Romans), &c. are found in the Mediterranean. *S. Pama* or *Bola Pama* of Buchanan resembles the "maigres," but has a singular natatory bladder. When twelve or fifteen inches long, it is erroneously called whiting at Calcutta, and furnishes a light and salubrious diet. It is caught in great abundance at the mouths of the Ganges, but never ascends higher than the tide. In New England, the intestine of the common cod (*Morhua vulgaris*) are cut into ribbon isinglass; in Iceland also the cod is said to yield isinglass, so also the ling (*Lota molva*), but Mr. Yarrell informed Dr. Royle that he had no reason to believe that isinglass is so prepared. At least, in the southern parts of England, fish being brought alive in well-boats as far as possible, cod and also ling sounds are mostly preserved soft, by salting, and are dressed for table as substitute for fish. Hence we see that Isinglass is not confined to the tribe of sturgeons, nor to the rivers of Russia, but that it is found in fishes on the warm coast of Brazil and the cold one of Iceland. It is also yielded by some of the great variety and shoals of fishes, on the long extended coasts of Eastern and Southern Asia, and some quantities are imported into Britain. A trade in isinglass, and in some of its substitutes, has long been established on the coast of India and it has long been imported by the Chinese from Bengal. Indeed on investigating the subject, the discovery is made that Isinglass is exported in much larger quantities and from a much greater variety of places than is generally supposed. So large a quantity as 800 or 900 maunds of the sounds of fish, that is of isinglass, being annually exported to China from the neighbourhood of Calcutta. The first who appears to have drawn attention to this subject, was an anonymous correspondent in Parbury's Oriental Herald in 1839, who stated, that the Chinese had long been engaged in a trade with Calcutta in isinglass. Also that this was afforded by a fish called "Sulleah" in Bengal, and that from a half a pound to three-quarters of a pound was obtained from each fish. This information was energetically followed up by Dr. McClelland of the Bengal Medical Service. The curing of fish had been

previously suggested by Dr. Cantor of the same service. Dr. McClelland's first paper was published at Calcutta in June 1839, in the *Journal of the Asiatic Society*, Vol. VIII. p. 203. In this he informs us, that having procured a specimen, from the bazaar, of the fish yielding the isinglass, he was surprised to find it to be a species of *Polynemus*, or paradise fish, of which several species are known for their excellence as articles of food. Of these he adduces the Mango Fish or tupsae mutcheo of the Bengalees (*Polynemus risua*, *Buch.*) as a familiar instance, though this is remarkable as being without a swimming-bladder; while the other species have it large and stout. These occur in the seas of warm climates; five are described by Dr. Buchanan in his *Gangetic fishes*, but only two are of considerable size, occurring in the estuary of the Hoogly, and probably in those of the Ganges. One of these, with another large species, is also described by Dr. Russell in his work on the fishes of the Madras Coast. That figured in his tab. 184 and called maga-booshy is *Polynemus uronemus* of Cuvier, while the maga-jellee, tab. 183, named *P. tetradaetylus* by Shaw is probably *P. Teria* of Buchanan. Both, but especially the first, Russell says, are esteemed for the table and called Roeball by the English. Dr. McClelland ascertained that the species affording the isinglass, is the *Polynemus sele* of Buchanan, *Sele* or *Sulea* of the Bengalese, described but not figured in his work on the Gangetic fishes (p. 226). Dr. M. has however published in the *Journal of the Asiatic Society of Bengal*, a figure from Dr. Buchanan's unpublished collection of drawings, which are kept at the East India Company's Botanic garden at Calcutta. This figure, he states, conveys a good representation of the *Sele*, about the half size of a specimen, from which he obtained sixty-six grains of isinglass. Dr. Buchanan describes the *Sele* as affording a light nourishing food, like most of the fishes which he has called Bola, but as inferior to many of them in flavour. It is common in the estuaries of the Ganges, and is often found weighing from twenty to twenty-four pounds; and may perhaps be the *Emoi* of Otaheiti, the *Polynemus lineatus* of Lacepede, the *P. plebius* of Broussonet. This, according to Block, is by the English called king-fish, and is the *Kala min*, *Tam. of Johu*, from Tranquebar, and abundant in the Kistna and Godavery. Buchanan further states, that the *Sele* has a strong resemblance to the above named "maga booshee" of Dr. Russell. As the anonymous author above referred to, stated that from half a pound to three quarters of a pound may be obtained from each fish, Mr. McClelland supposed either that *P. Sele* attains a much larger size than twenty-four pounds, the limit given to it

by Buchanan, or that isinglass is also afforded by a far larger species, namely, *P. tetradaetylus*, *Telia*, or *teriya bhangon*. This, as we have seen, is identical with the "maga jelle" of the Coromandel Coast, and which Buchanan often saw six feet long in the Calcutta bazaar, and was informed, sometimes attained 320 pounds avoirdupois in weight. It is considered by the natives as a wholesome diet although seldom used by Europeans. Mr. McClelland says he has frequently seen them of a uniform size, that must have weighed from fifty to a hundred pounds at least, loading whole cavalcades of carts on their way to the Calcutta bazaar during the cold season. Both the *Sele* and the "teria bhangon" must consequently be very common there from November to March. *P. Sele* is supposed to be a variety of *P. lineatus*, which is said to be common on all the shores to the eastward; but if so, Mr. M. says, it seems strange that the Chinese should send for it to the Hoogly. The same might, however, be said of the Cod, which, though caught in abundance on the coasts of Great Britain, is also diligently sought for on the banks of Newfoundland. He also inquires whether *Polynemus emoi* and *P. plebius*, supposed by Buchanan to correspond with his *Sele*, contain the same valuable substance, and whether either of Russell's species, the above named maga-booshee and maga-jelle (*Indian fishes*, 183-184), yield it.

Palogpong ikan or *uri ari ikan* of the Malayas, *lopa* of the Chinese, appears to have formed an article of exportation from the islands of the Indian Archipelago as early as they became visited by the Chinese. When these people commenced to settle in the Straits, they not only collected fish-maws there but also from distant localities, and Bombay, Ceylon, Madras, Bengal, Tenasserim and most of the Malayan Islands contribute to the annual supply, which is bought up by Chinese dealers at Penang, Malacca, and Singapore. By them the maws are exported to China. Since 1842, Mr. W. T. Lewis, Assistant Resident Counsellor of Penang, made some very successful attempts to improve the production of isinglass in Prince of Wales' Island. But European merchants there appear unwilling to engage in this novel branch of commerce, as the supply from want of proper care is uncertain, and procurable but in comparatively small quantities. These, however, are no objections to the Chinese dealers, as they are sure of a profitable and quick return of their outlay. The fishes from which isinglass is obtained at Penang are,

Lates heptadaetylus, (*Ikan siyakup*.)
Polynemus indicus, (*Ikan kurow*.)
Otolithus biauritus, (*Ikan salampue*.)
Otolithus ruber, (*Jarang gigi*.)

Otolithus argenteus, (Jarang gigi.)
Otolithus maculatus, (Jarang gigi.)
Johnius diacanthus, (Ikan tambareh.)
Labotes erate, (Ikan bati.)
Arius truncatus, (Ikan saludu.)
Arius arius, (Ikan saludu.)
Arius militaris, (Ikan saludu.)

The total quantities and value of fish-maws imported into and exported from Prince of Wales Island, from 1832 to 1842, were

Import. Pikuls.	Value Dollars.	Export. Pikula.	Value. Dollars.
1,323	50,172	1,939	73,842

On the Malabar Coast, excellent Isinglass is obtained from two species of *Otolithus*. One, perhaps the *O. biauritus*, Cauter, is named in Malayalam "*Sille korra*," it grows to a large size and is highly prized for the isinglass it yields; the *O. ruber*, also yields good isinglass. Dr. Mason describes the *Corvinus coitor*, or Indian Whiting, and the *Polynemus sele* as yielding this substance in Tenasserim. *Corvinus coitor* is frequently seen in the Maulmain bazaars, and besides being a good fish for the table, its air-bladder makes excellent isinglass. He thinks he has observed more species than one sold under the same native name. Two or three species of fish common in Calcutta that are called whiting, from their resemblance, both in form and flavour, to the European fish of that name.

King-fish.—*Polynemus sele*, Buch.

P. plebeius, Brouss.

P. lineatus, Lacep.

P. gelatinosus, McClell. ; *ka-tha Burn.* (the young,) O'Riley.

Lukway (Arracan.)

Polynemus sele, is found from Calcutta to Otaheite. It produces isinglass of the best quality, and Mr. O'Riley estimated that two thousand pounds might be obtained annually off Amherst alone. The sounds are a constant article of traffic among the Chinese. The largest sounds were exported from Rangoon, and they sell in Tenasserim at about half a rupee a pound. About ten thousand of the fish, large and small, are taken annually in Arracan, and the sounds sell there for about a third of a rupee per pound to the Chinese, who export them to Penang, were they said to bring more than a rupee a pound.

Specimens prepared in India for the European market were complained of, says Dr. McClelland, "as being too thick, if intended to come into competition with the superior varieties of Russian isinglass. The first quantities sent from Indiabrought only 1s. 7d., others have been sold for 3s., and a few samples have been valued at 4s. per pound." According to Drs. Jerdon and Cantor, the following are the

more important of the fishes, which produce Isinglass on the coasts of Eastern and Southern Asia.

Arius arius, Buchanan Hamilton.

Pimelodus arius, Buch. | Ikan Saladu or Ikan Ham.
 | Surdudu, MALAY.

Total length 1 foot; 10 inch. This fish inhabits the sea and estuaries of Penang, Malayan Peninsula, Singapore, Pondicherry and Gangetic estuaries. At Penang small individuals of this species are very numerous, at all seasons. They form an article of food, and contribute more than any other, of the Siluroideæ, to the exportation of Isinglass.

Arius militaris, Linn.

Silurus militaris, Linnae. | *Osteo-geneiosus*, B.

Length 1 foot, 6 inches. Inhabits the sea and estuaries of the Malayan peninsula, and of its islands, of Malabar, Coromandel, the Ganges and Irawaddy. Their air vessels are preserved.

Arius truncatus, Cuv. and Val. Length, 11½ inches; inhabits sea and estuaries of Penang, Malayan Peninsula. Its air vessel is small but very thick and is transversely divided into two compartments. The fish is held in esteem by the natives, but at Penang it occurs so rarely that its air vessel does not contribute much to the general stock of isinglass.

Capota macrolepidata, Kuhl. Length 11 inches. Inhabits Penang, Java and Tenasserim, (fresh water). The air vessel is very large, thin, white, consisting of two elongated oval portions, of which the anterior is truncated in front.

Corvinus coitor, Blyth. Inhabits the estuaries of the Ganges and Irawaddy. Its air-bladder makes excellent isinglass.

Corvinus chaptis, Balochaptis. The Bola, inhabits the Malay coast: furnishes isinglass.

Johnius maculatus, Bloch, Schneider, var?

Sari Kulla, TAM., Russell. | *Corvina maculata*, C. & V.

Inhabits sea of Penang. The form of its air vessel resembles that of *Johnius belengeri*.

Johnius Dussuwieri, C. & V.

Corvina dussuwieri, C. & V.

The total length of this fish is 6½ inches. It inhabits the Sea of Penang, the Malayan Peninsula, Singapore and Malabar. The length of the air vessel is about ¼ the total length. The isinglass is reputed good, but owing to the small size of the fish little is procurable.

Johnius diacanthus, (Lacepede).

Lutjanus diacanthus, | *Corvina catala*, Belan-
 | *Lacep.* | *ger und Bleeker.*
Johnius catalans, Cuv. | *Corvina nalla* Katchelee,
Nalla Katchelee, Russell. | *Richardson.*
Katchelee, Russell. | *Ikan Tambareh*, Malay,
Sciæna maculata, C. & V.

This fish grows to 2 feet 9 inches. It inhabits the sea of Penang, Malayan Peninsula, Singapore, Malabar, Coromandel, Bay of Bengal, Gangetic estuaries, Tenasserim, Canton, China seas, Madura and Java. The air-vessel, $\frac{1}{3}$ d of the length of the fish, is of a broad lanceolate shape tapering behind into a very elongated point. This fish is not only valuable as an article of food, but also on account of the quantity and quality of its isinglass, which sells in the China market at from 40 to 45 Spanish dollars per pecul.

Lates heptadactylus, (Lacepede.)

Perca maxima, Sonnerat. | *Colius vacti*, Ham.
Holocentrus heptadactyle, | *Lates nobilis*, C. & V.
Lacepede. | Richardson, Bleeker.
Pseudomeno, Russell. | Ikan Siyakup, MALAY.

This fish inhabits the sea and estuaries of Penang, Malayan Peninsula, Singapore and Madras. It yields isinglass, of which however in the straits of Malacca, but little is collected, partly on account of the comparative scarcity of the fish and partly owing to the thinness of the air-vessel. That of a fish when dried, weighs upwards of one ounce. At Penang this kind sells at the rate of 25 to 30 dollars per pecul.

Lophotes erate, Cuv. and Val.

L. Farkarii, C. & V. | Ikan batu, or Ikan pichat
prick, MALAY.

Total length 2 feet 5 inches. It inhabits the Sea of Penang, Malayan Peninsula, Singapore, Java, Madura, Malabar, Ceylon, Bay of Bengal, and estuaries of the Ganges. The air-vessel is very large, about $\frac{1}{3}$ of the total length, silvery white and of a lanceolate shape. It is excessively thin and so firmly adhering to the back, that but a small part can be removed. The isinglass is considered by the Chinese dealers to be of good quality, but the small quantity procurable renders the fish less valuable in this respect.

Mugil cephalotus, Cuv. and Val.

Mugil our, Forskal. | Bontali, TAM, Russell.
Jumpul, MALAY. | Sole bhanggau, Ham.
M. Cephalus, Russell.

Total length, 2 feet. It inhabits Penang, Malayan peninsula, Singapore, Macao, Lancav, Chusan, Madura, Coromandel, Bay of Bengal; Gangetic Estuaries, Malabar. The air-vessel is large, elongated, its parietes very thin, pearl-coloured.

Otolithus, Sp., perhaps *O. biauritus* of Cantor.

Sille-korn, MALAYALUM.

This fish grows to a large size. It is found on the Malabar coast and highly prized for the isinglass it yields.

Otolithus biauritus, Cantor. Total length 3 feet. Inhabits Sea of Penang, Malayan

Peninsula, Singapore, Lancav. Tenasserim Province, and according to Jerdon, the Malabar coast, where it is called Sille-kora, in Malayalam. The air-vessel is nearly one-half of the total length, and in shape might be compared with an elongated antique urn with two handles. From the anterior part of each of the latter proceed five branches, four of which give off smaller ones to each side, and the fifth is tortuous and smaller than the rest. It yields a large quantity of isinglass, which in the Chinese market is considered to be of the best quality, and fetches 40 to 50 Spanish dollars per pecul.

Otolithus ruber, Bloch and Schneider.

Jaran-gigi, MALAY.

The total length of this fish is 2 feet, 6 inches. It inhabits the sea and estuaries of Penang, the Malayan Peninsula, Singapore, Coromandel and Malabar. The air-vessel is large, flattened, broad lanceolate, terminating behind in a single point. The isinglass is considered very good and sells in the Chinese market from 40 to 45 Spanish dollars per pecul.

Otolithus maculatus, Kuhl and van Hasselt.

Jaran-gigi, MALAY.

The total length of this fish is 2 feet 9 inches. It inhabits the sea and estuaries of Penang, the Malayan Peninsula, Singapore and Batavia. It is highly valued for the sake of its air-vessel, which yields a considerable quantity of the best kind of isinglass.

Otolithus versicolor, Cuv. and Val. Russell, 109 Panna, TAM. The total length of this fish is only 6 $\frac{1}{2}$ inch. It inhabits the Sea of Penang. Its air-vessel is $\frac{1}{4}$ of the total length. Jerdon says this fish is one foot long and very common at Malras.

Pempheris molucca, Cuv. Length 3 $\frac{1}{2}$ inch. Inhabits sea of Penang, Moluccas, Batavia and Japan. Its air-vessel is large and thick.

Pempheris molucca, Cuv. This fish grows to 3 $\frac{1}{2}$ inches. It inhabits the Sea of Penang, the Moluccas, Batavia and Japan. Its air-vessel is large and thick.

Platax arthriticus, Cuv. and Val.

Ecan bouna, Bell. | Chcetodon arthriticus,
C. and V.

The total length of this fish is 1 foot 7 inches. It inhabits the Sea of Penang, Sumatra, Java and Singapore. The flavour is excellent, but the large air-vessel is too thin, and yields too little isinglass to become of value.

Polynemus. The several species of this genus, furnish a considerable portion of the isinglass of Southern and Eastern Asia, viz.

Polynemus heptadactylus. Total length 4 $\frac{1}{2}$ inches. Inhabits Penang, Batavia, Cheribon and Samarang.

Polynemus indius, Shaw.

P. Sele, Buchanan.
P. uronemus, C. & V.
P. plotens, McClelland.
P. lineatus, McClelland.

P. gelatinosus, McClelland.
Katha, the young, Burmese.
Lukwah Arracan.

Roe-ball..... ENG. Ikan kurow..... MALAY.
Walan kala..... TAM. King Fish..... ENG.

The total length of this fish is 3 feet. It inhabits the Sea of Penang, Singapore, Malayan peninsula, Surabaya; estuaries of the Ganges; Vizagapatam; Madras and Pondicherry. The structure of the air-vessel of this species is the most striking character by which it may at once be distinguished from *P. plebius*. Its membrane is silvery, thick, the general form oval. It occupies the whole length of the stomach terminating behind in a very sharp point, which penetrates the thick of the tail over the first interspinal of the anal. At Penang single individuals occur at all seasons; but numbers are taken from June to August. The weight is commonly from 4 to 6 lb. seldom exceeding 20. The air-vessel of a good sized fish, when dried and ready for the market in China, weighs upwards of 2 oz., is considered very good isinglass, and fetches 25 to 30 dollars per pecul. The fish itself is valued as an article of food, though less so than *P. tetradyctylus*. Mr. O'Riley estimated that 2,000 lbs. of isinglass from this fish, might be obtained annually off Amherst alone. Mr. Blundell said that the largest sounds were exported from Rangoon, and that they sell there at about half a rupee a pound. Major Bogle wrote that about 10,000 of the fish, large and small, were taken annually in Arracan and that the sounds sold there for about a third of a rupee per pound to the Chinese, who exported them to Penang where they are said to bring more than a rupee a pound.

Polynemus plebius, Broussonet; Linne Bloch; Shaw; Cuv. and Val.

Roe ball... .. ENG. Pole kala..... TAM.
P. lineatus, Lacépède. P. commersonii, Shaw.
P. niloticus, Shaw. Bynni, Bruce.

This fish attains to 4 feet as its full size. It inhabits the Coromandel coast, Otaheite, Isle of France and Isle of Tanna. Its value as a fish yielding isinglass requires to be ascertained.

Polynemus seclarius, Bloch-Schneider. This fish is only four inches long. It inhabits Penang, Batavia, Tranquebar and Coromandel. Its air-vessel is minute, being of the shape and size of a grain of oats.

Polynemus hexanemus Cuv. and Val. 4 inches long. Inhabits Penang, Batavia, Samarang and Pasuruan.—Cantor.

Polynemus tetradyctylus, Shaw. Roe-ball.

Polynemura teria, Gray. P. quadrifilis, Cantor.
Triglia asiatica, Linne. Muga jelle, Russell.
P. salliah, Cantor. Yerra kala... .. TAM

Inhabits Penang, Singapore, Malayan Peninsula, Lancav, Bay of Bengal, Gangetic estuaries, Australia, China, Bantam, Batavia, Tjilatjap, Samarang, Surabaya, Bangkallang. This species has no air-vessel.

Pristipoma guoraca, Cuv. and Val.

Perca grunniens, Forster. Authias grunniens, Bloch; Guoraka, Russell. Schneider.

This fish is one foot long. It inhabits the Isle of Tanna, Batavia, Coromandel and Mahe (fresh water). Its air vessel is very thin, from which its isinglass is of little value.

Umbrina Russellii, Cuv. Val. Richardson.

Qualar Katcheleo, TAM. Ikan gulama, MALAY.

Total length 6 inches to one foot? Inhabits Sea of Penang, Malayan Peninsula, Singapore, Vizagapatam; Indian and China Seas. Its isinglass is considered of good quality. Russell.

The Indian isinglass is not prepared with sufficient care to obtain a place in the markets of Europe. Bengal isinglass, however, has been found to consist of gelatine, albumen, a small portion of saline and earthy substance, ozmazome, and a minute trace of an odorous oil. In the Indian isinglass, it is probable that its defects are in a great measure to be attributed to a want of sufficient care in its preparation, and it is evident that good isinglass cannot be made without considerable attention be paid during the processes of washing, beating, scraping, and drying; all of which have a very important influence on the goodness of the finished isinglass. The imperfect solubility of some, and more especially of the thick pieces, is occasioned by the presence of a considerable quantity of albumen or insoluble membranous matter having most of the properties of albumen which is not only itself insoluble, but in addition renders much of the gelatine, with which it is associated, likewise insoluble. It is more than probable that the greater part of this albuminous substance might be readily removed by sufficiently scraping the isinglass during its preparation. Attention should also be directed to the process of drying, as, if not properly dried, it might possibly undergo a slight change or decomposition and become partially converted into a more insoluble form of gelatine. A more important objection is the smell which, however, may likewise, to some extent, be traced to the preparation. It is probable that by increased care in cleaning and drying by exposure to air, some of those defects may be removed especially as we shall observe in comparing the two processes, that much greater care is bestowed on the preparation in Russia than in India. Boiling with fresh made charcoal would probably have the effect of depriving inferior isinglass of some of the smell and colouring matter when required for the purposes of a jelly. The isinglass cut into threads

is unsuitable for the English market, notwithstanding that isinglass for retail is cut into fine threads, as more convenient for general use, and for making jellies and soups, in consequence of the extensive surface which is exposed rendering it more easily and quickly soluble. But there is a great prejudice in the wholesale market to buying things in a cut or powdered state in consequence of the innumerable methods adopted for falsifying and adulterating almost every drug. Machinery is used in London for cutting the isinglass into threads of any degree of fineness, and as it is impracticable at present to rival this in India, besides having to contend against prejudice, if sent in this state, it is preferable, and will be cheaper to prepare the article and send it as sheet isinglass, that is, the form of the slit sounds themselves, or their purest membrane washed, cleaned, and dried in the best manner. The Indian isinglass, as at present prepared, is complained of as too thick if intended to come into competition with the superior varieties of Russian isinglass. Some of it may, without difficulty, be rendered thinner, for even in the dried state layers of membrane which display a fibrous structure may be stripped off, and which no doubt contain the greater portion of the insoluble albumen. It might also be made thinner by beating, or pressing between iron rollers or marble slabs, as is done with American and some kinds of Brazilian Isinglass. The extra labor which this would require might be profitably saved, by not tearing it into fibres, in which state it is disapproved of in the market; but it might still be cut or rasped into a state fit for domestic use. The refuse should be turned to account; the soluble parts of the sounds, separated from the insoluble and poured out into thin plates and dried on nets, as is done with some of the gelatins of commerce. In order to ascertain the value of the article (merely stripped of all impurities calculated to injure its quantity without any regard to appearance, a considerable quantity was sent to England by Dr. McClelland. From the account received of the sale, it appears that this isinglass realized only 1s. 7d. per lb., which was considerably under its prime cost. Forty-four maunds and ten seers of fish sounds having been bought for forty rupees a maund, required an expense of 100 rupees for cleaning, after purchase from the fishermen, thus costing altogether about 1s. 7d. per lb. This quantity, or 2,235 lbs., at 1s. 7d. per lb., realized £176 18s. 8d.; but the charges in India and in England, consisting of packing, demurrage, freight, insurance, shipping charges, export and import duties, warehouse, brokerage, commission, interest, &c., were so heavy that the whole did not realize quite one-third of the outlay. One of

the cut samples had been bleached, but was of no more value than the one unbleached. Though the first quantities from India brought only 1s. 7d. others have been sold for 3s. and a few samples have been valued at 4s. per lb.—*Drs. Koyle on Isinglass*, p. 11; *Cantor Malayan Fishes in Journ. Beng. As. Soc. Mason's Tenasserim*.

ISIS, a goddess of the Egyptians. Macrobius tells us, that Isis "is worshipped in every religion, being either the earth or universal nature, under the influence of the sun; for this reason the whole body of the goddess is covered with breasts (in this respect resembling the Diana multomamma of Ephesus) because the universe is nourished by the earth of nature. Over the door of the minor temple of this deity at Pompeii, are wreaths of lingam and yoni. *Milner's Seven Churches* p. 79. *Tod's Rajasthan*. See Gouri; Isani; Kali.

ISJIRIA SAMUSTRANADI. TAM. Baringtonia acutangula.

ISKARDO, the capital city of Bultistan, or Balti, (called by English geographers, "Little Thibet,") a country a good deal to the north-east of Kashmir, and north-west of Ladak. Gilgit is a savage country, lately conquered by Goolab Singh, to the west-north-west of Iskardo. The Chorbat district is a dependency of the government of Iskardo, which, like that of Le, is subject to Kashmir. The desert country by which Nubra and Chorbat are separated, has, for the present, acted as a barrier to the further extension eastward of the mahomedan religion, which is now universally that of the people of the whole of Iskardo (or Balti) district, as well as of Dras. On the Indus, and in the valley south of it, there is no uninhabited tract between the two, so that the mahomedan and buddhist population are in direct contact. The result is, that mahomedanism is in that part gradually, though very slowly extending to the eastward. The name Iskardo is a mahomedan corruption of a Tibetan name Skardo, or Kardo, as it is very commonly pronounced. The mountains which surround the Iskardo plain rise at once with great abruptness, and are very steep and bare. The houses of Iskardo are very much scattered over a large extent of surface, so that there is no appearance of a town.—*Dr. Thomson's Travels in Western Himalaya and Tibet*, pp. 204, 219. *Mrs. Hervey's Adventures of a Lady in Tartary*, Vol. I. p. 213-14. See Balti; India; Kabul; Maryul; Sikh; Skardo; Tibet.

ISLA DOS NEGROS. See Papuans.

ISLAM. The mahomedan name of the mahomedan religion, derived from the

Arabic verb, *Salim*, he was 'saved, other parts of the verb being in use as *salam*, mussulman. The repressive influence of Islam has placed shackles on the independence of human thought, stifled free inquiry, and imprisoned the intellect in the close dark cell of dogma and superstition. Islamism, is regarded by the Jews as the second great heresy of their faith.—*Out Rev.*, Feb. p. 387. See *Khajah*; *Mahomed*; *Koran*.

ISLAMABAD, on the *Jhelum*, a seat of the shawl manufacture.

ISLANDS.

Taph.....HIND. | Pulo.....MALAY.
Nusa.....JAV.

The researches of Darwin have shown that the coral polype does not build from the fathomless depths of sea which immediately surround the coral reefs and islands. He seems to imply indeed that the coral animals cannot exist at a greater depth than thirty fathoms, but, living corals exist and build compound polypidomes at far greater depths in northern latitudes. Darwin maintains that the whole area of the Pacific is slowly sinking; that all the reefs and islands are the summits of former mountains; that all the coral structures were originally attached to the land at a shallow depth, and that to whatever depth below they now extend, it is only in a dead condition, and has been effected by the subsidence of the supporting land carrying the coral with it, while the successive generations of the living polypi, ever working upwards on the old dead foundation, have maintained a living coral structure near the surface, and that nearly in the same outline, and from the original foundation. Darwin describes coral islands as of three forms; the Atoll, or Fairy ring of the Ocean, with a lagoon in the centre; barrier-reefs stretching along a vast extent of coast: and coral reefs which are merely fringes of coral along the margin of a shore. Von Buch is of opinion that the coral ring of the atoll is merely the edge of a submarine volcano, on which the coral insects have built. An atoll differs from an encircling barrier reef only in the absence of land within its central expanse; and a barrier reef differs from a fringing reef in being placed at a much greater distance from the land with reference to the probable inclination of its submarine foundation, and in the presence of a deep water lagoon-like-space or moat within the reef. An atoll sometimes constitutes a great circular chain enclosing a deep basin, but opening by one or more deep breaches into the sea. Sometimes they surround a little island by a girdle of reefs, or form the immediate edging or border of an island or continent. Atolls occur in the Pacific, in the Chinese seas, amongst the Marianne and Philippine Islands, Maldives and Laccadives, and there are also

the atolls of the Sunda group. In the eastern Archipelago and the Pacific ocean, are many of the coral islands.

ISLAND OF DIODORUS. Aden. See Aden.

ISLAND OF PERIM. See Perim. Aden.

ISM. A name, or attribute. In exorcism, amongst mahomedans, certain names (*Isim*, sing. *Isma* pl.) are used such as the *ism-jallali*, or fiery or terrible attribute also the *ism jamali*, the watery or air attribute, and with these they pretend to cast out devils, and command the presence of genii and demons.

ISM. ARAB. A noun, *Isim-ul-nisbah*, Ar. an adjective.

ISMAEL. Son of Abraham. See *Ishmael*; *Khalifs*.

ISM-I-AZAM. The great attribute of the deity.

ISM-I-JALALIA. The terrible or fiery attribute of the deity.

ISM-I-JAMALI. The amiable attribute of the deity.

ISMAD also **KOHIL**. Ar. Antimony, sulphuret of Antimony.

ISMAEL, SAMANI, a Turk, the founder of the Samani-dynasty, A. D. 862. He conquered Transoxiana, Khorasan, and Afghanistan and fixed the seat of his government at Bokhara. The Samani dynasty ruled for 120 years. It was the fifth of this dynasty who possessed a Tartar slave named Alaptagin who was made governor of Ghazni and Candahar and on the death of his patron assumed independence. Alaptagin was succeeded A. D. 970, by his purchased Turki slave Sabaktagin.

ISMAIL, the first king of the Saffavean race, ascended the throne of Persia, in A. D. 1499, and proclaimed the sheah faith to be the national religion of that country.

ISMAILI are shiah sectarians, who take their name from the imam Ismail, son of the imam Jafar Sadaq. The Ismaeli are the sect of the old man of the mountain, the Sheikh-ul-Jabl. The sect in its original form was a branch of the shiah, which was called Ismaelian, from Ismail the eldest son of the fifth Imam, whom they recognized as his father's successor in opposition to the mass of the shjahs. Their doctrine took the form of a sort of gnosticism, giving a non-natural sense to all revelation, from which they had the name also of Bathenians from *batm*, Ar. within, a word signifying "esoteric"; Hassan Sabah, son of an Arab at Rai, one of their converts in Persia, put himself at the head of the sect in that country, and about A. D. 1090 made himself master of the mountainous part of Irak Ajami, immediately south of the Caspian. This region included many strong castles, and at one time the power of

ISONANDRA ACUMINATA.

his successors extended to the gates of Ispahan. From its character the country was called by the Arabs Ballad-ul-jibal, "the Hill country," and hence the chief's title. This was also applied to the head of a branch society which had its seat in Syria and became well known to the Crusaders. The name of "Assassin" is now, by many supposed to be derived from hashish, the drug under the influence of which the emissaries of the society acted, but it is, more correctly, obtainable from Hassan Sabah, hence al-Hassani.—*Malcolm's History of Persia, Vol. I. p. 347. D'Olsson, book iv. ch. iv. Yule Cathay I. p. 154. See India; Kabul; Khajah; Khuzistan.*

ISKHES. ARAB. Daphne mezereum.

ISONANDRA, a genus of plants, belonging to the natural order Sapotaceæ, one species of the genus *I. gutta* furnishes the useful gutta percha. The genus consists of large trees, growing in Ceylon, and in the two peninsulas of India. Dr. Wight, in *Icones*, has, *I. Can-dolleana*, lanceolata, percha, *Perottetianna*, polyandra, and villosa. Thwaites mentions, in Ceylon, *I. canaliculata*, *Thw.*, a middle sized tree in the Cultura district; *I. grandis*, *Thw.*, a large tree of the central provinces and Saffragam districts from the seeds of which an oil is extracted and which is used similarly to that of the *Bassia longifolia*. He also names *I. lævifolia*; *I. pauciflora*; *I. rubiginosa* and *I. Wightiana*, as trees of moderate and large size.—*Dr. Wight Ic. Thw. En. Pl. Zeyl.*

ISONANDRA ACUMINATA. *Lindl.*

Bassia acuminata, Beddome.

Indian Gutta tree... ENG. | Pashouti ... MALEAL.
Pashouti... MALEAL. | Pali... TAM.

Grows in the forests of Coorg, the Wynaad Travancore and in the Annamali mountains. It grows to a height of 80 or 90 feet and furnishes a good wood and capable of receiving a good polish. It exudes from the trunk a substance having similar characters to the gutta percha of commerce, this is procured by tapping, but the tree requires an interval of rest of some hours or even of days after frequent incision. In five or six hours, upwards of 1½ lbs. was collected from 4 or 5 incisions in the tree. When fresh, this is of a milk color, the larger lumps having a dull red-color. The gum is hard and brittle at the ordinary temperature, but becomes sticky and viscid on the increase of heat such as that from friction in a mortar, and when this condi-

ISONANDRA GUTTA.

tion is reached it does not, until after the lapse of several days, resume its original consistence. Boiled with water it becomes of a reddish brown colour rendering the water turbid and slightly saponaceous. With some chemical reagents the behaviour of the gum was exactly like that of the gutta percha, while with others only a slight similarity was observed. After solution in naphtha or turpentine, gutta percha resumes its original condition, but the pauchonta continues viscid and sticky, and if again much cooled becomes brittle and friable as at first. It is not found applicable to all the purposes for which gutta percha is used, but 20 to 30 per cent. of it may be mixed with gutta percha, without destroying the qualities of the gutta.—*Balfour in Report of Madras Govt. Central Museum. Madras Conservator's Report, 1858, p. 6. Year Book of Facts.*

ISONANDRA CANALICULATA, *Thw.*

A middle sized tree of the Cultura district of Ceylon.—*Thw. En. pl. Zeyl. III, p. 177.*

Large tree of the Central province, and Saffragam district, of Ceylon, growing at an elevation of 3,000 to 6,000 feet. An oil is extracted from seeds which is used in the same way as that from the *Bassia longifolia*.—*Thw. Enum. pl. Zeyl. III, p. 176.*

ISONANDRA GUTTA—*Hook.*

Mazer wool tree ... ENG. | Gutta-percha tree,
Taban..... MALAY. | Niato..... MALAY.

The Gutta-percha tree, the *Isonandra gutta* of Sir W. Hooker is a native of the Malayan Archipelago, of Sumatra and Borneo, and produces the Percha which is as indestructible by chemical agents as caoutchouc. The tree flourished for centuries in its native jungles, exuding its juice only to be received by the soil, until the discovery was made, in 1842, that its gum was suited for an infinite number of applications; and now, there is scarcely any vegetable product more extensively useful, or one more generally sought after for mercantile purposes, a regular supply being of much consequence to some manufactures. Careful vigilance is needed for protecting the trees whence so valuable a product is derived, but we know that even their admitted financial value has not been sufficient to protect them from thoughtless and unnecessary waste. Dr. Montgomerie, of the Bengal Medical Establishment, transmitted specimens of this substance to England, on the 1st March 1843, and received the gold medal of the Society of Arts for its introduction, "as a new and hitherto unknown substance, likely to be useful for various purposes in the arts." It is one of the most valuable vegetable productions that has ever conducted to the

comfort and safety of mankind, or aided communities in their commercial traffic and in their hard-wrought and difficult progress to engineering perfection. Dr. Montgomerie, in 1842, observed in the hands of a Malayan woodman at Singapore, the handle of a *parang*, made of a substance quite new to him and which he found could be moulded into any form, by simply dipping it in boiling water, until it was heated throughout, when it became plastic as clay, and when cold, regained, unchanged, its original hardness and rigidity. The discovery was communicated to the Medical Board of Calcutta, and subsequently, to the Society of Arts in London, and became rapidly known to the world. Sir James Brooke reports the tree to be called *Niato* by the Sarawak people, but they are not acquainted with the properties of the sap; it attains a considerable size, even as large as six feet in diameter, is plentiful in Sarawak, and most probably all over the island of Borneo. The tree is stated to be one of the largest in the forests in which it is found. The timber is too loose and open for building purposes, but the tree bears a fruit which yields a concrete oil, used for food. Gutta Percha, in its crude state, differs, in many particulars, from caoutchouc; it is of a pale yellowish, or rather dirty white colour—it is contained in the sap and milky juice, which quickly coagulates on exposure to the air—from twenty to thirty pounds being the average produce of one tree. For collecting the sap, the trees are felled, barked, and left dry, and useless. Hence the forests will soon be cleared of the gutta trees; whereas, it is believed that a constant and moderate supply might be secured by incisions in the bark, as in the case of caoutchouc. The gutta is received in blocks, or in rolls of thin layers, being in the first place, freed from impurities, by kneading in hot water when it is left soft, plastic and of a whitish grey. When thus prepared, the gutta has many curious properties. Below the temperature of fifty degrees it is as hard as wood, but it will receive an indentation from the finger-nail. When softened in hot water, it may easily be cut and moulded, and it will harden as it cools to its former rigidity; and it may be softened and hardened any number of times, without injury to the material. Unlike caoutchouc, it has little elasticity, but it has such tenacity that a slip, one-eighth of an inch substance, sustained 42 lbs. weight, and only broke with a pressure of 56 lbs. When drawn out, it remains without contracting. It has been made subservient, to the manufacture of tubings, mouldings for picture-frames, catheters, and other surgical instruments, whips, thongs, cricket-balls, driving bands or straps for mechanic purposes, soles for boots and shoes. In solution, also, like

caoutchouc, for water proofing cloth; it is likewise employed in mastics, cements, and is burnt and made into printing ink and paint, &c.—*Tomlinson*.

ISPAHQOL. Ispagula or Ishabghol. PERS. Seed of Plantago.

ISPAHAN, the former capital of Persia, is a very ancient city. An attempt has been made to identify it with Ecbatana, the capital of ancient Media; but the arguments in favour of this supposition are more ingenious than sound. Ecbatana was probably modern Hamadan. Ispahan occupies the central part of an oval plain, which is enclosed by a range of mountains, presenting a singularly serrated outline, the lowest part is on the N. E. and the highest on the S. W. side of the city. From an elevated pass leading through the rugged and rocky belt on the latter side, there is obtained a fine view of this mountain basin, whose circumference is about 30 miles. A distance of about 12 miles separates the mountains on the western side from those of the eastern: the shorter diameter being about 8 miles. It is well watered by the tortuous Zend-rud, which flows through it rather southward of its centre. Its foreign imports, embrace objects of commerce from India or Europe, but the cotton and silk stuffs, the velvets, glass, pottery, &c., of the country are obtainable in its bazaars. At a period not very remote, Ispahan contained upwards of 600,000 souls; but its population latterly decreased to 150,000. The north and north-eastern parts of the city are less deserted than those to the south and west.

As the people of Shiraz are notorious for turbulence and blackguardism, so are those of Ispahan for obsequious flattery and deceit; in these all Persians are wonderful adepts, and desperate and unfathomable liars, but the citizens of Ispahan surpass the rest of their countrymen in this vice. The Afghans under Mir Mahmud in 1722, besieged Ispahan. The horrors of this siege, equal to any recorded in ancient history, have been described by the Polish Jesuit Krusinski, who personally witnessed them and they are noticed in the "Histoire de Perse depuis le commencement de ce siecle," (the eighteenth), of M. la Mance Clairac, on authorities which cannot be disputed. The inhabitants of Ispahan were compelled by famine to devour not only mules and horses, but dogs and other creatures which their religion taught them to consider as unclean. A woman endeavouring to strangle a cat was heard to exclaim at every scratch or bite that she received "Thou strivest in vain, I'll eat thee notwithstanding." The leaves and bark of trees were ground into a kind of meal and sold by weight, shoe leather was boiled and used as food; at length human flesh became the chief support of many miserable wretches, who for a while were content with what they could collect from bodies that filled the public streets; but some were induced to murder their fellow citizens, and, it is even said, that parents killed and devoured their own children. From the MS. memoirs of Ali Hazin, we learn that "a crust or lump of bread was sold at so high a price as four or five gold asrafi." A pound of bread, according to Krusinski, attained, in September, the price of thirty shillings; and, in October, of above fifty. Among the calamities of this memorable siege, Ali Hazin laments the destruction of his library which comprised about five thousand volumes, Arabic and Persian, many enriched with the marginal notes of his learned ancestors.—*History of the Revolution of Persia, published by the Pere du Cerceau, quoted in Ouseley's Travels, Vol. iii. p. 44-45.*

ISPAND. PERS. The seed of the Lawsonia inermis, in Persia burned at marriages.

ISPAT. HIND. Steel.

ISPRINJI, a town of Baluchistan, occupied exclusively by the Bangolzye Baluch who also spread into Shahl and Mustang and in winter repair to Talli, near Lehri.

ISPRUK, a coarse powder made from a species of Delphinium, growing in Afghanistan, used in dyeing.—*Simmond's Dict.*

ISRAEL. HIND. Aristolochia Indica.

ISRAEL. Though Jews were Israelites, yet the Israelites were not Jews. The word Jew

{Judæus) is really "Judæan," and dates only from the return from Babylon, when the tribe of Judah became the head representative of the nation. The Samaritans always call themselves the children of Joseph, and the Jews Yehudim, or Judæthites.—Among the Israelites, the whole subject of another life was thrown so completely into the shade that we are left in doubt whether the noblest minds amongst them even believed that there was any future for the human soul, or any knowledge or device or wisdom in the grave. They remained 400 years in bondage to the most deeply believing nation, and adopted from their masters all manner of opinions and ceremonies, yet remained apparent exceptions to the whole human race in their absence of belief in immortality. Most of their customs, related to this life; the blood sprinkled on the door-posts of Israel in Egypt was a sign that the destroying angel was not to enter, the inmates being under the divine protection. A similar preserving token is referred to in Ezekiel ix. 4, where the man "clothed in linen," having a written inkhorn by his side, is commanded by God to set a "mark" upon the foreheads of those who grieved for the abominations of Jerusalem. "Behold my sign!" says Job xxxi. 35, according to the marginal reading; or, "Behold, here is my 'Thau'" (a mystic mark), as Calmet renders it, evidently referring to some distinctive badge which he wore; and Paul, probably alluding to some acknowledged sacred sign, observes "henceforth let no man trouble me for I bear in my body the marks of the Lord Jesus." Portions of St. John's Gospel were worn by the early Christians, and verses of Scripture were even placed upon horses. Goshen, where the Israelites were allowed to pitch their tents and tend their flocks, was in Ramesses or Heliopolis, derived from the word Goshie, or upper lands, perhaps, they called it the land of Goshen. They were Shemmo, or strangers in the land, and hence the Israelites called themselves the children of Shem.—*Sharpe's History of Egypt, Vol. I. p. 38.* See Kurdistan; Serpent.

ISRAHJI, according to mahomedan belief; the angel who will sound the trumpet at the last day.

ISKANJ. ARAB. ? Red lead. Cinnabar.

ISKI-VEL. SANS. Aristolochia Indica, L.

ISREE, a cotton fabric. Vizagapatam Isree; Nellore white Percalah, and Jyempettah Sooccy are of accurate workmanship.—*Jur. Rep. M. B. of 1855.*

ISSEEDONES. See Kedah.

ISSUM. RUS. Raisins.

ISTAKHAN. PERS. Bones.

ISTAKHR. An isolated hill north-west of Persepolis, having a fort which seems to have served as a state prison. This isolated hill is the key of the pass which opens into the plain of Persepolis, from the hilly country of Ardekkan. Istakhr or Persepolis was always a favoured spot with the ancients. It was the cradle of the Ahmed race, and it was in its vicinity that Yezdijird on his return from Khorasan placed himself for the last time at the head of his subjects, and was defeated by Abdullah, the son of Omar in A. D. 650. The *Sharf Nameh* or History of Kurdistan, represents the castle of Istakhr as a state prison in which Ahmed was confined during the space of ten years. Among the celebrities of Istakhr, we may mention the famous impostor *Mazdae*, who propagated the absurd doctrine of the community of women, which in the early part of the nineteenth century was renewed by the Saint Simonians. *Mazdae* was a native of that town, and flourished in the reign of the Kasanian monarch Kobad, in the sixth century of the Christian era. *Quarley's Travels, Vol. II. p. 404.* *Buron C. A. De Bode's Travels in Kurdistan, and Arabistan, p. 165.* See Fars; Kabul.

ISTALIF, a town in Afghanistan, in one of the most picturesque spots which can be conceived; all that a combination of natural beauties can achieve are beheld here in perfection. It is, near Kabul, to the north, and is celebrated for its gardens. The inhabitants of the surrounding country are Tajik and are turbulent and vindictive. The hills produce good pasture. The houses are erected along the skirt of the mountain. Near this place is a beautiful village called Istargich, on the way to Charikar. This latter place is larger than any other town in the valley, but is not handsome. The emperor Baber, in his Memoirs, thus describes the Reg-Rawan or moving sand. Between the plains there is a small hill, in which there is a line of sandy ground, reaching from the top to the bottom. They call it Khwajah Reg Rawan; they say in the summer season the sounds of drums and nugareh issue from the sand.—*Mohun Lal's Travels, p. 460.* *Masson's Journeys, Vol. iii. p. 120.*

ISTAQBAL, the mahomedan courtesy of advancing to receive a distinguished guest. A deputation is usually sent forward to meet, welcome, and conduct to the lodgings prepared for him, any stranger or guest to whom it is designed to pay high respect; and the more numerous and higher in rank the persons of whom this deputation is composed, the greater is the honor conferred. In the courtesies of mahomedans a host advances to receive a visitor and on his departure conveys him (murejat) to

the same spot.—*Fraser's Journey into Khorasan*, p. 121.

ISTARAKAH. The Zinat al Majalis describes the castle of Istarakah, as one of Jamashid's works.—*Ouseley's Travels*, Vol. II. p. 404.

ISTARAKU PALA. TEL. Holarrhena-tidisenterica.—*Wall.*

ISTIBEDSH. TURK. White lead.

ISTRABRI. HIND. corruption of the word strawberry. Few mahomedans being able to pronounce letter "s" followed by a consonant, without prefixing the letter i.

ISTAFLIN JAZR. AR. The carrot, *Daucus carota*—*Linn.*

ISTARA KULA PALEM. TEL. *Holostemma rheedianum*, Spr.—*W. Ic.*

ISVARA VARMA. See Inscriptions.

ISVARA. TEL. *Aristolochia Indica*.—*Linn.*

ISWARA, in Sanskrit, signifies "Lord" and in that sense, is applied by the hindoos, to three forms, Brahma, Vishnu and Siva, whom they adore, or rather to each of the forms in which they teach the people to adore Brahm or the supreme being. The Puranas say that Brahma, Vishnu and Siva were brothers, and the Egyptian triad, Osiris, Horus and Typhon were brought forth from the same parent, though Horus was believed to have sprung from the mysterious embraces of Osiris and Iris before their birth: as the vaishnava hindoos also imagine that Hara, sprang mystically from his brother Huri or Vishnu. The Osiris of the Egyptians is the analogue of Vishnu, both being black, and according to the Puranas, Vishnu on many occasions took Egypt under special protection. Krishna was Vishnu himself according to the most orthodox opinions of the vaishnava sect. The title Sri Bhagavat, importing prosperity and dominion, is applied to Krishna, and the black Osiris had also the titles of Sirius, Scirius and Bacchus. It is related that Osiris and Bacchus imported from India the worship of two divine bulls, and in this character he was Siva whose followers were pretty numerous in Egypt. The bramans give to Brahma, the colour red; and by the Egyptians, the same colour is given to Typhon or Mahadeva, and both are named Iswara. Iswara attempted to kill his brother Brahma, who, being immortal, was only maimed; but Iswara finding him afterwards in a mortal shape, in the character of Daksha, killed him as he was performing a sacrifice. Mr. Wilford discovers in this the story of the death of Abel; and offers very

learned and ingenious reasons for the belief.—The number three is sacred to Iswara, or Siva, chief of the Tri-murti or Triad, whose statue adorns the junction (Sangum) of all triple streams; hence called Triveni, who is Trinetra, or three-eyed; and Tridenta, or 'god of the trident; 'Triloca god of the triple abode, heaven, earth and hell; Tripura of the triple city, to whom the Tripoli or triple gates are sacred, and of which he has made Gane's the janitor, or guardian. The grotesque figure placed by the hindus during the saturnalia in the highways, and called Nat'ha-Rama (the god Rama), is the counterpart of the figure described by Plutarch as representing Osiris, "ce soleil printanier," in the Egyptian Saturnalia or Phamenoth. Even Ram-isa and Ravana may, like Osiris and Typhon, be merely the ideal representatives of light and darkness, and the chaste Sita, spouse of the *Surya* prince, the astronomical Virgo, only a zodiacal sign. Iswara or lord, and Mahadeva, or great god, are synonymous, and are claimed by both vaishnava and saiva hindoos, as appellations of their respective deities Vishnu and Siva, and, in this view, their Vishnu or their Siva are their Supreme Creator. In the doctrines of the Sri Sampradaya, a sect of hindus, "Chit" means the "spirit" of Vishnu, this, with "achit" or matter and iswara god, or ruler, being the three predicates of the universe. In their views, Vishnu is Brahma, before all and creator of all. Iswara, the lord, is the practical deity in the vedanta. See Argha; Kala; Kali; Kartikeya; Priyanath; Siva; Vageswari; Vidya; Yavana.

Ivory is obtained from the tusks and teeth of the elephant, the narwhal, the walrus, and the hippopotamus. The best and largest supply is however from the elephant.

The male elephant when full grown has two tusks, varying very greatly in size in different animals, but most valued when they are large, straight, and light in colour. These tusks are hollow at their insertion into the jaw, and for a considerable space therefrom, but become solid as they taper towards the extremity. The principal sources whence they are obtained are the western coast of Africa and the East Indies; but the African tusks are most esteemed, as being denser in texture, and less liable to turn yellow. By an analysis, the African show a proportion of animal to earthy matter, of 101 parts to 100; while in the Indian it is 76 to 100. The applications of ivory are so numerous that a large demand of elephants' tusks has existed for a lengthened period. The imports into Great Britain amounted in 1831 and 1832 to 4,130 cwts., of which 3,950 cwts. were retained for home consumption. Now, reckoning the medium weight of a tusk at about sixty pounds, it is evident that the imports of these years would require 7,709 tusks, or the destruction of 8,854 male elephants. But since that period the imports have so greatly risen, that in Sheffield alone 180 tons or 3600 cwt. of ivory are worked up annually into knife-handles, &c. It is also affirmed that of the quantity of tusks imported although some weigh from 60 to 100 pounds, yet the number of small tusks is so enormous, that an average weight of nine pounds can only now be reckoned on; in which case 45,000 tusks, from 22,000 elephants are required to supply the demand of this great cutlery mart of England. Sheffield alone, has been said to consume the ivory of 20,000 elephants, but this seems an over calculation. Occasionally, broken or shed tusks are collected, or those of animals which die a natural death are obtained; but the supply from these sources is never very large, so that the slaughter of elephants, after all deductions made, is going on at a rate which leaves it a constant wonder that the breed of this noble animal has not been sensibly diminished. Ivory is wrought into the forms of chess-men, billiard-balls, the keys of musical instruments, thin plates for miniatures, mathematical and other instruments, and an immense variety of small objects of use, amusement or ornament. At Zanzibar and on the East Coast of Africa, tusks weighing 100 lbs. each are common; those of 175 lbs. are not rare, and a pair has been seen whose joint weight was 560 lbs. Lately about one million have been annually imported into Britain, which, taking the weight of a tusk at 60 pounds would require the slaughter of 8,333 male elephants. The tusks of the hippopotamus afford a very hard and white ivory. These

are usually short and much curved, hollow at the place of insertion, and covered with a glossy enamel. They vary in weight from three or four pounds to thirty. These are highly prized by the dentists, and are better adapted than any other ivory for making artificial teeth. The thick coat of enamel which covers them has first to be removed, for this entirely resists steel tools, and under it is found a pure white ivory, with a slight bluish cast. The parts rejected by the dentists are used for small carved and turned works. The horn or tooth of the narwhal is also hard and susceptible of a fine polish. The largest size is ten feet long; at the lower extremity it forms a slender cone of a twisted or spiral figure. Fossil ivory supplies almost the whole of the ivory-turner's work made in Russia. Along the banks of the larger rivers of the Russian empire, and more particularly those of further Siberia, thousands of tusks are annually dug up, which once constituted the weapons of defence of a species of mammoth now extinct. These have not undergone the changes usually understood in connexion with the term fossil, their substance is as well adapted for use as the ivory procured from living species. So numerous are these tusks, that they are occasionally exported from Russia, being cheaper than recent ivory. They are rarely to be met with in England, except in museums. Mention is made, however, of one which measured 10 feet in length, and was solid to within 6 inches of the root, weighing no less than 186 lbs.: this was cut up into keys for piano-fortes. African ivory, when first cut, is mellow, warm, and transparent, almost as if soaked in oil, and with very little appearance of grain or fibre, the oil dries considerably by exposure, and a permanent tint then remains, a few shades darker than writing paper. Asiatic ivory is more dead-white at first, but is more disposed of the two to turn yellow afterwards. Ivory comes to China principally from Cochinchina and Africa, via Bombay, and always finds a ready sale at Canton; the largest and best tusks weigh from 16 to 25 pounds each, decreasing to five or six pounds. The cuttings and fragments also form an article of trade, as the workmen can employ the smallest pieces. Bones and horns, especially the long horns of buffaloes, are in China worked into handles, buttons, &c. Rhinoceros' horns are brought from Burmah, from Sumatra, and from Africa through Bombay; they are highly valued by the Chinese from a notion that cures made from them sweat whenever a poisonous mixture is poured into them. A perfect horn sometimes sells as high as \$300, but those that come from Africa do not usually rate above \$30 or \$40 each. The principal use of these horns is in

medicine and for amulets, for only one good cup can be carved from the end of each horn; and consequently the parings and fragments are all preserved. The hard teeth of the walrus, lamantin, and other cetaceous animals, also form an article of import into China from the Pacific, under the designation of *sea-horse* teeth; they weigh one or two pounds a piece, and the ivory is nearly as compact, though not so white, as that of the elephant.—*Tomlinson; Hollanppel; Hon'ble Mr. Morrison's Comp. Desc. Madras Exhibition Juries Rep; Hamilton's Sinus, Blackwood's Magazine, March 1858.*

IVORY CARVINGS, from different parts of India are much to be admired whether for the size or the minuteness, for the elaborateness of detail or for the truth of representation. Among these the ivory carvings of Berhampore are conspicuous. A set of chessmen from India at the Exhibition of 1851, carved from the drawings in Layard's "Nineveh," were excellent representations of what the workmen could only have seen in the above work and showed that they are capable of doing new things when required; their representations of an elephant and other animals were true to nature. The carvings in the same material in a state chair sent from Travancore were greatly admired, and, from the truth of representation, on a minute scale, where an elephant was enclosed in the shell of a pea, from Calicut. Chouries, or fly-flappers, where the ivory, or sandal-wood, is cut into long hair-like threads, are also specimens of their mechanical skill. The delicate carving of Chinese workmen is well known and has often been described; many specimens of it are annually exported. Few products of their skill are more remarkable than the balls, containing ten or twelve spheres cut out one within another. The manner of cutting these is simple. A piece of ivory or wood is first made perfectly globular, and then several conical holes are bored into it in such a manner that their apices all meet at the centre, which is usually hollowed out an inch or less after the holes are bored. A long crooked tool is then inserted in one of the conical holes, so bent at the end and stoppered on the shaft that it cuts the ivory at the same distance from the surface when its edge is applied to the insides of the cone. By successively cutting a little on the insides of each conical hole, their incisures meet, and a spherical is at last detached, which is now turned over and its faces one after another brought opposite the largest hole and firmly secured by wedges in the other holes, while its surfaces are smoothed and carved. When the central sphere is done, a similar knife, somewhat larger, is again introduced into the holes, and another sphere

IVORY CARVINGS.

detached and smoothed in the same way, and then another, until the whole are completed, each being polished and carved before the next outer one is commenced. It has been supposed by some that these curious toys were made of hemispheres nicely luted together, and they have been boiled in oil for hours in order to separate them and solve the mystery of their construction. Fans and card cases are carved of wood, ivory, and mother of pearl in alto-relievo, with an elaborateness which shows the great skill and patience of the workman, and at the same time his bad taste in drawing, the figures, houses, trees, and other objects being grouped in violation of all propriety and perspective. Beautiful ornaments are made by carving roots of plants, branches, gnarled knots, &c., into fantastic groups of birds or animals, the artist taking advantage of the natural form of his materials. Models of pagodas, boats, and houses are also entirely constructed of ivory, even to representing the ornamental roofs, the men working at the oar, and women looking from the balconies. Baskets of elegant shape are woven from ivory splinths; and the shopmen at Canton, exhibit a variety of seals, paper knives chessmen, counters, combs, &c., exceeding in finish and delicacy the same kind of work found anywhere else in the world. The most elaborate coat of arms, or complicated cypher, will also be imitated by these skilful carvers. The national taste prefers this style of carving on plane surfaces; it is seen on the walls of houses and granite slabs of fences, the wood work of boats and shops, and on articles of furniture. Some of it is pretty, but the disproportion and cramped position of the figures detract from its beauty. The ivory carving, ebony and other hard wood ornaments, the bronzes and porcelain specimens of China are all exquisitely worked.

In the eleven years, 1850-1, to 1860-1, the exports from British India of ivory and ivory-ware, principally to Great Britain, China and America were as under :

Years.	Cwt.	Tons	£ Value.	Years.	£ Value.
1850-1	2809	140	43,086	1855-6	82,334
—1-2	4836	242	90,139	—6-7	128,096
—2-3	56,035	—7-8	19,805
—3-4	79,954	—8-9	98,157
—4-5	66,921	9-1860	97,126
				1860-1861	82,138

Tusks are largely imported into Bombay from the African Coast, Zanzibar, &c., and are chiefly re-exported to England. The natives of India, also, display great skill and neatness, as well as habitual taste, in their work boxes of ivory, horn or porcupine quill, ebony and sandalwood, their fans and umbrellas, chouries, and khushkhus or other baskets, hookah-snakes, imitation fruits

IVORY CARVINGS.

and flowers, toys and puzzles. The elegant carving of the Chinese, in ivory, and the cheapness of the articles, causes a large sale of the most useful to all parts of the world. Fans, seals, paper-knives, chessmen, &c., &c., are exported principally to the United States, to India, to South America, Europe, &c. Under the old system, 100 ivory fans were estimated to weigh 6 cati, 4 tael and paid 6½ mace duty. Of the Chinese manufactures in ivory, the most elegant are camp baskets, consisting of several pieces placed upon each other, surmounted with a handle, richly carved :—Work baskets of various shapes ;—Fans some in open work ; others with figures and ornaments raised, or in relief :—Hand Screens wrought in a similar manner :—Card Racks, &c. But the most singular article is the wrought ball, which contains from nine to fifteen internal globes, one within another, wrought from a solid piece of ivory, through apertures not more than half an inch in diameter. Fine ivory carved work can be executed in Shorapore, in the Dekhan, of a peculiar and very delicate description. This consists of figures of deer and birds, flowers, as also combs, large and small, cups, &c., &c. Any orders for which would be executed with peculiar care. It would be impossible to define the prices of these articles, as they would depend upon the size and work required. At the Madras Exhibition of 1855, a very interesting and complete series of carvings in ivory was exhibited by the rajah of Travancore. It comprised many of the common animals, reptiles, fruits and flowers of the country, all carved with taste and carefully finished. There was a good deal of grace and spirit in the action of the animals, some of which were in natural attitudes particularly a bull and cow, two deers, a cheeta and a rabbit. Of the reptiles, a frog and lizard were well represented, and a pair of paper cutters with ornamental handles were particularly deserving of notice, one for the judicious adaptation of a common garden flower to the design, and the other of a lizard in a spirited attitude. The fruits and flowers were well represented and the whole series evinced a perception of the natural beauties of the objects represented. The ivory of Madras exported is lbs. 4,310, value Rs.71,507. The largest pair of elephant tusks sent to the exhibition, weighed 130 pounds, obtained from a wild elephant killed in the Travancore forests. One tusk weighed 71 pounds, the other 67 pounds, and showed a fine white compact kind of ivory ; of these two, one measured 6 feet 8 inches in length, and the other 6 feet 6 inches, the circumference at the base being 17 inches in each case. The domestication of the elephant is usually attended by deterioration of the length and quantity of the ivory. Ivory

painting is carried on with unequalled success at Delhi, as is also the art of making jewellery in the European fashion.—*William's Middle Kingdom*, Vol. II., pages 141 and 408. *Yule's Embassy*, p. 59. *Hodgson's Nagasaki*. *Hon'ble Mr. Morrison's Compendious Description*. *Mad. Ex. Sur. Rep.* See Carving.

IVORY PALMS.

Palme de marfil... *Span.* | Homers, Indians of Peru
Tagua, Indians of Magda- | Pullipunta " "

The ivory palm is the *Phytelephas macrocarpa* or *P. microcarpa*, a tree of S. America between Lat. 9° N. and 8° S, and L. 70° to 79° W. It inhabits damp valleys, banks of rivers and rivulets on the lower coast region in Darien and on mountains 3,000 feet above the sea in Oceana. This interesting palm-tree is generally found in separate groves seldom intermixed with other trees or shrubs. The fruit, a collection of from six to seven drupes, forms clusters which are as large as a man's head and stand at first erect, but when approaching maturity its weight increasing and the leaf stalk which had, up to that period, supported the bulky mass having rotted away, it hangs down. A plant bears at one time from six to eight of these heads each weighing when ripe about twenty-five pounds. The drupes are covered outside with hard woody protuberances. Vegetable ivory is exported chiefly from the river Magdalena and in some years no less than 150 tons of it were imported into England. and 1,000 nuts may sell in London for seven shillings and six pence. The Indians use its leaves for thatch. The seeds at first contains a clear insipid fluid with which travellers allay their thirst; afterwards, this same liquor becomes milky and sweet and it changes its taste by degrees as it acquires solidity until at last it is almost as hard as ivory. The liquor contained in the young fruits turns acid if they are cut from the tree and kept sometime. From the kernels (albumen) turners fashion the knobs of walking sticks, the reels of spindles and little toys which are whiter than animal ivory and equally hard if they are not put under water, and if they are they become white and hard when dried again. Bears, hogs and turkeys devour the young fruit with avidity. This useful plant might be introduced into India.—*Seaman in Botanical Magazine*, May 1856, page 192.

Jilpal, "	Putta pala, "
Koora, MAHR.	Tedda, "
Sonde cottay, TAM.	

A small tree, common in the jungles and on the ghats of the Bombay coast; but seldom sufficiently long or straight for household purposes. It grows in the Godavery forests, in the Circars at Nagpore and in Bengal, and on the banks of tanks at Kotah. The flowers are very sweetly scented and it blossoms in the hot weather; and would form a very fit ornament for gardens and pleasure grounds. It furnishes a hard but very small wood, rather of good quality, which is sometimes used for beams and posts in the houses of the poor of the Madras presidency; but, throughout India, it is more used for torches than for any other purpose, as it burns very readily and clearly, and on that account its branches are often made into torches by people travelling at night.—*Voigt. Gibson. Ainslie*, pp. 179, 203. *Irvine. M. E. J. R. Captain Biddome. Flor. Andh.*

IZESHINE or **YASSEN**, a religious book of the Parsee or Zoroastrians.

IZASHNE. See *Sudra*.

IZNEE, a fuger who acts as a messenger.

IZNEE SHAH, a mohurram faqeer.

IZ-UD-DIN HUSSAIN, the founder of the Gori dynasty, was a native of Afghanistan. While an officer of rank of Musasood, son and successor of Mahmud, he married his master's daughter and received the province of Gor, A. D. 1151 or 1152. His son Ala-ud-din completed the overthrow of the Ghaznavi dynasty, by the defeat of Bahram, the last king, who fled into India, the real founder of the Gori dynasty, at Delhi was a prince, Sahib-ud-din who took the title of Mahomed.

IZZA. CHALD. Goat.

In the English alphabet, this letter has only one sound, as in jam, jelly, job, just; and, the Tamil excepted, each of the oriental languages has a letter with a similar sound. The letter j has a different sound in the languages of the other European nations, from that of the English; and the French obtain the English sound by prefixing the letter d, thus djam'l for jam'l, a camel; djab'l for jab'l, a mountain. The Germans give to this letter the sound of y, and have proposed to obtain the sound of the English letter j by using an accented g'. The people of Egypt often give to this letter the sound of s, and those of Yemen give it the sound of hard g, so that jab'l is pronounced gab'l, and jam'l is pronounced gam'l.

JAB. HIND. Saccharum, *Sp.*

JABA. SANS. Hibiscus rosa-Chinensis.—*Linn.*

JABAD. MALAY. Civet.

JABAL. AR. A mountain.

JABAL-ARAFAT, anciently called Jabal Ilal, the mount of Wrestling in Prayer, and now Jabal-ur-Rahmat the "Mount of Mercy," is a low pointed hillock, of coarse granite split into large blocks, with a thin coat of withered thorns, about one mile in circumference and rising abruptly from the low gravelly plain—a dwarf wall at the southern base forming the line of demarcation—to the height of 180 or 200 feet. It is about a six hours' march, or twelve miles, on the Taif road, due east of Meccah. Near the summit, is a white-washed mosque with a minaret, looking like a small obelisk: below this is the whitened platform, from which the preacher, mounted on a dromedary, delivers the sermon, to be present at which is an essential part of the mahomedan pilgrimage to Meccah.—*Hamilton's Senai, Hejaz, and Soudan*, p. 131. *Burton's Pilgrimage to Meccah*, Vol. iii. p. 252, 257.

JABAL DIBAVAND, a mountain in Persia, rising about 10,000 feet above the sea level, near Rai, the ancient Rhagæ.

JABAL HAOURAN. The waters of the Nahr-uz-zerka, the Jabbock of the Scriptures, first collect to the south of jabal Haouran at this point, they enter the jabal Belka, and after winding through the wadys in a westerly direction, finally empty themselves into the Shariat-ul-Kabir (the Jordan).—*Robinson's Travels*, Vol. ii. p. 171.

JABAL SHAMSAN, the highest wall of the Aden crater, where Cain is supposed to have been buried.

JABAL-UL-JUDA, Aghri Dagh, or Mount Ararat, the Ararat of modern geographers,

in the provinces of Erivan is in height about 16,200 feet. In the last volume of *Cosmos*, Humboldt records the height of Demavend at 19,715 feet, which is but 1,785 feet under the height attributed to it. According to other authorities, Ararat is only 17,112 feet high. General Monteith, who passed three years at the foot of mount Ararat, used many means to ascertain its elevation, and made it 16,000 feet above the level of the Araxes. At a distance it has a resemblance to a ship. It is called by Armenians mountain of the Ark, and by others, the Mountain of Noah, Agridagh being the name given to it by the Turks; and the Armenians also call it Macis: but all unite in revering it as the haven of the great ship which preserved the father of mankind from the waters of the deluge. Ararat is called by the Arabs, jabl-ul-Judi and by the Armenians, also, massissinsar, or mountain of the ark. Berosus and Alexander both declare that in their time it was reported that some planks of the ark remained on this hill, at the date of the accession of the Abbasside caliphs A. D. 749.—*Porter's Travels*, Vol. I. p. 183. *General Monteith's Report*. See Iran.

JABAL ZABARAH. In Egypt, the Samaragdus Mons of the ancients, has the famous emerald mines which were worked 1650 B. C., in the time of the Great Sesostris II, by extensive galleries. It was again worked in the early part of the reign of Mahomed Ali, pacha, and recently a British Company undertook it. The mines were on the Kosseir road from Koptos to Aenum (Philoteræ). Wellsted thinks (*Trav.* ii. 323), that the locality indicated by Bruce was the island of Wadi Jemal, and that the Arabs had so called it, because of its proximity to the only emerald mines on the adjacent continent. Emeralds are now brought from Egypt, Germany, from the Altai mountains; the finest from New Grenada where they occur in dolomite, and, as is said, from India.—*Bunsen's Egypt*, *Wellsted*, ii. 303.

JABAT. MALAY. Castor.

JABER CASTLE. See Mesopotamia.

JABLI, Hill bedouins near Lahej.

JABL MALAN. See Kelat.

JABLOKI SEMLENUE, also, Patata, Rus. Potatoes.

JABLONNOI. In 1842, the territory between the Jablonnoi mountains and the northern bank of the Amoor was ceded to Russia by the Chinese.

JABLOTA. HIND. Jatropha curcas.

JACANA.

JABLPUR, a town in the central provinces of India in L. 23° 9' 7" L. 79° 56' 3" in Malwa. It is a large military station, 1½ miles from the right bank of the Nerbudda. The dak bungalow is 1,386 feet above the sea.—*Schb. Ad. See Kol.*

JABOONA. A river of Kishnagurb, in Nudda.

JABUNSERIE. A river near Kolahattie in Ruugpoor.

JABRAL, at Oomraoti in Berar, the deities worshipped are named as under,—

Male deities.	Female deities.
Jabral Abrai.	Asra or Aurai.
Massoba.	Meskal.
Bahram.	Amba.
Mahadeo.	Marri.
Shadawal.	Satwai.
Kaudoba.	Agachi Panna and her sister.
Worba.	Jana Bai.
Yetoba.	

Jabral is worshipped at and near Ellichpur and seems to be the angel Gabriel, whom mahomedans style Jabrail. In the alliterative habits of the orientals the term Jabral abrai is commonly used and the silver figure, that of a man, is worn around the neck. Near Oomraoti, also, is a rag tree, with incense on altars of mud at its foot, which the dher of Balgaon said was a Jabral.

Sakinath, is a deity of Oomraoti, whose worship protects from snakes.

In the Chauki pass, in the Lakenwara range, which forms the watershed between the Godavery and the Taptee, about 10 miles north of Aurungabad, there is a shrine of the deity called Massoba to which from a circle of a hundred miles, people of all castes resort, brahmin and sudra and dher, but chiefly the Mahatta kunbi. The jatra is held in the month Cheita, and lasts for four days, during which many sheep are offered in sacrifice. It is in the southern side of the pass, a mere block of stone, with smaller blocks at its foot all smeared with red lead. The objects of their visits are wholly personal, beseeching the deity to give or preserve, their children, their flocks or their food.

JACANA. This singular bird is a native of the N. W. Himalayas and of China and is distinguished not less by the grace of its form than by its adaptation to the localities for which nature has allotted it. Formed for traversing the morass and lotus covered surface of the water it supports itself upon the floating weeds and leaves by the extraordinary span of the toes aided by the unusual lightness of its body. Like the moorhen, of whose habits and manners it largely partakes, it is doubtless capable of swimming, the long and pendent tail feathers being elevated so as not to dip in the water. Its scientific

JACK TREE.

name is *Para sinensis*. It may be seen in the North West Himalaya squatting on the broad leaves of the lotus, *Nelumbium speciosum*, and marsh marigold (*Caltha palustris*). Its flight is not strong, and is composed of many flaps; the call is rough, like that of the water-hen. The curved tail feathers, the brilliant yellow patch on the hind part of the neck, and shining brown of the back, white wings more or less tinged with black, will at once serve to distinguish it.—*Adams, Williams' Middle Kingdom, p. 263.*

JACHANT. Rus. Sapphire.

JACHTA. Por. Russia leather.

JACI. HIND. *Jasminum grandiflorum*.

JACK. Dr. William Jack was appointed to the Bengal Medical Service in 1813, and was in the earlier part of his career employed in the ordinary duties of his profession. During the Nepal war of 1814-15 he was attached to the army under General Ochterlony, and had an opportunity of seeing the outer valleys of Nepal, a country which at that time was a terra incognita to science. In 1818, while at Calcutta, on a visit to Dr. Wallich, he met with Sir Stamford Raffles, the Governor of the British settlements in Sumatra, who offered him an appointment on his staff, promising him every facility for the exploration of the natural history of that island. The eastern or Malayan Peninsula of India was unknown botanically till it was visited by Jack, whose descriptions of Malayan plants were published in the *Malayan miscellanies*, and have been reproduced by Sir William Hooker in the companion to the *Botanical Magazine*, and by Dr. McClelland in the *Calcutta Journal of Natural History*. Unfortunately his career was a very short one, as he sank under the effects of fatigue and exposure on the 15th September 1823, on board the ship on which he had embarked on the previous day to proceed to the Cape of Good Hope.—*Hooker and Thomson, Fl. Indica.*

JACKA, MAL. The fruit of the *Artocarpus integrifolia*.—*Linn.*

JACK IN THE BOX. ENG. *Hernandia sonora*.—*Linn.*

JACK TREE. ANGLO-MALAY, the *Artocarpus integrifolia*. The dye obtained from its wood, as prepared by the natives, is a brilliant orange yellow, and is obtained by the addition of an infusion made from the leaves of the 'Don-yat' producing a brilliancy of colour not excelled by the best English dyes. The new sacerdotal dress of the Poongyees or buddhist priests of Burmah evince the effect of this process, and the dyed article will be found to surpass most of the British range of dyes of its class, and as a process not requiring the application of any of the metallic

bases as a mordant, the jack-wood dye would doubtless become an article of inquiry and of consequent standard value.

JACKAL.

<i>Canis aureus</i> , <i>Linn.</i>	<i>Lupus aureus</i> , <i>Kempfer.</i>
<i>Canis aureus</i> <i>Indicus</i> , <i>Hodg.</i>	
Nari CAN. TAM.	Jackhals DUT.
Jackal ENG.	Kola MAHR.
Shigal DUK. PERS.	Brigala SANS.
Nakka TEL.	

The jackal is found in a great part of Asia, in Syria, Arabia, Persia and in all India west of the Brahmaputra. Over South eastern Europe, Central and Southern Asia, both the jackal and the hyæna are more or less plentiful, affecting also the mountainous regions to pretty high altitudes. Along the line of the Ganges, in lower Bengal, they move in packs and eat indiscriminately. In the Peninsula, they are of larger size, are seen singly or in pairs, and in the Dekhan, live much on wild fruits, the coffee bean of the plantations is largely eaten by them. Their cry when moving at night is very disagreeable, and even when clicketing their call is unpleasant. Among mammals, the jackal, hyæna, domestic swine, and dog; and among birds, vultures, kites, crows, minas, and the adjutant bird *Leptoptilos argula*, *Gmel.*, are the chief carrion eaters of south Eastern Asia. The jackal and hyæna are of nocturnal, bold and stealthy, habits and though the hyæna hunts generally singly; the jackal does so in packs, and anything in the way of flesh, putrid or otherwise, is acceptable. The swine, the buffalo, the cow, the bullock and even sheep, in many parts of India are driven daily to the purlieus of the towns. The cry of the jackal is peculiar; it is composed of a succession of half-barking, half-wailing cries, on different notes. When properly pronounced there is no better illustration of it than the following words, set to the music of the animals voice:—

—A dead hindoo! A dead hindoo!
—Where-where? where-where?
—Here-here; here-here?

The jackal in the peninsula of India and in the low country of Ceylon hunts in packs, headed by a leader, and they have been seen to assault and pull down a deer. The small number of hares in the districts they infest is ascribed to their depredations. When a jackal has brought down his game and killed it, its first impulse is to hide it in the nearest jungle, whence he issues with an air of easy indifference, to observe whether any thing more powerful than himself may be at hand, from which he might encounter the risk of being despoiled of his capture. If the coast be clear, he returns to the concealed carcase, and, followed by his companions, carries it away.

But if a man be in sight, or any other animal to be avoided, the jackal has been seen to seize a cocoanut husk in his mouth, or any similar substance, and fly at full speed, as if eager to carry off his pretended prize, returning for the real booty at some more convenient season.

They are subject to hydrophobia, and instances are frequent of cattle being bitten by them and dying in consequence. An excrescence or small horny cone about half an inch in length, and concealed by a tuft of hair is sometimes found on the head of the jackal. This the Singhalese call narri-comboo; and they aver that the possessor of this can command by its instrumentality the realisation of every wish, and that if stolen or lost by him, it will invariably return of its own accord. Those who have jewels to conceal rest in perfect security, if, along with them, they can deposit a narricoomboo, fully convinced that its presence is an effectual safeguard against robbers. The words of Psalm lxiii. 10, "they shall be a portion for foxes," appear obscure: but if they be rendered, 'they shall be a portion for jackals,' the anathema becomes plain and striking to a hindoo, in whose country the disgusting sight of jackals, devouring human bodies may be seen every day. So ravenous are those animals, that they are said to steal infants as they lie by the breast of the mother; and sick persons who lie friendless in the street or by the side of the Ganges, are said sometimes devoured alive by these animals in the night.—*Tennant's Sketches of the Natural History of Ceylon*, p. 36-37. *Eothen's Travels from the East*, p. 261. *Ward's Hindoos*. *Adam's Naturalist in India*.

JACKDAW, the common European Jackdaw, *Corvus monedula* of Europe, Siberia, Barbary, W. Asia, Peshawur valley, and Kashmir, may be seen in flocks in winter in the northern frontier of the Punjab, associated with the Cornish chough and the rook. The first two come from Cashmere, where they are found in great abundance, during the summer; but the rook, if ever seen in Kashmir, is only a cold weather visitor and seems to come from the west, inasmuch as it is said to be common in Afghanistan. It appears at Rawul Pindie in flocks about the beginning of September, it is found in winter as far south as Lahore and disappears entirely in March. The hooded crow has been brought from Northern Afghanistan, and is mentioned by Lieutenant Wood in his travels as common in Kuthuz, but it is not found in Cashmere or in the Punjab. Besides these British birds, the chimney swallow makes its appearance in October and leaves again, in spring, for the straw built sheds of Cashmere, where it breeds and spends the summer months.

The white rumped martin and sand martin are both likewise migratory, and repair to Cashmere and Ladakh in summer. The black and alpine swifts remain longer, and may be seen careering about during the summer evenings, especially after a shower of rain. The ring-dove is a resident on the sub-Himalaya. The common starling is plentiful in the north as elsewhere in Hindoostan. The lapwing (*Vanelus cristatus*) arrives in flocks in the beginning of November, and departs for the west early in spring; its summer residence has not been found out, but it must be common in certain parts of Persia and Afghanistan. The common and jack snipe, with a few painted snipe, appear in the Rawul Pindee in February and March, and are procured as many as thirty couple at a time. Nearly all the water fowl met with in the rivers and marshes of the north west come from the Tartarian lakes, where they may be found breeding. After a sultry day it is usual to see the wire-tailed swallow skimming over the plains, and by the side of pools and streams a solitary green sandpiper (*Totanus ochropus*) is not rare. The brown backed heron (*Ardeola leucoptra*) also occurs in such situations. The black ibis (*G. papillosus*), with its red crown, is seen during the cold months; flying, along with the rooks and European jackdaws, and besides, on the marshes about, the great and little bitterns, with the spotted rail, are not uncommon. Of the other European birds may be noticed the short-eared owl, moor buzzard, the pale harrier, *Circus swainsonii*, the cormorant ruff, and smew, all coming and departing with the winter months.—*Adams*.

JACK FRUIT TREE. ENG. *Artocarpus integrifolia*.—*Linn.*

JACK WOOD. ANGLO-MALAY.

Phunai	Guz.	Nangka	MALAY.
Funet	"	Uram Pila.....	MALAY.
Phannas.....	HIND.	Pilla maraim.....	TAM.
Fanas ?	"		

The *Artocarpus integrifolia*, grows in cultivated grounds, and is of value for its fruit, and its timber. In many places it is found two feet and a half in diameter, and from thirty to thirty-five feet high. It has an excellent timber and in Canara, it was preferred by Tippu sultan for the Grab vessels built at the naval dépôt, Honore. In Ceylon, at Point de Galle, it is used by the furniture makers for chairs, couches, &c., for which purpose it answers well; and, if polished with care, its brilliant colour is superior to that of mahogany. When cut down, it is yellow, but turns dark and improves by age. In England it is used as well as satin wood for making backs of hair brushes, &c.—*Edye, Forests of Malabar and Canara*. See *Artocarpus integrifolia*.

JACOB, grandson of Abraham, a patriarch of the Israelites : Jacob was father of twelve sons who founded the twelve tribes of the Hebrews he went to Egypt B.C. 2747-6.—*Bunsen*.

JACOB, Major General John. Wrote a pamphlet, on irregular cavalry Bombay, 1846, and also on several subjects connected with the organization of armies. Born 11th January 1812, he fell a victim to fever in 1860, in Sind. Though he never directed regular operations on an extensive scale, he had taken notable part in eventful campaigns, and had fought in great battles with memorable valour. He was endowed in an uncommon degree with those personal gifts which enable one man to exercise an ascendancy over thousands, and which, in all situations and all ages of the world, have constituted the material of heroes. With the single exception of Sir James Outram, he represented, perhaps more vividly than any soldier of his time, that natural and inherent superiority of power, which when expressed in the race instead of the individual, gives the British nation the dominion over India. He entered the Bombay Artillery, in 1828, and he participated, as an artillery officer, in the Afghan campaigns, but he did not accompany the expedition all the way to Cabul. In the year 1841, 500 cavaliers were enrolled as the Sind Horse and Col. Outram selected Jacob for the chief command. At the campaigns and conquest of Sind which ensued, on the field of Meeani, Jacob's Horse and Jacob himself established a name which was never afterwards sullied or obscured. After Sind had been annexed to the British territories from a few troops the force was gradually expanded till it included two strong regiments, and mustered 1,600 of the best horsemen in India. To these soldiers was intrusted, the patrol of the frontier, and, though they were divided into inconsiderable detachments, sometimes of less than 50 men each, their vigilance, fidelity, and intelligence were such as to ensure the perfect protection of the province. Jacob was still the sole head of this formidable body, as commandant of both regiments together, assisted simply by two lieutenants in each. Five Europeans thus controlled nearly 2,000 of the fiercest swordsmen of the East, and with such absolute effect, that it was said not a trooper in the corps knew any will but that of his colonel. Their discipline was perfection itself; their devotion unquestioned; their loyalty never impeached. Jacob by his precepts no less than his example laboured to enforce the theory that Europeans were naturally superior to Asiatics, and that the latter so far from resenting such ascendancy, desired nothing better than to profit by it. All they wanted was to obey, provided only that their obedience

was challenged by one clearly competent to demand it. Place no man said he, in command unless he is qualified to impress and govern by proofs of personal excellence, and, when you have got such a man, leave those whom he is to govern with no idea of any authority but his. Instead of teaching natives to look up to some central and remote jurisdiction, give them their plain and visible lord in their commanding officer, and in him only. Instead of diluting the magical influence of race by multiplying European officers, and thus exhibiting inferior specimens of the dominant class, concentrate power and effect by making these rulers rare and absolute. Facilitate their work by giving them every species of personal authority under definite instructions; teach the native soldier to look up to a man, ever present with him, in whom he recognizes a natural expression of that government which otherwise he can only dimly understand, and then you may save nine-tenths of your officers and rely implicitly upon the devotion of your troops. Perhaps it is true that 50 Jacobs, with 200 subalterns, could have organized and controlled in admirable fashion a native army of 100,000 men—but 50 Jacobs are not always to be found. His redoubtable soldiers, were not raised on the frontier from Pathans or Beloochees, but were pure Hindustances, with a few recruits of similar character from the Deccan. Jacob's raw material was exactly that of the Bengal and Bombay armies, and approximated, indeed, more nearly to the former model than the latter. When we reflect that from this material—since thought so essentially worthless—Colonel Jacob did actually construct and maintain a body of the finest, and, as far as we can tell, the most faithful horsemen in the world, we shall obtain some idea of the extraordinary powers, of one of the best representatives of England's ascendancy in the East.—*Home News*, Jan'y. 10, 1859.

JACOB, Major LEGRAND, (1851) Resident at Bhoj. Author of an Account of Gumli or Bhumli: Report on the iron in Kattywar; its comparative value with British metal; mines, and means of smelting ore. Lond. As. Trans. vols. v. 73; viii. 98.—Brief historical, geological, and statistical, memoir on Okhamandul in Bom. Geo. Trans. vol. v. 157.—Report on the district of Babriwar, Ibid, vol. vii. 700.—Inscriptions from Palitana, in Bom. As. Trans. vol. i. 56.—On the Asoka inscriptions, Girnar, Ibid, 257.—*Dr. Buist's Catalogue*.

JACOB'S WELL, in the valley of Nablous, a few miles south of Shechem. It is 75 feet deep.

JACQUEMONT, VICTOR, born at Paris 1801, died at Bombay 7th December 1832.

Was a travelling naturalist to the Royal Museum of Natural History at Paris, during the years 1828-9, 1830-1 and '32. He travelled in the Himalayas, Ladak, India, Tibet, Punjab, and Cashmere. His travels were published in the form of letters to his relatives.

JACYNTH. A gem owing its deep orange color to the presence of zircon. It is the gulmaidah of India.

JADABILLAY. TAM. a woman's head ornament in the Tamil country. See Jewellery.

JADE. Axe stone.

Yu, Chin.

The term jade, has been given to several minerals, serpentine, nephrite and saussurite, which resemble each other but little, except in colour. The Chinese estimate their celebrated jade stone very highly, and there are numerous shops, both for cutting it and exposing it for sale, carved into all those curious and fantastic forms, for executing which this people are so well known. Its value in the eyes of the Chinese depends chiefly upon its sonorousness and color. The most valued specimens are brought from Yunnan and Khoten; a greenish white colour is the most highly prized, but a plain color of any shade is not much esteemed. A cargo of this mineral was imported into Canton from New Holland not long ago, but the Chinese would not purchase it, owing to a fancy taken against its origin and color. The patient toil of the workers in this hard and lustreless mineral is only equalled by the prodigious admiration it is held in and both fairly exhibit the singular taste and skill of the Chinese. Its colour is usually a greenish white, passing into a greyish-green and dark grass-green; internally it is scarcely glimmering. Its fracture is splintery, splinters white, mass semi-transparent and cloudy; it scratches glass strongly but rock-crystal does not scratch it. Jade is found in China, Burmah, Yunnan, Khoten and Egypt and is used as dagger handles, cups, vases. The pale greenish varieties are the best: bangles made of jade come from Mogoung, in the north of Burmah, the bright green tint seen in these specimens is the characteristic peculiarity of the Burmese jade. The Chinese have a perfect mania for jade, using it for Mandarins' buttons, pipemouth pieces, and various articles of personal ornament and luxury. They estimate it according to the purity of the white and brightness of the green tints. Jade bangles of Burmah of second quality cost 125 Rupees or 12 10s. A Chinaman who sold a pair showed specimens which he said would fetch in China sixty times its weight in silver, and he said that the really first-rate jade is sold for as much as forty times its weight in gold; this appears incredible, but all enquiry tends to show that the Chinese will give almost anything

for the finest jade. Jade stood high in the estimation of the Mongols, and figures largely in their legends and their poetry. It is related that when Chenghiz was proclaimed Khagan on the grassy meadows of the river Kerulan, a certain stone spontaneously flew asunder, and disclosed a great seal of graven jade, which was kept as a palladium by his descendants, and was almost the only thing saved by the last emperor of his house when flying from the Chinese insurgents. The Mongol word for jade is *khas*, The mountain near Khotan, which supplies some of the best jade, is called, according to Timkowski, *Mirjai*, or *Kash-tash* (Turk. "Jade-rock"). The Tartar name may have some connection with the Persian word *khas*, royal, noble. Crawford technically styles the Burmese jade "noble serpentine," and in the narrative of (Goes the jade of Yarkand is spoken of as "*marmoris illius apud Sinas nobilissimi*."—*Schmidt*, pp. 71, 133. *Yule Cathay*, I. p. 130. *Cat. Exhibition 1862. Fortune's Wanderings*, p. 88. *Williams' Mid. King*, page 243.

JADGHAL or **LUMRI**, a race in Las.—*Mason. Narrative*, p. 51.

JADI-CHETTU. TEL. *Semecarpus anacardium*.

JADIKAI. TAM. *Myristica moschata*.

JADIPUTRI. TAM. Mace. *Jadiputri* Tailam. TAM. Nutmeg butter; Nutmeg oil.

JADO, one of the low castes in a village,—the same as Kumeu. In some places, the term is equivalent to *sodra*.—*Elliot*.

JADON, *Yadu*, or *Yaduva*, a tribe of Rajpoots of the Chunderbunsa division, who profess to trace their origin in a direct line from Krishna. *Yadu* is the patronymic of all the descendants of Buddha, the ancestor of the Lunar race, of which the most conspicuous are now the Bhuttee and the *Jareja*; but the title of *Jadon* is now exclusively applied to the tribe which appears never to have strayed far from the limits of the ancient Suraseni, and we consequently find them still in considerable numbers in that neighbourhood. They are considered spirited farmers. All these have adopted the practice of second marriages, and are now considered of an inferior rank to their brethren in Kerowlie.—*Elliot*.

JADOO-PALUNG. BENG. *Salicornia Indica*.

JADROON, a race from a wild district near Kelat-i-Ghilzi.

JADU. HIND. Enchantment; hence *Jadugar*, a sorcerer.

JADUKUTTA, a river of Sylhet.

JADUN or *Gadun*, a race on the right bank of the Indus where that river issues from the Himalaya near Torbela. They have been

supposed to be Rajputs, but they are Pathans who speak Pushtoo.—*Campbell*, p. 87.

JADWAR. HIND. *Cureuma acedaria*.

JAD, *YADU*, a branch of the Abir.

JAEDAD. PARS. Signifies a place; employment; also, in accounts, assets, funds, resources.

JAENAMAZ. PERS. A place of prayer; vulgo *Janeemas*, or *Moosalla*.

JAEPHAL. HIND. *Myristica moschata*.

JAES, a tribe of Soorujbunsee Rajpoots resident in the pergunnahs of Nohjeeel and Mast in Muttra in which they were formerly more numerous than they are at present.—*Elliot*.

JAETI, gladiators in the south of India *Jetti*, Colonel Tod mentions that one of the courts in Kutch funds were set apart for *Jaeti*, at one time to fifty thousand rupees per annum. In the *akhara* (arena) prize-fighters *Asman dikhlana*, is their phrase for victory, when the vanquished is thrown upon his back and kept in that attitude.—*Tod's Rajasthan*, Vol. II. p. 589. See *Jetti*.

JAF, a very large predatory tribe residing near Kanaki, on the Dialla, dependant on Turkey, and numbering about 25,000 families. They inhabit in winter the plains of Sulimaniah and Zohab, and in summer migrate to the mountain of Ardalan. They are the most warlike and unruly of all the Kurdish tribes. The *Jaf* tribe inhabit the highest mountains on the frontier of the territory of the Vali of Sinna. They are a fine-looking, brave, people, but esteemed exceedingly uncivilized and barbarous even by the Kurds. Their dialect of Kurdish differs considerably from that of the *Bebbeh* Kurd; and their appearance is so singular that they are easily recognized. They form a body of yeomanry cavalry in number about 2,000, which follows the Bey when he is summoned to attend his feudal lord, the pasha of Sulimania in the field.—*Ferrier Caravan Journeys*, p. 68.—*Rich's Residence in Koordistan*, Vol. I. p. 112. See *Koordistan*.

JAFFA, the ancient Joppa, the nearest seaport to Jerusalem, is about 30 miles south of Cæsarea. It is the sea port of Jerusalem and is built on a hill jutting into the sea. It has seen St. Paul, Pompey, Salah-ud-din, and Napoleon. At one hour's journey from Jaffa is Yabne, the ancient Jabneh or Jamnia, still a considerable village. At four hours' journey, or about twelve miles, is Edzoud, the ancient Azotus and the Ashdod of Scripture 2. *Chron.* xxvi. 6.—*Robinson's Travels, Palestine and Syria*, Vol. I. p. p. 16, 21.

JAFFERABAD, on the Guzerat coast, in lat. 20° 53' N., has the best river on the coast. The chief of Jafferabad, who resides in Gujerat; the sidi of Janjira, who resides in the Konkan;

and the nawab of Sucheen are all of African origin.

JAFFERI GUNDI. Duk. Gompbrena globosa.

JAFFERI OATH. This oath is considered by mahomedans to be more solemn than that used in British Indian Courts. Its words, Aksamto B'illa hil Jabbar, il Kahar, il Muntakabbir, il Muntakim, mean, I swear in the name of the Omnipotent, Indignant, High and Avenging God.

JAFFNA. A district and town in Ceylon. In the sandy parts of Jaffna a hollow palmyra is inserted to form a well.

JAFFRA. TEL. Bixa orellana, Arnotto.

JAG. Amongst the Mahrattas, if a sudra die suddenly, his family hold a riotous vigil on the 10th night after the demise, it is called *Jagar*, and the object is to compel the spirit of the deceased to enter the body of the son or of some other person to reveal any secret matter desired to be known. The word is from *jagna* to wake — *Wils. Gloss.*

JAGA or *Jaga-bhat*, a division of the Bhat tribe. — *Wils.*

JAGADDIHARA. See *Kala*; *Priyanath*.

JAGANBANSI, a brahman tribe of zamindars in the Fettehpur zilla. — *Wils.*

JAGANNATH, Jagannatha, vernacularly Juggernath, from *Yoganatha*, Lord of the world, is a name now especially applied to Vishnu in the form in which he is worshipped at the temple of Jagannath at Puri in Orissa. All the land within 20 miles round this pagoda is considered holy, but the most sacred spot is an area of about six hundred and fifty feet square, which contains fifty temples. The most conspicuous of these is a lofty tower about one hundred and eighty-four feet in height and about twenty-eight feet square inside, called the *Bur Dewali*, in which the idol, and his brother and sister Subhadra, are lodged. Adjoining are two pyramidal buildings. In one, about forty feet square, the idol is worshipped, and in the other the food prepared for the pilgrims is distributed. These buildings were erected in A. D. 1198. The walls are covered with statues, many of which are in highly indecent postures. The grand entrance is on the eastern side, and close to the outer wall stands an elegant stone column, thirty-five feet in height, the shaft of which is formed of a single block of basalt, presenting sixteen sides. The pedestal is richly ornamented. The column is surrounded by a finely sculptured statue of Hanuman, the monkey chief of the Ramayana. The establishment of priests and others belonging to the temple has been stated to consist of three thousand nine hundred families, for whom the daily provision is enormous. The holy food is presented to the idol three times a day. His meal lasts about an hour, during which time the

dancing girls, the *Deva-dasi*, belonging to the temple, exhibit their professional skill in an adjoining building. Twelve festivals are celebrated during the year, the principle of which is the *Rat's Jatra*. The temples of Jagannatha are said to be numerous in Bengal, of a pyramidal form. During the intervals of worship they are shut up. The image of this god at Jaggernath in Orissa, is a rude block of wood, and has a frightful visage with a distended mouth. His arms which as he was formed without any, have been given to him by the priests, are of gold. He is gorgeously dressed, as are also the other two idols which accompany him. In a compartment in the temple of Rama, he is represented in company with Bala Rama and Subhadra without arms or legs. The temple is built on a low sandy plain about $1\frac{1}{2}$ mile from the shore. The car is painted with obscene figures. In the festivals at this hindu temple the images brought forward are those of Krishna his brother Balarama and sister Subhadra, and the populace reproach Krishna and his sister for having indulged in a criminal intimacy. In the Mahabharata, Subhadra is stated to have been married to Arjuna; Balarama and Subhadra are also accused. — *Cole. Myth. Hind. p. 52.*

JAGAN NARAYANA. See *Inscriptions*.

JAGATI DASARI. Religious mendicants in Mysore, who beat a gong when begging — *Wils.*

JAGAT POINT, a projecting land in Guzerat.

JAGA UNDU ? An article of Jewellery.

JAGDALAK, the Afghans were defeated at this place on the 9th September 1842.

JAGERIA ABYSSINICA. SPRENG. Syn. of *Guizotia oleifera*. — *D. C.*

JAGERIA CALENDULACEA. SPRENG. Syn. of *Wedelia calendulacea*. — *Less.*

JAGGERY. ENG. Unclearified palm sugar or treacle. Coconut palm. *Borassus flabelliformis*, *Caryota urens*. See *Goor*.

JAGGON. MALAY. Zea mays: Indian Corn; **JAGGRI.** A palm, named in Sumatra anau, and by the eastern Malay, gomuto, is the *Borassus gomutus* of Loureiro, the *Saguerus pinnatus* of the Batavian Transactions the *Cleophora* of Gertner and the *Arenga saccharifera* of modern botanists. Its leaves are long and narrow, and though naturally tending to a point, are scarcely ever found perfect, but always jagged at the end. The fruit grows in bunches of thirty or forty together, on strings three or four feet long, several of them hang from one shoot. In order to procure the nira or toddy (held in higher estimation than that from the coconut-tree), one of these shoots for fructification is cut off a few inches from the stem, the remaining part are tied up and beaten, and an incision is then

made, from which the liquor distils into a vessel or bamboo closely fastened beneath. This is replaced every twenty-four hours. The anau palm produces also sago and the remarkable substance resembling coarse black horse hair, called iju and gomuto, and used for making cordage of a very excellent kind, as well as for many other purposes, being nearly incorruptible. It encompasses the stem of the tree, and is seemingly bound to it by thicker fibres or twigs, of which the natives make pens for writing. Toddy is likewise procured from the lontar or *Borassus flabelliformis* and jaggeri is now made from the juice of almost all the palms the tale of the hindus. The word jaggeri is evidently the shakar of the Persians, the Latin saccharum, and sugar. —*Marsden's Hist. of Sumatra*, p. 88.

JAGGURI, CAN. MAR. *Antiaris innoxia*. — *Blume, Rumphius*.

JAGHDAL. See Kelat.

JAGHIR. The state revenues of a tract of land assigned, with or without conditions, to a servant of the state, with the power to collect and appropriate the state revenue and carry on the general administration. This tenure was most common under the mahomedan government. The jaghir given to the English East India Company by the nabobs of the Carnatic extended from Madras to the Pulicat lake, northward; to Alamprave southwards; and westward, beyond Conjeveram: that is, about 108 British miles along shore, and 47 inland; in the widest part. This jaghir is now known as the Chingleput collectorate. — *Elliot, Renell's Memoir*, p. 264.

JAGHIRDAR. HIND. PERS. Holder of a Jaghir.

JAGLAIN. A Jat clan, proprietors of a few villages in Paneeput Bangur. — *Elliot Supp. Glossary*.

JAGNAS. See Inscriptions, p. 389.

JAGNI. HIND. A flambeaux.

JAGO. See Kocob.

JAGONG-KADOK. MALAY. Name of a vegetable in use at Kadok.

JAGREE.

Kund AR. | Guda, Gura ... SAN.
Coompta sugar Bombay. | Kara Vellam..... TAM.
Jagri, Gur... GUZ. HIND. | Nalla Bellum..... TEL.

The jagree of India, is unrefined sugar produced by evaporating the juices of palms, the cocoanut, the date, the *Caryota urens*, the &c; palmyra, the gomuti the values of the quantities exported from India were in 1857-8 £34,024; in 1859-60 £32,953-8-9 £40,553 1860-61 and in 1861-2 £2,150 ninety per cent. of which was from Madras. See Sugar.

JAGUNG. MALAY. JAV. Maize, Zea mayz.

JAGURUNU. SANS. From jagree, to be awake. See Jag.

JAIL. PERS. The second title amongst mahomedans in India, as Asof Jah, Azim-Jah.

JAHAN. HIND. PERS. the world. Hence, Jahan-gir world conqueror. Jahanpanah world-protector, meaning "your majesty."

JAHANGIR. A title of Pir Mahomed grand son of Timur. He entered India in A. D. 1398, by way of Ghazni, and took Multan, and then re-joined the main army under Timur. Timur gave him the government of all his Indian conquests and named him his universal heir, but six months after the death of Timur, in 1404, he was assassinated.

JAHANGIR, an emperor of India, in 1611, who granted to the English a site for a factory at Surat. His tomb is in Shahdra, on the right bank of the Ravi, eleven miles distant from Lahore. It is constructed entirely of marble, of fine workmanship, beneath which rests the body of the monarch. The tomb of his wife, Nur-mahal, previously the wife of Sher Afgan, has been ruined; precious stones were daily carried away by the restless Sikhs. His drinking cup was formed out of a large ruby. A few years ago, it had been placed for sale in one of the English jewellery shops at Calcutta by the ex-king of Lucknow. The cup had been scooped hollow out of an uncommonly large sized ruby more than three inches long, by as many broad, in the fashion of a goblet, with the name of Jehangir inscribed upon it in golden characters. Side by side was placed also a similar but smaller cup, with a leg to stand on which had belonged to the great Timur. The cup having passed into private property, its whereabouts cannot be any more traced. *Mohun Lal's Travels*, p. 17. *Tr. Hind. V. p. 460*.

JAHANNAM. AR. HIND. PERS. hell, the Gehenna of Scripture.

JAHEETUB. BALI. Ginger.

JAHEZ. ARAB. or Mhyndhee. HIND. A mahomedan bride's bridal paraphernalia, which is carried in procession to the bridegroom's house, consisting of clothes, garlands, dressing cases, trinkets and a number of articles of furniture. This is the dowry and is the lady's property, descends to her children, and in case of her dying without issue belongs to her nearest of kin. The settlement made by the bridegroom is called the mahr. The mahr is a religious obligation, without which no marriage is lawful; as, however, the bride is allowed to remit an indefinite portion of it, it is more generally owed than paid. — *Burton's Scinde*, Vol. I. p. 289.

JHIL. HIND. A lake, a morass.

JAHNAWI. The sacred thread of the hindus which the brahmins, in their secret ceremonies, call Yadnupavita, also, Zandiam; second birth or twice-born are terms frequently met with in works on the hindu people, and

indicate that the person to whom it is applied has received the zonnaar or sacrificial cord. The artizan class of sudras in Southern India, engaged in five avocations, viz. :—

Goldsmiths, Komala.	Braziers, Kongsara
Carpenters, Wodla.	and
Blacksmiths, Komala.	Stonecutters, Sungtrash,

all wear it. They are sudras, and are divisions of the same race, for they intermarry. It is also worn by brahmans chetties. See Birth; Dwita: Jandiam, Poita, Zandiam, Zonar.

JAHN-NUGGER, is about four miles west of Nudden, and below which the Ganges formerly held its course. Brahmaditla, in Jahn-nuggur, is a spot where human sacrifices were formerly offered to an image of Doorga and where a great mela is now annually held in July. One of the amusements in this mela, is the Jhapan or the exhibition of the skill of snake-catchers and snake-charmers, and purchase of their pharmacopœia of antidotes.—*Tr. of Hind. Vol. I. p. 41.*

JAHOO. BENG. *Tamarix gallica.*

JAHREJA, a rajput clan who occupy parts of Kutch and Kattywar the different tribes of them who inhabit Hallaur and Muchoo Kaunta,—are as under.

Jata-zadeh,	Kubhur.	Bharanee.	Khumanee.
descendants	Rewanee.	Bhananee.	Kana.
of the Jain.	Weobanee.	Aurun.	Kao.
Hurdol.	Lokanee.	Dil.	Batach.
Doonguranee.	Morance.	Halla.	and other
Sungeea.	Kunderya.	Hapa.	castes.
	Ummur.		

The Jahreja have been notorious for killing their infant daughters. They obtain in marriage the daughters of any of the numerous races of Rajputs and even find their facilities such as to allow of their being nice in selecting from the most respectable families. They are furnished with wives by the Jhalla, Wagela, Gail, Chura, Summa, Purmar, Surney, Soda, Jaitwa, Wala, and Wadal tribes; but there seems to be a general preference in favour of the Jhalla. From the Jaitwa the Jahreja cannot have obtained any wives for a long time, as it is more than a century since any grown-up daughters have been seen among them. This fact is to be accounted for only by admitting that female infanticide was prevalent among them. Of this, indeed, there seems no reason to doubt; for, although they allow that the practice is sinful, and do not openly avow it, they, as well as the Jahreja among them, signed the instrument of abolition; ; however, this outrage on human nature is of comparatively recent origin, and may without much hesitation, be ascribed to the example of the Jahreja, in concurrence with base and mercenary motives, the influence of example and communication, says Colonel Walker,

and the remark is of a cheering, as well as of a saddening nature, "is capable of procuring converts to the most criminal and flagitious courses."—*Correspondence relative to Hindoo Infanticide, p. 38.—Report, par. 161-169. Cormack's Female Infanticide, p. 108.*

JAI. HIND. Victory.

JAI. HIND. Oats.

JAI. HIND. *Jasminum officinale.*

JAIANTI. BENG. *Sesbania ægyptiaca.*—*Pers.*

JAIDAD. PERS. Assets, See Jaedad.

JAILS. The native governments of India, had no Jails. Their punishments were immediate and consisted of fine, branding, mutilation or death. In the reign of Ranjit Singh there were not at any time, 100 men in confinement in the Panjab, and the first sanction asked for, when it fell to British rule was for jails to hold 10,000 prisoners. The space allowed to each prison in India is 648 cubic feet and 37 superficial feet as minima. In 1864, there were 74,000 prisoners in British India.

JAIMINIYA ASWAMEDHA, a treatise on sacrifice, a work ascribed to Jaimini. See Vedas.

JAIN. This sect has been described by Professor Wilson, Major Moor and Mr. Coleman, there are a few in Mysore, in the Canarese tract of the Ceded Districts, and in Guzerat and there are small bodies found in various parts of India. In its migrations to the countries since its dispersion by the brahmans, buddhism has assumed and exhibited itself in a variety of shapes. At the present day its doctrines, as cherished among the Jaina of Guzerat and Rajpootana, differ widely from its mysteries, as administered by the Lama of Thibet; and both are equally distinct from the metaphysical abstractions propounded by the monks of Nepal, or the philosophy of the Burmans. Its observances in Japan have undergone a still more striking alteration from their vicinity to the Syntoo; and in China they have been similarly modified in their contact with the rationalism of Lao-tseu and the social demonology of the Confucians. But, in each and in all, the distinction between the buddhist sects is in degree rather than essence; and the general concurrence is unbroken in all the grand essentials of the system. The Jain sect arose in the sixth or seventh century, were at their height in the eleventh, and declined in the twelfth, and are now, though very numerous, much scattered about the west of India and in Marwar. Their leading religious tenets consist in a denial of the divine origin and infallibility of the Vedas; secondly, in the reverence of certain saints or holy mortals who acquired by practices of self-denial and mortification, a station

superior to that of the gods; and thirdly, extreme and even ludicrous tenderness for animal life. The disregard of the Vedas and veneration of mortals are common to the Jain and Buddhist, and the former involves a neglect of the rites which they prescribe, but so far as the doctrines which they teach are conformable to Jain tenets, the Vedas are admitted and quoted as an authority. The buddhists, although they admit that an endless number of earthly Buddhas have existed, confine their reverence to seven. But the Jain sect extend their number to 24 of their past age, 24 of their present, and 24 of the age to come. The statues of these, either all or in part, are collected in their temples, sometimes of colossal dimensions, and usually of black or white marble. The objects held in highest esteem in Hindustan are Parawath and Mahavira the twenty-third and twenty-fourth Jina of the present era. The generic names of a Jaina saint, expresses the ideas entertained of his character, by his surnames. He is,

Jugat prabhu, Lord of the world.

Kashina Karmma, Free from bodily or ceremonial acts.

Sarvojna, Omniscient.

Adhiswara, Supreme lord.

Devadi Deva, God of Gods.

Tirtha-kara or Tirthan Kara one who has crossed over *Tiryuti anena*, that is, the world compared to the ocean.

Kevadi, The possessor of spiritual nature, free from its investing sources of error.

Arhat, Entitled to the homage of gods and men.

Jina, The victor over all human passions and infirmities.

The last of the Jina, was Mahavira, who was born of Trisala, wife of Siddhartha, of the family of Ikshvaku and prince of Pavana, in Baratakahetra, and he married Yasodha daughter of the prince of Samstavira. He afterwards became a Digambara or naked ascetic and led in silence an erratic life for 12 years, and during his wanderings in this state he was repeatedly maltreated. He then commenced to lecture at Apapapuri in Bahar. His first disciples were brahmans of Magada and Indrabhuti or Gotama of the brahman tribe of Gotama rishi who is not identical with the Gautama of the brahmans. Mahavira died at the age of 72, 38 of which had been spent in religious duties.

According to the Jains the vital principle is a real existence animating in distinct portions, distinct bodies, and condemned to suffer the consequences of its actions by migration. The reality of elementary matter is also asserted, as well as of gods, demons, heaven and hell. All existence is divisible into two beads. Life

(Jiva) or the living and sentient principle; and Inertja or Ajiva, the various modifications of inanimate matter. Though the forms and conditions of these many change, as they are created they are imperishable. With them, Dharma is virtue, and Adharma, vice. The Jain faith is supposed to be amongst the most recent of all the religious systems in India. Hema Chandra, one of their greatest writers, flourished in the end of the 12th century, and the compiler of the Jain Puranas of the Dekkan, is said to have written at the end of the 9th century, and another book, the *Kalpa Sutra* was not composed earlier than the 13th or 18th century. The Jain religion, never extended itself into Bengal or Hindustan, for two princes of Benares professed buddhism up to the eleventh century. In western Marwar and all the territory subject to the Chalukya princes of Guzerat, the Jain faith became that of the ruling dynasty, about 1174, and Jain relics and followers are still abundant in Marwar, Guzerat and the upper part of the Malabar Coast. The Jain faith was introduced on the Coromandel Coast, in the 8th or 9th century, in the reign of Amoghvarsha, king of Tonda Mundalam. This, the 8th or 9th century, seems to have been the earliest period of the existence of this religion, there, and it was no doubt but an offshoot of the buddhist faith. The Jain are at present divided into the Digambara or Skyelad, i. e. naked, and Svetambara, i. e. the white robed, the former of which is the widest diffused, and seems to have the greatest claim to antiquity. All of the sect in the Dekkan and in western India appear to be Digambara Jain. Indeed the term Jain seems a new appellation, for in the early philosophical writings of the Hindus, they are styled Digambara or Nanga, but in the present day, the Digambara do not go naked except at meal time, but wear coloured garments. The Digambara assert that the women do never attain Nirvan, but the Svetambara admit the gentler sex to final annihilation. There are clerical as well as lay Jains, or Yati or Jati and the Sravaka, the former of whom lead a religious life and subsist on the alms which the latter supply. The Yati are sometimes collected in mathas, called by them Pasals and even when abroad in the world they acknowledge a sort of obedience to the head of the Pasala, of which they were once members. The Yati never officiate as priests in the temples, the ceremonies being conducted by a member of the orthodox priesthood, a brahman duly trained for the purpose. They carry a brush to sweep the ground before they tread upon it, never eat nor drink in the dark, lest they should inadvertently swallow an insect, and sometimes wear a thin cloth over their mouths lest their breath should demolish some of the atomic ephemera, that frolic in the sun-

beams. They wear their hair cut short or plucked out from the roots. They profess continence and poverty, and pretend to observe frequent fasts and exercise profound abstraction. Some of them are engaged in traffic, and others are proprietors of maths and temples, and derive a comfortable support from the offerings presented by the secular votaries of Jina. The Jains of the south of India, are divided into castes, but in northern Hindustan, they are of one caste, refuse to mix with other hindus and recognise eighty-four orders amongst themselves, between whom no intermarriages have taken place and many of whom do not intermarry. This classification is called the *Gachcha* or *Got*, the family or race, which has been substituted for the Verna, the Jati or caste. The secular Jains follow the usual professions of hindus. The Jains are to be found in every province in Hindustan, collected chiefly in towns, where, as merchants and bankers, they usually form a very opulent portion of the community. They are numerous in Murshedabad, Benares and the Doab, but they are most numerous in Mewar and Marwar; numerous in Guzerat, and in the upper part of the Malabar Coast, and scattered throughout the Peninsula. They form a very large division of the population of India, and, from their wealth and influence, a most important one.

According to Major Moor, some have considered the Jaina to be a division of the sect of Buddha; but the principal tenet of their faith is in direct opposition to the belief of that sect. The latter deny the existence of a supreme Being the former admit of one, but deny his power, and interference in the regulation of the universe. Like the buddhists, they believe that there is a plurality of heavens and hells; that our rewards and punishments in them depend upon our merit or demerit; and that the future births of men are regulated by their goodness in every state of animal life. Like the brahmans, the Jaina acknowledge a supreme Being, but pay their devotion to divine objects of their own creation, with this difference, that the brahmans represent their deities to be of heavenly descent, whereas, the Jain objects of worship, like, but at the same time distinct from, those of the buddhists, are mortal, of alleged transcendent virtue, raised to beatitude by their piety, benevolence, and goodness. Equally with the buddhists, they deny the divine authority of the Vedas, yet they admit the images of the gods of the Vedantic religion into their temples, and, it is said, to a certain extent worship them, but consider them to be inferior to their own *Tir'than-kara*. They, therefore, appear to blend, in practice, portions of the two faiths, advocating doctrines, scarcely less irrational than those of atheists, and no less wild than the heteroge-

nous polytheism of the brahmans. The Jaina derive their name from the word *Jinu* (ji, to conquer), because a Jaina must overcome the eight great crimes, viz., eating at night, or eating of the fruit of trees that give milk; slaying an animal; tasting honey or flesh; taking the wealth of others, or taking by force a married woman; eating flour, butter, or cheese; and worshipping the gods of other religions, though this last injunction strongly militates against what has just before been stated. The Jain extend the doctrine of benevolence toward sentient animals to a greater degree than the buddhists with whom they agree in their belief of transmigration. A Jain *Yati* or priest carries with him a broom made of cotton threads to sweep the ground before him as he passes along, or as he sits down, lest he should tread or sit upon and injure any thing that has life. A strong instance of their strict adherence to this article of their religion is related in Major Seeley's work, the *Wonders of Ellora* "An ascetic at Benares was, like the rest of the sect, extremely apprehensive of causing the death of an animal. A European gave him a microscope to look at the water he drank. On seeing the animalculi he threw down and broke the instrument, and vowed he would not drink water again. He kept his promise, and died." The *jati* or *yati* are usually taken from the Banya tribe and are devoted, in early life, to the purposes of religion. They pass their noviciate with a *guru* or teacher, and at a proper period are admitted as *yati*. On this occasion a novice is stripped of his apparel, and, with certain ceremonies, invested with the dress of his order. A blanket, a plate, and a cloth for his provisions, a water-pot and his broom are then given to him.

Mr. Coleman also says that the Jain have been considered a subdivision of the buddhist sect but they differ from it, in some respects, as much as they do from the Brahmans in others. The buddhists do not admit of castes, neither do they believe in a Supreme Being. The Jain do acknowledge one, but deny his power over, or interference in, either the creation of the world or anything contained in it. They might, therefore, like the buddhists, as well discard their belief altogether; the buddhist admit into their temples images of the brahminical deities, but do not in Ceylon, Ava, or Sam, acknowledge them as objects of worship; the Jain both admit them, and, in a limited degree, acknowledge them. Jaina images are in Kannara, called *Chindeo*, a corruption of *Jainadeva*; and the fort, Chinraypatan, may, perhaps, be in more correct orthography, *Jainaraya-patana*. During the invasion of Mahmood of Ghuzni, this religion seems to have prevailed in the provinces

of Guzerat, Khandesh, Aurangabad, Bijapur and the Konkans. The hill of Shatrurji at Palitana in the Gohelwar district at the mouth of the Gulf of Cambay is dedicated to Adinath, the first of the 24 hierophants of the Jains. Each temple contains images in marble of Adinath or of some other of the Tirthankara and perhaps no fabric of human workmanship in India, is more calculated to arouse wonder, admiration and lasting remembrance than Palitana in its unique and mysterious perfection. No fabric of human workmanship in India, is more wondrous than Palitana.

The Jains assert that Jina, Mahavira, was the preceptor of Gotama, placing him a few years anterior to Gotama; in the year 569 B. C. and 512 before Vikramaditya. According to Dr. Buchanan certain Jain tribes assert that they came from Arabia and it is remarkable that the images of the Jaina have are woolly heads. Some of these idols colossal to a degree perhaps unequalled, others are very diminutive, but the great bulk of this sect are undoubtedly of Aryan origin. At present in India, the Aryan races hold to the three great religions, Buddhism, Brahminism; and Zoroastrianism, and the followers of the Jain belief are all of this race, many of whom however, in Cashmere, Afghanistan and Rajputana have become mahomedans. An eminent Jain priest gave as a reason for the innovation of enshrining and worshipping the forms of the twenty-four pontiffs, that the worship of Kaniya before and after the apotheosis, became quiet a rage amongst the women who crowded his shrines, drawing after them all the youth of the Jains; and that, in consequence, they made a statue of Nemi to counteract a fervour that threatened the existence of their sect. It is seldom we are furnished with such rational reasons for religious changes. The designation *Vedya* is still used as a term of reproach to the Jains and Buddhists. The ancient Persians were worshippers, like the present Jain, placed a bandage over the mouth while worshipping.

Dr. Bird in his "Historical Researches on the Origin and Principles of the Buddhist and Jaina religions, furnishes several dates of inscriptions from the caves of Karli, Karli, Ajunta, Ellora, Nasik, &c. The caves of Udyagiri and of the Khandagiri hills about 20 miles from CUTTACK and five from Boban Esvara are next in antiquity to those of Behar. They are built on the hills of Udyagiri and Khandagiri, the former are Buddhist and the older, the latter probably Jain. Many of the inscriptions are in the Lath character, and this gives their age as anterior to the Christian era. The frieze sculpture in the Gausgompha is superior to any in India and resembles that of the Sanchi tope at Bilsa. In it there are no gods, no figures of

different sizes, nor any extravagance. In the Buddhist caves here, there are no figures of Buddha; or any images. In a Jaina cave on Khandagiri, the 24 Tirthankara with female energies are sculptured.

True Jaina caves occur at Khandagiri in Cuttack and in the southern parts of India. But are few and insignificant. There are cut in the rock of Gwahor Fort, a number of colossal figures, some thirty to forty feet high; of one of the Tirthankara, some sitting, some standing. Their dates are about the tenth or twelfth century before Christ.

Of the Behar caves in the neighbourhood of Rajahmuri, the Milk maid's cave, and Brahman girls' cave; have inscriptions in the Lath character. They are of about 200 B. C.; and are the most ancient caves of India. The Nagarjun cave and Haft Khaneh or Satghur group are situated in the southern arm of the hill at some little distance from the Brahman girl and Milkmaid's cave. Another group is the neighbouring Karna chapara and Louas Kishi cave.

Five Jain images, in marble have been dug up at Ajmir with a Prakrit Inscription derived from the Pali, and the date, A. D. 1182 is on one image. The character used in the inscription is Deva Nagari. The sect mentioned is Jain, of the Digambari class. The name of one of the images, Prajnanath. These five images of naked Jain saints were dug up at Ajmir, in a mahomedan burial ground; and the inscriptions on them are curious for showing the Prakrit (not Pali) of the twelfth century.—*Ben. As Soc. Jour.* Vol. VII. page 53.

The principal Jain seats at present, are at Aboo and Girnar. Girnar is an eminent Jain locality, but Mount Aboo, in Jain estimation, is the holiest spot on earth. Dilwarra, according to tradition has been famous from a remote antiquity. Hindoo temples are said to have existed which to which, since A. D. 1034, pilgrims have resorted; but all traces of them have disappeared; on their traditional site, however, at Dilwarra, Bimul Sah, a rich Jain merchant and others, erected the celebrated Jain temples which are now there. The Jain priests of Aboo are chosen from amongst the youth of the Oasi tribe or Oswal of the Marwari people. They never marry but live a *sadhu* or pure ascetic life and are scrupulously careful to avoid destruction of animal life. They move about with a cloth over their mouths to prevent insects entering; they use incessantly a small brush or broom to sweep aside all living creatures, they eat seldom generally once daily and they never partake of stale food lest in the interval since its cooking animalcules may have formed in it. Many of the people usually called Marwari are almost all of the Jain religion. The conduct almost exclusively the

entire banking business of India. Colonel Tod tells us that they are of Rajpoot origin, and one of them, the Oswal is the richest and most numerous of the eighty-four mercantile tribes of India, and is said to amount to one hundred thousand families. They are called "Oswal" from their first settlement, the town of Oasi. They are all of pure rajpoot birth of no single tribe, but chiefly Pura, Solanki and Bhatti. All profess the Jain tenets, and the pontiffs of that faith must be selected from the youth of Oasi. These great bankers and merchants are scattered throughout India, but are all known under one denomination, Marwari which is erroneously supposed to apply to the Jodpoor territory, whereas, in fact, it means belonging to Maroo, the desert. It is singular he adds (*Rajasthan ii.* 234) that the wealth of India should centre in this region of comparative sterility. The Marwari is essentially following similar mercantile pursuits to the *vaisya komati* of the Peninsula of India, viz, that of banker and merchant, to which, however, the Komati add that of retail shopkeeping. If a Marwari engaged in business in the Peninsula, be asked as to his caste, he replies that he is a Mahajan, a Bania, a Bais, or Vais, meaning that his profession is of that section of the people. But on further question he explains that originally the Marwari was a rajpoot; that there are twelve great tribes, of whom are the Oswal, Messar, Agarwala, Saragogi, Maddat-war, Parwar, Bijabargi, and five others. These all subdivide into innumerable "kap" or clans; in the Messar tribe alone, are 72; amongst whom are the Rathi and Dhaga. All the Marwari adhere to the "gotra" or exogamic principle, taking their descent from a founder, and in their marriage ceremonies they abstain from the blood relationship, never marrying in their own gotra. Their widows never re-marry.

Between them and the brahminical hindu, there has been, in Guzerat, a spirit of emulation from the most ancient times. The Jain do not revere akya Muni, but restrict their reverence to 24 Budd'ha, styled *teerthanakara* who have attained annihilation. The last *teerthanakar* was Maha-Vira, who died B. C. 600. They have maintained their ground in Guzerat and in parts of Mysore and followers of their creed hold in their hands a large part of the wealth and trade of India. Their temples are magnificent, the most a recent of them are at Girnar, the most exquisite on Mount Aboo the most extensive and still flourishing at Shatroonjye near Palit'hana. The last mentioned were beautified and restored by Siladitya and it is the most ancient and most sacred of the Jain shrines of Guzerat. Almost every Indian city has contributed to its adornment. The numbers and power of these sectarians are little known to Europeans, but in 1820, the

pontiff of the Khartra-gataka, one of the many branches of this faith, had 11,000 clerical disciples scattered over India; a single community, the Oasi or Oswal, then numbered 100,000 families; and more than half of the mercantile wealth of India passes through the hands of the Jain laity. Rajast'han and Saurashtra are the cradles of the Jain faith, and three out of their five sacred mounts, namely, Abu, Palit'hana,* and Girnar are in these countries. The officers of the state and revenue were chiefly of the Jain laity, as are the majority of the bankers, from Lahore to the ocean in Colonel Tod's time. The chief magistrate and assessors of justice, in Oodipoor and most of the towns of Rajast'han, were of this sect; and as their duties were confined to civil cases, they are as competent in these as they are the reverse in criminal cases, from their tenets forbidding the shedding of blood. To this leading feature in their religion they owe their political debasement: for Komarpal, the last king of Anhilwara of the Jain faith, would not march his armies in the rains, from the unavoidable sacrifices of animal life that must have ensued. The strict Jain does not even maintain a lamp during that season, lest it should attract moths to their destruction. Among the merchants of the Jain tribe, women are not, in general, educated; but when they are left widows at an early age they are in the habit of devoting themselves to Jain or priests with whom they abide, and from whom they learn not only the rites, but also to read the sacred books of their religion: they become, in fact, mendicant priestesses, and exercise considerable influence over the females of their tribe from the most remote period, Mewar has, afforded a refuge to the followers of the Jain faith, which was the religion of Balabhi, the first capital of the Rana's ancestors, and many monuments attest the support this family has granted to its professors in all the vicissitudes of their fortunes. One of the best preserved monumental remains in India is a column in Chetore. Most elaborately sculptured, full seventy feet in height, dedicated to Parswa-na'th, the noblest remains of sacred architecture, not in Mewar only but throughout Western India, are Budd'hists or Jain: and the many ancient cities where this religion was fostered, have inscriptions which evince their prosperity in these countries, with whose history their own is interwoven and to their having occupied a distinguished place in Rajpoot society; the libraries of Jessulmer in the desert, of Anhilwara, the cradle of their faith, of Cambay, and other places of minor importance consist of thousands of volumes. These are under the control, not of the priests alone, but of communities of the most wealthy and res-

pectable amongst the laity, and are preserved in the crypts of their temples, which precaution ensured their preservation, as well as that of the statues of their deified teachers, when the temples themselves were destroyed by the mahomedan invaders, who paid more deference to the images of Budd'ha than to those of Siva or Vishnu. The preservation of the former may be owing to the natural formation of their statues; for while many of Adinath, of Nemi, and of Parswa have escaped the hammer, there is scarcely an Apollo or a Venus of any antiquity, entire, from Lahore to Rameswara. The two arms of these theists sufficed for their protection, while the statues of the polytheists have met with no mercy. Palit'hana, or the abode of the Pali, is the name of the town at the foot of the sacred mount Satrunjya (signifying victorious over the foe) the Jain temples on which are sacred to Buddhawara, or the Lord of the Buddhist Palit'hana seems derived from the pastoral (pali) Scythic invaders bringing in their train the buddhist faith which appears indigenous to India, Palestine, which with the whole of Syria and Egypt, was ruled by the Yksos or Shepherd—kings, who for a season expelled the old Coptic race, may have had a similar import to the Pali-t'hana founded by the Indo-Scythic Pali. The earliest objects of adoration in Rajputanah were the sun and moon, whose names designate the two grand races, Surya, and Chandra, or Indu. Bud'ha, son of Indu, married Ella, a grandchild of Surya, from which union sprang the Indu race. They deified their ancestor Bud'ha, who continued to be the chief object of adoration until Krishna: hence the worship of Bal-nath and Budha were coeval. That the nomade tribes of Arabia, as well as those of Tartary and India, adored the same objects, we learn from the earliest writers; and Job, the probable contemporary of Hasti, the founder of the first capital of the Yadu on the Ganges, boasts in the midst of his griefs that he had always remained uncorrupted by the Sabeism which surrounded him. "If I beheld the sun when it shined, or the moon walking in brightness, and my mouth has kissed my hand, this also where an iniquity to be punished by the judge, for I should have denied the God that is above." That there were many hindus who, professing a pure monotheism like Job, never kissed the hand either to Surya or his herald Bud'ha, we may easily credit from the sublimity of the notions of the 'One God,' expressed both by the ancients and moderns, by poets and by princes, of both races but more especially by the sons of Budag, who for ages bowed not before graven images, and deemed it impious to raise a temple to

"The Spirit in whose honour shrines are weak."

Hence the Jain, the chief sect of the budhists, so called from adoring the spirit (Jin), were untinctured with idolatry until the apotheosis of Krishna, whose mysteries superseded the simpler worship of Bud'ha. Nemnath (*the deified Nemi*) was the pontiff of Budha, and not only the cotemporary of Krishna, but a Yadu, and his near relation; and both had epithets denoting their complexion; for Arishta, the surname of Nemi, has the same import as Sham or Krishna, 'the black,' though the latter is of a less Ethiopic hue than Nemi. It was anterior to this schism amongst the sons of Budha that the creative power was degraded under sensual forms, when the pillar rose to Bal or Surya in Syria, and on the Ganges: and the serpent, "subtlest beast of all the field," worshipped as the emblem of wisdom (Bud'ha,) was conjoined with the symbol of the creative power, as at the shrine of Eklinga, where the brazen serpent is wreathed round the lingam. Bud'ha's descendants, the Indu race, preserved the ophite sign of their lineage when Krishna's followers adopted the eagle as his symbol. These, with the adorers of Surya, form the three idolatrous classes of India, not confined to its modern restricted definition, but that of antiquity, when Induethan or Indu-Scythia, extended from the Ganges to the Caspian. In support of the position that the existing polytheism was unknown on the rise of Vishnuism, it may be stated, that in none of the ancient genealogies do the names of such deities appear as proper names in society, a practice now common; and it is even recorded that the rites of magic, the worship of the host of heaven, and of idols, were introduced from Kashmir, between the periods of Krishna and Vicrama. The powers of nature were personified, and each quality, mental and physical, had its emblem, which the brahmins taught the ignorant to adopt as realities, till the pantheon became so crowded that life would be too short to acquire even the nomenclature of their "thirty-three millions of gods." No object was too high or too base from the glorious orb to the rampi, or paring knife of the shoemaker. Krishna is worshipped under the seven forms in the various capitals of Rajast'hann, and these are occasionally brought together at the festival of Anacuta at Nat'hdwara.—*Tod's Rajasthan, Tennent's Christianity in Ceylon*, p. 206, 207. *Cole. JAKATRA. This ancient town is the modern Batavia, is also the name of the river on which the town is built.

JAKAWANSA. **SINGH.** *Anisomela obovata*.

JA'K'HAN. **HIND.** The wooden foundation of the brick work of a well. It is generally made of the green wood of the Goolur tree (*Ficus glomerata*), which is less liable to rot than any other kind.—*Elliot Supp. Gloss.*

JAKHUB, also Shiagh, also Pooniah, are denominations of the Jit race in the Rajputanah desert, a few of whom preserve, under these ancient sub-divisions, their old customs and religion; but the greater part are among the converts to mahomedanism, and retain the generic name, pronounced Zj'hut. Those enumerated are harmless and industrious, and are found both in the desert and valley: There are, besides, these, a few scattered families of ancient tribes, as the Sooltan and Khoomara, of whose history we are ignorant, Johys, Sindil and others.—*Tod's Annals.*

JAKILA. **MALEAL.** *Ficus venosa*.—*Ait.*

JAKA. The highest mountain near Simla.

JAKRANI. A Baluch tribe. See Kelat.

JAKUN. The wild tribes inhabiting the Malayan Peninsula, Sumatra and a few of the neighbouring Islands are divided into three principal classes, which are subdivided into many others. The first of these divisions includes the Batta, who inhabit the interior of Sumatra and a few neighbouring islands. The second is that of the Semang, who are found in the forests of Kedah, Tringanu, Perak and Salangor. Under the third division, the Jakun, are comprised of many tribes, who inhabit the south part of the peninsula from about Salangor on the west coast, and Kemaman on the E. coast, and extend nearly as far as Singapore. All these various wild tribes are ordinarily classed under the general and expressive appellation of Orang Binua meaning people of the soil. The Malays in the thirteenth century, had but a short time inhabited the Peninsula, since we are informed by the Sejara Malayan, that Singapore is celebrated in Malayan history, as having been the first place of settlement of the early Malay emigrants from Sumatra. The Orang Binua are not mahomedans; it is stated by the Binua, and admitted by the Malays, that before the Malay Peninsula had the name of Malacca, it was inhabited by the Orang Binua. In course of time, the early Arab trading vessels brought over priests from Arabia, who made a number of converts to mahomedanism, and those of the Orang Binua that declined to abjure the customs of their forefathers, in consequence of the persecutions to which they were exposed, fled to the fastnesses of the interior where they have since continued

in a savage state. Their general physical appearance, their lineaments, their nomadic habits and a few similarities in customs, point to a Tartar extraction. The principal habitations of the Jakun are found at the upper extremity of the rivers of Johore, Banut, Batu Pahat and Muar. There is, however, a remarkable difference in the physical appearance of the several classes of Jakun. Those of Malacca are generally as tall as the common run of Europeans; they are more dark than any other of the wild tribes; and in which respect there is not much difference between them and the more dark of the Indo-Portuguese of Malacca. The Jakun of Johore are a fine race of men: many of them are taller than those of Malacca; the face also is expressive and well characterized, and the expression of the eyes in many of them is a little severe. Their nose does not recede at the upper part, neither is it so flat or so broad at its base as this organ is in the Chinese, Cochinchinese and pure Malay. Several of them have aquiline noses. Some children and young men are beautiful. The women are plump but not over stout. The Jakun of Menangkabau States, are very short, their physiognomy is low, and seems to announce great simplicity; many of them are ugly and badly made. The Jakun are generally strong, and muscular. The hair black, ordinarily frizzled, but very different from the crisp hair of the Negro. Some of them leave the whole to grow on the head, as the Cochinchinese; others, as many of those of Malacca, cut theirs entirely; others chiefly of the Menangkabau States and of Johore, shave the head, leaving it only above three inches in diameter at the crown where they never cut it, the same as the Chinese; and to prevent this head of hair from being hooked by the branches of tree in their sylvan habitations, they tie it up in the form of a top knot. They have scarcely any beard, and many of them have none at all. The women leave their hair to grow, and then tie it up in the same way as the Malay women; but they are not very particular in this respect. It has been stated that in the forests of Pahang are numerous tribes of the Jakun, who are as white as Europeans: that they are small, but very good looking; and the Malays form a party and beat the forest in order to catch these poor creatures. They take their captives to Pahang or to Siam, where on account of their whiteness and comeliness, they sell at a high price. They do not worship the sun nor the moon nor any idol. The Jakun of Malacca, cannot be more than three hundred, about one-half of whom are seen near Reim and Ayer Panas, at Ayer Barn, Gassim, Kommander, Bukit Singhi; in the river of Muar near Pankalang Kota, at Poghalay, Sagil, Segamon,

Lemon, Jawee; in the small river of Pago, and in that of Ring. The remainder are to be found, at Bukit More, Ayer Troas, Bukit Gadong, Tanka, and it is reported there are a good number at Segamat. The Jakun of Johore inhabit that part of the peninsula which is under the sway of the sultan of Johore, and cannot amount to more than one thousand, scattered over that large extent of country. There are Binua on the Simrong and other branches of the Indian which are in Johore. The southern part of Pahang is inhabited by the same tribe of Binua who are found in Johore, some of whom have habitations which can scarcely be called houses. The Jakun of Johore build comfortable houses in the Malay way, divided into several rooms, for the private accommodation of the family; with pots, plates, and mats as furniture, a frying pan of iron to cook rice, a cocoanut shell to keep water, and baskets to bring food. The houses are raised about six feet from the ground, and are entered by a ladder like the Malay houses. The best houses of the Menangkabau Jakun are about the same as the more simple and common houses of the Jakun of Johore; others are rude edifices on the top of four high wooden poles; thus elevated from fear of tigers, and entered by means of a long ladder. The roofs are often thatched with Chuchol leaves. There is but one room in which the whole family is huddled together with dogs and the bodies of the animals they catch. The huts are so made as to be moveable at a moment's warning; they are ordinarily situated on the steep side of some forest clad hill, or in some sequestered dale, remote from any frequented road or foot path, and with little plantations of yams, plantains, and maize; some have also patches of rice about them. The bones and hair of the animals whose flesh the inmates of these scattered dwellings feed upon, strew the ground near them, while numbers of dogs generally of a light brown colour give timely notice of the approach of strangers. The Jakun of Malacca are the most ignorant, the poorest and most miserable, their best houses are about the same as the worst of those of the Menangkabau Jakun, and several families live without even having any house at all. These gather themselves together to the number of five or six families, they choose a place in the thickest of the forest, where they clear and hedge a circle of about thirty feet in diameter; and so make a sort of bulwark against the numerous tigers, bears and panthers, they establish their dwelling in this enclosure, each family works to construct what will serve for a bed during the night, a seat in the day time, a table for the repast, and a dwelling or shelter in bad weather; it consists of about fifteen or twenty

sticks of six feet long, laid one beside the other, supported at the two extremities by two other transverse sticks which are set upon four wooden posts; the whole being about two feet in height, four feet broad and six feet long. One dozen Chucho leaves gathered by their ends, cover the bed, and the beds are placed around the enclosure, in such a way that when all the persons are sleeping every one has his feet towards the centre of the habitation which is left vacant, to be used as a cook room, or for any other purpose. The clothes of the Jakun (when they wear any) are ordinarily the same as those used by Malays, but poor, miserable, and above all very unclean; many of them use clothes without washing, from the day they receive or buy them, until they become rotten by use and dirt, and they are obliged to throw them away. If vermin are found, they are eaten with delight as in Cochin China. Many of them are badly dressed, and some nearly naked from want, for all desire to be clothed, and the most agreeable presents which can be offered to them are some trowsers, sarong, baju, or some handkerchiefs to put round their head, in the Malay fashion. Those of them who go, habitually, nearly naked, do not appear so before strangers, excepting they have no clothes. The Jakun of Jahore and Menangkabau are superior to the others, are the best dressed, have a great number of crystal, copper, tin; and silver rings on their fingers, and also silver bracelets. The Menangkabau women are not so well clothed, many of them go nearly naked, at least near their houses and those who use clothes, show often an embarrassment which proves that they are not accustomed to their use. The Jakun of Malacca are badly dressed, many of the women have only a Sarong, and if they are married, a ring, the necessary present of the husband before marriage. The greater part of the men have nothing but a strip of the fibrous bark of the terap tree, beaten into a sort of cloth of a reddish brown colour, called a Sabaring, round their loins; part of this comes down in front, is drawn between the legs and fastened behind. The Jakun are idle but their principal occupation is the chase. When there is no more food at home the husband beats the forest, and sometimes returns with large pieces of venison, but sometimes with nothing, and on such days they go to sleep without supper. This is the ordinary evening work, when the sun is near setting. In the day time they remain at home where they prepare arrows and the weapons, the substance with which they poison their arrows, and they cook and eat the animals caught the day before. They traverse the jungle during

the day seeking after rattan, dammar, garu-wood, and several other articles of commerce; they sometimes cook the flesh before they eat it, but at other times they eat it raw, some merely put the animal upon the fire till the hairs are singed, when they consider it as cooked. A traveller saw some large monkeys which after having been thus cooked, were dished up upon a kind of mat as a meal to some seven or eight persons, who speedily devoured the whole. Some Jakun refuse to eat the flesh of elephants under the pretext that it would occasion sickness. A Jakun has always his spear, which is both a stick to walk with and an offensive or defensive weapon. The parang, an iron blade of about one foot long, and two or three inches broad, with a haft like that of a large knife, they use to cut trees. Their marriages are ordinarily celebrated about the month of July and August when fruits are plentiful. The bridegroom frequents for some time the house of his intended, and when he has obtained her consent, he makes a formal demand to the father. A day is then appointed; and an entertainment is prepared, more or less solemn, according to the means of the two contracting parties, and their rank in the tribe. When the day of the marriage is arrived, the bridegroom repairs to the house of the bride's father, where the whole tribe is assembled. The dowry given by the man to his intended is delivered, and must consist at least of a silver or copper ring a few cubits of cloth perhaps or a pair of bracelets, other ornaments, and furniture are added. Sometimes the woman presents also some gifts to her intended and then the bride is delivered by her father to the bridegroom. Amongst some tribes there is dance, in the midst of which the bride elect darts off into the forest followed by the bridegroom. A chase ensues during which should the youth fall down, or return unsuccessful, he is met with the jeers and merriments of the whole party, and the match is declared off. A European who inhabited Pahang many years, said that during the banquet a large fire is kindled, all the congregation standing as witnesses: the bride runs round the fire till caught up by the groom. Adultery is punishable by death. It is not allowed to keep more than one wife. Only one was seen who had two, and he was censured and despised by the whole tribe: a man can divorce his wife and take another. If the divorce is proposed by the husband, he loses the dowry he has given to the woman; if the woman ask the divorce, she must return the dowry she received. The children follow the father or the mother according to their wishes; if young they follow the mother. No

assistance is ordinarily given to lying-in women; their physicians or Pawang, are not permitted to appear in such circumstances, and midwives are not known amongst them. It is reported that in several tribes, children, so soon as born, are carried to the nearest rivulet, where they are washed, then brought back to the house, where a fire is kindled, incense of kamunian wood thrown upon it, and the child then passed over it several times. The practice of passing children over fire was in all times much practiced among ancient heathen nations; and it is even now followed in China and other places. With the dead, the corpse is washed, wrapped in some cloth and interred by relations and neighbours, in a grave about four or five cubits deep. The sumpitan, quiver of arrows, knife, &c., of the deceased are buried with him, along with some rice, water, and tobacco. The Jakun consider white as a sacred colour; and it is a peculiar subject of comfort, when in their last sickness, they can procure for themselves some white cloth, in which to be buried. They are candid and honest, extremely proud, and will not submit for any length of time to servile offices or to much control. Each tribe is under an elder, chief or leader termed the Batin who directs its movements, and settles disputes. The Jakun hate the Malay, and the Malay despise the Jakun.

The woolly haired, short, race of the south of the Malacca peninsula are about 7,000 or 8,000 in number. Towards the north of the province of Ligor, they are called Karian, towards Kedah, Perah and Salengore, Samang, In Quedah, Bodoanda; between Salengore and mount Ophir, Mantra; those from mount Ophir to the coast, in the province Malacca, Jakun; and the Binua dwell in Johore, immediately behind Singapore. They are forest races, living on deer, hog, fish, birds, roots and fruits such as the durian, jack and mango. Many of them build on trees, 20 to 30 feet from the ground. In their marriages, the youth arranges with the girl's parents, but the ceremonial remind us of the old tale of Hippomenes and Atalanta. If the tribe is on the bank of a lake or stream, the damsel is given a canoe and a double bladed paddle and allowed a start of some distance, the suitor, similarly equipped starts off in chase. If he succeed, in overtaking her, she becomes his wife, if not the marriage is broken off. But the chase is generally a short one, for though the maiden's arms are strong, her heart is soft and her nature warm and she becomes a willing captive. If the marriage take place where no stream is near, a round circle of a certain size is formed. The damsel is stripped of all but a waist band, given half the circle's start in

advance, and if she succeed in running three times round before the suitor come up with her, she is entitled to remain a virgin: if not, she must consent to the bonds of matrimony; as in the other case, but few outstrip their lovers.

The Bodoanda is a Jakun tribe inhabiting Quedah.

Jakun men are seldom above five feet high. Those of them who still retain their savage habits, use the sumpitan, poisoned arrows, and spear, — *Cameron* 115. *J. I. A.* p. 272, *January to May* 1868. *Newbold's Malacca, Vol. II.* p. 210. See Kedah; Quedah; India.

JAL. HIND. *Salvadora Indica* also *S. oleoides*, *Kaurijal*, *S. Indica*. The various names *jal*, *wan*, *vanr*, or *pilu*, are given to the *S. oleoides* abundant south of Lahore. *S. oleoides*, called "kauravari," is a bad fuel, quite useless for locomotives, but can be used for steamers.

JAL. A water ordeal, in which the accused is dipped under water, whilst an arrow is shot and a person runs and brings it. If, on his return, the accused be still alive, he is deemed innocent.

JALA. HIND. *Hydrilla verticillata*, also *Potamogeton gramineus*, *H. verticellata* is a water plant used in purifying sugar.

JALIKA. Sans. From jala, a net.

JALIKAT. TAM. A sport in the South of India: it consists in loosing, either from a large pen or from a number of stakes to which they are tied, a lot of cattle with cloths or handkerchieves tied to their horns, money being sometimes knotted in the cloths,—nothing is done to infuriate the cattle before being released; when let go, the spectators shout and cheer and a tremendous tom-toming is set up, this so far excites the animals that most of them go off at a gallop, and such of the spectators as wish to distinguish themselves in the eyes of their countrymen as swift runners and brave men, go after the cattle and strive to pull the cloths off the beasts' horns, the cloth and any valuable attached to it being the reward of the captor. This may be considered the national amusement of the people of Madura. It is practised at Trichinopoly, Poodloocottah, in parts of Tanjore, and is as much their passion, as horse racing is that of the people of England or bull baiting that of the people of Spain.

The rich ryots, zeminders and head men are the great promoters of this kind of sport, by running their own cattle, &c.; directly they find that its practice is attended with danger of being tried for an accident, it is probable that they will voluntarily withdraw from actively

continuing it, when it will greatly lose its interest and excitement among the people, and they will then probably voluntarily give it up and take to or invent some more harmless amusement.

JALI MABA. CAN. *Vachelia farnesiana*.

JALKUKAR. HIND. *Tulipa stellata*.

JALLALI. A masked or mumming devotee at the Maharum. The Jallali mummies who adopt fancy dresses in the Maharum, sing, Mariah, satires and songs. The great bulk of them are low caste hindoos and pariahs.

JALLUKRI. HIND. *Centranthus ruber*.

JAL-MOOTEE. BENG. *Cyperus pygmaeus*.

JALMOR, from Balti, a dark, hard, serpentine-like stone, takes a fine polish. It is used like zahr mohra for cutting into cups, &c.; the value of a cup is from Rs. 3 to 4.

JALIN? CAN. *Shorea laccifera*, *Heyne*.

JALNA (Jaulnah) in L. 19° 51' N. and L. 75° 54', E. in the Dekhan a military station, 38 miles E. of Aurangabad, 1652 feet above the sea.

JALNIM. HIND. *Lippia nodiflora*, also, *Lycopus Europæus*.

JALNIM. HIND. *Herpestes monniera*.

JALUKA. Sans. Leeches.

JALUS. ARAB. Literally accession, the term applied to the ascent of a throne. In the Southern Konkan the Jalus San or San-i-Jalus, has formed an era commencing with the year of Salivahana 1578, (A. D. 1656) and running on hence forward in the ordinary solar manner. It corresponds exactly with the accession of sultan Ali Adl Shah II to the throne of Bejapore—*Thomas' Prinsep*.

JALSOO. See Kunawer.

JAM. DUK. *Psidium pyrifera*, also, *P. pomiferum*.—*Linn.* The guava.

JAM. A hindoo title supposed by Colonel Tod to be a corruption of Sambu a titular appellation from the Sambu of Alexandria. It is, however, a hindu title borne by the Jam of Bela, the Jam of Nowanuggur in Surashtra, the Jam of Kej, also the Jam of the nomade Mahomedan Jokya, a Samma tribe, west of Tatta and has no connexion with Jamshid nor has it a Persian origin—*Elliot, Burnes' Kabul*. See India; Kattywar; Kelat; Khyber.

JAM Any vessel for drinking out.

JAM. MALEAL. *Eugenia jambos*.—*Linn.*

JAM. A river running near Seones and near Lodikhera in Nagpoor.

JAMA. An article of mahomedan dress.

JAMA. AR. A place where mahomedan people assemble to pray, a house of public worship.

JAMA-BANDI. HIND. Revenue Settlement on a village.

JAMA CHETTU. TEL. *Psidium pyrifera*.—*Linn.*

JAMADAGNI, A famous rishi, the father of Paras Rama, at whose command the latter cut off the head of his mother Penaka. See *Brahmadeca*; Rama; Paras Rama.

JAMADAB, The chief or leader of any number of persons, also a native commissioned officer in the native armies of India.

JAMAICA GINGER, uncoated Malabar or Bengal ginger.

JAMAICA YELLOW THISTLE, *Argemone mexicana*.

JAMAI-POOLI-SHIM, BENG. *Dolichos lignosus*.

JAMAL, ARAB. Camel.

JAMALGOTA, HIND. *Baliospermum Indicum*, also *Croton tiglium*.

JAMALI, A Baluch tribe, who inhabit the country, from the Gaj towards Schwan; and a little lower down, on the stream.—*Masson's Journeys*, Vol. II. p. 137.

JAM-AMROOD, HIND. Guava tree.

JAMA MUSJID is the principal mosque in Indian towns in which mahomedans meet for prayer and religious services. The Jama Musjid of Delhi cost ten lakhs of rupees and took six years in its construction. It was begun and completed in the reign of Shah Jehan. Three of the highest, the broadest and finest flights of steps in Delhi, made of stone, lead to the front and side entrance, whence the spectator comes to a square platform. In the centre of this is a large cistern which is intended for the performance of the "wazu" or ablutions before prayer. While the three sides open inwardly with a corridor and cloisters, the west of the square platform is the cathedral itself, rising in three large domes and two of the most stately minarets within the town of Delhi. Its space admits of a vast congregation and on the anniversary of a saint of any celebrity or on any other particular occasion, it is crowded with unahomedans.—*Tour in India by French*, p. 10.

JAMAN, HIND. *Syzgium jambolanum*; also, *Prunus padus*, *P. cerasus*, also the sloe like fruit of *Syzgium jambolanum*, also a sweetmeat, made to resemble the fruit.

JAMAN KUMB, of Kangra, is the fine white fibre of a climbing plant, but it has frequent knots and joints which make the fibre short.—*Powell's Handbook*, Vol. 1. p. 511.

JAMARA, HIND. *Viburnum foetens*, Nagar jaman, is *Ficus reticulata*.

JAMASP, One of the Sassanian kings.

JAMAUKA, HIND. *Cucurbita citrullus*.—*Linn.*

JAMAWEH, PERS. Bedding.

JAMB, HIND. MAL. *Eugenia jambos*.

JAMBA, MAR. *Inga xylocarpa*.

JAMBAN, A tree in Canara which grows from two to four feet in diameter and from

twenty-five to forty feet in height. Its wood is very scarce, very much resembles mahogany and is generally used for house furniture.—*Edge M. and O.*

JAMBAO, MALAY. A general term applied to species of *Eugenia*, *Myrtus*, *Anacardium* and *Psidium*.

JAMBEE, A cane with stiff stems and large knots, imported from China; a species of *Calamus*.

JAMBI, JAV. Betel-nut, Areca-nut, Penang-nut from the Areca catechu palm.

JAMBIRA, SANS. also, Nimbooka, Niboo, Limbo. BENG. HIND. *Citrus limosum*.

JAMBIRA, also Nimba Chettu. TEL. *Citrus bergamia*.—*Risso and Poit. Roeb. W. & A.*

JAMBIYAH, AR. HIND. A crooked dagger.

JAMBO, SING. *Eugenia jambos*.—*L.* The bark is used as a mordant for blue and black dyes, also, BENG., *Jambosa aquea*. *D. C., W. & A.*

JAMBO-IRING, SUMATRA. *Anacardium occidentale*.—*Linn.*

JAMBOOLA, SINGH. *Citrus decumana*.—*Linn. W. & A. Roeb.*

JAMBONS, FR. Hams.

JAMBOSA AQUEA.—*D. C. W. and A.*—*Prod. I. 332, Roeb; Wight, Icones.*

Eugenia aquea, *W. Ill.* | *Eugenia sylvestris*, *Mook's Cat.*

JAMBOSA AQUEA.

Jambo BENG. | Wal-jambo-gass SINGH.

Abundant in the Central province of Ceylon, up to an elevation of 5,000 feet.—*Theo. En. Pl. Zeyl.* p. 115.—See *Eugenia aquea*.

JAMBOSA DOMESTICA *D. C.*, *Jambosa malaccensis*, *D. C.*, *Jambosa purpurascens*, *D. C.*, are syns of *Eugenia malaccensis*.—*Linn.*

JAMBOSA VULGARIS, *D. C.*, syn. of *Eugenia jambos*.—*Linn.*

JAMBOSA CYLINDRICA.—?

Eugenia (J.) cylindrica, | *Eugenia (J.) pauciflora*, *W. Ic.* | *W. Ic.*

A moderate sized tree of the Ambagamowa district, in Ceylon, up to an elevation of 8,000 feet.—*Theo. En. Pl. Zeyl.* ii. p. 115.

JAMBOSA MALACCENSIS, *D. C.*, syn. of *Eugenia malaccensis*, *Linn.*

JAMBOSA SALICIFOLIA.—?

Pao Jambod. MAHR.

A crooked tree growing much on the rivers of the Bombay Deccan country. The stem is generally useless for house purposes, on account of its crookedness, but the straight shoots are eagerly sought after as rafters.—*Dr. Gibson.*

JAMBOSA VULGARIS, *DeCandolle*. syn. of *Eugenia jambos*.

JAMBU, HIND. *Inga xylocarpa*.

JAMBU also *Pedda Neredu*. **TEL.** *Eugenia jambolana*.—*Lam.* or *Syzgium jambolanum*, of *W. and A.* is the rose apple and is so denominated from its odour. From the Jambu a very fine plum-coloured dye, is extracted: both the Jambu and the Teemree bear a pleasant sub-acid fruit.—*Postan's Western India*, Vol. II. p. 48.

JAMBU DWIPA. SANS. In the Hindu *Cosmos*, one of the seven grand divisions of the earth, including Asia, and so named from the tree called Jambu abounding in it. Modern commentators, however, allege that it refers only to certain parts of the interior of Asia, the Eden of the Hindus. In this sense Jambudwipa, is the central division of the world. India is so called in the *Puranas*.

JAMBU MALACCA MARAM. also Jambu Malacca Pallam. **TAM.** The tree and fruit of *Eugenia Malaccensis*.

JAMBUL. MAHR. *Eugenia jambolana*.

JAMBU-MONAT. MALAY. *Anacardium occidentale*.—*Linn.* Cashew-nut tree.

JAMBU-NAWEL MARAM. TAM. *Eugenia jambos*.—*Linn.*

JAMBU-NEREDU, also *Pedda Neredu*. **TEL.** *Eugenia Jambolana*, *Lam*—(large var.) *R.* ii. 484 *Syzgium Jam*.—*W. and A.* 1015—*Rheede*, v. 29.

JAMBAVATI. SANS. From Jambavan, the name of a certain bear.

JAMCANA. TEL. Cotton Carpets.

JAMUANEE. HIND. A flowered Dacca wove muslin.

JAMDANEE.—? A sort of leathern port-manteau.

JAMED-ALU. KARN. In Coorg, a predial slave.

JAMEL. ARAB. *Camelus dromedarius*.—*Linn.* The Camel properly Jamal.

JAMES, Commodore, commanded the E. I. Company's Marine Force in India. In 1755, in alliance with the Mahrattas, he sailed from Bombay, to attack the strongholds of Angria, and on the 2nd April, unaided by the Mahrattas he took Severndroog and Goa, Bancoot surrendered on the 8th April and in February 1756 he attacked Gheria.

JAMES, Colonel, Henry, R. E., Author of General description of the Country of Abyssinia and of the different Routes leading into it.

JAMES AND MARY. A dangerous shoal in the Hoogly, it is an English corruption of the Hindustani words *Jabaz marra*, a ship struck.

JAMIUT. See Kelat.

JAMI. A celebrated Persian poet. See Ahmedi Jami.

JAMI. See Kazzilbash.

JAMUR. HIND. *Ficus carica*, also *F. caricoides*.

JAMI-UT-TUARIKH. Fazl ullah Rashid, otherwise Rashid-ud-din, son of Imad-ud-daulah, Abu'l Khair, was born at Hamdan about A. D. 1247. His enemies, in the latter part of his life, called him a Jew both by birth and religion. The latter part of the assertion is disproved, both as to himself and his immediate predecessor, but Quatremere is inclined to think that he was possibly of Jewish descent, as he shows an acquaintance with Jewish rites and customs singular for a mahomedan statesman. Ibn Batuta (ii, 116), who saw Rashid's son attending as wazir on Abu Said Khan at Baghdad, says that the father, Khwaja Rashid, had been an emigrant Jew.

Said-ud-daulah, the chief minister and favourite of Argun the father of Oljaitu, was a Jew. He had studied agriculture, architecture and metaphysics. He was an adept in mahomedan theology and controversy and was acquainted with Hebrew, Arabic, Mongol, Turk and Persian. His greatest work was called by the author the *Jami-ut-tuvarikh*, "Collection of Histories" or Historical Cyclopædia, which in fact it is. It contained histories of the Tartar and Turkish tribes, of Chingiz and his race, and of the Persian khans in particular, including his master Oljaitu; of various dynasties of Western Asia, of Mahomed and his companions, of the prophets of Israel, the Cæsars and several Christian princes; of China and of India. It concluded, or was intended to conclude, with a universal geography, but it is doubtful if this was ever written, though the existing portions of the work contain many geographical notices.—*Yule Cathay*, II. p. 255.

JAMKALUM, or *Jamcana*, **TEL.** Cotton carpets.

JAMMI CHETTU. TEL. *Prosopis spici-gera*.—*Linn W. and A.* also, *Adenauthera aculeata*.—*Roxb.*

JAMMU. HIND. *Prunus padus*.

JAMMU GAUDI. TEL. *Typha elephantina*.—*Roxb.*

JAMNA. A river of Hindustan, which rises in long. 78° 24' E. lat. 30° 33' N. in the immediate neighbourhood of the hot springs of Jammuotri. Captain Johnson, on the 12th May 1828, found the river issuing from a snow bed at an elevation of 10,840 feet above the sea. The Jumna is also called the Kal Yamuna, or black Yamuna, and Kalinde or the "black pool" from Kaniya having destroyed the hydra Kaniya which infested it. The poet Jydiva styled the Yamuna the blue daughter of the sun. The Jumna is a feeder of the Ganges, which it joins at Allahabad. The principal feeder of the Jumna is the Chambul, which

takes its rise on the Vindhya mountains. See Allahabad ; Ganges ; Krishna ; Saraswati.

JAMNOTRI. A mountain in the Himalaya, in long. $81^{\circ} 0' N.$; lat. $78^{\circ} 29' E.$ in Garhwal, on the left bank of the Jumna, about 8 miles N. of Kharsali. The hot spring " Bassu Tarta" and the level of the Jumna there, is 9,793 feet above the sea. *Rob. Sch'l.*

JAMO URIA. *Eugenia jambolana.*—*Lam. Rozb.*

JAMOA. *HIND.* *Schleichera trijuga*, also *Elæodendron Roxburghii.*

JAMONES. *SP.* *Haus.*

JAMOON. *HIND.* *Eugenia Jambolana*, syn. of *Calyptanthus caryophyllifolia Willd. Swartz*; also, *Calyptanthus jambolana* or *Syzygium jambolana.*

JAMPAN. *HIND.* A litter for the hills.

JAMP SANYA. See Siva.

JAMROOL. *BENG.* *Eugenia alba.*

JAMRUIL. *AR.* A ceremonial at the Kaba, in Mecca, in which pilgrims throw stones, as if at the devil : it originated from Abraham throwing stones at the ram sent to take the place of his son. See Kaba.

JAMSAN. *HIND.* A kind of earth containing an alkali, useful in alum manufacture.

JAMSETJEE JEEJEEBHOY, a Parsee merchant of Bombay, of a princely generous disposition, was knighted by the queen of England on the 3rd March 1842, was subsequently created a baronet—obit, 14th April 1859.

JAMSHID. The fifth king of the Peshadian dynasty of Persia, who, according to Bailey, flourished 3,209 years before the Christian era. The Shah Namah describes him as the first to civilize mankind, and the Persian writers consider the bas reliefs at the ruins of Persepolis—still visible in all their pristine beauty after a lapse of five thousand years,—to be representations of the court of Jamshid, more especially on the festival of the Nouroz. The celebrated Persian poet Fardusi, wrote the Shahnamah in A. D. 1000, containing three heroes, Jamshid, Faridun and Garhasp, as the three earliest representatives of the generations of mankind. A little way from the gate of the entrance of Toos, there stands a dome ornamented with lacquered tiles so small as seemingly to form a part of some private house ; this dome covers the dust of this celebrated poet who after the unworthy treatment he received from shah Mahmood, Ghaznavi, retired there to die.—*Frazer's Journey into Khorasan*, p. 510. See Fardusi.

JAMU. A town and district in the western Himalaya, in long. $33^{\circ} 41' 5'' N.$, lat. $75^{\circ} 51' 4'' E.$ The town of Jamu, in the valley of the Chenab is 1,500 feet above the sea, and the bed of the Chenab is a little above 1,000 feet. The boundary mountains of Jamu rise

12,000 to 14,000 feet. Jamu, is the capital of a principality of which the rulers are Dogra Rajputs. The town contains 7,000 or 8,000 people. It is built on the summit of the first wooded sloping ridge that rises from the plains of the Punjab and on the right bank, at the place where it is divided by a narrow ravine which allows an exit to the river Ravi in its way to its junction with the Chenab.—*Vigne. Schl.*

JAMUKARAM. *TAM.* Carpets.

JAMUN. *HIND.* *Calyptanthus caryophyllifolia* ? : also *Syzygium jambolanum* ; also, *Prunus padus*.

JAMUNA. *HIND.* *Cerasus cornuta*, also *Prunus padus* or bird cherry.

JAN. In India the Jan, the Gin of the Arabian nights, is only known amongst the mahomedans. In Sind, the Jan resembles the Pwceca or Puck of Britain. The Jan of the Baluch hills is wayward and often morose, but not necessarily malignant. He is described as dwarfish with large eyes, and covered with long hairs, and often changes to the form of a camel, goat or other animal. On meeting a Jan, it is essential not to be alarmed, to use civil language. The Jan can become the servant of man and work hard.—*Burton.*

JAN. *HIND.* *Urtica heterophylla.*

JAN. *HIND.* *PERKS.* Life soul spirit, hence, Jandar brave, spirited. Janwar, animal, an expression of affection.

JAN. See Semang.

JAN-I-ADAM. *HIND.* *Ajuga decumbens.*

JANA CHETTU. *TEL.* *Grewia rotundifolia.*—*Juss. W. and A.* This name is applied to several sp. of *Grewia.*

JANAKA. See Kshetriya.

JANAKUA. *MALAC.* *Costus speciosus.*

JANAM ASHTAMI, the nativity of Krishna held as a festival on the 8th day of the month Bhadra. It is also called Gokal-Ashtami and is a hindoo festival in commemoration of the birth of Krishna, an event which is said to have taken place at Mathura, at midnight, about the 22nd August, on the 8th of Shravan. One vaishnava sect keeps the holiday Janam on the 8th and another on the 9th of Shravan. Krishna is stated to have been born of Devaki, niece of Kans, king of Mathura. Kans having had it predicted that one of his race would destroy him, he endeavoured to compass the death of Devaki's offspring in which he failed, and on the 9th Krishna was removed to the house of a cowherd named Nanda. The worshippers abstain during the day from certain articles of diet, at night they bathe and ornament the image and offer the tulsi, or *Ocimum sanctum.* On the following day, a brahman serves as pujari, and afterwards he himself is worshipped. The 8th day is held by the Gaoli or cowherd race as a

great jubilee day, from the circumstance of Krishna having been reared by one of their people, they join hands and dance, and shout Govinda, Govinda. The shrines of Kanoba are much visited at night, the Bhagat of the shrine by self-flagellation, becomes hysterical, which is deemed by the people to be a possession by the deity, on which they prostrate themselves, burn incense and present sick people to the Bhagat. On the following day, the Bhagat's disciples work themselves into hysterics.—*Bombay Gazetteer*.

JANAMEJAYA. See Inscriptions

JANAM-PATRI and Tripno. The former is indispensable to every hindoo child, being at once his horoscope and the guide throughout life.—*Richard F. Burton's Sindie*, p. 399. See Janm.

JANAPA, also, **SIHANAPA**. **TAM.** *Crotalaria juncea*. Sun hemp.

JANA PALASERU. **TEL.** *Antidesma pubescens*.—*Roxb.*

JANAPHAL. Situated near a spur of the Adjunta hills, and the head-quarters of the Mekhur district. The maximum heat in the hottest weather is 98°, about the same as at Ghindwarra or Baitool in the Central Provinces. Janaphul is thirty-six miles from Akolah.

JANAPUM. **TAM.** Thin rope made of the fibre of *Crotalaria juncea*.

JANA SPECIOSA. **Gmel.** syn. of *Costus speciosus*.

JANASTHANA. This place is the modern Nasiek, situated on the Godaveri, not far from the western Ghats, and a place of pilgrimage. *Hind. Th. Vol. I.* p. 304.

JANE or **PABBASA.** **TEL.** *Trichaurus ericoides*, *W. and A.* 143, *lc.* 22.

JANEMAJAYA. The sacrifice of snakes.

JANEO. **HIND.**

Janwey **MAHR.** [Yajno Pavita] ... **SANS.** This cord or string falls over the left shoulder to the right hip. It is worn by the brahman, kshatrya and vaisya castes, by the Ved or Bed of Bengal, and in the Dekhan by the five artificer castes.—*Wils. Gloss.* See Jandiam; Zonar.

JANGAL. **HIND.** Rough tracts of wood and grass; a forest or jungle.

JANGAL BELL. **HIND.** *Salix* sp.

JANGAL PARUNGI. **HIND.** *Quercus semecarpifolia*.

JANGAM. **SANS.** The priest of the lingaet or lingayet sect, called also lingawant, and in the south of India, Vira saiva, a hindu sect, worshippers of Siva, under the usual form of a lingam which is worn, of small size, made of copper or silver in a little casket suspended round the neck, tied in the turban, or fastened on the arm. In common with the saiva sect generally, the Jangama smear their foreheads with vibhuti or ashes, and wear necklaces, and carry rosaries made of the rudraksha seed. They are few in Upper India, but in the south they are numerous and the Aradhya and Pandaram, the officiating priests of the Saiva shrines, are commonly of this sect. The sect is stated to have originated with Basava. The sectarian Jangama religion is one of the most bigotted and exclusive in all India: and, greatly disliking brahmins, these are excluded from their villages shutting out from themselves at the same time the only, until recently, learned people of India. The people of a village near Kalladghi, purposely abstained from digging wells, and in the dry weather had to go about three miles to the Gutparbah river for water, acting thus, as they said, to prevent brahmins settling amongst them.

The three words, Om! "Guru, Linga, Jangam" comprise the creed of the sect, and evidently were intended to disavow every part of the braminiacal priestly tyranny. This mystic phrase is thus expounded. The image (lingam) is the deity: the jangam is the wearer or fellow worshippers: and he who breathes the sacred spell in the ear is the Guru.

The Aradhya sect are brahmins, who though jangams, retain their caste.

The Banijaga are followers of the jangam customs, and seem to be of the Vaisya race.

The Lingaet, Lingadari, or Vira Saiva sect, Lingawant, Lingadhara, and Lingamat worship Siva, in the form of a lingam. The sect was founded in the 12th century, by Basava, a brahman residing at Kalliani in the centre of the peninsula. In common with the Jangama they are "vira saiva hindus, whose sole object of worship is the lingam, a model of which they carry on their arms, or suspend in caskets of silver or gold around their necks.

They are sectarian saivavi, for they do not, in their creed recognize castes nor acknowledge brahmins. The customs and belief of this sect were fully described by Mr. C. P. Brown in the Madras Literary Journal. They are very numerous amongst the Canarese speaking people from Salem through Mysore northwards to Panderoon on the Kistnah, and further north and east towards Kalliani fort, where the sect was originated in the thirteenth century by a brahman named Basava. But further north, even in the Oomraoti district of East Berar,

there were, in 1869, 7,670 of this sect. Their avocations are almost solely those of civil life, as agriculturists and shop-keepers. They are rigid in external ceremonial, but they have loose ideas in morals, probably resulting from what Wilson states as their belief in the inferiority of women and from their licentious habits they are often before the criminal courts. The great bulk of them are such rigid vegetarians, they will not even bring any living creature to a flesh eater. Their dislike to brahmins is such that they use every means to prevent their settlement in their villages; but, though by their religion they should abstain from caste distinctions they are the most exclusive of all the religionist in India, the followers of every different trade or avocation refuse to eat together or intermarry, the Jangama alone adhering to their law. They have made the differences in their avocations equivalent to the caste or race distinctions of other hindoo people. The Jangama, the priests of the Lingaet sect, are often married, so often, indeed, that they are classed Virakta Jangam and Grihasht Jangam, or ascetic and domestic Jangama.

All these anti-brahminical worshippers of Siva, who are called Jangam, Vira saiva or Lingadhari, are easily recognized by their wearing a small idol, either hung on the breast or bound on the arm. These are the disciples of Basava whom they regard as a form of the god Siva. They are widely spread throughout the south of India, among the Canarese, the Telugu and the Tamil Nations.—*Brown's Essay of the Creed, Customs, and Literature of the Jangama*, p. 7.

JANGAR. See Boat.

JANGATA. TEL. The Satana wanloo, Jhera wanloo, and Dhasra wanloo are three mendicant sections of religious devotees of the hindoos. The Satana keep a god "Permaloo," the image of an incarnation of Vishnu in their houses and worship it daily. They perambulate the streets morning and evening and accept alms from all but the lowest castes. They often demand alms threatening otherwise to burn themselves with a lamp or torch. The Dhasra play on the "Jangata," "Tarte" and Sincoo and hold an iron worshipping lamp in their hands. They walk before the corpse when it is carried to the funeral pile.

MALEAL.		Manu pendalam;
Tapioca, Mandioc, Cassava		Bitter Cassava ... ENO.
Karra pendalam....		

Tapioca is the farina manufactured from the expressed juice of the tubers of the Janipha manihot. Great care is requisite in its preparation as the roots contain a poisonous principle which is only got rid of by the application of strong heat. The poorer classes of British India use the tapioca flour, but none is exported. The plant thrives in any soil, although a sandy loam is the best. It requires no cultivation whatever, and is occasionally met with in Aracan, growing wild in the jungle. At the Madras Exhibition of 1855, excellent tapioca was exhibited by Mr. Rundall, of Razole, near Rajahmundry. Various other samples of "Hill Tapioca" were also exhibited—obtained from the roots of different species of *Arum*, *Dioscorea*, or terrestrial orchids; but none of them appeared important. Tapioca is prepared in S. America from two species of Janipha, or the bitter and sweet cassava or manioc roots. From the facility with which the bitter cassava can be rasped into flour, it is cultivated almost to the exclusion of the

sweet variety, which contains in its centre a tough, fibrous, ligneous, cord. The bitter, variety however, contains a highly acrid and poisonous juice, which is got rid of by heat or by fermentation, so that cassava bread is quite free from it. When the juice has been carefully expressed, the *fecula* or flour is washed and dried in the air without heat, and forms the Brazilian arrowroot of commerce; but when dried on hot plates it becomes granular and forms tapioca. An artificial tapioca is made with gum and potato starch. The granules of this are larger, whiter, and more brittle and more soluble in cold water than genuine tapioca.

Cassava or Bitter Cassava, are the West Indian names both of the *Janipha manihot*, and of the Cassava or manioc starch prepared from that plant, from which also are prepared cassava meal or flour, or Brazilian arrowroot, also cassava cakes or bread. The cassava is called in Brazil *Mandisca*. The *Janipha manihot* plant grows about 6 or 8 feet high, with a tuberous root weighing up to lbs. 30. The acrid milky juice when fresh is poisonous, but the roots are washed, scraped, ground or grated into a pulp, and the juice pressed out and preserved. The pulp or meal that remains is called *Couaque* and is made into Cassava cakes or Cassava bread. The expressed juice by standing, deposits a white powder, which when washed and dried forms what the British call Tapioca meal or Brazilian arrow root, by the French "*Moussache*" and in Guiana, *Cypipa*, and when this is dried on hot plates, the grains of *fecula* burst and adhere together and form tapioca. The expressed juice is sometimes fermented with treacle into an intoxicating fluid. Pearl Tapioca is not from this plant but from potato starch. Sweet cassava is prepared from the *Manihot aipi* which is similar to *J. Manihot*, but has no deleterious properties.

Tapioca is prepared from the starch of the bitter cassava but by washing and granulating on hot plates, by which the concretions are formed, as seen in commerce.

Cassava flour, or meal, from which cassava bread is made, is obtained from the *Janipha manihot*, by grating the root, expressing the juice by pressure and then drying the residual cake and pounding. It is called *Moussache* by the French.

Cassada root is a name of the root of the *Janipha manihot*.

Cassarep, the concentrated juice of the bitter cassava, forms the basis of the West India dish pepper pot. One of the remarkable properties of cassarep, is that meat placed in it is preserved longer than by any other process of cooking.—*Comlinson. On the Cul-*

JANTIANA. AR. *Gentiana lutea*, Linn.

JANNUBEE. See Kunawer.

JANOLAH. HIND. Gum Arabic.

JANTONG. MALAY. Plantain leaf.

JANUMU. TEL. *Crotalaria juncea*, Linn. *C. tenuifolia*, R. iii. 263.

JANUPA-NAR. TAM. fibre of *Crotalaria juncea*.—Linn.

JANUS. See Saraswati.

JANWA, the zone, cord or thread *worn by several classes or castes of hindoos. The brahminical cord consists of six or more threads of cotton, called the *poila* or *janwa*, with which every lad is invested at the age of eleven or twelve years, and constitutes the sacred distinctive badge of that class. On the solemn occasion of their investiture, the youths are first taught the mysterious words entitled the *Gayatri*, "Let us meditate on the adorable light of the sun, the divine ruler, may it guide our intellects."—*Ed. Baron Hugel's Travels in Kashmir*, p. 38.

JANWAR. A Rajput tribe in Bundelcund.

JAPA. HIND. A repetition of the name of Rama, a religious rite of the Dadu Panthi Vaishnava. See Dadu Panthi; Japa-Mala.

JAPAC. Thibetan. Chinese brick tea imported over the Chinese frontier.

JAPA-MALA. HIND. This rosary consists of twenty-seven beads, which are told over four times, the number of one hundred and eight being the most proper for the repetition of such forms as "Ram, Ram, Ram!" "Wah, Guru ji ki Fatah!" "Shri Ganesaya Namaha,"! &c.—*Richard F. Burton's Sindh*, p. 419. See Japa.

JAPAN. This island empire forms a very extensive chain stretching from the south point of Korea. It is situated between the 26th and 52nd degrees of north latitude and the 128th and 151st of east longitude, and embraces a population of nearly 40 or 50 millions of souls. It is composed of four or five large, and, including all its dependencies of the Low-Kew group and the Kurile archi-

pelago, it is said, of as many as 8,850 smaller islands and islets, stretching along the coast of Asia, in a N. E. and E. N. E. direction, their shores being washed by the sea of Japan and the north Pacific ocean, and separated from the Corea gulph by Manchooria. Marco Polo was the first European traveller to notice it. It is bounded on the north by the Sea of Okotsk, and the independent portion of the island peninsula of Sagaleen; to the east by the North Pacific Ocean; to the south by the Eastern Sea of China; and to the West by the Sea of Japan. Until the year 1870, this empire possessed two sovereigns, the spiritual one, the Mikado or head of the religion of the country, and the Tycun, Zeogun, or Cobo, the chief of the state, who held his court at Jeddo. About B. C. 600, Japan was ruled by Zin-mu-tin-wu, or the divine conqueror, who was a Chinese warrior and conqueror and the founder of the Mikado dynasty, which, about the 16th century, became set aside from temporal affairs. With small localities excepted, the whole range of the empire is subject to violent volcanic action, and in 1703, Yedo was nearly destroyed by an earthquake. Fudsi Yama, near Yedo, is a high volcanic mountain, at present inactive, but tradition reports it to have risen in one night, and as it rose, there occurred a depression in the earth near Miako, which now forms the lake of Mit-su-no-umi. In A. D. 864, it burst asunder from its base upwards, and at its last eruption in 1707, it covered Yedo, with ashes. It is crested with snow, and presents the appearance of a truncated cone, and the gathering of a white cloud around its summit, is a sign of bad weather. It is 12,450 feet high, standing comparatively alone out of the plain, for the other hills near are as nothing, and appear more like part of the slope leading to it than a separate range. There is almost always a little snow on the summit, and when seen on a clear morning or evening, cut sharp and distinct against the sky, it is a magnificent object, and well worthy of the veneration bestowed upon it. But the greatest volcano is Wun-sen-ta-ki, or the mountain of hot springs, on a promontory of Kiu-siu on which rests perpetual snow. It is feared and worshipped by the Japanese. In A. D. 1793, an eruption occurred which destroyed Sima-bara with nearly 50,000 people, and so altered the coast line that mariners failed to recognize the once familiar scenes of their voyages. In the island of Kiu-siu, there were in the middle of the nineteenth century, five volcanos in a state of activity. The numerous islets also are all of volcanic origin, and some were then in a state of activity. The four larger islands are Nipon, Kiu-siu, Jesso, and Sikoff, which

together form a group not dissimilar in geographical configuration to Great Britain and Ireland. In the first island are situated Yedo and Miako, the two capitals, the Tycoon, the temporal sovereign, residing in Yedo and the Mikado or spiritual sovereign dwelt in Miako. The island of Nipon popularly called Japan, and known to the Chinese as Yang-hoo, or Jih-pun-kwo, is the largest, and its name signifies land of the rising sun.—Kiu-siu or Ximo, the most southern of this group, in lat. $32^{\circ} 44'$ N. and long. $129^{\circ} 52'$ 7" E. has the harbour of Nangasaki on its western side, is a hundred and fifty miles north to south by two hundred and seventy east to west.—Sikoff is about a hundred miles in length by sixty in breadth. The gross area of the empire is estimated at 265,500 square miles. Sagaleen island is a little smaller in extent than Nipon, and was formerly divided between the Chinese and Japanese, the former holding the northern and the latter the southern half. Its native population are the Kurile, a very hairy, wild and untutored race. The chief town in the Island of Jesso, is Matsmai: the second is Hakodadi. Matsmai is an imperial city, built upon undulating ground, and the hills near are covered with oaks, firs, cedars, poplars, the yew, the ash, cypress, birch, aspen and maple. Within sight of Hakodadi, and at the distance of about twenty-five miles, is an active volcano, but no smoke can be seen from Hakodadi. The crater forms nearly a circle, from 1,500 to 2,000 yards round. The ground is in some places so hot that the hand could not touch it. This volcano at about twenty miles distant and five from Hakodadi, throws up a hot sulphur spring, the heat of its water being 109° in the warmest part. The natives use it as a bath; and regard it as almost a certain cure in cases of skin disease. Men, women, and children all go in together, perfectly naked. Hada, is a port in Nipon, about 40 miles from Simoda, and is built on a plain, eighty miles from the metropolis, it contains about 8,000 people. The town is divided into wards separated by wooden gates. It contains nine buddhist and one suntu temple. Since the treaty of Kanagawa, by which the port was opened to the Americans, Simoda has been raised to the dignity of an imperial city. A hot spring flows from a rock at Simoda, stated to be sulphurous. In Jesso, the coasts are more peopled than in the interior, the more fertile lands being the nearest the ocean. The reverse of this occurs in Nipon, where the sea skirts are characterised by rugged cliffs, with barren rocky hills adjoining, the interior alone being peopled. The religious and supreme emperor who lived at Miako, had twelve wives and twenty-five other consorts. Neither the hair of his head,

his beard or his nails were ever cut. All his victuals were prepared in new vessels, which are broken after using them, and his garments renewed daily were also daily destroyed, to prevent any others using them. When he went abroad, he was carried in a palanquin, from whence he could see without being seen. This supreme emperor alone lived in polygamy, all the people having but one wife. The Lew-Kew group or kingdom, consists of thirty-six islands lying between those of Kiu-siu and Formosa. The island of Lew-Kew is the largest of the group, which is tributary to the empire of Japan, through the prince of Satsuna. Lew-Kew island is about 60 miles in length from north to south with a varying breadth of from five to ten miles, and its scenery, especially at its northern and eastern side, is wild and mountainous. In Lew-Kew, the salutation consists in clapping the hands together, and in that position elevating the knuckles to the forehead, and bowing sufficiently low for the hands so placed to touch the ground. The Lew-Kew people wear a cloak, which is gathered in at the waist with a girdle of brocade silk or velvet; in this is stuck an embroidered pouch, containing a small pipe and some powdered tobacco. In Lew-Kew, the hair is shaven off the forehead for about three inches in front, and carried from the back and sides into a tuft on the top of the head where it is held by one or more pins, gold being in most esteem with the men and polished tortoise shell among the women. The artistic and manufacturing skill of the Japanese is very great, their famous products being swords, string and wind musical instruments of elaborate workmanship, theodolites, aneroids, &c. The books abound in illustrations. Like that of the Semitic races, their writing is from right to left. The letters or syllabic characters of the Japanese are forty-eight in number. Paper is made from the leaves of the bamboo, which is as strong and lasting as the best calico, and when well oiled, becomes perfectly waterproof. Hooded cloaks and umbrellas, made of this material last for years. The Japanese likewise make handkerchiefs of paper, and so cheap that they are burned when soiled. The Japanese as a people are individually and collectively virtuous. They are partial to bathing, either in the vapour, or warm bath or in the surf, and both sexes bathe together in the public bath rooms, unmatted, in which they see no indelicacy. The women possess an unruffled temper and amiability, and are faithful and virtuous. The universal sign of rank in Japan is two swords the blades of which are highly burnished. In no country more than Japan, are the people more sensitive to disgrace or dishonour, and a man of rank will destroy himself by using his sword to disembowel himself

rather than survive disgrace. This suicidal ceremony is called the *Harikari* and the incisions are made so as to resemble an X. All military men, and all the servants of the Zio-goon and persons holding civil offices under the government are bound, when they have committed any crime, to rip themselves up, but not till they have received an order to that effect from the court at Jeddo: for if they were to anticipate the order, their heirs might be deprived of their property. For this eventually all the officers of government are provided in addition to their usual dress, with a suit necessary to be worn at the time of such death, which raiment consists of hempen cloth and without armorial bearings. So soon as the order of the court has been communicated to the culprit, he invites his intimate friends for the appointed day and regales them with saki. After they have drank together for some time he takes leave of them and the orders of the Court are then read to him by an officer appointed for that purpose. He then returns and generally delivers a farewell address to those assembled, after which he inclines his head towards the floor, draws his larger sword and inflicts the fatal cross. One of his confidential servants stationed behind him, and whom he has deputed for the task, then runs a sword through his master's neck. When a man is conscious of having committed a crime and apprehends disgrace, he puts an end to his own life in the same manner. The sons of the nobles and gentry are said to exercise themselves with the sword in their youth for five or six years, with a view to acquire a grace and dexterity in the performance of the fatal deed. The Japanese burn the bodies of their nobles, and incase their ashes, but the humbler of the community are interred. The dead, towards whom great reverence is paid, are seated in a box in a sitting posture; and are followed to the first place of interment, viz. well built stone vaults constructed in the sides of hills, by a procession of women in long white veils. After the body has been interred seven years, and has become a skeleton, the bones are removed and deposited in stone vases, which are placed on shelves within the vaults or deposited in the crevices of rock. White is the garb, not of festivity, but of mourning: and a bride, when leaving their father's house, is arrayed in this color, emblematical of being thence forward dead to her parents. She is carried to her groom in a *norimon* or palanquin. *Kitu* is a form of salutation in Japan, where the inferior, laying the palms of his hands on the floor, bends his body so that the forehead nearly touches the ground, and he remains in this position for

some seconds. The superior responds by laying the palms of his hands upon his knees, and nods or bows more or less low according to the rank of the other party. It is customary for the wives of men of rank to wear a small dagger in their girdles. Young women, alone, have white teeth; on marriage these are dyed black, and education is bestowed on all. In the State, the Torika are officers of noble blood, commanding troops, under the orders of the governors whom they assist with their advice and carry out their orders. The Doosiu are assistants to the Torika, serve as guards, do duty on boardship and in guard boats. Each of the Doosiu is required to maintain a servant. The Karoo are stewards. The Bugio are civil officers, of rank of two swords, who exercise a controlling power over collectors, interpreters, and other inferior officers. Amongst the Japanese, the tanners live apart from the other inhabitants in a village by themselves, near the place of execution, situated at the western extremity of the city. They are the public executioners and are held in great disesteem. Wrestling is a favourite amusement for the rich, who keep largely overfed men, for the purpose of being pitted against each other. These are so full of flesh, that their distinctive forms are almost hidden, though this is more owing to the development of muscle than to deposit of fat. The Japanese are not large consumers of animal food. Their houses are of smaller size than those of Britain and are very scantily furnished with furniture but their floors are covered with a fine soft matting. The shoes or sandals are not worn indoors, but are left outside in a square earthen cavity or verandah near the door. Itzabu is a Japanese silver coin, worth in Japan sixteen hundred cash. An American dollar has a little more silver in it than three itzabu, and in China is worth from 1,400 to 1,600 cash. By the American treaty, the silver dollar is rated at one itzabu. A prominent feature in Japan is the multiplicity of religious sects, but there is at present no religious persecution, and members of the same family are often of different persuasions. The spiritual emperor was the high-priest of the ancient Japanese religion. The Siu-tu is an ancient religion in Japan, and still prevalent. It consists of an apotheosis of all great heroes or saints, like the old pagan religions of Europe, amongst whom the Japanese include Buddha, which explains the great consideration shown by the various sects there. The great object of interest, in nature and in the religion of the people in Japan, is its sacred mountain, Fudsi Yama. It is crested with snow, presents the appearance of a truncated cone, and the gathering of a white cloud

around its summit, warns of a hurricane. Fudsi Yama is still occasionally ascended by pilgrims for the worship of the god of the winds. It is from the Rhinoceros view that the Japanese prepare their lacquer which is so fine as to resist the action of hot water. The Japanese language is agglutinate, and the alphabet phonetic, in these respects resembling the Korean, and differing from the Chinese which is monosyllabic and rhematographic. The Japanese language is much mixed with Chinese. It is not monosyllabic but agglutinate, supplying suffixes to modify the idea. The priests of the buddhist religion employ the Chinese, but their poetry is in the pure Japanese. It would appear, on the whole, from the contradictory accounts by ethnologists, as to the physical formation of this people, that there exists among them both the Mongolian and Malayan types, and it is not improbable that a wave of the Mongol has passed over the primitive Malayan race of the country and left the two races now inhabiting it. The Japanese at present, therefore, seem to be of two or three races. The learned men in the United States Expedition, from analogies in the language, formed an opinion that they are of the Tartar family. Mr. C. F. Fals regards the people of Lu-chu as identical with the Japanese, and asserts that they have many characteristics which distinguish them alike from the Malay and Chinese—such as the absence of the long angular form of the internal canthus and the presence of a thick black beard. Dr. Prichard considers the Japanese to belong to the same type as the Chinese, but Dr. Pickering maintains that they are Malays—while Dr. Latham follows Siebold in regarding them as of two distinct types of physical formation. According to other authorities, there are even three types of people in Japan, viz. the field labourers who have broad faces, brown hair, with an occasional tinge of red; flat noses, large mouths and a comparatively light complexion. The fishers of the sea coast have prominent features, with their noses inclining to the aquiline: hair black and crisp, wavy with a tendency to curl. The nobles are majestic in deportment and more resemble Europeans. One of the races is described as having an oval head and oval face, rounded frontal bones and a high forehead, with a mild and amiable expression of countenance. The complexion is light olive with eyes slightly oblique, large and animated, long eyelashes, and clustering eyebrows, heavy and arched, the cheek bones are moderately prominent, chest broad and largely developed. In Siam one of these races of the Japanese are the most esteemed for their courage, and the kings of Siam have always employed them as their principal force in preference to the Malays.

It would seem that the Japanese, of all classes, look upon their wives as upon a faithful servant a Japanese is never known to beat his wife. It is a custom amongst some Japanese to take a woman a few weeks on trial before deciding upon whether to marry her or not. The Japanese marriage ceremony is very simple. The bride and bridegroom drink wine with each other three times, exchanging cups with each other every time, in the presence of a few select friends; after which the young lady gets her teeth blackened, and she is married for better and for worse. In the Japanese racing matches any one who likes can run his horse, and the course is the main road. The distance is about a quarter of a mile, the horses run the distance, turns harp round in the road, and off back again, and keep on so until tired out. Among existing religions, the Sin-tu (Sin the gods and Tu faith) and the Buddhist, are the most extended. The Sin Tu embraces a cosmogony, hero worship, the Ten-sio-dai-sin the Sin goddess, being the principal object of worship. The religion has a trace of buddhism. Neither milk, butter nor cheese are used as food by the Japanese. Horses in the islands are in general small, but those of the cavalry are said to be of a fine breed, hardy, of good bottom, and brisk in action. The Japanese place the dead in a tub, with paper flowers all round, carry it into the temple and have prayers chanted over it, after which they carry the body on to the mountain and burn it, the priest chanting all the time. When it has all burnt away, they pick up the ashes and carry them to the graveyard behind the temple and bury them with all due solemnity. They erect monuments, and have gravestones with name and age of the deceased written on; and there are certain days in each year for the relatives going to pray over the graves and strewing the ground with flowers. The principal exports and produce of Hakodadi are iron, lead, copper, silver, gold, rice, wheat, potatoes, buckwheat, barley, peas, beans, sulphur, saltpetre, salmon? salmon trout? codfish, sharks, herring, beche de mer, cuttlefish, mussels, clams, seaweed, &c., wax, tea, silk, and oilseed, and fish. There is a very extensive lead mine about fifteen miles from Hakodadi, on the side of a mountain, and it is worked somewhat in the same manner as such mines are worked in Wales. The ore gives about 50 or 60 per cent of lead, but very little silver. Gold, silver, copper, coal, iron, sulphur and tin are found in Japan. In the north of Nippon are several gold mines, but this metal is also found in the sandy beds of rivers. The silver mines most abound in the province of Kallami. But the most abundant of the metals is copper which is sold in cylinders to traders. The Japan springs, lakes

and rivers are numerous. The country is of moderate fertility, but well wooded, with the bamboo, oak, fir, cypress. The rainy months *Satuki*, are June and July, and the frost at Nagasaki lasts only a few days. The Rhu vernix, is the celebrated tree called by the Japanese *Urui*, from which the Japan varnish is obtained by incisions in the bark. There is an inferior and little valued kind called *Farsi*, probably that of R. vernix adulterated with the varnishes of India and Siam.

Gold is found in many parts of the Japanese empire, sometimes it is obtained from its own ore, sometimes from the washings of the earth or sand, and sometimes it is mixed with copper. The quantity in the country is undoubtedly great. An old Spanish writer of the seventeenth century tells us that in his day the palace of the emperor at Yedo, as well as many houses of the nobility were literally covered with plates of gold. In the beginning of the Dutch trade the annual export was £400,000 sterling and in the course of sixty years the amount sent out of the kingdom through the Dutch alone was from twenty-five to fifty millions sterling. Silver mines are quite as numerous as those of gold. In one year the Portuguese, while they had the trade, exported in silver £587,500 sterling; copper, lead, quicksilver, tin and iron also occur in Japan. Thunberg tells us that the richest gold ore and which yields the finest gold, is dug up in Sado, one of the northern provinces in the great island of Nippon. Some of the veins there were formerly so rich, that one catti of the ore yielded one, and sometimes two taels of gold. But of late "he says" he was informed the veins there, and most other mines, not only run scarcer, but yield not near the quantity of gold they did formerly. There is also, he relates, a very rich gold sand in the same province, which the prince causes to be washed for his own benefit, without so much as giving notice of it, much less part of the profit, to the court of Jedo. After the gold mines of Sado, those of Surunga were always esteemed the richest, for besides that these province yielded at all times a great quantity of gold-ore, there is some gold contained even in the copper dug up there. Among the gold mines of the province Satzuma, there was one so rich, that a catti of the ore was found upon trial to yield from four to six taels of gold for which reason the emperor had given strict orders not to work it, for fear so great a treasure should be exhausted too soon. There was another gold-mine in the province Tsikungo, not far from a village called Tossino, there are no silver-mines, in all Asia but only in Japan. The Japan stream, the Kuro Sino,

sweeps along the outer or eastern shores of the Japanese islands, and carries with it the gulf weed or *Sargossa* with many animal forms, such as *Clio*, *Cavolina*, *Pteropods*, *Spirialis*, *Atlanta* and the pelagrin skeleton shrimps *Alima* and *Erichthys*; also the carapaces of the sailor crabs. The women wear silk gowns. Cemeteries have a cheerful even gay aspect. Materials for dyeing are taken from a species of *Betula*, from the *Gardenia florida*. *Polygonum Chinense*, *barbatum* and *aviculare* all produce a beautiful blue colour, much like that from indigo. The leaves are first dried, then pounded, and made into small cakes which are sold in the shops.

The Japanese language is much mixed with Chinese. It is not monosyllabic but agglutinate, supplying subfixes to modify the idea. The priests of the buddhist religion employ the Chinese, but their poetry is in the pure Japanese. There exists among them both the Mongolian and Malayan types, and it is not improbable that a wave of the Mongol has passed over the primitive Malayan race of the country and left another of the races now inhabiting it. The Japanese at present therefore seem to be of two or three races. The United States Expedition, from analogies in the language, formed an opinion that they are of the Tartar family. Mr. C. F. Fals regards the people of Lu-chu as identical with the Japanese, and asserts that they have many characteristics which distinguish them alike from the Malay and Chinese—such as the absence of the long angular form of the internal canthus and the presence of a thick black beard. Dr. Prichard considers the Japanese to belong to the same type as the Chinese, but Dr. Pickering maintains that they are Malaya—while Dr. Latham follows Siebold in regarding them as of two distinct types of physical formation. The prevalent belief is that there are three types of people, in Japan,—the field labourers have broad faces, brown hair, with an occasional tinge of red; flat noses, large mouths and a comparatively light complexion. The fishers of the sea coast have prominent features, with their noses inclining to the squaline; hair black and crisp, wavy with a tendency to curl. The nobles are majestic in deportment and more resemble Europeans. One of the races is described as having an oval head and oval face, rounded frontal bones and a high forehead, with a mild and amiable expression of countenance. The complexion is light olive with eyes slightly oblique, large and animated, long eyelashes, and clustering eyebrows, heavy and arched, the cheek bones are moderately prominent, chest broad and largely developed. In Siam one of these Japanese races are the most esteemed for their courage, and the kings of Siam have always employed them as their

principal force in preference to the Malays. I would seem that the Japanese of all classes look upon their wives as upon a faithful servant; a Japanese is never known to beat his wife. It is a custom amongst some Japanese to take a woman a few weeks on trial before deciding upon whether to marry her or not. The Japanese marriage ceremony is very simple. The bride and bridegroom drink wine with each other three times, exchanging cups with each other every time, in the presence of a few select friends; after which the young lady gets her teeth blackened, and she is married for better and for worse.

The illustrated Japanese books are very good, and show much artistic talent. A group of trees, a branch of Japan bamboo, a bunch of leaves, a cottage and turn in a road, and such simple subjects form each of them a perfect study in itself, though appearing to have been drawn with one stroke of the pen. The latter is, in fact, a brush but is made quite hard with gum or glue except at the extremity.

The Japanese earthen-ware is beautiful, though not equal to the Chinese; except the egg shell china ware which surpasses for transparency any seen in that country. There are other kinds of china rarely seen in England, and which are, though perhaps less curious, quite as beautiful as the egg shell. Among them the rarest, and most difficult to procure is lacquered china.

Of all the works of art in which the Japanese excel the Chinese the lacquer is the most striking. Some of that now made is very fine, but not to be compared with the real old lacquer, which is very rare, and is hardly ever brought into the market, except when some old family is in such distress for want of money then they bring pieces of antique lacquer (which is as highly esteemed by them as family plate with us) to be sold at Yedo or Yokohama. There are on some of the noblemen's estates manufactories of lacquer, some are celebrated for the excellence from which their owners derive great wealth. Articles made there are always marked with the crest or crests of the owner of the estate, so that that which is much sought after, such as Prince Satsuma's lacquer, may at once be recognized by seeing his crest upon each piece.

Copper abounds throughout the whole Japanese group and some of it is said to be not surpassed by any in the world. The natives refine it and cast it into cylinders about a foot long and an inch thick. The coarser kinds they cast into round lumps or cakes. Quick-silver is said to be abundant, but this, so far as is known has never been an article of export. Lead also is found to be plentiful, but like quick-silver it has not been sent out of the king-

dom. Tin has also been discovered in small quantities, and of a quality so fine and white that it almost equals silver, but of the extent of this mineral little was known, as the Japanese did not attach much value to it, and therefore have not sought for it. Iron is found in three of the provinces, and probably exists in others. The Japanese know how to reduce the ore, and the metal they obtain is of superior quality, of which they make, excellent steel.

Amongst the Aino of Japan, if a twin birth occur, they always destroy one of the infants. This idea prevails amongst the Khassya and the Bali race.

The temple of the Japanese is only a small square room, hung round with pictures principally of foxes, which are thought, most probably to be votive offerings, made by people who had lost their friends. The fox is looked upon as a great and powerful demon, to be held in much veneration. He is supposed often to take the form of a beautiful woman, in which shape it appears to men, and lures them on, and on, and on till they are lost in the forest and on discovering it hang themselves. Therefore, when any one is lost offerings are immediately made at the nearest fox temple, when if the devil be propitiated thereby, the search for the lost one is successful.

Coal, says Kämpfer, is in great quantities in the province of Sikusen and in most of the northern provinces. Dr. Siebold also speaks of coal as being in common use throughout the country, and on visiting one of the mines he saw enough to convince him that it was skilfully worked. For domestic purposes they convert the coal into coke.

Natice Sulphur is an abundant mineral. In some places it lies in broad deep beds, and may be dug up and removed with as much ease as sand. A considerable revenue is derived by the government from sulphur, many of the timber trees of Japan were noticed by Thunberg during his residence there, in the eighteenth century. The most recent notice of the plant of that island is in Hodgson's Nagasaki, pp. 342—13.

Bonzo is a corruption of the Japanese word *bussa* a pious man, and the term bonzo was given by the Portuguese to the priests of Japan. and has since been applied to the priests of China, Cochinchina, and the neighbouring countries. In China, the bonzo are the priests of Fuh, or sect of Fuh, they are distinguished from the laity by their dress. In Japan they are gentlemen of families.

The Japanese have a great respect for the dead. They place the remains inside a kind of square tube, and in a sitting posture. To obtain this position, they are said to use the Dosio powder which, placed within the mouth of the corpse, is said to have the effect

of relaxing all the muscles. The hollow square is carried in a chair or norimon by four men into the yard of the Tera, escorted by a few women dressed up in bright colours, wearing a veil of white crape on the head. They are here met by the Ochan and a quantity of minor canons who chaunt to the sounds of the tom-tom, the whole company awhile moving with the body, around the temple into which they at length rush with a great noise. Prayers are then read over the body, and it is removed to be burned. If the deceased have been a person of rank, the ashes are deposited in an urn and buried within the sacred precincts of the Tera. In the procession there is very little affectation of sorrow; they seem to regard it as a joyful occasion, and the whole ends with a feast at the house of the deceased.

A prominent feature amongst the Japanese is the variety of religious beliefs. One of which is that of Buddha, but the Sin-tu prevails to as great an extent, the priests of the buddhist religion use the Chinese language in their worship except in their poetry which is in the Japanese tongue. There is a paper in *Notes and Queries on China and Japan*, in which an endeavour is made to identify the curious symbol so often found on Buddhist images, which buddhists themselves regard as the emblem of the seal of Buddha's heart—the "Svastika" of Sanscrit scholars—with the "Hammer of Thor" of Scandinavian mythology. It is conjectured that this symbol must have been brought to China, Japan, and Mongolia by buddhist priests, and its origin is therefore to be looked for in India. It appears there on the most ancient buddhist coins, and has been noticed on the walls of all the rock-cut temples of Western India. Even the Ramayana mentions domestic utensils as marked with the very same figure. The Svastika appears in ancient Teutonic and Scandinavian mythology, under the name of Thor's hammer, as the sceptre of Thor, the god of thunder. It has also been discovered on many ancient coins of Indo-Germanic nations. From all this it is concluded that the Svastika was the common symbol and chief magic charm of the Aryan races before they separated. To the present day this "hammer of Thor" is used among the German peasantry and in Ireland as a magical sign to dispel thunder. Moreover, as in the middle ages bells used to be rung to drive away thunder, the svastika of the East used to be engraven on church-bells, and to the present day many bells in England bear the symbol.

The Japanese are somewhat frivolous and pleasure loving, but they are hardy and enduring, they are physically robust but their minds are of a dilettante order.

The Japanese write like the Chinese in columns from the top to the bottom of the paper,

beginning at the right hand side, but the character is less fantastic and far more running than the Chinese.

As a general rule, the daughters even of the high nobility have no fortunes or dowry on marriage. On the contrary, if they are considered very handsome, amiable in temper and very accomplished, the parents expect the bridegroom to pay down to them a handsome sum of money or to make over to them some other valuable property.

The *Aino* are the aboriginal races of Yezo, whose severe treatment by the Japanese, has led them to other countries and they also occupy the Southern part of the island of Seghalin, which is in possession of the Japanese. Their number does not exceed 80,000; they are strong and muscular, but they are as despised by the Japanese as Jews are by the Arabs. The women are handsome, have a profusion of black flowing hair, but their appearance is not cleanly, their lips are tattooed beautifully blue. They do not speak Japanese; and servants from Hakodate cannot converse with them.

The Japanese have numerous festivals and holidays, held in commemoration of ancestors, deities, warriors and sages, or from some untraced ancient custom. That at the winter solstice, the *Oki-don-tako*, or great holiday, lasts 14 days. It is a period of great rejoicing, all mercantile accounts are if possible settled and much friendly intercourse takes place. The *Gokats Seku* festival, at the summer solstice, about the middle of June, is in commemoration of *Gongen Sama*, a great general to whom the present dynasty owes its origin, and the Japanese date their births from it. Banners with the *koi* or carp are hoisted along with scarlet streamers. The Japanese traditions trace their origin to a body of poor fisherman, and the bones of the cray fish are used to incite humility and temperance and indicate their origin and a slice of fish is sent with each letter, for the same object. The *Gokats Seku* festival, is held with much ceremony and enjoyment. About the middle of July the mercantile festival the *Omat-suni* is held. It is a procession of trades and an exhibition of their wares amongst which the wax workers are very prominent.

Fires are frequent and a watch and fire brigade, *She-case* and the *Yo-shon-gyi* and *Ka-na-bo* are in readiness. The under limbs of the Japanese are slender, the people are affectionate in their domestic relations. Indigent parents sell their daughters for a term of years as prostitutes. But many girls seek service in the tea houses. Marriage is solemnized in two ways, the one religious, the other civil. Education has made great progress, but it is not general, only confined to the requirements of each trade.

The Japan executive government is carried on by the Daimio officials. There are governors of provinces, with supreme power. They are feudal princes over whom one of their number styled *Tycoon* is chief and he, assisted by the *Gorogio* or Great Council, presided over the affairs in the name of the *Mikado* or spiritual emperor, its supreme head. The *Mikado* issued decrees, bestowed titles and delegated authority to others. He resides in *Yeddo*, in the centre of the city, in a palace with large grounds surrounded by a moat. Priests act as spics and masters of ceremonies. In Japanese mythology *Ten zio dai zin*, the patron goddess of the empire, sprang from the great Sun god. The high officers often move incognito, *Naiboen*, for relaxation, and their wives only move out in a "*Norimon*" under a guard. The *Mikado* has several titles *Zen zi*, son of heaven, *Mikado* emperor; *Dairi* or *Kinrai*, grand interior, and his ancestry, it is said, can be traced uninterruptedly for 700 years before the Christian era. He was rarely visible, was allowed 12 wives of noble birth, and unlimited concubines. His eldest daughter becomes the chief priestess of the temple of the sun at *Issie*, which contains the shrine of *Ten zio dai zin*.

In Japan, punishment inflicted on any member of a family entails disgrace on the whole. Hence certain noble families, military and officials of rank, have the privilege of carrying out their own death punishment. It is called the *Hara kiru* or happy despatch and it is practised for every crime. To be legal, an order for its performance must be issued by the *Tycoon*, or by the suzerain prince of the culprit.

The Japanese sometimes bury the dead but generally burn. In the latter case the remains from the fire are collected in a jar which is sealed and deposited in the cemetery or temple in which the remains of his ancestors have been placed.

They have athletic games, the *athletas* being termed *smoo*: also fencing theatres, card playing, draughts and chess. The principal religions of Japan are the *Sintu* and *Buddhist* but there are other sects some of them philosophical. Every *Sintu* sectarian has in his house a *kami* or patron saint, and the good go to their region after death, the bad, to places of punishment. The spirits of their ancestors are believed to revisit earth on the religious festivals.

All Japanese bathe twice daily. The poor resort to the public bath houses where men, women and children bathe together. The Japanese are poetical and given to sentimental reflections. The Japanese lay branches of the star anise plant over the graves of their friends and its capsules are burnt in temples as incense. *Lieut. Silver, Sketches of Japanese Manners.*

JAR EXO. in the Durga puja festival of the hindus of India, a sacred jar is an essential article in the celebration of the mysteries and is marked with the combined triangles, denoting the union of the two deities, Siva and Durga. The Sacta sect, worshippers of the Sacti, or female principle, mark the jar with another triangle. The Vaishnava sect in their puja, use also a mystical jar, which is also marked. These marks, Mr. Paterson says are called Tantra; and are hieroglyphic characters, of which there are a vast number. He hence ingeniously deduces the identity of the hindu puja with some Egyptian rites of

a corresponding nature. An explanation of his views is given in his Essay on the origin of the hindu religion, in the eighth volume of the Asiatic Researches, p. 401. In that called the kalasi puja, a kalasi or water jar is placed in a chamber as a type of Durga or other divinity and is worshipped.

JAR. HIND. A root of a plant.

JARAB was the son of Sultan, the son of Eber, and brother of Peleg, and from him the ancient Arabians derive their ancestry. The Yaharabi, therefore, who claim the nearest approach to the parent stem, trace their genealogy further back than the other tribes in Arabia, and may, undoubtedly, be pronounced the oldest family in the world. Saba, the grandson of Sultan, founded Saba, and the Sabians are supposed to be identified with the Cushites, who dwelt upon the shores of the Persian Gulf. This was the position the seceders occupied at the period of the dispute for the caliphate, between Ali and Mowaiyah and it throws a ray of light upon the mist that envelopes the history of this remote period, when we find some direct evidence bearing on a point which has heretofore been a matter of mere conjecture. The name of Arabia, with some show of reason, has also been derived from the Jarab here alluded to.—*Wellsted's Travels, Vol. I. p. 8.*

JARAH. HIND. A surgeon: jarahat, is surgery. See Sang-i-Jarah.

JARAH, a wood of Western Australia, unsurpassed in soundness and durability. For all works of magnitude such as dock-gates, wharves, &c., requiring strength it is without equal. It is applicable for almost all purposes; for, although inferior to Spanish mahogany in beauty of grain, it is highly effective in all ornamental work and most useful for all the requirements of the house-carpenter, such as window frames, doors, beams, and every description of furniture, and if cut at the proper time of the year and allowed to season before being used, it has proved almost indestructible. Its wonderful qualities have been fully acknowledged by all the principal engineers of the colonial Governments who now specify in all their contracts for piles, for jetties, and wharves—also for beams and flooring, that none but the Jarah timber must be used. It sets at defiance white ants on land, and the *Teredo navalis* in water. This superb wood is used as the ordinary and cheapest timber,—roofs, floors, window frames, mantel pieces, tables, and doors, are all of solid jarah, resisting insects like so much marble, and capable of receiving the highest polish. The introduction into India of a wood of such quality and durability, as that described, will be a positive boon.—*Daily Examiner.*

JARTIKKA. The Bahika was a tribe occupying the neighbourhood of the Indus near Attock, at the time of Alexander and Chandragupta. The Bahika were one of the republican races known as the Arashtira (*Sans.*) or the kingless, the republican defenders of Sangala or Sakala. They are the Adraistæ of Arrian, who places them on the Ravi. The Arashtira were known by the several names of Bahika, Jartikka and Takka, from which last is the name of their old capital of Taxila or Takka-sila as known to the Greeks. The Takka people still exist in considerable numbers in the Panjab Hills, and their alphabetical characters and the name of Takri or Takni are now used by all the Hindus of Kashmir, and the northern mountains from Simla and Sabathoo to Kabul and Bamian.—*Sir H. Elliot.* See Chandragupta; Kabul.

JARASANDHA, a king of Magadha, of a Turanian dynasty. He twice waged war against Mathura, the Behar of the present day. Krishna repulsed the first invasion but, after the second invasion, Krishna and Yadava retired to Dwaraka. Jarasandha, according to Bunsen, (iii. 555) was the Indian king who opposed Semiramis on the Indus, B. C. 1230. Jarasandha and Sahadeva, according to professor Wilson were cotemporaries. B. C. 1400. Jarasandha, is supposed by Sir William Jones to have been a cotemporary of Krishna and Yudishtira. B. C. 3101. Jarasandha, king of Magadha is the historical personage amongst the heroic kings of the Mahabharata. It was his wars and conquests which occasioned the great popular movement that took place immediately before the era of the five Pandava kings. He drove the Yadava from their settlements on the Jumna and brought 86 kings prisoners to his capital. He held imperial sway. It was he who opposed Semiramis B. C. 1230, defeated and drove her back to the Indus with immense loss. He was son of Brihadratha and grandson of Vasu. He was of the dynasty of the Barhadratha, which Bunsen estimates B. C. 986 was followed by the following dynasty, Pradotyā B. C. 646 Bimbisara B. C. 578. In this dynasty, Buddha appeared as a teacher B. C. 563 and died B. C. 543. Seshunaga B. C. 446 Nand 378. Maurya, whose first was Chandragupta 312. After Jarasandha's death, his kingdom fell to pieces, and it was followed by the murderous war amongst the princes of the Kaurava and Pandava.—*Bunsen*, iii. 585.

<i>bracteatum.</i>	<i>latifolium.</i>	<i>sambac.</i>
<i>brevilobum.</i>	<i>laurifolium.</i>	<i>simplicifolium.</i>
<i>chrysanthemum.</i>	<i>malabaricum.</i>	<i>tetraphis.</i>

Yuthika savala kesi, having golden or auburn hair, brown as the yellow jasmine, was deemed a mark of beauty in ancient India, and in the west of India such hair is even now sometimes seen, but the prejudice in favour of ebony locks is so strong that it is considered a morbid affection of the hair, and the women dye and conceal it. In the *Hero* and *Nymph* occur the words,

Her voice is music—Her long tresses wear
The jasmine's golden hue.

The yellow varieties of jasmine should be grown in pots, but being natives of the higher latitudes of the tropics, they often perish during the hot season, they require a loamy soil well manured, and perfect drainage. The white varieties grow well in the flower borders, requiring to be pruned occasionally, to keep them in proper form, this should be done after flowering.—p. 250. *Riddell. Hind. Theatre, W. Ic. Voigt.*

There are two varieties of this beautiful and very fragrant twining plant, one is *Jasminum sambac*, plenum, the great double Arabian Jasmine, the rich lobed branches of which

are studded all over like the snow-drop tree with lovely white flowers, the size of small roses, and delightfully fragrant. This variety is probably more cultivated than any other flower, though the single flowered, with a twining habit is not unfrequently to be seen. The single variety is called "motiga," but beautiful varieties called "Satha" with single and double flowers, which have the odour of fine green tea are also cultivated at Ajmir and are probably the *J. scandens* of Willdnow. In the fields in the vicinity of Foo-Chow-foo large quantities of *J. sambac* are cultivated. It is used to decorate the hair of the Chinese ladies and to garnish the tables of the wealthy. All Chinese gardens, both in the north and south are supplied with this favourite flower from the province of Tokein. Various other shrubs such as *Murraya exotica*, *Aglaia odorata* and *Chloranthus inconspicuus*, are grown for their blossoms, which are used for mixing with the tea. The flowers of the sambac are supposed by the hindus to form one of the darts of Kama Deva the hindu god of love.—*Fortune's Wanderings, page 382.—Mason Voigt. Roxb. W. I. Irvine Med. Top.*

JAT. BURM. Passages in the life of Gautama, in various periods of pre-existence.

JAT or **Jet** or **Jut** or **Zat**, pronounced thus variously in different parts of India, means a race, a tribe, a clan, a manner, a kind.

JAT, matted hair: throughout the Punjab, **Jut** also implies a fleece or fell of hair, also goat's hair.

JAT or **Jet**, or **Jut**. In Upper Sind, a **Jut** means a rearer of camels or black cattle, or a shepherd in opposition to a husbandman. In the Punjab generally, **Jut** means a villager and husbandman in opposition to an artisan or handicraftsman. The **Jat** latterly acquired great power. The **Jat** (*Getu*? and *Yuechi*?) emigrated from Upper Asia and are now spread over the Punjab, at Lahore and on the banks

of the Jumna. The Birk or Virk is one of the most distinguished of the Jat tribes, and the Sudhoo, Cheeneh, Yuraitch, Chhut-theh, Sidhoo, Kurekal, Gondhul &c., are Jat sub-divisions in the Punjab. Some of the Jat are said to be descendants of the Kahkar of the Salt Range.

The Getæ, are supposed by Professor Wilson to be the Sacæ. If we examine the political limits of the great Getic nation in the time of Cyrus, six centuries before Christ, we shall find them little circumscribed in power on the rise of Timur, though twenty centuries had elapsed. At this period (A. D. 1330), under this prince of the Getic race, Toghluc 'Timoor Khan, the kingdom of Chaghtai was bounded on the west by the Dhasht-i-Kipchak, and on the south by the Jaxartes or Jihoon, on which river the Getic khan, like Tomyris, had his capital. Kojend, Tashkand, Otrar, Cyropolis, and the most northern of the Alexandria cities were within the bounds of Chaghtai. The Gete, Jut, Jit, and Takshak races, which occupy places amongst the thirty-six royal races of India, are all from the region of Sikatai or Chaghtai. Regarding their earliest migrations, the Pooranas furnish certain points of information and of their invasions in more modern times, the histories of Mahmud of Ghizni and of Timur abundantly acquaint us. From the mountains of Joud to the shores of Mekran, and along the Ganges, the Jit is widely spread; while the Takshak name is now confined to inscriptions or old writings. Inquiries in their original haunts, and among tribes now bearing different names, might doubtless bring to light their original designation, now best known within the Indus; while the Takshak or Takiuk may probably be discovered in the Tajik, still in his ancient haunts, the Transoxiana and Chorasmia of classic authors, the Mawar-ool-nahr of the Persians, the Turan, Turkisthan, or Tocharisthan of native geography, the abode of the Tachari, Takshak, or Toorslika invaders of India, described in the Pooranas and existing inscriptions. The Gete had long maintained their independence when Tomyris defended their liberty against Cyrus. Driven in successive wars across the Sutej, they long preserved their ancient habits, as desultory cavaliers, —under the Jit leader of Lahore, in pastoral communities in Bikanir, the Indian desert and elsewhere, though they have lost sight of their early history. The transition from pastoral to agricultural pursuits is but short, and the descendant of the nomadic Gete of Transoxiana is now the best husbandman on the plains of Hindusthan. Dr. Jamieson proves satisfactorily that the Getæ and Thracians were the same people, and that it is very probable, if not certain, that the Getæ and Goths were also the same people. He also observes that the Getæ and Scythians were the same people. On the nor-

thern side of the Danube, opposite to the territory occupied by the Scythians, and in the angle forming a part of Thrace, there was a small nation in the time of Herodotus, who bore the name of Getæ. Ancient writers distinguish the Getæ from the Massagetæ, by placing them in countries remote from each other. Les peuples qui habitent ces vastes contrées de la haute Asie, bornées au midi par l'Inde, la Chine, et la Perse, à l'orient, par la mer du Japon, à l'occident par les fleuves qui se jettent dans le Mer Caspienne et la Pont Euxin, au nord enfin pas la Mer Glaciale, sont connus sous le nom vulgaire et collectif de Tartars ... Quoi qu'il en soit de l'origine de ce nom des Tartars, les Européens, qui l'ont légèrement altéré, s'en servent indifféremment pour désigner une foule de nations à demi civilisées, qui diffèrent beaucoup entre elles. Dans ce sens, je crois qu'il est bon de conserver à ces nations le nom collectif de Tartares, quoique corrompu préférentiellement à celui de Tartars qui parait plus correct mais qui appartient à un seul tribu ne doit pas servir à désigner les autres tribus en general". The Masagetæ, Getæ or Goths, seem gradually to have advanced from their ancient limits into the more fertile districts of Asia, and all the lower and middle parts of the western boundary of the Indus, went by the name of Indo-Scythia. The Scythians, chiefly the Getæ, had expelled the Greeks, who continued long after the retreat of Alexander, and re-peopled it with colonies of their own nation. The Getæ were the bravest and most just of all the Scythians, and continued to preserve this character in their new possessions. They pursued the hunter's occupation, living more by the chase, though these avocations are generally conjoined in the early stages of civilization. Asi was the term applied to the Gete, Yeut or Jut, when they invaded Scandinavia and founded Jutland. The Asi seem to have been a northern race with several divisions some of which appear to have been conquered by the Egyptian king Seti III. Colonel Tod considers that Scandinavia was occupied by a tribe of the Asi. He says that the Suevi or Suiones erected the celebrated temple of Upsala in which they placed the statues of Thor, Woden and Freya, the triple divinities of the Scandinavian Asi. Herodotus says the Gete were theists, and held the tenets of the souls immortality; Amongst the Chaghtai princes from the Jaxartes, are historians, poets, astronomers, founders of systems of Government and religion, warriors, and great captains, who claim our respect and admiration.

The Jut or Jat in the north and North-west of India are known as industrious and successful tillers of the soil, and as hardy yeomen, equally ready to take up arms and to follow the plough. They form, perhaps, the finest rural popula-

tion in India. On the Jumna their general superiority is apparent, and Bhurtpoor bears witness to their merits, while on the Sutlej religious performance and political ascendancy served to give spirit to their industry and activity and purpose to their courage. The Sikh are not a race, but a body of religionists, who take their name from the hindi word, "sikha" to learn, Sikh meaning a disciple. For a short time, the Sikh rose into a great nation in the country lying between India and Afghanistan. During the 16th and 17th centuries, Nanak and Govind, of the Khutree race with their succeeding guru, obtained a few converts to their religious views among the Jat peasants of Lahore and the southern banks of the Sutlej. Towards the close of the 18th century, they grew to be a great nation, with an influence which extended from the Karakorum mountains to the plains of Sindh and from Delhi to Peshawur. Their dominions were included between the 28th and 36th parallels of north latitude, and the 71st and 77th meridians of east longitude. This tract consists of broad plains, slightly above the sea level, or mountain ranges two or three miles high. The Sikh population of the Punjab has commonly been estimated at 500,000 souls, but Captain Cunningham considered a million would be the more correct number. The total in all India is 1½ million. In the former Sikh territory, all were not of the Sikh religion. The people and dependent rulers of Ladakh profess Lamaic Buddhism, but the Tibetans of Iskardo, the Durdoos of Gilghit and Kuhka and Binha of the rugged mountains, are mahomedans of the shia sect. The people of Kashmir, Kishtwar, Bhimbur, Pukhi and of the hills south and west to the salt range and the Indus, are mostly sunni mahomedans, as are likewise the tribes of Peshawur and of the valley of the Indus southwards, as also the inhabitants of Mooltan, and of the plains northward as far as Pind-dadun-khan, Chuneot and Depalpoor. The people of the Himalaya eastward of Kishtwar and Bhimbur, are hindus of the brahminical faith, with some buddhist colonies to the north and some mahomedan families to the southwest. The Jat of the Manjha and of the Malwa districts, in the Punjab territory, are mostly Sikh, but perhaps not one-third of the whole population between the Jaelum and Jumna, has, as yet, embraced the tenets of Nanak and Govind, the other two-thirds being still equally divided between mahomedanism and brahminism. Most of the modern Sikh in no way separate from their tribes and are known as Jat, or Khatri or brahman Sikh, one member of a family being frequently a Sing'h while others are not. The written character in use is called Guru-

mukhi. It is the Devanagari, in form, but with different powers to the letters. The Sikh are the only sect whose religion teaches them not to smoke tobacco. They have, however, no objection to other narcotics, opium and bhang and snuff taking is not so common. Smoking was first prohibited by the tenth Guru, Govind Sing'h, whose chief objection to it appears to have been that the habit was promotive of idleness, as people would sit smoking and do nothing.

The Jat, race have spread along the banks of the Jumna, in Haryana, in the N. West provinces, Bhurtpur, Dholpur, and Bikanir, and some of them according to Wilson, claim to have come from Ghuzni and the far West, while others claim to be descended from the Yadu. The rajah of Bhurtpore is a Jat. There are two sub-divisions of them, the Dhe and Hele, or Rach-hade and Deswale but there are many tribes. They are partly of the Sikh, partly hindu, and partly of the mahomedan religions. The Jat race is regarded by Mr. Campbell as belonging to the Arian family, but to have appeared in India later than the brahminical hindus. The Jat are hindu in much of their speech, laws, and manners, but have some grammatical forms of speech not to be traced in the earlier brahminical writings. The Jat tribes present the most perfect example of the democratic and more properly Indo-Germanic races. They constitute over a great part of India, an upper and dominant stratum of society, and have, to a great degree given their own tone and colour to many provinces. In great part of Jat land, the great body of the free people are Jat, and retain their original institutions in the greatest purity, little modified by modern brahminical laws. In the west country their name is pronounced Jât, but in the Punjab and in the east country, it has the long sound of Jat. Writing generally, the Jat are of the mahomedan religion in the west, and in Sindh : of the Sikh sect in great part of the Punjab, and in some sense of the hindu faith in the east and near Bhurtpore, assimilating in their dress to their religious confreres. This has impressed many with the belief that these religionists differ from each other also in race, but by tracing this population, the differences in the type disappear and the one extreme is found to merge into the other. There may, however, be a different race in the west, and those on the west are pastoral and predatory, while Captain Burton mentions that a wandering predatory tribe bearing their name are found on the western parts of Central Asia, about Candahar, Herat, Meshed. The Jat of the lower Indus, appear to be of the same race as the Brahui and are almost black.

The Jat are not found in Afghanistan; but, in Beluchistan, in proceeding eastwards by the Bolan Pass and other routes, there, they succeed the Tajik and Dohwar of the west of Afghanistan and the vicinity of Candahar, and occupy the plains and the hilly country, descending into the plains, spread to the right and left along the Indus and its tributaries, occupying Upper Sindh on one side, and the Punjab, on the other. But in the Punjab, they are not found in any numbers north of the Salt range, and in the Himalaya, they are wholly unknown which would seem to show that the Jat did not enter India by that extreme northern route. Also the Jat does not occupy lower Sindh and they are not found in Guzerat. The Jat is however the prevailing population in all Upper Sindh and their tongue is the language of the country. They were once the aristocracy of the land, but latterly have been dominated over by other races and thus have lost somewhat of their position as the higher classes of the society. In the south and west of the Punjab, too, they have long been subject to mahomedan rulers. But latterly, as the Sikh, they became rulers of the whole Punjab and of the country beyond as the upper Jumna, in all which territories they are still in every way the dominant population. Over great tracts of this country, three villages out of four are Jat, and in each Jat village, this race constitute perhaps two thirds of the entire community, the remainder being low caste predial slaves, with a few traders and artisans. The Jat extend continuously from the Indus over Rajputanah. The great seat of Rajput population and ancient power and glory is on the Ganges; but, since vanquished there by mahomedans, the chief Rajput houses have retired into the comparatively unfruitful countries now known as Rajputanah where, however, the Jat is the most numerous part of the people. They share the lands with the Meena, the remains of the brahman population and the dominant Rajput, but they have the largest share of the cultivation. The northern part of Rajputanah was partitioned into small Jat republics before the Rajput were driven back from Ajoodiah and the Ganges. The southern and more hilly parts of Rajputanah are not Jat, but are occupied by the Mhair, Meena and Bhil; but in Malwa, again, the Jat are numerous and seem to share that province with the Rajput and Kunbi. Those of Beluchistan are described by the people of Candahar, as fine athletic men, with handsome features but rather dark. Those in Upper Sindh, up the course of the Indus, and in the south western Punjab, are for the most part of the mahomedan religion. They have been long subject to foreign rule and seem to be somewhat inferior to their unconverted brethren.

In all the east of Beluchistan, the Baluch are but a later wave and upper stratum. There, about the lines of communication between India and Western Asia, in the provinces of Sewestan and Kuch. Gandava, the Jat form probably the largest portion of the agricultural population and claim to be the original owners of the soil. In the west, advancing through Rajputanah we meet the Jat of Bhurtpore and Dholpore; Gwalior was a Jat fortress belonging, as is supposed by Mr Campbell, to the Dholpore chief. They do not go much further south in this direction. From this point, they may be said to occupy the banks of the Jumna, all the way to the hills. The Delhi territory is principally a Jat country and from Agra upwards, the flood of that race has passed the river in considerable numbers and forms a large part of the population of the Upper Doab, in the districts of Alighur, Merut and Muzafarnagar. They are just known over the Ganges in the Moradabad district, but they cannot be said to have crossed that river in any numbers. To sum up, therefore, the Jat country extends on both sides of the Indus from L. 26° or 27° N. up to the Salt Range. If, from the ends of this line, two lines be drawn nearly at right angles to the river, but inclining south, so as to reach Lat. 23° or 24° N. in Malwa, and L. 30° on the Jumna, so as to include, Upper Sindh, Marwar, part of Malwa on one side, and Lahore, Umritsur and Umballa on the other, then connect the two eastern points by a line which shall include Dholpore, Agra, Alighur and Merut, and within all that tract the Jat race ethnologically predominates, excepting only the hills of Mewar and the neighbourhood, still held by aboriginal tribes. Advancing eastwards into the Punjab and Rajputanah, we find hindu and mahomedan Jat much mixed and it often happens that one-half of a village or one branch of a family are mahomedans and the other hindus. Further east, mahomedan Jat become rarer and rarer, and both about Lahore and all that part of the Punjab along the line of the upper Sutlej and Jumna, the great mass remain unconverted. In the Punjab the Jat all take the designation of Sing'h, and dress somewhat differently from the ordinary hindu Jat; but for the most part, they only become formally Sikhs, where they take service and that change makes little difference in their laws and social relations. The Jat of Delhi, Bhurtpur, &c. are a very fine race and bear the old hindu names of Mull and such like and are not all Sing'h. In Rajputanah, the Jat are quiet and submissive cultivators. They have now long been subject to an alien rule and are probably a good deal intermixed by contact with the Meena and others. The Jat Singh of the Punjab and upper

Satiej may probably be taken as the best representative type of the race. Compared to northern races, they are dark : they are tall, large and well featured, with plentiful and long beards, fine teeth and a very pleasant open expression of countenance. They are larger and taller than the Afghan Pathan with the upper part of the body especially well developed but not so stout limbed or quite so robust, they are a fine, remarkably handsome, race of men, not excelled by any race in Asia. In courage, energy, and military qualities, they excel the more beautiful non-Pathan races of the northern hills and they are as energetic in the peaceful arts as in that of war. They are good cultivators, hard working and thrifty ; they let little land lie waste and pay their land tax punctually. Their women work as well as the men and make themselves generally useful. They are not learned, though many men and some women can read and write. They have a great craving after fixed ownership in the soil. They are essentially agriculturist, seldom gardeners, and in Hindustan are never pastoral. They breed cattle largely, and sometimes rear camels when the country is suitable, and in Jat countries both ordinary carts and large mercantile waggons are usually plentiful, and as waggons they not unfrequently carry their grain and other produce to distant markets on their own account. The Jat formerly dwelt in Rajputana in republics, such as, in the time of the Greeks, were alluded to as democratic institutions, and one recognised republican state, that of Phool or Maraj, came down to the present day and was the last recognised republican state in India. It was a Jat republic, and gave the chiefs who founded the states of Patialah, Nabah, Jheend, &c. The old territory of the Phoolkain race was recognised by the British and treated amongst the protected Sikh States, but has recently been brought under the general rule of British dominion. Every Jat village, however, is, on a small scale, a democratic republic, every man having his own separate and divided share of the cultivated land. The union in a joint village community is rather the political union of the commune, so well known in Europe, than a common enjoyment of property. A father and son may cultivate in common, but commensality goes no further. The village site, the waste lands and grazing grounds and, it may be, one or two other things belong to the commune, and the members of the commune have, in these, rights in common. For all the purposes of cultivation, the remainder of the land is in every way separate individual property. The government is not patriarchal, but a representative communal council or panchayat. All the Jat are subdivided into many Gentes and

Tribes, after the usual fashion of the peoples of the Aryan or Indo-Germanic stock, and the usual fashion is to marry into another Gens. The Jat have little of the hindu ceremonial strictness, and in Punjabi regiments, they mess freely like Europeans, and have then two or three meals a day comfortably. The Jat, Rajput and their congeners are branches of one great stock. Brahmans of Kashmir and the frontier hills are hindus in an earlier stage of brahminical developement. The Jat country is just such as would be occupied by a large stream of people issuing through the Bolan Pass, in Lat. 28 or 30° north, and the Rajput are ranged in a semi circular form around the eastern and northern and south edge of the Jat area, the mass of them occupying the rich valley of the Ganges. Mr. Campbell's conjecture is that the Rajput are an earlier wave from the same source as the Jat who came in by the same route, have farther advanced and been completely hinduised, while the Jat have come in behind them. Punjabi is the language spoken by the Jat, but which in Upper Sindh is called Jati-Gul or the Jat tongue and Mr. Masson calls that of Beluchistan and Sindh Jetki. It is an Indo-Germanic tongue allied to the Sanscrit. In its main grammatical and essential features it is not widely different from the Hindi of the Rajput and other Hindustani people. It is one of the most praeit of Indian vernaculars. The Jat, Jāt, Jet, Jut or Jhut, partly hindu, partly sikh, and partly mahomedan, thus occupy the North West and bordering provinces, also the Punjab, and Sindh. They all refer to the west of the Indus and to Ghazni as their original seats, and the Dhe or Pachade reached India from the Punjab about the middle of the 18th century. The other section is the Hele or Deswale. The Jat seem to have come through the Bolan pass, occupied the high pastoral lands about Quetta and thence descended into the plains which they still occupy. The Jat is the great agricultural tribe in the Punjab and in the Punjab parience, Jat and zamindar or cultivator are synonymous. There are no Jat in Kashmir or within the hills. The Aodi tribe of Jat dwell in Paniput, and Sonaput. The Aolania Jat, in Paniput, claim to be above other Jat by having had the title of malek or king conferred on them. The race, however, as spread from Herat, Kabul and Kandahar, throughout the Punjab, down the Indus into Kach and Gandhava, and eastwards to the Jamna and Ganges, is the same, and wherever spread, they retain a dialect of their own. Mr. Masson also regards them as descendants of the Getæ, who, he says, once possessed the whole of the countries immediately east and west of the Indus. The

zamindars or cultivators of the soil, at Jell, as throughout Kachi, are Jet, who there seldom moved abroad but on bullocks and never unless armed. A Jet may generally be seen half naked—seated on a lean bullock, and formidably armed with matchlock and sword, and to the north and west of Kachi Gandhava; as also in Herat, Kandahar, and Kabul, they are, he says, seen as itinerant artisans, like gypsies. In the Punjab, they are not found west of the Jilam, but east of that river the Jet cultivators use waggons. The Jet has been so long settled in Kachi Gandhava, as to appear the aborigines. Amongst their numerous subdivisions are the Kalora, Kukar, Hampi, Tunia, and Abrah. Re-marriage of widows is permitted. According to Mohan Lal, the S.k. Jat are polyandrous, and one brother takes his brother's wife but in saying this he seems to allude to the custom of Curao, also written karao seemingly from "karana," to cause to do, this being the term given among the Jat, Gojjar, Ahir, and other races and tribes in western Hindustan to concubinage generally; but more especially to marriages of widows with the brother of a deceased husband. This practice is known to the eastward by the name of Oorhuree, in the Deccan of But'hee and, in other provinces, by the term Dhureecha, and is followed among these classes, but is not very openly confessed even among them, as some degree of discredit is supposed to attach to it. It is only younger brothers who form these connections, elder brothers being prohibited from marrying their younger brothers widows, but among the Jat of Delhi even this is not prohibited. This practice has been common among several nations of the East. The Jews followed it and in Egypt it was admitted for a childless widow to co-habit with a brother of the deceased husband. When the laws of Menu were enacted, Curao appears to have been a recognized institution, but as is not unusual with the Institutes, there is much contradiction between the enactments relating to it. From a consideration of all the passages on the subject, it appears that failure of issue was the point on which the legality turned. He who was begotten, according to law, on the wife of a man deceased, or impotent, or disordered, after the due authority given to her, is called the lawful son of the wife (Ch. IX., v. 176.) From the fact of Draupadi marrying the five Pandoo brothers, we learn that polyandry must have prevailed amongst one of the races of that period; and if polyandry, the practice of Curao was, no doubt, not uncommon: indeed, the compiler of the Mahabharata, Vyasa, was himself appointed to raise up offspring to his deceased brother. There is perhaps no circumstance which so strongly shows the North-

ern descent of the deified heroes, of the Mahabharata, as this marriage. Herodotus tells us that the practice prevailed among the nomadic Scythians, as it does at present among the Bhotia. The practice is adopted also by the Nair of Malabar, between whom and the people of the Himalaya Wilson traces obscure vestiges of a connection. Amongst the Jat, Gojjar and Ahir, children born Curao are considered legitimate, and are entitled to inheritance accordingly. Children begotten by the women previous to Curao, except in the case of fraternal Curao, are known by the name of Kudhelura, and do not inherit the property of the father-in-law.

Captain Postans tells us that in Sindh, the Jat like all the tribes in the Sindh countries, are divided into innumerable sub-divisions called "Koum" and are there a hard-working race, occupying themselves in rearing camels, feeding flocks, or cultivating the soil. They are invariably found in large communities, often living in temporary huts or "waund," and migrate all over Sindh and its confines, as shepherds, in search of pasture. Where this is not the case, they are farm servants either of the Biluchii chiefs or wealthy zamindars, who repay their labour with a modicum of the produce. The Jat in Sindh, are a quiet inoffensive class, and exceedingly valuable subjects. Their women, are, throughout the country, noted for their beauty and, to their credit, be it also spoken, for their chastity. They work as hard as the men, and the labour of tending, driving home their flocks, milking the cattle, &c. is fairly divided. The Jat are very numerous and form a large division of the population of Sindh, though seldom found in its towns, being dispersed over the whole face of the country particularly eastward to the desert tract which separates Sindh from Cutch, known as the Runn on which this tribe rear large flocks of camels, besides the Jat. There are other pastoral and peaceable classes of mahomedan persuasion, such as the Khosa in Upper Sindh, Sikh Lohana in the Delta, and emigrants from the Punjab, who have in many instances become amalgamated with the people of the country. The Khosa become a predatory tribe on the eastern confines of Sindh, verging towards the Cutch territories, where Rajputs are located; they are very troublesome. They are also on the eastern boundaries as wandering herdsmen. The Daood Putra who inhabit generally the country of that name in the north are to be met with in various parts of Sindh. The Samah are Jat though they are generally known by the former title. Such also are the Machi and numerous other subdivisions of the Jat tribes. Throughout Sindh the Jat is as in-

separable from the camel as the Arab from his horse in Arabia; they are invariably camel drivers and feeders, and are consulted on every occasion where the health or efficiency of this invaluable animal is in question. The Jat of Sindh and Kach Gandhaya have become mahomedans. According to Mr. Masson, the Jetki is everywhere the language of the Jet.

According to dictionaries, Jat means a race, a tribe, and in Upper Sind a Jat means a rearer of camels or black cattle, or a shepherd in opposition to a husbandman. In the Punjab generally, Jat means a villager and husbandman in opposition to an artist or handicraftsman. The Birk or Virk is one of the most distinguished of the Jat tribes. The Jat (Getae? and Yue-chi?) who emigrated from Upper Asia, are now spread over the Punjab at Lahore and on the banks of the Jumna, and the Sindoo, Cheeneh, Vuraiteh Chhutteh, Sidhoo, Kureka or Kurreal, Gondul, &c., are Jat sub-divisions in the Punjab. The Jat in the north and west of India are industrious and successful tillers of the soil, and hardy yeomen, equally ready to take up arms as to follow the plough. On the Jumna, their general superiority is apparent, and Bhurtpoor bore witness to their merits. Some of the Jat are said to be descendants of the Kalkar of the Salt Range.

As instances of the narrow and confused state of our knowledge regarding the people of India, it may be mentioned that the Birk or Virk, one of the most distinguished tribes of Jat, is admitted among the Chalook Rajputs by Tod (i. 100). Further, the family of Onckot in Sindh is stated by Tod (Rajasthan, i. 92, 93) to be Pramara or Powar, while the emperor Humayoon's chronicler talks of the followers (*i. e.* brethren) of that chief as being Jat. The editors of the Journal of the Geographical Society (XIV. 207, note) derive Jat from the Sanscrit Jyestha old, ancient, and so make the term equivalent to aborigines; but this etymology perhaps too hastily sets aside the sufficiently established facts of Getae and Yuechi emigrations, and the circumstances of Timur's warfare with Jettah in Central Asia. Gutwara, or gatwara, but more correctly, Gunt'hwara are a tribe of the Jat race who hold villages in Gohana, (where they are called Aolanea, after their chief town), in Sonapat Bangur, and in the Domb on the opposite side of the Jumna. They trace their origin from Ghuzni, from which place they were accompanied by the bhut Rajwara, and the blacksmith Buden—all of whose descendants are now living and engaged in the occupation of their fathers in the villages of the Gunt'hwara fraternity. Among the Lahia and Johya Rajpoots of the Indian desert, where they

founded their first capital, Derrawal, many from compulsion embraced the mahomedan faith; on which occasion, he says, they assumed the name of Jat, of which at least twenty different offsets are enumerated in the Yadu chronicles.

The Jat long continued as a powerful community on the east bank of the Indus and in the Punjab, and we have the most interesting records of them in the history of Mahmud, whose progress they checked in a manner unprecedented in the annals of continental warfare. It was in 416 of the Hegira (A. D. 1026) that Mahmud marched an army against the Jat, who had harassed and insulted him on the return from his last expedition against Saurashtra.

The Jat then, as now, inhabited the country on the borders of Mooltan, along the river that runs by the mountains of Joud. When Mahmud reached Mooltan, finding the Jat country defended by great rivers, he built fifteen hundred boats, each armed with six iron spikes projecting from their prows, to prevent their being boarded by the enemy, expert in this kind of warfare. In each boat he placed twenty archers, and some with fire-balls of naphtha to burn the Jat fleet. The monarch having determined on their extermination, awaited the result at Mooltan. The Jat sent their wives, children, and effects to Sind Sagur, and launched four thousand, or, as others say, eight thousand boats well armed to meet the Ghuznians. A terrible conflict ensued, but the projecting spikes sunk the Jat boats while others were set on fire. Few escaped from this scene of terror; and those who did, met with the more severe fate of captivity." Many doubtless did escape; and it is most probable that the Jat communities, on whose overthrow the state of Bikaner was founded, were remnants of this very warfare.

Still the Jat maintained himself in the Punjab, and till the middle of the nineteenth Century the most powerful and independent prince of India was the Jat prince of Lahore, holding dominion over the identical regions where the Yuchi colonized in the fifth century, and where the Yadu, driven from Ghuzni, established themselves on the ruins of the Tak. The Jat cavalier retains a portion of his Scythic manners, and preserves the use of the chukra or discus, the weapon of the Yadu in the remote age of the Bharat. According to Colonel Tod, the Yadu-Bhatti princes, when they fell from their rank of Rajpoots, assumed that of Jat, who are assuredly a mixture of the Rajpoot and Yuti, a branch of the great Getic race. Though reduced from the rank they once had amongst the 'thirty-six royal races,' they appear never to have renounced the love of

independence, which they contested with Cyrus in their original haunts in Sogdiana. The name of the Cincinatus of the Jat, who abandoned his plough to lead his countrymen was Chooramun. Taking advantage of the sanguinary civil wars amongst the successors of Arunxzb, they erected petty castles in the villages (whose lands they cultivated) of Thoon and Sinsini, and soon obtained the distinction of Kuzzák, or 'robbers,' a title which they were not slow to merit, by their inroads as far as the royal abode of Ferokhsér. The Syeds, then in power, commanded Jey Sing of Amér to attack them in their strongholds, and Thoon and Sinsini were simultaneously invested. But the Jât, even in the very infancy of their power, evinced the same obstinate skill in defending mud walls, which in later times gained them so much celebrity. In all the ancient catalogues of the thirty-six royal races of India the Jit has a place, though by none is he ever styled 'Rajpoot'; nor does a Rajpoot intermarry with a Jit.

In the Punjab they still retain their ancient name of Jit. On the Jumna and Ganges they are styled Jat, of whom the chief of Bhurtpoor is the most conspicuous. On the Indus and in Saurashtra they are termed *Jat*. The greater portion of the husbandmen in Rajasthan are Jit; and there are numerous tribes beyond the Indus, now proselytes to the mahomedan religion, who derive their origin from this race.

The kingdom of the great Geta, whose capital was on the Jaxartes, preserved its integrity and name from the period of Cyrus to the fourteenth century, when it was converted mahomedanism to Herodotus informs us that the Geta were theists and held the tenet of the soul's immortality; and De Guignes, from Chinese authorities, asserts that at a very early period they had embraced the religion of Fo or Boodha.

The traditions of the *Jit* claim the regions west of the Indus as the cradle of the race, and make them of Yadu extraction; thus corroborating the annals of the Yadu, which relate their migration from Zabulistan. Of the first migration from Central Asia of this race within the Indus, we have no record: it might have been simultaneous with the Takshac, from the wars of Cyrus or his ancestors.

The superiority of the Chinese over the Turks caused Changiz Khan to turn his arms against the Nomadic Geta of Mawerool-Nehr (Transoxiana), descended from the Yuchi, and bred on the Jihoon or Oxus, whence they had extended themselves along the Indus and even Ganges, and are there yet found. These Geta had embraced the religion of Fo.

The *Bagari* tribe, inhabiting the district of Bagar, between the South West borders of Hariana and the Sutlej, are said to have been Rajputs but are also supposed to be Jat. There is a robber race of this name settled in Malwa. The Jat of Mewar clings to his patrimonial estate. In the second Maratta war, the Jat of Bhurtpore were inclined to side with Jeswant Rao Holkar: that fortress is on the borders of the desert of Rajputana, and was invested by Lord Lake in 1805, and after several determined assaults, made without capturing the place, the Rajah sued for terms. In 1825, however, during the Burmese war, the Jat, puffed up by the belief that their mud fort was impregnable, again drew down the anger of the Indian Government, and the fort was taken by storm on the 18th January 1826. When besieged by Lord Lake in 1805, with 10,000 regular soldiers, four determined assaults were made on January 9th and 22nd and February 20 and 21, but in each instance repulsed, though at the close, the besieged on the 10th April 1805 yielded to terms. In those four fruitless attacks, the British loss was 3,203 killed and wounded, of whom 103 were officers. In 1826, it was again besieged and successfully stormed by Lord Combermere. The walls were built of unbaked brick or clay.

The parent country of the Jat seems to have been the banks of the Oxus, between Bactria, Hyrkania and Khorasania, in this position, there was a fertile district, irrigated from the Margus river which Pliny calls Zotale or Zothale and General Cunningham believes this to have been the original seat of the Jat, the Iatii of Pliny and Ptolemy and the Xanthii of Strabo. The term Jat is only their tribal name, the general name of their horde is Abar. Taking these two names, their course from the Oxus to the Indus may be dimly traced, in the Xanthii of Strabo, the Iatii of Pliny and Ptolemy, the Xuthi of Dionysius of Samos, who are coupled with the Arieni, and in the Zuthi of Ptolemy, who occupied the Karmanian desert, on the frontier of Drongiana. Subsequently, the main body of the Iatii seem to have occupied the district of Abiria and the towns of Pardabathra and Bardaxema in Sind, or Southern Indo-Scythia, while the Punjab or Northern Indo-Scythia, was chiefly colonized by their brethren of the Med. When the mahomedans first appeared in Sind, towards the end of the seventh century, the Zath and Med were the chief population of the country. But the original seat of the Med or Medi, was in the Punjab Proper, from which Mr. Thomas concludes that the original seat of the Iatii or Jat colony was in Sind. At the present day, the Jat are found in every part of the Punjab, where they form about two-fifths of the popu-

lation. They are divided into not less than a hundred different tribes. They mostly profess mahomedanism. To the east of the Punjab, the Jat, professing brahminism, are found in considerable numbers, in the frontier states of Bikaner, Jesulmer, and Jodhpur, where Colonel Tod estimated them to be as numerous as all the Rajput races put together. They are found also, in great numbers along the upper course of the Ganges and Jumna as far eastward as Bareilly, Farakhabad and Gwalior where they are divided into two distinct clans. To the south of the Punjab, the Jat who profess mahomedanism, are said by Pottinger, to form the entire population of the fruitful district of Haraud-Dajel, on the right bank of the Indus, and the bulk of the population in the neighbouring district of Kach-Gaudara. In Sind, where they have intermarried largely with the Baluchi and with races of hindu descent professing mahomedanism, it is no longer possible to estimate the number of the Jat population, although it is certain that a very large proportion of the inhabitants must be of Jat descent.

Bikaner, in L. $72^{\circ} 20'$ E. and L. $27^{\circ} 56'$ N. is the chief town of an independent sovereignty, chiefly in the great Indian desert. It has an area of 17,676 square miles, with the population estimated by Tod in the beginning of the 19th century at about 639,000 the revenue is about six lakhs of Rupees. Bikaner maintains a force of 2,100 cavalry, and about 1,000 infantry and 30 guns. Bikaner was originally inhabited by various small tribes of Jat and others, the quarrels among which led to the conquest of the country in 1458 by Bika Sing, a son of rajah Jodh Sing of Jodhpore. After consolidating his power he conquered Bagore from the Bhattees of Jesulmer and founded the city of Bikaner; he died in A. D. 1505. Rai Sing, the fourth in descent, from Bika Sing; succeeded to power in 1573, and in his time the connection of Bikaner with the Delhi emperors began. Rai Sing became a leader of horse in Akbar's service and received a grant of fifty-two pergunnahs including Hansi and Hisar. The people most numerous are the Jit and the territory was once populous and wealthy, but the plundering Beedawat bands, with the Sahrai, the Khasa and Rajur robbers in the more western desert so destroyed the kingdom, that while formerly there were 2,700 towns and villages, in Colonel Tod's time, not one-half of these remained. Three-fourths of the population are the aboriginal Jit, the rest are their conquerors—the descendants of Bika, including Saisote (Saraswati brahmins) Charans, bards and a few of the servile classes.

Amongst the Jat, the "Karao" is the marriage of a widow with the brother of a deceased husband, as practised amongst the Jat, the Gujar and Ahir and other inferior tribes in the N. W. of India. The term Karao is also applied to concubinage. At present, the flower of the Punjab population is Jat; they form the majority of converts to the religion of Nanuk. They are the core and nucleus of the Sikh commonwealth and armies. Equally great in peace and war, they have spread agriculture and wealth from the Jumna to the Jhelum, and have established a political supremacy, from Bhurtpore and Delhi to Peshawar. Essentially yeomen by lineage and habit, they can yet boast of two regal families at Lahore and Bhurtpore, who in their day have stood in the first rank of Indian powers. In the Punjab they display all their wonted aptitude for stirring war and peaceful agriculture, and the feudal polity of the khalsa has imparted to them a tinge of chivalry and nobility. Their chief home is in the Manjha, or centre portion of the Baree Doab, and their capital is Umritsur. But they have also extensive colonies at Gojeranwalla, in the Rechnab Doab; Gujerat, in the Chuj; and about Rawal Pindie in the Sind Saugur. For centuries they have peopled the southern Punjab, of which the capital is Mooltan; but there they are held in different repute, and their importance is merely agricultural. In many localities the Jat profess the mahomedan creed, having been converted chiefly during the emperor Aurangzeb's reign, in the south they mainly belong to this persuasion.—*Records of the Government of India, No. 11. JATA. See Khaki.

JATA. SANS. A knot of hair on the heads of hindu devotees. The Jata or matted hair assumed by Rama and Lakshmana on dismissing the royal chariot at the village of Srin-

gavera to indicate their entering upon a forest or ascetic life. Jata therefore is a braid of hair worn by the hindu votaries of Siva, also a twisted braid of hair, worn by hindu ascetics.—*Ram. II. 49. Hind. TA. VI. p. 300. Richard F. Burton's Sindh. p. 384. See India.*

JATAFALA. SANS. *Myristica moschata.*

JATAKARMA. See Yug byasa.

JATAKI, in Beluchistan, a language spoken by the Rind, Talpur, Murri, Chandia Jemali and Laghari who speak either Jataki or the hill tongue of the Beluchi. The Jataki is also called Siraiiki from Siro or Upper Sind where it is commonly spoken by the people; but also Biluchi from its being used by several of the Biluch clans settled in the low country. The word "Jataki," spelt with the cerebral T, and the peculiar Sindh J or Dy, is an adjective formed by the proper noun Jat, the name of a people who were probably the aborigines of the Punjab. The author of the Dabistan applies the term "Jat dialect" to the language in which Nanak Shah composed his works. The Journal of the Bombay Branch of the Asiatic Society, 1819, contains a short Grammar, which serves as a specimen of the Jataki tongue.

JATAHY?—*Hymenaea courbaril.*

JATAIYU. A fabulous bird killed by Ravana.

JATAMANSI. HIND. SANS TEL. The *Cyperus stoloniferus* of Heyne, Retz, and Wight Contr., but the true Jatamansi is the *Nardostachys Jatamansi*,—*D. C. and Royle*, the Balch'haru or Bal elhur Hind. Sanbal-ul-tuib, Arab. and Sanbal-i-Hindi. Pers. The true plant is only found at great elevations beyond the tropics, and, in south India, the term is applied to the sweet smelling tubers of various species of *Cyperus*, and in Upper India, to the lemon grass, *A. schenanthus*, and other species of *Andropogon*, which are also known under the names of Askhar and Sikhunas (*oxiris*). Sir W. Jones identified it as the spikenard of the ancients.—*Elliott's Flora Andhrica*. See *Jatamansi*, *Nardostachys* *Valerian*. *Nardostachys jatamansi*.

Grows in New Andalusia, Havana, and is one of the most common small bushes throughout India. It is in flower and fruit all the year. The seeds are purgative, but very uncertain in their operation; proving sometimes violent like those of the *Nervalum*, though they are naturally milder. Before administering them, they should be cleared from the thin filament in which they are closely enveloped; after which two or three may be taken as a dose. Nearly all the *Jatropha* are powerful cathartics, and Fee cites *J. gossypifolia*, America, *J. glandulosa*, Arabia and the *J. multifida*, or coral plant, (Avellana purgatrix, grand ben purgatif) a native of America and India, a shrub 8 or 10 feet high, replete with acrid bitter juice, with large pinnatifid glabrous leaves, the fruits slightly pyriform, about the size of a nutmeg; a single seed is said to be purgative. Lindley says it is "one of the best of the emetics and purgatives, acting briskly without inconvenience, and the effects readily allayed by a glass of white wine." Dr. O'Shaughnessy, however, considers it a very dangerous article. Dr. Wight gives also *Jatropha peltata*, and *J. villosa*. The leaves which are five angled, are considered as discutient, and the milky juice of the plant is supposed to have a detergent and healing quality. The seed is called in Dukhani *Jangfi erundi ki-binj* in Arabic *Dundebirri* and in Tamil *Kaat amanska moqttoo*. A fixed oil, (called in Canarese *Mara haralu unnay*) prepared

from the seeds is reckoned a valuable external application in cases of itch and herpes; it is also used in chronic rheumatism, and for burning in lamps. The milky juice boiled with oxide of iron makes a fine black varnish.—*O'Shaughnessy*, p. 568. *Mason's Tenasserim*. Cleghorn, Punjab Rep. Genl. Med. Top. p. 208. A native of the East India. The pale or whey colored thin juice, which exudes from a fresh wound, is employed by the hindoos as an escharotic to remove flaws from the eyes. Its seeds also yield a stimulating oil, in appearance approaches castor oil, fluid and light straw-colored. This is now chiefly used medicinally as a counter irritant, but if procurable in sufficient quantity seems likely to prove a useful oil.—*Roxb. M. B. of 1855*. *O'Shaughnessy*, p. 559. *Thw. En. Pl. Zeyl*, p. 277.

JAU. HIND. *Artemisia sacrorum*.

JAU IRSI. TAM. Arrow root.

JAUN. ANGLO-HINDI; also Office-Jaun, a kind of conveyance, from Jana to go.

JAUN-PAUN is a conveyance like a chair, with a high back, and covered in on all sides, with doors, panels, curtains and canopy. It is carried by four men at a time, on their shoulders, two to each pole. There are a great variety of shapes in the Simla, Mussoorie, and Darjeeling jaun-paun, the fashionable conveyance in those Sanatoria and the men (Jaun-pauni) who officiate as the carriers of the

jaun-paun, are gaily attired in many coloured garments, or different kinds of livery, selon les goûts varies-du beau monde.—*Mrs. Hervey's Adventures of a Lady in Tartary*, Vol. I. p. 53.

JAUNE-ANTIQUE. FR. A kind of marble.

JAUNTARI. HIND. *Myristica officinalis*; mace.

JAUNPUR. See Inscriptions.

JAU-SAG. HIND. *Chenopodium album* pilajau is *Artemisia elegans*.

JAUSAM. CHIN. Giuseng.

JAUSHIR. HIND. A medicinal gum resin, gum opoponax, from *Opoponax chiroum*. It is also called Gau-shir in the Lahore bazar, "Jahoshi" at Shiraz, and "hoshi" is the name by which Dr. Lindley obtained it from Beluchistan.

JAUMUKADDAM, also Jauzmukaddar, HIND. *Pavia indica*.

JAUZ-UTTRIB. HIND. The nutmeg.

JAVA, an island in the Eastern Archipelago, the south point of which is in latitude 8° 47' S. and longitude 114° 29' 10' E. It is the chief of the islands which the Dutch hold under the designation of Netherland India, the head ruler being styled the Governor General of the Dutch Indies, Commander-in-Chief of all the forces of His Majesty the king of Holland to the east of the Cape of Good Hope. It is a country diversified with hills, mountains and valleys, and on the south coast, the steep sea walls are clothed to the very beach with luxuriant woods. Java has long belonged to the Dutch, but during the convulsions in Europe, it was taken possession of by the British in 1811, but restored in 1816. During the British occupation of Java, the sultan of Palembang caused all the Dutch in the town to be massacred, thinking that by this summary method he would be enabled to rid himself entirely of European influence; but the British government at Batavia, horror-struck by the atrocity of his conduct, for the purpose of evincing their displeasure at the crime and their determination to punish it, despatched a force under the command of colonel Gillespie, who, in the execution of this duty performed one of the most gallant exploits upon record. The force consisted of several vessels of war, and a large body of troops. On ascending the river, a battery, of one hundred large guns flanked by armed vessels, surrendered without firing a shot, and the sultan, terrified at the approach of the British, fled into the interior with his treasure. With the news of his flight, the British commandant was informed that the Malays had risen, and were slaughtering the Chinese and other foreign settlers. Colonel Gillespie, anxious to put a stop to these frightful outrages, embarked with a small number of grenadiers in a few light boats, leav-

ing orders for a larger force to follow immediately. When the little party approached the town, darkness had already set in, and the shrieks and outcries plainly evinced that the work of carnage was continued. The Colonel and his party, which consisted of ten persons himself included, landed undismayed among a vast multitude of blood-thirsty wretches who, paralyzed at the boldness of the action, allowed their opponents to enter the place, where they were soon afterwards joined by a small reinforcement. At midnight, about three hours after the arrival of the first party, the main body of troops entered the place, and a town defended by forts and batteries, mounting two hundred and fifty pieces of cannon, was taken possession of without the loss of a single life. The following day saw order restored, and a new sultan was soon afterwards placed upon the throne. The population of Java, in 1810, was 3,000,000 or 50 to the square mile. In 1815, the population had increased to 4,615,270 and in 1857, including Madura, it amounted to 11,594,158 and 180 to the mile. But the other Dutch possessions in the Indian Archipelago, contain an aggregate population of something less than 6,000,000. Java and Madura are separated by a narrow strait and may be considered as one territory, with a mean length of 650 English miles and 100 in breadth. The population, arranged into classes are,

European settlers.....	20,231
Dutch Army, European.....	10,765
" " African soldiers.....	427
" " Malays and Javanese.	15,036
Natives.....	11,410,856
Chinese.....	138,856
Arabs and Asiatics.....	24,615

The women, in opposition to the rule in most tropical countries, exceed the men by 700,000. Slavery continued to be sanctioned until 1859, when it was abolished, but had so fallen away as an institution that there existed then only 5,260 slaves to liberate. In Netherlands India, the Dutch Government has been, since 1824, a commercial firm assisted by the Trading Company established in 1824 under the patronage of king William. This has proved the salvation of Java, and their shares have been at a considerable premium.

Since 1818, both the Imports and the Exports have doubled their value.

The natives clothe themselves entirely in imported cotton stuffs, spending, annually, about 1s. 9d. each on clothing. The principal of the imports are cotton stuffs, wines and spirits, iron and machinery. Amongst the indigenous avocations are the cultivation of tea and coffee, and 450,000 families are employed in the cultivation of the coffee plant. In 1857, there were, in Government plantations 14,729,700 tea shrubs under cultivation, which produced nearly 2,000,000 English pounds of tea and gave employment to 100,000 families. The mode adopted by the Dutch, in governing the people, has been to continue the semblance of authority in their own chiefs, while the real power rests with the Dutch officers termed residents. In Java alone, are 106,105 native chieftains or princes supported by the Dutch during good behaviour and whose united salaries amounted in 1857 to 1,834,007 guilders. The wild sand coast of Bantam in Java, is annually frequented by large numbers of turtles, where they have often to creep over nearly a quarter of a mile of the beach, to the dry and loose soil at the foot of the sand dunes. In their progress to and fro, they are attacked by parties of wild dogs, birds of prey and even tigers. Among the small groups of islands in the Java sea, the waterpouts are frequent, and not always accompanied by strong winds; more than one is seen at a time, whereupon the clouds whence they proceed, disperse, and the ends of the waterpouts bending over finally cause them to break in the middle. They seldom last longer than five minutes. As they are going away, the bulbous tube, which is as palpable as that of a thermometer, becomes broader at the base, and little clouds, like steam from the pipe of a locomotive, are continually thrown off from the circumference of the spout, and gradually the water is released, and the clouds whence the spout came again closes its mouth. Sir S. Raffles says that Java was originally peopled by emigrants coming in vessels from the Red Sea; from whence it is inferred that these ancient Egyptians might have been the ancestors of one class of the people. The Javanese seen by Mr. D'Ewes are described as small in stature, but muscular in form, supple and active in their movements and of a light copper colour. The people of the Tengger mountains, shortly described in Raffles' History, may be a relic of an aboriginal race. This race, like a few others in India and the Archipelago, adopt the singular practice of building their villages in terraces and the practice seems to have once prevailed in the Philippines. The inhabitants of the Serwatti islands, select the summits of hills or the

brows of cliffs which rise abruptly from the sea, as sites for their habitations. The crest or extreme summit of the hill is occupied by a large waring tree, the *Ficus indica* ? of Kumphius, beneath which the idols of the village are placed on square platforms of loose stones. Here the elders meet when any important matter is to be discussed. Below the tree the sides of the hills are scarped into a succession of platforms or terraces, on which are erected their oblong barn-like houses with wooden walls and palm leaf thatch. At Letti, a neighbouring island, where the hills are far inland, the brows of the cliffs which overhang the sea are selected, and a similar mode of scarping into terraces is adopted when necessary. The same system also prevails at Baba and Timor Laut, also amongst the Malle Arasar, or hill kings, of the Pulney hills in the extreme south of India.

Probalonggo in East Java, is the richest sugar-producing district in the island, and its inhabitants principally Madurese. The south-western side of the plain of Probolinggo is bounded by the Tengger mountains where the people still cling to a religion supposed to have originated in hinduism.

Giinding, is the name given to a land wind in East Java, occasioned by the S. E. monsoon blowing right over the land through the gap at Kalakka, 1,000 feet above the sea between the Jyang and Tengger mountains, 8,000 and 9,000 feet high. The dress of Javanese ladies differs but little from that of men of the upper class, except in the kabya being buttoned across the breast. No covering is worn for the head, their bright black hair being tastefully arranged in a knot, decorated with bunches of white flowers: the women of the lower class wear a blue sarong, and a wide shirt of the same colour. Both sexes, but more particularly the women, pay great regard to cleanliness, bathing at least once a day. Amongst the dependencies may be mentioned the Moluccas or Spice islands, which, next to Java, are the most important of the Dutch possessions in India. The islands so called are Amboyna, Banda, Ternate, Tidore and the smaller islands in the neighbourhood and they form a sub-government of Java. The greatest part of these islands were discovered by the Portuguese who were in possession of them at the commencement of the 16th century, but were acquired by the Dutch at the close of that era. The monstrous policy of this nation led them at one time to root up and destroy at a great cost, often by force of arms, all nutmeg and clove trees except the number necessary to produce the quantity of spices which it could sell, and so preserve the monopoly. The Amboynese are of a middling

height and well formed. They make good mounted and foot soldiers. They are gentle, brave, very sober and easily managed. A considerable number have embraced christianity. Their costume is nearly the same as the Malays of Java. The average annual crop of cloves is from 250,000 to 300,000 lbs. The clove tree begins to bear at fifteen years and is in full perfection at 20, and the twenty average yield is 5 lbs., though a tree has been known to yield 25 lbs. It attains a height of 35 to 40 feet.

Banda residency, comprises several islands of which are Banda or Banda-Neera, Gunong Api so named from its terrible volcano, Lonthoir, Rosingain almost abandoned after the extirpation of its spices, Pulu-Aj, and Pinang. Banda is very unhealthy and is subject to frightful earthquakes; many of the people are christians. The Serwatti islanders have a more general resemblance to the inhabitants of the South Sea Islands, than to those of the Indian Archipelago. They are taller and fairer than the Malay or Bugi. They wear a waist cloth made of cotton or of the bark of the paper mulberry, and allow their long wavy hair to float over their shoulders or tie it at the back of the head. Their boats, the cora cora, are long and graceful with low sides and great breadth of beam, high stems and sterns which rise like horns at each extremity of the vessel, and are ornamented with festoons of large cowrie shells and bunches of feathers. They build their villages on the summits of cliffs or the brows of hills which rise abruptly from the sea or on the banks of rivers. On the crest of this cliff is a fig tree (*Ficus indica*, *Rumph*) the waringin, beneath which are placed their idols on square platforms of loose stones; and below the tree the sides of the hill are scarped into a succession of platforms or terraces on which the houses rest. The fishing canoes or flying canoes of Java are long, but very narrow—just broad enough to enable a man to sit between the gunwales; the crew seldom exceeds four men. They are rendered steady by long semi-circular outriggers, one end secured to the gunwale, the other to large bamboos and of the same length as the canoe itself; and, as they are daubed all over with some bright white substance, they have the appearance of huge spiders crawling over the dark blue sea; their speed, when propelled by paddles, is very great; but, greater under their large triangular sails.

In 1851, the aggregate value of Imports and Exports of the Island was £18,761,980. It has a population of 12,000,000 with 461 inhabitants to the square mile.

The islands occupied by the Dutch in the Eastern Archipelago, for their civil Government, are divided into 22 provinces or prefectures, known under the names of Residencies. The census of 1845, showed a population in Java of 9,542,045.

According to the traditions of the Javanese, Sumatra, Java, Bali, Lombok and Sumbawa, were all formerly united, and they give the dates of A. D. 1192, 1283 and 1350, but these are not to be received. The dividing line between Asiatic fauna and that of Australia, must be drawn down the Straits of Macassar, and continued southward through the Strait of Lombok between Lombok and Bali. Java, locally Jawa, is the name of the original occupants of the eastern part of the island who in latter years have spread all over the island and have given it their name. The Chinese call it Chi-poo. Marco Polo who described, though he did not visit it, calls it Giaua. Up to the middle of the 15th century, the people of Java, from Cheribon in Long. 109° to the west, spoke the Sundaese tongue: But in 1811, nine-tenths of all the population of Java, spoke Javanese, and the Sundaese was already confined to the mountainous parts of the south and west, and to a small colony near Bantam. Sir S. Raffles says that Java was originally peopled by emigrants coming in vessels from the Red Sea; from whence it is inferred that the ancient Egyptians may have been the ancestors of one class of the people. The Javanese are small in stature, but muscular in form, supple and active in their movements and of a light copper colour. The people of the Tenger mountains, shortly described in Raffles' History, may be a relic of an aboriginal race. They are a peculiar people who speak a dialect of Javanese and, despite the zealous efforts of the mahomedans, they still follow the hindu religion. This race, like a few others in India, and the Archipelago adopt the singular practice of building their villages in terraces. This practice seems to have once prevailed in the Philippines. The inhabitants of the Serwatti islands, select the summits of the hills or the brows of cliffs which rise abruptly from the sea, as sites for their habitations. The crest or extreme summit of the hill is occupied by a large warring tree, the *Ficus indica* of Rumphius, beneath which the idols of the village are placed on square platforms of loose stones. Here the elders meet when any important matter is to be discussed. Below the tree, the sides of the hills are scarped into a succession of platforms or terraces on which are erected their oblong barn-like houses with wooden walls and palm leaf thatch. At Jetti, a neighbourly island, where the hills are far inland, the brows of the cliffs

which overhang the sea are selected, and a similar mode of scarping into terraces is adopted when necessary. The same system also prevails at Baba and Timor Laut. At Buitenzorg, 40 miles inland from Batavia, hundreds of miles of mountain and valley country are terraced and irrigated. The same system is pursued at Bali and Lombok and seems to have been introduced by the brahminical race. The system of terracing is practised amongst the Malie Arasur, or hill kings, of the Pulney hills in the extreme south of India.

The *Kalang* people who reside among the inhabitants of the Tenger mountains are said to have been at one time numerous in various parts of Java, leading a wandering life, practising religious rites different from those of the people, and avoiding intercourse with them; but most of them are now reduced to subjection, are become stationary in their residence, and have embraced the mahomedan faith. Whenever the Kalang move from one place to another, they are conveyed in carts, having two solid wheels with a revolving axle and drawn by two or more pairs of buffaloes, according to the circumstances of the party.

The volcanoes of Java are in two lines: one, commencing near cape St. Nicholas, its N. W. extremity passes diagonally across the island to its S. E. headland on the Strait of Bali. The other line runs parallel, and extends from Cheribon on the S. Coast to the Strait of Sunda. The volcanoes are in two separate fissures in the earth's crust, and the volcanoes in it are cones of elevation, each distinct and separate; their number being 38, and some of them of immense size. They throw out volcanic ashes, sand and scorie and sometimes trachytic lava. White clouds of sulphuric acid gas continually wreath their peaks and is destructive to life. Large quantities of sulphur are dug out. A severe earthquake was experienced in Batavia, and over an extensive region in Java, on the 16th of November 1847. In the Courant of the 27th October 1847, it was mentioned that a shower of ashes had fallen at Buitenzorg on the night of the 17th, which came from the Guntur mountain, in the district of Limbangan, residency of Preangar. On Sunday the 17th October, at 11 o'clock P. M., the earthquake shocks, following each other in quick succession, were felt at Tijandjur, the first of which was very strong, and lasted for fully ten seconds. The shower of ashes began to fall the same night, and on the following morning had already clothed the earth, grass, trees, and buildings with a brown covering. The fall of ashes and sand lasted the whole day, and made it very inconvenient to be in the open air. The eyes of

travellers suffered. The earthquakes had not wholly stopped at Tjundjur on the 29th October. The mountain had, however, fortunately begun to be at rest, and no damage had been caused by the eruption. The shower of ashes had reached as far as the frontiers of the residency of Bantam, a distance of more than 80 miles to the west. Tenger mountains mean the wide or spacious mountains. There is here an old volcano with its trachyte crater 7,500 feet above the sea, in diameter $3\frac{1}{2}$ and $4\frac{1}{2}$ miles. It is the largest crater in Java and one of the largest in the world. Its bottom is a level floor of sand, which in some places is drifted by the wind like the sea and is called by the Malays the Lant Pasar or Sandy sea. Four cones of elevation rise from this sand floor, the smallest of which called Bromo, in 1866, was active throwing out ashes. It rises like Monte Somma in the crater of Vesuvius. But trachyte, obsidian and pumice have been thrown out in succession.

Papandayang volcano, in 1772, in the south of Java in $1. 10^{\circ} 8'$, in a single night threw out scorice and ashes which Dr. Joughuhn thinks made a layer 50 feet thick for seven miles around. In Dr. Horsfield's account of it, drawn up from the native testimony, it is stated that an extent of ground of the mountain and its environs, 15 miles long and full 6 broad, was by this commotion swallowed up within the bowels of the earth, but such sinking, according to Mr. Bikmore (p. 75,) does not seem to have occurred.

Mount Galung-gong, a few miles N. E. of Papandayang is also a Java volcano. On the 8th July 1822, at noon, not a cloud was seen in the sky when suddenly at $\frac{1}{2}$ past one a frightful thundering was heard in the earth and from the top of this old volcano, a dark dense mass was seen rising higher and higher into the air, and spreading itself out over the clear sky with such an appalling rapidity that in a few moments the whole landscape was shrouded in the darkness of night. Through this darkness flashes of lightning, gleamed in a hundred lines, and many natives were struck down by falling stones. Then a deluge of hot water and flowing mud rose over the rim of the old crater and poured down the mountain sides, sweeping away trees and beasts and human beings. At the same moment, stones and ashes and sand were projected high into the air, and as they fell destroyed nearly everything within a radius of more than 20 miles. A few villages on the lower declivities of the mountains escaped, from being built on eminences as they were above the streams of hot water and mud, and the stones thrown out fell beyond them, destroying villages at a greater distance.

By 4 p. m., the extreme violence of the eruption had passed, by sunset the sky was again clear, and the sun shining on a scene of desolation. A second eruption occurred five days afterwards and by that time more than 20,000 persons had perished. Batavia is built on both sides of a small river almost in a morass. Batavia Residency has a total population 517,762 :

Europeans	5,576	Arabs.....	684
Chinese.....	45,570	Eastern peoples...	311
Natives....	463,591		

Turabar Residency has a population of 1,278,600 of which 1,261,271 are Natives.

The Javanese are of short stature, the men do not average more than 5 feet 3 inches, face lozenge shaped, cheek bones high and prominent, mouth wide, and nose short. They all gamble greatly. They profess mahomedanism, but still follow many hindu customs ; a few are professing christians. Batavia anchorage is sheltered by the islands at the mouth of the Bay. Samarang Residency a town in Java, has 1,020,275 of population, exclusive of the military : viz.

European.....	5,162	Arabs..	438
Natives....	1,001,252	Other eastern races	1982
Chinese....	11,411		

Near Samarang, is the Head Quarters of the army of Netherland India, strongly fortified. Samarang anchorage is exposed to the Western monsoon. The town is built on both sides of a small river.

The *Gallus fuscatus* or green jungle fowl is common in Java ; also, *G. bankiva*. *Buceros lunatus* the great wood-pecker more than four feet long, and *Loriculus pusillus*, a pretty little Lorikeet about four inches long. In the western districts of Java are the calliper butterfly, *Charaxes kadenii* ; the elegant green and yellow Trogon ; *Harpactes Reinwardti*, the gorgeous little minivet fly-catcher, *Pericrocotus miniatus*, which looks like a flame of fire among the bushes, and the rare black and crimson oriole, *Analcipus sanguinolentus*. The *Papilio arjuna*, has its wings covered with grains of golden green and P. Coon, also occurs.

The Amphetrite or sea worm of Java, lives in holes of the great solid madrepores. The gills of these lovely creatures are in the form of spiral ribbons of brilliant orange-green and blue. These gaudy plumes are alternately extruded and retracted and seen through the pellucid water, present a very singular and beautiful appearance.

Java has seven pigeons peculiar to itself : a peacock ; also the green jungle cock ; two blue ground thrushes (*Arenga cyanea* and *Myophonus flavirostris*), the fine pink-headed dove (*Ptilenopus porphyreus*) ; three broad

tailed ground pigeons (*Macropygia*) and many other interesting birds found no where in the Archipelago out of Java.—*Adam's, Trav.*, p. 51. *Wallace, Vol. I.* p. 54, 118, 147, 160. *Mr. G. W. Earl, Journal Indian Archipelago. Fraser's Magazine. Curiosities of Science. Keppel's Indian Archipelago, Vol. II.* p. 141. No. 3, *Jour. Ind. Arch. Crawford. Bismore*, p. 74, 76. *Journal of the Indian Archipelago*, Decr. 1857, p. 361.

JAVA ALMOND. *Canarium commune*.—*Linn.*

JAVA BYAMU. *Tel.* Hordeum hexastichon.—*Linn.*

JAVA CAT. *Viverra zibethica*, the Mussony, of the Javanese is found in Java and Sumatra.

JAVAN. In ancient Sanskrit literature, a designation of the western world, generally supposed to be applied also to Ionia, the isles of Greece, and Asia minor. In the form of Yavana, it is also held applicable to the Greeks and their descendants who made inroads into India through the N. W. and from the Euphrates, and are said to have reached Orissa through Kashmir and the term Yavana was applied also to Greeks left by Alexander to garrison the banks of the Indus. Javan or Yavan, is, however, applied by the Hindu both to Greeks and Mahomedans. *Ezekiel*, ch. xxvii, alludes to the Javan and Dan, but Yavana, has been used by the Hindus to mean Iones, as it is used in *Genesis*, chap. x., and in the Arabic Persian, Coptic and Armenian languages to signify Greeks, Iones being once the appellation of all the Greeks.—*Plato de Leg.* iii. 684, in *John's Indian Archipelago, Vol. I.* p. 284. *Tod's Travels*, p. 375.

JAVAPILALA. *BENG.* Nutmegs.

JAVA PRAIA CHITTAM. See Hindu.

JAVA PUSHPAMU. *Tel.* Hibiscus rosa-chinensis.—*Linn.*

JAVA SEA. In February, the western monsoon blows almost continually, with great violence. In March it blows irregularly; in April less vehement. Mr. Logan writing of the farther east in the *Journal of the Indian Archipelago* remarks that amongst the sea basins whose ethnic influence has been in operation during all historic times and is uninterrupted at the present day, are the China, Malacca, Java, Mangkasar, Solo, Mindoro, Molucca, Banda, Papua, Jilolo, Papuan, Papua-Australian and Papua-Micronesian seas, and the Archipelagian seas of Johore, the Trans-Javan or Timorese Chain, the Bisayan group, the Moluccas, Eastern Melanesia and the different Polynesian and Micronesian groups. All these basins exert a two fold influence. They provoke a constant intercourse between the rivers of their opposite margins or the islets scattered through them, they bring the whole under the

operation of foreign civilizations and, opening as they do into each other, they serve as broad highways traversing the whole Archipelago in different directions, and uniting it, both for foreign navigators and for the more advanced and enterprising of its native communities. Upon the northern coast of Java the phenomenon of daily land and sea breezes is finely developed. Surabaya harbour in E. Java is sheltered from all gales; Surabaya Residency has a population of 1,278,600 of which 1,261,271 are natives. It is built on both sides of a small river which is being widened into a canal.—*Bismore*, 57. *Logan*.

JAVA SPARROW. *Loxia erythraea*.

JAVE. *Pushtu*. *Grisia tomentosa*.—*Roxb.*

JAVELIN, the ancient German warriors had a custom of crowning their javelins with coronals of leaves from the sacred trees.—*Postan's Western India, Vol. II.* p. 196.

JAXARTES, the modern Sir river. Chengis khan and his bands issued from the pastoral

lands beyond this river. On the eastern side of Central Asia, is a fertile tract, watered by the great rivers the Jaxartes and the Oxus, and it is in this fertile tract that the conquests of Russia were made between 1864 and 1868. After long years spent in fortifying posts, Russia, in 1864, made a sudden irruption into the upper valley of the Jaxartes, and in that year took three forts of Kokand, viz. Aoulietta, Turkestan and Chemkend. In the spring of 1865, the chief of Kokand fell in battle, and in June 1865, the city of Tashkend was stormed. On the 20th May 1866, they fought and won the battle of Irdjar, against the Bokhariotes, and later in the year captured the forts of Oratepe and Juzak, within 40 miles of Samarcand. On the 13th May 1868, a great battle was fought under the walls of Samarcand, and the city surrendered, and later in the year Bokhara yielded.—*Fortnightly Review*, July 1868. See Kalmuk; Hindu; Kelat; Kabul.

JAY. In wooded situations, on the western ranges of the N. W. Himalaya, the traveller is struck with the characteristic and elegant long tailed jay *Calositta sinensis*, Linn. This graceful creature attracts attention not only by the brilliancy of its plumage, but the loud, harsh screams it utters as the traveller approaches, now jerking up its long tail, after the manner of the magpie, now garrulously chattering, as though reproaching one for intruding on its haunts.—*Adams*.

JAYA CHANDRA. See Inscriptions.

JAYADEVA. Few Europeans probably are familiar with the name of Jayadeva, and yet this man, like Choitunya will hold a prominent place in some future history of India as an enthusiast and a reformer, who has left a lasting impress in Bengal. He too spiritualized the worship of Krishna, and denounced the caste system. One of his most celebrated poems was translated at full length by Sir William Jones and is printed in one of the earlier volumes of the *Journal of the Asiatic Society* and though it abounds with that oriental imagery and passion which seem to have characterized the most popular eastern bards from time immemorial, it contains some undoubted beauties, and throws a new light upon some important phases of religious development. His tomb is still to be seen in the district of Bheerbhoom.—*Trav. of a Hind*, Vol. I. p. 22.

JAYADKATHA, king of Sindhu, stole away Draupadi but was pursued and captured. He took the Kaurava side in the battle of Kurukshetra and was slain by Arjuna.

JAYANTI, the birth day of Krishna, celebrated as a festival by the Vaishnava sect.

JAYANTI. HIND. *Aschynomene sesban*. Its small yellow flower is held sacred to Siva.

JAYAPAL. HIND. *Croton tiglium*.

JAYAPHALA, the 'fruit of victory,' is the nutmeg; or, as a native of Java, *Javaphala*, 'fruit of Java,' is most probably derived from Jayadiva, 'the victorious isle.'—*Tod's Rajasthan*, Vol. I. p. 603.

JAYAPALA. SANS. *Croton tiglium*.

JAYAPUR. See Saud.

JAYASINHA, rajah of Ambhere, a distinguished astronomer of 1693. He constructed a large set of valuable tables; erected magnificent observatories at Benares, Delhi, Kotah, and Oojein.—*As. Res.* Vol. V. pp. 177, 167.

JAYA VARMA DEVA. See Inscriptions.

JAYEESURY. See Bhairava.

JAYPHUL. BENG. Nutmeg-tree; *Myristica moschata*.

JAYPUR. See Khaki.

JAZAR-UL-BOSTANI. ARAB. *Daucus carota*.—Linn.

JAZIAH. AR. HIND. A capitation tax, a mahomedan poll tax on non-conformers.

JAZIRAH. ARAB. An island. The Sea of Oman, or Persian gulf, called also the Persian Sea, and Erythrean Sea, also the Sea of Fars, has several islands, the Jazirah-i-Lafet called also Jazira-i-daraz, or Long-Island, known on maps as Kishm. Also Khareg island, on maps Karrack, a small island but well watered, not very far from Bushir and which once belonged to the Dutch, and was held in 1838 to 1846 by the British.—*Ouseley's Travels*, Vol. I. p. 331. *Kinnear's Geographical Memoir of the Persian Empire*, p. 54. *Colonel Chesney's Euphrates and Tigris*, p. 210. *Porter's Travels*, Vol. I. p. 458. See Aras; Arden; Ardekan; Irak; Iran; Kashgoi; Kab; Kirman; Lar; Laristan; Oman; Erythrean Sea.

JAZR. EGYPT. *Daucus carota*.—Linn.

JAZZER. A river in Gowhattee.

JEAPOTA. HIND. Putranjiva Roxburghii.

JEBAT. MAL. Musk.

JEBEL HASSAN. A rocky promontory to the west of Aden, and very similar to the Aden mountain; properly Jab'l Hassan.

JEBEL NARKOUS, or "Mountain of the Bell" is about four hundred feet, in height, and the material of which it is composed is a light coloured friable sandstone; but an inclined plane of almost impalpable sand rises at an angle of 40° with the horizon, which when put in motion raises musical sounds. At their commencement the sounds might be compared to the faint strains of an Aeolian harp when its strings first catch the breeze: as the sand becomes more violently agitated, by the increased velocity of the descent, the noise more nearly resembles that produced by drawing the moistened fingers over glass. As it reaches the base the reverberations attain the loudness of distant thunder, causing the rock on which

Wellsted was seated to vibrate, and the camels, animals not easily frightened, became so alarmed, that it was with difficulty their drivers could retain them. The sounds sometimes fell quicker on the ear, at other times were more prolonged; but this swelling or sinking appeared to depend upon the Arabs increasing or retarding the velocity of the descent.—*Wellsted's Travels*, Vol. II. pp. 24, 25, 26.

JEDDAH, a town in Arabia, on the borders of the Red Sea. Its settled population has been estimated at 25,000. According to Captain Burton, the Arabian cities are none of them large, the population of El Medinah is from 16,000 to 18,000, and the Nizam troops in garrison 400. Mecca contains about 45,000 inhabitants, Yambu from 6,000 to 7,000, Jeddah about 25,000, and Taif 8,000.

JEDDO, or Yedo, the capital of the empire of Japan is situated at the northern extremity of the gulf of the same name, in an extensive plain.—*MacFarlane's Geo. and His. of Japan*, p. 150.

JEBUS. See Tin.

JEEAPOOTRA. HIND. The nuts of Putranjiva Roxburghii, which in India are strung by the natives round the necks of children as an amulet.—*Simmond's Dict.*

JEERIGB SEMBA. See Oryza sativa.

JEERUK. BENG. Cuminum cyminum. Cummin seed.

JEEVA. SANS. Life, from jeev, to live.

JEETGHUR. See Morrieson.

JEIYA-SHIM. BENG. Lablab rubriflorum.

JEIETU. See Iran.

JEGURA. TAM. Cluytia patula.—*Kozb.*

JEHAD. ARAB. A religious war of the mahomedans: generally used to designate a war against other religionists.

JEHANABAD, in the district of Sekooha, governed by a chief of the tribe of Sharegi the most powerful in Seistan. Sharegi is so called from Shahrek, the residence of this chief's family, and one of the principal places in Seistan.—*Ferrier Journ.* p. 415.

JEHANABAD, a town in the Hooghly district of Bengal near the Dalkee Sur river.

JEHANDAD KHAN. See Khyber; Shah Shuja-ul-mulk.

JEHANGIR, king of Delhi, was the title assumed by Selim, the son of the emperor

Akbar, on his accession to the throne in 1605. He married, in 1611, Nur Jehan, a beautiful woman. She was the widow of Sher Afghan. Her name was associated with that of her husband on the coins. Her brother obtained high office, and her father was made a minister, and proved an able statesman. Jehangir was contemporary with James the First, Malek Ambar, an Abyssinian chief and distinguished statesman, took charge of the kingdom of Ahmednuggur on the assassination of Chand sultan, in 1600. He placed a relative of the late king on the throne. For twenty years he opposed the Moghul efforts, and in 1612 repulsed the efforts of Jehangir, but in 1621 he was defeated and purchased peace. Oodypoor submitted to the power of Delhi in 1614 after having been for eight centuries independent. Jehangir also married a Marwaree wife, the sister of rajah Maun. But the Rajputnee princess early put an end to her life by swallowing poison, disgusted with the quarrels of her husband and son. In Allahabad they show the sacred asrama or hermitage of Bhadrwaj Muni, a hindu sage of vedic antiquity, and the forefather of the present Mookerjee Brahmins, also in the middle of the Khusróo Bagh are three mausoleums, two over the princes Chusróo and Purvez, and a third over the Marwaree Begum of Jehangir. The tombs are all on the model of a mahomedan Taziaab.—*Tr. Hind.*, Vol. I. pp. 328, 329.

JEHAN NAMA, or a "description of the world" is a work quoted in the Ajajib-al baldan.—*Ouseley's Travels*, Vol. I. p. 180.

JEHAN NUMA. A Turkish work printed at Constantinople in 1736 though bearing a Persian title.—*Ouseley's Travels*, Vol. I. p. 180. See Mommái.

JEHRI. The plain of Dasht-i-Giran, south of Chappar is inhabited by the Sunari, a branch of the Jehri tribe of Jhalawan.—See Kalat.

JEHOIAKIM, for three months, king of Israil. In B. C. 598, while only 18 years old, Nebuchadnezzar burned and pillaged his palace and the temple of Jerusalem and took the king and his mother and court to Babylon. He was succeeded by his uncle Zedekiah whom Nebuchadnezzar placed on the throne. But in B. C. 589, Zedekiah rebelled and in 588, Nebuchadnezzar laid siege to Jerusalem, and B. C. 586, took it by storm burned the temple and palace and put out Zedekiah's eyes.

JEHUR. HIND. a pile of water pots placed one on the other. The word is pronounced also Jekhur and also written Jehar. To take the water pots off the head of a divorced woman, is to imply consent to marry her. The custom prevails amongst the Jat, Akher and Conjur, but principally amongst the former, and more

commonly in Rajpootana than in the Oudh and Delhi provinces.—*Elliot*.

JEHANGER NUGGUR. A name of Dacca.

JEL. HIND. *Avena sativa*. A. sativa.

JELPOOR, was the last of the principalities of Rajpootana to accept the protection tendered by the government of British India. To the latest moment, she delayed her sanction to a system which was to banish for ever the enemies of order.—*Tod's Rajasthan*, Vol. I. p. 377.

JEHR KACHURA. MAR. *Strychnos nuxvomica*.

JEJURI. A hindu temple in the Mahratta country. The situation of hindu temples, after allowing for the necessary proximity of water, is generally the most beautiful the neighbourhood affords. Jejuri temple is very rich: it is said to expend half a lakh, 50,000 rupees, yearly, in the expenses and establishment for the deity, Kandeh Rao; horses and elephants are kept for him, he and his spouse are bathed in Ganges water, rose-water perfumed with otto, and decorated with gems. The revenues, like those of most other temples, are derived from houses and lands given by pious people, and from presents and offerings constantly making by all descriptions of votaries and visitors, according to their means, or their faith, hope, or charity. The Murlidar women, however numerous, are not, perhaps, any expense, but rather a source of revenue to the temple. At the annual Jatra, or fair, which commences on the last day of the dark half of Chaitra, (in January) a lakh or more of persons visit Jejuri; it is customary for the worshippers to sacrifice a sheep, and the Brahmans assert that twenty, or, in particular years, thirty thousand are slain on this occasion, to the honor and glory of Kandeh Rao.—*Moore*, p. 422. See Kandobah.

JEK. HIND. *Melia azedarach*.

JEKU. HIND. of Basahir, *Daphne oleoides*.

JEL. HIND. *Sesbania Egyptiaca*, also *Herpestis monnieri*, *H. B. & Kunth*.

JELALABAD, a town near Kabul, also the province of which it is the capital. The town is enclosed within mud walls, and has but an indifferent appearance. The province extends from the Kotal of Jugdallak to Daka, in a line from west to east. To the south, the great range of Safed Koh divides it from Khuram, and to the north a series of hills, of nearly equal elevation, separate it from Kafiristan and Bajor. Daka, the eastern point, is at the entrance of the Khyber pass. The beautiful valley of Jelalabad is extremely well watered. Besides the Surkh Rud and Kara-Su, a number of rivulets flow from the Safed Koh, and the great river of Kabul glides

through it, receiving in its course the united river of Lughman, composed of the streams of Alishang and Alingar, and lower down the fine rivers of Kamah, Khonar and Chitral. These rivers flow from the north, and have their sources remote from this part of the country. The climate of Jelalabad is remarkably diversified. The winter season is particularly delightful, although subject to violent wind storms: but in the summer, in the centre of the valley, or along the course of the river, the heat is excessive. The great mountain range, the Safed Koh, defines the limits of Jelalabad valley to the south, and divides it from Bangash. Vigne remarks if Jelalabad be the Nysa of Arrian, as it most likely is, he should certainly think that the Safed Koh, or "white mountain," was Mount Meros.

The plain of Jelalabad is cultivated to a high degree. Besides the Kabul river, the plain is copiously irrigated by other streams, and notably by the Surkh Rud, which enters it from the west, and falls into the main river, at Darunta; by the Kara-Su (or the black river), which, east of Balla Bagh, unites with the Surkh Rud; and by the numerous and beautiful springs of Sultanpur, which form a rivulet flowing through the centre of the plain by Char Bagh. Few countries can possess more attractive scenery, or can exhibit so many grand features in its surrounding landscape.

Jelalabad is said to have been built by Jelal-ud-din. The town is advantageously situated for commerce, as besides being on the high road from Peshawar to Kabul, roads lead from it to Darband, Kashmir, Ghizni, Bamian, and through Lamghan to Badakhshan and Kashkar.

The climate of Jelalabad is like that of India, except in summer. The inhabitants are mostly descendants of Indian people. They speak also the Hindusthani language, besides Persian and Afghani. Jelalabad contains many sepulchral topes, which also occur at Daranta and at Ildida or Idda in its neighbourhood. That at Jelalabad was opened by Mr. Masson and the inscription makes mention of Kadiphes. Of the Khyber tribes, proper, there are three great divisions, the Afredi, the Shinwari, and the Orak Zye. Of these, the Afredi, in their present locality, are the most numerous; the Shinwari, more disposed to the arts of traffic and the Orak Zye, the more orderly. The Afredi occupy the eastern parts of the hills, nearest Peshawar; and the Shinwari the western parts, looking upon the valley of Jelalabad. The Orak Zye reside in Tirah, intermingled with the Afredi, and some of them are found in the hills south-west of Peshawar. It was a

malek or chief of this tribe who conducted Nadir shah and a force of cavalry, by the route of Chura and Tirah, to Peshawar, when the principal road through the hills was defended against him. The Shinwari, besides their portion of the hills, have the lands immediately west of them, and some of the valleys of the Safed Koh range. More westerly still, under the same hill range, they are found south of Jelalabad, and are there neighbours of the Khogani. These are in the condition of unruly subjects. There are also some of them in Ghorband, and they dwell in great numbers bordering on Bajor to the north-west, where they are independent, and engaged in constant hostilities with the tribes of Bajor and of Kafiristan.

Tirah and Churah are fertile and well peopled valleys, enjoying a cool climate, in comparison with that of Peshawar; and it was not unusual for the sirdars, and others, who had an understanding with the inhabitants, to pass the warm weather in the former of these places; which also frequently became a place of refuge to the distressed. The Khaibari like other rude Afghan tribes, have their maleks, or chiefs, but the authority of these is very limited; and as every individual has a voice in public affairs, it is impossible to describe the confusion that exists amongst them. Of course, unanimity is out of the question, and it generally happens that a nanawati, or deliberation on any business, terminates not by bringing it to a conclusion, but in strife amongst themselves. The portions of the Afreidi and Shinwari tribes who inhabit the defiles of Khyber, through which the road leads from Peshawar to the Jelalabad valley, are but inconsiderable as to numbers, but they are extremely infamous on account of their ferocity, and their long-indulged habits of rapine. Under the Sadoz Zye princes, they received an annual allowance of twelve thousand rupees on condition of keeping the road through their country open, and abstaining from plunder. They called themselves, therefore, the servants of the king.—*Vigne's Personal Narrative*, p. 232. *Masson's Journey*, Vol. I. pp. 174. to 181. *Moore's Travels*, Vol. I. p. 358. *Mohan Lal's Travels*, p. 343.

JELLALIA. See Punjab.

JELALANI, one of the Biluch tribes who occupy the mountains and the low country, the Seharni, Suwarni, Gulamuni, Jelalani, Chandiah, and Shahani are sections.

JELAL-UD-DIN, king of Kharasm fought with Chengiz Khan near Bunnoo, in 1221, but was defeated and swam the Indus river.

JELAL-UD-DIN, Mahomed Akbar, grandson of Baber, and seventh in descent from Timur, was the eldest son of the emperor Humayun

and of his wife Hamida Banu Begum. He was born at Amerkot in the valley of the Indus on the 14th October 1542. See Akbar.

JELAL-UD-DIN, a famous author of the Sufi sect commonly called Mulla-Rumi.

JELAM or HYDASPES. This river takes its name from the town of Jhelum, beneath which it flows. In Kashmir, it is called Behat a contraction of the Sanskrit Vitasta, which the Greeks altered to Hydaspes. According to Vigne, the term Ghikar, or Ghuka, or Khaka, is applied to the people dwelling on the right bank of the Jelam or Jylum, and Ghuka or Kuka is said to mean right; whilst those on the left bank are called Bamba from the Sanscrit word Bam the left. The tract between the Chenab and Behat or Jelum is named the Chenab doab, that between the Ravi and the Chenab, the Rechna doab; and that between the Beas and the Ravi, the Bari doab. The Jelam, is the most western of the great rivers of the Punjab, and takes its name from the town of Jelam. It drains the valley of Kashmir, and flows through the pass of Baramulain the lofty range of Pir Panjal. The whole mountain course of the Jelam is, according to General Cunningham, 380 miles, and its fall about 8,000 feet, or 21 feet per mile; but in the plain of Kashmir the fall is only 3 feet per mile. From the hills to its junction with the Chenab below Jhang, the general direction is south-west and the length about 240 miles. The whole length from its source to its confluence with the Chenab is about 620 miles. The Jelam is the Hydaspes of Greek historians, the fabulous Hydaspes of the Romans. Arrian and Strabo record that Alexander the Great was supplied by this river with wood from Kashmir, of which he constructed boats. The Jelum rises in the valley of Cashmere, and draining its waters, flows westerly, making its exit at the Pass of Baramula, and joins the Kishengunga. Its sanscrit name is Vitastha; Vayat and Behut in the dialects; the Betusta of the Ayceen Akberi. The last, which is still its local name near Jelalpoore (the supposed site of the battle between Alexander and Porus) is the probable origin of the Hydaspes of Arrian, and the Bidaspis of Ptolemy. It is called both Dendum and Tamad by Sherif-ud-din.—*Camps and Battlefields of Alexander and Porus*, by Capt. Abbott, R. A., in the *Tour. As. Soc.*, 1848 in "Diary of a Trip to Pind Dadan Khan and the Salt Range," by A. Fleming, M. D.—*Jour. As. Soc.*, 1849. *Descriptive Notice of the Jelam District* by L. Bowering, B. C. S. *Jour. As. Soc.* 1850. *Report on the Geological Structure and Mineral Wealth of the Salt Range*, by A. Fleming, M. D. *Jour. As. Soc.*, 1853. *Survey of the Jelam river*, by Lieut. Foster, I. N. Punjab Govt. Report,

No. VI. 1861. *History of the Punjab, Vol. I.* p. 23. *Cleghorn's Punjab Report*, pp. 168, 169, 183. *Cunningham's History of the Punjab, Vol. I.* p. 9.

JELL, a town in Beluchistan in the south-western quarter of Kach Gandava, in a district replete with monuments, remnants of a former people, which bear a great analogy to the ponderous Celtic vestiges of ancient Europe. A hot spring, the Garm-ab, preserves its temperature throughout the year. The sulphureous spring of Lakha is some twenty miles south of Jell, there is another a little below Sehwan, on the hills west of the Indus, and again other very hot springs near Karachi. These several springs are found in the same line of hills, and those inferior ones at the base of the superior range dividing Sind and Kachi, from Beluchistan; under the same hills, north of Jell and west of Suran and Sauni are sulphur mines, indications of the same geological formation. Jell and Shadia are the chief towns of the Magghassi one of the Beluch tribes, who have been located for a long time in Kachi. They are divided into four principal families or clans, of which the Butani is the more illustrious, and furnishes the sirdar of the whole. They boast of being able to muster two thousand fighting men, and when visited by Mr. Masson, had been engaged in endless hostility with their neighbours, the Rind, an inextinguishable blood-feud existing between the two tribes. The Magghassi and the Rind are alike addicted to the abuse of ardent spirits, bhang and opium. Cultivation in the neighbourhood is extensive, principally of Juar and the cotton-plant. The country occupied by the Magghassi is abundantly supplied with water.—*Masson's Journeys, Vol. II.* p. 124 to 149. See Jet; Jat; Kah; Kelat.

JELLAR-ZAI. See Kelat, p. 492.

JELLINGHEE. A river of Nuddea.

JELLY FISIL. One of the Rhizostoma. These are hardened in China by means of alum and eaten. Some are three feet across. It is the only one of the *Aculephæ* known to be used as food.—*Adams*.

JELUDAR. PERS. Formerly called rekab-dar or the "stirrup holder," a person who, on foot, accompanied a horseman.

JEMADAR. A commissioned native officer in the native army of British India.

JEMAL-UD-DIN. See Abd-ur-Razzaq.

JEMLAH. ARAB. A creese or dagger.

JEMBU-NERADI. TEL. *Eugenia jambos*.

JEMIAH GOAT. See Capræ.

JEMUDU, also Chemudu. TEL. *Euphorbia tirucalli*.—*Linna.* also *E. tortilis*.

JEMUJU? MALAY. *Anethum graveolens*.—*Linna.*

JENA CHETTU or Jana Chettu. TEL. *Grewia rotundifolia*.—*Juss.*

JENCIANA. SP. Gentian.

JENGIBRE, also, Agengibre. SP. Ginger.

JENGIZ KHAN lived in the 13th century. He introduced complete changes in the constitution of Central Asia. He gave a prominent influence to the Moghul race who, after the lapse of three centuries, crossed the Indus under Baber, and eventually established themselves in India, till finally removed by the British. See Changiz Khan; Afghanistan.

JENNEL. A river near Jamalpoor cantonment and near Bhawanipur in Nusseerabad district.

JEORA. HIND. Perquisites of blacksmiths, washermen, carpenters, and other village servants.—*Elliot*.

JEORI, or Jureeb. HIND. a cord, a rope.

JEPAN, is a corruption of the words Ni-Pon or Eastern land.—*Alcock*. See Japan.

JEPHTHAH. See Sacrifice.

JERAD UL-BAHR. ARAB. Flying fish.

JERAM KOTTAM. MALEAL. *Antidesma pubescens*.—*Roxb.*

JERU TIKA. MALEAL. *Clerodendron serratum*.—*Blume, Bl. W. Ic.*

JER-KATCHERI. GUZ. also Kuchla. GUZ. HIND. *Nux vomica*.

JERDON, T. C., a medical officer of the Madras Army. He gave, in the Madras Literary Society's Journal several contributions on the fresh water and salt water fishes of the Peninsula. Also, in 1839, a catalogue of the Birds of the Peninsula of India, arranged according to the modern system of classification; with brief notes on their habits and geographical distribution, and descriptions of new, doubtful and imperfectly described species. The total number of this catalogue was nearly 390: which, however, included 10 of Colonel Sykes' and nearly as many more observed by Mr. (now Sir) Walter Elliot, of the Madras Civil Service, who placed at Dr. Jerdon's disposal, valuable notes on birds procured by him by which, in addition to the new species added, this naturalist was enabled to elucidate several doubtful points, to add some interesting information on various birds, and to give the correct native names of most of the species. Subsequent to this, Dr. Jerdon published a series of supplements to his Catalogue of Birds, correcting some points and adding others. Jerdon's Birds of India in three volumes, printed in 1869 and 1864, has done much to complete our knowledge of this class of the animal kingdom and his "Mammals of India" published in 1867, has been of similar value for that branch.

JER FALCONS, do not occur in the East Indies. The Bahri is a noble bird, and is the *Falco peregrinus*, *Gmel*, or peregrine falcon,

though some erroneously consider it a variety of the *Jer-falcon*.

JERICO, an ancient city of the Hebrews, near its site is Rihab a Bedouin village. The channels of streams around Jericho are filled with the nebbuk trees, apparently indigenous, and growing more luxuriantly than on the White Nile. It is a variety of the *Rhamnus*, and is set down by botanists as the *Spina Christi*, of which the Saviour's mock crown of thorns was made. The twigs are long and pliant, and armed with small, though most cruel, thorns. The little apples which it bears are slightly acid and excellent for alleviating thirst.—*Taylor's Saracen*, p. 68-9.

JEREGAM MULLA. MALEAL. *Jasminum sambac*.—*Ait.*

JAREI. See Semang.

JEREMIAH. Niebuhr gives this name to the Arabs of a district. The valley of Jeremiah, is a melancholy solitude, where, it has been conjectured, stood the village in which Jeremiah was born. At one end of it is a castle—singularly situated on a rock called the castle of the Maccabees.—*Skinner's Overland Journey*, Vol. I. p. 197. See *Kartikya*.

JERITE. A river near Butwa in Chupra.

JERIAM KOTTAM. MALEAL. *Antidesma pubescens*.—*Roxb.*

JERIDAH. According to the M.S. Burhani-Kattia, this signifies a kind of small spear or lance. But instead of real javelins, the Persians use in their equestrian exercises, branches of the palm tree (*jeridab*), or sticks of some heavy wood, which they dart at each other with considerable violence, and from frequent practice, learn to parry and avoid with much ingenuity.—*Onseley's Travels*, Vol. I. p. 190.

JERIKA. TEL. Leeches.

JERMAI. GUZ. *Anamirta cocculus* or *Cocculus Indicus*.

JERN. DAN. Iron.

JERNAIN, lat. 24° 56' N. long. 53° 0' E., a small island on the south side of the Persian Gulf.

JERROW. HIND. *Rusa aristotelis*.—*Cuv. Gray.*

JERUGU. TEL. *Caryota urens*.

JERUK. MALAY. *Citrus aurantium*. Orange. *Citrus medica*.?—*Roxb.*?

JERUKA. SANS. Cumin seed.

JERU KAAT NARIGAM. MALEAL. *Limonia acidissima*.—*Linn.*

JERU-KANDEL. MALEAL. *Kandelia Bredii*.—*W. and A.*

JERU KANSJAVA. MALEAL. *Cannabis sativa*.

JERU KIRGANELLI. MALEAL. *Phyllanthus urinaria*.

JERUK-LEGI. JAV. Orange.

JERUK MANIS. MALAY. *Citrus aurantium*.—*Lind.*

JERU PARNA. MALEAL. *Sida acuta*.—*Burm.*

JERUSALEM, an ancient city of the Hebrews frequently styled in the Scriptures, the Holy City (Isa. xlviii, 2, Dan. ix, 24; Nehem. xi, 1; Matt. iv, 5, Rev. xi, 2.) and the Jews to this day never call it by any other appellation than *El-kadus*, that is, the holy, sometimes adding the epithet *El Shereef*, or the noble and mahomedans style it *Bait-ul Maqaddas* or the holy city. The prophet scribe, Ezra, called by the mahomedans, *Ozair*, was according to mahomedan tradition, of the race of Jacob, of the tribe of Levi and fourteenth in descent from Aaron. They say that the Holy Scriptures, and all the scribes and doctors who could read and interpret them, excepting a few who were taken captives to Babylon were involved in the destruction of Jerusalem by Nebuchadnezzar. Ezra, who was then very young, was among this number, and continued to read and teach the law of God to his countrymen during their captivity. At the end of the captivity, Ezra returned to Jerusalem, and some say there, some, near Babylon, while he was occupied in weeping over the ruined city and temple of God, he said to himself, "How can fallen Jerusalem ever rise again!" No sooner had he conceived this thought when God struck him dead, and he remained so for one hundred years, when he was raised again, and employed the rest of his days on earth in explaining the word of God to the Jews. The Christians of the East say that Ezra drank three times of a well in which the holy fire had been hid, and that thus he received the gift of the Holy Ghost, which rendered him capable of re-establishing the Holy Scriptures among his countrymen. About 100 miles above Koorna, on the right bank of the Tigris, is his tomb. It is a pretty mosque of tessellated brickwork, surmounted by a green cupola, and the corners and tops of the tomb are ornamented with large balls of copper gilt.

Jerusalem was conquered and destroyed by the Babylonians B. C. 588, and the two tribes of Judah and Benjamin, were then carried away captive, for 70 years. They were then allowed by Cyrus, king of Medo-Persia, to return to Judea, to re-build Jerusalem, and they remained tributary to Persia until that country was conquered by Alexander B. C. 330. Jerusalem was built on the hills Zion, Millo, Acra, Bezetha, Moriah and Ophel, the mountains which "stand round about Jerusalem." Its first name was the city of Melchizedek, then it was called Salem and then Jebus, but the tribe of Benjamin called it Jerusalem. The most interesting population of Jerusalem is that of the Jews, who, as

in all other eastern towns, are confined to a particular quarter, viz., the hollow space lying between the site of the ancient temple, and that part of mount Zion which is included within the walls. It is called Harat-el-yahud. Their habitations have a mean appearance from without, being generally built of unpolished stones, hastily put together, without any attempt at architectural embellishment. This affected simplicity does not arise from poverty, for most of them are in easy circumstances, but entirely from prudential motives, it being found necessary to conceal their wealth. Jerusalem has a population of about 13,340,

Mahomedans.....	4,000	Armenians.....	280
Jews.....	6,000	Syrians Copts.....	150
Greeks.....	1,500	Greek Catholics.....	110
Latins.....	1,200	Protestants.....	100

a large proportion of the Jews are women and girls. The synagogues in Jerusalem are both poor and small, not owing to the poverty of the possessors, or the want of alms from abroad, but from prudential motives mentioned above. The tombs of the kings, situated in a small valley to the north of the city, bear some resemblance in their general plan to those of Thebes, except that they are without ornaments, either sculptured or painted. There are fragments of Sarcophagi in some of them. Jerusalem is the Syria of the Greeks. The chief native industry is the manufacture of soap and "Jerusalem ware," this latter consisting of chaplets, crucifixes, beads, crosses, and the like, made for the most part at Bethlehem, and sold to the pilgrims, who annually flock to the holy city to the number of about 6,000. The population of the entire Sandjak, or province, is estimated at 200,000, of whom 160,000 are mahomedans. Owing to the absence of good roads and the insecurity arising from the predatory tribes of the Bedouins inhabiting the outskirts of the district, vast and fertile plains lie waste or are but partially and poorly cultivated; it is believed that sulphur, bitumen, and rock salt abound on the shores of the Dead Sea. The vegetable produce is barley sufficient for local requirements. Jaffa is the port through which Jerusalem deals with foreign countries. The trade of Jaffa experienced a considerable increase in 1863; the quantity of cotton exported rose from 55,000 lbs. in 1862 to nearly ten times the amount in 1863, with a prospect of this again being trebled or quadrupled in 1864. There are regular lines of French, Austrian, and Russian steamers, and a telegraphic line between Beyrout and Jaffa, thence to be carried on to Alexandria.

Jerusalem was destroyed B.C. 586, its second temple was completed B. C. 10th March 515 under Darius.—Some of the Afghans have

asserted that they are remnants of one of the Hebrew tribes, and in this view, they do not object to the designation of Ban-i-Israel, which, of course, does not include the Yabudi or Jew, and Count Bjornsterna (p. 233-234) states, that they affirm that Nebuchadnezzar after the destruction of the temple of Jerusalem, removed them to Bamean, and that their present name came from their leader Afghans, who was son of the uncle of Azof (Solomon's wazir,) who was the son of Berkin. Mr. Masson, however, (*Journeys*, Vol. I. p. xii-xv,) explains that the introduction of the mahomedan faith, with the legends and traditions of that religion, has induced all the Afghans to pretend to a descent from the Jewish patriarchs and kings,—a pedigree, however, which Mr. Masson regards as only due to their vanity, and which does not require to be too seriously examined. In another sense, they affirm that they are all Ban-i-Israel, or children of Israel, which merely means that they are not heathens; for they affirm christians, although not acknowledging their prophet, and the shiah sect whom they revile as heretics, to be, equally with themselves, Ban-i-Israel, although they exclude Hindus, Chinese, and all idolaters.—*Taylor's Saracens*, p. 89. *Robinson's Travels in Palestine and Syria*, Vol. I. pp. 16, 113. *Rick's Residence in Kurdistan*, Vol. II. p. 390. *Mignan's Travels*, p. 9. *Townsend's Outrains and Havelock*, p. 308. See Koorna; Tigris.

JERUSALEM ARTICHOKE, *Helianthus tuberosus*. A species of sun-flower, a native of South America. It goes to seed generally in October and November, as the plants grow they must be well earthed up, and if very tall, may probably require to be supported with sticks. This vegetable is ripe as soon as the stalk withers, and the best method of preserving them is to let the roots remain in the ground. The stems abound in fibres. To sow them, put either a half or a whole one, at a foot distance, in rows, the same as potatoes, and attend to them in like manner.—*Royle's Fib. Plants*, page 301. *Riddell*. See Cucurbitaceæ.

JERUSALEM SAGE. *Phlomis*, *Sp.*

JERU-TIAKU, also Jerutika. *MALEAL*. *Clerodendron serratum*.—*Blume*.

JERWA. A river near Seroha in Rewa.

JERZ. *PER*. Bustard.

JESSAMINE. See Kameri.

JESSORE. A district and town in Bengal, the town 77 miles from Calcutta to the east of Barasat and Nuddea. Jessore, is an alluvial district.

JESSULMER, a town and province of Rajputana, containing Rajputs of the Bhat section. The rulers of Jessulmer styled rao, form the dynasty of Bhatti, and are a branch of the Yadu race of the Chandravansa. Jessulmir, is separated on the north from Bahawalpoor by the great desert, and is the modern name of a tract of country comprehended according to ancient geography, in marogast'hali, the desert of India. It is termed M̄cr in the traditional nomenclature of this region, from being a rocky (m̄cr) oasis in the heart of the sandy desert. The greater part of Jessulmer is t'hul-or-roce, both terms meaning a 'desert waste.' From Jowar, on the Jodpoor frontier, to Kharra, the remote angle touching Sind, the country may be described as a continuous tract of arid sand, frequently rising into lofty teeba (sand-hills), in some parts covered with low jungle. This line, which nearly bisects Jessulmer, is also the line of demarcation of positive sterility and comparative cultivation. To the north, is one uniform and naked waste; to the south, are ridges of rock termed muggro, rooe, and light soil. There is not a running stream throughout Jessulmer; but there are many temporary lakes or salt marshes, termed sire, formed by the collection of waters from the sand-hills, which are easily dammed in to prevent escape. They are ephemeral, seldom lasting but a few months, though after a very severe monsoon they have been known to remain throughout the year. One of these, called the Kanoad Sirr, extends from Kanoad to Mohungurb, covering a space of eighteen miles, and in which some water remains throughout the year. When it overflows, a small stream issues from the Sirr, and pursues an easterly direction for thirty miles before it is absorbed: its existence depends on the parent lake. The salt which it produces is the property of the crown, and adds something to the revenue. The country still dependent on the Rawul extends between 70° 30' and 72° 30' E. long, and between the parallels of 26° 20' and 27° 50' N. lat, though a small strip protrudes, in the N. E. angle, as high as 28° 30'. This irregular surface may be roughly estimated to contain fifteen thousand square miles. The Yadu of Jessulmer, who ruled

Zabulisthan and founded Guzni, claim the Chagitai as of their own Indu stock: a claim which Colonel Tod deems worthy of credit. Owing to its isolated situation, this State escaped the ravages of the Mahratta race. The first chief with whom the British Government entered into political relations was maha rawul Moolraj, who succeeded to power in 1762. In 1818, however, a treaty was concluded with Moolraj by which the State was guaranteed to his posterity, the chief was to be protected from serious invasions and dangers to his State, provided the cause of quarrel was not ascribable to him, and was to act in subordinate co-operation to the British Government. No tribute was demanded from him. Up to 1823 the Bikaner State continued to urge its claims to territories in the possession of other chiefs, but these claims were rejected, as the investigation of them was inconsistent with the engagements subsisting between the British Government and other States. During the life-time of Moolraj, who died in 1820, the State was virtually governed by his minister, Salim Sing, who committed the most awful atrocities. He put to death nearly all the relatives of the chief. The town of Jessulmer was depopulated by his cruelty, the trade of the country was interrupted, and the relatives of the maha rawul who escaped death fled from the country. In 1844, after the conquest of Sind, the forts of Shagur, Gurseca, and Guttoora, which had been wrested from Jessulmer, were restored to that State. The forts were given over by Meer Ali Morad by order of the British Government, but no sunnud appears to have been given to the chief of Jessulmer on this occasion. In 1846, the widow of Guj Sing'h adopted Runjeet Sing, who, in 1862, received a formal sunnud guaranteeing the right of adoption; he receives a salute of fifteen guns. The area of Jessulmer is 12,252 square miles, the population about 73,700, and the revenues Ruprees 5,00,000. The military force of the State does not exceed 1,000 men.—*Tod's Rajasthan*, Vol. II. pp. 216, 278. *Treaties, Engagements and Sunnuds*, Vol. IV. p. 154. *Tod's Rajasthan*, Vol. II. pp. 280, 250, 278, 279. See Rajput; Kelat; India.

JESUS, an Alexandrian author, son of Sirach, who came into Egypt B. C. 132 and translated into Greek, the Hebrew work of his grandfather Jesus, which is named the Book of wisdom, or Ecclesiasticus. It is written in imitation of the Proverbs of Solomon; and though its pithy sayings fall far short of the deep wisdom and lofty thoughts which crowd every line of that wonderful work, it will always be read with profit and pleasure. In this book we see the earliest example that we

now possess of a Jewish writer borrowing from the Greek philosophers; though how far the Greek thoughts were part of the original Hebrew may be doubted.—*Sharpe's History of Egypt*, Vol. I. p. 397.

JESUS CHRIST, is believed in by mahomedans, as the Ruh Allah or Spirit of God; born miraculously of the Virgin Mary. They reject his mission as a redeemer and saviour, and of the baptism, but regard him as one of the prophets whose intercession is of value. According to Mahomed, Jesus was born of a Virgin, was a prophet and the Spirit of God or Ruh Allah. Mahomed in the Koran (v. 37) says, the angels said, Oh! Mary, verily God sendeth thee good tidings that thou shalt bear the "Word" proceeding from himself, his name shall be Christ Jesus, the son of Mary. "Verily, the likeness of Jesus, in the sight of God, is as the likeness of Adam; he created him out of the dust, and then said unto him Be, and he was." "God said, O Jesus, verily, I will cause thee to die, and I will take thee up unto me, and I will deliver thee from the unbelievers, and I will place those who follow thee, about the unbelievers until the day of resurrection."—*Koran*, pp. 39, 40. See Karund; Kidder.

JESWUNT RAO HOLCAR, his mausoleum is near the scene of his greatest glory. See Holkar; Mahratta Governments in India.

JET. HIND. Sesbana Egyptiaca.

Git.....DUT.	Gagat.....GER.
Zwarte-Jarnsteen..	„	Gagata, Lustrico ..	IT.
Pitch coal.....	ENG.	Gagata.....	LAT.
Jais, Jayet.....	FR.	Gagates.....	„

Jet is imported into India, from Europe and is only worn by Europeans, large quantities of lignite are found in the tertiary strata along the sea coast of India, but none of it takes a good polish.—*McCulloch's Commercial Dictionary*, p. 656.

JET, a term, which as Jat, J'hut and Jut, pertains to one race, spread from Herat, Kabul and Kandahar, throughout the Panjab, down the Indus into Kach'h Gandhava, and eastwards to the Jamna and Ganges, but wherever spread, are said to retain a dialect of their own to which has been given the name of Jetki. Mr. Masson seems to imply that they are descendants of the Getae who, he says, once possessed the whole of the countries immediately east and west of the Indus. The zamindars, or cultivators of the soil, at Jell as throughout Kachi, are Jet, who there seldom move abroad but on bullocks and never unless armed. A Jet may generally be seen, half naked, seated on a lean bullock, and formidably armed with matchlock and sword, and to the north and west of Kach'h Gandhava as also

in Herat, Kaudahar, and Kabul, they are seen as itinerant artizans, like gypsies. In the Panjab, they are not found west of the Jelum, but east of that river the Jet cultivators use waggons. The Jet has been so long settled in Kach Gandhava, as to appear the aborigines. Amongst their numerous sub-divisions are the Kalora, Kokar, Hampi, Tuniah, Abrah. According to Mohan Lal, the Sikh Jat are polyandrous, and one brother takes his brother's wife.—*Masson's Journeys*, Vol. ii. p. 125. *Masson's Kelat*, p. 352. See Jat; Jut.

JETEE or Chitree, or "Rajmahal Bow-string creeper," *Marsdenia tenacissima*, grows in dry barren places. Its dried milky juice serves as a caoutchouc. Its fibres are made into thread, twine, bow-string, and rope. It belongs to the family Asclepedaceæ.—*Royle's Fl. Pl.*

JETHI MADH, GUZ. HIND. Root of *Glycyrrhiza glabra*, Liquorice root also *G. Triphylla*, The Jetimad'h, or Liquorice root of commerce is obtained from the *Glycyrrhiza glabra* of Europe, Syria and mount Caucasus, cultivated in England and *G. echinata* is of Tartary and northern China.

JETIMAD'H KARAS. GUZ. HIND. Liquorice juice.

JETKI, the languages of the Jet race, in Beluchistan. See India; Jat; Jet; Kelat.

JETIMANSI. GUZ. TEL. also Chebur. GUZ. Spikenard.

JETII, in Southern India, a sort of castus, which is worn over the first phalanges, on the right hand of the boxers, called Jetli. It is made of buffalo horn with four sharp projections like knuckles, and the fifth near the little finger, with a greater prominence than the rest. The hitting is by a sharp perpendicular cut.

JETWA, the rana of Porebunder, styled Pancheria, represents the Jetwa one of the four ancient Rajput races, still extant in the Kattyawar peninsula. In the days of Mahmud, all the west and north of Kattyawar belonged to the Jetwa Rajputs, but the forays of the Jhala and Jhareja have confined them to their present district, the shaggy range of hills called Burdo. The Jhala, of Kattyawar who own the *raj* of Hulwad Drangdra as their chief, are supposed to have sprung from an offshoot of Anhilwarra, on the extinction of which dynasty they obtained large territorial aggrandisement. The thakur of Murvi in Kattyawar is a Jhareja and was the first in Colonel Walker's time to abandon infanticide. He has possessions in Cutch. See India; Katiwar; Rajpoot.

JEU. According to the Gnostics was Adam, "the primal man." See Adam; Adam's peak.

JEW. In all mahomedan countries, the Jews are known as Ya-hud or Yahudi, i. e. of the tribe of Judah, but this term is regarded

both by themselves and those who apply it as a derogatory appellation. On the Bombay coast, they style themselves Ban-i-Israel, but this name is used by the Afghan, for themselves, as also for mahomedans and christians, who, as possessors of revealed religions are regarded as children of Israel. Jews are found scattered throughout central, southern and eastern Asia. They are, however, most numerous in Europe, Palestine, Egypt, Arabia, Persia, Bokhara, Khiva, Afghanistan, China and on the west coast of India. They are more seldom met with in the further south-east. They were formerly widely scattered in China, and possessed a temple at Yih-Chan, the capital of the district of Shuh, now Ching-tu. In none of these countries have this people obtained high employments under their rulers, but in Egypt and Syria, their position seems more advantageous. Throughout Persia, Bokhara and Afghanistan, they occupy themselves in petty traffic, and as bankers and spirit distillers, and in the Bombay presidency, they find employment in the subordinate offices of Government and in the native Army, where they generally rise to be petty officers. A colony of this people have resided at Cochin on the south-west of the Peninsula of India, ever since the early centuries of the christian era, and without quoting her authority. Mrs. Elwood describes this as a branch of the tribe of Manasses who, on the downfall of the Babylonian empire, after a journey of three years from Babylon, settled in Malabar. Kukul Kelu Nair, the most recent writer on this point, is of opinion that at the time of the grant of the Nos. 1, 3 and 2 copper plate documents in the Jews' possession, and possessed by the Christian church there, two towns, viz. Mani-grammam, which Irani Korten of Mahadeva Patnam obtained by No. 1. in A. D. 230, and Achu Vanam which Joseph Roben a jew obtained by No. iii. in A. D. 186, were chiefly inhabited by Jews and Syrian christians; and he thinks that document No. ii. was granted in A. D. 316 by the last Perumal to the Tarisa Palli or church. And, from this, it is obvious that the Jews and Syrian Christians must have arrived in Malabar before the date of the documents i. and iii. The Jews have not much increased. Christians, however including the Syrians proper and those following the Romish persuasion, in 1860, numbered in Travancore, 181,009 souls, in Cochin 44,574, total 225,583 souls. But the Jews, in 1860, numbered in Travancore only 114 souls, and 1277 in Cochin, with a few at Changhat in the zillah of Malabar. In the food, the clothing of the men, and language, the Syrian christians are not to be distinguished from the hindus and few of them know the Syrian language. The Jews are in many of

these respects similar and some of them are black in colour. Many of them are very wealthy, possess gardens and lands and follow trades, but as to the causes restraining their increase, nothing is known. Many authors have endeavoured to trace the tribes who were removed from their position in the Holy Land and Dr. Wolff, who long wandered in search of traces of them, is quoted as being of opinion that if the Affghans be the descendants of Jacob they are of the tribes of Judah and Benjamin. But on the subject of the present locality of the ten tribes, whom the conquests of Salmasasar dispersed over Asia, writers, in their desire to discover them, have yielded so much to their imaginations, that traces of them have been supposed to be found in Mexico, Malabar, England, Japan, Afghanistan, Abyssinia, north of Africa, Central Africa, British India, Pegu and Peru. The facilities with which pastoral nomade races can remove or be removed from one place to another, and the practice with eastern conquerors of suddenly transplanting a troublesome or refractory nation, may have facilitated the disappearance of the Jewish tribes who seem to have early abandoned their faith and to have mingled with and been fused into the mass of the people of the country or countries in which they had been located. A memorable instance of such voluntary migration was afforded in the instance of 100,000 Kalmuck families leaving the Black Sea to return to their nomade life in the East. Several instances of voluntary and forcible migration in Afghanistan occurred towards the middle of the nineteenth century. After the English mission had left Herat, the vizier Yar Mahomed pressed Ibrahim Khan of Gour, who had 7,000 families of Taymuni under his rule, and after having completely devastated the country which they occupied, Yar Mahomed removed them to Herat where he established some in the city and the remainder in the suburbs. Subsequently to this, in the beginning of 1846, when Yar Mahomed marched with his army in the direction of the Murghab, on the banks of which river some Hazara Zeidnat were encamped, they decamped into the Persian territory, and Asolud-Dowlah gave them the village of Karez on the frontier of Herat. After the removal of Asolud-Dowlah, however, in the close of 1846, Yar Mahomed marched against these small Uzbek khanats in the north of Khorasan; and attacked and defeated the Hazarah chief Karim Dad Khan, in the open country of Kilah-nun. Yar Mahomed encamped upon the field of battle, and in the space of eight days collected ten thousand families of the Hazarah Zeidnat whom he removed from their native soil to that part of the district of Herat,

reaching from Obek to Gorian, where he settled them on the banks of the Heri-Rud. By these forced migrations of the Tay-nooni and Hazareh, the Herat principality became more populous than it had been previously to the siege of Herat in 1838, and Yar Mahomed obtained the further advantage of keeping under his eye the most turbulent inhabitants of his dominions. He made excellent soldiers of these Eimaks and by their amalgamation with the Afghans it became almost impossible for the former to betray him. To some such forced or voluntary migration we may attribute the disappearance of the Hebrews. One of the traditions connected with the Jewish people has been that they were driven into Tartary, and there are a considerable number of these religionists in the territories subject to Khiva, Merv and Bokhara. In the celebrated letter from the Tartar sovereign, Prester John, to Alexius Comnenus, the emperor of Constantinople, in describing his territories, he says, beyond this river are ten tribes of Jews, who, although they pretend to have their own kings, are nevertheless our servants and tributaries. The authenticity of this letter is doubted by many, but in Marco Polo's travels, Jews are described as being in the army of Kublai Khan. According to Dr. Moor, the Chozan Tartars were Israelites, professing the Jewish religion and practising circumcision, and much has, by some authors, been made of the circumstance already noticed that the Afghans still call themselves Bin-i-Israel. One of the legends of the Afghans, is that they were Jews whom Nebuchadnezzar transplanted after the overthrow of Jerusalem to the town of Ghor, near Bamian, and that they continued in their faith till Kalid, in the first century of mahomedanism summoned them to assist in the wars with the infidels. The Afghans look like Jews, but this may be said of many other eastern races. In one custom, that of the younger brother murdering the widow of the elder, the Afghans follow the Jewish people. Mr. Masson notices the Afghan assertion, that they are descendants of the Jewish people, merely to observe that this assertion is due to their vanity, and has its origin in the literature of their present religion which has made them acquainted with the history of the Jews. He alludes, however, to some customs in the tribes holding the Khairbar pass, who wear locks of hair in a manner common to oriental Jews. He tells us that there are a few families of Jews at Kabul, but while perfectly tolerated as to matters of faith, they by no means command the respect which is shown to Armenians. Like them, they are permitted to make vinous and spirituous liquors, and they depend chiefly for their livelihood upon the clandestine sale

of them. Some years since, a Jew was heard to speak disrespectfully of Jesus Christ; he was arraigned, and convicted before the mahomedan tribunals on a charge of blasphemy; the sentence was "sang sar," or to be stoned to death. The unhappy culprit was brought to the Armenians that they, as particularly interested, might carry into effect the punishment of the law. They declined, on which the mahomedans led the poor wretch without the city, and his life became the forfeit of his indiscretion. It was singular that an attack upon the divinity of our Saviour should have been held cognizable in a mahomedan ecclesiastical court, and that it should have been resented by those who in their theological disputes with christians never fail to cavil on that very point. The Jew, in averring that Jesus Christ was the son of the carpenter Joseph, had differed from their own belief on that subject, but had not the assertion been made by a Jew, who would have noticed it? The Jews are everywhere the despised, the rejected race.

Jews have existed in large colonies in Arabia ever since the captivity. In no country have they preserved their nationality more completely, though surrounded for centuries by hostile mahomedan tribes. Their own tradition asserts, that during the invasion of Palestine by Nebuchadnezzar, they fled to Egypt, and subsequently wandered further south, till they came to the mountains of Arabia, where they permanently established their homes. The fertility of the soil, the salubrity of the climate, and its picturesque scenery, rapidly caused the little colony to increase, by attracting fresh emigrants, who sought that peace which their own distracted country no longer afforded. Inured to hardships and nursed in war, these foreign colonists soon gained an ascendancy over the wild Arab tribes by whom they were surrounded, and in a little time the exiles of Judea reigned where they had before only been tolerated. But the introduction of mahomedanism materially altered their position, and severe enactments converted their once prosperous towns and villages into charnel houses. Notwithstanding this persecution, however, every valley and mountain range still contains numbers of this despised but undying race, who number not less than 200,000 souls. At Aden the Jews are filthy in the extreme in their persons and habitations, and even the more wealthy of the community are nearly as uncleanly and parsimonious as their poorer brethren. The principal trades which they pursue in Aden are those of masons, builders of reed and mat houses, and workers in silver and ostrich feathers. In other parts of Arabia, they are the most active, industrious, and hardworking people in the country: debar-

red from the cultivation of the soil, they have become the monopolisers of every useful art and every branch of trade; yet in the bazaars and streets, wherever one wanders, the haggard, wan and care-worn Jew is the most pitiable object. Throughout all these countries, Jews are held in great disesteem. A Persian will admit the christian to his house, though he takes care to separate his establishment from the rest of the house; if his guest should eat with him a separate tray is provided, and all contact avoided as much as possible. Jews and christians are not generally admitted in Persia into the public baths. Even when European gentlemen go to these, it is usual to give notice, that they may be made private; and this is tolerated more because government find it their interest to be civil to them, than as a right. Were a European to travel without a mahomedan guide and in humble guise, out of the common tract he should find strong objections made to his frequenting the mahomedan baths. In Persia, christian or Jew are not permitted to enter into any of the principal mosques or places of holy pilgrimage of the country, and it is similar in Turkey. A poor Armenian or Jew would incur great risk, were he found within the sepulchre of Imam Raza, or Fatima, or the great mosque at Shiraz, or in the mosques of Constantinople or Damascus.

There were only a few families of Jews at Herat on the arrival of the English Mission under Captain Todd, but they are settled in numbers in different parts of eastern Persia and Turkistan. Those of Herat were very well affected towards Captain Todd's party. They communicated with each other in the Hebrew character, though in the Persian language. When M. Ferrier passed through Herat, the Jews were rather numerous and allowed the exercise of their religion. Their number had increased on account of the persecution to which they had been subjected in Meshid.

Moses led the Israelites out of Egypt and the law was delivered on Sinai B. C. 1320. Bunsen's Egypt Shalmanuzer in B. C. 721 carried ten of the Hebrew tribes captive to Assyria from which date their history is lost. The ancient Jewish era was composed of lunar years. Their mundane era is also of lunar years and its origin was in the 14th or 11th century. The mundane era or era of creation, is the same as that of Alexandria, 4004 years before the Dyounisian or vulgar era. The Jews made it 243 years later or A. A. C. 3761 which is still the epoch of their mundane era.

How many of the Jewish people have become christians is not known. The first scene of Paul's ministrations in Ephesus, was a Jewish syna-

gogue; for at an early period, colonies of that nation were scattered over all the east. Separated from their native land by the fortune of war or the pursuit of commerce, they still retained their national character and peculiar ritual, occasionally travelling to Jerusalem to worship and sacrifice in David's city. From the book of Esther we learn, that in the reign of Ahasuerus or Artaxerxes Longimanus, the Jews were found in all the provinces of Persia, and in a sufficient number to defend themselves from a formidable conspiracy of their enemies. After their captivity in Babylon, they were spread not only through Asia, but Africa, and the European cities and islands; and hence, Strabo, cited by Josephus, states, "this people had already passed into every city, nor were it easy to find any place in the world, which had not received this nation and been possessed by it." In the time of Tiberius, it is related, that four thousand libertini of the Jewish superstition were banished into Sardinia, and the rest commanded to quit Italy, if they did not abjure their religion. Philo speaks of a great part of the city beyond the Tiber, being inhabited by Jews, mostly libertini who were permitted to live according to their own rites and customs. We are not, therefore, surprised at finding a community of Jews in the bosom of the Ephesian idolatry: the extent, wealth, and commercial importance of the city, would naturally make it the resort of all nations; and the dispersion of a portion of the chosen tribes in the high places of heathenism, was doubtless an ordination of providence, to give a public testimony against the abominations and errors with which they were characterised.

Libertus, according to the Romans, was one who had been a slave, and obtained his freedom; libertinus was the son of a libertus, and in Acts vi 9, mention is made of the synagogue of the libertines.

The Jews of Malabar are still distinguished into black and white. The former are much more assimilated to the Hindu natives, and by the latter are regarded as inferiors. About the year 1830, the white Jews were reduced to about two hundred, living in Mattancheri, a suburb of Cochin, in which the black Jews also had a separate synagogue. The great body of the black Jews inhabited towns in the interior, and had many other synagogues. The tradition of these latter was that they were part of the tribe of Manasseh carried captive by Nebuchadnezzar, who emigrated at a later period to Cranganore. The white Jews believe themselves to have come soon after the destruction of Jerusalem. A grant in favour of the Jews, by a native king in Malabar, is said to date from A. D. 231. Ferishta testifies to their presence when the first mahome-

dans settled on the coast. Padre Paolino, towards the end of the eighteenth century estimated the Jews of Mattancheri, Muttam, and Kayan Kulam at between 15,000 and 20,000.

The Jews of Cochim seem to have arrived in A. D. 68. Of the Jews in the Khanat of Bokhara, the greater number live in Bokhara, others at Katta-kurgan, Samarkand, and Karshi. In all these places, separate quarters of the town are assigned to them, outside the precincts of which they are forbid to settle, and therefore cannot intermix with the mahomedans. Their rights and privileges are exceedingly restricted; thus, for example, they dare not wear a turban, but must cover their heads with small caps of a dark coloured cloth, edged with a narrow strip of sheep skin, not more than two fingers in breadth. Neither are they allowed to wear any other apparel than khalats of aledja, nor to gird their loins with a broad sash, still less with a shawl, but must twist a common rope round their waist. To prevent their hiding this distinctive mark, they are strictly forbidden to wear any flowing garment over the girded khalat. In Great Britain, as elsewhere in Europe, the Jewish people constitute two distinct communities—those of the Spanish and Portuguese under the general name Sephardim; and those of the German and Polish under the name Ashkenasim. The Sephardim hold that they are the descendants of the tribe of Judah, the aristocracy of the nation. The Ashkenasim, on the other hand, are more numerous and enterprising. They are not so confined to London as the Sephardim, but are scattered throughout the country. Wherever traffic opens a door for gain, there the Ashkenasim never hesitate to settle. All the Jews who travel the country with wares are also of this community. Formerly the light universally adopted in Britain for the Sabbath in Jewish families, was a peculiar kind of lamp with seven wicks; but now wax candles or gas are made use of, according to convenience. The ceremony of lighting the lamp or candles invariably devolves upon the wife. On Friday afternoon, when the Jewish Sabbath commences, the wife lights the lamp, generally walks three times round it, and, with uplifted hands, says as follows:—"Blessed art thou, O Lord our God, king of the universe, who hast sanctified us with thy commandments, and commanded us to light the lamp of the Sabbath." When no wife happens to be in a family, this duty falls upon the widower, or the eldest male. The Jewish sabbath begins on Friday evening, about the time of the appearance of the stars; and continues till the same time on Saturday evening. Thus they keep their religious day from sunset to sunset

according to the passage of Gen. i. 5, "And the evening and the morning were the first day." And, as is usual in many Asiatic nations, when a boy has reached his eighth day, he must be received a member of the Abrahamic covenant by circumcision according to Gen. xvii. 12.

Tophillin, is a rabbinical word, and signifies two peculiar articles worn by the young Jew in Britain: one is for the head, and the other for the arm. Four slips of parchment are prepared each about an inch wide, and eight inches long. On these, passages of Scripture in Hebrew are written with great care and beauty. These four passages are Deut. xi. 4—9. Deut. ix. 13—21. Exod. xiii. 2—10. Exod. xiii. 11—16. On two of the squares raised in the material itself whilst preparing it to be formed into a box, is the Hebrew letter "shin" the initial letter of the word, Shaddai, Almighty one of the Creator's incommunicable names. It is now the duty of the young Jew to attend the synagogue every morning; but if circumstances do not permit, he is allowed to say his prayers at home. In either case, he must put on the tophillin before commencing his devotions. First he takes hold of the one for the arm, and places it on that part of the left arm opposite the heart; and after securing it there by winding the leather thong seven times around, he says the following blessing "Blessed art thou, O Lord our God king of the universe, who hast sanctified us with thy commandments, and commanded us to wear the Tophillin. Then he takes the one for the head, and places it exactly in the centre between the eyes touching where the hair begins to grow. In the reference made to them in the New Testament, these are called phylacteries, from the Greek phylacterion φυλακτήριον, guards, watchers, &c., and were called so from the notion that they act as amulets especially in keeping off evil spirits. In Jewish society, in Britain, is a class of persons called Shadchanim whose business it is to act as matchmakers. One of the first duties of a Jew on becoming head of a family, is to prepare a Meznah for his door posts. A piece of vellum about three inches square is prepared, and on one side the two passages of the law Deut. vi. 4-9, and xi 13-21. are written in Hebrew.

The ancient custom of the rare is still continued, wherever residing, the mother of the bride must see the proofs of consummation. A similar custom is observed by all mahomedans and by the Armenians but with the latter, to a much more indelicate degree.

The paschal lamb of the Jews was partaken of only by the men of the Jews above 21 years of age, probably a single mouthful.

Dr. Wolff found the Jews of Central Asia quite ignorant of the history, suffering, and death of

Jesus Christ which convinced him that the Jews of Khorassan and Bokhara were of the ten tribes who never returned to Palestine after the Babylonish captivity.

All the Jews of Turkistan assert that the Turkoman are the descendants of Togarmah, one of the sons of Gomer, mentioned in Genesis x. 3. The Turkoman have no mosque; they pray apart from each other, either in the field or the tent. Twice in the year they assemble in the desert, and proffer their prayer.

The Jews in Bokhara are 10,000 in number. The chief rabbi assured Dr. Wolff that Bokhara is the Habor and Balkh, the Halah of the 2nd, Kings xvii. 6; but that in the reign of Chengis Khan they lost all their written accounts. At Balkh the mahomedan mullahs assured him that it was built by a son of Adam, that its first name had been Hanakh, and afterwards Halah, though later writers called it Balakh or Balkh. The Jews, both of Balkh and Samarcand, assert that Turkistan is the land of Nod, and Balkh, where Nod "once stood." The Jews of Bokhara, bear a mark, by order of the king, in order that no mahomedan may give them salaam or peace.

He thought the general physiognomy not Jewish, but he was wonderfully struck with the resemblance that the Yousufzye and the Khybari two of their tribes, bear to the Jews. When Wolff reached Cochín, he found there black and white Jews celebrating the feast of Paschal. Those that are called black Jews are, he says, such as became Jews of their own accord at Cranganore, and in other parts of the country they are of black and half black colour. For this reason, the white Jews do not intermarry with them. They have neither priests, nor Levites, nor families, nor relations on foreign coasts. They are only found in the Malabar coast. They observe the law as white Jews do. They are most numerous at Cochín. Many of the black Jews, however, assert that their ancestors became Jews when Haman fell, and affirm (though the white Jews deny it) that they were there when the white Jews came to Hindustan. They consider themselves as slaves to the white Jews, pay their yearly tribute and a small sum for the circumcision of their children, and for permission to wear frontlets in prayer time. They do not sit down with the white Jews, nor eat with them. In this they resemble the Americans in the United States, who do not eat with the negro population. The immorality of the white Jews of this place was frightful.

The Jews of Yemen adhere simply to the ancient interpretation of Scripture, in the passage of Isaiah vii. 14, "a virgin shall conceive," and they give to the word the same interpretation, virgin, that the Christians do without

knowing the history of Jesus. Rabbi Alkaree asserted that in Isaiah liii. the suffering of the Messiah is described as anterior to his reign in glory. He informed Dr. Wolff that the Jews of Yemen never returned to Jerusalem after the Babylonish captivity; and that when Ezru wrote a letter to the princes of the captivity at Tanaan, a day's journey from Sanaa, inviting them to return, they replied, "Daniel predicts the murder of the Messiah and another destruction of Jerusalem and the temple." Sanaa contains fifteen thousand Jews. In Yemen they amount to twenty thousand and Wolff estimated the total population of the Jews throughout the world, to amount to ten millions. He baptized there sixteen Jews, and left them all New Testaments.

The Jews in China call themselves Tiau-kin Kian, or the sect which plucks out the sinew. They are said to number one million of souls. They have synagogues, and keep themselves perfectly distinct from the other inhabitants of the villages. The earliest record of the Chinese Jews which can be relied upon, is that of an Arabian merchant, who, in 877, mentions the Jews that traded with him in China. In the twelfth century, the rabbi Benjamin of Toledo visited the East, to discover some of the scattered children of Israel; and he states, that he found Jews in China, Thibet, and Persia. The Jesuit Ricci, whilst resident at Peking in 1610, states that there were ten families of Jews residing in Keang-foo, and they had in their possession a copy of the Pentateuch, which had been handed down from generation to generation for six centuries; therefore, from the whole of these statements, it may fairly be concluded, that for many ages Jews have been inhabitants of China. It is the custom in Jerusalem, every Friday, for the Jews, with veils over their heads, in mourning and lamentation, to proceed to the ruins of the walls of Jerusalem: for this they pay tribute to the Turks, the hymn they sing is as follows.

"The Almighty shall build His Temple speedily:
Lord, build, Lord, build, build Thy Temple speedily:
In haste, in haste, even in our days,
Build Thy Temple speedily.
He is beloved, He is great, He is glorious
He is sweet!
Lord build, build Thy Temple speedily:
In haste, in haste, even in our days,
Lord, build Thy Temple speedily!"

Jews practise as doctors at Herat, and sometimes also as sorcerers. The Israelites are rather numerous there, more especially since their persecution at Meshed. Though their depart-

ture from that city is forbidden, and they are mulcted in very heavy fines if they are caught absconding, they nevertheless continually make the attempt, and arrive at Herat, where they are permitted to trade, and commerce through their means flourishes more than it otherwise would. They are also allowed the free exercise of their religion, and are thoroughly protected by the rulers.

Josephus, who is considered to have written his work on the ancient history of the Jews about the year 93 of the Christian era, says, in his eleventh book, with reference to the return from captivity of those who came back with Ezra, "the entire body of the people of Israel remained in that country, wherefore there are but two tribes in Asia and Europe subject to the Romans, while the ten tribes are beyond the Euphrates till now, and are an immense multitude, not to be estimated by numbers." To the same effect, St. Jerome, in the fifth century, in his notes upon Hosea says, "unto this day the ten tribes are subject to the king of the Parthians, nor has their captivity ever been loosed."

Before the introduction of mahomedanism, there were whole nations of Jews in Arabia. The king of the Homerites was a Jew. Under the emperor Heraclius, many of them were driven from the Roman dominions into Persia, where some of their countrymen had remained ever since the first captivity; and history informs us, that they often excited the heathen princes against the Christians. Seventy years after the death of Mahomed, the Ethiopians sent over an army to assist the Christians of Yemen against Abu Nowas their king, and a bigoted Jew. Many of the Arabian tribes had been converted by the Jews who fled from the destruction of Jerusalem by Titus. Chaibar was their principal city in Arabia: it was taken by Mahomed A. D. 623-7. Chaibar was in the neighbourhood of Medina; they were removed into Syria by Omar—Hira was also the residence of a Christian prince, who had reigned there 600 years before he was conquered by the mahomedans.

The Jews of Europe have assimilated in physical as well as moral qualities to the nations amongst which they dwell. Those who have recently settled in Bombay and Calcutta are the most strikingly handsome of all the races now in India. Their skins have a faint rathous tint, but their complexions are bright and transparent looking. Their features are large and prominent, their forms tall and goodly.

Jews originally were pastoral shepherds and husbandmen, but they began to follow merchandise in Solomon's time and, in Rome, prohibited from holding land they became merchants and

traders. To the Jew, every person not circumcised was a Gentile and this term was used by the Jews to designate all races not Jews or not circumcised. It answered to the Barbaros of the Greeks and Romans. The term Gentile is employed by the Europeans in India, to designate the Tiling people, the race occupying the country from Madras to Ganjam. It is pronounced Gento, which is a corruption of the Portuguese "Gentio" a "Gentile," and the people themselves accept that designation. The Gentile of the Jews is the equivalent of the M'hetcha of the Aryan hindu, the "E." of the Chinese, and the Kafir of the mahomedan. With the Arabs, they themselves are the Arab ul Arab, all the rest of the world are "ajami" or foreign. Dr. Fryer (Travels, 1672 to 1681), says, "the Gentiles, the Portuguese idiom for Gentiles, are the aborigines." He appears to be the first English writer by whom the term is used, but before his time Pietro del la Valle speaks of the hindoos as Gentile, following the example of the Portuguese.—*Baron Clement. JEWAKEE, a pass in Afghanistan occupied by the Afreedee. Their mountains are very strong. In the settlement of the N. W. Himalaya districts, the British Government was concerned chiefly with the Afreedee of the two passes i. e., the Kohat Pass or Gullee and the Jewakee Pass. For the guardianship of these passes the Afreedee received some kind of consideration from successive dynasties, Ghiznivide, Moghul, Doornace, Barukzye, Sikh and British; and broke faith with each and all. These mountaineers are great traders and carriers. They

convey salt from mines in the Kohat district to the Peshawar market. They also cut and sell the firewood of their hills. By these means they procure a comfortable subsistence, which cultivation of their rugged hill-sides would not alone suffice to afford. The British authorities can, by blockading the mouths of the passes, stop the trade and reduce the Afreedees to sore straits. The Gullee or Kohat Pass is the direct and best route from Kohat to Peshawar. The government post between these two important stations runs usually by this route.

JEWALA MUKI. The flames' mouth, or spirits' mouth, a celebrated hill, in a sandstone range opposite Nadaun on the Amritsir road. A stream of hydrogen gas, which oozes through the sandstone, issues from ten or a dozen fissures in the rock. On a light being applied, the flame plays around the fissures which the devotees suppose to proceed from the Muk'hi or mouth of the Jawala or spirit.

JEWAN-PUR. MAR. Putranjiva Roxburghii.

JEWAR. HIND. *Euryale ferox*.

JEWAR. HIND. Ploughmen's perquisites, also called in Hindi Azwar and Thapa. —*Ed.*

JEWAR. A clan of Rajpoots of this name in Sagar and Bundelcund.

JEWASSA. HIND. Alhaji maurorum, the Camel's thorn, the chief food of the camel, in Upper Sind and the Punjab.

JEWELLERY. Workers in iron and steel could never have found difficulty in managing gold and silver, for which indeed the East has always been famous. Working in gold was familiar to the Egyptians before the exodus of the Israelites. That the hindoos have long been familiar with its applications we find proof in the hymns of Rig Veda, where golden armour and golden chariots, and decorations of gold and jewels, are frequently mentioned. The rose chain from Trichinopoly, and the snake chains of the northern Circars all display great skill in the workmen, as also the silver filigree work of Hyderabad, for which Cuttack and Dacca are most famous, and display greater delicacy and beauty than either Genoa or Malta. Much of the Indian jewellery being peculiar in form, and in the ways in which it is worn, is not much admired in Britain; the articles usually made in filigree work are bracelets, earrings, brooches, and chains, groups of flowers, attar-dans, and small boxes for native uses. Mr. Taylor says, "the design best adapted for displaying the delicate work of filigree is that of a leaf; it should be drawn on stout paper, and of the exact size of the article intended to be made. The apparatus used in the art is exceedingly

simple, consisting merely of a few small crucibles, a piece of bamboo for a blow-pipe, small hammers for flattening the wire, and sets of forceps for inter-twisting it." The art of making gold wire, that is, silver covered with gold, is practised in various parts of India, in Dacca and Hyderabad, as well as Delhi and Benares. Several varieties of gold and silver thread (*badlu*) are made at Dacca, as *goolubatoon* for the embroidery of muslins and silks; *goshoo* for caps and covering the handles of chouries; *sulnah* for turbans, slippers, and hookah-snakes; and *boonim* for gold lace and brocades. Much fringe of various patterns is made, and thin tinsel stamped into various forms of flowers, or impressed with excellent imitations of jewels, such as flat diamonds, emeralds and rubies. Many of the ornaments are made only for the poorer classes, for instance, imitations of precious stones, ornaments in pewter, in shell, and lac, and still simpler, a bracelet with straw to represent the gold, and the red seeds of *Abrus precatorius* in the place of garnets. The following are the names and uses of a few of the jewels of Southern India.

Yunkee, or Armet.	Jadabillay, Head ornament.
Jampaloo, or Ear Jewel.	Kutree Paval, Ear ornament.
Kutree Paval, Ear ornament.	Adega, Neck ornament.
Valliel, or Bangles.	Curdapoo, Head ornament.

	Cummul and Jemeeka.

Bracelets, anklets, and armlets of gold, silver, brass, copper, deer horn, the metals being solidly massive and as chains, are in use in all eastern countries, and amongst hindus and mahomedans. Hindu men may be seen with gold or silver rings, earrings, and neck laces, but in general these are restricted to women and children. The custom of wearing jewellery has doubtless been through all ages, and is alluded to in Josh. xiii. 6: Is. iii. 16 and 18. Some of those of the hindus are inconveniently massive, and heavy rings, usually of silver set with a fringe of small bells, are often worn by hindu ladies. Hindoo women wear loose ornaments one above another on their ankles, which at every motion of the feet, produce a tinkling noise. Armlets are worn alike by hindus and mahomedans, and by men and women. They are of gold or silver, some in the form of massive carved rings, some as locketts; the more expensive, worn by royalty are the bazu-band, literally arm-lets. These are generally worn as ornaments, and since the most ancient times like earrings, (Gen. xxxv. 4: Ex. xxxii. 3, 4: Hosea xi. 13: Judges. viii. 21) the *cowrie* in

areus, often of gold, like those of the Ishmaelites. But they are often caskets containing, as with the mahomedans, charms, their ta'viz, or as with the Jangam sect of hindus, the phallic lingam. These ornaments are often worn round the neck like the golden bulla and leather torum of the Roman youth, or as in Prov. vi. 21, and most women have frontlet ornaments such as are alluded to in Deut vi. 8. Bracelets are also largely worn by all classes, of both ages and sexes, of every material, but those of the humbler women are principally of coloured glass and ornamented with lac and brass. The manufacture of shell bracelets is one of the indigenous arts of Bengal, in which the caste of Sank'hari at Dacca excel. The *chanks* of which they are made are large univalve shells of several species of turbinella, from six to seven inches long, and of a pure white color. They are imported into Calcutta from Rannad in Southern India, and from the Maldiv Islands. At Dacca they are also used for beetling fine muslins. In making the large massive bracelets which are worn by Hindoo women, they are sawn into semi-circular pieces, and these are rivetted and cemented to form the bracelets, some of which are elaborately carved and inlaid with a composition of lac and a red pigment. A pair of bracelets of this description frequently costs as high as 80 rupees. Of the thick pieces of the shells, beads are made to form the necklaces, which the Bengal sepoy wear. Some Marwari women and the Binjara women have the entire forearm from the wrist to the elbow covered with heavy massive bracelets and the lower part of the legs equally covered with anklets. The anklets of the Binjara women are of deer horn. Amongst the Rajputs, the women adopt a brother by the gift of a bracelet. The intrinsic value of such pledge is never looked to, nor is it requisite it should be costly, though it varies with the means and rank of the donor and may be of flock silk and spangles, or gold chains and gems. The acceptance of the pledge and its return is by the katchli, or corset, of simple silk or satin, or gold brocade and pearls. Colonel Tod was the "Rakhi bund Bhai" of the three queens of Oodipoor, Boondi, and Kotah, besides Chund-Bae, the maiden sister of the Rana, as well as many ladies of the chieftains of rank. Though the bracelet may be sent by maidens, it is only on occasions of urgent necessity or danger. The festival of the bracelet (Rakhi) is in spring. The adopted brother may hazard his life in his adopted sister's cause, and yet never receive a mite in reward, for he cannot even see the fair object who, as brother of her adoption, has constituted him her defender, Isaiah xlv 3. notices 'Trea-

asures of darkness.' It is still common in India for persons to bury their jewels and money under the house floor, or in the compound. Enamelling, as applied in India to jewellery, consists of an extremely fine pencilling of flowers and fancy designs in a variety of colours, the prevailing ones being white, red, and blue; and is invariably applied to the inner sides of bracelets, armlets, anklets, necklaces, earrings, sirpooch, tiara, and all that description of native jewellery, the value depending upon the fineness of the work, and often exceeding that of the precious stones themselves. In general the cost is moderate, as the finest specimens are only made to order. The best come from Benares, Delhi, and the Rajpootana States. In the south of India, the manufacture of enamels on articles of domestic use like the above is almost entirely restricted to Hyderabad. It presents no varieties, but in general consists of a blue coating interlined with white on a surface of silver, and is applied to rose-water sprinklers, spice boxes, basins, and such like articles. The merit of the manufacture lies in the simplicity of the enamel itself, and in the lightness of the silver article to which it is applied. Though pleasing, it is the coarsest enamel produced in India. At Indore, in Central India, the manufacture does not constitute a regular trade. It is invariably applied to articles of personal decoration such as necklaces, armlets, brooches, earrings, &c, which are set by native jewellers, according to the taste of the purchaser. The subjects generally consist in a representation of the avatars, or pictures of the metamorphoses of Indian deities; and the work is so perfect that it will stand, not only the influence of climate, but even rough handling. Specimens of this kind of work have no fixed market value, the price being entirely dependent upon the number of competitors that may be in the field when any of them are offered for sale. A set of the ornaments, consisting of a necklace, earrings, two armlets, and a brooch, in plain gold, contributed to the exhibition of 1851, was valued at 1,700 Rupees or 170*£*. A duplicate forwarded to the Paris Exhibition in 1855, was purchased for 600 Rupees or 60*£*. The Indian export trade of jewellery is unimportant being only to the value of about £3,000 a year.—*Toy Cart. Tod's Travels, Tod's Rajasthan. Juries' Reports Ex. 1851. Madras Exhibition of 1855. Report of Exhib. of 1862. Royle's Arts of India, pp. 475-6. 509-510.*

JEYPAIA. After his final defeat by Ismael, son of Sabaktagin, at Pchawar, resigned his throne to his son Anungpal, and put an end to his own life, by ascending a funeral pyre.

JEYPORE, a kingdom in Rajputanah, founded by Dhola Rai in A. D. 967. The family belong to the Kachwaha tribe of Rajpoots and claim descent from Rama, king of Ayodhya, between whom and Dhola Rai thirty-four generations are said to have intervened. At the time of the foundation of the Jeypore State, the country of Rajpootana was divided among petty Rajpoot and Meena chiefs, all owing allegiance to the hindoo kings who then ruled in Delhi. Jeypore early succumbed to the mahomedans. Rajah Bhugwan Doss was the first Rajpoot chief who allied himself by marriage with the mahomedan emperors of Delhi. The Jeypore family furnished the emperors with some of their most distinguished military leaders. One of the chiefs of Jeypore, Jey Sing II., who began to rule in A. D. 1699, was distinguished by his intellectual capacity and his liberal patronage of science and art, and his attainments in mathematics and astronomy made his name known to European scholars. The Mahratta supremacy over the Rajpoot States succeeded that of the mahomedans and the political relations of the British Government with Jeypore commenced in 1803 when Juggut Sing was then maharajah of Jeypore, and in 1818 he ended a life which had been spent in the grossest debauchery, and regretted by no one. But on the 25th April 1819, a posthumous son was born by one of the ranees, and he was recognized as heir both by the Jeypore nobles and the British Government. Till the ranees' death in 1833, Jeypore was a scene of corruption and misgovernment. The young maharajah Jey Sing died in 1835, leaving a young son, Ram Sing, then under two years of age and the Agent to the Governor General then proceeded to Jeypore, reformed the administration, and assumed the guardianship of the infant heir. The Agent's life was attempted and his Assistant was murdered.

The area of Jeypore is about 15,000 square miles and the population 1,900,000. The available revenue is 36 lakhs. The larger portion of the Sambur lake belongs to Jeypore and the salt manufactured from it yields to this state 4 lakhs. The military consist of 452

artillery; 4,600 infantry, 5,142 cavalry and 4,096 Nagma.

Babra, three marches from Jeypore, on the road to Delhi has one of the edicts of Asoka engraved on a block of stone or rock, on a hill, in old Pali and of date B. C. 309. It is in the oldest Lat character. It differs somewhat in style and language from the pillar and rock edicts. The subject is the budhist commandment, forbidding the sacrifice of four-footed animals. The Vedas are alluded to, but not named, and are condemned as mean, and false in their doctrine, and not to be obeyed. The scriptures of the Muni (which must be the Vedas) are spoken of as directing blood-offerings and the sacrifice of animals. Priest and priestesses, religious men and religious women, amongst the budhists, are commanded to obey the edict, and bear it in their hearts.—*Treaties, Engagements and Summits, Vol. IV. p. 29. Beng. As Soc. Jo. Vol. IX. p. 617. See Rajput.*

JEYPORE, a native state west of Ganjam, westward of the state of Jeypore, and having the Godavery for its southern boundary, lies the district of Bustar, in length about 170 miles, and in breadth about 120, it occupies an area of 13,000 square miles in extent. With its plains and plateaus, lofty mountains and fertile valleys, rivers and forests, it appears like a continent in *parvo*. The total population numbers about 200,000, cultivation is carried on to a considerable extent, and rice is produced in great abundance. The natural productions of the country

are honey, wax, galls, horns, jaggery, thussa silk, drugs, dyes, gums, resins, and fibres are in profusion. All these are carried out of the country by the brinjarri race who give salt, cloth, brazen utensils, pepper, spices, coconuts, tobacco, opium, wheat, paper and cotton in exchange. Teak is abundant; the Mowa tree serves at once for liquor, food, and oil. Iron ore is found in the eastern part of the dependency, and is of excellent quality; gold also is washed from the sands of one or two rivers. The country is unhealthy. Fever is exceedingly prevalent throughout the district, and is very severe in the months of September, October and November. Dysentery and diarrhoea generally accompany it at those times, great amount of moisture is contained in the soil which is principally clay; there is no drainage. Cases of cholera are very rare, but small-pox fully makes up for it.

Politically, the country is divided into ten talooks, each being governed of course by its own zemindar or dewan, and the whole by a rajah. Jugdulpore, is the capital of Bustar, and the residence of its rajah. Many of the villages throughout the dependency consist only of fifty huts and under, and in the wild jungly tracts two or three hovels standing near each other are dignified with the name.

The people range in importance from the fish-eating brahmin, to the hunting and fishing Tugara or Purja, who will eat any thing, from beef and mutton, down to rats and snakes. The Gudwa who subsist by cultivation chiefly, seem much given to dancing and amusement. On holidays, men and women join in dancing to the music of a pipe and drum. A ring is formed by all joining hands; the company circles round and round like the preparatory movement to a quadrille galopade, relieved now and then by mighty hops to the centre and back. Thus finished, a man steps forward, singles out one of the other sex, and banters her about her ugliness and so forth and the woman retorts. The Soondee deal extensively in evil spirits, that is to say, they know the weakness of their fellows for the fermented juice of the Mowa, and do not fail to derive a large profit from it. The Maria are the most numerous class in the dependency. They inhabit the densest jungles, avoid all contact with strangers, and are so timid that they flee to the hills on the least alarm. They are strong and agile, very expert in the use of the bow, but the most cheerful, light-hearted race alive. A Maria wears a cloth round his loins, a necklace or collar of beads, earrings and bracelets of brass, and a girdle of cowries. Hanging to the girdle is a bamboo tobacco-box, and a small iron knife is stuck in behind. A bow and arrows, or a spear, complete his costume. The women wear rather more beads,

and if possible rather less calico, but they tattoo themselves from head to foot. The dress of the Maria decreases in quantity in direct proportion to the increase of the distance of their abodes from civilization. They are very inquisitive, sharp observers, apt to learn, and remarkable for their truthfulness and honesty. Beyond this country, higher still up the mountains are other "gentle savages," destitute of buffaloes, bullocks, cows, or ploughs, and knowing little besides their rude mode of cultivation and the everlasting Mowa berry. Like the Maria these also are very susceptible of improvement and civilization if they meet with kindness and fair dealing.

JEY SINGH, the royal historian and astronomer of Amber, connects the line with Soomitra the fifty-sixth descendant from the deified Rama, who appears to have been the contemporary of Vicramaditya, A. C. 56.

JEZAL. PERS. or Shamkhal is a rifle of great length and weight, which is fired from a rest like a fork, attached to it near the muzzle. This weapon, is much used by the mountaineers of Persia and Afghanistan. By the English, it is called Ginjaal, and is a wall piece, or large gun; properly Jazal.

JEZAN. A sea-port of Yemen, in the district of Abou Arcesh, its population, about four hundred, are engaged in the pearl fishery, which both here and at the island of Farsan, about three miles distant, is carried on extensively. See Tehama.

JEZAYIR, the name of an extensive district comprising many stations of importance. The first is the village of the Beni-Mansur, Bir Homaïd, and Nahr Antar, which are the principal positions. It is said to be pierced by three hundred canals, among which are Nahr Saleh, Deyar Beni Asad, Deyar Beni Muhammed, Fat'hiyah, Kalaa, Nahr Sebaa, Batinnah, Massuriyah, Iskanderiah, Igarah, and others. The northern boundary of this district is Kut-e-Mua. This extensive district is inhabited by various tribes, who have successfully assisted the imperial arms, and having revolted from the government of Basrah, had succeeded in establishing an independent power against the united forces of Basrah and Hawaizah. This independence was preserved not less from the bravery of the inhabitants, than from the great difficulty of approaching their insular positions, in the broad expanse of the Euphrates, over the district in which they are situated, until the age of Ali Pasha who reduced the country, and so broke the spirit of its population, that, from that hour, the tameness of the people of Jezayer became a trite proverb.—*Mugnan's Travels*, p. 288.

JEZER. AR. Carrot; *Daucus carota*.

JEZIA. ARAB. HIND. PERS. Poll-tax. This was imposed, during the early mahomedan conquests, on all other religionists who submitted to the mahomedan rule, and was the test by which they were distinguished from those who remained in a state of hostility. Its abolition was one of the beneficent acts of Akbar, but Aurangzebe reimposed it.—*Yule, Cathay, Vol. II. p. 411. Elphinstone, II. p. 457.*

JHABOOA, Ali Rajpore, Jobut, Mutwarh, Indore, and Gwalior district, with the British pergunnah of Mundpore and State of Burwani have been formed into a Bheel Agency.

JHAKI. HIND. Buckwheat, Fagopyrum esculentum.

JHAL. GUZ. and HIND. Net.

JHALA, a race who own the raj of Hulwud Drangdra as their chief, and are supposed to have sprung from an offshoot of Anhilwarra, on the extinction of which dynasty they obtained large territorial aggrandisement. The part of the Jhala Makwabana tribe who also inhabit the Saurashtra peninsula is styled Rajpoot, though neither classed with the Solar, Lunar, nor Agni-cula races; but though we cannot directly prove it, they seem to be of northern origin. It is a tribe little known in Hindustan or even Rajasthan, into which latter country it was introduced entirely through the medium of the ancient lords of Saurashtra, the present family of Mewar: a splendid act of self-devotion of the Jhala chief, when rana Pertap was oppressed with the whole weight of Akbar's power, obtained, with the gratitude of this prince, the highest honour he could confer,—his daughter in marriage, and a seat on his right hand. It was deemed a mark of great condescension of a recent rana sanctioning a remote branch of his own family, bestowing a daughter in marriage on the Jhala ruler of Kotah. This tribe has given its name to one of the largest divisions of Saurashtra, Jhallawar, which possesses several towns of importance. Of these Bankaner, Hulwud, and Drangdra, are the principal. Regarding the period of the settlement of the Jhala, tradition is silent, as also on their early history: but the aid of its quota was given to the rana against the first attacks of the mahomedans.

The Jaitwa, Jelwa or Camari, is an ancient tribe, and by all authorities styled Rajpoot, though, like the Jhala, little known out of Saurashtra, to one of the divisions of which it has given its name, Jaitwa, its present possessions are on the western coast of the peninsula: the residence of its prince, who is styled rana, is Poorbunder. In remote times their capital was Goomtee whose ruins attest considerable power, and afford singular scope for analogy, in architectural device, with the style termed Saxon of Europe. The

bards of the Jaitwa run through a long list of one hundred and thirty crowned heads, and in the eighth century have chronicled the marriage of their prince with the Tuar re-founder of Delhi.—*Toel's Rajasthan, Vol. I. p. 113.* See Kattyawar; Jhareja; Rajpoots; Kutch or Cutch.

JHALAWAN, Saharawan and Las are on a great mountain range or table land that runs N. and S. Jhalawan with less elevation than Saharawan, is held by Brahui tribes, amongst whom are the Minghal, Bizunju and Samalari, in the hills. The fixed population in their little towns, does not exceed 10,000 and are greatly exceeded by the pastoral tribes,—the great tribes of Minghal and Bizunji, giving them the preponderance. Jhalawan and Saharawan are the two great central districts of Beluchistan, and these districts surround the districts of Kelat which depend on the capital. The plain of Dasht-i-Guran south of Chappar, is inhabited by the Sunari, a branch of the Jehri tribe of Jhalawan. Many of the Jhalawan tribes are undoubtedly of Rajpoot origin, and until lately, the practice of infanticide was prevalent amongst them. Near Bagwana is a cave in a rock filled with the dried mummy-like bodies of infants, some of which have a comparatively recent appearance. See Kelat; India.

JHALLAWAR, in Kattyawar, has been a separate dependency only from the 8th April 1838, when the Kotah principality was dismembered and maharaj rana Mudun Sing was established in Jhallawar under a treaty by which he acknowledged British supremacy, and engaged not to negotiate with any other power without the sanction and knowledge of that Government, on which he was vested with the titles of Maharaj Rana. During the mutinies of 1857-58, Pirthee Sing, his successor, rendered good service by conveying to places of safety several Europeans who had taken refuge in his districts. The estimated average amount of revenue of this State is between fourteen and fifteen lakhs of Rupees. It pays Rupees 8,000 a year to the British Government as tribute; no local corps or contingents are paid from the resources of Jhallawar; the area of the State is 2,500 square miles; and the population 220,000. The entire military force of the State is about 500 Horse and 3,500 Infantry. In the Jhallawar district, in Kattyawar, property stolen or the thief must be produced, and the Pagri race who trace the pag or foot-prints are there the most famous. Lions are still found in the Geer jungles and there are no tigers and Captain Postans observes that while Kattiwar abounds with the tiger and lion species, Cutch, the neighbouring province, is free from this terrible infliction. The rao of Cutch, at one period, had several dens filled with wild beasts.—*Treaties, Engagements and*

Sunnuds, Vol. IV. p. 87. Postan's Western India, Vol. II. p. 158.

JHALORE, one of the most important divisions of Marwar. It is separated from Sewanchi by the Sookri and Khari, which, with many smaller streams, flow through them from the Aravalli and Aboo, aiding to fertilize its three hundred and sixty towns and villages, forming a part of the fiscal domains of Marwar. Jhalore fortress stands on the extremity of the range extending north to Sewanoh and guards the southern frontier of Marwar. Sewanchi is the tract between the Looni and Sookri. Macholah and Morseen are the two principal dependencies of Jhalore. Beemal and Sunchore are the two principal divisions to the south, each containing 80 villages. Bhadranoon, a fief of Jhalore, has a Joda chief and Meena population. The Thul of Goga is very thinly inhabited with many sand-hills, called t'hul ka-tiba. The t'hul of Tiruroe lies between Goga des and Jessulmer. The t'hul of Khawar is between Jessulmer and Barmair in the most remote angle of Marwar. Barmair t'hul, also called the Malli-nat'h-ka-t'hul is occupied by cattle breeders. The Kherdur or land of Kher, and Nuggur Gooroh on the Looni are the chief t'hul.

The Chohan rajput of the desert has, on the N. and E., the above tracts of Marwar, to the south Kooliwarah and the Runn, to the west the desert of Dhat. The sterile ridge which passes through Chotun to Jessulmer passes west of Bankasir on to Nuggur Parkur. The wells are 65 to 130 feet deep. The Sehrai, Khossa, Keli and Bhil inhabitants are predatory races. The Chohan rajput does not wear the zonar and does not much respect the bramans. The Pit'hil and Banis are farmers and traders.

The Runn or Rinn, is a remarkable feature of the desert. It is a salt marsh, 150 miles broad, into which the Looni or Looni or salt river enters and then runs on to the sea. The Looni rises in the Aravalli. In Marwar it separates the fertile land from the desert, afterwards runs through the Chohan territory, dividing it into the eastern part called Raj-Bah or Sooi-Bah, and the western part called Parkur or "beyond the Khar or Looni." The Kaggar rises in the Siwalik Hills, flows under Bhutnair walls and once emptied itself between Jessulmer and Rori Bukkur.—*Tod's Rajasthan, Vol. i, p. 19; Vol. ii, pp. 289 to 330. Ritchie, the British World in the East. Vol. i, p. 7.*

JHAN PAN. BENG. A litter or sedan chair used in the mountains.

JHAND. HIND. *Prosopis spicigera*, also *P. stephaniana*; its bark is used in tanning. The Jhand, called kundi in Sindhi, is the *Prosopis spicigera*: and furnishes the best fuel wood, being heavy and compact, and burns slowly:

when stacked it is liable to be attacked by white ants.

JHANDA. HIND. A banner. Madar ka jhanda, Dastagir-ka-Jhanda, banners of Madar and Dastagir.

JHANGH. PANJ. *Hydrilla verticillata*.—*Roxb.*

JHANJHAN—? *Æschynomene cannabina*.

JHANJI. HIND. of Kulu, *Corylus colurna*.

JHANSI, lies south of Gwalior. In 1782 it was plundered by Baji Rao, and was captured by Sir Hugh Rose on the 2nd April 1858.

JHAO. HIND. *Tamarix indica*.

JHAPI, umbrella shaped hats worn by the lower class of Assamese made from the coarse leaves of the Toko pat palm, the *Livistonia Jenkinsiana* Griffith. The leaf of the talipot palm *Corypha taliera* is similarly used.—*Simmond's Dict.*

JHAR. HIND. A tree.

JHARA or Jhada. GUZ. HIND. A purgative.

JHARAL See Capree; Jarai.

JHAR BERI. HIND. *Zizyphus nummularia*, also *Zizyphus jujuba*.

JHAREJA, a rajput race in Guzerat, and Cutch with a branch in Kattyawar, descendants of the Yadu and claiming from Krishna. In early ages they inhabited the tracts on the Indus and in Sewisthan. But at another place Col. Tod relates that Samba obtained possession of the tracts on both sides the Indus, and founded the Sind Samma dynasty, from which the Jhareja are descended. There is every probability, he states, that Sambus, of Samba Nagari (Minagara), the opponent of Alexander was a descendant of Samba, son of Krishna. The Jhareja chronicles, in ignorance of the origin of this titular appellation, say that their ancestors came from Sham or Syria.

The Jhareja dominions extend over a tract of about one hundred and eighty miles in length and sixty in breadth; the land is generally poor, indifferently cultivated and thinly peopled, so much so, that although it contains an area of upwards of ten thousand square miles the number of inhabitants is only half a million, one-twentieth part of which is confined within the capital, Blooj, and another twentieth within the sea port of Mandavi. Except these two places, there is none which merits the name of city, though there are a few towns, as Anjar, Lukput, Moondia, &c. on the coast, which derive importance from their position. Of this population, the number of the dominant race, the Jhareja, fit to bear arms, was estimated at only twelve thousand; the remainder are mahomedans and hindus of all sects and classes.

The tribes of Rajputana have a political system similar to the feudal practice of Europe. On the demise of a chief the members of his family would be entitled to a certain appanage

of his demesnes, and every district so acquired would constitute a distinct principality subject to a similar subdivision at the decease of each subsequent holder. Each minor tributary thus possesses a body of kinsmen who are collectively termed the bhaiad or brotherhood. The Jhareja of Guzerat, were, till late in the nineteenth century, addicted to female infanticide. In 1818, Captain McMurdo estimated the members of Jhareja in Cutch at about 12,000 persons of whom only about 30 were women. The Jhareja killed their daughters to avoid paying for them heavy marriage portions. The Jhareja of Cutch are, however, stated by Mrs. Elwood to be a branch of the Sindh Summa stock, of Arabian extraction, descended from a child of a mahomedan zamindar by a daughter of a petty chief in Cutch, whose descendants settled in Powar and Patcham. They marry daughters of the Jhalla, Wagel, Sodha, and Gohil rajputs.

The Thakur of Murvi is a Jhareja and was the first in Colonel Walker's time to abandon infanticide. He has possessions in Cutch. Several tribes of Rajputs and Kathi are found in the peninsula of Guzerat or Kattyawar, within the 66th and 72nd degrees of east longitude, and 20th and 23rd of north latitude. The inhabitants of the Kattyawar province may be classed under the following heads:

a. Rajput, amongst whom there are several tribes, standing in power and wealth thus: 1. Jhareja; 2. Jhallah; 3. Gail, and 4. Jetwah.

b. Kat'hi, of whom there are three families, Walla, Khacher, and Khooman. They are originally of the same stock, but have now their respective districts.

c. Kuli, Kaut, and Sindi, called Bawar.

d. Kunbi, Mar, Ahar, Rhebarri, and the other industrious classes.

The Jhareja are the most powerful and numerous of the rajput tribes of Guzerat and possess all the western part of the peninsula, they are a branch of the family of the rao of Kutch, who in consequence of intestine feuds, left their country about A. D. 800; and having crossed the Rann, at the head of the gulf of Kutch, established themselves upon the ruins of the Jetwah rajputs and a few petty mahomedan authorities which at that time existed in Halar. The Jhareja are also said to trace their origin from Jhuna, a chief of the mahomedan tribe of the Summa of Sindh.

The lands appear to have been divided in common among the whole tribe, the teclat, or eldest branch of the family, reserving to itself the largest portion, whilst the bhaiad or brotherhood held their respective villages by a pure feudal tenure. The outlaws, amongst them, the Baharwuttia, acted with great violence. If he failed in getting flocks, he seized the persons of such villagers as he could find, and

carried them off. These were styled bhan, or captives, for whose release sums of money were demanded. The life of a Baharwuttia was one of blood and rapine, until he was killed, or by the fury of his feud he compelled his chief to grant him redress; and the security of Charan (religious persons) and Bhat (Bards) races having been given on both sides, the outlaw and his family returned to their homes and occupations in perfect security.

The Bhomea of Kattyawar still preserve a great portion of that spirit of hospitality for which their ancestors were celebrated.

All the inhabitants of Guzerat are much addicted to opium and spirituous liquors. A custom prevails throughout the country, of erecting a stone to the memory of those who have died a violent death; but it appears now to be common, also, to those who have departed in the course of nature. This stone is called a pallia: it resembles a European grave-stone, has the name, date, and mode of death engraven, and is surmounted by a roughly executed figure, representing the manner in which the deceased fell. Thus you see them on horseback with swords and spears; as also on foot, or on carts, with the same weapons; or on vessels, and this of course is applicable to fishermen. In the upper parts of the pallia are the sun and moon rudely represented. The practice of "traga," or inflicting self-wounds, suicide, or the murder of relations, formed a strong feature of the manners of the people. This practice, which in Kattyawar was common to the bhat and charan of both sexes, and to brahmins and gossain, has its rise in religious superstition, and although tragas seldom wore a very formidable aspect, still they were sometimes more criminal, by the sacrifice of a greater number of victims. The traga ceremony borders much upon the brahman practice of dharma, but is more detestable. The Charan, besides becoming security for money on all occasions, and to the amount of many lacs of rupees also became what is called fa'il zamin, or security for good behaviour, and hazir zamin, or security for re-appearance. The Bhat are more immediately connected with the Rajput clans, and the Charan with the Kat'hi. The two castes will eat of each other's food, but will not intermarry. The women of the Charan and Bhat are clothed in long flowing black garments, and have a sombre, if not actually horrid appearance. They do not wear many ornaments, and are not restricted from appearing in the presence of strangers, accordingly, in passing a Charan village, the traveller is sometimes surrounded by women who invoke blessings on his head by joining the backs of their hands, and cracking the knuckles of their fingers in that position over their heads. The Kat'hi women are large and masculine in their figures, often

dressed in long dark garments like the Charan women, but have the character of being always well looking, and often remarkably handsome. They are more domesticated than the Rajpoot, and confine themselves solely to the duties of their families. They are often brides at seventeen and sixteen years of age, which may probably account for the strength and vigour of the race. A Kat'hi will do nothing of any consequence without consulting his wife and a Charan, and be in general guided by their advice. In the marriage ceremony of the Kat'hi tribe there is a trace of the custom found amongst the Gond and Kolarian races, and in almost all Indian castes. The Kat'hi, to become a husband, must be a ravisher, he must attack with his friends and followers the village where his betrothed resides, and carry her off by force. In ancient times this was no less a trial of courage; stones and clubs were used without reserve both to assault and repel, and the disappointed lover was not unfrequently compelled to retire, covered with bruises, and wait for a more favourable occasion. The bride had the liberty of assisting her lover by all the means in her power, and the opposition ceased when her dwelling was once gained by the assailants, and the lady, then bravely won, submitted willingly to be carried off by her champion. The Kat'hi do not intermarry with any other caste. The Kat'hi follows the hindu religion, although no hindu will eat with them. A Rajpoot will, however, eat food dressed by a Kat'hi. He worships the cow, leaves a lock of hair on his head; and adores Mahadeo and other hindu deities, although he is more attached to the worship of the Sooruj (Surya or the sun), and to Ambha and other terrible goddesses. The Kaut, the Mar, the Ahir and the Rharri of Guzerat are cultivators, but until recently some of them plunderers when opportunity offered.—*Cole. Myth. Hind. p. 284.* See India; Kat'hi or Katti; Kattyawar; Kalapatta; Rajpoot; Infanticide; Badbail.

JHARIA, a name applied in the Central Provinces to the older settlers, supposed to be from "Jhar" underwood, forest; they are much looser in their observances than later comers of the same caste, eating forbidden food, and worshipping strange gods.

JHAR-KA NAMAK. Duk. Potash.

JHARKHAH. HIND. A hill in Gurgaon district, producing iron.

JHAR-KI-HULDI. Duk. *Coscinium fenestratum*.—*Coleb.*

JHAR-SUAH. HIND. A mahorum faqueer.

JHARUL. HIND. *Capra jemlaica*.—*Ham. Smith.*

JHAU. HIND. *Tamarix dioica*, also *T. orientalis* and *Tamarix gallica*. syn. *Indica*, also? *Artemisia elegans*? *Tamarix dioica* grows

as a brush wood on lowlands near rivers. See Jhao.

JHAWAN. HIND. Rough porous bricks used as flesh rubbers.

JHEEL. HIND. A marsh or lake. The Jheels of eastern Bengal owe their origin chiefly to the excessive rainfall of the Khasia and Silhet hills and to the overflow of the Surma. They occupy an immense area, fully 200 miles in diameter, from north-east to south-west, which is almost entirely under water throughout the rainy season, and only partially dry in the winter months. They extend from the very base of the Khasia hills and eastern extremity of the Cachar district, southward to the Tippera hills and Sunderbuns, and westward to the Megna river and considerably beyond it, thus forming a fresh water continuation of the Sunderbuns, and affording a free water communication in every direction. The villages, and occasionally large towns, which are scattered over the surface of the jheels, generally occupy the banks of the principal rivers; these have defined courses in the dry season, their banks always being several feet higher than the mean level of the inundated country. Extensive sand-banks, covered in winter with a short sward of creeping grasses and annual weeds, run along the banks of the largest streams, and shift their position with every flood. The remainder of the surface is occupied by grassy marshes covered in winter with rice crops, and in summer with water, upon which immense floating islands of matted grasses and sedges are seen in every direction, gradually carried towards the sea by an almost imperceptible current. Near Chura, the common water plants of these jheels are *Vallisneria spirata*, *Damasonium*, two. *Myriophylla*, two. *Villarsia*, *Trapa*, blue, white, purple and scarlet water-lilies; *Hydrilla*, *Utricularia*, *Limnophila*, *Azolla*, *Saivinia*, *Ceratopteris*, and floating grasses.—*Hooker and Thomson, Flora Indica. Hooker. Him. Jour. Vol. II. p. 309.*

JHEEND. One of the cis-Sutlej states; it has an area of 1,236 sq. m. and a population of 311,000, souls, with a revenue of four lacs of rupees. The maharaja is a Jat, of the Sikh faith, and of the same descent as the maharaja of Patiala. In 1857, this chief was the first person who marched against the mutineers at Delhi.

JHELM. One of the rivers of the Panjab, a tributary to the Chenab river, the ancient Behut. It rises in the Vallur lake, in Kashmir, and after a short course to the west receives the Kishn-ganga river. The Lidur rises in N. E. mountains of Kashmir, near Shesha Nag. It runs through the valley of Kashmir, and into the Panjab by the Baramula gorge; then runs S. to Chenab and the confluence is in lat. 30° 10' lon. 79° 9' after a course of 409

miles. The Jhelum receives the Lidur, 50; Vishnu, 44; Sind, 72; Lolab, 44; Kishengunga, 140; Kunihar, 100; Pir Panjal, 115 miles and about 280,000 sq. m. are drained. It is navigable for 70 miles through Kashmir, from the Indus to the town of Ohind. The Vishnu river is considered by the Kashmiri as the parent of the Jhelum, it rises in the Kosa Nag or Shesha Nag lake, which is fed by the melting snow and glacier in a hollow on an upland valley of the southern ranges. The river runs through a narrow rocky glen, remarkable for picturesque grandeur. The falls of Ambul are well worth a visit, as few localities in the Cashmere mountains possess such attractive scenery. A pathway leads from the village of Uta to within a short distance of the cataract. A large portion of the course of this river is through the foreign territory of Keshmir, flowing out from the valley through the Pir Panjal range, at the Baramula pass, and first touching British territory at Pattan. The snow on the Kaghan heights melts in March, and the river acquires volume in April; the full flood lasts from May till July.—*Adam's Royal Comm. San. Rep. Powell Handbook Econ. Prod. Punjab*, p. 533. See Jelam; Inscriptions; Panjab; Sikhs.

JHELMUM town is built on the banks of the river of that name. It is supposed to be erected on the site of the Bucephalia of Alexander. The Jhelum valley produces all sorts of grain except rice. The marts for export are Jhelum and Pind Dadan Khan in the Jhelum district, and Khooshab in Shahpore. Oil is largely produced in the Salt Range from sursoon, tara mera, and ulsi. Soap is manufactured from the refuse. Blankets from wool, and packing bags from goats' hair are manufactured and sold at Doomelee. There is a thriving trade in horses and mules. The first thing a zemindar does with any small sum of money he has saved, is to buy a good mare, from which he breeds; and if any single individual is too poor to buy a whole mare himself, he and two or three others in the same condition as himself will club and purchase an animal amongst them. The colts or fillies produced there are largely bought up by officers of the cavalry service in search of remounts; high prices are frequently given for them, sometimes as high as Rs 300 and 350 for 3 year old colts and fillies. Brass vessels and leather and parchment jars are largely made at Pind Dadan Khan. Jhelum town is in Lat. $32^{\circ} 55'$; $72^{\circ} 52'$ in the Sindh Sagor doab on the right bank of the Jhelum and the mean height of the station, is about 1,620 feet. The district of Jhelum, as at present constituted, extends from the Jhelum river on the E. to the Attock on the W. On the north it is bounded by the various taluks of Rawalpindi as the public

country, Potwar, Synd Kusran and Nurali the river Suan and Pindi Gheb; on the south its limit is the Jhelum river as far as Dhak, whence it stretches due west being bounded to the south by the districts of Kupahab, Mitta, Tuwanah and Kuchi. In this extent of 180 miles, with a range of hills traversing the centre, it is natural that the character of the country should vary much, the ravine country to the north, the hills of the centre, and the fine fertile plains to the south, are well marked distinctions.—*Jour. Ben. As. No. 1 of 1850*, p. 644. *Thornhill; Schlegel-Weit. Oleghorn Panjab Report.*

JHENDA. HIND. Banners.

JHIJAN. HIND. *Æschynomene cannabina*; also a coarse fibre from *Sesbania aculeata*.

JHIL. HIND. A swamp, a marsh, a natural lake. The Jhils of lower Bengal in L. 24° N., L. $87^{\circ} 50'$ E. are about 50 feet above the sea, at high water. See Jheel.

JHINA or Jhinga. BENG. *Luffa setida*, also *Luffa acutangula*.—*Roxb.*

JHINGHORA. HIND. *Bauhinia parviflora*.

JHIRAK of Hurriana. Hyana.

JHOJHA. HIND. The stomach.

JHOJHA, an inferior class of mahomedans who are scattered over different parts of the Doab and Rohileund and are reported to be good cultivators. In pergunnah Burn of Boolundshuhur, they represent themselves as converted Rathore, Chouhan and Tuar; but by others they are considered to be converted slaves of these tribes. In like manner, the Jhoja of Anoopshahur are said to be slaves of the Mooghul converted to mahomedanism. Being mahomedans, they are not restrained by hindoo observances of certain festivals and thus, while hindoos are waiting for the Dithwun before they cut their sugar cane, the Jhojha have already begun to press their cane, and manufacture their sugar.—*Ell. Supp. Glus.*

JISHNOO. SANS. From jee, to conquer.

JIT. HIND. *Salvadora Indica*.

JHOJRU. HIND. *Tephrosia purpurea*.

JHOLA. HIND. A swing, Jholphorana, and Jhol-p-horana kay ghurray matrimonial ceremonies of the mahomedans. See Guhwara.

JHOLAWAN. See Brahui; Jhalawan.

JHOOL. HIND. Horse cloth.

JHOOMKA-BITA. BENG. Citron-leaved passion flower, *Passiflora citrifolia*.

JHOONJURI.—? *Trifolium indicum*.

JHOONTIAH. URJA? A tolerably common tree of Ganjam and Gumsur, its extreme height is 45 feet and circumference $4\frac{1}{2}$ feet and height from ground to the intersection of the first branch, 15 feet. It has a hard, white wood, used chiefly for making hair combs and small boxes.—*Captain Macdonald*.

JHOOTHA. HIND. Leavings of food, that which has touched food and is thereby defiled.

JHOTA. HIND. *Hordeum hexastichum*,

JHOW. in Beluchistan, has but one village, Nandaru, its tribes are the Mirwari and Halada, the latter Brahui and pastoral. Numerous mounds here called "daim" exist, where coins and trinkets are found, remnants of some former race. See Kelat

JHUGUN. HIND. Gum of *Odina wodier*.

JHULA. HIND. A suspension bridge. In the simplest form, a jhula has a single set of ropes, from which a wooden seat is suspended, which is pulled from side to side by means of a rope, worked from the rocks on either side of the river. The rudest of the twig Jhula are the usual communications across the Ravi, but good wooden bridges (sangla) are kept up for the sake of sheep at Oli, Ulasa, and elsewhere.—*Cleghorn, Punjab Rep.* 101. *Dr. Thomson's Travels in Western Himalaya and Tibet.*

JHULA. HIND. *Antennaria contorta*.

JHUND. HIND. *Saccharum sara*.

JHUNG. The chief products of this district are cotton, wool, ghee, wheat and grain. The chief staples in the Bunnoo district are cereals, salt, alum, and iron.—*Cleghorn.*

JHUN JHUNEE - AU - KUREE. also Jhunjhunian-kari. HIND. BENG. Common vetch, *Vicia sativa* also *Ervum hirsutum*.—*Willde.*

JHUR-BEREE. From jhar, a bramble, and ber, the name of a tree, which appears to be the same as the cider of Africa and Arabia, the *Zizyphus napeca* of modern botanists, and the *Rhamnus spina Christi* of Linneus, and probably identical with the tree which yielded the famous fruit of the *Lotopha-gi*. The Jhurberee seldom exceeds two feet in height but the Ber or *Z. jujuba* is a large tree which sometimes grow to the height of twenty and thirty feet. The Jhurberee is often called the Pala shrub, and is used for many useful purposes. During a year of famine, (for it seems to grow equally luxuriant in a drought) the people to the west of the Jumna fed their cattle and paid a large proportion of their revenue from its sale.—*Elliot Supp. Gloss.*

JHIJJAN. HIND. *Sesbania aculeata*, formerly *Æschynomene cannabina*.—*Roxb. Flor. Indica*, III. 335. *Powel. Hand book*, Vol. I. p. 208.

JI. HIND. from Jiva, SANS. Life, pronounced in the various tongues of India, Jio, Jib, and Jiv, means the vital principle, the mind or intellectual action, and enters into many composite words as an affix. Jivagar is a buddhist teacher and ascetic. Jiva-bothi or Jeokothii, a house for the reception of living animals such as at Bombay and supported by the Jains at Surat.—*Wilson.* See Jew.

JIPOTA. HIND. *Putranjiva*.—*Roxb.*

JIBBAH. See Mesopotamia.

JIBBAL AKDTHUR. See Muskat.

JIBBAL-JUDI, Erzurum, corrupted from Arzan-i-Rum or Roman Arzan, was taken with pillage and havoc by the Tartars in 1241. Even in Tournefort's time the Franks commonly pronounced the name Erziron. Though not the highest city even of the old world it stands at a height of some 7,000 feet above the sea, and is noted for the severity of its winters, inasmuch that a late Italian traveller calls it the Siberia of the Ottoman Empire. The usual mahomedan tradition places the grounding of the Ark not on Armenian Ararat, but on the Jibbal Judi in Kurdistan, whence Benjamin of Tudela says (p. 93.) Omar Ben Khatab removed the Ark from the summit and made a mosque of it. Sir H. Rawlinson considers Judi to be much higher than Demawend, and as Demawend is believed to be fully 4,000 feet higher than Ararat, the claims of Judi to be the mountain of the Ark are very intelligible.—*Yule Cathay*, Vol. I. p. 467.

JIBL MIA ALLY or Quoin Hill, 865 feet high, is near Babelmandeb.

JIBBAL MUSA. The mount of Moses, is the name given by the Arabs to all that range of mountains which rises at the interior extremity of the valley of Faran; and to that part of the range on which the Convent of St. Catharine stands, they give the name of Tur Sina. This similarity of name, owing, most probably, to tradition, affords ground for presumption, that the hill on which stands the convent of St. Catharine was the Sinai of the Jews, on which Moses received the law.—*Niebuhr's Travels*, Vol. I. p. 191, 92. *Herod*, IV. p. 177.

JIBBREEL. The angel Gabriel.

JIBILIKA CHETTU. TEL. *Grewia Rothii*. W. and A. G. *salvifolia*.—*Roxb.* also *Urania lagopodioides*, D. C., the *Doodia lag. R. iii.* 366.

JIDDA, the seaport of Mecca is built along the shore in the form of a long parallelogram, extending almost due north and south. From the sea it has a poor appearance; only a few minarets rise above the houses, which present a long line of mean buildings. Almost every variety of the sons of Shem and Ham has sent its contingent to form the motley population. A most unpleasant sight to the English eye are the crowd of poor Indians, who litter in the streets like dogs; a dirty mat, a cooking-vessel, a water-jar, and heaps of filthy rags form their household furniture; sometimes a low hovel not much larger than a kennel, is constructed of a mat leaning on sticks against a wall, under which the proprietor creeps at night, or during the heat of midday. These Indians are pilgrims who have returned here from Mecca, but being destitute of means to continue their journey, live on alms, a life of

squalid idleness. The number of houses, large and small, may be about 4,000, and the population perhaps reaches 20,000. The revenue arising from the customs is shared between the Sultan and Sheriff; upon which account the Kiaja and the Vizier always attend together, when goods are examined. The trade of Jidda is considerable.—*Niebuhr's Travels, Vol. I, p. 234-5. Hamilton's Sindi, Hedjaz, Soudan, p. 57.*

JIDDOO-KA-DANG, the Joudes of Rennell's map; the Yadu hills high up in the Punjab, where a colony of the Yadu race dwelt when expelled Saurashtra.—*Tod's Rajasthan, Vol. I, p. 61.*

JILO DAR The ordinary muleteers of Persia are great liars and annoy in every possible way. The Jilolar, or chief mule-tee, he who has or holds the bridle, is a very different character.—*Ferrier's Journ, p. 47.*

JILRU CHETIU. TEL. *Calotropis gigantea*.

JILUGA BENDU. TEL. *Aschynomene aspera*.—*Linn. and W. and A. Hedysarum lagenarium*.—*Roxb.*

JIMACH, also called Wokhab. Dr. Francis Buchanan Hamilton, remarking upon the hawking or falconry observed by him in the Shahabad district, mentions that "he saw a jimach attack a very strong falcon as it was hovering over a bush into which it had driven a partridge. The moment the falcon spied the jimach it gave a scream, and flew off with the utmost velocity, while the jimach equally pursued. They were instantly followed by the whole party, foot, horse, and elephants, perhaps 200 persons, shouting and fring with all their might; and the falcon was saved, but not without severe wounds, the jimach having struck her to the ground; but a horseman came up in time to prevent her from being devoured." The *Wokhab* or *Ukab*, as it is also termed, is a small eagle, very abundant in the plains of Upper India, the Dukhun, &c., bearing many systematic names, the earliest of which is *Aquila fulvescens*; it is not quite so large or robust, as the *A. nobiliss* of Africa, with which it has been supposed identical. The wokhab is very troublesome in hawking, after the sun becomes hot, mistaking the jesses for some kind of prey, and pouncing on the falcon to seize it. Mr. W. Elliot once or twice nearly lost 'Shahin' (*Falco peregrinator*) in consequence, they flying to great distances for fear of the Wokhab, or the Jimach. The principal species employed in Indian falconry, are identical with those of Europe; namely, the Bhyri of India, which is the peregrine falcon or *F. peregrinus*, *Gmel.* of the West; and the Baz of India, *Asur palumbarius. Linn.* which is the Goshawk or 'Gentil Falcon' of Britain. In a curious Persian treatise on the subject, by the head falconer of the Mogul emperor Akbar, the various species used are enumerated, and may be recognized with precision: among them is the Shangar, which is clearly the Jer Falcon of the north; represented as extremely rare and valuable, taken perhaps once or twice only in a century, and then generally in the Punjab.

JINGANI. See Kara-chi or Kara.
JIMANDARA TIGE. TEL. *Thunbergia*
ragrans.—*Roxb.*

JINKOR, L. 18° 56' ; L. 73° 14', in the Konkan, 2 miles N. of Choke Fort is 2,065 feet above the sea.

JINSENG. SP. Ginseng.

JINTAN. MALAY. Cumin seed, aniseed.

JANTAWAN. A tree of Borneo, yielding caoutchouc. Its bark is soft and thick. One of these in Borneo, an *Urceola*, grows to the size of a man's body: has a very rough appearance, on being cut emits its sap in the greatest abundance, and without destroying the tree, very large quantities might be obtained from a single trunk. There are three kinds in Borneo, called by the generic name of Jintawan by the natives; two are common in Sarawak, viz., the *J. susuh*, or milky jintawan, and the *J. bulat*, or round fruited jintawan. They equally produce the caoutchouc, which having been analyzed, is found to differ in no respect from that produced by the *Ficus elastica* and other trees. The natives of Borneo use it to cover the sticks with which they beat their gongs and other musical instruments. The fruit, which is large and of a fine apricot colour, contains ten or twelve seeds enveloped in a rich reddish pulp, and though but a jungle plant, is one of the most grateful fruits of the country to the European palate.—*Low's Sarawak, p. 52.*

JIRU KANELI. MALEAL. *Cascaria esculenta.*—*Roxb.*

JIT. De Guignes explains the origin of the Scythians on the Indus, shows what became of them, and affords proof that they were not swallowed up in any of the hindu classes. The people called Yue-chi by the Chinese, Jit by the Tartars, and Gete or Getæ by some European writers, were a considerable nation in the centre of Tartary as late as the time of Tamerlane. In the second century before Christ, they were driven from their original seats on the borders of China by the Hiong-now, with whom they had always been in enmity. About 126 B. C. a division of them conquered Khorasan in Persia; and about the same time the Su, another tribe whom they had dislodged in an early part of their advance, took Bactria from the Greeks. In the first years of the Christian era, the Yue-chi came from some of their conquests in Persia into the country on the Indus, which is correctly described by the Chinese historians. This portion of them is represented to have settled there; and accordingly, when Timur (who was accustomed to fight the Jit in Tartary) arrived at the Indus, he recognized his old antagonists in their distant colony. They still bear the name of Jit or Jat and are still numerous on both sides of the Indus, south-easterly to Delhi and Bhurtপুর, forming the peasantry of the Panjab, the Rajput country, Sind, and the east of Beluchistan; and, in many places, professing the mahomedan religion.

The only objection to the Getic origin of the Jat race is, that they are included in some lists of the Rajput tribes, and so enrolled among pure hindus; but Colonel Tod, from whom we learn the fact, in a great measure destroys the effect of it, by stating that, though their name is in the list, they are never considered as Rajputs, and that no Rajput would intermarry with them. In another place, he observes that (except for one very ambiguous rite) they were "utter aliens to the hindu theocracy." It is a more natural way of connecting the immigration of Rajputs from the west with the invasion of the Getæ, to suppose that part

of the tribe who are recorded to have crossed the Indus at an early period, and who probably were those found in the south by Alexander, were dislodged by the irruption from Scythia, and driven back to their ancient seats to join their brethren, from whom in religion and caste, they had never separated. Jit and Bhakti seem to have been greatly intermingled and the Jit and Gbikar seem to have led a similar Scythic origin. Ferishta calls Rae Sehra and his tribe of Langa, Afghans; and Abul-Fazil says, the inhabitants of Seevee were of the Noomri (fox) tribe, which is assuredly one of the most numerous of the Jit or Gete race, though they have all, since their conversion, adopted the distinctive term of Baluch. The Bhakti chronicles call the Langa in one page Pat'hani, and in another Rajpoot, which are perfectly reconcilable, and by no means indicative that the Pat'hani or Afghani of that early period, or even in the time of Rae Sehra, was a mahomedan. The title of Rae is sufficient proof that they were even then hindus. Mr. Elphinstone scouts the idea of the descent of the Afghans from the Jews; and not a trace of the Hebrew is found in the Pushtoo, or language of this tribe, although it has much affinity to the Zend and Sanscrit. Colonel Tod entertains the conviction of the origin of the Afghans from the Yadu, converted into Yakudi, or 'Jew.' Whether these Yadu are or are not Yuti, or Gete, remains to be proved. The strongest resemblance in the Scythians is in the name of a now obscure tribe called Ilan to that of the horde which the Romans called Ilun; or to that of the great nation of the Turk, once called by the Chinese Hien-nyu or Hiong-niu. The Ilan though now almost extinct, were once of some consequence, being mentioned in some ancient inscriptions; but there is nothing besides their name to connect them either with the Huns or the Hiong-niu. We may admit, without hesitation, that there were Scythians on the Indus in the second century. The white Hun (according to De Guignes) were Turks, whose capital was Organj or Khiva; but his evidence, if admitted, only goes to prove that the name of Ilun was known in upper India: and, along with that, it proves that up to the sixth century the people who bore it had not merged in the Rajputs.—*Elphinstone's History of India*, p. 435, 436, 437, 438. *Tod's Rajasthan*, Vol. II, p. 238.

sprinkled on dough in making bread; it is also called Nari Khoah and Jivani; also, in the Arabic language Talib al Khahz and in Syriac Ninya.—*Barham's-Katia Ouseley's Arabic*, Vol. I. p. 310.

JIVA-PITRA, the 'father of life,' would be a very proper epithet for Mahadev, the 'creative power,' whose Olympus is Kailas.

JIWUL, also Jiyul. BENG. Odina wodier. —*Rowb.*

JIZIAH. AR. A tax by mahomedans on other religionists, applied to Bagor to a house-tax on the inhabitants of towns not engaged in tillage, which is also called Pandree, Jizyah properly means the capitation tax levied on infidels. In Arabia, Bedouins, and even the town chiefs, apply the opprobrious term to black mail extorted from travellers, even of their own creed.

JO. A Burmese people speaking a rude dialect of the Burmese, lying east of Chittagong.

JO. A beverage made from rice or millet and used by the Bodo. The grain is boiled and flavored by a root called agai-chito. It is left to ferment for two days in a nearly dry state. Water is then added and it is fit for drinking in three or four days.

JOA-KA-PHAL. HIND. *Helicteres isora*. —*Linn.*

JOALA MUKHI, or the flame's mouth, caused by a flickering flame from the combustion of gas escaping from the ground. One of these occurs at Badku or Baku, a seaport of the Caspian, where Pottinger thinks it is caused by the vast quantities of Naphtha found there. Another Joala mukhi occurs in the Kohistan, and a town has sprung up on the slope of the hill below the shrine or temple built over the springs. The hill is 500 or 600 feet high. The presiding priest is a brahman from lower Bengal.—*Pottinger's Travels in Beloochistan and Sindh*, p. 165. See Jawala Mukhi.

JOANNES DAMASCENUS, a father of the christian Church who lived at the court of the khalif Al Mansur for whom Abdallah ibn al-Mokaffa had translated the fables of the Panehatantra from Pehlevi into Arabic. Joannes wrote a religious novel called Barlaam and Josephat into which he introduced a number of eastern fables and took his principal hero Josephat from the "Lalita-vistara," the life of the Buddha or enlightened, a portion of the sacred canon of buddhists. The story of Barlaam is, in its most striking points, a mere repetition of the story of the Buddha, and Josephat, the hero of the story, has been raised to the rank of a saint, both in the eastern and western Churches. And thus, though under a different name, the sage of Kapila vasta, the founder

of a religion, which in the purity of its morals is nearer to christianity than any other religion and counts even now, after an existence of 2,400 years, 255,000,000 of believers, has received the highest honours which the Christian church can bestow. If Buddha lived the life which is there described, few saints in the Greek or Roman Churches are the equals of St. Josephat, the prince, the hermit, and the saint.—*Max Muller, in Proc. Roy. Inst. Gr. Brit., June 1870.*

JOASMI, of the maritime chiefs of the Persian Gulf with whom the British Government have concluded treaties are the Joasmi chief of Ras-ool-Khyma and Shargah, the chief of the Ban-i-Aa tribe of Abou-thabee or Boo Debaye, the chief of the Boo Filasa tribe of Debaye a branch of the Buhijn, and the chiefs of Amalgavine and Ejman. The possessions of these chiefs extend from Ras-ool-Khyma along the coast westward beyond the island of Bahrein. They all pay tribute to the Wahabi chief of Nejd, but are really independent. The Joasmi have occupied the province of Seer from the earliest times, carried on a vigorous and profitable trade by sea, till in 1805, they succumbed to the influence of the Wahabi religionists and were drawn into the piratical projects of that turbulent sect. Under their influence the Joasmi plundered two British vessels and treated the Commanders with great cruelty. An expedition was sent to the Persian Gulf to punish them for this aggression and to co-operate with the Imam of Muscat, who was then at war with them. The expedition resulted in the conclusion of a treaty on the 6th February 1806, binding the Joasmi to respect the flag and property of the British and to assist vessels touching on their coast. The spread of the Wahabi in Oman soon threatened the Imam of Muscat with destruction, and the British Government determined to support him and to destroy the piratical fleets as the only means of preserving the peace of the Gulf. A strong British Force was dispatched in 1809, which took Ras-ool-Khyma, Linga, Luft and Shinar and destroyed the boats of the pirates. But piracy soon recommenced. In 1814, the Joasmi tribe wished to be at peace with the British provided they were allowed to war with Arabs. But they were quite unable to make good their professions. Even after the negotiation of preliminary articles of peace with the resident at Bushire, the Joasmi

attacked and plundered British vessels. Other tribes were soon drawn under the Wahabi influence, and piracy increased beyond endurance. A second expedition was fitted out, and sailed from Bombay on the 1st November 1819. The naval part of it consisted of several of British ships of war, and Company's cruizers under the command of Captain T. Collier; and the land forces amounted to about 3,000 European and Native troops, under the command of Major-General Sir William Grant Keir. This expedition reduced Ras-ool-Khyma, the principal stronghold of the pirates, which had been carefully fortified and was vigorously defended; and also the hill fort of Zyah, which was likewise well defended by a veteran Wahabi, deeply imbued with the boldness and character of that sect. Ras-ool-Khyma was taken on 9th December and engagements were made with the Arab chiefs preliminary to the conclusion of a general treaty in 1820. By the 9th article, the carrying off of slaves from the coasts of Africa or elsewhere, and the transporting them in vessels, was declared to be plunder and piracy. Thereafter, it was renewed annually till 1843, when it was prolonged for ten years. On the expiry of the ten years' truce in 1853, a treaty of perpetual peace was concluded, which provided that there should be a complete cessation of hostilities at sea between the subjects of the subscribing parties; Colonel Skianer states (p. 5.) that in his time the greatest part of the western shore of Arabia was in the possession of the Joasmi Arabs, who obstructed by their depredations the commerce of the Persian Gulf. Their principal rendezvous was Ras-ool-Khyma, a town about seven miles south-west of Rums. Mr. Fraser writing about 1821, says the pirates of the Persian Gulf, sailed in large well armed boats and attacked every merchant vessel they met, seldom sparing a captive, but putting to death, with ceremonies of a horrid nature, those who fell alive into their hands even when they surrendered without resistance. He adds that these pirates were of no class of men distinct from the people of the country they inhabited, although a portion of their enterprise and skill may have been imbibed from adventurers, forced by their misdeeds to seek a refuge upon their barren shore; they were, for the most part, men of the Arab tribes, who settled on or near to the sea coast; but came naturally addicted to sea-faring occupations, and, accustomed to a predatory life among themselves, carried with them the same dispositions upon the element which had become to them a second home; they plundered to enrich themselves, and plundered all nations alike. These pirates have been generally known

by the name of Jonami: a corruption from Gohafsin, or Johafsin, the name of a tribe, which was particularly notorious for their piracies.—*Treaties, Engagements and Sanads, Vol. VII. p. 239, 240. Fraser's Journey into Khorasan, p. 5. Skinner's Overland Journey, Vol. ii. p. 223. Job, ch. xxxi. v. 20, 27, 28.*

JOBIE. A high island, 87 miles in extent, off the coast of New Guinea.

JOBOKA. A rude Pagan tribe, on the hills of Asam on the eastern frontier of the Mikir and Cachar. See India.

JOB'S TEARS. Eng. Coix lacrima.—*Linn.*

JOCA. A river near Bareilly.

JODAGIR, or hill of strife, called also the Bakur chiria or bird's nest, a hill in Rajputana with a castle on it.

JODENLYM. Dur. Bitumen.

JODH BAI, was the daughter of raja Maldeo, and sister of Oody Singh of Jodhpore in Marwar. In 1569, Oody Singh gave her in marriage to Akbar, whose favourite she soon became, and a few months after their union, she and Akbar made a pilgrimage on foot to the tomb of Moin-ud-Din at Ajmir. They travelled six miles a day. Arrived there, Moin-ud-Din appeared to Akbar in a dream and bid him seek the interposition of Sheikh Salem, a holy old man who dwelt on the top of Futehpur Sikri. Sheikh Salem assured Akbar that Jodh Bai would bear a son who would live to an old age, and the Bai remained in a hut near the hermit till the promised boy was born. He was named Mirza Selim and was the future Jehangir of Indian history. Much of the good that fell to India, during Akbar's reign is ascribed to the influence of Jodh Bai. She died sometime after A. D. 1600. Her tomb was to be seen on the artillery practice ground at Futehpore Sikri, near Agra till about the year 1840, but the walls and gateways were first taken away and then the tomb destroyed in practising mining. No palliation can ever be urged to defend an outrage on the dead, far less can any plea extenuate the act of blowing up into the air the remains of a woman, no other than Akbar's favorite sultana, the empress Jodh Bai, to whom the people of India owed much of the good they enjoyed under his long reign, by inspiring not only her husband, but the most able mahomedan minister that India has ever had, with feelings of universal benevolence.

Colonel Tod, writing about 1820, mentions the magnificent tomb of Jodh Bai, the mother of Shah Jehan, as at Secundra, near Agra, and not far from that in which Akbar's remains are deposited. Oody 'le gros' was the first of his race who gave a daughter in marriage to a Tartar. The bribe for which he bartered his honour was splendid, for four provinces, yielding £200,000 of annual revenue,

viz. Godwar, Rs. 900,000, Oojein, 2,49,914, Debalpore, 1,82,500, Budaawar, 2,50,000, were given in exchange for Jodh Bai, at once doubling the fisc of Marwar. With such examples as Amber and Marwar, and with less power to resist the temptation, the minor chiefs of Rajast'han, with a brave and numerous vassalage, were transformed into satraps of Delhi, and the importance of most of them was increased by the change. Truly did the Mogul historian designate them "at once the props and the ornaments of the throne."—*Tod's Rajasthan Trav. Hind. Vol. II. p. 8.*

JODHPORE or Marwar is a Rajpoot State which ranks among the States of Rajpootana next in importance to Oudeypore and Jeypore. Tradition ascribes its foundation to Jodha, a descendant of the Rahtore Rajpoot kings of Canauj, who is said to have founded the city of Jodhpore about A. D. 1459, Jodhpore became tributary to the emperor Akbar. The family gave several daughters in marriage to the imperial family and furnished some distinguished generals to the imperial army. It was one of the conditions of this alliance that the chiefs of Jeypore and Jodhpore should regain the privilege of marriage with the Oudeypore family which they had forfeited by contracting alliances with the emperors, on the understanding that the offspring of the princesses of Oudeypore should succeed to the state in preference to all other children. Jodhpore was conquered by Sindhia, who levied from it a tribute of sixty lakhs of rupees and took from it the fort and city of Ajmere. At the commencement of the war of 1803, Maun Sing had just been elected by the nobles to be chief of Jodhpore after a long struggle with his cousin Bheem Sing. Thereafter Jodhpore was ruined by internal disputes regarding the succession of Dhokul Sing, a reputed son of Bheem Sing, and by a disastrous war with Jeypore and then the minister of Jodhpore, terrifying the maharajah into abdication and pretended insanity, and assuming the management of the country himself for two years, ended by plundering the treasury and leaving the country with its resources completely exhausted. Chutter Sing, the only son of the maharajah, assumed the Regency on the withdrawal of Ameer Khan in 1817. In 1824 twenty-one villages in the pergunnahs of Chang and Kot Karana in Mairwarra were made over to the British Government for eight years, with a view of bringing the lawless Meena and Mair races into submission, the maharajah agreeing to pay rupees 15,000 a year towards the expenses of the local corps which was then raised. The engagement was renewed in 1836 for nine years, and seven additional villages were put under British administration. This lease expired in 1843. The maharajah then re-

ceded the seven villages, but expressed his readiness to leave the others under the administration of the British Government for such time as might suit their convenience, and on this unsatisfactory footing the administration of these villages still remains. The desert tract of Mullance also is under the superintendence of the Jodhpore Political Agent. It belongs to Jodhpore, but the feudatories acknowledge the maharajah's supremacy only by paying an annual tribute of Rupees 6,882, which is collected by the Political Agent and paid over to the Durbar. By the 8th Article of the Treaty of 1818 with Maun Singh, the Jodhpore State was bound to furnish a contingent of 1,500 horse. Under this Article a demand was made in 1832 for a force to co-operate against freebooters who occupied Nuggur Parkar. The contingent failed in its duty and proved perfectly useless. In 1835, therefore, the obligation to furnish the contingent was commuted to an annual payment of Rupees 1,15,000 towards the Jodhpore Legion, which was then raised. This Legion mutinied in 1857. Its place is now supplied by the Erinpoora Irregular Force. The commandant of the Force is also Political Superintendent of Sirohee and Magistrate of Mount Abo. Besides the contribution for the Erinpoora Force, Jodhpore pays a tribute of Rupees 98,000, a remission of Rs. 10,000 having been made in 1847, in consideration of the cession to the British Government of the rights of Jodhpore to the province and fort of Omerkote. This province fell to the possession of Jodhpore in 1780, but it was wrested from that State in 1813, by the Talpur amirs of Sind. After the conquest of Sind, Government promised to restore it to the maharajah. But as the fort of Omerkote was a valuable frontier post and the district could not be controlled by Jodhpore, it was considered best for the British Government to retain possession of it, and to give to Jodhpore a money compensation in the shape of remission of tribute. Within a few months after his resumption of power, maharajah Maun Singh put to death or imprisoned most of the chiefs who, during his assumed imbecility, had shown any unfriendly feeling towards him. Maharajah Tukht Singh, ruler of Jodhpore, did good service during the mutinies, received the right of adoption, and is entitled to a salute of seventeen guns. The area of Jodhpore is 35,672 square miles, with a population of 1,783,600. The revenue is about seventeen and a half lakhs, of which about five lakhs are derived from salt. The troops kept up by the State do not exceed 6,000 men. The Political

Agent is also President of the Marwar Interjurisdictional Court of Vakteels, which decides all border disputes arising between Bikaner, Jessulmer, Kisbenghur, Sirohee, Palsanpore, and Jodhpore. The Court is composed of vakteels from these States and from Oudeypore, Jeypore, and Seekur. It meets once a year at Ajmere, Balmere, Nagore, and Mount Abo. — *Treaties, Engagements and Sanads, Vol. IV. p. 41—45.* See India; Rahtor; Maharwar.

JOE-BOE. BURM. *Walsura piscidia.*

JOFI, name of a liquor prepared from sugar cane, among the Teita tribe of Eastern Africa.

JOG. SANS. In hinduism, amongst ascetics, the practice of religious abstraction, with the object of the individual being united to the universal soul and acquiring similar supernatural powers. — *Wilson.*

JOGANNATH. See Jaganath, Sri sampradaya.

JOGI or Yogi, is a term properly applied to the followers of the Yoga or Patanjala school of philosophy, which, amongst other tenets, maintained the practicability of acquiring, even in life, entire command over elementary matter, by means of certain ascetic practices consisting of long continued suppression of respiration and other puerilities, such as fixing the eyes on the top of the nose. Individuals are still met with, who thus strive to effect a union between the portion of vital spirit residing in the body and that which pervades all nature, and the hysterical hallucinations which follow give airy notions a local habitation and a name. It was practised in India, so early as the eighth century. In the temples of Salsette, Elephanta and Ellora, the principal figure is mostly Siva, decorated with ear-rings, such as are worn by the Khanphata Jogi sect. The walls are covered with ascetics in the various Asana or positions in which the Yogi is to sit. The cells attached to some of the temples are also indicative of Jogi residence and one of the caves of Salsette is named that of Jogiswara or Siva, as Lord of the Jogi. The Jogi sect of Gorkanath are usually called Kanphata, from having their ears bored, and rings inserted into them at the time of their initiation. They may be of any caste and live as ascetics in Maths. Siva is the object of their worship. They officiate indeed as his priests, especially at the celebrated Lat of Bhairava at Benares. They mark the forehead with a transverse line of ashes and smear the body with the same; they travel in a cap of patch work, and garments dyed with red ochre. Some simply wear a dhoti or cloth round the loins. The Saringhiha are a Jogi sect who use the saringhi or hts. and bag in the name of Bhairava. Another sect is the

Dunghara, from their peddling in thread to the housewives of the villages; and the Matsyandri or Maschadri, from Matsyandri whom they regard as their founder, are a third sect, and a fourth is the Bharthari. They are all ascetics. In the Dekhan, however, the Jogi, are usually tall and well formed men, devotees, who never resort to manual labour to gain the means of livelihood but earn a subsistence by begging and selling small articles of merchandise. They, there, seem to be arranged into twelve orders:—

1. Dubray Jogi or Bal santa ka Jogi.
2. Khani bhai; tie heavy stones to their body, and beg and sell medicines.
3. Launghoti jogi, or Juggai jogi, are merchants, selling beads.
4. Kan phata jogi, or Sonari jogi, live in temples and are the priests.
5. Tingri ka jogi, musicians, performing on the tingri.
6. Soce pat bechne-wala jogi, sell beads of coral, &c.
7. Mendiki jogi, beg by beating on the tambourine.
8. Shan ka jogi.
9. Kalghari bechne-wala jogi, sell the drip-stones, which the caste of Dóombur make for brahmins.
10. Thugganes jogi, sell wooden trays made by carpenters near Dharwar.
11. Chako, or Katti jogi, sell knives and scissers.
12. Dubbray hajani-wala, beat a kind of tambourine.

The jogi have olive yellow complexions, are generally tall, dressed in clothes dyed red from the "geru," ochre or red earth, and have rings in their ears, which are put in when they reach maturity. No stranger can be admitted into the jogi sect, the children by marriage alone being considered Jogi. About 2,000 reside in the peninsula of India. The Dubbray Jogi, Kalghari-bechnewala, and Thugganes, intermarry and eat together, and are considered of the same origin, their occupations alone differing. The other divisions keep to themselves. Their ruler, in the Dekhan is styled "Nat'h Bawa;" he is a Gooru or spiritual leader. The Nat'h Bawa lives in a house or temple called a Mat'h, and in the southern Mahratta country one lives at Kittoor and one at Hullyhul. The authority of the Nath Bawa is supreme and he fines and dismisses delinquents from the community. He never marries; but adopts a child and successor while in life. The language said to be used by the Jogi throughout India, is the Mahratta: very few of them can either read or write. They dwell in huts made of the Karbi. They eat the deer and hare, the Mendiki jogi

even eat the cow, and all use intoxicating drinks. Animals that die of natural death are also used by them as food. They never labour for a subsistence, but in selling small articles of merchandise and begging, they roam from village to village. Their modes of obtaining alms are extremely varied. The Khant Bhai, demands alms, if refused ties his lengthened body to the latch of the door; and many Jogi use musical instruments to sing to, and attract attention. The women make rings, beads, and toys for sale. They never devote their women to the gods. Their marriages take place in early youth, and cost about fifty or sixty rupees: two or three wives are sometimes in one household. The dead of the sect are buried by the Vesya caste. In Persia, the term Jogi or Yogi is given to this particular sect of Indian religious mendicants, and to pilgrims who often wander beyond the bounds of their own country, and are occasionally seen in Persia, on their way to Bakhah, or certain other places of religious pilgrimage. Thus in Persia, the appellation becomes applied to all religious mendicants from that country of whatever sect. In Mewar they can always muster many hundreds of the Kanfara, or Kanphatta Jogi, or 'split-ear ascetics,' so called from the habit of piercing the ear and placing therein a ring of the conch shell, which is their battle trumpet. The Bhartri-Hari-Jogi mendicants, profess to have been instituted by Bhartri-Hari, brother of Vikramaditya in the century before Christ. The generation has passed away, who saw the remarkable Mahapurush at the Ghosaul's of Kidderpoor. He was apparently a man about forty years of age, with a very fair complexion, and jet-black hair. He did not eat or drink anything, nor speak a word, but remained in a sitting posture, with his legs and thighs crossed, absorbed in meditation. In 1867 there was a Jogi sitting in one of the caves of Ellora, who had sat there for five years and the people were unaware who brought him food. Garments coloured with geru, or red ochre are worn by all classes of mendicants, and a little horn is often suspended around the neck. The Moodra is a round prickly seed worn by the ascetics as ear-rings. The Kan Phutta Jogi wear a large metal ear-ring. The Jogi's patera is a hollow gourd, that of the divinity Hari (the god of war), is the human cranium.—*Fraser's Journey into Khorasan*, p. 394. *Wilson's Tr. of Hind. Vol. I. p. 48. JOGINI TANTRO, a work of high repute in Assam, as its contents are supposed to have been communicated by Siva to his consort Parvati. It states, regarding the king Nasuk,

that though an "Osh" or infidel, he was in such favour with the gods, that they made him the guardian of the temple of Kamikhya. It is not improbable, that the temple was originally erected by Neroh; but of this we have no certain evidence.—*Beng. As. Soc. Jour. Nov. F. of 1835.*

JOONI. *See* A murli.

JOOTAN. *See* Sabu.

JOGYAN. *Hind.* Wheat of red and white sorts sown together.

JOHAN. *See* Kelat.

JOHAR. A general sacrifice in war to which the Rajput resorts when pressed by overwhelming numbers. On one occasion, when Jeallmeer was so pressed Colonel Tod relates that Moolraj and Ruttun repaired to the palace of their queens and told them to take the sohar, and prepare to meet in heaven, while they gave up their lives in defence of their honour and their faith. Smiling, the Soda Rani, replied, "this night we shall prepare, and by the morning's light we shall be inhabitants of swarga" (heaven); and thus it was with the chiefs and all their wives. The night was passed together for the last time in preparation for the awful morn. It came; ablutions and prayers were finished, and at the Rajdwara were convened bala, pride and bridd. They bade a last farewell to all their kin, the Johar commenced, and twenty-four thousand women and girls from infancy to old age, surrendered their lives, some by the sword, others in the volcano of fire. Blood flowed in torrents while the smoke of the pyre ascended to the heavens: not one feared to die, every valuable was consumed with them, not the worth of a straw was preserved for the foe. This work done, the brothers looked upon the spectacle with horror. Life was now a burthen, and they prepared to quit it. They purified themselves with water, paid adoration to the divinity, made gifts to the poor, placed a branch of the tree in their casques, the saligram round their neck; and having eased themselves in armour and put on the saffron robe, they bound the mor (crown) around their heads, and embraced each other for the last time. Thus they awaited the hour of battle, and three thousand eight hundred warriors, with faces red with wrath, prepared to die with their chiefs. Several instances of the awful rite of Johar, when a whole tribe may become extinct, have been recorded in the annals of Mewar, the object of it being undoubtedly to prevent the women falling into the hands of the enemy. To the women of Europe the fate of the Rajpootni must appear one of appalling hardship. In each stage of life, death is ready to claim her; by the poppy at its dawn, by the flames in riper years; while

the safety of the interval depends on the uncertainty of war. The loss of a battle, or the capture of a city, is a signal to avoid captivity and its horrors, which to the Rajpootni are worse than death. It is singular that a nation so refined, so scrupulous in its ideas with regard to females, as the Rajpoot, should not have entered into some national compact to abandon such proof of success as the bondage of the women. When the foe was the Tatar the Johar might have been pardonable, but the practice was common in the international wars of the Rajpoots; and there are numerous inscriptions on stone and on brass, which record as the first token of victory the captive wives of the foe-man. When "the mother of Sisera looked out of the window, and cried through the lattice, why tarry the wheels of his chariot, have they not sped? have they not divided the prey, to every man a damsel or two?" gives a perfect picture of the Rajpoot mother expecting her son from the foray. The Jewish law with regard to female captives was perfectly analogous to that of Menu; both declare them "lawful prize," and both Moses and Menu establish rules sanctioning the marriage of such captives with the captors. "When a girl is made captive by her lover, after a victory over her kinsman, marriage is permitted by law." The forcible marriage in the hindu law termed *Racchasa*, viz. "the seizure of a maiden by force from her house while she weeps and calls for assistance, after her kinsman and friends have been slain in battle" is the counterpart of the ordinance regarding the usage of a captive in the Pentateuch, excepting the "shaving of the head," which is the sign of complete slavery with the hindu. When Hector, anticipating his fall, predicts the fate which awaits Andromache, he draws a forcible picture of the misery of the Rajpoot; but, to prevent such degradation, the Rajpoot had recourse to the Johar, or immolation of every female of the family. The very term widow (*rand*), is used in common parlance as one of reproach. The rule for the Jews (*Judges*, v. 28, 30) *Deuter*. 21, 10-13. "When thou goest forth to war against thine enemies, and the Lord thy God hath delivered them into thine hand, and thou hast taken them captive and seest among the captives a beautiful woman, and hast a desire unto her, that thou wouldest have her to thy wife; then thou shalt bring her home to thine house, and she shall shave her head, and pare her nails; and she shall put the raiment of her captivity from off her, and shall remain in thine house, and bewail her father and her mother a full month: and after that thou shalt go in unto her, and be her husband, and she shall be thy wife."—*Pennant's Hindustan*,

JOHIA, a Rajput tribe some of whom have become mahomedans. They were formerly near Allahabad. See Daood-putra.

JOHN, Dr., the founder of the Missionary botanical garden at Tranquebar, into which were introduced many plants, chiefly of the peninsula, but also from Ceylon.

JOHNUS, a genus of fishes, several species of which furnish isinglass.

JOHORE, formerly the chief city of the empire of that name and residence of the sultan, is situated about twenty miles up the river so called. The town was founded in 1511 or 1512 A. D. by sultan Mahomed Shah II. of Malacca who, after his expulsion from that place by the Portuguese, fled to the river of Johore. From that time the town of Johore has been the capital of the empire which took the name of the empire of Johore instead of that of Malacca, and up to 1810, there had succeeded 14 princes. Johore is the residence of a Panghulu who is appointed both by the sultan of Johore and by the tumungong of Singapore. It is now the generally received opinion that Johore derived its population from Menangkabau. Vanderworm in 1677 and Valentyn in 1727 gave correct though imperfect digests of the *Sijara Malayu* and other Malay histories. Marsden in the 3rd edition of his history of Sumatra retracted his previous opinion that the Malays of Sumatra had emigrated from the peninsula, cited the account in the *Sirja* correctly from Valentyn and Vanderworm, but added an ingenious conjecture of his own that the Maha Meru of the Malay historians was the mountains of Sungei Pagu in the Menangkabau country, and that the adventurers who established Singapore were from the Suku Malays in that country "one of the four great tribes." Mr. Crawford adopts this conjecture and, misled by Marsden's loose transcript comprehension of Valentyn's notice of the Suku, tells us that the parent race, that is the Menangkabau, consist of these four tribes, the fact being that they are the Suku not of Menangkabau but of the country of the Sapulobua Bender to the south, which lies around Gunong Sungi Pagu. In Marsden's and Raffles' maps of Sumatra, the inland part of this country is a perfect blank, the name being erroneously confined to its maritime division. The number of Suku or clans is very great and their names are various. Thus the Malays of Pandang belong to eight distinct Suku, one of which is also named Malayu. But Mr. Crawford does not rest his

opinion merely on Marsden's misinterpretation of the Dutch authorities. This great authority goes further, and declares that we may believe the universal assertion of the Malays themselves that all the Malayan tribes, wherever situated, emigrated directly or indirectly from Menangkabau. Enquiries, however, show that neither the Malay histories, nor the belief of the Malays, support the opinion that Singapore was founded by a swarm thrown off by the inland people of Menangkabau itself. Singapore, as stated in the text, was founded by Malays from Bentan, and the Malay of the peninsula at this day so far from considering the orang Menangkabau, including those of the Sungei Pagu Malays, as orang Malayu, regard them as a distinct though allied people. Although there can be no doubt that both originated from the same stock, there are differences in manners, institutions and even to a certain extent in language, which, even without reference to their traditions and opinions, would render it doubtful to any mind, that the Malays of the principal states of the peninsula are descended from the orang Menangkabau. The existence of a Suku Malayu in Menangkabau, which is the foundation of Marsden's conjecture, proves nothing in itself as to the origin of the word, because if a considerable number of Malay from Sungei in Plembang resorted to Menangkabau the rulers of the latter would have placed them in a separate Suku. The same policy is followed by the Menangkabau race in the peninsula and both there and in Sumatra, the Suku are generally named from the places where the clan had its first origin. The Menangkabau traditions derive their kings, and even the first inhabitants of Sumatra, from the country extending from the Plembang to the Indragiri, and Malay histories relate that Sangsapurba from Plembang, after visiting Java and Bentan, ascended the Indragiri or Kuantan and was chosen by the Menangkabau people for their king. Plembang did not even form part of the region over which Menangkabau extended its dominion in ancient times. Mr. Marsden's conjecture that by Maha Meru or Bukit Saguntang-Guntang, the mountain of Sungei Pagu is to be understood, requires no other comment than that it is a mere supposition, unsupported by evidence, and contradictory of the Malayan histories which were his only authority for a derivation of the Malay of the peninsula from Sumatra. As this eminently candid and sagacious author had only seen the Dutch abstracts of these histories, he could not have been aware of the extent to which his hypothesis departs from them. The Bukit Saguntang-Guntang is in Plembang and is now known by the name of Bu;

kit Se buntang. It may probably be shown hereafter that the name Malayu having been carried by the clan to Singapore, and thence to the other maritime Malayan states subsequently formed, came to be applied by foreigners to all the people speaking the same or a similar language. At the time when Marco Polo visited the Archipelago the name appears to have been still confined to the first maritime state, which he calls Malaicur. The primitive Malay stock of Sumatra, from which all the civilized tribes were derived, appears to have been the rude tribe still scattered over the interior, from the southern limits of the Batta country to the extremity of the mountain ranges. From this stock, civilized tribes probably originated not only in Menangkabau but in other parts of the great region extending from the Pakan to the straits of Sunda, and which from its possessing all the large rivers as well as the richest inland valleys of Sumatra, would be favourable to civilization. The evidences of the language are almost decisive on this point. The people on the most southern of these rivers, the Talang Bawang, although so near to Java, preserve Malay as the bulk of their vocabulary. The same remark appears applicable to the people on the next river, the Plembang, with the exception of the greater number of the inhabitants of the capital who are of Javanese extraction. At the time when Sang Nila Utama left Plembang, the people were Malayan according to the Sijara, a fact which the history of the Javanese confirms, for they inform us that the Javanese colony which settled at Plembang left Java in the reign of the last king of Majapahit, or in the latter half of the 15th century. The people of the hilly country along the western coast from which the feeders of the Plembang are derived, also speak dialects essentially Malayan, and having a slight mixture of Sundanese. The people of the other rivers to the north, the Jambi, Indragiri, Kampar, Siak and Rakan, are Malay. It is this whole region, and not merely the small country of Menangkabau in its N. W. corner, that may be regarded as the primitive land of the Malays. The people on all its rivers must have had some intercourse with the Peninsula and the Johore Archipelago from times long before the foundation of Singapura, but whether for centuries or thousands of years it is hardly possible that we shall ever know. In all points in which the Peninsular Malays differ from the inland and purely agricultural Malays of the region in question, they assimilate to its river and maritime Malays, and Malay history does not go back to a period when the maritime Malays were entirely confined to Sumatra. The Johore Archipelago was probably inhabited from a very remote

period, anterior even to the existence of any race in Sumatra, by a maritime branch of the same people, radically Malayan, who are now found in the interior of the Peninsula and of the southern half of Sumatra. Several tribes in various stages of civilization, still possess the Johore islands. Though little known to Europeans they can never have been without Malay or Hindu-Malay visitors, for it was by the great rivers of Plembang, Jambi, Indragiri and Kampar, before whose embouchures these islands lie, that the hindus of Ceylon and southern India must have gradually carried civilization into the interior of southern Sumatra. The Indragiri, in particular, appears to have been crowded with Hindu-Malay settlements, many of the numerous villages on its banks retaining purely Hindu names to this day. It was by this river probably that they reached the fertile plain of Menangkabau. We are inclined to think that the Malays on this river must have attained a certain civilization, in advance of the wandering mountain tribes, even before the hindus came. If any colonies of the latter settled in the country they must have been few in their numbers or unaccompanied by women, for the present inhabitants, unlike the eastern Javanese, preserve no physical traces of Indian descent. It is very conceivable that Hindu merchants remaining in the country for a time and unaccompanied by women, like the Kling at this day, would be led to marry the daughters of the native chiefs, assume political power, obtain priests and architects from India and engraft on the old republican-oligarchical governments of the land semi-hindu monarchical dynasties, the representatives of which, at each generation of descent, would depart further from Indian type, till all physical trace of foreign blood was lost. The Hindu-Javan influence was probably more modern and comparatively transient. The Menangkabau race are a purely agricultural, mining, and inland trading people, and consequently when they began to emigrate to the Peninsula their proceedings were precisely the reverse of those of the Singapore colonist and indeed of all other Malays. They passed through the maritime districts, and sought valleys amongst the mountains of the interior. This fallen empire is nominally bounded by the Cassang river on the W. coast, and by Kemaman on the E. coast in lat. $4^{\circ} 15' N$. The Sultan of Johore's present possessions on the peninsula are subdivided into several petty states—First, that of Muar, extending from the Malacca territory to Parrit Siput, including a large river of the same name, and an island district called Segamet. This is under the immediate rule of the tumungong of Muar, a chief residing at Pancalang Kota, on the river.

JOHYA.

J. I. A. No. VIII. August 1848, p. 518, Oliphant. Newbold's British Settlements, Vol. II. p. 41-42. See Binua; India; Jakun.

JOHORE ARCHIPELAGO. This extensive archipelago is formed by the prolongation of the plutonic zone of elevation of the Malay Peninsula from Singapore to Billiton. The islands, with the exception of a few of the most southerly, formed the insular part of the kingdom of Johore from the 13th century till the occupation, in 1820, of Singapore.

JOHORE RIVER is more than half a mile wide with 12 to 8½ fathoms water.

JOHYA, a Rajput race, in the tracts about Pakpattan, along the Sutlej. The Johya, Dahya and Mangalya races, once hindus, are now mahomedans, but are few either in the valley or desert, as also are the Baluch-Bairawi, a class of Baluch, Khairawi, Jangria, Oondur and Baggria, descended from the Pramur and Sankla rajpoots. By some authorities the Johya are included among the thirty-six royal races of India; by others they are considered a mere ramification of the Yadu Bhatti and Colonel Tod calls them a Jet race. Some of the Joodi and Johya inhabit the range called in the native annals Juddoo-kadang, and by Baber the hill of Jud, skirting the Behut. The position of Behera is laid down in the memoir of Rennell, who calls it Bheera, in 32° N. and 72° 10' E.; and by Elphinstone in 32° 10', but a whole degree further to the east or 73° 15'. This city is often mentioned in the Yadu Bhatti annals. It was one of their intermediate places of repose, on their expulsion from India and migration to Central Asia. Its position was minutely pointed out by the emperor Baber (p. 259), who in his attack on the hill tribes of Jit, Goojur, Guker, &c. adjoining Kashmir, "expelled Hati Guker" from Behreh, on the Behut river, near the cave-temples of Garkotri at Bikrum," of which the annotator remarks that they, as well as those of But Bamian were probably buddhist. Baber (p. 294) also found the Jit masters of Sialkote, most likely the Salpoor of the inscription (Vol. I. p. 803), conquered from a Jit prince in the twelfth century by the Patan prince, and presumed to be the Sajbahanpoor founded by the fugitive Yadu prince of Gujni.

The Johya, Dahya, and Mangalya, once found amongst the Rajput tribes, are now proselytes to mahomedanism. There are also Barrowi, a class of Balooch, Khairawi, Jangrea, Oondur, Baggreah, descended from the Pramur and Sankla Rajpoots, but not possessing, either in respect to numbers or other distinctive marks, any claims to attention. Colonel Tod mentions that, from the Johya, in one of the districts of

JOHTAN.

Bikaner (amongst whom some traditions of Alexander the Great are preserved) a book of the Johya was sent him by the prime minister of Jessulmer.—*Tod's Travels, Vol. XIV, p. 45; Tod's Rajasthan, Vol. I, p. 19, Vol II, p. 298, 289 to 330. Erskine's Life of Buder, pp. 259, 294.*

JOINA. SANS. from Jinu, to conquer or excel.

JOINT-FIRS, a name of the plants of the natural order Gnetaceæ of Lindley.

JOINT GRASS, Mr. Bonyngé, says this grass is not generally known in India. He never met with it in the south, north-west or in Bengal. It grows in the Tartar country; generally in the margins of forests, where there may not be too much shade; a forest being partially cleared, it springs up in places where it perhaps never existed before, or if it did, not for centuries past. The grass will run to a length of some fifteen feet, and will rise if there be any support, five or six feet; if not will grow up some three or four feet by its own support. It is not a wiry grass, the joints are some six or eight inches long; with four or five blades of grass about the same length growing out from each joint. The joints near the ground are hard and brittle—those near the top soft and juicy—with a luxuriant termination of soft blades similar to those from each joint, but are softer and thicker. He found that cattle browsing on this grass, became as fat as if fed on gram.—*Bonyngé's America, p. 159. See Graminaceæ.*

JOISHT'HA. SANS. Jyesh't'ha, a planet.

JOIVATRIKA. SANS. from jiv, to live.

JOJAR, HIND. Tephrosia purpurca.

JOJH, HIND. Alhagi maurorum.

JOJRE, HIND. Xanthium strumarium.

JOJY, the eldest son of Chengis Khan, received from his father, the sovereignty of the vast territory of Dasht-i-Kapchak.—*Markham's Embassy, p. 84.*

JOKATI. TAM. Gomphia angustifolia.—*Vahl.*

JOKI, a nomade Baluch tribe in the hills west of Tatta, their chief is termed the Jam.—*Burnes' Kabul.*

JOKTAN, or Kah'tan, son of Heber, his descendants are termed al Arab al Araba or pure Arabs. Kahtan was the first in the land of Yemen to wear a diadem. Arabians are divided by native historians into two distinct races, the posterity of Kahtan or Joktan, the son of Heber, who were termed al Arab al Araba, the pure Arabs,—and the race of Adnan, the lineal descendants of Ishmael, who were called mixed Arabs, or Arab al Mostaraba. The latter were intermixed with the descendants of Jorhan, one of

the sons of Kahtan, and occupied the district of Hejaz, and from them were descended the tribe of Koresh. Kahtan was the first that wore a diadem in the land of Yemen, and his great grandson Abid Shams or Saba was the first of the Arabian kings who undertook warlike expeditions and enriched his country with the spoil of his enemies, and is said to have received the name of Saba from the numerous captives whom he brought into Yemen. Kahtan was succeeded by his son Yarab, who was the first to speak the language and introduce the ceremonials of Arabia. Amongst the sons of Saba or Abid Shams, were Hamyar, Amru, Kahlan and Ashaar. Hamyar was the first of Kahtan's descendants who reigned over the whole of Yemen. He drove the remains of the tribe of Thamoud out of Yemen into Hejaz, and was one of the bravest, most skilful and handsomest men of his time. Hamyar signifies red, and he is said to have received this name from the colour of his garment and to have been the first king of Arabia who had a crown of gold.—*Early Christianity*.

JOLAH. CAN. Sorghum vulgare.—*Pers.*

JONAH, a prophet of the Hebrews, who sailed from Joppah. The ruins opposite Mosul are called Nabi Yunus and Koyunjik. A sketch showing the tomb of Jonah is given at p. 131, vol. I. of Layard's *Nineveh and its Remains*. Ricold of Montecroce also mentions the traces and ramparts of Nineveh, and a spring which is called Fount of Jonah. The prophet suffered grievously from the easterly wind. This is the sherki so much dreaded in all these countries, which is hot, stormy, and singularly relaxing and dispiriting.

The place of the sepulchre of the prophet Jonah is uncertain. Mr. Layard tells us that the Jews, in the time of St. Jerome, pointed out the sepulchre of Jonah, at Gathhepher, among the tribe of Zabulon. He adds that the ruins in Assyria and Babylonia, chiefly huge mounds, apparently of mere earth and rubbish, had long excited curiosity from their size and evident antiquity. They were at the time the only remains of an unknown period of an age antecedent to the Macedonian conquest. When the inhabitants of the neighbourhood pointed out to him the tomb of Jonah upon the summit of one of them, it was natural to conclude, that it marked the site of the great Nineveh. But this tradition as to the site of the tomb of Jonah is not supported by Scripture. Though now received by christians and mahomedans, it probably originated in the spot having been once occupied by a christian church or convent, dedicated to the prophet. The building, which is supposed to cover the tomb, is very much venerated, and only mahomedans are allowed

to enter it. Kinneir remarks that on the opposite bank of the Tigris, and about three-quarters of a mile from that stream, the village of Nunia, and sepulchre of the prophet Jonah, seem to point out the position of Nineveh, the largest city, perhaps, that ever existed in the world. Its origin is ascribed by profane writers to Ninus, and in the Scriptures to Ashur, the son of Shem, or Nimrod, the son of Cush. The history of this metropolis is lost in succeeding ages. It would seem gradually to have fallen into decay after the building of Babylon: and, in the reign of Adrian it was so completely destroyed, that even the place where it stood was unknown.—*Kinneir's Geographical Memoir*, p. 258-59. *Layard's Nineveh and its Remains*, Vol. I, p. 22, 131, 138. *Yule's Cathay*, Vol. II, p. 351. *Rich. Residence in Kurdistan*, Vol. II, p. 35.

JONAKHAR. A tribe of people, also called Labbycal.

JONANGI. TEL. The mahomedan Labbi tribe.

JONES, Sir W. A learned orientalist, author of Remarks on Dr. Hunter's astronomical observations made on journey to Oojein.—*As. Res.* Vol. iv. 159. Ashoka is a Sanscrit word, from "a" not, and soka, sorrow. The Ashoka tree grows throughout India, its small orange, scarlet flowers appear in March and April and the fruit in August and September. It is often referred to by Hindoo poets, and Dr. Roxburgh says, "when this tree is in full blossom, I do not think the whole vegetable kingdom affords a more beautiful object."

It has a beautiful flower diversified with orange, scarlet and bright yellow tints. In hinduism it is consecrated to Siva and is often planted near temples,—as the lotus flower, called Kamala or Padma, is sacred to Vishnu and his wife Lakshmi; a sweet scented jasmine (*J. undulatum*) to Vishnu and to Mariamma, the goddess of the pariah or servile races; the superb crimson *Ixora* *bandhuca* is offered at the shrines of Vishnu and Siva, and the *Nauclea cadamba* a stately tree, yields, in the hindu belief, the holiest flower in India. The Ashoka is one of the most beautiful of Indian trees. Sir W. Jones observes, that "the vegetable world scarcely exhibits a richer sight than an Ashoka tree in full bloom. It is about as high as an ordinary cherry tree. The flowers are very large, and beautifully diversified with tints of scarlet, of pale yellow, and of bright orange, which form a variety of shades according to the age of the blossom." It grows abundantly in Ceylon. In Hindu poetry despairing lovers very commonly address objects of nature, clouds, elephants, and birds, on the subject of their lost or absent mistresses, and the Ashoka tree is often invoked.

In some places, in India, it is more esteemed than at others. The women bathe in some holy streams with the blossoms floating in it. The hindoos say that the contact of the stem of the Ashoka tree with the foot of a woman of superior beauty, is supposed to make the tree blossom. This tree is often alluded to in Select Specimens of the Theatre of the Hindoos, translated by Mr. Wilson. In the 'Toy Cart,' Maitreya says, describing a garden—"and here the Ashoka tree with its rich crimson blossom, shines like a young warrior bathed in the sanguine shower of the furious fight." Captain D. L. Richardson, (*Flowers and Flower Gardens*, p. 189) says that its small yellow flower is eaten by young hindu women as a medicine. Voigt also says its flowers are of an olive yellow colour. These differences as to the colour of the flowers arise from their changing during development. When they first expand, they are of a beautiful orange colour, gradually changing to red, forming a variety of beautiful shades. They are fragrant during the night. Coleman says that men and women of all classes ought to bathe, on

a particular day, in some holy stream; especially the Brahmaputra, and drink water with buds of the Ashoka floating in it. Sita is said to have been confined in a grove of the ashoka tree, while in captivity by Ravana: other relaters say she was confined in a place, or house called Asocwan.

Dr. Wallich found the *Amherstia nobilis* growing beside a Jonesia, and its symmetry, and numerous bunches of red and orange flowers certainly entitle it to companionship with that celebrated tree. Gaudama, it is said, was born under this tree; and within the fall of its shadow, he delivered his first harangue, "At the instant of his birth," say the Burman sacred books, "he walked seven steps, and with a voice like the roaring of the king of lions he exclaimed, 'I am the most excellent of men; I am the most famous of men; I am the most victorious of men.'"—*Mason's Tenasserim. Coleman's Mythology. Lady Falkland's Chow-Ohow. Richardson's Flowers and Flower Gardens. William's Story of Nala*, page 117. *Roxb. Flora Indica*, II, p. 218, 220. *Eng. Cyc. Vol. III*, page 303. See the Megha-duta, the 4th Act of the Vikramorvasi and the 9th Act of the Malati M'adhava.

JOMBI. JAV. Areca catechu.

JONG. A river near Kuthol in Nagpoor.

JONGRA. TEL. *Curcuma montana*.—*Roxb.*

JONK. GUZ. HIND. *Hirudo medicinalis*, the leech.

JONNA. TEL. SING. Jonnalu. TEL. Plural Sorghum vulgare. Pers. the Andropogon sorghum of *Roxb.*

JONZULKI. PERS. *Gardenia dumentorum*.

JOOA. HIND. The yoke of a carriage or plough. The word yoke is preserved in many of the Indo-European languages, thus, Sanscrit Yug, Persian Yogh, Greek Zeugos, German Joch, Latin Jugum, Russian Igun, English Yoke.—*Elliot*.

JOOAR, a pass in Kunawer.

JOOAR also Juari, HIND. Sorghum vulgare.

JOOBBA. HIND. An outer coat worn by mahomedans. See Jub'ha.

JOOBUL. A Rajpoot state, originally tributary to Sirmoor, but after the Goorkha war it was made independent, and the rana received a sunnud from Lord Moira on the 18th November 1815. The revenue is Rupees 13,000 and the population, 17,362 souls. The rana pays Rupees 2,520 tribute, and is bound to render feudal service.—*Treaties*.

JOODI, some of this tribe and the Johya tribe inhabit the range called Juddoo Ka Dang, and by Baber the hill of Jud.

JOOGNI-CHOOKUR, HIND. *Gmelina arborea*.

JOOGAR also Joojar. HIND. A monument raised by the Rajpoots to the memory of soldiers slain in battle. Colonel Tod, writing of one of these, says his body was carried to Ranolli and burnt, and he had his cenotaph amongst the Joojar (those slain in battle) of his fathers.—*Tod's Rajasthan, Vol. II. p. 416.*

JOOI. BENG. Pavetta tomentosa.

JOOIN. BENG. Jasminum auriculatum.

JOOIN-PANA. BENG. Rhinacanthus communis.

JOOLWA. HIND. Amongst mahomedans a matrimonial ceremony.

JOOM. BENG. Garuga pinnata.

JOONAGURH, although now inhabited, presents much the same character as described by Abulfazil centuries ago. It is encircled by a belt of deep forest, several miles in breadth.—*Tod's Travels, p. 361.* See Girnar; Khengar.

JOOND BEDUSHTAR. PERS. also Ashbutchegan. ARAB. Castor.

JOONG. A nuddy near the Ung nuddy in Hazareebagh.

JOONNADY. HIND. Lace bordered. See Cloths.

JOOLI-KUNKA. BENG. Panicum Roxburghii.

JOORA or Jura. HIND. A rope of twisted grass, or twine made to support a round bottomed jar. It is called also Indoree, Endhoos, Chukwa, Gooruree, Gindoree and Goduree.—*Elliot S. G.*

JOORDUK, a pass in Afghanistan, near which is the Buhadur Kheil. At Bahadur Kheil, Lutumur and Kharrah are the three Trans-Indus mines.—See Khyber.

JOORIE, A river of Sylhet.

JOORKE or JURI. HIND. From Jorna to join, a small bundle of sugar-cane. The tops of the Jooree are brought home on the Ekadushiee of Katik and are kept suspended from the roof of the house till the Holce, and burnt during that festival. See Di'thwun.

JOOHIKA. BENG. Jasminum auriculatum.

JOOTI. HIND. Shoes. Jootee-ka-Jora, also jora. HIND., a pair of shoes.

JOOYAR. BENG. Sorghum vulgare.

JOOZ. HIND. A section of a book, what printers technically term a sheet.

JOOZ-UL-KUEH. ARAB. Randia dumetorum.

JOOA, a river of Bareilly.

JOQINI TANTRO, a work of high repute in Assam, its contents are supposed to have been communicated by Siva to his consort Parbati. It is stated, regarding the king Norok, that though an "Osur" infidel he was in such favour with the gods that they made him the guardian of the temple Kamikhya. It is not improbable, that the temple was origin-

ally erected by Norok, but of this we have no certain evidence. The assertion made in the Tantro, however, would, at least, lead us to suppose that the temple was in existence in his day.—*Jour. As. Soc. of Ben. No. I of 1855. Robinson's MS.*

JOR. HIND. Union. Jora, a pair; a pair of shoes, a married couple, Joru a wife, a suit of clothes.

JORDAN. A river that flows from Lebanon, southward, for 100 miles, till it enters the Dead Sea. The valley of the Jordan opens to the east, beyond which the eye loses itself in the desert of Haouran. Haouran is a term applied to any solitude, whether barren or fertile, and sometimes applied to extensive pasture lands. Haouran is the Auranitis of Josephus, and the Ituria of St. Luke. The countries south of Damascus, viz., the Haouran, the rocky wilderness of the Ledja and the mountainous district lying east of the Jordan, collectively speaking formed the country, which was first conquered by the Israelites before the subjugation of the Land of Canaan, and was allotted to the tribe of Reuben, Gad, and the half tribe of Manasseh. In the time of the Romans nearly the whole was comprised under the district called Perma, which was itself divided into the six cantons of Abilene, Trachonitis, Ituræa, Gaulonitis, Batanæa, and Perma, strictly called; to which some geographers have added Decapolis. Abilene was the most northern of these provinces, being situated between the mountains of Libanus and Anti Libanus, and deriving its name from the city of Abila or Abela. Trachonitis was bounded by the desert on the east, Batanæa on the west, Ituræa on the south, and the country of Damascus on the north, and included the rocky district now called El Ledja. Ituræa, on the east of Batanæa, and to the south of Trachonitis, derived its name from Ietur, the son of Ishmael, and was also called Auranitis, from the city of Auran, which latter appellation it still retains, under that of Haouran. Gaulonitis was a tract on the east side of the lake of Genesareth and the river Jordan, which derived its name from Gaulan, the city of Og, king of Bashan. Batanæa, the ancient kingdom of Bashan, was situated to the north-east of Gaulonitis, and was celebrated for its excellent breed of cattle, its rich pastures, and for its stately oaks. A part of it is now called El Belka. Perma, in its strictest sense, included the southern part of the country beyond Jordan and Samaria.

In the days of Joshua, the Jordan overflowed all its banks. It is still, undoubtedly the largest river of Palestine. Although rivers are frequently mentioned in the sacred writings, yet, strictly speaking, the only river in the Holy

Land is the Jordan, which is sometimes designated as "the river" without any addition, as is also the Nile (Gen. xli. 1; Ex. i. 22; ii. 6; iv. 9; vii. 18, and viii. 3, 9, 11 and occasionally the Euphrates, as in Jer. xi. 18. In these cases, the tenor of the discourse must determine which is the river actually intended by the sacred writers. The Jordan rises a few miles N. E. of Paneas (better known under its subsequent name of Cæsarea Philippi), at the foot of mount Hermon, a branch of the Antilibanus. Its apparent source flows from beneath a cave at the foot of a precipice in the sides of which are several niches with Greek inscriptions. During several hours of its course, it continues to be a small insignificant rivulet. Crossing the bogs and fens of the lake Merom, subsequently called Lamochonitis, after a course of fifteen miles, it passes under the city of Julias, the ancient Bethsaida, it then expands into a beautiful sheet of water, the lake Tiberias, anciently Genesareth, and, after a winding course of about sixty miles through a hollow valley called El-Ghor, it empties itself into the lake Asphaltites, or Dead Sea, the Bahr-ul-Lut of the Arabs. Its whole course is about one hundred and thirty miles. Its breadth and depth varies, averaging in the former respect about thirty yards, and in the latter, three. It is called, by the Arabs, Sheriat-ul Kebir.—*Robinson's Travels in Palestine and Syria, Vol. I. pp. 73, 74, 212. Vol. II. p. 121.*

JOREE. URJA? A tree of Ganjam and Gumsur. Extreme height 60 feet, circumference 5 feet and height from ground to the intersection of the first branch, 8 feet. Bandy wheels are occasionally made of this wood, which is also burnt for firewood. The seeds are eaten by the Khonds. The tree is tolerably common.—*Captain Macdonald.*

JORHAN. See Joktan.

JORHAT, in Assam. See India.

JOROOL also Jarul. **BENG. HIND.** Lagerstræmia regina.

JORU. See Cotton manufactures.

JOSEPH'S WELL, a well in the citadel of Cairo, 260 feet deep, sunk by a ruler named Joseph, about A. D. 1100.

JOSEPHUS, a Jew who lived about A. D. 90 and wrote a history of the Jews.

JOSHANDAH. HIND. A decoction by boiling in water. Khisandah is an infusion.

JOSHI. An inferior tribe of brahmins employed in casting nativities and fostering other superstitious practices of the natives. Their name is derived from Jotish, astrology, and they are known also by the names of Bhudurea and Dukout. The manner of the employment of the Joshi is described in Exodus xxxii. 5, where Aaron made proclamation,

and said, 'To-morrow is a feast to the Lord.' Similarly before a religious ceremony, or festival, the officiating brahmin, or an appointed person proclaims, 'To-morrow, or on such a day, such a ceremony will be performed'—*Elliot.*

JOSHUA, a Hebrew chief who led the Israelites over Jordan, B.C. 1280 and drove the Amorites from their dwelling place near Hebron. Rameses-III. was then reigning in Egypt. On the conquest of Canaan by the children of Israel, Joshua divided it into twelve parts, which the twelve tribes drew by lot, according to their families. In this division of the land into twelve portions, the posterity of Ephraim and Manasseh (the two sons of Joseph) had their portions as distinct tribes, in consequence of Jacob's having adopted them. The "northern" parts of the country were allotted to the tribes of Asher, Naphtali, Zebulon, and Issachar; the "middle" parts to that of Ephraim, and one-half of the tribe of Manasseh: the "southern" parts to those of Judah, Benjamin, Dan, and Simeon, and the "country beyond Jordan" (which was first conquered by the Israelites before the subjugation of the whole land of (Canaan) was allotted to the tribe of Reuben, Gad, and the other half tribe of Manasseh. The tribe of Reuben obtained the southern parts, the tribe of Gad the centre, and the half tribe of Manasseh the northern part. The tribe of Levi indeed (which formed in effect a thirteenth tribe) possessed no lands. By divine command there were assigned to the Levites, who were appointed to minister in holy things, without any secular encumbrance, the tenths and first-fruits of the estates of their brethren. The next remarkable division was made by king Solomon, who divided the kingdom he had received from his father David into twelve provinces or districts, each under a peculiar officer. The Euphrates was the "eastern" boundary of his dominions, the Philistines were "westward" on the Mediterranean Sea, and Egypt was on the "south." He had therefore for his tributaries, the kingdoms of Syria, Damascus, Moab, and Ammon; and thus he appears to have possessed all the land which God covenanted with Abraham to give to his posterity. But this was only a splendid parenthesis in the historic page of the Israelites. After the death of Solomon, ten tribes revolted from his son Rehoboam, and erected themselves into a separate kingdom under Jeroboam, called the kingdom of Israel. The two other tribes of Benjamin and Judah, continuing faithful to Rehoboam, formed the kingdom of Judah. This kingdom comprised all the southern parts of the lands, consisting of the allotments of these two tribes, together

with so much of the territories of Dan and Simeon as were intermixed with that of Judah. Its royal city or metropolis was Jerusalem, in the tribe of Benjamin. The kingdom of Israel included all the northern and middle parts of the land, occupied by the other ten tribes, and its capital was Samaria, in the tribe of Ephraim. But this division ceased, on the subversion of the kingdom of Israel by Shalmaneser, king of Assyria, after it had subsisted two hundred and fifty-four years. The Holy Land fell successively into the hands of the Syrian kings, the Greeks and Romans. In the time of Jesus Christ it was divided into five separate provinces, viz., Galilee, Samaria, Judæa, Peræa, and Idumæa.

Galilee comprised the country formerly inhabited by the tribes of Issachar, Naphtali, and Asher, and by part of the tribe of Dan, and was divided into Upper and Lower.

Samaria included the tract of country which was originally occupied by the two tribes of Ephraim and Manasseh within Jordan, lying exactly in the middle between Judæa and Galilee.

The district of Peræa comprised the six cantons of Abilene, Trachonitis, Ituræa, Gaulonitis, Batanæa, and Peræa, strictly so called, to which some geographers have added Decapolis.

The province of Idumæa was added by the Romans on their conquest of Palestine. It comprised the extreme southern part of Judæa, together with some part of Arabia.

Under the Romans, Palestine was dependent on the government of Syria, and, about the commencement of the fifth century, was divided into three parts; viz:—

1. Palæstina Prima comprised the ancient regions of Judæa and Samaria.
2. Palæstina Secunda included the ancient districts of Galilee and Trachonitis.
3. Palæstina Tertia, or Salutaris, comprised the ancient Peræa and Idumæa.

In the modern divisions of this part of the Turkish government, Palestine has not formed a distinct country, but has always been included in Sham or Syria. This latter province has hitherto been divided into pachalics or governments, bearing the names of Acre, Tripoli, Aleppo, and Damascus, but as their extent usually increased or diminished, according to the degree of influence of the individuals to whom they were respectively entrusted, their limits have never been defined with accuracy. After the occupation of this territory by the Egyptian troops (1833) it was divided into moudirlik or governments, and confided to generals of division.—*Robinson's Travels in Palestine and Syria*, Vol. I. pp. 1 to 9.

JOSS-HOUSE, a Chinese temple.

JOSS-STICK. ANGLO-CHINESE. Aromatic pastilles, used in temples in China.

JOTEE, a large lamp made of paste.

JOTH, means a high mountain, and is often used to signify a mountain pass.—*Mrs. Hervey's Adventures of a Lady in Tartary*, Vol. I, p. 91.

JOTHAM. See Serpent.

JOU, a barley-corn: in India, as in many other countries, the primary unit of measures of length.

JOU, a western section of Beluchistan.

JOUDE. The Yuti and Jadu or Yadu, have much in their early history to warrant the assertion of more than nominal analogy. The annals of the Yadu of Jessulmer state that long anterior to Vicrama they held dominion from Guzni to Samarcand, that they established themselves in those regions after the Mahabharata, or great war, and were again impelled, on the rise of mahomedanism, within the Indus. As Yadu of the race of Sham or Sam (a title of Krishna,) they would be Sama-Yadu; in like manner as the B'hatti tribe are called Shama-b'hatti, the Ashambetti of Abul Fazl. The race of Joude was existing near the Indus in the emperor Baber's time, who describes them as occupying the mountainous range in the first Doab, the very spot mentioned in the annals of the Yadu as their place of halt, on quitting India twelve centuries before Christ, and thence called Jadu or Yadu-ka-dang, the 'hills of Jadu or Yadu?' The peopling of all these regions, from the Indus to remote Tartary, is attributed to the race of Ayu or Indu, both words signifying the moon, of which are the Hya, Aswa, (Asi,) Yadu, &c. who spread a common language over all Western Asia.—*Tod's Rajasthan*, Vol. I. p. 529.

JOUDPOOR and Odeypoor are usually termed in Indian history, Marwar and Mewar.—*Malcolm's Central India*, Vol. I, p. 519.

JOUETS, also Bimbelots, Fr. Toys.

JOUKA-PIHUL. HIND. *Helicteres isora*.

JOUK-BIN. BURM. *Elæodendron integrifolia*.

JOU-KHIAO. The first and most ancient of the faiths in China is that called Jou-khiao the Doctrine of the Lettered, of which Confucius is regarded as the reformer and patriarch. It is based upon a philosophical pantheism, which has been variously interpreted at various epochs. It is believed that at a remote period, the existence of an omnipotent God, a requiter of human actions, was not excluded from it.—*Huc's Christianity*, Vol. I, p. 322.

JOURNAL or Jaunal. HIND. In Rohilcund and the Doab land cultivated alternately by Rubbee and Khureef sowings. Land in continual cultivation.—*Elliot's Sup. Gloss.*

JOWRAH.

JOUNPUR, a town in the Benares province of the North West Provinces.

JOURTA also Kibitka, Russ. A tent made of felt, called in Mongol, *gher*; several tents together, forming a kind of village or station, are called *ourto*. Oulous or olos, signifies in Mongol, empire, people; Ordo, a chateau, or imperial palace.—*Timkowski's Journey to Peking*, Vol. I. p. 12.

JOUZ. PUSHTU. Albaji maurorum.

JOUZ-I-HINDI. PERS. Cocoa-nut palm, *Cocos nucifera*.

JOUZ-UL-NURUJ. ARAB. *Physalis angulata*.

JOUZ-MAZIL. ARAB. *Datura fastuosa*, *Mill. Roxb.* also *D. alba*, *Rumph.*

JOVAKYER. A servile caste of toddy drawers in Malabar, inferior in social rank to the Jover, or Tiyar with whom however they intermarry. See Jover.

JOVANA AMELPUDI. MALEAL. *Ophiocyon serpentinum*.—*Linn.*

JOVANA ARALI. MALEAL. *Nerium odorum*.—*Ait.*

JOVANNA-POJA-TALI. MALEAL. *Criminum latifolium*.—*Herb.*

JOVE. See Indra.

JOVER or Tiyar. A servile caste of toddy drawers in Malabar. See Jova-kyer.

JOVI. HIND. *Ficus infectoria* also *Ficus t'sirla*.

JOW. GUZ. HIND. PERS. *Hordeum vulgare*, barley.

JOWAIR. See Kol.

JOWALA-MOOKHI, the 'mouth of flame,' cannon, which are consecrated before a battle. They are called avatars, or incarnations of Jowala-mookhi, the Etna of India, at the edge of whose crater the Hindu poet very properly places the temple of Jowali Rani, the terrific Kali-ma, the hindu Hecate.

JOWKSHAR. GUZ. HIND? Jow-khar? Potash.

JOWLI. GUZ. HIND. *Cadaba Indica*, also *Cadjan*. ANGLO-MALAY.

JOWRAH. Ghuffoor Khan, the first nawab of Jowrah, was brother-in-law of the predatory leader Amir Khan whom he represented at the court of Holkar when Amir Khan quitted Malwa on his expeditions into Rajpootana. The lands which had been assigned to him by Holkar were guaranteed to him by the 12th Article of the treaty of Mundore on condition of his maintaining a body of 600 horse, the quota to be increased in proportion to the increasing revenue of his districts. In 1842 the existing arrangement commuted to a yearly contribution of Hali Rupees 1,85,810 when the western Malwa contingent consisting of the troops furnished by Jowrah was amalgamated with the eastern

JUANGA.

Malwa contingent furnished by Holkar and Dewas. The contribution was reduced to Hali Rupees 1,61,810 in 1859 as a reward for the Nawab's services during the mutinies. The area of Jowrah is 872 square miles; the population, 85,456 souls; the revenue Rupees 6,55,240. Jowrah contains the best poppy growing lands in Malwa and yields yearly about one thousand chests of opium. The nawab keeps up a military force of 175 horse and 600 foot. The nawab received a sunnud guaranteeing the succession to his state according to mahomedan law, in the event of the failure of natural heirs. He receives a salute of 13 guns.—*Treaties, Engagements and Sunnuds*, Vol. IV. p. 343.

JOWZAL KOWSUL. ARAB. *Gardenia dumetorum*. Jowz bewa. PERS. *Myristica moschata*, Nutmegs. Jowz Khusif. ARAB. Walnuts. Jowz-mazel. ARAB. Thorn apple, *Datura fastuosa*. Jowz-ul teib. ARAB. *Myristica moschata*. Nutmegs.

JUAH. HIND. of Kulu, *Pavia Indica*; Indian horse chestnut. See Gunh.

JUALA-MUKHI, its temple lies on the right bank of a little stream, over which a slender bridge is thrown, before the building. The flame is considered sacred to Dunga.—*Baron Hugel's Travels in Kashmir and the Punjab*, page 46.

JUANGA. The Patuah or Juanga are a forest race inhabiting the Tributary Mahals to the south of Singhbloom in Cuttack, scattered in the mahals or killahs of Keonjur, Pal Lehra 30 villages, Dhekenal 6 villages, and Hindole 6 villages. In Dhekenal alone their numbers are stated at 1,005 persons. The stature of the men does not exceed 5 feet 2 inches and in the women 4 feet 3 inches or 4 feet 4 inches. Their forms are slight with little muscular development, and physique weak. Their face is shorter and broader than that of the Uriah, nose is flat and nostril wide. Their colour is not darker than the Uriah peasant. The men are not handsome, but the women are repulsively ugly. The men dress like the peasantry of the neighbourhood, but all the covering of the women consists of two bunches of twigs with their leaves attached, one before and one behind, which are changed daily, and kept in their position by a strip of bark or a string of glazed earthen-ware beads passed twenty or thirty times round the waist and over the stems of the twigs, hence the name of the tribe, Patuah, literally people of the leaf, but they call themselves Juanga. They also all call themselves Pudhan. The women also wear necklaces of the same kind of beads, and their hair is gathered together in a knot at the back of the head fastened by a string with a silver or brass button at each end of it. The women

wear no blanket or covering at night but sleep between two fires. Their traditions are to the effect that they were formerly vain of fine dress and were wont to lay aside their good clothes to prevent them being soiled, and wear such leaves when attending to the cleaning of the cow-houses or other duty; when one day, a thakurani, or according to some, Sita, appeared and commanded them as a punishment for their vanity always to wear such leaves. Dr. Shortt mentions that the legend of Killah is that a rishi commanded them to wear the leaves. They believe that if they violated these commands they would be devoured by tigers. The women dance in a circle to the sound of a large drum beaten by the men, moving round and round in the same measured step, occasionally advancing towards the musicians and then retreating, but keeping the body inclined towards the musicians. Their villages are in the clearings or openings in the forest; are small with about six or eight families in poor and mean thatched huts of wattle and dab, each family in its own dwelling. They have no lands, but sometimes assist in the cultivation of the neighbourhood. Their vocations are chiefly those of the chase, using the bow and arrow and dogs; they kill deer, hogs and not unfrequently snakes, of the flesh of which, especially that of the Python molurus, they are very fond. Except the cow, they are omnivorous. Their usual food is insipid and nauseous roots (tunga, kurba and panialu,) and the seeds of the jungle grasses. They have no system of caste. If they have any worship, it is one inspired by a desire to avert evil; they, however, deny that they worship any deity or have any image, but they pay homage to nameless spirits who inhabit the woods and mountains, and make offerings of a fowl, a goat, or rice, or spirits, to the genus loci. In the month Bysakh, they offer libations to the manes of their deceased ancestors. They bury their dead. Marriages are arranged by the parents and are scenes of revelling and drunkenness. They adhere to one wife unless she prove unfruitful. Like many of the hindoo races, they will not pronounce their wives' names. Their language is not similar to Uriah, and it shows that they are connected with the Mundah of Chotah Nagpore and that their nearest kinsmen are the Kheriah. But in their present position they are isolated from all other branches of the family, and they have no suspicion that they are connected with them. They receive the name of Patuah from the sole covering used by the women consisting of bunches of leaves, before and behind, stuck into a waist-cord.

The Tributary Mahals of Cuttack came into the possession of the Anglo-Indian government, about the beginning of the nineteenth century,

but until 1854 we were in total ignorance of the presence of this forest race; their existence was, however, known to the inhabitants of the Mahals or Killahs of Keongur, Pal Leyra, Dhekanal, and Hindole, where they reside; the tribe are few in number, not exceeding forty villages, and inhabit a forest region, which, to Europeans generally, from the prevalence of jungle fever, has ever been a sealed book. The Juanga were discovered in 1854 by Mr. Samwell of the Bengal Civil Service, Superintendent of the Tributary Mahals of Cuttack.

Both sexes are eminently hideous, more especially the females, whose natural ugliness is probably enhanced by hard labour, exposure, and bad living, for all the drudgery devolves on the women who seem to suffer from scanty food also, whilst their husbands have a plump and well-fed appearance. The women are also supposed to suffer much from the cold by night, as they are prohibited from using any covering whatever, and can only keep up the caloric during the cold season, by sleeping between two blazing fires. The countenances of both sexes are coarse and repulsive, their faces are broad, noses flat and wide in the nostrils, but in complexion not much darker than their neighbours, the Uryah, though the latter are a fine handsome race, whilst the Juanga are both ugly and diminutive, the men rarely exceeding 5 ft. 2 in. in height, whilst the tallest of the women is never above 4 ft. 3 in. or 4 ft. 4 in. The Juanga women, are fond of ornaments, which they wear in the nose, ears, and hair. That for the nose is the ordinary nhut, or nose-ring of other Indian tribes. In the ears are worn two or three rings, and one larger ornament worn in the upper part of that organ; this latter ornament is bell-shaped, and not untasteful. The hair of the women is worn after the shock order of chevelure, but gathered into a knot at the back of the head, and fastened by a string, each end of which terminates in a brass or silver button. Sometimes, too, a bell-shaped ornament is worn in the hair and has not a bad appearance. The effect of the Juanga costume on a person who beholds one of these women for the first times is ludicrous enough, but it is in the dance that such appears pre-eminently ridiculous. They dance in a circle to the music, or rather noise, of a large drum, beaten by the men, which marks the time, moving round and round in the same measured step, occasionally advancing towards the musicians, then receding from them, in the performance of which the Juanga ladies evince a strong disposition to attitudinize and make display. In the dance they bend gracefully forward at an angle of about 45 degrees, the left hand slightly holding the extremity of the long strings of

beads, the right hand hanging down towards the knee. In such an attitude it must be evident that the stiff bundle of twigs in front will press inconveniently against the legs of the dancer as she bends forward, she therefore pushes it between them towards the rear, which necessarily forces up the rear bundle, and, as the materials of the sylvan crinoline are about as flexible as a birch broom, the effect of a dozen such tails bobbing up and down together in the dance is ludicrous to European eyes, though the Juanga themselves do not seem to consider the sight at all promotive of laughter.

The Juanga know nothing of their origin, but are supposed to be descended from the aborigines of the country, though some of them declare that the Tributary Mehal of Kionjur was the original seat of their race. Others, again, and the greater number, seem to have no idea that their ancestry had ever occupied other lands than those where they at present reside. These people have no caste, and declare that they worship no deity whatever, but they certainly fear to offend a supreme being, as evinced in the matter of their women's costume. Moreover, when they find a particularly productive wild grape, or plum-tree, they sacrifice a kid, fowl, and some rice to the spirits of the place, whose protection says Mr. Samwell, they implore, somewhat in these terms:—"Lord, let the bears and tigers flee when they see us; let them not meet us." This tribe bury their dead without any peculiar ceremonies, and once a year, in the month Mysakh, offer sacrifices and libations to the spirits of their deceased ancestors. They have no priesthood amongst them, and no images are to be seen in their groves or about their houses. Juanga marriages are scenes of disgustingly drunken revelry, and all the members of the tribe, within a reasonable distance, assemble at the bride's house, and escort her with music and dancing to the house of the bridegroom; the women then wash her feet in water tinged with turmeric, after which the elders complete the marriage ceremony. This consists, apparently, in each elder tying the thumbs of the bridal pair together with a thread, after laying his hands on them in succession; then follows the nuptial feast, at which the men and women eat apart from each other, and the night is afterwards spent in dancing and drinking; the festivities on these occasions continue for three days.

The Juanga language bears no resemblance to the Uriya, or any of the dialects of the hill tribes of Orissa, but our knowledge of them is still very imperfect. These people eat the flesh of all animals except the cow,

from which they abstain, not through any religious scruples it is said, but out of deference to the Dhekenal rajah, whose lands they are permitted to live on rent free, on condition of supplying him, when required, with ardent spirits, which they distil from mhowa flowers and wild honey which is very plentiful in those jungles. The men, also, are bound to serve him as coolies, for the conveyance of his baggage when he travels through the district, and to beat the jungle when he hunts, which latter duty they consider a pastime; as, next to killing game themselves, their greatest pleasure is to see it killed by others. Their quickness of sight, too, in tracking a wounded animal is quite wonderful; for when no trace of a hoof is perceptible to the European sportsman, the Juanga will discover a deer's track, even some hours after the animal may have passed over fallen leaves and ground the least calculated for tracking an animal. They also hunt with dogs, of which they possess a very useful breed, but they have no fire-arms. Their expertness with the bow is quite astonishing and at eighty yards they will hit a very small mark and it is considered no feat to shoot a hare at full speed, or a bird upon the wing—the latter being generally shot with blunt arrows. Their bows are generally of bamboo, and so powerful are they, as to send an arrow through and through a wild hog or deer; but they do not care to meddle with the large animals, and have an especial dread of the bear and tiger. This tribe do not hold any land, and appear to have a strong aversion to agriculture, or any other laborious employment. They possess but few domestic animals, and these they rarely kill except for sacrificial purposes; thus they have to depend on the produce of the chase to supply them with flesh, but game of all kind is so plentiful in those jungles, that the Juanga need never be in want of animal food. The flesh of snakes is, by them, considered a peculiar delicacy, but their ordinary diet consists of edible grass, seeds, and roots, which must be an unpalatable and little nourishing kind of aliment; however, as before stated, the men show no symptoms of insufficiency of diet, for they appear plump and sufficiently fed, but the women have a meagre and half starved look, though, perhaps, this arises as much from want of clothing, as the absence of sufficient nourishment: for a certain degree of warmth is quite as essential as food, to maintain either man or beast in healthy condition. The Chenchoo of the Guntoor and Masulipatam jungles much resemble the Juanga in their habits, and the jungles of Malabar contain the Holier race whose women, up till A. D. 1830, were in the practice of attending the market of Mangalore, in

similar vegetable costume.—*Dr. Colburn's Journal*, No. 395, Oct. 1861.

JUBA. HIND. *Hibiscus Rosa-sinensis*.

JUBALPUR. The head-quarters of the district of the same name, is situated in east longitude $79^{\circ} 59' 43''$ and in north latitude $23^{\circ} 9' 31''$ on the banks of the Nerbudda, in the Central Provinces of India.

The district is one of the largest and most populous in the Central Provinces, and is bounded on the north by the Panna and Mair, on the east by Rewar, on the south of Mandla, Seoni, and Narsinghpur, and on the west by the Damoh. It lies between latitude $22^{\circ} 40'$ and $24^{\circ} 8'$ north, and between longitude $81^{\circ} 6'$ and $79^{\circ} 55'$ east and contains an area of 4,261 square miles. The main body of the district is a large plain of rich soil watered by the Narbada, the Paret, and the Hiran, extending from Sihora on the north to the Bhara and Lameta ghats of the Narbada on the south, and from Rumbhi on the east of Sankel where the Hiran unites with the Narbada, on the west. About nine miles from Jubalpur on the south-west, a considerable extent of tolerably pure and beautifully saccharine white limestone is seen, the river cuts a deep channel through the mass of this rock, exposing sheer vertical surfaces of the white limestones in places 220 feet high it is scarcely possible to exaggerate the picturesque effect of the varied outline and colour of the whole. The locality is well known as the "marble rocks." Coal is found at Ramghat, Lametaghata, and near Singapur on the Mahanadi. The latter seam is eighteen inches thick, and is said to be poor and unworkable. The Lametaghata coal, promises well. Iron is found in more than a hundred places, of which the principal are Simra, Gogri, Bolia, Agaria, Dairora, Jauti, Panagar, and Lameta. The iron is worked entirely by native processes. The population of the district amounts to 620,201 souls, or about 145 per square mile. The non-agriculturists exceed the agriculturists by about 35,000. The people are for the most part Gond, Gond-Rajput, Lodhi, Ponwar, Kurmi, Kahar, Dhinar, Dher and Chamar. There are also brahmins, both from the Maharashtra, and from Mathura; Kayaths from Farukhabad and elsewhere, and mahomedans. There are now no Gond landholders of any importance,

but there are some Lodhi chiefs who once possessed a local celebrity.

The following woods from Jubbulpore, were sent to the Exhibition of 1862: viz.

<i>Tectona grandis</i> .	<i>Acacia leucophloea</i> ?

JUBBULPORE HEMP. *Crotalaria tenuifolia*, is a perennial plant, native of Coromandel, which grows to 6 or 9 feet high and yields this fibre. It is considered equal to Russian hemp, and bears a heavier weight.

Kind and quality of rope.	Size.	Government Proof.	Breaking weight.
	Inch.	Ct. qr. lb.	Qt. qr. lb.
Oiled Jubbulpore Hemp.			
Artillery Traces.....	3	36 0 0	43 2 0
Untarred do, superior four			
Strand, plain laid.....	3½	42 0 0	83 0 0
Untarred Dhunchee (<i>Reschynomene cannabina</i>			
Rox), <i>Sesbania aculeata</i> .	3½	49 0 0	75 0 0
Fine apple fibre.....	3½	42 0 0	57 0 0

A good deal of the value of this plant is supposed to be the result of the climate and soil in which it is grown.

JUBANEE. BENG. *Lovage*, *Ligusticum ajowan*.

JUBAR. The Bibor, Jubar, and Kulita or Kolita, are populations to the north and east of the Abor and Mishmi localities, on the drainage of the Brahmaputra.

JUBBULPORE, the total area of the district of Jubbulpore, inclusive of Bijeragorub, and the villages of Nagode and Mybere lying within this tahsil proved to be 4,801 square miles. Pilibheet the chief town of the Jehanabad sub-

division of the Bareilly district, has a population of 27,900 souls inhabiting 6,116 houses. It derives its name from a sect of Bunjarra called "Peera," and "Bheet," a structure, or anything raised above the ground, the entire name implying the lodgment or "Tanda" of Peera Bunjarra. They first established themselves at a place now called "old Pilibheet," and removed to the site of the present town about the year 1740 on the invitation of Hafiz Rahmat Khan, the then ruler of Bareilly, and in fact of all Rohilcund; the town was subsequently fortified, and the old bastions and curtains of it are still standing though dilapidated and broken. Pilibheet is the great emporium of northern Bareilly and the adjacent Terai and hills, and its timber and rice marts are unequalled in all Rohilcund. The far famed Pilibheet rice is grown in the northern low Terai lands, and the finest and best quality sells at 3 seers per rupee, whilst the price of the coarser or inferior description varies from 8 to 11 seers per rupee. Numbers of flat bottomed boats are annually built at Pilibheet and floated down to Futtehgurh, where they ordinarily sell for about 200, or 250 rupees each.

JUBHA, is a long outer garment, generally of cloth, worn by learned and respectable mahomedans, it is a large wrapping gown, with sleeves, at the wrists, but wide above, open in front, and so wide, as to admit of being folded round the body; the one side lapping broadly over the other; it very much resembles the Persian "barounce," but in Persia is commonly made of coarser materials. The Khorasani jubha is most commonly made of brown, or reddish grey woollen; and frequently of camel's hair. It is a very good external covering, its close texture not readily admitting the wet, and in a great measure excluding the wind. In India, it is made of muslin or cotton, or chintz.—*Fraser's Journey into Khorasan*, p. 266.

JUBHLA. See Sudra.

JUBUSA. BENG. Hebrew Manna plant. *Alhagi maurorum*.

JURUNSERIE. A river near Momunpoor in Rungpoor.

JUOH-CHEE. A lying-in woman.

JUDEA. At the present day, the only important town within the limit of Judæa, is Hebron, anciently called Arba and Herjath-Arba. It is twenty miles from Jerusalem. Abraham, Sarah, and Isaac were buried near Hebron in the cave of the Machpelah. Gen. xxv. 7, 8, 9, 10.) Their tombs are prettily shown by the mahomedan population.—*Robinson's Travels in Palestine and Syria*, Vol. I, p. 166.

JUDAISM. See Karand. Semitic races.

JUDEE. A class of mashaekh.

JUDEN-PECH. Gen. Bitumen.

JUDGALI or JETHGALI. The language of Lus, is almost similar to that of Sind. The name is evidently derived from that of the tribe.—*Pottinger's Travels in Beloochistan and Scinde*, p. 30.

JUDI MARA. MALBAL. *Graptophyllum hortense*.—*Nera*.

JUDISHT'HIRA. Thirty princes in a regular lineal descent from *Judist'Hira* succeeded him on the throne of Indrapastha, but, excepting their names, little more has been recorded of them. The last of the Pandoo race was Kashemaka, who is said to have been de-throned and put to death by his own minister.

JUDOON, a pathan race who inhabit a tract below the Hussunzye country and on the right bank of the Indus opposite the British town of Torbeila, and thence stretching westward. In this tract the most notable place is Mount Mahabun, of classical celebrity. They have been supposed to be Rajputs, but they are pathans who speak Pushtoo. The Judoon never molested British subjects or lands, and up to 1850, the British had no relations with them.

Beyond the Judoon country on the north-west, is Booneer or Buncor. It is a rugged country, extending from the lower range of the Hindoo Coosh downwards to hills which command the Chumla valley and the central plain of the Eusufzye. On its western frontier, again, lies the Swat territory. The Boonere people could muster a force of some thousands; they appear to be on good terms with their neighbours, the Swatee. In 1849 they aided some British subjects, at Loondkhor in Eusufzye, who refused to pay revenue; but they had generally abstained from molesting British subjects. Near them are the Swat, Ranezye and lower Osmankheyl tribes, the two latter being subordinate to the former.—*Campbell*, p. 87.

JUDOO-PALUNG. BENG. *Salicornia indica*.

JUDWAR. ARAB. *Circuma zedoaria*.

JUFT. RUS. Juften, GER. Russia leather.

JUGANI CHUKUR. TEL? HIND. *Gmelina arborea*.—*Kozb*.

JUGDALIK. A village and pass in Affghanistan, so named from the former abundance of the Jigde, or Sanjid (*Elæagnus*) of which not a tree was found by Moorcroft.—*Moorcroft's Travels*, Vol. II, p. 372. See Jagdalah.

JUGGERNAUTH TURKOPUNCHANUM, Sanscrit tutor to Sir William Jones, compiled the digest of Hindoo laws, under the patronage of Lord Cornwallis.

JUGGURI. CAN. MAR. also Kurwat, CAY. MAR. *Antiaris saccidora*.

JUGGUT COONT, the point of land beyond Dwaries, the last stronghold of the Yadu race

when their power was extinguished. It was at Jaggut Coont, the Jigat point, of English maps, where the Badkail, a branch of the Rahtor, established themselves.—*Tod's Rajasthan*, Vol. I. p. 409; ii. 317.

JUGHI, Mezang, and Luli are tribes classed as mussulmans in Bokhara, but they seem to be similar to gypsies, their women go unveiled, and the men are careless in their religious duties. Numbers of them are established at Bokhara, and other towns, as medical men and telling fortunes and horse dealings; such as lead a wandering life, encamp in tents of a coarse cotton stuff called "bez." They have permission to halt near all the lakes and rivers of the Khanat, whenever those places are not previously occupied by Uzbeks; in consequence of which a great number of them are dispersed along the banks of the Zarafshan, near Samarkand, while others encamp in the neighbourhood of Karakul.

JUGLANDACEÆ, the walnut tribe, an order of plants, including many valuable timber trees. There are in the East Indies, three species of the genus *Juglans* and three of *Engelhardtia*, viz. *Roxburghiana*, *Wallichiana*, and *Colebrookiana*.—*Roxb.*

JUGLANS ARGUTA. WALLICH. Theetkya, BUAM. Grows in Burmah, *J. regia*, in Central Asia, *Engelhardtia Roxburghiana* in the mountains on the north-east of India, and *E. Wallichii* at Penang and Singapore. But though the great portion of the genus *Juglans* has been now placed under *Carya*, common in North America, *J. regia* extends from Greece and Asia Minor, over Lebanon and Persia, probably all along the Hindoo Koosh to the Himalayas, it is abundant in Cashmere, Sirmore, Kemaon, and Nepal. A new species occurs on Caucasus; and *J. arguta*, was found by Dr. Wallich as far south as Taong Dong.—*Royle's Ill. Him. Bot.* p. 342. *Voigt. Roxb.*

JUGLANS CAMIRIUM. LOUZ. Syn. of *Aleurites triloba*.

JUGLANS CATAPPA. LOUZ. Syn. of *Terminalia catappa*.—*Linn.*

JUGLANS REGIA.—*Linn.*

Than, Khor, Ka, Darga of Chenab and Ravi. Ka botang of Ladak. Walnut tree ENG. Dun of Kangra.	Starga of Ladak. Ughz; Waghz, of Trans- India. Akrot, PERS. HIND. Charmagbz...
---	--

The walnut tree grows throughout Central Asia and according to Darwin occurs wild in the Caucasus and N. W. Himalaya. In Jullundur, however, it is not a forest tree, but is cultivated by zemindars on their own estates. The trunk of a very old tree is from 15 to 18 feet; wood hard, light and strong, of a dark brown colour, beautifully veined; and receives a high polish; the wood is used principally for cabinet

making purposes, and for gunstocks; not subject to worms, nor liable to warp. It is there a good timber tree, and bears a fruit in much esteem. It is found in the Sutlej valley between Rampur and Sungnam at an elevation of 7,000 to 9,000 feet. This fruit ripens well at Pangt, but not much higher, and its pericarp contains tannic and gallic acid in abundance. The nut is emulsive, and very rich in a valuable drying oil. The walnut, is found in particularly great abundance, on the shores of the Caspian sea, but it has been so long naturalized in Europe, as to give it a place among the European trees. The wood is soft and flexible, and easily worked, but while young is of little value, being very white, and liable to be attacked by the worm, but as it grows older, the colour becomes brown, sometimes very beautifully veined. In the south of France, the wooden shoes of the peasantry are made of walnut. That wood is considered the best which has grown in a dry soil, although, in such a situation, the timber is not so quick of growth, as when the ground is rich and moist. In the N. W. Himalaya, the tree grows wild, but the cultivated trees yield the really good fruit, of which two kinds are sold, one with a thick shell, and one which has a thin shell, called "kaghazi akhrot"; is more esteemed, and sells at a higher price. In Kanawar walnuts sell at 1,000 per rupee. Punji is famous for them and the tree grows there at an elevation from 7,000 to 9,000 feet. In those regions, the tree is valuable for the fruit as well as the wood, which from old trees is dark-coloured and handsome.

The husks and root of the walnut both yield a dye, which is much used by gypsies and theatrical performers for staining the skin brown. It is also used by cabinet-makers and joiners to stain white and yellow woods of a dark-brown or black colour, like that of the walnut. In the preparation of the dye from the husks, they should be allowed to rot, and then boiled in water, adding to the decoction fresh water, according to the colour required to be produced by the solution. The sap of the walnut tree contains a large quantity of saccharine matter; and in some countries the trees are tapped for the purpose of obtaining the sap, which by evaporation is converted into sugar. It is also in many parts of Europe and Asia fermented and made into wine, and a spirit is also distilled from it. The leaves of the walnut, as well as other parts of the tree, contain a large proportion of alkali in them and in some parts of France they are collected and burned for the sake of the potash contained in the ashes. The bark of the leaves, the husks, and the oil of the walnut have all been used in medicine, and had at one time a great reputation. All

JAGANNATHA.

parts of the plant, excepting the albumen of the seed, possess a bitter principle, which acts as a tonic and an anthelmintic, and has been its great recommendation as a medicine. Cowley, in his 'Plants,' sums up the virtues of the walnut in the following lines :—

"On barren scalps she makes fresh honours grow.
Her timber is for various uses good;
The carver she supplies with useful wood.
She makes the painter's fading colours last.
A table she affords us, and repast.
E'en while we feast, her oil our lamp supplies.
The rankest poison by her virtues dies;
The mad dog's foam and taint of raging skies.
The Pontic king, who lived where poisons grew,
Skillful in antidotes, her virtues knew."

Anglers employ an infusion of the leaves or husks for pouring upon the earth, in order to procure worms, which it speedily brings to the surface.—*Eng. Cyc. Mr. Somnall in the "Asiatic Researches," Colburn's Journal United Service Magazine, No. 395, Oct. 1861, p. 232. Darwin. Col. Lake quoting Balfour, p. 138, in Powell's Hand-Book, Vol. I. p. 538. Cleghorn's Punjab Report, p. 65. O'Shaughnessy, p. 605. The Book of Trees, p. 141, 142. Cleghorn's Punjab Report, by Dr. Honigberger, p. 292.*

JUGLANS TRICOCCA.

Ta-soung-let-wah... BURM.

This tree is found on the banks of the streams in the Pegu district, but is scarce :—it is a hard strong timber. Wood, white colored, adapted to every purpose of house-building.—*McClelland.*

JUGNI. HIND. Oxide of manganese. See Injni.

JUGO-DE-LIMON. SP. Lemon juice. Citric acid.

JUG-RAJ. HIND. Amongst the hindoos of India, the act of abdication confers the title of Jugraj; or when they conjoin the authority of the son with the father, the heir is styled Jivaraj. Four instances of this are on record in the annals of Boondi.—*Tod.*

JUG RANI. HIND. Queen of the world.

JUGUDDHATRI. SANS. from jūgāt, the world, and dhatri, an upholder.

JAGUDISHA. SANS. from jūgāt, the world and ishā, lord.

JAGADGOURI. SANS. from jūgāt, the world, and gourā, light yellow.

JAGANNATHA. SANS. from jūgāt, the world, and nā'hā, a lord. The temples of Jagannat'ha in Orissa have been endowed by several rich hindoos: raja Ram Krishna-deva gave two villages, the rents of which were about 4,000 rupees annually: Nimoo-mulliku of Calcutta gave daily one rupee, or Rs. 36½ annually; and his children continue the

JULLALEA.

donation. It was supposed by Ward that not less than 100,000 rupees a year are drawn from the hindoos by the brahmuns of this temple.—*Ward's View of the Hindus, Vol. II. p. 9.*

JAGANNAT'HA-KSHETRA. SANS. Jūgāt, the world, nat'ho, a lord, and kshētrā, a place. JUGUT, a river of Almorah.

JUGUT KOONT. HIND. The world's end, on the coast of Saurashtra.—*Tod.* See Juggut.

JUGUT MUDUN. BENG. Gendarussa vulgaris. Justicia gendarussa.

JUGUT-MU. PERS. also, Kali-Shumbali. HIND. Justicia gendarussa.

JUGYU-DOOMOR. BENG. Wild fig. Ficus glomerata.

JUHAD-FI-SUBEEL-ILLAH, a holy war of the mahomedans; a jahat.

JUHAZ (lit, a ship), or Bayra, a ceremony.

JUI-PONA. BENG. Rhinacanthus communis.—*Nees.*

JUIA or JAZIA. PERS. A poll tax, levied at Yezd on the Parsees. See Jazia.

JUJUBE TREE. ENG. Zizyphus jujuba.—*Lam.* "Unab" is the jujube fruit.

JUK. HIND. Impatiens, Sp.

JULAMERICH, a Kurd territory north of the pashalik of Bagdad. See Iran; Kurdistan.

JULDARA. PUNJ. Armeniaca vulgaris.—*Lam.*

JULG, Dr., a great Turanian scholar.

JUL GURGUR. BENG. Coix aquatica.

JULIAN ERA, invented by Joseph Julius Scaliger about the middle of the 16th century, is a period of 7980 years, arising from the multiplication of the Cycles of the sun, moon and indiction, or of the numbers 28, 19 and 15, its epoch commencing on the 1st January of the 706th year before the creation.

JULIDINA, a group of fishes of the family Labridæ.

JULIENNE OIL. Oil of Hesperis matronalis.

JUL-JATRA. On the 14th (Sūdi), or 29th, is a solemn festival in honour of Vishnu. It is called the Jul-jatra, from being performed on the water, "Jul." The rana, chiefs, ministers, and citizens, go in procession to the lake, and adore the "spirit of the waters," on which floating lights are placed, and the whole surface is illuminated by a grand display of pyrotechny. On this day, "Vishnu rises from his slumber of four months;" a figurative expression to denote the sun's emerging from the cloudy months of the periodical floods.—*Tod's Rajasthan, Vol. I. p. 598.*

JULLALEA, or Khakees, a class of faqirs.

JULLAL or **JALLAL**, the terrible attributes of the deity.

JULLAL-UD-DIN-KA-KUNDAN, a ceremony.

JULALABAD, a name given by Akbar to the town of Arail on the banks of the Jumna after his own title of Jalal-ud-Din. By a public edict he abolished the salutation of "Salam Alaikoom," substituting "Allaho Akbar," and the reply of "Jal-i-jalaliho;" in both of which are parts of his name, Julalood-Deen Mahomed Akbar." The Sipah Salur was ordered to see that the same exclamations were made at meals; and the Aftabi, the rupee, and several other coins of his reign as well as his seal, bore the inscription Allaho Akbar Jal-i Jallaliho. There are several instances of Arail being mentioned prior to Akbar's time. In the Tarikh-i-Budaoni it is stated that the pergunnah of Arail was in A. H. 977, before the composition of the Ayeen-i-Akberee, given in jagher to raja Ram Chund — *Elliot's Supp. Gloss.*

JULLANDHUR. The Kohistan of Jullandhur is interesting ethnologically. The revenue of the rajah of Mundi is reckoned at four lacs of rupees a year, much of which is derived from salt and the half is paid to the British Government. The hamlets in Kooloo, near the Tiri pass, in the Jullandhur Kohistan, seldom contain more than from fifteen to twenty houses. Single houses are numerous, and, from being scattered amongst the fields, give an agreeable variety to the bold landscape. This distribution of houses arises from lands available for cultivation being usually of small extent and widely separated, and consequently unable to support large communities. It is also imperatively necessary for the husbandman not to place a ravine or any other impediment between his hut and his fields, as all communication with them would probably be cut off during the greater part of the rains, an important season of the year in India. The natives of Sookeyt, Mundee, and Kooloo, in the Kohistan of the Jullandhur, have sallow complexions but appear to be of the same race as the inhabitants of Busahir. In fact many of the coolies employed in carrying baggage between Simla and Kalka are men from these States, who are attracted there by the wages, which average one anna a day in their own districts, but from four to six annas on the left bank of the Sutlej. The men are generally tall and strong, but few of them are handsome. Many of the young women are pretty, but at the age of 20 or 25 become coarse and stout. The dress of both sexes is nearly the same. It consists of a drab-colored woollen frock, trowsers of the same, or of leather, and a flat

skull cap, generally black, with sandals made of coarse grass. The woollen cloth called puttoo is manufactured by themselves and resembles thick coarse blanketing. It is sold in pieces of 10 inches in width and about 21 feet in length at 2 Rs. 8 As., or 3 Rs. a piece, according to the quality. Both sexes wear a girdle around the waist, and the men generally go bare-legged during the hot weather. They seldom, if ever, wear shoes, the richer classes; however, wear worsted stockings and shoes when they go out. The women, instead of the cap, sometimes have a colored piece of cloth tied round the head, and occasionally twist their hair into one long plait, the end of which is then ornamented with slips of colored cloth or shreds of worsted. The plait is by no means unbecoming to the young. The dress of the women on the western side of the Seukandir range consists of a tightly fitting body and sleeves with a full petticoat having a broad border at the bottom. Their favorite color is a light yellowish chocolate, whilst the border is generally of a deep blue or of some other dark color. A veil is thrown over the head and shoulders, as in the plains. If they meet a European they stop and turn their backs to him until he has passed. The men dress pretty much in the same manner as those on the plains. The women of Kooloo and the adjoining states are indifferently fond of ornaments. These are of the usual description, with the exception of mother o'pearl amulets, which both men and women use, consisting of small thin plates of mother o'pearl of various sizes and engraved with mystical figures. Several of these are hung around the neck and hang conspicuously on the chest. Polyandry is said to be unknown amongst them, nor are they guilty of infanticide, but polygamy is general. Travelling is generally performed in the janpaun by those who can afford it. The janpaun is like a large tray with a pair of bamboo shafts behind as well as in front. Ladies have theirs covered over with scarlet cloth. All agricultural labors, with the exception of ploughing, are performed by the women, while the men sit idling at home, grain crops are cut with the sickle, and burdens are usually carried in the kilta or large conical baskets hanging over the shoulders on to the back, which is the general mode of carrying loads in the Himalaya mountains. The mountaineers of those parts had long been in the habit of ill treating their wives, and on the introduction of English laws the desertion of their husbands by the women was pretty general. The men of Kooloo laid their grievances before the proper authority, by whom they were told that since, before the British rule, they valued their cattle more than their wives, they must now

reverse the custom, and take greater care of their wives, a system of valuation they evidently could not appreciate, as wives were more plentiful than cattle. About Subathoo one sometimes sees infants wrapped up like little mummies and laid in such a position that a small rill of water falls on their heads. These infants are usually watched by some elderly female whilst their mothers are employed in the fields. The natives believe that this ordeal strengthens the children and renders them hardy, and that it cures dysentery and various other diseases. But the common object is to keep them asleep, and this is found to be the most effectual means of so doing. It is not known whether the inhabitants of the mountainous district on the right bank of the Sutlej adopt this plan or not. They dread the evil eye, and have recourse to witch finders, who feign the power of discovering evil spirits which wander over the mountains in the tangible form of witches. If a cow or any other living creature die, its death is immediately attributed to some evil eye, and a witch finder is employed to discover it. This impostor having selected some old woman who had no means of propitiating him by gifts, places his victim in the centre of a group, whilst all interested in the case sit around her in a circle. He then dances round the poor creature, and ultimately nods his head towards her, whereupon all the lookers on do the same, which coincidence is deemed a sufficient proof of guilt. Formally she was subsequently condemned to be burnt to death. But since that district became a British province and these inhuman proceedings have not been allowed to take place, they declare the victim of their superstitious credulity an outcast, and refuse her the commonest necessities of life, thus she is abandoned to her fate, and would probably starve to death, but for the timely gift of a goat or a sheep by some one of her relatives to the witch finder, who forthwith fastens the guilt on some other person in the hope of extorting a present, in a similar manner from the relatives of the person last accused.

The inhabitants of the Chumba range appear to be a different race of men. They are shorter and appear much stronger, and are certainly cleaner about their persons. They call themselves Rajpoots, and say they belong to the Guddeerat. They are sharp and able to impose upon their less knowing neighbours. Most of the witch finders are of the Chumba Guddeerat. When Europeans made their first appearance in the Kangra valley these men had very slight notions of caste and would eat or drink any thing the former gave them, whereas, since their contact with the natives of the plains, they have become as bigotted as any hindu. The

Chumba Guddees may always be known by their peculiar conical caps, with lappets to turn down over the ears like an English travelling cap. As the traveller proceeds from the plains into the interior it is very interesting to remark the gradual change in the features, from the Hindoostani to the Tartar-like countenance of the Lahouli. These last are a totally distinct race from the people of Kooloo or the Chumba Gaddi range. The Lahouli are a short sturdy set of men, very ugly and filthily dirty. The women are decidedly plain. The costume of both sexes consists of a pair of loose woollen drawers, with a frock of the same material, whilst a wrapper is also often wound around the body by being thrown over the shoulders and fastened by a brass clasp in front. Their dress, generally of a black color, is of a kind of plaid, and their caps are of the same. The women wear their hair either in long plaits fastened at the back of the head with a profusion of red wool and colored threads, or comb it back off the forehead, tying it in a lump behind, and adorning it in a similar manner. Around the flat circular caps are strung large white shells like cowries, glass beads, and pieces of amber. Around their neck, both men and women wear amulets of mother o'pearl, pieces of amber, turquoises and other precious stones. Each man has, hanging to his belt, a tinder pouch and a brass instrument for striking fire; with many other non-descript implements. They spend six months of each year in Kulu on account of the severity of the winter season in Lahoul. The greater part of that time they pass in dancing and drinking. On their jubilees, they set off fireworks and make a tremendous noise, whilst the women dance. These exhibitions do not terminate until they are all too drunk to continue them. All the mountaineers are fond of spirituous liquors, especially of brandy, but do not often drink to excess. In their orgies, the women are ridiculously decked out, especially the aged dames. Many of the young damsels have beautiful eyes, of which they make the utmost use. Their characteristic costume, their long cues of hair, and felt caps stuck coquettishly on one side, and the peculiar bunchy knot peeping out behind, to say nothing of the ornaments, produce a most ludicrous effect, whilst they shuffle and wriggle their bodies about in the dance. The men continue either quietly looking on or beat tom-toms and other instruments. It is a custom to add the names of adjacent towns, villages, or places of note, thus the place and town are spoken of as Shujanpoor Tira; the Bul Dhoon is called Sookeyt Muudi; also Kangra Bhawun; and Pallam Puttiar, &c., are terms commonly used.

The following elevations obtained from Capt. A. Cunningham are to be taken as approxi-

mations, they may be 100 feet either more or less than the truth :—

Adinanagur, ft. 1200	Hoshiarpoor, ft. 1200
Pathankot... .. 1200	Kumleh-gurh.... 4258
Noorpoor... .. 1665	Nari Ghaut... .. 2009
Kotila 1370	Rajapoor ditto... 2500
Kangra... .. 2647	Sekunder ditto... 5430
Josla Mukhi.. 1803	Jaintri ditto..... 5832
Tira..... .. 2470	Gogar pass... .. 4900
Mundi..... .. 2637	Tiri ditto..... .. 6484
Sultanpoor.... 4584	

Kangra is situated in latitude $31^{\circ} 57'$; longitude $76^{\circ} 4'$. Near Jullundhur, just after leaving Buttail is a heap of stones in the centre of the road. This is a cairn formed by Tartar tribes, who invariably pass them on their right hand as well as throw a fresh stone on the pile. These piles of stones are noticed in Lloyd's and Gerard's "Travels in the Himalaya" also in the 'Travels of the Russian Mission through Mongolia to China, by George Tinkowski, and in the Journal of the Bengal Asiatic Society, April 1859, page 385. These must not be confounded with the conical piles raised on conspicuous points or peaks in honor of their gods by almost every tribe of mountaineers in the world, whilst they are in a state of barbarism. It is also a favorite practice of the Mongols in Central Asia to erect these heaps to the honor of their gods, by whom they are called "obos." A curious custom is practised in the neighbourhood of Mundi-nuggur in the Bul-Dhoon or valley of Sookeyt Mundi in the Kohistan of Jullundhur where the women, gaily dressed, assemble in groups to greet the stranger with songs as he enters each village for which honor he is expected to bestow a rupee on each knot.

The following trees are of frequent occurrence in topes and avenues in the Jullundur Doab :—

Acacia Arabica.	Melia sempervirens.
Acacia sirisso.	Salmalia Malabarica.
Dalbergia sissoo.	Cordia latifolia.
Acacia modesta.	Ficus religiosa.
Ehretia laevis.	Ficus Indica.
Morus.

JULOSTYLIS ANGUSTIFOLIA, Thw.

Kydia angustifolia, Arn.

A middle sized tree of the south of Ceylon, not uncommon.—Thw. En. Pl. Zeyl. p. 30.

JULOTSURG, also written Jalot sarg, is a ceremony which is gone through, when a pond, *boalee* or well, is married. The only difference between this and the Bunotsarg is that the

bird is personated by an image, instead of the toolsee.—Elliot.

JULPAI. BENG. *Eleocarpus prinoides*.

JUL-PAPRA. BENG. *Mollugo triphylla*.

JULPA. SANS. to speak, from *jalp* to speak.

JUMAKIUS. GREEK. *Calotropis gigantea*.

JUMAL-CHOONTI, or Jumal bel, a ceremony.

JUMALGOTA. HIND. The *Croton tiglium*, a small tree, leaves alternate, ovate, cordate, from three to five inches long and two or three broad; yields the croton oil.—Jaffrey. See Nepatulah oil; Oil; Croton seed.

JUMA-RAT. HIND. Thursday.

JUMBA. MALAY. A land measure, 12 feet square, or 144 feet superficial: in Penang, the twentieth part of an orlong, which is $1\frac{1}{2}$ acre.—Simmond's Dict.

JUMBAGAM MARAM. TAM. A species of *Pterocarpus*, common about Nelambore and Wynand, a large tree, wood used for building and fencing gardens, said to be durable.—McLuer, M. E.

JUMBIZ or Jumiz. HIND. *Aquila imperialis*. Bechst.

JUMBOO. HIND. A metal water pot.

JUMBOO. BENG. *Eugenia jambolana*.

JUMBUDWIPA: in hindu cosmogony, the continent south of Maha Meru, in which men reside.—Hardy's Eastern Monachism, p. 437.

JUMBU-NAVEL PAILLAM. TAM. *Eugenia jambos*.

JUMD CHINI. ARAB. Soda.

JUMMA MUSJID. In India, the common appellation of the principal mosque of a town. That of Delhi close to the Chandney Chowk, is built of great blocks of red sandstone, with three domes of white marble, and raised upon a terrace fifty feet high. It is a noble sample of mahomedan architecture; and one of the grandest temples ever raised by man. It is the second most remarkable building in India being next in rank to the Taj. Had it been wholly of white marble, the grandeur and effect would have been immeasurably greater, as it is, the red stone of the colonades, and the pavilions, and the court yard, and the gateways, seems to be a blemish in the design, though it may have been intended to set off more the beauty of the white marble of the mosque by contrast. It is the highest building in all Delhi, towering above every other object, and seen from every part of the city. The mosque itself rises on the west of the platform indicating the direction of Mecca. In shape, it is an oblong, two hundred and one feet in length and one hundred and twenty feet in breadth. The top is surmounted by three magnificent domes of white marble, crowned with richly gilt copper domes. The flags are about three

feet long, by one and a half broad, and their number is 900, capable, as it evidently appeared of holding 2,000 persons. The Jumna musjeed was commenced in 1629 and finished in 1648. It is said to have cost ten lacs of rupees.—*Tr. of Hind. Vol. II. p. 282-287.*

JUMMAT-KHANA. HIND. A meeting house.

JUMMAN JATT. The founder of a sect of hindoo devotees.

JUMLA. HIND. Terminalia arjuna.

JUMMADI-UL-AKHIR The sixth month, and Jummadi-ul-awal, the fifth month of the mahomedan year.

JUMMALI, the amiable attributes of the deity.

JUMMA-OOLLAH, or Jummah Allah, AR. HIND. God's assembly.

JUMNA is a tributary to the Ganges. It rises at Jumnoutri in the Himalaya, in lat. 31°, lon. 78° 3'; 10,849 feet above the sea. It runs S. W. then S. E. to the Ganges, at Allahabad 840 miles from the sea. Length 860 miles. It receives the Tonse of Supin, about 100 miles long; Hindan, about 160; Hansoutee, 99; Bangunga, 220; Chumbul, 570; Sind, 260; Hetwa, 360; Cam, 230; Baghin Nuddee, 90; Seyngur, 210; Urrund Nuddee, 245 miles. About 105,000 square miles drained. In consequence of its bed being obstructed by shoals and rocks, navigation is not practicable for craft above Delhi, except by means of the canal. Its banks are lofty and precipitous, and ridges of rock in many places advance into the stream, combining with its general shallowness and strong current to render navigation extremely difficult and dangerous. The affluents of the Jumna are considered to be more rapid in their course than those of the Western Himalayan rivers.

The Jumna, is the Kalindi of older hindoos, a name associated in the hindoo mind with the adventures of many an ancient rajah and rishi, the loves of Radha and Krishna. The spot where the sister nuddees (Greek Naiades) meet, makes a magnificent prospect. There is scarcely a lovelier spot than the prayag of Allahabad. The broad expanse of waters, the verdant banks and the picturesque scenery, tell upon the mind and fascinate the pilgrim. A special great mela here, is held every year on the full moon in January—Maghai Prayag, as the common Hindoo saying goes. The holy fair lasts there about two months and attracts people from far and near.

The Jumna rises at the south-western base of the Jumnoutri peaks and the Mesopotamia formed by the Ganges there, known as the Doab, is the Anterved of the ancient hindus. From the narrow point in which it terminates, the valley broadens as it stretches away to-

wards the west, embracing a greater and greater area between the Ganges and Jumna. The whole of its immense superficies forms a vast, populous, and busy hive, enriched by human industry, and embellished by human taste. It is thickly dotted with great townships and cities, and under the sun, no country makes up such a highly interesting prospect of green fields, orchards, and gardens, in a continuous succession. In this fair savannah man has had his abode from a remote antiquity, to reap rich harvests, and live amidst plenty. Here were the cities of the pre-vedic Dasya races. Here rose the first cities of the Arya race. In the plains of the Doab, the rajahs of Hastinapoor, of Indraprastha, and of Kanouj exhibited the highest power and splendour of hindu sovereignty. The rich districts watered by the Ganges and Jumna have always tempted the avarice of the foreign conqueror. Here was the residence of the most famous hindu sages. From this birth-place of arts and civilization, wisdom travelled to the west. This Doab is the battle ground of the Pandoo against the Kuru—of the Ghiznivide and Ghorian against the hindu; of the Mogul against the Patan—of the Mahratta against the Mogul—and of the British against the Mahratta, where many a spot is hallowed by tradition, and many a ruin is consecrated by history. In this Doab almost every inch of land is under the plough. From Allahabad to Sheeoabad there are four large cities, and villages at frequent intervals. A similar distance in Bengal is no doubt dotted with the same number of villages, but has not one town equal to Fettehpore, Cawnpore, or Mynpore. Here the rural population is more intelligent and spirited than the same class in Bengal. The humblest Doabee lives upon better food, and covers his body, with more abundant clothing than the humblest Bengalee. The cattle here are various. Camels, buffaloes, horses, donkeys and oxen are all made to assist man in his labours. The fondness of the Doabee women for coloured millinery evinces a more refined female taste, and to them may remotely be traced the impetus which is given to the various dye manufactures of northern India. The agricultural women of the Doab use ornaments of brass and bell-metal. The same class in Bengal are in the habit of wearing shell-ornaments, and a pair of Dacca shell-bracelets may sometimes cost the sum of two hundred and fifty rupees. One particular ornament in general use amongst the Doabee women, of both the upper and the lower classes, is the teeka, which is in the shape of a tiny crescent made of gold, silver, or tinsel, according as the female is circumstanced. It is fixed with an adhesive substance on the forehead, just between the eyebrows. These teeka are not a little prized

and coveted by the Hindustani young men. They train bulbuls to execute little commissions of gallantry. On a given signal, the bird goes, seizes and carries off the teeka from the forehead of a woman, as precious booty, to her pining lover. The Doab, like Bengal, is flat and alluvial. The vast plain is uninterrupted by a single eminence; the tall and robust figure, the firm step, the stern eye, and the erect bearing of the manly Hindustani are everywhere to be seen. In Bengal the oxen alone forms beasts of burden. A hindustani cooly takes the load over the waist, and not upon the head. In Calcutta the Baboos do not know what it is to ride. In Hindustan rural women perform journeys on horse-back and princesses discuss the merits of horsemanship. The people of the Doab have for the most part well-formed features. The rude Jat, however, has a coarse mean physiognomy. The western and Eastern Jumna canals were of ancient construction, but had fallen into disrepair till restored during the administration of Lord Dalhousie.—*Tod's Rajasthan*, Vol. i, *History of the Punjab*; Vol. i. p. 23 to 28. *Tr. of Hind.*, Vol. i. p. 302 to 304 and 334 to 372. Vol. ii. p. 18. *The Indian Administration*, by H. G. Keene. *Cleg. Prin. Rep.* p. 10.—See Dharma-rajah; Doab; Hindoo; India; Jat; Krishna, Kuru; Pandoo; Polyandry; Radha; Siku; Triveni; Yama.

JUMNO-MUNDROO. A Nepaul tree, which bears yellow sweet-smelling flowers in bunches; its leaves resemble those of the holly and the wood both in closeness of texture and colour, is very like box.—*Smith's Nepaul*.

JUMNOTREE, near this holy site of the hindus, is a junction of three streams. From the bed of the torrent the mountain rises at once to its height, apparently without any very extensive irregularities, and the steepness of the declivity at this point may in some degree be estimated, when it is understood that here, though at the foot of this upper region of the mountain, the very peaks are seen towering above as ready to overwhelm the gazer with the snow from their summits, and, in fact, the avalanches from above fall into the channel of the river. The particular spot which obtains the name of Jumnotree is very little below the place where the various small streams formed on the mountain brow, by the melting of many masses of snow, unite in one, and fall into a basin below.—*Fraser's Himalaya mountains*, p. 428.

JUMOUNT. See Meghnad.

JUMPALOO. TAM. See Jewellery.

JUMPTI, the state-barge of the amirs of Sindh, an immensely long boat, some as much as 120 feet.—*Postan's Personal Observations*, p. 128.

JUMRA, gravel or small stones thrown at pillars, representing the Devil, in the valley of Mina.

JUMUDAGNI. SANS. From jamat, terrific, and agni, fire.

JUMWAREE, a river near Mubarikpoor in the Muzafferpoor district.

JUN, a tribe in the waste tracts between the Sutlej and Indus. In the same locality, are the Bhuttee, Seel, Kurrul and Kathi tribes.

JUNAGURH; lit. old fortress, a town with high land near, on the coast of Guzerat, near Porbunder. This ancient city is at the foot of and guards the sacred mount of Girnar. There is little doubt it is the Asildurga or Asilgurb, of the Grahilote annals, where it is said that prince Asil, by the consent of his uncle the Dabi prince, raised a fortress called after him, near to Girnar. It is now a large mahomedan town about forty miles from Puttun. It is the residence and capital of the nawab, a descendant of Sher Khan, Babi, a soldier of fortune, who seized it in the general anarchy which preceded the subversion of the Moghul rule. 20 miles to the west are the ruins of Balabhipura. There is here an inscription on a rock with the Pali edicts of Asoka. It is in Sanskrit prose but with grammatical errors, and punning. The date, if after Wathen's inscription, or the Andhra kings, is between the third and the end of the sixth century, of the christian era. On the coins of some of the princes of this dynasty are the dates 283, 323, 360, 385, and 390, but of what era is not known. Rudra Dama mentioned in the inscription is the father of the Rudra Sah of the coins, with the Samvat 355. The character used in the inscriptions is altered, but approaching Wathen's plates and old Deva Nagari, nearly Wathen's. The religion mentioned is buddhist. The invocation is Siddham and there is not the slightest trace or allusion to brahmanism. On the coins of the princes, the chaitya is impressed, and one of the princes is called Jina Dama, or votary of Buddha. Of the kings or princes mentioned, are Rajah Maha Kshatrapa, or Swami Chastana, his son was Raja Aridama. Chandragupta Maurya of Magadha is referred to, and his grandson Asoka. The following names of the Rudra Sah family appear on the coins: Rudra Sah, his son Aga Dama. Dama Sah (no coins). His son Vijaya Sah. His brother Vira Dama. His son Rudra Sah, date 283. His brother Viswa Sah, date 324, Rudra Sah, 332? His son Utri Dama, date 360? His son Siawa Sah. Swami Rudra Dama (no coins). His son Swami Rudra Sah, Samvat 385 and 390? This inscription records the repeated repairs of a bridge,—once by Pupya Gupta, treasurer of raja Chandra Gupta, Maurya;

then by the Greek (Yavana) raja of Asoko, Tasaspa; and, lastly, by Rudra Dama. The names of eleven sovereigns of this dynasty have been made out from their silver coins, which are unquestionably buddhist, the chief and contral emblem on the reverse being the chaitya. Rudra Sah is called the son of Jina Dama, the votary of Buddha. One, of the completion of the bridge, is in the seventy-second year of the son of raja Swami Chastana, called the raja Aridama, and although this inscription be in Sanskrit, there is not the slightest relation to brahmanism in it. Both by the inscription and coins the princes are buddhist, and Swami Rudra Sah has the Samvat date 385, which, if of Vikramaditya, places him in the fourth century of the christian era, but if the era be the Balibhi, the date is A. D. 704. The inscription mentions the election of a king (Rudra Dama) by the people, who did not permit the sacrifice of animal life; and he is called the Lord of the country of Ongein, Mathura, Sindh, &c., and the conquered Satkarini, king of the Dekkan.—*Postan's Western India*, Vol. II, p. 33. *As. Soc. Journ.*, Vol. VII, p. 339. *Pottinger's Travels in Beloochistan and Sind*, p. 8. *Prin. Ind. Ant.*, Vol. II, p. 61.

JUNAR. BENG. Indian corn. *Andropogon bicolor*.

JUNARDDANA. SANS. From jana, a person, and ardduna, a giving distress.

JUNAPAM or SUNN. *Crotalaria juncea*.

JUNB. ARAB. Grapes.

JUNCACEÆ, *Agardh*. The rush tribe of plants consisting of 4 gen. 18 sp. viz. 13 *Juncus*; 1 *Luzula*; 3 *Flagellaria*, 1 *Susum*. Rushes are found in moist places on the mountains of India. The common rush of Europe is employed for making mats, baskets, and the bottoms of chairs, and its pith is employed for the wicks of rush lights. *Juncus effusus*, which is the common European species, is, according to Thunberg, cultivated in Japan for making floor-mats. *J. glaucus* a European species found in the Himalaya, and closely allied to *J. effusus*, might be employed for all the purposes of the common rush.—*Illustr. Himal. Bot.* p. 401. *Royle's Fib. Pl.* p. 60.

JUNCUS ODORATUS. Syn. *Andropogon schenanthus*.—*Linn.*

JUNDAMAREE. URYA. A tree of the Northern circars, extreme height 30 feet, circumference 2½ feet, and height from the ground to the intersection of the first branch, 6 feet. Used for ploughshares, and burnt for firewood, being very common.—*Captain Macdonald*.

JUND BADUSHTAR. AR. Castor, the dried *Castoreum*, obtained from the glands of the beaver, largely used in hindu medicine, in

hysteria and uterine ailments. In the living animal, the castor is nearly fluid, and in this state, as also when dry, it has a strong penetrating odour.

JUN. The wild tribes of Chibh and Buhow in the hills of the Punjab, the Jun and Kathi, and the Dogher and Bhattee of the plains, have different characteristics, but the idle and predatory habits of some, and the quiet pastoral occupations of others, are equally the result of position as of character.—*Cunningham's History of the Sikhs*, p. 18.

JUNGAL MAHAL, the vagrant Baori of the Bhatti country and west of Delhi subsist chiefly by stealing. The Baori of the Jungal Mahal, are a low caste of cultivators and palanquin-bearers.—*Wills Gloss*.

JUNGAM, the priest of the Lingaet sect, or Vira-Saiva. In Southern India, one division of the Jungam worship one lingam, while the Panche bunjeka wanloo, worship five lingams.

a. The Linga balgee wanloo sect wear the Lingum, the emblem of Siva, in a silver casket on their breasts, suspended from their necks.

b. The Jaloroo balgee wanloo, wear the lingum on their right arm.

u. The Jungum wanloo, worshippers of one lingum.

b. The Punchabanjerka wanloo, worshippers of five lingams. See Jangam.

JUNGEEZ KIFAN. A mode of spelling the name of Changez Khan; with respect to religion, he was the apostle of the most complete toleration. Mahomedans relate that he had the subject discussed in a mosque of Bokhara, and there laid down the principle, that he required only faith in one all powerful God, leaving all the rest to be supplied by man's free study and judgment. But the creed of Changez-khan was budhism.—*Prinsep's Tibet, Tartary and Mongolia*, p. 3 and 4.

JUNG'HARA. HIND. A large and somewhat turbulent tribe of Rajpoots of the Thar clan, in the south-east of Rohilcund, whence they appear to have expelled the Kut'herya.—*Blind Supp. Gloss*.

JUNGPEN, BHOT. LIT. Fort-holders.

JUNG. PER. HIND. The sixth or lowest title amongst the mahomedans of India.

JUNGIPORE. Twenty-one miles from Jungipore is Sooty, where the Bagiritti branches off from the Ganges. The neighbourhood of Sooty is remarkable for the battle of Gheriah, fought between Ali Verdi and Sarfaraz Khan in 1740. There was another battle fought here in 1763 between Meer Kasim and the British.

JUNGLE. HIND. A-vap. BURM. A forest: a scrubby forest: hence wild un-

JUNHOO.

cultivated, useless ; as Jungli Kandi. *Dracontium polyphyllum*. Jungli Moonghi. *Ornocarpum seunoides*.

JUNGLI-PIAZ. HIND. *Scilla Indica*.

JUNGLE BEAD TREE. ENG. *Abrus precatorius*.—*Linn.*

JUNGLE BERRY. *Erinocarpus Nimmonii*.

JUNGLE BHANG. See hemp.

JUNGLI-ADRAK. BENG. *Zingiber capitatum*.

JUNGLI-BADAM. HIND. *Canarium commune*, also *Sterculia foetida*.

JUNGLI-DAL. BENG. *Potamochoa Retzii*.

JUNGLI BADAM. HIND. *Canarium commune*.—*Linn.* BENG. *Sterculia foetida*.—*Linn.* See Neeradi mootoo.

JUNGLI-HALDEE. BENG. Wild turmeric, *Curcuma arnatica*, also *C. zedoaria*.

JUNGLI-KHAJOOR. BENG. *Phoenix acaulis*.

JUNGLI-MUTUR. BENG. Yellow vetchling, *Lathyrus aphaco*.

JUNGLE GERANIUM. *Ixora bandhuca*.

JUNGLE KEMAS. See Caprae.

JUNGLI-AM. DUK. *Spondias mangifera*.—*Pers.*

JUNGLI CHUCHINGA. BENG. *Trichosanthes cucurmerina*.

JUNGLI ERANDI. DUK. *Jatropha curcas*.

JUNGLI IRANDI KA TEL. HIND. *Jatropha curcas*.

JUNGLE SHEEP. *Cervulus moschatus*.—*De Blair*.

JUNGLI KABUT. HIND. Bustard. *Otis tarda*.

JUNGLI KANDI, also Jungli Kunda ka gadda. DUK. *Dracontium polyphyllum*.—*Linn.*

JUNGLI MOONGHI. DUK. *Hedysarum seunoides*, also HIND. *Ornocarpum seunoides*.

JUNGLI-PIAZ. DUK. GUZ. HIND. *Squill*. *Scilla Indica*.—*Roxb.*

JUNGLI PIPAL. HIND. *Ficus religiosa*.

JUNGLI RAI-AM. HIND. *Tetranthera*.

JUNGLI SHAMBALU. HIND. See *Namelundugu*.

JUNGLI GANGA. *Desmodium recurvatum*.

JUNGLI KARINJ. HIND. *Terminalia alata*.

JUNGLE, in Africa, is formed by dense and almost impenetrable gigantic grasses : in Australia by rich dense scrub of species of *Eucalyptus*, *Melaleuca*, &c. intertwined with scrub vinyt, a species of *Cassytha*, but the jungles of India are of canes and other palms very difficult to penetrate.

JUNHOO. SANS. From ha, to abandon, (viz. the world.)

JUNIPER BERRIES.

JUNIPER. Many juniper plants grow in the northern hemisphere of India. The juniper of Rondu has a very extended range in altitude, being common in the drier parts of the Himalaya at elevations of 12 or 18,000 feet, and in some parts of Tibet, where it meets with a higher summer temperature, even as high as 14 or 15,000 feet. The *Juniperus excelsa* of Wallich, so far as the point can be decided by dried specimens, seems identical with specimens in the Hookerian Herbarium, collected in Karabagh and Sakitschiwan by Stowitz, and communicated to Sir W. J. Hooker by Fischer. The Turanian specimens of *J. excelsa* from Bieberstein are, however, a good deal different, and are perhaps only a form of *J. Sabina*.

J. Barmudiana and *J. Barbadensis* are noticed under the word cedar, Mr. Hodgson, names as plants of Japan *J. rigida* ; *J. taxifolia* ; *J. chinensis* and *J. procumbens*.—*Dr. Thompson's Travels in Western Himalaya and Tibet*, p. 256.

The berries of the common Juniper tree have stimulating and diuretic properties, are used in the distilleries in England and Holland for flavouring gin or Geneva. The berries procurable in the Indian bazars, are supposed to be brought from the Himalaya and Cabool. The common juniper was found by Captain Webb on the Neetee pass, and by Mr. Inglis in Kunawur—3 to 6 feet high, forming a dense diffuse, irregular bush, occasionally tree-like, and attaining an elevation of 20 feet. Odour of the leaves agreeable and balsamic, of the berries also agreeable, taste of the leaves resinous, rather bitter ; of the berries sweet, aromatic, slightly saccharine, hot, and rather bitter. The berries are considered diuretic and emmenagogue ; brought from the Himalaya and Cabul. The berries contain sugar, mucilage, and a little essential oil. The oil is white or yellowish, light, very liquid, of hot and acrid juniper taste, and very strong smell ; the extract of the berries is called a " Rob." The oil is prepared on the large scale in Holland, and is often adulterated with turpentine. Besides its stimulating and narcotic properties, gin is also acknowledged to be a powerful diuretic. Of the 13 conifers of the North-west mountains only the *Juniperus communis*, the Deodar, *Pinus Gerardina*, *Pinus excelsa*, and *Cupressus torulosa* are not found in Sikkim. Dr. Mason mentions the *Pinus Latteri* as growing in Tenasserim, and Dr. Brandis adds, *Pinus Massoniana*, Lamb.

JUNIPERUS EXCELSA.

and Pinus Khasians. Thunberg mentions many pines in Japan, and they are numerous in China. The conifers of the Himalaya were described by Major Madden in 1846 to 1849. —*Faulkner. Ben. Ph.* 209. *Royle, p* 352. *O'Shaughnessy, p.* 620.

The natives often confuse the two shrubby species *J. communis* and *J. squamata*. They are common in many parts of the Punjab Himalaya from sometimes as low as 7,000 to at times as high as 13,000 feet, and occur near the Safed Koh, Trans-ludus, often forming a belt or more frequently patches above the upper limit of trees, although, seen at times very much below that. The wood burns fairly well, and on the passes it is frequently the only decent fuel to be got within miles. Madden states that from the berries, with barley meal, a spirit is distilled, the former being probably only added to impart a gin flavour. The berries are officinal in the plains, and are used in decoction, being considered stimulant.—*Dr. J. L. Stewart's Punjab Plants, p.* 223.

Pencil Cedar	Lewar (deodar.)	CHENAB.
Chalai.....	Shurgu.....	SUTLEJ.
Shukpa.....	Shukpa.....	LADAK SPTL.
Shur.....	Apura	BEUCHISTAN.

This tree is said to be abundant in Nepal, and to occur below the Niti Pass in Kumaon. In the Punjab Himalaya it is common in the upper and more arid parts of the basins of the Sutlej and Chenab, likewise in Ladak, also in some numbers on the Kunhar, a tributary of the Jhelum, and near the Safed Koh (Bellew.) and on Chehel-tan in Beluchistan (Masson, &c.) Cleg-horn gives the crest of the Dhauladhar, above Kangra, as a habitat which is perhaps doubtful, as the climate there is moist. The elevational range may be put at 8,000 to nearly 15,000 feet. At the higher altitudes it is only seen as a shrub, but at 10,000 feet acquires a considerable girth. The timber, which has the same

JUNIPERUS SPHERICA.

fragrance as that (also produced by a juniper) from which pencils are made, is light, and not strong, but is used for many purposes in the almost treeless parts where this generally grows. It is employed as supports for water channels, and the heart-wood when in moist earth, is nearly imperishable. In Lahoul it is also used alternating with stones, for the walls of houses, as well as for beams. And on the Sutlej some of the temples are built of it, and it is said to be in some request for boxes at Simla. In Kanawar, also, vessels made of it are much esteemed, and some charcoal is made from it. In Kanawar the wood is used as incense, and offered by the Lamas to their deities, and in the latter the twigs are used by the priests in several religious ceremonies, and the fruit is regularly burnt as incense by the buddhists. Masson states that on Chehel-tan the fruit is employed medicinally and is exported to Hindustan so that it may constitute part of the Abbul of the bazars. In Khagan, on the Kunhar, the small branches under the name of Chalei ke dhup, are burned near the patient as a remedy for delirious fever.

It is found in the Sutlej valley between Rampur and Sungnam at an elevation of 9,000 to 12,000 feet, and there yields an excellent, light, odoriferous wood. This is according to Royle, the Himalayan cedar. *Juniperus excelsa* forms a fine tree in Britain and is used as an ever-green. At a small village near the Lipa stream, on the Werang pass of the Himalaya, with some cultivation, and a rather odd-looking little temple, are two fine trees of *Juniperus excelsa*, the sacred Juniper of the Kuna-war and Tibetan. The Juniper in Kanawar appear to be of three sorts. One called Pama is an immense creeper, another Shoor or Shookpa is a tree of fifteen or twenty feet, on which are a few small cones, and the third is a bush named Bettir.—*Dr. Thomson's Travels, p.* 87. *Dr. J. L. Stewart's Punjab Plants, p.* 224. *Cleg-horn's Punjab Report, p* 63. *O'Shaughnessy, page* 620. *Eng. Cyc. Sec* Evergreens.

JUNIPERUS OXYCEDRUS. See Cedar; Deodar.

JUNIPERUS RECURVA. Desv.

Khoubair.....	HIND.	Ubbul.....	HIND.
---------------	-------	------------	-------

The weeping blue juniper and the arboreous black one (called "Telokpo") yield beautiful wood, like that of the pencil cedar, but are comparatively scarce in Sikkim.—*Hooker, Vol. II, p.* 45.

JUNIPERUS RELIGIOSA. *Royle*, grows at an extreme height on the Himalaya, generally, and is held in reverence by the people.

JUNIPERUS SPHERICA. On one of Mr. Fortune's excursions amongst the hills he met with this curiously formed tree, which, at first, sight seemed to confirm the old Virgilian tale of

apples growing upon plane trees. It is one of those junipers which grow to a considerable size in the north of China, and which the Chinese are fond of planting round graves.—*Fortune*.

JUNIPERUS SQUAMOSA.

Beter HIND. Bet'har HIND.
Pethri " Pama, also Talu PUNJ.
Creeping Juniper. ENG.

This is found at very high altitudes in the Sutlej valley, between Rampur and Sungnam, at an elevation of 12,000 to 13,000 feet, where forests disappear. It is used as firewood in crossing the high passes.—*Cleghorn's Punjab Report*, p. 63.

JUNIPERUS VIRGINIANA. See Cedar Deodar

JUNIR. Here and at other places in the Deccan, are bud'hist caves with numerous inscriptions, in the old pal, seven of which were collected by Colonel Sykes. The date is the second to third century before Christ and the character used in the inscription is the Old Lat; but not so old as the Delhi Lat character. The inscriptions narrate by whom the caves were excavated and for what objects. That at Karli is for foreign pilgrims: the great Charlya cave excavation at Junir is for the comfort of the attendants at the temple, &c. Dharmika Seni, is called the author of the one hundred caves at Junir, but is not called king. Vira Senaka excavated the Deophy temple. Sulisadatta is called Lord of the City of Thaka. These seven inscriptions, do not record positively the titles of any princes, nor name the Samana and others of the priesthood; but it must be borne in mind that the moment a prince became a "Samana" he abandoned his titles. The inscriptions are remarkable, also, for having [initial or final] many of the emblems on the coins.—*Journ. Bl. As. Soc. VI. p. 454. Vol. VI. p. 504 and 1038.*

JUNJOOH, a hindu race, in the hills south of Kashmir.

JUNK. A Malay and Javanese word applied to the larger craft of the Archipelago, used both in war and for commercial purposes. The word is properly Ajong or Jong, corrupted by the Portuguese into Junco, which the English have improved into Junk, and apply to the larger Chinese vessels. The Chinese word for the vessels called Junk, is Wang-kang. The word Ajong, is used for boat, by the Chinese and Malay.—*Crawford*.

JUNK SEYLON, or Salang Island, one of the islands of the Mergui Archipelago, and separated from the continent by Papra Strait, extends from lat. 8° 9' to 71° 46' N., being 8 leagues in length and about 3 leagues broad. It formerly belonged to the Malay

raja of Queda, but it has since been forcibly occupied by the Siamese of Ligor. In the entrance of the Strait of Malacca, near the Nicobar and Acheen Islands and betwixt them and Junkseylon, there are often very strong ripplings, particularly in the S. W. monsoon. There is no perceptible current, yet the surface of the water is impelled forward by some cause. They are seen in calm weather approaching from a distance and in the night their noise is heard from a considerable distance before they are near, alarming to persons unacquainted with them, for the broken water makes a great noise when the vessel is passing through it. They beat against a ship with great violence, and pass on, the spray coming on deck, and a small boat could not always resist the turbulence of these remarkable ripplings.—*Horsburgh*. See Barren Island.

JUNKEE-JAM. BENG. Dalrympelia pomifera.

JUNNU KATTI. TAM. JUNNU GEDDA. TEL. Cheese.

JUNNUT-OOL-BUQQEEA, the name of the cemetery at Medina where Hussun was buried: literally, the paradise of the eternal.

JUNO. See Saraswati; Kali; Osiris; Yavana.

JUNONA. A village in the Chanda district, situated seven miles east of Chanda and six miles north of Billalpur, with which latter place it is supposed to have been connected during its occupation as the capital of the Chanda kingdom.

JUNCOTOORWA. A small clan of Rajpoots in Gungapoor, zillah Benares.

JUN AND KATHI of Kattyawar are tall, comely and long-haired races, who have vast herds of camels and black cattle, from which the towns are furnished with ghee or clarified butter, and the people themselves provided with libations of milk. See Kat'hi.

JUNTREE or Jantu, HIND. An Almanac or Register. The word originally meant a perforated piece of metal through which wire is drawn, and may have subsequently been applied to an almanac on account of its having many open compartments, or ruled divisions.

JUNAKA. SANS. From jan, to be produced; properly Janaka.

JUNAMEJAYA. SANS. From jans, a man, and ej, to tremble.

JUNAPA. TAM. P. Crotalaria juncea.

JUPITER. See Hindu; India; Krishna; Sani; Yavana.

JUPA. SANS. To speak inaudibly, from jup, to mutter.

JURA. HIND. SANS. The knot of hair, on the head of a hindu, properly Japa.

JURAMINA MUDHARO, HIND. Aristolochia longa, used both in powder and

mixture; employed as a tonic in diseases of the chest and brain, and especially in headache.

JUREA or **JARIYA**. One of the seven divisions of the Lodh tribe.—*Elliot. Supp. Gloss.* See Lodh.

JUREEB or **Jarib**. **HIND. PERS.** A measuring chain, or rope. Before Akbar's time, it was a rope. He directed it should be made of bamboo with iron joints, as the rope was subject to the influence of the weather. In British survey measurements a chain is used. A jureeb contains 60 Guz, or 20 Guth'a, and in the standard measurement of the Upper Provinces, is equal to five chains of 11 yards, each chain being equal to 4 Guth'a. A square of one Jureeb is a Baegha. A Jureeb in Hebrew and Arabic, signified originally only a measure of capacity, equal to 4 Qufeez, or 384 mud (Latin, Modius), and in course of time came to signify the portion of land which required as much to show it as a Jureeb would contain. The Pat'ha and Nalee of Gurhwal and Kumaon have a similar origin. This use of the term must have altered before the reign of Timoor, for in the Institutes we have an injunction, which is evidently the foundation of Akbar's division of soil into three classes. The words Qufeez and Mud are both retained in the Spanish cañiz and almod. Indeed, nearly all the Spanish weights and measures are like very many administrative words derived from the Arabic. As the quintal of one hundred pounds, from kintur, of which the fourth (rooba) is the arroba: arralde, a pound from arrattle; xeme, a span, from shamah; and so on.—*Elliot. Sup. Gloss. Al Makkari, vol. I. p. 500. Asasu-l-Loghat.*

JURGON. **AR.** ? Zirconia.

JURI. See Kelat.

JUR-KUNDALOO also Kundaloo; and Kubra, a large nettle, growing in the northern and middle parts of the Himalaya. It attains to about eight or nine feet high and the natives make ropes of the fibre, for tying up their cattle and snow sandals.—*Royle's Fib. Pl.*

JURRAH. **ARAB. HIND. PERS.** A surgeon.

JURU. See Semang, properly Jara.

JURU-BHARUTA. **SANS.** from jara, decrepitude.

JURUD-KALMI. **BENG.** Hewittia bicolor.

JURUMUDI. **MALAY.** A steersman.

JURUTKAROO. **SANS.** from jri, to be withered, and kri, to do.

JUS. See Karej.

JUS, properly Jast, **HIND. ZINC.**

JUSAWUR or Jusawut, the name of a tribe of Rajpoots in Areeng of Muttra. They are held in no great consideration.—*Elliot.*

JUSHODA. **SANS.** from Jashas, fame, and da, to give.

JUSQULAME. **FR.** Henbane seed.

JUSSAD. **GUZ. HIND. PERS.** Spelter. Zinc.

JUSSI. **TAGAL.** A delicate fibre of the Philippine Islands, of which dresses, &c., are made. Jussi fibre, and striped Jussi dresses from Manila, were exhibited in the Exhibition of 1851; the plant yielding the fibre is not known.—*Royle. Fib. Pl. Simmond's Dict.*

JUSSIEUA **CARYOPHYLLACEA.** **LAM.**

Syn. of Ludwigia parviflora.—*Roxb.*

JUSSIEUA EXALTATA. **ROXB.** Syn. of

Jussieuia villosa.—*Lam.*

JUSSIEUA FRUTICOSA. **D. C.** Syn. of Jussieuia villosa.—*Lam.*

JUSSIEUA RACEMOSA. **ROTTL.** Syn. of Lumnitzeria racemosa.—*Wild.*

JUSSIEUA SUFFRUTICOSA. **LINN.** Syn. of Jussieuia villosa.—*Lam.*

JUSSIEUA VILLOSA.—*Lam. W. & A.*

J. exaltata, Roxb. Rheede. | J. suffruticosa, Linn.

J. fruticosa, D. C.

Lal ban Langa.....**BENG.** | Karambu... ..**MALEAL.**

A perennial plant grows in Bengal in both peninsulas of India and in Cochinchina. It is employed in medicine.—*Voigt, p. 33.*

JUSTICIA, a genus of plants belonging to the natural order Acanthaceæ. Thirty-two species of Justicia are described by Dr. Roxburgh. A few only of which have any medicinal virtues attributed to them, and all but one are now referred to other genera. Lindley quotes *J. pectoralis*, as a stomachic, *J. biflora*, and *Acanthus mollis*, having emollient leaves are used for poultices, and Wight gives *J. linida* Of the East Indies, are *J. calycotricha*, *J. dentata*, and *J. ecbolium*. Some of the species are planted as flowering shrubs—*Gen. Med. Top. p. 124. Riddell, Gardening. O'Shaughnessy, p. 483.*

JUSTICIA ADHATODA. **Linn. Roxb.**

Malabar Nut.....	Adhatoda Vasika,...	Nees.
Arus.....	Alus.....
Bakus.....	Vasuka,.....	HIND.

This plant grows abundantly wild, and common all over India. Leaves are used at Ajmeer, and are considered diaphoretic and sedative, and used in cough prescriptions. The root is used in Ceylon as an emmenagogue and to cause abortion. The charcoal of the plant is used to make gunpowder.—*Irvine's Med. Top. of Ajmere, pp. 124 to 173.*

JUSTICIA APPRESSA. **FORSK.** Syn. of Barleria prionitis.—*Linn.*

JUSTICIA COCCINEA. This species bears a small pink flower. The leaves are of a reddish colour underneath. It is said by the natives that the root is an antidote to the bite of a snake, and that it is the root sought after by them when bitten by the cobra.—*Riddell.*

JUSTICIA PICTA.

JUT.

JUSTICIA DENTATA. Klein. Syn. of *Justicia ecbolium*, Roxb. *Rheede.*

JUSTICIA ECBOLIUM.—Roxb. *Rheede.*

Oodoo Jati.....	Burm.	Jati.....	HIND.
Tan-sa-lat.....	Burm.	Pachcha Vádámbaram	TEL.

A shrubby plant common in most parts of India, and in flower nearly all the year. It is a native of the Indian forests, said to be diuretic. Flowers pale blue, tube very long and slender.—*O'Shaughnessy. Roxb. Fl. Ind. t. 114. Voigt.*

JUSTICIA ECHIOIDES. Roxb. Syn. of *Andrographis echioides.* *Nees. W. Ic.*

JUSTICIA GENDARUSSA. ROXB.

Gendarussa vulgaris.—*Nees.*

Jujat-mu....	HIND.	Caur Nuchi....	TAM.
Kali Shumbeli....	"	Nalla-Wawali....	TEL.
Nila Nirghundi.	SANS.		

A handsome shrubby plant with bark of a dark purple hue very smooth, and in some varieties green, flowers during the rains, it grows readily by cuttings or slips: the leaves when rubbed have a strong and not unpleasant smell; they are roasted and given by the Vitians in chronic rheumatism.—The leaves dried and powdered; are used as a preservative to keep insects from books.—*Riddell. Genl. Med. Top. p. 172. Ains. Mat. Med. p. 73.*

JUSTICIA NASUTA. LINN.

Rhinacanthus communis.—*Nees.*

White-flowering Justicia. | Kabutar ki jhar. HIND.

A shrubby plant with white flowers in axillary and terminal panicles; grows spreading along the ground. The leaves are bruised and used by the natives for curing ringworm. Found in the native gardens as a flower. The flowers are sold along with those of Jasmine, and the roots are used in medicine as an excitant.—*Riddell. Genl. Med. Top., page 173.*

JUSTICIA PANICULATA. *Burm. Roxb.*

Andrographis paniculata.—*Wall.*

This plant grows wild in the southern parts of India. It is one of the chiraytta, and is highly prized as an excellent stomachic. See *Andrographis paniculata chiretta.*

JUSTICIA PICTA. ROXB.

Graptophyllum hortense.—*Nees.*

Painted Justicia.	Face plant.....	ENG.
Soorkh-Vasooka....		

This is a very ornamental and handsome variegated shrub, bearing red flowers, having green leaves with large white spots fringed with green, and some varieties with red and dark red spots. The leaves are used for the decoration of the dessert after dinner, and other ornamental purposes: few leaves can be found on which some grotesque resemblance

to the human countenance may not be fancied or traced.—*Riddell. Genl. Med. Top. p. 173. Jaffrey.*

JUSTICIA PROCUMBENS. LINN. Syn. of *Rostellaria procumbens.*—*Nees.*

JUSTIOIA REPENS. LINN. Syn. of *Rungia repens.*

JUSTICIA VERTICILLATA.

Erect Justicia. | Kustoola...HIND.

Found in the Kotah jungles.—*Genl. Med. Top, p. 173.*

JUSTIN. See Chandragupta.

JUT. Under the words Jat and Jet, have been given some notices of, seemingly, a distinct race to which these differently pronounced names are applied. They are supposed to have sprung from hordes, who had migrated from the plains of Upper Asia, and been pushed forward into the valley of the Indus by succeeding and more warlike races. Captain Postans tells us that the Jut, like all the tribes in the Sind countries, are divided into innumerable subdivisions called Koum, and are there a hard-working race, occupying themselves in rearing camels, feeding flocks, or cultivating the soil. They are invariably found in large communities, often living in temporary huts or "wand," and migrate all over Sind and its confines, as shepherds, in search of pasture. Where this is not the case, they are farm servants either of the Biluchi chiefs or wealthy zamindars, who repay their labour with a modicum of the produce. The Jut in Sind, are a quiet-in-offensive class, and exceedingly valuable subjects, but have hitherto been much depressed. Their women are, throughout the country, noted for their beauty, and, to their credit be it also spoken, for their chastity. They work as hard as the men, and the labour of tending, driving home their flocks, milking the cattle, &c. is fairly divided. The Jut are very numerous and form a large division of the population of Sind, though seldom found in its towns, being dispersed over the whole face of the country, particularly eastward to the desert tract which separates Sind from Cutch, known as the Runn on which this tribe rear large flocks of camels. There are other pastoral and peaceable classes besides the Jut, of mahomedan persuasion, such as the Khosa in Upper Sind, Sikh Lohana in the Delta, and emigrants from the Punjab, who have in many instances become amalgamated with the people of the country. The Khosa become a predatory tribe on the eastern confines of Sind, verging towards the Cutch territories, where Rajputs are located, they are very troublesome. They are also on the eastern boundaries, as wandering herdsmen. The

Daod Putra who inhabit generally the country of that name in the north are to be met with in various parts of Sind. The Sumah are Jat, though they are generally known by the former title. Such also are the Machi and numerous other subdivisions of the Jat tribes. The Jat is as inseparable from the camel throughout Sind, as the Arab from his horse in Arabia; they are invariably camel drivers and feeders, and are consulted on every occasion where the health or efficiency of this invaluable animal is in question. According to one authority, the Jat occupying parts of the ancient Sikh territories, are sprung from barbarous hordes, who emigrated from the plains of Upper Asia, but who now have long held the hindu language and belief. But, if the Jat of Sindh and Kach Gandhava be of the same stock, these have become mahomedans. The Jetki is everywhere, according to Mr. Massoon, the language of the Jat.

Gavelkind, the equal division of the inheritance amongst the sons, was brought to England by the Jat brothers who settled in Kent. It was the custom of the Geli hordes, and is still followed by the Jharija rajputs.

During the sixteenth and seventeenth centuries of the Christian era, Nanuk and Govind, of the Khutree race, obtained a few converts to their doctrines of religious reform and social emancipation among the Jat peasants of Lahore, and the southern banks of the Sutlej.

Taking Lat. 23° or 24° N. in Malwa, and L. 30° on the Jumna, so as to include Upper Sind, Marwar, part of Malwa on one side, and Lahore, Umritsur and Umballa on the other, then connect the two eastern points by a line which shall include Dholpore, Agra, Alighur and Merut, and within all that tract the Jat race ethnologically predominates, excepting only the hills of Mewar and the neighbourhood, still held by aboriginal tribes. Advancing eastwards into the Punjab and Rajputana, we find hindu and mahomedan Jat much mixed, and it often happens that one-half a village or one branch of a family are mahomedans and the other hindus. Further east, mahomedan Jat become rarer and rarer, and both about Lahore, and all that part of the Punjab along the line of the upper Sutlej and Jumna, the great mass remain unconverted. In the Punjab, the Jat all take the designation of Singh, and dress somewhat differently from ordinary hindu Jat; but, for the most part, they only become formally Sikhs, where they take service, and that change makes little difference in their laws and social relations. The Jat of Delhi, Bhurtpur, &c, are a very fine race, bear the old hindu names of Mull and such like, and are not all Singhs. In Rajputana, the Jat are quiet and submissive cultivators. They have now

long been subject to an alien rule and are probably a good deal intermixed by contact with the Meena and others.

The Jat Singh of the Punjab and upper Sutlej may probably be taken as the best representative type of the race. Compared to northern races, they are dark; they are tall, large and well featured, with plentiful and long beards, fine teeth and a very pleasant open expression of countenance. They are larger and taller than the Afghan Pathan with the upper part of the body especially well developed, but not so stout limbed or quite so robust. They are a fine, remarkably handsome, race of men, not excelled by any race in Asia. In courage, energy, and military qualities, they excel the more beautiful non-Pathan races of the northern hills, and they are as energetic in the peaceful arts as in that of war. They are good cultivators, hard-working and thrifty; they let little land lie waste and pay their land tax punctually. Their women work as well as the men and make themselves generally useful. They are not learned, though many men and some women can read and write. They have a great craving after fixed ownership in the soil. They are essentially agriculturists, seldom gardeners, and in Hindustan are never pastoral. They breed cattle largely, and sometimes rear camels when the country is suitable, and in Jat countries both ordinary carts and large mercantile waggons are usually plentiful, and as waggons they not unfrequently carry their grain and other produce to distant markets on their own account. The Jat formerly dwelt in Rajputana in republics, such as, in the time of the Greeks, were alluded to as democratic institutions, and one recognized republican state, that of Phool or Maraj, came down to the nineteenth century and was the last recognized republican state in India. It was a Jat republic, and gave the chiefs who founded the states of Patiala, Nabah, Jheendca. The old territory of the Phoolkian race was recognized by the British, and treated amongst the protected Sikh States, but has recently been brought under the general rule of British dominion. Every Jat village, however, is, on a small scale, a democratic republic, every man having his own separate and divided share of the cultivated land. The union in a joint village community is rather the political union of the commune, so well known in Europe, than a common enjoyment of property. A father and son may cultivate in common, but commensality goes no further. The village site, the waste lands and grazing grounds, and, it may be, one or two other things belong to the commune, and the members of the commune have, in these, rights in common. For all the purposes of cultivation, the remainder of the land is in every way separate indivi-

dual property. The government is not patriarchal, but a representative communal council or punchayet. Re-marriage of widows is permitted. All the Jat are subdivided into many Gentes and Tribes, after the usual fashion of the peoples of the Arian or Indo-Germanic stock, and the usual fashion is to marry into another Gens. The Jat have little of the hindu ceremonial strictness, and in Punjabi regiments they mess freely like Europeans, and have their two or three meals a day comfortably. The Jat, Rajput and their cogeners are branches of one great stock. Brahmans of Kashmir and the frontier hills are hindus in an earlier stage of brahminical development. The Jat country is just such as would be occupied by a large stream of people issuing through the Bolan Pass, in lat. 28 or 30° north, and the Rajput are ranged in a semi-circular form around the eastern and northern and south edge of the Jat area, the mass of them occupying the richer valley of the Ganges. Mr. Campbell's conjecture is that the Rajput are an earlier wave from the same source as the Jat, who came in by the same route, have farther advanced and been completely hinduised, while the Jat have come in behind them. Punjabi is the language spoken by the Jat, but which, in Upper Sind, is called Jati Gul or the Jat tongue, and Mr. Masson calls it Jetki. It is an Indo-Germanic tongue allied to the Sanscrit. In its main grammatical and essential features it is not widely different from the Hindi of the Rajput and other Hindustan people. It is one of the most praeit of Indian vernacular. The Jat, Jot, Jet, Jut or Jhut, who thus occupy the north-west and bordering provinces, also the Punjab and Sind, are in religion partly hindu, partly Sikh, and partly mahomedan. They all refer to the west of the Indus and to Ghazni as their original seats, and the Dhe or Pachhadhe reached India from the Punjab about the middle of the 18th century. The other section is the Hele or Deswale. The Jat seem to have entered by the Bolan pass, occupied the high pastoral lands about Quetta and thence descended into the plains which they still occupy. The Jat is the great agricultural tribe in the Punjab and, in the Punjab parlance, Jat and zamindar or cultivator are synonymous. There are no Jat in Kashmir or within the hills. The Aodi tribe of Jat dwell in Paniput and Sonapat. The Aolania Jat in Paniput claim to be above other Jat by having had the title of malek or king conferred on them. The race, however, spread as it is from Herat, Kabul and Kandahar, throughout the Punjab, down the Indus into Kach Gandhava, and eastwards to the Jumna and Ganges, is the same, and, wherever spread, they retain a dialect of their own to which, in Sind, has been given the name of Jetki. Mr. Masson seems to imply

that they are descendants of the Getæ who, he says, once possessed the whole of the countries immediately east and west of the Indus. The zamindars, or cultivators of the soil, at Jell as throughout Kachi, are Jet, who, up to A.D. 1830, seldom moved abroad, but on bullocks and never unless armed. A Jet might generally be seen half naked—seated on a lean bullock, and formidably armed with matchlock and sword, and to the north and west of Kach Gandhava, as also in Herat, Kandahar, and Kabul, they are seen as itinerant artizans, like gypsies. In the Punjab, they are not found west of the Jilam, but east of that river the Jet cultivators use wag-gons. The Jet has been so long settled in Kach Gandhava, as to appear the aborigines. Amongst their numerous subdivisions are the Kalora, Kokar, Hampi, Tunia, Abrah.

According to Mohan Lal, the Sikh Jat are polyandrous, and one brother takes his brother's wife, but in stating this he seems to allude to the custom among the Jat, of Curao, also written karao seemingly from "karana," to cause to do, the term given among the Jat, Goojur, Ahir, and other races and tribes in western Hindustan, to concubinage generally; but more especially to marriages of widows with the brother of a deceased husband. The practice, which is also known to the eastward by the name of Goorhurree, in the Deccan of Butt'hee; and, in other provinces, by the name of Dhureecha, is followed among the Jut race, but is not very openly confessed, even among them, as some degree of discredit is supposed to attach to it. It is only younger brothers who form these connections, elder brothers being prohibited from marrying their younger brother's widows, but among the Jat of Delhi even this is not prohibited. The practice has been common among several nations of the East. The Jews followed this custom, and in Egypt it was admitted for a childless widow to cohabit with a brother of the deceased husband. When the laws of Menu were enacted, Karao appears to have been a recognized institution. But as is not unusual with the Institutes, there is much contradiction between the enactments relating to it. From a consideration of all the passages on the subject, it appears that failure of issue was the point on which the legality turned. He who was begotten according to law on the wife of a man deceased, or impotent, or disordered, after due authority given to her, is called the lawful son of the wife (Ch. IX., v. 176). From the fact of Draupadi marrying the five Pandoo brothers, we learn that polyandry must have prevailed amongst the heroes of that period; and if polyandry, the practice of Karao was, no doubt, not uncommon: indeed, the compiler of the Mahabharata, Vyasa, was himself appointed to raise up

offspring to his deceased brother. There is perhaps no circumstance which so strongly shows the northern descent of the deified Pandava heroes as this marriage. Herodotus tells us that polyandry prevailed among the nomadic Scythians as it does at present among the Bhotia. The practice is adopted also by the Nair of Malabar, between whom and the people of the Himalaya, Wilson traces the obscure vestiges of a connection. Amongst the Jat, Goojur, and Ahir, children born Curao are considered legitimate, and are entitled to inheritance accordingly. Children begotten by the women previous to Curao, except in the case of fraternal Curao, are known by the name of Kudhelura, and do not inherit the property of the father-in-law. According to dictionaries, as the words are written, Jat means a race, a tribe, while Jut means a manner, a kind, and likewise matted hair: also, throughout the Punjab, Jut implies a fleece of fell of hair, but in Upper Sindh a Jut means a rearer of camels or black cattle, or a shepherd in opposition to a husbandman. In the Punjab generally, Jut means a villager and husbandman in opposition to an artist or handicraftsman. The Jat, latterly, acquired great power. The Birk or Virk is one of the most distinguished of the Jat tribes. The Sindhoo, Cheech, Vuraiteh, Chhuttheh, Sidhoo, Kurrekal, or Kurreal, Gondul, &c., are Jat sub-divisions in the Punjab and their numerous sections added to their following varied religious sects, have given rise to doubts as to the unity of the race. The Jat in the north and west of India are industrious and successful tillers of the soil, and hardy yeomen, equally ready to take up arms as to follow the plough. On the Jumna, their general superiority is apparent, and Bhurtpoor bore witness to their merits. Some of the Jat are said to be descendants of the Kahkar of the Salt Range. The Zjbut, Jut or Jit, who dwell in Sind from the sea to Dawudputra but not in the t'hul, are the oldest of the proselytes to mahomedanism—*Masson, Vigne Postans. Pat fibre ..	JUTE.	Chotee-megila ..	HIND..

Corchorus capsularis.

Isband.....	HIND.	Ghi-nalita pat..	BENG.
		Naltapat.....	

This fibre has long been known in India, as in use in the manufacture both of cordage and cloths, but it was only during the past fifteen years that it has come to be used in England. It is the product of the two distinct plants *Corchorus capsularis* and *Corchorus olitorius*, above named, both of them common all over India, and in Ceylon and China, both cultivated for their leaves, and under shoots, as pot herbs, and for their fibres. *C. Olitorius*, is the Jews' mallow, and is supposed to be the plant alluded to in Job xxx. 4. There is one variety called by the natives Teetah Pat and another variety which the natives call Bem Pat. Jute is easily spun and is much used to mix with cordilla. It is made into "ghunny" cloth (megili), cordage, and paper and damask cloth made of Jute is said to be more durable than that fabricated from cotton. Jute fibre brings, according to quality from £13 to £22 per ton, in the markets of Europe. The fibres are subdivisible into very fine fibrils, which are easily spun: they are long, soft and silky, and under the microscope, cannot be distinguished from those of flax, to all the purposes of which the jute fibre is applicable. When prepared by steeping, the plant requires long maceration, a fortnight or three weeks being scarcely sufficient for it. The chief sites of its cultivation in the Bengal Presidency, are Malda, Purnea, Natore, Rungpore and Dacca, and four varieties are distinguished, Pat, Tasa, Mesta and Coshta. At Jungpore the names given to Jute are Ghore Sun (probably *Hibiscus*) Pant, Cooch Murda Pant, and Amleeah Pat, (probably *Crotalaria*.) In its culture the land is prepared as for rice, the plants are weeded when a foot and a half high, and it is cut close to the roots when it has flowered, and before the seeds are ripe, a few plants being left to allow the seeds to come to maturity. After the plants are cut down, their tops are clipped off, and fifty to a hundred tied together. These bundles are laid in a shallow tank and weighed and allowed to remain for eight or ten days, being daily examined to ascertain that they are

not unduly rotted. When the bark is found to separate and the stalk and fibres become soft the bundles are opened and five or six stalks taken in the hand at a time, by a person standing in the water, who breaks off about two feet of them from the bottom; the bark, which has become soft like thread is held in both hands, and the stalks are taken out. The fibres are separated by mere washing, are dressed and exposed to the sun to dry, by hanging them over bamboos. They are afterwards partially cleaned, and finally made up into bundles of from one to two maunds, for the market. The culture of Jute has of late years greatly improved in many places and the produce is stated to be from 400 lbs to 700 per acre. Jute fibre has been noticed at length under the article *Corchorus*. Dr. Hunter gives the following, as the imports into Great Britain of this Indian product:

1838	1,136 tons.	1854	24,086 tons.
1842	2,740 "	1855	26,964 "
1844	5,500 "	1856	36,554 "
1846	9,220 "	1857	32,300 "
1848	8,900 "	1858	37,800 "
1852	16,980 "		

Bengal is almost the sole country from which the exports are made and the quantities exported from all India were as under:

Tons.	£	Tons.	£
1850-1	29,120 196,936	1856-7	33,689 275,057
1851-2	26,763 180,976	1857-8	39,441 303,292
1852-3	17,942 112,578	1858-9	... 525,099
1853-4	25,475 164,769	1859-60	38,060 290,018
1854-5	34,978 229,241	1860-61	53,716 409,371
1855-6	44,135 329,076		

As will be observed, the exports doubled in eleven years, and its value rose from £7 to £8 a ton. As an exported article perhaps there is no other fibre in the world which has had such an extraordinary rise in so short a space of time. About the first quarter of the nineteenth century its export was unknown; and now about 60,000 tons are annually consumed in Great Britain alone. From the peculiar adaptation of this fibre in the manufacture of coarse useful goods, from the many improved modes of preparing it, and from the increasing wants of the world, there is no reason why double this quantity may not be required, and that too, within a limited period. The mills of Dundee consume a larger proportion of this useful fibre than any other in Great Britain, it is believed nearly one-half of the quantity imported; and yet its introduction in the trade of Dundee is comparatively speaking, of recent date. About 1830, a well-known merchant brought a small quantity and wished the spinners to make a trial of it, but he could not prevail upon them to do so. He

then employed a person in the neighbourhood to tease it down, at the—now fabulous—cost of from £4 to £5 per ton, and then induced a spinner to mix it sparingly amongst tow; but it was not till the expiry of years that it was manufactured to any extent by itself. A process, was subsequently invented by Mr. Clausen (a Dane) by which flax, hemp, jute, and other substances were converted into a substitute for cotton. The invention seemed to work well, but the Manchester people at that time would have nothing but American cotton on any terms, and the invention was valueless. He cleaned the fibre from the straw by crushing and beating. The fibre was then steeped in a strong solution of bicarbonate of soda, and afterwards in water acidulated with sulphuric acid, which, combining with the soda, set free the carbonic acid with which the fibre was saturated. The liberated gas split the fibre into a material as fine as floss silk. It was then bleached by being steeped in a solution, of chloride of magnesium, then dried and cut into lengths of the required staple, or rather longer, as the staple was ground down during the carding. It then passed to the carding machines, and was treated precisely as cotton, and it was said at the time that it worked perfectly in the ordinary cotton machinery. After the *Corchorus olitorius* plants come to maturity, which is generally considered to be the time when they begin to ripen seed, and the lower leaf in the stems begin to turn yellow, or about the second week in October, the whole are simultaneously cut down,—no matter if all have grown uniformly in size or not, or whether the plants be good, indifferent, or bad, the whole is reaped off. After the whole is cropped off, it is staked in bundles of about 200 to 250 sticks in each, and then put down in any convenient place to undergo the process of fermentation, which is generally done within three or four days, according to the temperature of the weather; the more heat the less time occupied, and if the weather is mild, the period is longer. The whole is then taken and immersed in water, keeping the bundles down by any convenient means at disposal, but it is chiefly done with clods of earth, which are most conveniently obtained. The steeping process, if performed in a pool or pond containing stagnant water, decomposes the vegetable matter within eight or ten days, but if it be done in clear water, or a running stream, or in a tank of ordinary depth, having clear water, then the period of time is longer, say about seventeen to twenty days. When decomposition approaches completion, a man generally goes down and examines the fibres once a day, and at its close, both morning and evening, to see if all is perfected, and this is

done by simply feeling the stalks with the thumb and four-finger, to which it readily yields. When the whole is known to be completed, he goes down about knee-deep in water, and takes a handful of the stalks, holding the same with his left hand over the surface of the water, and in his right hand holding a small palmata or a piece of flat wood or plank, with which he gently strikes towards the stem of the stalks and whilst he does so, he whirls the whole, repeating the strokes with the palmata as he does so, which at once separates the fibre from the stalk or as much of the parts as is struck, which is generally from 15 to 18 inches in length from the lowest end; the whole is then broken, the parts adhering with fibre are then held with the left hand, and with the right the part where the stalks are broken is held, and the whole immersed perpendicularly about 9 or 10 inches in water, and a few jerks are then given in rapid succession, which admits of complete separation of the fibre from the broken stalks; but if any still adhere, the same is gently taken off with the right hand. When this is done, the extracted fibre is then held with the right hand, wrapping a portion round the palm of the hand, and with his left the operator holds the stalk a little under water parallel to him; he again gives a few slight jerks from and towards him. He also uses his left hand in pushing the stalks forward when drawing towards him. This manipulation can only be done with facility by those who are used to it. The whole of the fibre at once easily separates from the entire stalk and immediately floats up; the fibre is then washed to take off its refuse, and the whole is then wrenched off and taken up to be dried in the sun. To improve the jute fibre, two things are necessary to be looked after; the first is the process of fermentation, and the second is allowing the time for decomposition of the vegetable matter, and to avoid stagnant pools and ponds for the purpose, which, though it facilitates the object, injures the fibre very much. The process of fermentation is necessary to be carefully looked after, because if this be neglected and the heat exceed that degree which is absolutely necessary, and which is about 130° to 140° Fahrenheit, then the whole is affected by the gas which, in a manner, burns the bark, as such acids do, and the consequence is that, when the fibre is extracted, instead of obtaining the same with a fine, silky, glossy appearance, the whole of the produce becomes of a dark lead or black muddy color, which is considered bad or inferior in quality. It is not easy to mark the exact state of temperature, but natives engaged in the business, from their constant use, are capable of marking nearly about the time.

The next point to be carefully attended to is the time allowed to steep the whole for the purpose of permitting the vegetable matter to decompose, this part of the process, unless properly attended to, does not yield fibre of the usual size, but results as an inferior article, because it yields fibre of a coarse quality; the tender fibre which otherwise is retained, rapidly decays, and is broken into threads and washed off when extracting the same from the stalk. For which purpose, when the bundles are steeped down after the fermentating process, they are so arranged that the stems are first immersed in water with their top branches above its surface, and allowed to remain for a time, which is considered as sufficient for the stems to be partially decomposed, when the whole is properly steeped down, for the entire stalk to be decomposed at the same time; if this be not attended to, as stated above, the result is a short and coarse fibre, without any silky, glossy appearance.

The next point is to avoid pressing down the bundles with clods of earth, as at the time the decomposition is about to be perfected, the mineral substances being washed down mix with the fibre, destroying the vegetable substance and giving the fibre a red muddy appearance. Stagnant tanks are likewise to be avoided for the impurities they contain, though the decomposition is much facilitated. Native cultivators can rarely avoid these two materials for want of means and proper resources; but if they be avoided, no doubt the fibre extracted will yield a superior texture.

In the way the plants are cultivated in Bengal a wide margin is left for improvement, but on one point improvement is possible, the seeds being, at present, so laid out, that in portions of the land they are over-thickly studded, and while those take the start and come soon to the standard height, the plants under them form stragglers, not having the full play of the sun over them; the bark of these therefore remains more tender, and when cut down, and those of full growth, the height of which ought to be 6 to 8 feet, be separated, and the fibres extracted no doubt the same would yield a better quality of jute.—*Dr. Hunter, in Ed. New Phil. Journ. No. II. Vol. X. October 1859, Dundee Advertiser. Annals Ind. Administration. Royle's Fibrous Plants, p. 244. J. Manuel in Indian Field, No. 25, 18th September 1858.*

JUWUR. KASHM. *Annesleya horida*. This plant is common in the lake of Kashmir. Its broad round leaf lies on the water like that of the lotus, its under surface being covered with numerous hard, sharp and hooked spiculæ.—*Vigne*.

JUYA. SANS. From jee, victory, properly Jaya.

JUYANTI. BENG. SANS. From jee, to conquer. *Æschynomene sesban*.—*Linn*. Syn. of *Sesbania Cochinchinensis*. See Dhanchee properly Jayanti.

JUY-DHAN. BENG. *Andropogon saccharatum*.

JUYU-DOORGA. SANS. From jays, victory.

JUY-PHAL. BENG. *Croton tiglium*, properly Jayphal.

JUZ, AR. a part of a book.

JUZE, properly jiziya. From an Arabic word meaning subjugation; conquest; compensation,—a capitation tax levied by the mahomedans on their subjects of another faith. The correct word is Jizea, but usual in Hindoostan to pronounce the word Jazea. It appears from the Ayeen-i-Akbari that the khalif Oomar laid an annual tax upon every one who

was not of the mahomedan religion. A person of high condition paid 48 dirhems, one of moderate means 24 dirhems, and one in an inferior station 12 dirhems. It does not exactly appear when this tax was instituted in India. Tod thinks it was imposed by Baber in lieu of the Tumgha which he solemnly renounced on the field of battle, after the victory which gave him the crown of India, but we read of it long before this, for as early as the time of Ala-ud-Din, only a century after the final subjugation of Hindoostan, we find it spoken of as an established tax. The tax was abolished by Akbar in the 9th year of his reign, and was not imposed again till the 22nd of Aurungzeb, who, with his wonted intolerance, directed that its levy should be attended with every circumstance of contumely which his ingenuity could devise.

From this period it appears to have been regularly levied, and with particular severity in the time of Farokhsir (in consequence of the appointment of Inayat-U-Nah as Financial Minister, who had been Secretary to the bigoted Aurungzeb) until the time of Ruffe-ood-Darjat, when the Barha Syud, or twelve syuds, abolished it, and the hindoo again recovered their consequence. Ruttun Chund, a hindoo, being appointed Financial Minister, and being possessed even of such influence, as to be empowered to nominate the mahomedan Cazees of the Provinces. After the death of Ruttun Chund, the capitation tax was once more levied, as it is stated to have been again repealed by Mahomed Shah, at the intercession of maharaja Jye Singh and Gerdhur Buhaddôr. Since that period, no emperor was possessed of sufficient authority to enforce the Jazea, and this odious tax became extinct for ever: but not till it had operated as one of the most effectual causes of the decline of the mahomedan power, by alienating the affections of the hindoo population, which the early Moghul emperors had courted, and in some measure obtained.—*Twareekh-i-Mahomedshahae. Elliot Supp. Glossary. Annals of Rajasthan, Vol. I. p. 403.*

JUZEERAH means an island, but is a term applied to the countries between the Euphrates and Tigris: the Mesopotamia of the ancients.

JWALA MUKHI, in L. 31° 52' 6" N. L. 76° 18' 6" E. in Chamba, about 8 miles N. of Nadáun has a great temple 1,888 feet above the sea. The words are from jwala, a flame, and mookha, a face. It is also called Jwala-Jee and "Jee" which signifies "lord," is used as a term of respect. It is famous for its temple and takes its name from the fire which perpetually issues from fissures in the rocks which are enclosed within the temple. It is a lambent flame of a pale red colour. This temple

is sacred to Devi. Numerous of devotees make a pilgrimage from the most distant parts of India to worship at this shrine. Long ere this holy spot is reached, temples, tanks, and ascetics are seen. The town contains at least five or six hundred houses, and a very large population, among whom a great proportion are Gossain, Bairagi, Yogi, Jat and penitents of all sorts. To all who die here a grave is set apart, with a lingam on it. The temple stands about one hundred feet up from the plain. The whole is built like a fort, and enclosed by a wall about twenty feet high.—*Mrs. Hervey's Adventures of a Lady in Tartary, Vol. I. p. 21, 23. Baron Hugel's Travels in Kashmir, p. 42-45. Schlagentweit.*

JWALANA. SANS. from Jwala, to enkindle. See Jwala.

JWAR, the Gore glacier is above Milam in Jwar.

JY. This word in Pehlavi, as well as in Sanscrit, means pure.—*Malcolm's History of Persia, Vol. I, p. 9.*

JYANG. See Java.

JYANTIKA. HIND. Sesbania egyptiaca.

JYE, SANS. victorious.

JYE CHAND, a Rahtor rajput, the last hindu sovereign of Canouj. He was father of Sanjogata. When the Chohun rajput, Pirthivi raj, the last of the Delhi kings, assumed empire by the sacrifice of the aswamedha, Jye Chand, to soothe his mortified vanity, celebrated the Raj shui sacrifice. It was for the last time performed by a hindu prince, and all the hindu sovereigns of India attended it, except rajah Pirthi'raj of Delhi and Samarsi of Mewar, whom Jye Chand represented by effigies of gold, assigning the post of porter to Pirthi'raj and that of scullion to Samarsi. It was at this, that Jye Chand brought forward his daughter Sanjogata, to select her husband, but she threw the Burmala over the neck of Pirthi'raj and in A. D. 1175, Pirthi'raj carried her off to Delhi.—*Travels of a Hindoo.* See Jye; Pirthivi: Sanjogata.

JYE KUSH MULL. See Nepal.

JYESTH. On the sixth day of this hindoo month about May and June, hindoo women hold a ceremonial festival, called Aranya Shashth (Forest-sixth) in which they walk in a wood. The ceremony is in the hope of obtaining handsome children.—*Wils.*

JYNTAHE HILLS, on the east of Bengal. Agreements have been concluded with the chiefs of the following States: Nusteng, Moleem and Khyrim, Lungree and Mahram in the Jynteah and Cosyah Hills.

Nusteng.—Moot Sing, the rajah of this petty State, expressed a desire to enter into an engagement, but it was settled with Dun Singh his successor.

Moleem and Khyrim.—In 1862, a military cantonment and sanitarium were formed at Chillong, in the Moleem country, instead of at Cherra Poonjee. The rajah ceded all his sovereign and personal rights in the land for a sum of rupees 2,000, and the rights of the private proprietors were bought up for rupees 6,325, and an annual payment of rupees 108.

Lungree.—Oomit, chief of Lungree, received from the British Government, the title of Rajah on his signing an engagement of submission and fidelity.

Mahram.—In October 1864, Oo Sai Sing was recognized by the British Government on his signing the usual engagement of allegiance and submission.—*Treaties, Engagements and Sumnuds, Vol. VII, p. 332.*

JYOI PANA. BENG. Rhinacanthus communis.

JYOTISH MATI. HIND. Anthistiria anathera.

JYOTISH MATI. SANS. TEL. Literally "light possessing," also Buddha basara and Budda Kakara, TEL. Cardiospermum halicabum Linn; popular superstition asserts that by eating its seeds the understanding is enlightened and the memory rendered miraculously retentive.—*Elliot's Fl. Andk.*

JYOTISH-STOMA. SANS. from Jyotish, light; and stomā, the whole.

JYOTSHI. HIND. A kind of coarse rice in Peshawar.

JYOTISH. SANS., from jyot, to shine.

JYPAL. BENG. Croton tiglium.

JYRONG, a Garrow village.

JYSWAR, also Jaiswar, Jasawar and Juswar, a tribe of inferior Jadonbansee rajpoots in the pergunnahs of Uleepoor, Puttee, Kishnee, Nubeegunge, and Azimnugur in Central Doab.

JYU, a Thibetan coin, equal to a Purruckhabad rupee.—*Wilson.*

K

K. This letter of the English alphabet has a simple guttural sound, as in kalender, keep, king, koran, and has analogous letters in Arabic, Persian, Urdu, Sanserit, Hindi, Mah-rati, Guzarat'hi, Bengali, Uriya, Telugu, Karnata, Tamil, Malayalam, Chinese, Malay and in all the languages of the further Indies and Eastern Archipelago, and there ought not, therefore, to be any variations in representing the names and words of these tongues by means of this letter. Nevertheless, in writing them, owing to the English letter C, as in candour, capture; and the letters Ch, as in character, chronic, churlish, having the same sound as K, many ordinary words of the East Indies, are met with written in various ways, as in Cashmere, Cashmir, Kashmir, Kabul, Cabool, &c., &c., consequently several words beginning with c, ch and k are necessarily, for facility of reference, repeated here.

KA, a people inhabiting the mountainous country lying between Lao and Kambojia. Mr. Crawford in his Embassy mentions that the Siamese make no scruples in reducing them to slavery. He adds that the features of one whom he saw differed strikingly from those of a Siamese. They are described by other authors along with the Khong, the Gueo of the Portuguese, as rude tribes in Kambojia either actually pagan or imperfectly buddhist.—*Crawford's Embassy*, p. 177. See India. Ka-riang.

KA, of Sutelej and Kanawar. Juglans regia, *Linn.*, the walnut tree.

KA, HIND. Saccharum, *Sp.*

KAABA, the temple of Mecca. See Kaba, Abou Karib, Somanath.

KAAN, a river at Indore.

KA-AN-TIA, BURM. A small but valuable wood of Tavoy.

KAARTEN, DUT. Cards.

KAARZEN, DUT. Candles.

KAAS, DUT. Cheese.

KAAT, properly Ka'h, TAM., MALAYAL., CAN. Wild, uncultivated.

KAAT ILLUPA, TAM. Bassia latifolia, *Roxb.*

KAAT MANGA, TAM. Buchanania latifolia, *Roxb.*

KA'B, a tribe of Arabs in the province near the Persian Gulf, whose capital is Mu-

hamerahi. They extend north as far as Shuster and Ram Hormuz; to the east, their territory is limited by Behbahan, and including Hindyan in their possessions, the Ka'b Arabs spread along the head of the Gulf, touching Basra on the south. Their western territory touches on the wandering Arabs as far as Haniza. The greater part of this territory is watered by the Tab river with its numerous tributaries, and was known to Arab geographers by the name of Daurak. About the close of the last century, they became addicted to piratical pursuits and captured several English vessels. More lately, Muhamerahi was taken by Ali Raza Pasha, and, in 1857, by the Government of India, in their war with Persia. See Fars.

KABA, a piratical tribe in the gulf of Cutch, to the north of the Maratha provinces.

KA'BA, AR. A cube: also, the square house, in Mecca, held in reverence by mahomedans, by whom it is frequented in pilgrimage. Tibban Asiad Abou Kariba, or Abou Karib, commonly called Tobba, one of the most warlike of the Himyarite monarchs, was the first who, about A. D. 206, covered the Kaaba with a tapestry of leather, and also supplied it with a lock of gold. The nabobs of the Carnatic, who claimed to be descendants from the khalif Omar, usually sent a ladder of gold, for the pilgrims to ascend to the door of the Kaba. Immediately on arrival at Mecca, the pilgrims perform ablutions and proceed to the mosque, kiss the black stone, and encompass the Ka'ba seven times, commencing on the right, leaving the Kaba on the left, they perform the circuit thrice with a quick step and four times at a slow pace. They go then to the stone near the Kaba, bearing the impression of the feet of Abraham, repeat two prayers, and come and kiss the black stone again. In most families male children, when forty days old, are taken to the Ka'ba, prayed over, and carried home, where the barber draws with a razor three parallel gashes down the fleshy portion of each cheek, from the exterior angles of the eyes almost to the corners of the mouth. These "mashali" as they are called, may be of modern date.—*Burton's Pilgrimage to Mecca*, Vol. iii, p. 327.

KABAB? PHILIP. A measure of capacity.

KABAIZ.

KABAB, AR., PERS., HIND. Roast meat or small pieces of meat roasted or stewed on little skewers. They are alluded to in Homer's *Iliad* in two places, xiv, 87, and line 475.

* * * and fixed on forks of wood,
All hasty, on the hissing coals he threw ;
All smoking, back the tasteful viands drew,
Broachers and all.
* * * in rolls of fat involved without
The choicest morsels lay, from every part,
Some in the flames, he strewed with flour, then threw ;
Some cut in fragments, from the forks they drew.

Kabab-curry, is a favourite dish at the tables of Europeans in India, and consists of little pieces of meat with portions of onions, ginger, &c., on skewers, all curried.

KABABA, HIND. Xanthoxylon hostile.

KABABAH, ARAB. Piper cubeba.

KABAB CHINI, GUZ., HIND., PERS. Piper cubeba. Cubebs.

KABAIZ, a tribe of the Bulbassi, a Kurd race, composed of the following tribes :

1, The Kabaiz, the reigning family, consists of about two hundred persons ; 2, Man-zoor ; 3, Mamash ; 4, Piran ; 5, Rummook ; 6, Sinn and Tnafali, who together make one tribe. The chiefs of tribes are called Muz-zin. Each chief has a certain number of thieves, who rob for him ; and his tribe makes him voluntary gifts of provisions. These are his only revenues. The price of blood among the Bulbassi is twenty-two oxen, but it may be made up in other effects, to which often a nominal value is attached, more than twice the real amount, when the affair is to be compounded amicably. Their only laws are the usages of the tribe, and these are administered by the chief, assisted by the council of elders. The only crimes punished with death are adultery, seduction, and such like. The Bulbassi will not bestow a girl in marriage on a person of another tribe or people. They have courtship among them, and carrying off a girl by the lover is common. When a chief dies, he is succeeded by the best or bravest of his family, with the common consent of his tribe. If his eldest son be incapable, the best of the brothers succeeds. When a chief is once nominated he cannot be deposed, and his authority is so well defined, that there are no instances of a chief ever having attempted to exceed his powers. In their own country the Bulbassi do not willingly acknowledge any superior, either Turkish or Persian ; but when they descend into the regions of Karatchook they pay a tribute of sheep to the Bey. They are very fond of armour ; and most of the principal people among them possess a complete suit of mail. The Bulbassi Koord have a most curious way of curing wounds. They sew the wounded man in the skin of a bullock fresh stripped off the animal, leaving only his head out ; and

KABARDA.

they leave him in it till the skin begins to putrify. They say this never fails to cure the most desperate spear or sabre wound.—*Rich, Residence in Koordistan, Vol. i, p. 153.*

KABAL, of Muzaffargarh, the reticulum of the palm.

KABAN, a measure of capacity, in the Molucca and Philippine islands.

KAB-BAN-TIA, BURM. A timber tree found inland in Amherst and Tavoy Provinces, but scarce. It has a maximum girth of 6 cubits, and maximum length of 30 feet, and when seasoned, it floats in water. It makes beautiful furniture, and when long buried in ferruginous mud, turns of a very dark-red. It makes excellent planes ; and is used with great success, for all tool handles, and much recommended for such as do not receive direct percussion, as screw drivers, augers, hammers, handles—in fact for all tools except chisel handles, which are to be struck with a hammer, for which, however, the chisel-handle tree, a species of " Dalbergia " is the best. It makes excellent planes. It is stated by Dr. McClelland to be most plentiful in the Tharavaddy district, and to be hard, of fine grain, and used in constructing carts. Captain Dance says, a quantity of this was sold in August 1857, for export to Holland as a furniture wood.—*Captain Dance.*

KABARAGOYA, a reptile of Ceylon, partial to marshy ground, and when disturbed upon land, it takes refuge in the nearest water. From the somewhat eruptive appearance of the yellow blotches on its scales, a closely allied species, similarly spotted, formerly obtained amongst naturalists the name of Monitor exanthematicus, and the Singhalese word kabara, has a similar meaning. The kabara-tel or cobra-tel, a poison of Ceylon, is said to be prepared from the kabara-goyā ; and an individual suspected of having this poison in his possession, is cautiously shunned by his neighbours. In the Mahawanso, ch. xxiv, p. 148, the hero, Tissa, is said to have been afflicted with a cutaneous complaint which made his skin scaly like that of the godho, the Pali name of the kabara-goyā.—*Tennent's Sketches of the Natural History of Ceylon, p. 272.*

KABARDA. The country at the foot of the Caucasus, for a considerable distance to the eastward, is called Little Kabarda ; the stretch to the westward, being of larger extent, has the name of Great Kabarda, running along the line of the mountains till it meets the country of the Circassians. The people who inhabit these two districts, are known to the Russians under the general appellation Cherkess. They are the descendants of a mixed people, whose various origins,

character, and customs, are now nearly lost, as marks of distinction, in the one common name they bear and the gradual adoption of each other's customs. Latterly, the populations of both the Kabarda differ nothing in costume from their neighbours, the Circassians. They generally speak the same language, and are fond of considering themselves branches of that stock. But the people of Little Kabarda, are said to have been a colony from Great Kabarda, driven thence from their natural possessions by the more powerful tribes. Circassia might, in former times, have provided itself in the same way. There are, also, numerous Tatar tribes, which extend themselves southward over the lower hills and flat lands, which reach from the foot of the mountains to the Kuban; and then possess the banks of that river, westward, till it terminates at the Black Sea. It is from amongst this wild people, and the Kabarda people bordering on the Malka and Kouma rivers, that Russia formed its corps of Cossacks, known by the general name of Cossacks of the line of the Caucasus.—*Porter's Travels*, i, p. 51.

KABARGA, also Muscus, Rus., Musk.

KABARRA, HIND. *Capparis spinosa*, L.

KABBAR, HIND. Tobacco, dried, but not twisted up.

KABBR, ARAB. *Sinapis juncea*.

KABEJ—? a pheasant? of the Himalayas.

KABELJO, SW. *Kabeljaunk*, also *Baukaelia*, DUT. *Kabliau*, DAN. *Kabljuu*, GER. Cod.

KABIL, AR. A name of Cain. *Kabil-Habil*, Cain and Abel.

KABILJ, AR. A term employed in Arabia and Northern Africa to designate the various tribal bodies. From Taifa to Medina, there are ten such, with about 79,000 fighting men; those of Assir, 6 in number, with 44,500 fighting men; those of Taif, at Assir, 11 in number, with 66,000. The term *kahliah*, amongst the mahomedans in India, is applied to the family or to the wife of an individual.—*Fontanier, India, Egypt and the Persian Gulf*.

KABILLA WILLA-GASS, SINGH. *Antidesma bunias*.—*Spr. Syst. Veg.*

KA-BLENE, BURM. A red-dye-tree-bark, of Akyab, used to colour fishing nets a red-brown; 10,000 maunds could be obtained.

KABIRAJ, BENG. A physician.

KABIR PANTHI, a sect of vaishnava hindooes whose founder was Kabir, the disciple of Ramanand. He assailed the whole system of idolatrous worship and ridiculed the learning of the pandits and the doctrines of the Sastras, and with equal severity attacked the mahomedan teachers and the Koran.

Several popular sects, amongst whom are the Nanak Shahi, sprung from his teachings. He lived probably about A. D. 1449. The kabir-panthi are always included amongst the vaishnava sects, and maintain friendly relations with these. It is no part of their faith, however, to worship any hindoo deity or observe any of the rites or ceremonials of the hindooes. The Kabir Panthi are numerous in all the provinces of upper and central India. Their quaker-like spirit, their abhorrence of all violence, their regard for truth, and the unobtrusiveness of their opinions, render them very inoffensive members of the state. Their mendicants never solicit alms, and in this capacity they are, in a social view, in a very favourable position compared with many of the religious vagrants of India. The Kabir Panthi use no mantra or ritual, and those who have abandoned society abstain from all outward observances and address their homage by the chanting of hymns, exclusively to their invisible Kabir. Kabir is fabled to have been the son of a virgin widow of a brahmin, the father was a follower of, and was paying a visit to Ramanand. Unaware of her condition, Ramanand wished her to the conception of a son, which occurred, but ashamed of her condition she bore the child in private and exposed it. It was found and brought up by a weaver and his wife. Kabir is said to have been originally styled Inyani, the knowing or wise. He died at Magor near Garakhpur. This was endowed by Mansur Ali Khan with several villages.—*Wilson's Hindu Sects*. See Hindoo, Vairagi, Vaishnava.

KABLA-KHAN, emperor of the Chinese and Eastern oriental Tartars, was indisputably the sovereign of the most enormous empire that the annals of the world have ever made known: it comprehended the whole of China; Corea, Tibet, Tonquin, Cochin-China, a great part of India beyond the Ganges, many islands of the Indian Ocean, the whole north of the continent of Asia, from the Pacific to the Dnieper and Persia, also, was a feudatory of his throne, its sovereigns, the successors of Houlagou, receiving their investiture from the emperor of China, and as the dominions of these great vassals extended to the Mediterranean and the frontiers of the Greek empire, it may be said that the whole of Asia was subject to the laws of the great Khan, who had close to Pekin as the central seat of his government. The empires of Alexander the Great, of the Romans, or even of Chenghis Khan, were as nothing compared with that of Kablai. Kablai had received a Chinese education; he appreciated the advantages of civilization; he admired the

institutions of China, and protected literature and the sciences. He had some of the best Chinese books translated into the Mongol language, and founded schools for the young people of his own country, and gave much encouragement to their studies. He received with favour learned and literary men of every country and religion, granting them many privileges, and exempting them from taxes and tributes. It was he who established the college of Han-lin, the first academical institution of China. He was assisted in improving the astronomical calculations of the Chinese, by Arabian and christian astronomers. Some christian families were fixed by him in the city of Pekin; and many Greeks, who had followed the Mogul armies, were retained in his service, as men, whose attainments were so much superior, to those of his Tartar and Chinese subjects. Pekin was at the same time raised into an archbishopric by the Patriarch of Bagdad and the Roman Pontiff; embassies and missions, passed into Tartary; and the Mogul sovereigns of China afforded their protection to every stranger, whose talents might be useful to the state. Arghun Khan was Kublai Khan's great nephew. His wife was Zibellina, the Khatun Bulugan, a lady of great beauty and ability. She had been married to Abuka, but, on his demise, according to the marriage customs of the Mongols, she passed to the Urdä of her step-son, Arghun. On her death, Arghun sent Marco Polo for another wife, out of the Mongol tribe of Bayaut, but Arghun died before the lady Kuku-Chin was brought, and she passed to Ghazan, the nephew of Arghun, for Arghun had been succeeded by Kai-Khatu, his brother.—*Quart. Rev.*, July 1868.—*Hue's Christianity*, Vol. i, pp. 320-321; *Chetfield's Hindostan*, p. 298. See Polyandry, Jews, Marco Polo.

KABLARA, SANS. *Nymphaea lotus*. Qu. Kahlara?

KABLI-GERU, or Kabl-Giri, a race occupying the banks of rivers in the Dekhan, occupied as ferry-men.

KABONG, MALAY., any palm as the Cocoa-nut palm; the *Cycas circinalis*, *Linn.*, the Gomuti palm, or *Arenga saccharifera*: the last is cultivated for its sap to make jaggery or coarse sugar, and for its strong fibre.

KABOOK, SINGH. Linteritious deposit, said to be the product of decomposed gneiss.

KABUL. The name of a city, a territory, and a river on the N. W. borders of British India, under the rule of the Barukzye clan of Affghans. The origin of the name Kabul has not been traced. It is not mentioned by any of the Greek or Roman writers who were familiar with the Aria

territory, of which Herat is the capital;—with Ariana (Iran), the general name of the country east of Persia and Media, as far as the Indus:—with Bactria, the country watered by the Oxus and its tributaries, and Soghdiana, the mountains which feed the Jaxartes and divide the two rivers. The town of Kabul is 6,600 feet above the sea and its south quarter is in Lat. 34° 24' 5" N. It is a compactly built city, the houses being of sun-dried bricks. Vigne and Burnes estimated its population at about sixty thousand, made up of the Affghan, Kazzilbash, Tujik, and Hazara tribes, and there are a few hiadoos. With Ghuzni it was once tributary to Bannian, but Kabul is now the metropolis of both. Kabul is built at the foot of a range of hills, whose direction is from north-west to south-east. The country is thus divided into the "Plain of Kabul," and the Char Deh, or four villages. The city is built directly under a rocky hill of gneiss that rises a thousand feet above it, and bends round it from the south-east to the south-west, where, with the dip of another hill opposite, is formed the pass which leads into Char Deh, one hundred and fifty yards broad. Through this pass part of the British army entered Kabul. At the eastern extremity of the rocky hills, which enclose it on the south, is the Bala Hisar, on a neck of land about 150 feet high, which commands the city. The Kabul river runs towards the city, rising near Egeran, a castle, distant about thirty miles to the westward of Kabul. The whole of the north part of the plain of Kabul is irrigated by the water of the river, but the Logur or Mydan rises near the copper mine on the road from Ghuzni. The appearance of Kabul, as a city, has little to recommend it beyond the interest conferred by the surrounding scenery. It is best, and indeed can only be, seen from the east. In that direction it is first descried by the traveller from the lower countries. The great bazaar of Kabul was an elegant area nearly 600 feet long and about 30 broad. The Haunam or public baths, being indispensable appendages to a mahomedan city, these are in some number, but they are deficient on the score of cleanliness. The mahomedan tombs in Kabul vary little, except in position, from ordinary christian ones. They are placed from north to south; they have the same shaped headstone, generally of marble, either of the costly kind imported from more eastern countries, or of the native alabaster, procured in the quarries of Maidan. The head-stone also bears an inscribed epitaph, and is ornamented, with sculptured flowers and other fanciful devices. Kabul has no rainy season, but, as in Great

Britain, constant showers fall all the year round. Baber describes the climate as extremely delightful, and the Ark or citadel, as at once a mountain, a sea, a town, and a desert. Fruit is more plentiful than bread and is considered one of the necessities of life. The apricot is preserved in fourteen ways and is the most delicious of the dried fruits. The best gardens lie immediately north of the city, but further off, in the district of Istalif, they are very beautiful. In one garden, peaches, plums, apricots, beans, apples, quinces, cherries, walnuts, mulberries and pomegranates may all be seen growing. A variety of rhubarb termed rawash, is more or less plentiful in all the hills from Kelat in Baluchistan to Kandahar, and again from that place to Kabul. Attention is only paid to its growth by the inhabitants of Lughman, who supply the bazaars of the city. They surround the choicer plants with conical coverings of stones, so as to exclude light and air, and thereby produce that whiteness of stem so much prized. The unblanched plant is called chukri, and is also exposed to sale. It also makes an excellent preserve, by being first saturated in a solution of lime and then boiled with shirar, or the inspissated juice of grapes, losing, however, in this case its characteristic flavour. In June, apples are first brought to the bazaars, and in July, both apples and pears become plentiful. In the beginning of August peaches ripen in Koh-i-Daman; they are very large, but not well flavoured; indeed Mr. Masson questions whether any of the fruits of Kabul equal in flavour the analogous varieties of England. The rana zeba, is common: it is a remarkable variety of the rose (*Rosa prostolistata*), the exterior of whose petals is yellow, while the interior is vermilion. The mahomedan inhabitants of Kabul are of the sunni and shiah sects. The shiah live separately in a walled street called Chandaul. Numbers of gold-washers are constantly employed near Peshatt on the river of Chitral and Kamah. The metal is also found in the rivers of Lughman, and in the river of Kabul, into which they fall, and is sometimes collected near Kergah and Char Bagh of Lughman, and again near Jellalabad. On the joint river of the Koorhistan of Kabul before it enters the Safi hills, there is a spot preserving the name of Zir-Shu, that is to say, gold-washing, though now unfrequented, and it is certain that all, or nearly all, the rivers flowing from the north have auriferous sands, as quantities of the metal are procured in the Yusafzai districts. It may be worthy of note, that the people who search for the gold are not of these countries, but of the Panjab;

many are natives of Jelam, on the river of that name. It is not improbable that the rivers of Kafirstan, when increased in volume, may pass over soils enriched with gold and carry down the precious particles with them. Earthquakes are frequent. There are usually about a dozen in the course of the year. Baber describes a very severe one. The mahomedans say earthquakes are owing to the disturbance made by the soul of a great man passing from one place to another. The bulk of the mahomedan people occupying Kabul and the country around, now receive the name of Afghan, and their country that of Afghanistan:—but they are not one people, and they have scarcely ever, for any lengthened period, rendered a common obedience to one ruler. In the territories known by this designation are four principal towns, Kabul, Ghizni, Kandahar and Herat, and the prevailing language is Pushtu. The routes of great race migrations and of the large armies under Alexander and his successors, under Timur, Baber and Nadir shah, have been through these countries, and all have left remnants and colonies behind them, who have never up to the present day amalgamated and whose languages remain distinct. Alexander in his advance to the Indus must have passed close to the site of the present city of Kabul, though no mention is made of it. Even in his time, the countries through which, after crossing the Indus at Attock, he passed southwards to the delta of the Indus, were inhabited by numerous small nations and tribes. We read of the Malli, the people of the Multan of to-day;—the Oxydracæ, the people of Outeh;—the Cathi, the Kathari of Diodorus Siculus,—the present Khetri tribe. As soon as he had crossed over to Taxilas, on the east side, Ambisaces king of the Indian mountaineers, whom Rennell supposes to be ancestors of the Glikar race, sent ambassadors with presents to him. From the conflux of the Ascacines with the Indus, Alexander passed through the countries of the Sogdi, Musicani, Oxycani, Sindomanni and Patalan, and he seems to have encountered the nomade races in Baluchistan. This multitude of petty states has been a feature of these lands from the most ancient times. Several of the races dwelling there are alluded to in the Mudra Rakshasa, or Signet of the Minister, an ancient political drama, in Sanscrit, by Visakhadatta, perhaps of the 12th century, in which the events relate to the history of Chandragupta, the Sandracottus of the Greeks. Rakshasa was the minister of Nanda and afterwards of Chandragupta. In the scene where Viradha

Gupta visits Rakshasa, occurs the following dialogue :—

Rak.—What news from Pashapur ?

Vir.— I have not much to tell, Sir :

Where shall I commence ?

Rak.—With Chandragupta's entry in the city.

Whatever my agents since have done, inform me.

Vir.—You will remember, Sir, when in close league United by Chanakya, Parvateswara And Chandragupta in alliance, led Their force against the city, — a wild multitude Of Sakas, Yavanas and mountaineers, The fierce Kambojas, with the tribes who dwell Beyond the western streams and Persian hosts Poured on us like a deluge.

The Saka of the hindoos cannot be other than the Sacæ or Sakai of classical geography. They are repeatedly named in various works and seem to have been known on the borders of India or in its western districts in the first century preceding christianity. Vikramaditya, king of Ougein, being known as the Sakari or enemy of the Sacæ, his era dates B. C. 56, and it would appear that about this date, some northern tribes had settled themselves along the Indus, constituting the Indo-Seythi of Arrian. Their attempt to penetrate further to the east, by way of Kandesh and Malwa, was not improbably arrested by Vikramaditya, whence the epithet Sakari. The Sacæ are supposed by professor Lassen to be the Szu Tartar who were expelled about 150 B. C., from the Ili valley by the Yue-tshi or White Huns, whom he supposes to be the Tochari. After occupying Talia or Soghdiana for a time, they are further stated by the Chinese to have been driven thence also by the Yengar some years afterwards, and to have established themselves in Kipen, in which name Lassen recognises the Koppen valley in Koorhistan. The term Yavana, is in modern times applied by hindoos of Northern India to mahomedans of every description, but in the above quotation and in works prior to the mahomedan era, some other people must be intended. The interpretation of the word by Sir W. Jones is, Ionians or Asiatic Greeks, and there are some considerations in favour of this, although the chief argument in its behalf is the difficulty of attaching it to any other people. The mountaineers, or Kirata, of the quotation, may come from any part of India. They are known in classical geography as the Cirrhadaæ or the Cirrodes, the latter in Soghdiana, near the Oxus. The Kamboja are the people of Arachosia, or north-eastern province of Persia. For the site of the Bahika, as they are termed in the text, we are indebted to the Mahabarat, and the Parasika speak for themselves. The travellers, Burnes, Masson, and Ferrier, met with tribes who claim a Grecian descent. According to Burnes the mir of Badakshan, the chief of Darwaz in the valley of the

Oxus, and the chiefs eastward of Darwaz who occupy the provinces of Kulab, Shughnan, and Wakhan, north of the Oxus ; also the hill states of Chitral, Gilgit and Iskardo, are all held by chiefs who claim a Grecian descent. The whole of the princes who claim descent from Alexander seem to be Tajik, who inhabited the country before it was overrun by Turki or Tartar tribes. The Tajik, now mahomedans, regard Alexander as a prophet. The Badakshan family are fair but present nothing in form or feature resembling the Greek. They are not unlike the modern Persian and there is a decided contrast between them and the Turk and Uzbek. General Ferrier found at Gazergah a small encampment of persons in the dress of Uzbeks, but whose configuration of features clearly indicated quite another origin. He conversed with them, and they stated that they were the descendants of the Yunane (Greeks) whom Alexander the Great, Sikander Roomi, had left in these countries ; when he heard this he recollected that Marco Polo, and after him Burnes, as well as other writers on oriental history, mention the existence of Macedonian tribes which had settled on the north-west frontier of Chinese Tartary, and, from the replies he received to the numerous questions he put to these people, Ferrier was convinced of the existence of the real descendants of the ancient Greeks in those countries. These Yunane are not isolated and dispersed here and there but are united in tribes, occupying a considerable tract of country ; nothing, however, either in their language or their habits, betrays their origin. They are mahomedans, and have the reputation of being somewhat fanatical, and are not held in much consideration by the Tartars, amongst whom they are settled, but they are respected, for, like their ancestors, they are brave, and the consequences of their hatred are terrible to those who are the object of it. Burnes, while admitting the existence of the descendants of these Greeks in Central Asia, appears to doubt whether some of their chiefs are, as they affirm, the descendants of Alexander, for the historians of the son of Philip assure us that he left no heir to reap the fruits of his immense conquests.

Alexander built a city in his route eastwards towards the Indus to which he gave his own name, but the name it now bears, and its particular site have been lost. It was called Alexandria near the Caucasus, and Rennel points to Bamian as the quarter in which he would place it. General Ferrier mentions that the fortified town of Herat, is supposed to have been founded by Alexander the Great, but he does not quote his

authority. This city, he tells us, is a quadrangle of $3\frac{1}{2}$ miles long on the north and south sides, and rather more on the east and west. Its extent would be immense if all the suburbs were included, particularly those stretching to the west of the town beyond the Darwazah-i-Irak.

After the death of Alexander, Persia as well as Syria, fell to the lot of Seleucus Nicator, who established the dynasty of the Seleucidæ. Antiochus Soter succeeded Seleucus Nicator and in the reign of his successor, Antiochus Theos, Arsaces, a Scythian, who came from the north of the Sea of Azoff, induced the Persians to throw off the Greek yoke, founded the Parthian empire, and made Rhages his capital. This was likewise the period of the foundation of the Bactrian kingdom by Theodotus the governor of it, who finding himself cut off from Syria by the Persian revolution, declared his independence. Arsaces is called Asteh by Eastern writers, and is said to have been a descendant of the ancient Persian kings. When he gained the kingdom it is said he promised to exact no tribute and merely to consider himself as the head of a confederacy of princes, united for the double object of maintaining their independence and freeing Persia from a foreign yoke. This is the commencement of that era of Persian history called by Eastern writers, Mulook-u-Tuail, or commonwealth of tribes. In A. D. 906, Rhages was taken by Ismail, founder of the Samanee dynasty. It ceased now to be a seat of empire, and in A. D. 967, became the capital of the house of Shengur, a race of petty princes who maintained a kind of independence, while the dynasties of Saman and Dilemee divided the empire of Persia. In A. D. 1027, Rhages was the last conquest of Mahmud, of Ghuzni.

The history of the lands adjacent to Kabul, during the centuries immediately preceding and following the present era, is but little indicated in books, but has been, to a considerable extent, traced out by the learned men, Mr. James Prinsep, Mr. H. T. Prinsep, Professors Wilson and Lassen, from coins of Greek, Arian, Bactrian, Scythian, Partho-Scythian, Ario-Parthian and Indo-Scythian kings and dynasties, which the researches of Sir Alexander Burnes, Mr. Masson, Generals Court and Ventura had brought to light, as also from the engravings on rocks and on relics found in topes in all the region around Kabul. The characters in which these legends are engraved are Arian or Bactrian, Greek and Sanscrit. On coins, these are sometimes single, but many dynasties adopted bilingual legends, Arian and Greek, or Greek and Sanscrit, the Greek becoming gradually more

barbarous towards the present era, until at length, it became unintelligible. As Mr. Prinsep tells us, it seems established that the Arian or Bactrian language was long the vernacular of the Paropamisian range, of Kabul, and perhaps of Herat and Kandahar, up to the Indus, for it has been found in the topes of Manikhyala, in the Panjab and on the rock at Bamian. Unlike the Greek and Sanscrit, it is written like the Semitic tongues from right to left, but the letters being always separate, they could at pleasure be written from right to left. The earliest Greek was written alternately, as a plough is drawn, and tomb of Tuscan kings, opened some years since, contain inscriptions in Greek characters, written from right to left. The Mongolians who adopted the Syrian characters write it in lines downwards like the Chinese. The Arian character was adopted first on the coins of the Greek kings from Eucratides down to Hermaeus. It was then taken up by the Scythians, who crossed the Paropamisus, Imaus or Hindoo Kush, and also by Parthians who asserted their independence in Afghanistan. The Arian alphabet character, in the course of years, seems to have undergone a change, and the same forms are not to be recognised in later coins, nor the same epithets and titles, and the inscriptions discovered in topes are all in the less simple late character. Mr. James Prinsep, Mr. H. T. Prinsep and Professor Wilson have considered this Arian language to have a close affinity with Sanscrit, but Dr. Moore has recently put forth that it is Hebrew. It seems to have superseded the ancient Sanscrit of the days of Asoka, which was adopted by Agathocles and Pantaleon, the first of whom we know, from the pure Greek style of his other coins, to have been one of the earliest of the Grecian kings. After them, however, Sanscrit characters were entirely disused. Menander, the known Indian conqueror, never seems to have coined with the language of Asoka, from which circumstance Mr. H. T. Prinsep infers that the characters on the coins of Agathocles and Pantaleon were not vernacular, but had been introduced by the Indian sovereigns, who, following the first Chandra Gupta, retained dominion over the provinces ceded by the first Seleucus, until they were restored by Asoka to the Great Antiochus. At Manikhyala, a tope solidly built of quarried stones and lime cement, a great cupola, 80 feet high and 310 to 320 feet in circumference, was opened by General Ventura, but there are fifteen other and smaller cupolas there, which were opened by General Court. Monuments of the same kind are met with at Rawalpindi (in the Panjab), in the Hazara

country, west of Kabul, at Jelallabad, Lughman, Kabul, Bamian and in the Khyber pass. Many of those west of Kabul were opened by Mr. Masson. In one, N. N. E. of the village which was opened by General Court, a sculptured stone was found in Arian characters, along with Roman coins and coins of Kadphises and Kanerkes, a fact alone sufficient to indicate that the territories around had been under the sway of rulers of varied races. The earliest of these rulers were the successors of Alexander the Great. Alexander's death occurred in the spring of the year 323 B. C. His empire though only of ten years' growth, was not transient. His colonies and their institutions, manners and language had a lasting action in central Asia, the effects of which were felt for at least five hundred years after his decease. Though he left his brother Arrideus and the posthumous child of Roxana or Roxana, called Alexander, neither of these succeeded him, for his military commandants assumed sovereign power, and in B. C. 315, Antigonus assumed the regal title of king of Asia.

In B. C. 305, Seleucus gained a great victory over Nicator, a lieutenant of Antigonus, and followed it up by seizing and adding to his own government, the whole of Media, Hyrcania, Parthia, Bactria, and Aria, and all the countries as far as the Indus. In B. C. 303, he crossed that river to make war on Chandra Gupta, who, during these contentions had expelled the Grecian garrisons from the Panjab, and had so recovered that country for the native sovereigns of India. Seleucus being called to a final struggle with Antigonus made a hasty peace with Chandra Gupta, ceding the Panjab as far as the Indus. According to Strabo, Arachotia was also ceded, but this seems doubtful. Kuchee to the Boln Pass with the valley of the Indus may be the region ceded. Seleucus drove Antigonus into Phrygia where he was defeated and slain in 301 B. C.

Seleucus Nicator was assassinated in 280 B. C. by Ptolemy Ceraunus, from which date the whole of Asia to the Indus and Jaxartes was under the Syrian king Antiochus Soter, who from 280 to 261 B. C. reigned undisturbed over the same territory and left it to his son Antiochus Theos.

In 256 or 255 B. C., Bactria declared for independence under Theodotus or Deodatus.

Parthia followed about the year 255 B. C. under the rule of Arsaces, who is variously described as a native of Soghd, as a Bactrian, and, by Moses of Chorene, as of Balkh, this last author adding that the dynasty was known as Balkhaveses or Pah-

lavian. He used Greek only on his coins and in his public letters and correspondence ordinarily with the head of the sovereign on one side; only one coin has a lingual inscription. Great king of kings was a title first adopted by Mithridates II.

Arsaces I, B. C. 254-255, the first of the Arsacidan kings, a native of Balkh, revolted under Antiochus Theos, is supposed to have been killed in action with Ariarathes of Cappadocia, but the date and circumstances are not known.

Arsaces II, (Artabanus ?) son of Arsaces I, about B. C. 220 or 216, at first extended the Parthian empire but was afterwards driven into Hyrcania by Antiochus Magnus in B. C. 212; allying himself with the Scythians he recovered Parthia.

Arsaces III, B. C. 196, called Priapatus, Phraapatus or Phriadatus, son of Arsaces II, reigned 15 years, left three sons, Phraabates, Mithridates and Artabanus.

Arsaces Mithradates I, B. C. 177 or 173, made Balkh his capital, subdued Media and Persia and captured Babylon, brought under his dominion Western Bactria, Aria, Seistan, and Arachosia, and made a successful expedition into India.

Arsaces Phraabates II, B. C. 139 or 136. In his reign, Bactria seems to have been subjugated entirely by Scythians. He was defeated and slain in B. C. 130, when restraining the Parthians from ravaging the country.

Arsaces Artabanus, B. C. 126, uncle of Phraabates and youngest son of Priapatus, died of a wound received in action from the Tochari Scythians.

After many kings, the Greco-Parthian or Arsacidan dynasty in central Asia ended in A. D. 209 with Arsaces Artabanus, who was involved in a war with Rome, but ultimately slain in battle at Balkh by one of his Parthian officers, Ardeshir Babakan or Artaxerxes, who established his own, that of the Sassanians, in A. D. 235. It lasted nearly 500 years. The capital in the time of the Cæsars was at Selucia on the Tigris. The system of Government was Asiatic, by satraps or rulers possessing full power over the persons and properties of all the subjects of the state.

The history of the country of the Kophones river, i. e., Bactria, Aria and Kabul is different. Many of the coins have bilingual inscriptions, the one Greek on the obverse, some of excellent workmanship often of very barbarous forms, the other on the reverse is that called Arian, Arianian, Bactrian and Kabulian.

According to the prevalent authority of Lassen, James Prinsep, Professor Wilson and others, this language is said to be Sanscrit. It is written from right to left.

KABUL

The first Theodotus, B. C. 256, reigned about same time as Arsaces I.

Theodotus II, B. C. 240, is said to have reigned in the Kabul valley.

Euthydemus, B. C. 220 reigned in the time of the expedition of Antiochus the Great and was defeated in battle near Merv by the united Syrian and Parthian armies. He then urged Antiochus to receive him in alliance and so extend the Greek influence to the Indus. A peace was concluded, and Euthydemus led the Syrian army through Bactria, *i. e.*, by the route north of the mountains to the Kabul valley and across the Indus in B. C. 206. There Antiochus made peace with Sophagasesus (Asoka), which that sovereign recorded by edicts on rocks and pillars in various parts of India, in characters exactly resembling those on the coins of Agathocles. In B. C. 205, Antiochus returned by way of Arachotia. The translation of the edicts of Asoka, is in the Asiatic Society's Journal for 1838. That on the Girnar rock names Antiochus as Antiochia Yona Raja.

Eukratides, B. C. 178 ; Prinsep, B. C. 181 ; Bayer, Wilson, B. C. 165 ; Visconti, Lassen, B. C. 175. He seems to have made an expedition to India in 165 B.C., and, on his return from which, to have been murdered by his son. Numerous of his coins have been found in Bactria and Afghanistan, Mr. H. T. Prinsep considers that he ruled originally in Bactria, subsequently made conquests in and south of Paropamisus, in Kabul and, first of all the Greeks, coined in the bilingual Arian inscription. The first use of two languages, however, is also ascribed to Agathocles, who used Greek and Sanscrit while Eukratides used Greek and Arian. Eukratides was the earliest of the Greek kings of Bactria, Kabul and Asia who adopted bilingual inscriptions on his coins. It is supposed consequent on his conquest of the Paropamisus, after assumption of the title of Great King. On his death, his wide dominion is supposed to have been broken into several independent kingdoms.

Heliocles, B. C. 155, the parricide of Eukratides, used bilingual inscriptions on coins in pure Greek and Arian. His rule though short extended over Bactria and the Paropamisus.

Antimachus, B. C. 150, coined with Greek and Arian.

Agathocles, B. C. 190, coined with Greek and Sanscrit, is supposed by Lassen to have ruled Kabulistan to the Indus, and Mr. H. T. Prinsep supposes him to have been the governor left by Antiochus in Kabul, after his treaty with Asoka.

Pantaleon, B. C. 195, coined in Greek and Sanscrit.

KABUL

Professor Lassen supposes four Greek kingdoms, viz.,

That of Bactria :

One eastern under Menander and Apollodotus, comprehending the Panjab and valley of the Indus, with Kabul, and Arachotia or Kandahar added in times of its prosperity.

A western at Herat and in Seestan.

A fourth, central of the Paropamisus, which latter region Mr. Prinsep is inclined to give to Bactria, because of the bilingual as well as the pure Greek coins of Heliocles and Antimachus, kings of Bactria.

Of all the kings who followed Eukratides, Menander and Apollodotus alone are mentioned by classical authorities.

The Scythian kings, followed the Greek kings, in adopting their forms of money. They coined similar pieces with superscriptions similar and in the same languages, but inscribed on them their own names and titles and varied the emblems and devices.

Maues, B. C. 135, is supposed to have been a Scythian, the head of one of those tribes that broke into Bactria between 150 to 140 B. C., and he seems to have held communication with Azes. On the obverse, this coin contains the king with a trident, a Tartar war weapon, setting his foot on a prostrate enemy.

Azes, B. C. 130, the greatest of Scythian kings, on whose coins are bilingual inscriptions, with plain distinct Greek characters.—
ΒΑΣΙΛΕΥΣ ΒΑΣΙΛΕΩΝ ΜΕΓΑΛΟΥ ΑΖΟΥ.

In Arian, Maharajasa Raja Rajasa Mahatasa Ayasa.

The figures on the coins are various.

Professor Wilson thinks he was an Indian buddhist king about 50 B. C. Professor Lassen regards him as a Sacian Scythian, who conquered the Kabul valley in the time of the second Mithridates, and finally destroyed the kingdom of Menander and Hermaeus in about 120 B. C. He considers he was succeeded by Azilises.

Azilises, B. C. 115, reigned with the same titles as Azes. On one coin, the name of Azes is on the Greek obverse, and that of Azilises on the Bactrian reverse.

Vonones, B. C. 100, called Balahara, supposed to have been a Parthian satrap who asserted independence and created a kingdom for himself out of the dominions of Azilises.

Spalirius, B. C. 85, sometimes read Ipalirius, supposed a Parthian king.

Spalypius, B. C. 75, had many coins in two languages, he was a vice-regent, son of Vonones and perhaps brother of Spalirius.

About this time, as indicated by his coins, was a ruler, whose name is not known,—Soter Megas, B. C. 70, the nameless Great Soter king, had coins with an Arian legend which

KABUL.

James Prinsep and Professor Lassen ascribed to Azes. On all is a peculiar monogram with three prongs. The same monogram was continued in coins of Kadphises and of the Kanerkes, but it is not found in those of the Hercules type derived from Hermæus. Mr. H. T. Prinsep considers him to have been contemporary but not identified with Vikramaditya, and that he assumed the title of Soter Megas, which was continued down by the Kadphises kings. He considers that the nameless kings, with those on whose coins are the words Kodes or Hyrkodes, although mere local chiefs such as now rule at Kulm, Kunduz, and Balkh, preceded the conquest of the Panjab by Vikramaditya, B. C. 56.

Vikramaditya. About this great king, India affords nothing but fables, but a passage of the Periplus mentions that his capital was Ozene (Ujein) and it is known that he extended his empire to Kabul about B. C. 56. This dominion in the Kabul valley must have been temporary; his empire fell to pieces after his death and nearly a century elapsed before Chandra Sena restored the sovereignty of Hindoostan in its unity.

Kadaphes or Kadphises, a dynasty of three rulers, who ruled in Kabul, from the downfall of the kingdom of Vikramaditya. Kadphises' name is on the Arian reverse of the Hermæus coins of Hercules type. There is no indication of a settled worship. The Hercules worship was readily borrowed from the Greeks by the wild Scythians, as a mere reverence of physical strength. The Kohistan is supposed to be the district of the first rise of Kadphises, while Kabul and its valley were subject to Indian rule; and while there, the chief seems to have retained his Scythian title and rude worship of Heracles. Afterwards, overpowering the Indian governors who had followed Vikramaditya into the Kabul valley and Panjab, he or his descendants seem to have adopted the hindoo religion, coining with Greek and dropped their Scythian title. In a gold coinage by a Kadphises king, Siva occurs in the mixed male and female character, and very generally accompanied by the bull Nandi. Professor Lassen discovered in Chinese history, that K'hi-ontchi-u-hi Kui-tsi-kio, a Yuchi, or Yenchu, or white Hun, conquered the Szu or Azes Scythians in about 40 B. C. and dying at the advanced age of 84 years, his son Yen-ka-Ching prosecuted his career of victory and reduced the Indus valley and Panjab to subjection in about 20 B. C. The names are scarcely recognisable, but the facts and period correspond to the career and supposed era of the Kadphises kings.

Korosoko Kosoulo Kadphises, B. C. 50 in

KABUL.

Arian Dhama * * rata Kujula kasa Sabashakha Kadaphasahis,—coins are of the Hercules and Hermæus types.

Zathos Kadaphes Khoranos, B. C. 20. On the reverse of the coins is a sitting figure, with the arm extended, and wearing a loose flowing Indian dress. They have monograms the same as the Azes coins. The Siva worship had not yet been established as the state religion.

Vohemo Kadphises, B. C. 5. His copper coins have the king standing in a Tartar dress, with coat, boots and cap, his right hand pointing downwards to an altar or pile of loaves and having a trident separate on one side and a club on the other. The reverse has the Siva and Nandi bull.

The readings of the Arian inscriptions on coins of the Kadphises kings, by Lassen, J. Prinsep and Wilson are somewhat different, and it is suggested that the words Korso Kozonlo, Koranos and Zathos, were titles short of royalty. Professors Lassen and Wilson carry the dynasty of Kadphises through the whole of the first century of our era, and consider it to have been then overpowered by a fresh swarm of Scythians under the Kanerki kings. Mr. H. T. Prinsep supposes that during the ascendancy of the Kadphises kings, the Græco-Parthian party still held out in cities and communities, abiding their time to reassert their independence and rose again about the middle of the first century of our era; amongst these, coins show.

Undopherres, A. D. 40, calling himself king of kings in Greek, and in Arian Maharajasa Raja Rajasa, Tradatasa, Mahatasa, Pharahitasa.

Gondopherres or Gondophares, B. C. 55, who took the same Arian name of Pharahitasa.

Abagasus, king of kings, A. D. 70, in Arian Abakhafasa, Professor Lassen supposes this name to be identical with Volageses. Mr. H. T. Prinsep supposes these coins to be of Parthians who established for themselves a separate and independent sovereignty in Kabul and the Paropamisus.

Abagasius, A. D. 80, Captain Cunningham described the Arian legend on the coins to be "Of the saviour king Abagasus," younger son of Undopherres.

Kanerki. At the close of the first century of our era, when the above Ario-Parthian supposed dynasty ceased to reign in Kabul and the Panjab, a new race of Scythian kings appeared who issued gold and copper money of quite a different device and style from anything before current. These bear a title of Kanerkes, at first with the title of Basileus Basilcon, but afterwards with the Indian title

of Rao Nano Rao. The number and variety of the Kanerki coins indicate a long dominion for kings of the race. The only characters on their coins are Greek, but these become at last so corrupt as to be quite illegible. On their obverse is the king standing, or in bust to the waist, in a Tartar or Indian dress, with the name and titles in a Greek legend round; while on the reverse are Mithraic representations of the sun or moon with $\text{HAIO}\Sigma$, NANAIA , OKPO , MIOPO , MAO , $\text{A}\Theta\text{PO}$, or some other mystical name of these luminaries, also in Greek letters. And on all the Kanerki coins, is the same monogram as the Kadphises dynasty used, and which was borrowed apparently from the nameless Soter Mogas. This would seem to indicate that the Kanerki dynasty, though interrupted as Mr. Prinsep supposes by the intervention of Ario-Parthians was yet a continuation of the same tribe and nation as its predecessors of the name of Kadphises. The state religion seems to have been Mithraic, whence derived, not known, but on their coins, the Siva bull device is also found on the reverse, the bull's head being to the left,—in the coins of the Kadphises, being to the right. A list of their kings, cannot be framed, but their power seems to have lasted for more than two centuries. The style and device, of the Greek, of the gold coins especially, of the coins both of Kadphises and the Kanerkes was carried on till it grew more and more corrupt, and was at last entirely lost, through the deterioration of art, under the princes of hindoo race, who succeeded to the more energetic Greeks and Scythians.

Of all these conquerors, the routes of Alexander, Timur and Nadir Shah, are the only ones that have their particulars on record. Nadir Shah's route into India was the ordinary one, by Attock and Lahore, and he returned, as appears by Abdul Karim and M. Otter, by nearly the same route; save that instead of crossing the Indus at Attock, he went higher up, and passed the borders of Sewad, in his way to Jelalabad and Kabul. Timur in his route from Kabul towards Hindoostan, according to Sharif-ud-Din, went by way of Irjal, Shenuzan, Nughz, Banou (or Bunnou,) and thence to the Indus, at the very place where Jalal-ud-Din, king of Kharasm, fought with Chengis Khan in 1221; and so heroically swam the river after his defeat. It must not be omitted, that Timur crossed an extensive desert in his way to Batmir. In his return from the banks of the Ganges, he proceeded to the north-west, along the foot of the Sewalik mountains, by Meliapur, Jallindhar and Jum-moo, to the Indus, which he crossed at the

same place as before, and in the same manner; and returned to Samarcand by way of Bunnou or Banou, Nughz or Nagaz, Kabul, Bacalan and Termed.

About a mile from the city of Kabul is the tomb of the emperor Baber (obit 1530) in the sweetest spot in the neighbourhood: he had himself directed to be interred there. It is a brick building, fifty feet high. From the hill which overlooks Baber's tomb is a noble prospect over a plain twenty miles in circumference studded with gardens and intersected by three rivulets.

The population of the Affghan states is not numerous. General Ferrier quotes it at 4,200,000 in all, in the territories of Herat, Kandahar and Kabul. But the people are all above the English standard in height, and are brave to recklessness. The races in Affghanistan are not numerous. The Affghans, properly so called, are at present the dominant race, and in Kandahar, Kabul and Herat, hold the Tajik in subjection. The Tajik are the descendants of the ancient conquerors of the country, and may be sub-divided into the Parsivan or inhabitants of towns speaking Persian and the Eimak or nomades. The Uzbek are in numbers; the Hazara of Tartar, perhaps, of Turkoman origin, and the Eimak who graze their flocks in the Paropamisus, are brave, and relentless, and Affghans when travelling, whether proceeding from Balkh, Kabul, Kandahar or Herat, never enter into the mountain districts of these intrepid nomadic tribes. One of the Eimak tribes, is known as the Feroz Koli, after the city of that name, about sixty-three miles from Teheran. Timur exasperated at the depredations which they committed, transported the whole of them into the mountains lying between Persia and India. The races occupying Affghanistan are distinguished by marked characteristics, moral as well as physical. General Ferrier, (p. 5,) gives a most unfavourable account of them: he tells us that the Affghans of Kabul consider themselves as Indian Affghans, whereas those of Herat say they are Khorassani; one tribe repudiates another, and denies its Affghan origin, and there is not the least sympathy between them. The names of Patan, Rohilla, and Affghan, which serve at the present time to designate the Affghan nation, are really those of so many distinct races now confounded in one. The Affghans, he tells us, are tall, robust, active, and well formed; their olive and sometimes sallow complexions and strongly marked hard features give their countenances a savage expression; the lids of their black eyes, which are full of fire, are tinged with antimony, for this, in their

opinion, gives force and adds beauty and a dazzling brilliancy to them ; their black beard is worn short, and their hair, of the same colour, is shaved off from the front to the top of the head, the remainder, at the sides, being allowed to fall in large curls over the shoulders. Their step is full of resolution, their bearing proud, but rough. They are brave even to rashness, excited by the smallest trifle, enterprising without the least regard to prudence, energetic, and born for war. They are sober, abstemious, and apparently of an open disposition, great gossips, and curious to excess. Courage is with them the first of virtues, and usurps the place of all the others : with them it is "Give or I take." Force is their only argument, and it justifies everything ; an individual who is merely plundered considers himself extremely fortunate, as, generally speaking, life is also taken. There is no nation in the world more turbulent and less under subjection, and the difficulties in rendering them submissive to a code of just laws would be almost insurmountable. Affghans, he says, are as incapable of a continuous course of actions as of ideas ; they do every thing on the spur of the moment, from a love of disorder or for no reason at all : it matters little to them who gives them laws ; they obey the first comer directly they find it is to their advantage to do so. Their cupidity and avarice is extreme ; there is no tie they would not desert, to gratify their avidity for wealth. This surpasses all that can be imagined ; it is insatiable, and to satisfy it they are capable of committing the greatest crimes. For it they will sacrifice all their native and independent pride, even prostitute the honor of their wives and daughters whom they frequently put to death after they have received the price of their dishonor. Gold, in Affghanistan, is, more than anywhere else, the god of the human race ; it stifles the still small cry of every man's conscience if, indeed, it can be admitted that an Affghan has a conscience at all ; it is impossible to rely on their promises, their friendship, or their fidelity. They enter into engagements, and bind themselves by the most solemn oaths, to respect them, and in order to give them a sacred character, transcribe them on a Koran. They submit to the laws only after they have tried every means to evade them. General Ferrier believes that an enterprising and clever chief could, in Affghanistan, obtain from fifteen to eighteen thousand excellent Balooch infantry ; but it would be difficult to keep so large a force under the same flag for any length of time, so long as Seistan is in their possession. In General Ferrier's time the whole of the Affghau army consisted of the three divisions

of Kabul, Kandahar, and Herat ; of these, the troops called *Daftari*, or enrolled, presented the following effective force :—

(a.) Kabul, 31,000, viz :—

15,000 Affghan Horse.	4,000 Parsivan, Hazarah, or Usbek, Infantry.
6,000 Parsivan or Kuzilbash Horse.	
6,000 Affghan Mountaineers, Infantry.	

(b.) In Kandahar, 18,000, viz :—

12,000 Affghan Horse.	3,000 Balooch Infantry.
3,000 Affghan Infantry.	

(c.) In Herat the army consisted of 22,000 :—

8,000 Affghan Horse.	10,000 Parsivan Infantry.
4,000 Hazarah Horse.	

That officer says that the reason of their success against the other Asiatic hordes up to this day has been their *clán* in the attack, their courage, but not any clever disposition or a knowledge of military operations. He mentions that for the theatre of combat between their armies the Affghans always select large plains, in order that their numerous cavalry, on which they place a blind reliance, may be able to deploy freely. Though they are entirely ignorant of the art of attack and defence of towns and fortresses, the Affghans are remarkable for the obstinacy of their resistance and the correctness of their aim when they are behind walls. The arms of the Affghans are the firelock, the carbine, the swivel-gun, or a pair of lead pistols ; sometimes a bow, or a lance with a bamboo handle.

Earthquakes are repeatedly felt at Kabul. Vigne tells us (*Pers. Narrat.* 212) there are usually a dozen in the course of a year. While the British were besieged at Jellalabad, in 1841, its walls were thrown down by an earthquake. The prevailing rock is gneiss.

The town of Kabul is in Lat. 34° 23' N., Long. 69° 8' E. Mr. Masson derives its name from *Kapila*, a city ruled once by a prince *Kanishka*.

The Bamián pass, in Affghanistan, is 8,496 feet above the level of the sea. It is the great commercial route from Kabul to Turkistan, the several passes to the eastward are less frequented on account of their difficulty and their elevation. It is in Lat. 34° 50', Long. 67° 48', is about 1 mile wide, and is bounded by nearly perpendicular steepes. The pass leads over a succession of ridges from 8,000 to 15,000 ft. It is the only known route over Hindoo-Koosh for artillery or wheeled carriages. Kabul was taken by the British on the 7th August 1839, and its re-occupation was on the 16th September 1842. It was in this city and in the retreat from it that the British Indian army sustained the greatest disaster ever experienced during

British occupation of India. Kabul was evacuated by the British troops on the 6th January 1842, and their total destruction of the army occurred on the following day, but another army re-occupied it on the 16th September 1842.

Within the principality of Kabul and the northern part of that of Herat are high mountains covered with forests, having between them vast argillaceous plains well supplied with water, covered with fields, and susceptible of every species of cultivation; the portion south of Herat and Kandahar also consists of immense plains. Notwithstanding the bad quality of the soil in Kandahar, vegetable productions are extremely good and cheap. The Afghan plough is simply a piece of wood sharpened and hardened in the fire. The Affghans cultivate wheat, barley, maize, tobacco, cotton, and rice, sesamum, and palma-christi. In the mountains of Afghanistan are found vast quantities of iron, lead, and sulphur; quicksilver abounds; also asbestos, which is called sang-i-pamba. Afghanistan lies between 32° and 36° of north latitude, and 60° and 68° of east longitude, and within this confined space the climate varies amazingly according to the locality—the heat or the cold is felt in different spots in the same latitude with very different degrees of intensity, according to the configuration of the country. By the side of plains, on which the sun darts its burning rays, are table-lands at a very high elevation, and gigantic mountains where summer and winter seem to stand side by side. At Herat, in July 1845, the centigrade thermometer never stood higher than 37° in the shade, and that rarely; it more frequently ranged between 32° and 34°. From the commencement of May to the middle of September the wind blows constantly from the N. W. over this province, and often with such violence as to prostrate houses, uproot trees, and cause much devastation. The winter is tolerably mild; on the plain the snow melts as it falls, and does not lie long even on the summits of the mountains.

The province of Kandahar is everywhere subject to intense heat. In the fortress of Girishk, on the banks of the Helmund, in the month of August, the centigrade thermometer stood at 48° or 49° in the shade. This principality is bounded on the south by the deserts of moving sand of the Seistan, and is on this side open to violent winds, surcharged with exceedingly fine sand, which is very injurious to animal life. The population of Afghanistan is divided into two very distinct parts: first, the Affghan, properly so called; secondly, the Tajik, the descendants of the

ancients, conquerors of the country, and who may be sub-divided into two classes—the Parsivan, or inhabitants of the towns, and the Eimak or nomades. The Affghans are at the present time the dominant race, and the Tajiks are subject to them both in Herat and Kandahar; nevertheless Yar Mahomed Khan in the former city showed them great consideration, and permitted them to obtain an influence which may at some future time become fatal to the Affghans. At Kabul their superior numbers, their warlike instincts, and the fortified position which they occupy in that city, have obtained for them the same privileges as the Affghans; they share with them the appointments of the public service, and in the political troubles which often arise the party to which they give their support is very frequently triumphant. The Kuzzilbash or Persians established in Kabul by Nadir shah, and numbering 12,000 families, hold to the Tajik, to whom they assimilate in religion, both races being of the same sect, of shiah mahomedans. The different nations who inhabit the kingdom of Cabul were supposed, by the Hon'ble Mr. Elphinstone, to contribute to the population in the following proportions:—

Affghan.....	4,300,000	Indians (Cash-
Baluch	1,000,000	meer, Jut, &c.,
Tartars of all		&c.).....
descriptions. 1,200,000		5,700,000
Persians (includ-		Miscellaneous
ing Tajik) 1,500,000		tribes.....
		300,000

According to Captain Raverty, the people who dwell about Kabul and Kandahar. Shorawak and Pishin, are designated B'r-Pushtun or Upper Affghans; and those occupying the district of Roh, which is near India, are called L'r-Pukhtun or Lower Affghans. Persian is the official language of Afghanistan, but the Pushto is alike the common tongue of the uneducated people, of the families of the Sadozye kings, and of the dwellings of the Amir. There are, however, two divisions of the Affghans, termed Pushtun and Pukhtun, who speak Pushto and Pukhto respectively. The Pushto being the western dialect with affinity to Persian, and the Pukhto the eastern with many Sanskrit and Hindi words. The Pushto is spoken, with slight variation in orthography and pronunciation, from the valley of Pishin, south of Kandahar, to Kafiristan on the north; and from the banks of the Helmund on the west, to the Attock, Sindhu or Indus river, on the east;—throughout the Samah or plain of the Yuzufzye, the mountainous districts of Bajawar, Panjhkora, Suwatt and Buner to Astor, on the borders of Little Tibet,—a tract of country equal in extent to the entire Spanish peninsula. Also, throughout the British districts of the Dera-

jat, Banu Tak, Kohatt, Peshawar and the Samah or plain of the Yuzufzye with the exception of Dera Ghazi Khan, nine-tenths of the people speak the Affghan language.

Professor Wilson remarks that the inhabitants of the country around Kabul,—at the earliest period at which we have authentic accounts of them—that of the Macedonian conquest,—were Indians; and the designation given by the Greeks is confirmed by the language upon the reverse of the coins of the Greek kings of Bactria, which, there is little doubt, is a form of Prakrit.

The Pathan tribes have advanced into the north-east corner of Afghanistan within comparatively recent historical times, for the lower valleys of the Kabul country were once occupied by hindoo races, and the peaks of the Safed Koh, between Jelallabad and Kabul, bear such hindoo names as Sita Ram. The term Affghan is hardly known to the people when Europeans so designate, for the tribes have not, as yet, coalesced into a nation. Physically the Affghan people are among the finest on the earth, with a broad, robust, ruddy, manly look, and they are hardy and bold. They have a pleasant, frank, simple, unaffected way. About Kabul, they are fair, many with red hair and blue eyes, but some of the tribes in the lower and hotter hills and valleys near India, have somewhat dark skins. The majority are astute, intriguing, ambitious and faithless, avaricious, fickle, uncertain and crafty, and in bold unblushing lying a hindoo is a mere child to an Affghan. They are not trusted as mercenaries. The eastern tribes are politically quite independent, and the amir of Kabul does not pretend to any authority over them. These have been largely employed and been becoming more and more the military retainers in the native army of British India. The purer Affghan are quite illiterate. The Yuzufzye and other tribes in the north are comparatively recent conquerors of the northern hills and valleys, where they have mixed with a free hindoo people and are fairer than the other Affghan tribes. The government of the tribes is a democracy, their representation and self-government being by their Jirgah, but like most rude people no man's nationality extends beyond his own clan. Mr. Campbell supposes them to be Arian and probably of similar origin to the Jat. The Affghans in Peshawur and Kohat are British subjects.

The word Aimak is a Mongolian, Mantchu and Turki word, meaning a tribe. Of those, there are in Kabul and Persia four tribes, the Char Aimak. They dwell to the north of Herat and Kabul in the range of the

undulating country which in some places assumes a mountainous, in others a hilly character, and in some parts is well watered, in others bleak and rough, forming a watershed of two natural divisions, from the western of which flows the Murghab, the Tajend and the Farrah-rud, and from the eastern, the Helmund, the south-eastern feeders of the Oxus and the north-western feeders of the Kabul river. It is said that Timur, exasperated at the depredations committed by the people inhabiting Mazanderan, south of the Caspian, transported the whole of them into the mountains situated between India and Persia. The descendants of that people form the four Aimak tribes. They are also called Feroz Kohi, after the city of that name (situated about sixty-three miles from Teheran), where they were defeated and taken captives by Timur. According to Latham, the Aimak are of the sunni sect of mahomedans, and are in number four, viz., the Timuni, the Hazara, the Zuri, and the Timuri. The Timuri and the Hazara lie beyond the boundaries of Kabul, and are subject to Persia. Vambery, however, says that the four tribes are the Timuri, Teimeui, Feroz Kohi and Jamshidi, and that the whole are of Iranian origin and speak Persian. The Timuri dwell about Gorian and Kah'san; the Teimeui from Karrukh to Sabzwar; the Feroz Kohi near Kale No, and the Jamshidi on the shores of the Murghab. In their reverence for fire, their respect to the east, to which their tent doors look, they retain many of the fire worshipping views. The Aimak tents are Turk, those of the Timuri are Affghan. They live in well fortified castles, but in tents rather than houses, prefer a despotic government, eat horse flesh, and mix the flour of a nut (called Khundzik, chesnut?) with that of their wheat. The Aimak settled in the thirteenth century, and their number is estimated at 400,000.

The Ghilzi tribe, which with the Abdali, form the bulk of the Afghanistan population, but chiefly dwelling in Kandahar and Kabul.

The Berdurani tribe, on the north-eastern part of Afghanistan, occupy the lower course of the Kabul river, and the parts between the Indus, the Hindoo-Koosh and the Salt Range, touching the Ghilzye on the west, the Siakhposh on the north, and the Indians of India on the east, the Indus being their boundary, but Peshawur is a Berdurani town.

About a mile from the city of Kabul is the tomb of the emperor Baber (obit 1530) in the sweetest spot in the neighbourhood he had himself directed to be interred there. It is a brick-building, fifty feet high, and

from the hill which overlooks Baber's tomb, is a noble prospect over a plain twenty miles in circumference, studded with gardens and intersected by three rivulets. Besides the Kabul river, the plain is copiously irrigated by other streams and notably by the Surkh-rud (the red river) which enters it from the west and falls into the main river at Dorunta. A few miles below Jellalabad, the Kabul river is joined by a broad stream of considerable volume, which drains the Kuner valley and is likewise practicable for rafts.—*Vigne's Personal Narrative*, pp. 165, 193, 212; *Masson's Journeys*, pp. 152-63; *Vol. ii*, p. 274; *Smith's Dictionary*; *Malcolm's History of Persia*, quoted in *Ferrier's Journeys*, p. 55; *On the Historical result deducible from recent Discoveries in Afghanistan*, by H. T. Prinsep, Esq.; *Renell's Memoirs*, pages 112 to 121; *Captain Raverty on the Pushtu Language*; *Burnes' Kabul*, Vol. i, p. 143; *Cal. Rev. KAB'R, AR., PERS. HIND. A grave, a tomb.

KABROUANG, see Tulour or Salibaboo islands.

KABRA, HIND. *Capparis spinosa*: Chit—Kabra, Hindi. *Uraria chetkubra*.

KABR-KI-JHAR, HIND. *Calotropis procera*.

KABADA, HIND. See Nil.

KABUK, SINGH. ? Laterite.

KABUKAMALE, see India.

KABUTAR-BAZI, betting on pigeons, an amusement peculiar to the higher classes of Sind.—*Burton's Sindh*, p. 286.

KABUTR-KA-JHAR, HIND. *Justicia nasuta*, also *Rhinacanthus communis*.

KADYA, see Java.

KA-BY-AIN, also Kn-by-en, BURM. *Cerriops Roxburghiana*, Linn.

KABYLE, south of Algiers are the Berber race, the old Numidians, who differ in language, form and habit from the Arabs of the plains. Their number is about 700,000. They are a federal republic, the old Quinquagantes who gave so much trouble to the Romans, who tried the soldiership of Maximilian, and sixty years afterwards again revolted.

KABULI KADDU, HIND. *Lagenaria vulgaris*, Mitha kaddu, HIND. *Cucurbita maxima*.

KABULI-KIKAR, HIND. *Acacia Arabica*, var. *cupressiformis*; also *A. farnesiana*.

KABULI TSUI, HIND. *Cactus Indicus*.

KABUS, SIAMESE. A fresh water fish found in the Menam river. It is dried and exported.—*Crawford's Embassy*.

KABURNE, SANS. White copperas? Sulphate of zinc.

KACARI-KAI, TAM. *Cucumis muricatus*?

KACH, HIND. *Daucus carota*.

KACH, HIND. Glass, crude glass fused. Properly kanch.

KACH, see Kahan, Kutch.

KACHA. Raw, unripe, crude, in contradistinction to Pak'ha, ripe, clever, skilled.

KACHA GHARA, or unbaked pot, as an ordinal a pot is filled with water and carried to some distance without spilling.

KACHAI, see Nicobar Islands.

KACHAI, MALAY. Glass.

KACHA KODIE, the stems of a creeper, used instead of twine for tying bundles.

KACHAL, HIND. *Abies smithiana*.

KACH-ALU, PANJ. *Colocasia antiquorum*, Schott, the edible Arum or Arum colocasia; Til-kach-alu *Saxifraga ligulata*.

KACHAM, HIND. In the east of Kumaon, *Ulmus integrifolia*.

KACHAN or Kachal, Hind. of Hazara. *Abies smithiana*, Himalayan spruce; Tiliakachang, HIND. *Acoutium napellus*.

KACHIANA, TEL. *Bauhinia acuminata*, Linn.

KACHANG, Kachang-China, also Kachang Goring, Kachang-Tanah; also K. China, also K. Japan, MALAY, *Arachis hypogæa*; Ground-nut oil use in the Archipelago; Ground-nut of *Arachis hypogæa*.—Linn.

KACHAR, a territory in about Lat. 27° N., and Long. 92 to 93° E., on the northern part of the valley of Assam, north-west of Bishnath and north-east of Gowhatty. The Kachari or Bodo hill race also dwell in the mountains south of the Assam valley and to east of Munnipoor, in Lat. 24° 40' and Long. 93° E. The Kachari, the Naga, the Abor and some other tribes bordering on Assam are supposed to be of the same race as the Meehi. See India.

KACHAURI, HIND. A sort of sweetmeat.

KACHEN, HIND. *Melia azedarach*.

KACH GANDAVA, a district or section of Baluchistan on the east of which the capital is Gaudava. It is a great level tract, inhabited by three very distinctly marked races, the Jet, the Rind (including the Maghazzi,) and the Brahui. The Jet seem the original race, and

occupy the centre of the province. The Rind with their lawless sub-tribes the Jakrani, Dumbaki, Bughti and Marri, are a more recent intrusive race dwelling on the skirts. The Doda, a division of the widely dispersed great Marri tribe, have, for the last three centuries, occupied the hill ranges east of the plain of Kachi. The Marri are a brave race, and have long been distinguished as daring depredators. Harand and Dajil, in Kach Gandava, but bordering on the Indus, are inhabited by the Gurchani tribe of Rind, and have the Muzari on their south. The Great Rind tribes are subdivided into 44 branches, and though not Brahui are denominated Baluch. Their traditions affirm them to have immigrated ages ago, from Damascus and Aleppo. Their language is the Jetki in common with that of the other inhabitants of Kach Gandava and Mard-i-Rind means a brave man. The Rind of Kach Gandava are of the Utan Zye division.

Utan Zye dwell at Suran.

Dumbki and Jakrani dwell at Lehri.

Doda Marri dwell at Kahan.

Bughti dwell at the hills east of Lehrat, Sing Saloh and Teriki.

Homarari dwell at Tambu.

Jamali dwell at Rojan.

Of these Rind tribes, the Dumbki, Jakrani, Bughti and Doda Marri, have always been distinguished by their rebellious and predatory habits. They indulged these in the attacks on the British armies west of the Indus. The Marri tribe is considerable and inhabit the eastern hills of Kach Gandava, and a peaceful and obedient portion of the tribe are in the hills west of the province below Jell. A large portion are at Adam Marri, on the S. E. frontier of Sind. The Marri of Kach Gandava were notorious for their lawless habits and made frequent inroads on the plains. They and the Maghazzi seem to have emigrated from Mekran to Kutch Gandava at different periods, and to have become incorporated with the Jut cultivators.

The following minor Rind tribes reside in the north-eastern hills of Saharawan.

Kallui at Lup.	Mandarari at Rodbar,
Kuchik at Kirta.	and
Pushh at Johan.	Pugh at Kajuri.

The Rind on the western banks of the Indus are two great tribes, the Gurchani, who inhabit Harand and south of these the predatory, but nearly independent, Mazari tribe. The Maghazzi have only four families at the Butani at Jell, being the chief. They are the deadly enemies of the Rind, but are probably of the same race. The Maghazzi are sub-divided into four principal families or clans, of which the Butani of Jell

are the most illustrious and give the chief or sirdar, to the whole. They boast of being able to muster 2,000 fighting men, and between them and the Rind a blood feud long existed. The Maghazzi and Rind are alike addicted to the use of ardent spirits, opium and bhang. See Kelat, Jell, India, Kajik, Kelat, Jell, Jutt.

KA-CH'HA, also Cholna, HIND. A cloth worn round the hips, passing between the legs, and tucked in behind, the Tamil dovati.

KACHIHATO, see Inscriptions.

KACHIIHAURA, HIND. A small clan of Rajpoots, of whom a few are settled in Gorakhpur.

KACHIIAYANO, PALI. From Sanskrit, Katyayana; the tya of the latter being invariably changed to chla.

KACHHERI, HIND. A court-house.

KACHHI, HIND. A forest tract, or low alluvial land along the banks of the Indus: at Myanwali, the kachhi is covered with sissu trees. Kachhi is a generic term for wet, or low alluvial land and islands lying along the course of the Indus. The Kachhi low land tract on the left bank of the Indus, commences at Mari, opposite to Kálábágh, and extends in one form or other, to the sea. In some parts of the lower portions, bábúl predominates. Tamarisk more or less exists everywhere, and jhand, karil, with other shrubs or trees adapted for fire-wood, are largely scattered over the entire area in greater or less density. In the upper portion, appertaining to the Miyánwali tahsil, the shisham or Dalbergia sissoo greatly predominates, and appears to spring up spontaneously wherever the soil deposited by the river is left undisturbed, for a distance of at least thirty to forty miles below Kálábágh. Almost the whole of the forest worthy of being taken into account is situated on part of the series of low islands, among which meander the numerous and varying channels into which the Indus is divided for many miles below Mari and Kálábágh. The Kachi sissu forest, extends over fourteen or fifteen miles on low alluvial land upon the left bank of the Indus, between the villages of Bukkri and Fatty Khan, and more sparingly for fifteen miles lower down, or altogether thirty miles from Kálábágh. There are few trees in India which so much deserve attention as Dalbergia sissoo, the "Fai" of the Panjab, considering its rapid growth, the durability of the timber, and its usefulness for many purposes; the wood is universally employed when procurable by Europeans and natives where strength is required.—*Cleghorn's Panjab Report*, p. 220.

KACH'HI, a race or tribe, spread throughout Hindoostan, in Guzerat; and on the north-west borders of the Mahratta race. They are

KACHL

engaged in the finer branches of agriculture are industrious market gardeners, flower growers, and in Behar are large poppy growers. They recognize seven branches, the Kanaujia, Hardha, Singrauria, Jamanpuria; Bamhania or Maghya; Jaretha, and the Kachhwaha, who do not eat together or intermarry. There are, however, other distinctions, and in the Maluratta territory, some of them are named from the countries they have come as the Bundela and Marwari Kach'hi. The entire Canarese, Tamil, Teling and Mahratta nations of the Peninsula of India, are engaged in agriculture. In the North-West Provinces the Aheer, Kach'hi and Koormi are similarly occupied. The Kach'hi, Koeri, Morow, Kumboo and Kisan, are gardening and cultivating tribes in northern India. The Kachi of the Mahratta country, state that they came as cavalry and infantry soldiers from Bundelkund in the times of former kings and of Alamgir, and that they were villagers and servants. There are under one hundred houses in Begumpur in Aurungabad city. There are many in Poona and a few in Bombay, but only one in Jaulnah. In Aurungabad, Poonah and Bombay, they are fruit-sellers, market and flower gardeners and agriculturists. They are of a bamboo colour and speak hindi. They worship Settha, in the form of a stone from the river, offering flowers and betel and use vermilion in sanctifying the stone. They also worship Hanuman and Balaji. After death, they burn, but bury those who have died of small pox, also the unmarried. Of what may happen to them after death they know nothing.—*Elliot's Supp. Glossary.*

KACH'HO, see Pali.

KACH'HIWAR, HIND. A sub-division of the Kurmi tribe.

KACH'HIWAHA, a distinguished tribe of the solar race of Rajpoots, who claim descent from Kusu or Kusha, the son of Rama, and form the ruling race in Amber of Jaypur, the rajah of which is of the Kach'hwaha clan. There are three *Solar Dynasties* :—

The Grahilote or Gehilote with 24 Sakha or branches, of which the Sisodea is the most distinguished. The rana of Udayapur is a Grahilote.

The Rahtore, said to be descended from Rama by Kusa, his second son. It has twenty-four branches, and the raja of Jodhpur or Marwar belongs to this tribe.

The Kach'hwaha, also sprung from Kusa. The rajah of Jeypore is of this tribe. It has twelve kotri or houses.—*Tod.*

KACHI, *Kamanchi*. *Solanum rubrum*, *Mill.*

KACIII, the language of Cutch which

KACHUR.

has in it elements of the Guzerati. That of the hunters and tanners (Dedhs) is another dialect, but the language of Lar is purest. See Kelat, Jell, India.

KACHINI, TEL. *Bauhinia tomentosa*, *Linn.*

KA CHIR, HIND. *Pinus excelsa*.

KACHISA, HIND. A sub-division of the Kurmi tribe found in Bahar.

KACHKARA AFIM, HIND. A kind of opium from the hills.

KACHKRA, GUZ., HIND. Tortoise' shell.

KACHILAI or Kach Leia, HIND. *Tamarix dioica*.

KACH-LUN, HIND. Salt residue in glass melting.

KACHIMACH, HIND. *Solanum nigrum*.

KACH MUJ, PANJABI. *Daucus carota*, *Linn.*, the Carrot.

KACHINAL SAFAID, HIND. *Bauhinia acuminata*, also *B. variegata*.

KACHNAR, HIND. *Bauhinia variegata*, a tree of Chota Nagpore, with a soft, white wood.—*Cal. Cat. Ex.*, 1862.

KACHORAM, TEL. *Kæmpferia galanga*.—*Linn.*

KACHORI, TAM. *Tragia involucrata*.

KACHRA, in the Panjab, the seed of cotton: also a blight on sugar-cane, an insect eating the heart of the cane.

KACHRA, also Kachri, HIND. *Cucumis momordica*, also *C. pubescens*, Kapur kachri, kachur, also tika kachur, *Hedychium spicatum*.

KACHTA, HIND. *Strychnos nux-vomica*.

KACHU, MALAY. *Catechu*, *Areca catechu*.

KACHU, BENG. *Arum colocasia*.

KACHU-BONG, MALAY. *Datura fastuosa*, *Mill.*

KACHULA CHULA, MALAY, hard horns or horn-like parts of animals, believed to possess magical or medicinal properties. *Lang Limu* [ilmu] kahutan katungalan, are lines to which the Malays cannot affix any definite meaning. The rendering would perhaps be [magical] science for protection when alone in the forest, or to make the offerer alone as when surrounded by a forest.—*Jour. of the Indian Archæol.*, December 1847, page 309.

KACHUR, HIND. *Hedychium spicatum*, *Royle*. Jameson applies the name both to *Zinziber elatum* and to *Curcuma longa*. It is also applied to the *Curcuma zerumbet*, *Roxb.*, the zarmbad of the Lahore bazar. The kind called "pahari kachur" is the *Curcuma kuchoora* noticed by *Royle* as being more like *Curcuma montana* than *Curcuma zerumbet*. The powder made of the dry root is used by natives in the huli festivals: a third

KADAMBA.

variety is grown simply for the black round seeds it produces, which are strung together and sold for necklaces at the Jawalamukhi fair. The species is called "K'li-Sukhdarshan," *Hedychium coccineum*. But *Amarillis grandiflora* is also called sukhdarsan. Kachur root is one of the ingredients supplied by the Lahore druggists for scenting oils.—*Powell's Hand-book*, Vol. 1, pp. 299, 300; *Royle's Him. Bot.*; *Jameson's Catalogue*.

KACOOTA KALANGU, TAM. Dr. Ainslie had never seen this root, nor could he learn the botanical name of the plant.—*Ainslie*, p. 249.

KACSHA, in the astronomy of the hindoos, the orbit of a planet, or the circle which ancient astronomers called the Deferent; for the Caesha carries Epicycles, (Paridhi) like the Deferent.

KACYNAMA, SINGH. Cinnamon.

KADAGOO, TAM. *Sinapis racemosa*; mustard.

KADUKAI, TAM. *Terminalia chebula*.

KADA-KANDEL, TAM. *Lumnitzera racemosa*.

KADALI, TAM. *Melastonia malabathricum*.

KADALA, also Kadalakka, MALEAL, also Kadalay, CAN., TAM. *Cicer arietinum*, *Linn.*

KADALEWEGAM, MAL. *Aristolochia indica*, *Linn.*

KADALI, SANS. *Musa paradisiaca*.

KADALI-PUA, TAM. *Lagerstræmia reginae*.

KADAL NANDU, TAM. Cancer, a crab.

KADAL NURAI, TAM. Cattle-fish bone.

KADAM, AR., PERS., HIND. The foot, hence Kadam-bosi, feet kissing, in correspondence, a humble salutation. This word means sometimes a puce, a foot, also a yard measure of 30, 33 or 36 inches. *Kadam-rasul*, foot prints of the prophet Mahomed. In Southern Asia, there is a great reverence shown to saints' shrines and foot marks, amongst these are the tombs of the Pir-i-Dastagir, at Baghdad; of Kadir Wali at Negapatam, and the foot prints of the prophet at the Kadam Rasul hill near Secunderabad; to which multitudes annually resort: the foot prints of Abraham are shown at Mecca and those of Adam, at the great buddhist temple in Ceylon.

KADAMBA, SANS. The flower Nauclea cadamba, when full blown is invested with projecting antheræ like the erect bristles of a hedge-hog. Delight, according to the hindoos, gives a bristly elevation to the down of the body and is thus alluded to in the Hindoo Theatre,

How chances it
That one so free from passion should betray
Without apparent cause this agitation
And blossom like the round Kadamba flower?

KADAPHES.

Also Makaranda says

Thick on the hills broad bosom the Kadamba
Shows bright with countless blossoms.

The Nauclea cadamba, is a large and ornamental tree. The corollets of the flower are numerous, forming a large perfectly globular beautiful orange-colored head with the large white clubbed stigmas projecting.—*Flor. Indica*, Roxb., 121, *Hind. Theat.*, vol. ii, pp. 80, 100.

KADAM-BASUL, the foot prints of Mahomed on a hill near Secunderabad in the Dekhan.

KADANAKU or Leatavalla, TAM. Aloe perfoliata.

KADANCHIAR, JAVAN.

Burong-berrom, MALAY. | Nut-cracker of the English
at Banda.

A large white and blue pigeon.

KADANDA, HIND. *Verbascum thapsus*.

KADANGA, a flower of Siam, from whose calyx droop four yellow petals, diffusing a sweet perfume. It yields an essential oil: probably the Nauclea cadamba.

KADAPA CHETTU, also Kadimi manu, TEL., Nauclea cadamba, R.

KADAPARA, also Gâdidegadapara, TEL., *Aristolochia bracteata*, Retz.

KADAPHIES or Kadphises a dynasty which consisted of three rulers, who reigned in Kabul, from the downfall of the kingdom of Vikramaditya. Kadphises' name is on the Ariau reverse of the Hermæus coins of Hercules type. There is no indication of a settled worship. The Hercules worship was readily borrowed from the Greeks by the wild Scythians, as a mere reverence of physical strength. The Kolistan is supposed to be the district of the first rise of Kadphises, while Kabul and its valley were subject to Indian rule; and, while there, the chief seems to have retained his Scythian title and rude worship of Hercules. Afterwards, overpowering the Indian governor who had followed Vikramaditya into the Kabul valley and Panjab, he or his descendants seem to have adopted the hindoo religion, coinuing with Greek and dropping their Scythian title. In a gold coinage by a Kadphises king, Siva occurs in the mixed male and female character, and very generally accompanied by the bull Nandi. Professor Lassen discovered in Chinese history, that Khi-out-chiu-hi Kuitsi-kio, a Yuchi or Yeutchi or white Hun, conquered the Szus or Azes Scythians in about 40 B. C. and dying at the advanced age of 84 years, his son Yen-kaio-Ching prosecuted his career of victory and reduced the Indus valley and Panjab to subjection in about 20 B. C. The names are scarcely recognizable, but the facts and period corres-

KADDA PILŌW.

pond to the career and supposed era of the Kadphises kings.

Korosoko Kosoulo Kadphises, B. C. 50 in Arian Dhamarata Kujula kasa Sabashakha Kadaphasa. His coins are of the Hercules and Hermæus type.

Zathos Kadaphes Khoranos, B. C. 20. On the reverse of the coins is a sitting figure, with the arm extended, and wearing a loose flowing Indian dress. They have monograms the same as the Azes coins. The Siva worship had not yet been established as the State religion.

Vohemo Kadphises, B. C. 5. His copper coins have the king standing in a Tartar dress, with coat, boots and cap, his right hand pointing downwards to an altar or pile of loaves, and having a trident separate on one side and a club on the other. The reverse has the Siva Nandi bull.

The readings of the Arian inscriptions on coins of the Kadphises kings, by Lassen, James Prinsep and Wilson, are somewhat different, and it is suggested that the words Koroso, Kosoulo, Koranos and Zathos, were titles short of royalty. Professors Lassen and Wilson carry the dynasty of Kadphises through the whole of the first century of the present era, and consider it to have been then overpowered by a fresh swarm of Scythians under the Kanerki kings. Mr. H. T. Prinsep supposes that during the ascendancy of the Kadphises kings, the Græco-Parthian party still held out in cities and communities, abiding their time to re-assert their independence and rose again about the middle of the first century of our era; amongst these, coins show

Undopherres, A. D. 40, calling himself king of kings in Greek, and in Arian, Maharajasa Raja Rajasa, Tradatasa, Mahatasa Pharalitasa.

Gondopherres or Gondophares, A. C. 55, who took the same Arian name of Pharalitasa.

Abagasus, king of kings, A. D. 70, in Arian Abakhafasa. Professor Lassen supposes this name to be identical with Vologeses. Mr. H. T. Prinsep supposes these coins to be of Parthians, who established for themselves a separate and independent sovereignty in Kabul and the Parapamisus.

Abagasius, A. D. 80, Captain Cunningham described the Arian legend on the coins to be of "the saviour king Abagasus, younger son of Undopherres."—*Prinsep*.

KADA PILVA, MALEAL. *Morinda citrifolia* ?—*Linn.*

KADASHI, HIND. *Ribes leptostachyum*.

KA-DAT, BURM. *Cratava roxburghii*.

KADDA PILŌW, TAM. The river-side jack-wood tree, the natives use its wood for

KADER.

inferior purposes in small pattamah and coasting vessels. *Edye, For. of Malab. and Canara.*

KADA PILVA, MALEAL. *Morinda citrifolia*.

KADDATTAM or Karattam, or Karat, TAM. Cloth covered with a mixture of paste and charcoal, used for writing on, with soap-stone (balpam).

KADDIL-PASH, TAM. The Ceylon moss fucus: it grows in great abundance at Jafnapatani, and when boiled down makes an excellent jelly for invalids, and forms an article of trade thence. See Agar-Agar, Ceylon moss, Edible seaweed, *Eucheuma spinosa*, *Gracillaria tenax*. *Sphaerococcus*.

KADDU, Guz. ? *Helleborus niger* ?

KADDU, HIND. *Lagenaria vulgaris*. Sufel Kaddu, also Halwa-kaddu, HIND., *Cucurbita maxima*; Gol Kaddu, HIND. *Benincasa cerifera*. Kaddu is a generic term of the tribe, and there are also the Karwa or bitter, the haria or green, and the Kingri or guitar kaddu.

KADDDYA, an ant of Ceylon, bites severely.

KADEHOU MAA, SANS. *Polypodium taxifolium*.

KADEKULA, KARN. The lowest of the castes, a pariah.

KADELARI, MALEAL. *Achyranthes aspera*, *Linn.*, *Roxb.*

KADEL AVANAKU, MALEAL. *Croton tiglium*.

KADEL NANDOO, TAM. Any crab, of the genus Cancer.

KADENAKA or Katevala, MAL. *Aloe indica*.

KADENRU, HIND. *Taxus baccata*.

KADEPA TIGE, also Mandulamari tige, TEL.

Vitis cernosa, *Wall.* | *Cissus cernosa*.

Kadi means "yoke;" and the leaves are used as an external application to the neck of bullocks when galled by the pressure of the yoke.

KADER, a race occupying the Anamalai hills in Coimbatore, but not higher than 4,000 to 5,000 feet. They are the lords of the hills, and exercise some influence over the Puliar and Malai arasar races. They carry a gun, and even loads as a favour, but they do not perform menial labour, and are deeply offended if called coolies. They are expert at stalking game. They are a truthful, trustworthy and obliging tribe. They are small in stature, and their features resemble the African. They have curly hair, tied in a knot behind, and file the four front teeth of the upper jaw to a point, as a marriage ceremony. The Kader, as also the Puliar, Malai arasar and Muduwar, who

KADJAK.

also inhabit these hills, all gather the rich natural products, cardamoms, honey, wax, ginger, turmeric, resins, millets, soap-nuts, gallnuts, and exchange them in return for rice and tobacco. The Kader formerly located near Toomacadanú in the Anamalai, entirely left the British portion of the forest and went over to the Cochin territory, as the hill produce on the British side became exhausted and they paid the Cochin Government Rupees 100 per annum, for the privilege of collecting cardamoms, ginger, &c., they paid no seigniorage for the hill produce collected in British forests. They were useful as guides, but otherwise they were of no use in the forest, refusing to undertake any labour whatever.

KADER WALI, a mahomedan saint, Khajah Muin ud din, Chisti. He was a sunni, he was born in Sigestan A. H. 527, and came to Ajmir in the reign (A. H. 602-607) of Kutb-uddin Aibak, where he married a daughter of Syud Hussain Meshedi, a shiah. He died A. H. 628, and a magnificent mosque was built near his tomb A. H. 1027, by the emperor Jehangir. He has also a shrine at Nagpore near Negapatam. This saint is held in special reverence by the Moplah. His festival day is on the 11th Jamadi ul Akhir.

KADESIA. This battle put an end to the Persian empire. It was fought in the fifteenth year of the Hejira, (A. D. 632.) under the kaliph of Omar, by the Arab general Saad, against Rustum, the commander-in-chief of the Persian army, in the reign of Yazdijerd iii, the last of the Sassanian race. The battle lasted three days, at the end of which the Arabs were victorious and the Persian monarchy destroyed.—*Decline and Fall of the Roman empire; Rich's Residence in Koordistan, Vol. ii, p. 155; Thomas' Prinsep.* See Cadesia.

KADEWAR, HIND. *Gymnosporia spinosa*.

KADI, TAM. Acetic acid; vinegar.

KADI, cloth used for every ordinary work in India. It is called *Kadi* when white, *Hārava* when green.

KADIAM, SANS. Bangles.

KADIGI-HINDI, AR. *Cinnamomum nitidum*.—*Nees*.

KADI-KAN, *Panicum miliaceum*; millet.

KADIMI, TEL. *Barringtonia acutangula*.

KADIPHES, see Inscrptions, Kadaphes.

KADIRA, HIND. *Acacia catechu*.—*Willd.*

KADIR WALI, a mahomedan saint, one of whose shrines is at Negapatam. His Ooroos, is held on the eleventh day of the sixth month, Jamadi-ool-Akhir. See Kadir Wali.

KADISHEN, TEL. *Cluytia collina*.

KADIS-MANIS, BALI. ? Aniseed.

KADJAK. Immediately to the north and

KADURU.

north-east of Dadar, are hills, enclosing the valley of Sibi, the abodes of the Khaka, Kadjak, Shilanchi, Barru Zai, Marri, and other mingled Affghan and Baluch tribes. At a little distance from Dadar, a line of Jabbal, or low hills, or rather a fracture in the surface, extends from east to west across the country, and separates the particular valley of Dadar from the great plain of Kuch Gandava. The road throughout the fissure is level.—*Masson's Journeys, Vol. i, p. 340.*

KA-DO, a tribe in lat 23° 40' N., lying between the Kyen-dwen river and the Irawady.

KADOL, SINGH., a species of *Rhizophora*, which furnishes a rather hard, fine, close-grained, heavy wood.

KADONDONG, MALAY. *Emblica officinalis*.—*Geertn.*

KA-DON-KA-DET, BURM. *Connarus speciosus*.

KADOPARA, TEL. *Aristolochia bracteata*.—*Retz.*

KADOO-MA, TAM. *Cerbera odallam*.—*Geertn.*

KADOOBBAIREYA-GASS, SINGH. *Diospyros gardenieri*.—*Thur.* A rather hard, fine, close-grained, somewhat light Ceylon wood used for furniture. The heart of this wood is occasionally met with of extraordinary beauty, and with a curiously veined surface.—*Mr. Mendis.* See *Diospyros*.

KADRANI, a tribe inhabiting hills contiguous to Baghwan and Khozdar.

KADRAT-UL-VASSI, see Kurdistan.

KADSUMI, JAP., *Hedysarum tuberosum*.

KADU BERIYA ? SINGH. *Diospyros ebenum*, *Linn.*

KADU, HIND. *Cucurbita pepo*, also *C. maxima* or *C. lagenaria*, *sp.*

KA-DU, a Burmese tribe, scattered over the country between Kyun-duug and Monngkhung, a space of nearly two degrees. They are said to be a race of different origin from the Burmans. See India.

KADUGA, MALAL. ? *Sinapis ramosa*, *Roxb.* *Sinapis chinensis*, *Sinapis alba*. Mustard seed. Kadugu yeunai, SINGH. Oils of species of *Sinapis*.

KADUGAVANA, — ? *Rhinolophus* or *Hipposideros*.

KADUKAI MARAM, TAM. *Terminalia chebula*, *Retz.*

KA DU LAWA, see India.

KADUM BERIYA ? Coromandel or Calamander wood. *Diospyros hirsuta*.

KADURU, SINGH., means Forbidden, or Poisonous trees. "Strychnos nux vomica, is the Goda-kaduru; and from this word, Kaduru, the idea of the Forbidden Fruits has

KAMPFERA.

been attached to the shaddocks and to some other trees:—

Gou-kaduru, Bullock's heart,
Moodu-kaduru, Sea fruit,
Diwi-kaduru, Tiger's fruit,

Divi Ladner of Lindley's Vegetable Kingdom, corresponds with the Diwi-Kaduru. The Singhalese say, that Paradise was in their island; and that the forbidden fruit of the garden of Eden, was borne on the Divi Ladner of their country, probably the *Tabernaemontana dichotoma*. In support of this they point to the tempting beauty of the fruit, the fragrance of the flower, and show that it still bears the marks of the teeth of Eve. Till the offence was committed, which brought misery on man, we are assured that the fruit was delicious; but from that time forward it became poisonous, as it now remains.—*Bot. Reg.*, 1841, sub. t. 53, quoted in *Fergusson's Timber Trees of Ceylon*.

KAD-WOT-NU, BURM. *Cedrela*, sp.? A Tavoy wood, used for house and ship-building; a large timber, 40 to 70 feet, specific gravity 1.060.

KADYAN, see Kyans.

KAE CHOW-POO. A Chinese town in lat. 40° 30' N., long. 122° 25' E. at the eastern part of the Leatong Gulf; about 10 miles inland, has an extensive trade.

KAEDAM, or Kakidam, TAM., paper.

KÄMPFER, ENGELBERT, born 16th September 1651, at Lemgow, a small town in the circle of Westphalia, belonging to the Count de Lippe. His father John Kämpfer was minister of the church of S. Nicholas in that town. Kämpfer formed part of the embassy which proceeded through Russia from Sweden to the Persian Court where he resided, but on its return, he separated from it and proceeded to the Persian Gulf: he then entered the service of the Dutch and was long employed in Japan, and his Amœnitates Exoticæ and History were the result. He seems to have died of phthisis, for blood vessels burst in November 1715, at the beginning of 1716, and on the 24th October, having been ever since the last attack troubled with a nausea and loss of appetite, his vomiting of blood returned upon him with great violence, followed by fever, which lasted till the second of November, on which day he died, at five in the evening, 65 years and six weeks old. He was buried in the Cathedral Church of S. Nicholas at Lemgow.—*History of Japan*, Vol. i, p. 15.

KAMPFERA, a genus of plants of the order Zingiberaceæ, of which ten species are known to occur in the southern parts of the East Indies. The flowers of some species are ornamental, and the roots of several are used

KÄMPFERA GALANGA.

medicinally or as condiments. One species is supposed to produce the galangal root of commerce. The plant producing it, is a native of China, and the Reverend Mr. Williams says that the root is sent from China to India; and that there are two sorts, the greater and the smaller, obtained from different plants. The best of these is the smaller galangal, and is procured from the *Maranta galanga*. This is of a reddish colour, about two inches long, of a firm texture though light, and possessing an acrid, peppery taste, and a slight aromatic smell. The larger galangal is from a different plant (*Kämpferia galanga*), and is inferior in every respect, but both are used as spicery, to some degree, and in Europe as well as in India. Dr. Mason says, the *Kämpferia candida*, or White *Kämpferia*, Pan-oo-phoo of the Burmese, is often seen lifting its crocus-like flowers without a single leaf, on the most arid spots in the jungles of Tenasserim. All the species of *Kämpferia* are furnished with tuberous roots like the turmeric and ginger plants. The spikes of the flowers are short and rising from the root, in some species before, in others with, and nestled among, the leaves and all are highly ornamental. Dr. Mason mentions, as species of Burmah, the Kanmoung-nee; Ka-moung-net; Ka-moung-taing-byu; Ka-moung-kyet-la; Kyo-ka-mung. Of *K. Roxburghiana*, *Schult.* nothing is known. *K. parviflora*, *Wall.*, and *K. roscocana*, *Wall.*, grow in Burmah. *K. ovalifolia* is a plant of the peninsula of Malacca, and *K. marginata* grows in Burmah.—*Williams' Middle Kingdom*; *Mason's Tenasserim*; *Voigt*. See Galangal.

KÄMPFERA ANGUSTIFOLIA, *Roxb.*

Kanjon-bura, BENG. | Mudun nirbisi, HIND.

Has large, white, purple-lipped flowers. Its roots are used in Bengal as a cattle medicine.—*Roxb.*, i, 17; *Voigt*.

KÄMPFERA CANDIDA, *Wall.*

Pan-oo-phoo, BURM.

A plant of Martaban, Moulmein and Amherst, and probably growing throughout Burmah.—*Mason*; *Voigt*.

KÄMPFERA GALANGA, *Linn.*, *Roxb.*, *W. & A. Rheede*.

Alpinia scesillis, <i>Koen. Ar.</i>	Kats-julnm, MALACAL.
Chandro moola, BENG.	Kats jolan, TAM.
Kumula, "	Kachoram, TEL.
Kha-Mung, BURM.	"

Common all over India; rhizoma fleshy, tuberous, with fleshy fibres; the roots are agreeably fragrant, and of a warm bitterish aromatic taste. Notwithstanding its specific name, it is not the source of the true galanga root of the druggists, a drug now known to be the produce of the *Alpinia galanga*.—The roots of this plant may be often seen attach-

ed to the necklaces of Karen women, for the sake of their perfume. They also put them with their clothes, and use them to a small extent medicinally. It is cultivated by the Mug race of Arakan, by whom it is sold to the people of Bengal, who use it as an ingredient in their betel. The roots possess an agreeable fragrant smell, and a somewhat warm, bitterish, aromatic taste. The hindooes use them as a perfume and medicinally.—*Roxb.*, i, p. 15; *O'Shaughnessy*, p. 650; *Mason*.

KÆMPFERA PANDURATA, *Roxb.*

Curcuma rotunda, *Linn.*, | *K. ovata*, *Rosa oe.*
Rh.

Grows in Guzerat, the Konkans, and the Muluccas, has large whitish-rose coloured flowers.—*Roxb.*, i, 18.

KÆMPFERA ROTUNDA, *Linn.*,
Roxb., *W. Ic.*, *Rheede*.

<i>Kæmpfer longæ</i> , <i>Redout.</i>		Fragrant <i>kæmpferæ</i> .
<i>Bhooin champu</i> , <i>BENG.</i>		Melan kua, <i>MALEAL.</i>
<i>HIND.</i>		Bhooin-champaka, <i>SANS.</i>
<i>Bhoi champu</i> , "		Kaha sau-kanda, <i>SINGH.</i>
<i>Mye-ban-touk</i> , <i>Burm.</i>		Konda kalava, <i>Tet.</i>
<i>Round-rooted galangal.</i>		

This species is cultivated all over India. It is the finest species of the genus, and is cultivated by amateurs for its beautiful sweet-scented blossoms. It was long considered to produce the zedoaries, but Lindley and most other writers of authority, state that zedoary is the root of the *Curcuma zedoaria*. A nearly related species is indigenous in the Karen jungles.—*Roxb.*, i, p. 16; *O'Shaughnessy*, p. 650; *Mason's Tenasserim*.

KAF, the Koh-i-kaf or Mount Kaf of the Persians, is the fabulous mountain which, according to oriental cosmographers, surrounded the world, but since the science of geography has made some progress in the east the name has been confined to Mount Imaus to the east, and Mount Atlas to the west. The jan or genii, a race intermediate between angels and men, produced of fire, are supposed to have inhabited the earth for several ages before the birth of Adam, and to have been governed by kings, all of whom were called Soleiman (Solomon.) They fell into a general state of depravity and were driven into remote places by Eblis (the fallen angel) and such as remained in the time of Kaïumerns, the first of the Pesdadian dynasty of Persia, were by him driven to Mount Kaf.—*Journ. Ind. Arch.*, Vol. v, No. 9, page 548.

KAFAL, *ARAB.* The specific name of a Balsamodendron of Arabia, producing a myrrh.

KAFAS, *AR.* A hamper artistically made of palm sticks, in which provisions are kept.

KAFFA, *AR.* *Panicum miliaceum*.

KAFFA, a race of Eastern and Central Africa, who plough with staves.—*Krapf*.

KAFFE, also Kaffebonner, *DAN.* Coffee.

KAFFIR-BREAD, see *Cycadaceæ*.

KAFFIR KOT, an ancient fortress not far from Bannu, believed by the natives to have existed before the mahomedan invasion of India. The stones employed in its constructions are represented to be of wonderful dimensions.—*Masson's Journey*, Vol. i, p. 102.

KAFI, *HIND.* *Onoseris lanuginosa*. In Kangra, it is the tomentum of the leaf of *Onoseris apilotaxis*, &c.

KAFILAH, *ARAB.* A caravan; a company of travellers. A kafilah and a karwan, or according to European orthography, caravan, are usually synonymous. A distinction does exist, at least the Belooches and their neighbours consider a number of travellers, with their property, to be a karwan; but where all the goods belong to one merchant, they speak of a kafilah.—*Pottinger's Travels, Beloochistan and Sindh*, p. 47.

KAFILA BASHI, *PERS.* A title of the conductor of a large caravan.

KAFEN, see *Cafin*.

KAFIR, *ARAB.* A denier, vulg. an infidel. A term generally applied in India to the thick-lipped curly-haired negro races of mid-Africa, but also applied as an abusive epithet to christians, and non-mahomedans.

KAFIR, also called Sialh-posh-Kafir, a race, who occupy the mountainous region of northern Afghanistan with Bajur and Kuner on the south. Kafiristan, according to Vigne, commences from the mountains beyond the valley of Nijran, north of Kabul, and extends behind those of Taghan and Lughman to the frontiers of Bajawur. To the north it is bounded by Badakshan, and it forms the greater part of one side of the valley of Chitral, or Little Kashgar. They occupy a great part of the range of the Hindoo Cush and a portion of Belut Tagh. Vigne, another authority, says Kafiristan is bounded on the west by the Belut Tagh, on the east it touches Chinese Turkistan and Little Tibet, to the south lies Afghanistan, and to the north Kokun or Ferghana, where the population is Chaghtai Turk. The Kafir have idols of stone and wood, male and female, and one of their stone-idols is called Imrtan. They are independent, have defied all attempts at reduction, and their enmity to mahomedans is unceasing. Three large rivers flow through Kafiristan from north to south, and augment with their waters the river of Kabul and Jelallabad, which ultimately falls into the Indus. The two westerly rivers unite at Targari of Lughman, and the joint stream, after a short course

of eight or ten miles, falls into the Kabul river at Lergah, in the same district, about a mile to the east of Mandarawar. The easterly river, known as that of Kameh, falls into the Kabul river east of Jelalabad, and at a distance of about twenty-five miles from Kergah. The Kameh flows through Chitral, and its source is more remote. On the east it may be considered the boundary of the Siahposh territory, as the river of Nadjil and Alishang forms the boundary on the west. The sources of the Nadjil river are said to be not very distant, and it is the smallest of the three rivers. According to Mohun Lal, a Kafir race, the Peranchich, are found over a large tract of country besides the few families at Panjshir who preserve their ancient dialect. The Kafir are found in Kabul, Kamelh, Makeid and Attock. The race are tall, with fair skins, Grecian features, arched eye-brows, and ruddy complexions, handsome and extremely intelligent. They possess great ability and activity, are inveterate against mahomedans and give no quarter. They have idols, sacrifice to a chief deity, Doghan, and know Siva and Mahadeo by name. They all eat beef. They are fond of honey, wine and vinegar, music and dancing, the sexes dancing apart. They have no written character, and are said to speak a language resembling Pushye. They wear a lock of hair on the right side of their heads. The Kafir of northern Afghanistan are called Siahposh, from wearing black goat skin dresses. They are persecuted by all the surrounding nations who seek to capture them as slaves. Their women do all the out-door work and follow the plough. The Siahposh place their corpses in deal boxes, and without interring them, expose them on the summits of hills, like the people of Tibet, but it is not explained whether this is a final disposition. There can be no doubt but that the usages of a people which regard their dead are important evidences of the faith professed by them; or if not clearly indicating it, that they may show what faith is not professed. Thus, we are not permitted to consider a race that does not burn its dead of hindoo faith, and the rule of semi-exposure adopted by the Siahposh, has contributed probably, to their being suspected to be a remnant of the Ghabar, or followers of the reformer Zertusht, but no account has been heard of the least mention of fire-worship amongst them. There is the certainty that within the last three centuries there were people called Ghabar in the Kabul countries, particularly in Lughman and Bajur, also that in the days of Baber there was a dialect called Ghaberi. We are also told that one of the divisions of Kafirstan was named Ghab-

rak. But it does not follow that the people called Ghabar then professed the worship of fire. That in former times fire-worship existed to a certain, if limited, extent in Afghanistan, is evidenced by the pyrethræ, or fire-altars, still crowning the crests of hills at Gard-lez, at Bamain, at Seghan, and at other places. Near Bamian is also a cavern, containing enormous quantities of human bones, apparently a common receptacle of the remains of Ghabar corpses. At Murki Khel, in the valley of Jelalabad, and under the Safed Koh, human bones are so abundant on the soil that walls are made of them. There is every reason to suppose it a sepulchral locality of the ancient Ghabar; and, as if to leave no doubt of this, coins are found in some number there. It is further agreed that amongst the Siahposh, the women are separated from the community and located in a house set apart for them during the periods of childbirth and menstruation. In the former event, a seclusion of forty days is considered necessary. It is generally supposed that chastity is not an accomplishment of the Siah-posh women, or that a deviation from it is lightly regarded and easily compensated. It is, moreover, affirmed that the marriage ceremonies are extremely simple, consisting merely of procuring two twigs, or rods, of the respective height of the bride and bridegroom, and tying them together. They are then presented to the couple, who preserve them with much care, so long as they find it agreeable or convenient to live together. If desirous to separate, the twigs are broken and the marriage is dissolved. The Siahposh are affirmed to build their houses of wood, of several stories in height; it is also said that they are much embellished with carving. These accounts seem trustworthy, as we witness that the Safi of Kaziabad in the hills west of Lughman, and who have been converted to mahomedanism actually reside in such dwellings. Amongst the singularities imputed by the mahomedans to the Siahposh, is their objection to sit on the ground, or to take their repasts on it, and the custom they have of using chairs or stools. The arms of the Siahposh are bows and arrows, the latter thought to be poisoned, with long knives and daggers. Mr. Masson tells us that the Safi people are widely spread, occupying Dara Nur, Dara Mazar, Dara Peeh, and the valleys opening on the Khonar river and in a district called Surkh Khambar, south of Bajur. It has been noticed that they inhabit Taghow. They now speak the Affghan dialect, but also Pashai or Pushye. In the emperor Baber's time, they were styled Kafir, and they were subsequently expelled by the Ghilji from the

lands to the south of Taghow, and between Kabul and Jelallabad. Nader Shah, cultivated a friendship with them. They speak a dialect called Kohistani. South of the Saff, at Bahi, the first march from Goshter, on the Jelallabad river towards Bajur, are a people called Yeghani who consider themselves Affghans, but are probably converted Kafir, for they speak a dialect which no Affghan can understand. The fair complexion and regular features of the Siahposh Kafir, the variously coloured eye, and shaded hair, indicate them to belong to the European family of nations, and disconnect them from the Tajik, the Hazara, the Uzbek or the Kirghis. It also merits consideration that the region now inhabited by the Siahposh is surrounded by the countries in which the Greek dynasties ruled, and is encircled by the colonies, posts and garrisons, which they are known to have established, and by the fact of the establishment of military colonies of Macedonians at Alexandria-ad-Caucasum, Arigæum and Bazira, and of the garrisons of Nysa, Ora, Massaga, Peneleotis and Aornis. Those who suppose that the Siahposh Kafir are descendants of the Greeks, have their speculations strengthened by the fact, that many petty princes and chiefs, some of whom are now mahomedans, but originally Siahposh, claim descent from the Macedonian hero, and have preserved vague accounts referrible either to their reputed ancestor's marriage, with the fair Rozana, or to his amour with the captive queen of Massaga. According to Mohun Lall, who seems to quote from other authors, the corpse is attended by young men, who sing, skip, dance, and play on drums: unwashed, it is carried upon the shoulders of men, in a large box, to the top of a high mountain, and laid open in the sun. He says the women, who possess great beauty, manage all the out-door business, while their stout and handsome husbands remain in the house, feeding the children in their arms. If any stranger is found guilty of adultery with anybody's wife or daughter, the Siahposh never sentence him to death like the mahomedans, but exact from him a small sum of money, amounting to twelve or thirteen rupees. The Siahposh Kafir (according to the Mufti,) in lieu of feeling jealousy or anger at such acts, commend the liberality of their females towards every man who is the best of God's creatures in the world. They are captured and reduced to slavery by their neighbours. In Kabul the highest price of a slave is 200 rupees, and the lowest fifty. The whole of Afghanistan is full of Siahposh and Hazara slaves; but the former are sold at a higher price. Vigno says that the

mahomedans regard the Kafir, according to the name they give them, as infidels, the Kafir, on the other hand, detest the mahomedans. The feuds between them are constant, and there are persons killed every year in Lughman. The houses in which the Kafir dwell are some of them three or four stories high. According to Colonel Yule, the chastity and honesty of the people are lauded. Those of the same village entertain a strong feeling of kindred, so that neither fighting nor marrying among themselves is admissible. But the different tribes or villages are often at war with each other, and then to kill men or women of an alien tribe is the road to honor. They have no temples, priests or books. They believe that there is one God, but keep three idols, whom they regard as intercessors with him. One of these, called Palishann, is roughly carved in wood, with silver eyes; he is resorted to in excess or defect of rain, or in epidemic sickness. Goats are sacrificed, and the blood sprinkled on the idol. Women must not approach it. The other two idols are common stones. Goats' flesh is the chief food of the people, and occasionally partridges and deer; but fowls' eggs and fish are not used. They have no horses, donkeys or camels, only a few oxen and buffaloes, and a few dogs. They drink wine in large quantities, and very nasty it is, if what is brought down to Peshawar may be taken as a specimen; but none were seen drunk. Their drinking-vessels are of curiously wrought pottery, and occasionally of silver. They live to a great age, and continue hale till the day of death. The men are somewhat dark, but the women are said to be as fair as Europeans and very beautiful, with red cheeks. The men hardly ever wash either their clothes or their persons. In talking they shout with all their might. They bury their dead with coffins, in caves among the hills. Leech, in his report on the passes of the Hindoo Kush, mentions that iron smiths are regarded by the Kafir as natural bondsmen, and are occasionally brought for sale to the musliman people of the valleys; also, that the oath of peace of the Kafir consists in licking a piece of salt. This last was also the oath of the Kasia on the eastern frontier of Bengal. The tribes of the Kafir race, in Kafiristan, are numerous. They call one division of them, Siahposh (black vested) or Tor, both epithets being taken from their dress, like the Seythian Melanchlæonæ of Herodotus (iv, 10), for the whole of the Kafir race are remarkable for their fairness and beauty of complexion: but those of the largest division wear a sort of vest of black goat-skins, while the other dresses in white cotton. The following

are names of their tribes—the first set having been given by a young Kafir of Tsokooee,—Traigguma, Gimeer, Kuttaur, Bairagullee, Chindaish, Dimdeau, Waillee, Wanee, Cauma Cooshtee, Dhaing and Wauee, called Puneeta by the mahomedans.

The second, got by moollah Najeeb at Caumdeh, Caumojee (whose chief town is Muncheeashee), Moondeegul, Camtoze (half of whom are towards Lughman) Puroonee (whose capital is Kishtokee), Tewnee, Poonooz, Ushkong, Umlisee, Sunnoo, Koolumee, Roose Turkuma, (to whom belong Kataur and Gumber) Nisha, Chunga, Wauee, Khollum Deemish, Eerait, &c. &c. One of moollah Nujeeb's list is Pusha, which is stated to lie towards Cabul, and which, it is not doubted, is the origin of the Pushawee mentioned by Baber, and still found in the Kohistan of Cabul.

The third by Dhunput Ray at Kuttaun and on the borders of Bajour : Wauee Daiwnzee, Gumber, Kuttaur Pundeet, Khootoze Kaumozee, Divine, Tsokooee, Hurunseen, and Chooneea.

The houses of the Kafir are often of wood, and they have generally cellars where they keep their cheese, clarified butter, wine and vinegar. In every house there is a wooden bench fixed to the wall with a low back to it. There are also stools shaped like drums, but smaller in the middle than at the ends, and tables of the same sort, but larger. Their dances are generally rapid, and they use many gesticulations, raising their shoulders, shaking their heads, and flourishing their battle axes. All sexes and ages dance. They sometimes form a circle of men and women alternately, who move round the musicians for some time with joined hands, then all spring forward and mix together in a dance. Though exasperated to fury by the persecutions of the mahomedans, the Kafir are in general a harmless, affectionate, and kind-hearted people. Though passionate, they are easily appeased : they are merry, playful and fond of laughter. —*Yule's Cathay*, ii, 550 ; *Masson's Journey*, Vol. i, pp. 195, 207 to 230 ; *Elphinstone's Kabul* ; *Campbell*, p. 145 ; *Mohun Lal's Travels* ; *Burnes' Kabul* ; *Vigne's Personal Narrative*, p. 235 ; *Christian Work*, September 1865, p. 421 quoted in *Yule Cathay*, Vol. ii, pp. 550, 555. See Affghan, India, Jelallabad, Khulm, Kushi.

KAFIR KENNA, five hours and a half from Tiberia, is Kafir Kenna, the Cana of Galilee, so called to distinguish it from another town of this name in the tribe of Asher, (Josh. xix. 28.) The word Kafir meaning infidel, is applied by mahomedans to places more particularly inhabited by christians. Antipatris of the Greeks is the Kafir Saba,

the modern town.—*Robinson's Travels in Palestine and Syria*, Vol. i, p. 236.

KAFIRI-MIRICH, HIND. Capsicum grossum, the kafferi chilli or kafferi pepper of Europeans.

KAFTA, or Casta, ARAB. Catha edulis, Forsk.

KAFTAN, ARAB ? A cloak.

KAFUR, ARAB, PERS., HIND. Camphor. Laurus cinnamomum.

KAFURI, a yellow colour, lemon-yellow, the colour of amber, seoti rang is a pale yellow.

KAFUR KA PATTA, HIND. Meriandra Bengalensis.

KAGAL, see India.

KAGAM-PUVU-CHEDDI, TAM., Meme-cylon tinctorium.—*Kan* ; *Wild.*

KAGAR or Dassendi, people of Cutch, who receive their support from the charity of the Jarejah. They are a tribe of Charon of the Tombel, or as pronounced by the inhabitants of Kutch, Toomber ; and emigrated with the Jarejah into that country.—*Hindu Infanticide*, pp. 78—79. See Hindoo, India.

KAGARA, HIND. Saccharum spontaneum. *Linn.*

KAGASII, HIND. Cornus macrophylla.

KAGAYAN, an island of the Archipelago, containing a curious circular lake and at a height of about ninety feet, is another beautiful lake circular in form, and as nearly as possible similar to the lower one. The two lakes are separated by a sort of natural wall and the spectator standing on its narrow edge, can, by a mere turn of the head, observe them both. Opposite Kagayan are "The Five Islands," known also as Babuyan.—*Keppel's Ind. Arch.*, Vol. i, p. 83.

KAGGERA also Kánuga chettu, TEL. Pongamia glabra, *Vent.*

KAGHAN, is a barren dependency of Hazara. It is a long narrow glen, stretching upwards till it nearly reaches Chelas, the latter outpost of the maharajah of Kashmir's kingdom. It is inhabited by pastoral and aboriginal races, and was given in fiefdom to a Syud family who were confirmed by the British. These Syuds exercised internal jurisdiction and kept certain members of the family in attendance on the Deputy Commissioner of Hazara, virtually as hostages for good behaviour. After the British conquest, the Syuds were summoned to answer numerous complaints preferred by the people of Kaghan ; they came, but afterwards fled, and assumed an attitude of resistance and intrigue with the Sitana fanatics and with the Hussunzye, then hostile to the British.

The name "Huzarha" or thousands indicates that the Huzara tribes are numerous. The principal of these are the Turnoolce,

Gukkur, Swatee, Doond, Suttie, and the petty chieftains, equally numerous, were all granted jagheers, some for life, some for two or more generations, and some in perpetuity. The liberality of the British government was very great in Huzara: the land grants are in the proportion of one-third of the revenue of the district, which amounts to less than two lakhs of Rupees per annum. Each chief is bound to turn out his contingent of militia, if required; some 40,000 armed men could in an emergency be presented. The principal chieftains are the Gukkur chief of Khanpoor, the Turnoulee chief of Darwazye, the Swatee chiefs of Agrore, Mansera, and Gurhee Hubeboollah. Under British rule nothing can exceed the loyalty of the Hazara people, who, under the Sikhs, represented by Hurree Sing Nulwa, and maharajah Golab Sing, resisted cruelty and oppression with the most stubborn contumacy. The most important political district is western Turnoulee. This petty principality, with a geographical area of 250 miles south-east, and a revenue of Rupees 28,000 per annum, is held as a fief from the British government, and the chief possesses independent internal jurisdiction. The tract chiefly lies on the left bank of the Indus, a portion only being on the right bank, and confronts the Hussmzye country. It is inhabited chiefly by the Turnoulee, a tribe of martial Puthans. The father of a recent chief, Paynda Khan, was a wild and energetic man, and was never subjugated by the Sikhs or by the Jummoo rajahs. The son, Jehandad, behaved well to Gholab Sing at a time when that chief had no friends in Hazara, and was confirmed in his fief and received some additional landed grants. The British frontier line on the N. W. commences from the top of the Kaghan glen near Chelas on the north-west corner of the maharajah of Kashmir's territory, and then passes round the north-west boundary of Huzara, on the east side the Indus to Torbeila; then crossing that river, it winds round the north and north-west boundary of the Peshawur valley to the Khyber Pass, then round the Wuzerree Hills to Kohat; then round the western boundary to the Kohat district, along the Meeranzye valley and touching the confines of the Cabul dominions; then round the Wuzerree Hills to Bunnoo line and to the head of the Suleemancee range and then, lastly, right down the base of the Suleemancee range to its terminate on the upper confines of Sindh and of the Khelat kingdom. The length of this frontier is full 800 miles, and it is as arduous in its nature as it is extensive. Along the outer side of this frontier line, and therefore

beyond British jurisdiction, there dwell a series of independent tribes, on the inner side of this frontier up to the right bank of the Indus, there also dwell various tribes, in many respects resembling the first-named tribes, but who are British subjects. The numbers of fighting-men of the independent tribes may be estimated at 135,000, thus;

Tribes on Huzara frontier and near the Indus north of Peshawar.....	8,000	tribes on Kohat frontier.....	30,000
Swat and its dependencies.....	20,000	Wuzerree.....	20,000
Momund.....	12,000	Sheoranee and others in Dehra	
Atreede.....	20,000	Ishmael Khan District.....	5,000
Orakzye and other		Beloch tribes on Dehra Ghazee Khan border.....	20,000

Besides the above, there are other warlike but dependent tribes, within British territory with 80,000 fighting men:—

Turnoulee (including Jehandad's).....	8,000	Khuttuk.....	12,000
Other tribes of Huzara.....	10,000	Bungush.....	15,000
Eusufzye.....	25,000	Derajat tribes in British territory.....	10,000

It was but rarely that even two or three tribes would combine. When one tribe, or section of a tribe is hostile, it generally happens, that another tribe or section is friendly. Any thing approaching to a general combination is a contingency quite beyond the range of probability.

The principal timber trees of Kaghan are

Caparis aphylla.	Acacia Arabica.
Crataeva religiosa.	Acacia modesta.
Zizyphus jujuba.	Tamarix dioica.
Pistacia integririma.	Olea Europea.

—Records of the Government of India; Cleghorn's Panjab Report.

KAGHANIA, HIND. *Staphylea emodi*.

KAGHAZ, PERS, HIND. Paper; Akhbar Kaghaz, a newspaper.

KAGHAZI NIMBU, HIND. The thin-skinned lemon, *Citrus acida*, Roeb.

KAGHIDAK, HIND. *Ribes rubrum*. Red currant.

KAGHIUL, GUZ. Paper.

KAGPHALA, HIND. *Strychnos nux-vomica*.

KAGSARI, HIND. *Daphne oleoides*.

KAGSIII, HIND. of the Sutlej valley. *Cornus macrophylla*, Dog-wood.

KAGURA, BENG., HIND. *Saccharum spontaneum*.

KAH, PERS. Grass, but, in combination applied variously. Kah-i-Shutar, a juicy bitter plant, growing near Jell in Baluchistan, eagerly eaten by camels.

KAHA-MILIA, SINGH. *Vitex altissima*, Linn., it means yellow milia.

KAHA-GAIIA, SINGH. Arnotto.

KAHA-KAALA-GASS, SINGH. *Diospyros toposia*, Ham.

KAHCHARI.

KAHAN, a town in Kach Gandava, in the hill ranges east of the plain of Kach. It belongs to the Doda Marri, a division of the great and widely dispersed Marri tribe, who have been located in the neighbourhood for several centuries. The Marri are a brave race and have long been distinguished as daring depredators.—*Musson's Journeys*. See Kach, Gandava, Kelat, Tin.

KAHANGI, SANS. Aponogeton monostachyon, *Willde.*

KAHAR, HIND. A sudra race of Hindoostan, many of whom are slaves, and, in Behar, are considered impure. The Kahar are found following agriculture and as palanquin-bearers all through Hindoostan and the east of the Panjab, they are a considerable class, and are strong, hard-working, rather good-looking, men. They are water-carriers, fishermen and cultivators, hindooes drink water from their hands. Near Gya, they are also employed as palanquin bearers, and carry burdens on a yoke over one shoulder, and the name is one of the few real Indian words of which Ibn Batuta shows any knowledge.—*Wils. Gloss.*; *Campbell*, p. 120; *Yule Cathay*, ii, p. 408.

KAHATE, or Kahuato—? Cinnamon.

KAHATTA GAHA, SINGH. Careya arborea.—*Roxb.*

KAHCHARI, Bodo, or Borro, as the race call themselves, are numerous along the northern and southern borders of the Assam valley, but are found in almost all parts of the valley. Chatguri, a frontier district situated between Dosh Darrang and the Bhotan hills, seems to be their chief locality, and here their numbers are said to amount to about 30,000, which is about half the Kachari population in the valley. They have no written characters, but a large portion of their vocabularies are identical with those of the Garo tribe and almost all the rest may be traced to some dialect of the Tibetan, while the idiom of the language and the peculiarities of its grammar show abundant traces of descent from a common origin. The Bodo population extends from Bahar and Bengal on the west, to the Sikkim and Butan frontiers. The western branch of this tribe belongs to Bahar and Bengal, and to the Sikkim and Butan frontiers; the eastern branch occupies Assam and Cooch. They build their huts of grass and bamboo and reside in villages of from ten to fifty huts. They do not use leather in their arts or trades, and do not use wool as clothing, the latter being made of cotton and silk materials. They use utensils of brass, ropes of grass, and baskets of bamboo. Jo, or barley, fermented rice or millet, is used by them as a slightly intoxicating beverage, and resembles

KAHCHARI.

the "ajimana" of the Newar race in Nepal. They till the soil, but do not occupy a locality permanently, clearing and cropping and moving again to clear and crop another spot. The head of the village is called Gra. A Bodo and Dhimal will only touch flesh which has been offered to the gods by a priest. The bridegroom purchases his bride either by money or labour. Polygamy is rare. There are professed exorcists among them. The eastern Bodo in Cachar are called Borro, and are divided into the Kachari of the hill country and those of the plains. They are partly hindoo and partly pagan. Those in the plains in Assam are called Hazai, Hojai or Hajong, are of the hindoo creed, and speak a hindoo dialect. The hill Kachari are stouter, harder and more turbulent, and lives in villages of from 20 to 100 houses. Like the Naga, their young men of a certain age, leave their parents' dwellings and reside together in a large building. Of the three separate people, the Kochi, the Bodo and the Dhimal, the faintly, yet distinctly, marked type of the Mongolian family is similar in all three, but is best expressed in the Bodo features and form of body. The Bodo, Dhimal and other tribes inhabiting the mountains and forests between Kumaon and Assam, are styled Tamulian by Mr. Hodgson. He has done so on the view that all the aborigines of India, as distinguished from the Aryans, belong to one and the same stock, of which he considers the Tamulians of Southern India the best representatives. And he has founded this supposition on certain general grammatical similarities which, as he believes, are common to the entire Scythian group of languages. But Mr. Campbell, (pp. 48-49) observes that, in appearance, the Bodo and Dhimal are as different as can be, and as to their connection, so far as their languages show, there is not the slightest evidence. Mr. Robertson was of opinion that the border tribes of Assam, the Bodo and the Garo amongst others, were allied to the people of Tibet. Mr. Hodgson, however, considered that Mr. Robertson in arriving at that conclusion had overlooked the physical and psychical evidence, which, in a question of ethnic affinity are, in his opinion, each of them as important as the glottological. Closely connected with the Kachari, among the inhabitants of the plains, are the Hojai Kachari,—the Kochi which include the Modai Kochi, the Phulguriya and Hermia, the Mech, the Dhimal and the Rabha. Each of these speaks a separate dialect, between which and the Kachari, Mr. Robinson says, the differences are rather nominal than real.—*Mr. Hodgson; Latham's Descriptive Eth-*

nology; *Mr. Robinson, in B. As. Soc. Journ., No. 201, for March 1849; Mr. Hodgson on the Aborigines of North-Eastern India; Campbell on the Races of India, pp. 48 and 49.* See India.

KAHER, HIND. *Cervulus moschatus.*—*DeBlain.*

KAHETIA, near Tiflis, the celebrated Albania of the ancients.—*Porter's Travels, Vol. i, p. 120.*

KAH-GIL, thick mud, mixed with chopped straw and other materials, used as plaster throughout Sindh and Central Asia: literally, straw-mud.—*Burton's Sindh, p. 376.*

KAH GYUR and Tangyur, are two collections of buddhist works. See Koros.

KAHI, PANJAB. *Ulmus campestris, Linn.*

KAHI, HIND. A sulphate of iron. Marthas containing in greater or less quantity and purity, salts of iron in the form of an anhydrous sulphate; in the pure samples it takes the form of a whitish or cream-coloured radiated crystalline mass. Kahi-lal, or Kahi surkh, HIND., is Bichromate of potash; Kahi-suja, contains iron salts; Kahi-sabz, impure green vitriol; Kahi-matti, sulphate of iron earth; Kahi-safed, white anhydrous sulphate of iron; Kahi-zard, yellowish variety of Kahi-safed.—*Powell, Hand-book.*

KAHI, HIND. *Saccharum spontaneum.*

KAHI KAKELA, HIND. *Myrica sapida.*

KAHIMMAL, HIND. *Ficus venosa.*

KAHIN, MALAY., a piece of cloth.

KAHINEF, SANS. A tale; from Kat'ha, to speak.

KAHIRA, the Egyptian name of Cairo, corrupted through the Italian into Cairo. It means, not the "victorious," but, the "City of Kahir" or Mars, and it was so called because, it was founded in A. D. 968 by one Jauhar, when the warlike planet was in the ascendant.—*Burton's Pilgrimage to Mecca, Vol. i, p. 171.*

KAHUA, HIND. *Terminalia arjuna, W. and A.*

KAH-I-SHUTAR, a juicy bitter plant, found near Jell in Baluchistan. It is eagerly eaten by camels. Near, is a small chishma, or brook, supplied from a hot spring in the adjacent hills, called the spring of Lakha; it had a strong sulphureous taste.—*Masson's Journeys, Vol. ii, p. 126.* See Kah.

KAHK, ARAB. Is a light and pleasant bread of ground wheat, kneaded with milk, leavened with sour bean flour, and finally baked in an oven, not, as usual, in the East, upon an iron plate. The Kahk of Egypt is a kind of cake.—*Burton's Pilgrimage to Mecca, Vol. i, p. 361.*

KAHKAR, or Ghakar, or Kaker, a

KAHOOWA.

warlike tribe, in the time of Mahmud of Ghazni, inhabiting the Salt Range or Johd mountains between the Indus and the Behut or Hydaspes. They are the ancestors of the modern Jat. The Gukker, Gugger, and other aborigines of Hazara have most of them been mastered by Pathan invaders from beyond the Indus. The Mogul, and subsequently the Doorani failed to master them, but the Sikh rulers after having been frequently foiled, at length nominally accomplished their subjugation by stirring up internal faction and by the perpetration of acts of cruelty and treachery. The Glikar, inhabiting the banks of the Indus, are a Scythic race at an early period of history they were given to infanticide. It was a custom, says Ferishta, "as soon as a female child was born, to carry her to the marketplace and there proclaim aloud, holding the child in one hand, and a knife in the other that any one wanting a wife might have her; otherwise she was immolated. By this means they had more men than women, which occasioned the custom of several husbands to one wife. When any one's husband visited her, she set up a mark at the door which being observed by the others, they withdrew till the signal was removed." The Glikar are supposed to be the descendants of the mountaineers whose chief Ambisaces sent ambassadors with presents to Alexander. Baber writes the name Guker, but it is also written Ghuka and Khaka. The Gukkur are not distinguishable from the Awan, in personal appearance, both being very large fine men, but not exceedingly fair, inhabiting as they do, a dry, bare, rather low country, hot in summer. The country of the Kaker tribe in the head waters of the Lora is wild and inaccessible. It forms a square of about 180 miles between the Athtikzye country, the Spin Terin, the Suliman range and Baluchistan. But Kaker named Casia, occupy in part the valley of Shal. The Punni chui, in Sewi and Sewistan is Kaker. Their manners and habits vary.—*Rec., Court. of India; Tod's Rajasthan, Vol. i, p. 636; C., p. 96.* See Affghan, Jelani, Kabul, Khetri.

KAHLARU, MALAYALA, a jungle-tree which grows to about seventeen feet in height, and seven inches in diameter; its wood is very hard, close-grained, and strong; and is used by the natives in boats, and for timbers, and knees in vessels.—*Edge, M. and O.*

KAHIOLO, a Nepaul tree, from which the poorer people, in time of scarcity, prepare a nutritious bread, which is sometimes mixed with flour.

KAHOO, GUZ., HIND. *Lactuca sativa.* Lettuce.

KAHOOWA, HIND. *Pentaptera arjuna.*

KAH-PI, BURM. *Coffea arabica*, Linn. Coffee.

KAHREZ, PERS. An aqueduct.

KAHRUBA, ARAB., DUK., HIND., PERS. Amber; also copal, and the pure gum of *Vateria indica*.

KAHT, see Kathi or Katti.

KAHTAN, founded the Arabs in Yemen. In Hebrew he is called Juktan.—*Palgrave*. See Abd-us-Shams, Arab, Joktan, Saba.

KAHU, HIND. *Lactuca sativa*, or Lettuce; also the olive of *Olea europea*, *O. ferruginea* and *O. cuspidata*.

KAHUA, HIND. *Pentaptera arjuna*, Roxb.

KAHUR, a river of Nagpur.

KAHWA, ARAB., HIND., PERS., MALAY.

MAKHAL, POLISH. *Coffea arabica*, Linn. Ground coffee; in Hindi, the prepared coffee.

KAI, a Malayan grain measure.

KAI, TAM. The hand. Idankai, the left hand, Caste; Valan-kai the right hand. See Castes. Kai-kara, workers in basket work.

KAI, also Pallam, TAM. The fruit of a tree.

KAIA, MALAY. Wood.

KAIA AMBALLO, MALAY. A timber tree of the Archipelago, in Bawean.

KAIAOKA WOOD. ANGLO-MALAY. *Pterospermum indicum*, Wall.

KAIA BUNG NGAT? COCHIN-CHIN. Emblic myrobalan.

KAI BAHMAN, one of the kings of Persia, known to the Persians by the name of Ardeshir, and to the Romans as Artaxerxes, which was their mode of pronouncing Ardeshir.

Ardeshir Babegan bin Sassan, the son of Sassan, was an officer of the Parthian king. Arsaces Artobannus V, who assumed the Persian throne in A. D. 226, as the first of the Sassanian dynasty.

Ardashir ii, the tenth king of the Sassanian dynasty, was the Shapur or Sapor, who captured the emperor Valerian. He assumed power in A. D. 381, and Ardashir iii, in A. D. 629, was the 25th Sassanian under whom anarchy prevailed. The Sassanian dynasty ended in A. D. 641, when Yezdejird or Izdejird iii, was overthrown by the mahomedans.

Ardashir-daraz-dast, or Ardashir of the long arm, was Kai Bahman, the Artaxerxes Longimanus of the Romans, and one of the Kyanian dynasty.

Artaxerxes Mnemon, was a Persian king, B. C. 426, at whose court Ctesias, resided for some years. After Scylax, Ctesias was the next historian of India, and in his Indica, (cap. iv, p. 190,) he mentions that Artaxerxes Mnemon and his mother Parasatya presented him with two iron swords, which, when planted in the earth, averted clouds, hail and

strokes of lightning. This is the first notice of the lightning conductor. See Scylax: Lightning conductor.—See Greeks of Asia, Kabul, p. 437; Persian Kings, Fars, Sassanian.

KAIL or Kaili or Khal of Sutlej. Pinus excelsa, Wall.

KAIM of Panjab, *Nuclea parvifolia*, Roxb.

KAIMANIS, JAV., MALAY, *Cinnamomum zeylanicum*, Nees, also *Cassia lignea*.

KAIA MARAM, TAM. Properly Koia maram. *Psidium pyrifera*, P. pomifera, the guava.

KAIA MURA, king of Persia, is said to have built Balkh.

KAIAN, N. W. Himm. *Faba vulgaris*, Mench, the common bean.

KAIANIAN DYNASTY, see Persian, Kings.

KAIA NTAGERI, *Eclipta prostrata*.

KAI ANYANG, MALAY. A shrub of Bawean, the fruit of which sells at Java, at 30 florins per picul.

KAI PADARU in Canara, predial slaves, a subdivision of the Dher, or pariah race.—Wilson.

KAIA PUTI, MALAY. Literally, white-wood: Cajaput.

KAIAR, KAIL, HIND. Pinus excelsa.

KAIA SONA, MALAY. A timber tree of the Archipelago, at Bawean, much used in prahu and house-building.

KAI-BARATTA, a race in Bengal, fishermen by caste, and occupation, sometimes a domestic or predial slave, having sold himself or been sold as a child.

KAICI, HIND. Rosa Brunonis.

KAIDA, MALEAL *Pandanus odoratissimus*, Linn.

KAI-DAI-BI, COCH.-CHIN. *Blumea balsamifera*.

KAIDARYAMU, SANS. *Myrica sapida*, Wall., according to Wallich, the same as Káyaphal of Royle, III. 1, 346, who supposes *M. integrifolia*, R. iii, 765, to be the same.

KAIDRANI, see Khozdar.

KAIEL-CHA, HIND. Chinese brick tea.

KAIDA, or Thala. *Pandanus odoratissimus*.

KAIF, ARAB. Repose; the savouring of animal existence; the passive enjoyment of mere sense; Kaif is a word untranslatable in our mother-tongue. In a coarser sense "Kaif" is applied to all manner of intoxication. Son-nini is not wrong when he says, "the Arabs give the name of Kaif to the voluptuous relaxation, the delicious stupor, produced by the smoking of hemp;" and in Morocco, the word is applied to the dried flowers of the *Cannabis sativa*.—Burton's *Pilgrimage to Meccah*, Vol. i, pp. 12—13.

KAILAS.

KAIFIET, the aba or camaline, as it is styled in the Persian gulf, and the Kaifiet are worn in Oman, by all classes. It is a broad kerchief, striped green, red and yellow, having the sides hanging down, with knotted strings appended to them, serving by their motion to keep off the flies, which are there excessively troublesome.—*Wellsted's Travels*, Vol. ii, p. 210.

KAI-HU-YUD, also Kai-hu-yud-han ?, COCH.-CHIN. Sandalwood.

KAIKARI or Kaikadi, HIND., MAHR., TEL., in Berar, are makers of baskets from stems of cotton plants and palm leaves. They are a migratory and predatory race, whose ostensible occupation is basket-making. They wander through Berar.—*Berar Gazetteer*.

KAI-KARAN, MALEAL. A handicraftsman.

KAI-KAOS, see Persian kings.

KAIL, HIND. Pinus excelsa.

KAINT of Ravi. Pyrus variolosa.—*Wall*.

KAIAMURZ, a prince of Persia, to whom tradition points as the builder of Balkh.

KAIKEYA, one of the wives of Dasaratha and mother of Bharata.

KAI-KHOAIK, COCH.-CHIN. Aristolochia indica.

KAI KHUSRU, Turan or Scythia, to its furthest bounds, seems to have been under Afrasiab; and the young Kai Khusrus was sent into it; but it is quite impossible to say to what country.—*Malcolm's History of Persia*, Vol. i, p. 43.

KAI-KILAN, TAM. A weaver by caste and occupation.

KAI KOBAD, of the Persians, is the Dijoces of the Greeks. The reign of Phraortes, the son of Dijoces, is omitted by Persian authors, but it is probably included in the incredible period they assign to Kai Kobad. Kai Kaos is Cyaxares; and his son and successor, Astyages, is also omitted. *Malcolm's History of Persia*, Vol. i, pp. 31, 33.

KAI-KOLA, TEL. A weaver caste, or individual of it.

KAIL, HIND. Pinus excelsa, grows in Kullu, not in Kangra.

KAILAS or Gangri Range of mountains extends in one unbroken chain from the source of the Indus to the junction of the Shayok, and forms the natural boundary between Ladak, Balti and Rongdo on the south, and Ruthog, Nubra, Shigar and Hunzanagur on the north. It has six passes, at heights from 15,000 to 18,105 feet. Gangri, in Tibetan, means Ice mountain: Kailas means crystalline or icy, and is derived from Kelas, crystal, which is itself a compound of *Ke* water, and *las* to shine. The Kailas or ice mountain, is the Indian Olympus, the abode of

KAILWA.

Siva and the celestials. The Tibetans look upon Ti-se or the Kailas Peak as the highest mountain in the world. See Abishegam, Indus.

KAILASA, in Hindoo mythology, the paradise of Siva, but now the name of a mountain near lake Manasarowara. Both brahmanical and buddhist cosmogony derive four great rivers of India, the Indus, the Sutlej, the Ganges, and the Sardha from one holy lake at the foot of Kailas. It is also firmly believed by the hindoos that the Sone and the Nerbudda rise out of the same pool near Amarkantak. In a tradition, reported by Burnes, the Oxus, Jaxartes, and Indus are all believed to rise in the Sirikul on Pamer. The rivers of Cambodia, of Canton, of Ava, and a fourth, perhaps the Salween, were regarded by the people of Laos as all branches of one river; a notion which was probably only a local adaptation of the Indian buddhist tradition.—*Yule Cathay*, ii, p. 347. See Meru, Mahadevi.

KAILAS-GARH. Lat. 12° 50' 4; Long. 79° 2' 46 in the Karuatak, S. E. of Pallikonda, or Polikonda, 2766 ft. above the sea.

KAILAS HILL. Lat. 18° 18'; Long. 73° 9' in the Konkan, 16 miles W. of Indapur. Top of the hill is 2019 ft. above the sea—*Bom. Cat*.

KAIL, Kai, Panching, MALAY. Fishhooks.

KAILWA, a small territory in Rajputana: when Salombara of Cheetore fell at the gate of the sun, the command devolved on Putta of Kailwa. He was only sixteen: his father had fallen in the last shock, and his mother had survived but to rear this, the sole heir of their house. Like the Spartan mother of old, she commanded him to put on the 'saffron robe,' and to die for Cheetore: but, surpassing the Grecian dame, she illustrated her precept by example; and lest any soft 'compunctious visitings' for one dearer than herself might dim the lustre of Kailwa, she armed the young bride with a lance, with her descended the rock, and the defenders of Cheetore saw her fall, fighting by the side of her Amazonian mother. The Rajpoots had maintained a protracted defence, but had no thoughts of surrender, when a ball struck Jeimul, who took the lead on the fall of the kin of Méwar. His soul revolted at the idea of ingloriously perishing by a distant blow. He saw there was no ultimate hope of salvation, the northern defences being entirely destroyed, and he resolved to signalize the end of his career. The fatal Johar was commanded, while eight thousand Rajpoots ate the last 'beera' together, and put on their saffron robes; the gates were thrown open, the work of destruction commenced, and few survived to stain the yellow mantle by

KAIOA ISLAND.

inglorious surrender. Akbar entered Cheetore, and thirty thousand of its inhabitants became victims to the ambitious thirst of conquest of this guardian of mankind. All the heads of clans, both home and foreign, fell, and seventeen hundred of the immediate kin of the prince sealed their duty to their country with their lives. The Túar chief of Gwalior appears to have been the only one of note who was reserved for another day of glory. Nine queens, five princesses (their daughters), with two infant sons, and the families of all the chieftains not at their estates, perished in the flames or in the assault of this ever memorable day. Their divinity had indeed deserted them; for it was on 'Aditwar,' the day of the sun, he shed for the last time a ray of glory on Cheetore. The rock of their strength was despoiled; the temples and palaces delapidated; and, to complete her humiliation and his triumph, Akbar bereft her of all the symbols of regality.—*Tod, Rajast'han*. See Cheetore.

KA I KHE, COCHIN-CHIN. Millet.

KAIMAL, MAL. Amongst the Nair, a title of rank and used by the inferior classes when addressing them.—*Wils*.

KAIMAL, or kalmal gond, Hind. of Kangra and Haripur, the gum of Odina wadier, used in calico-printing.—*Powell's Hand-book*, Vol. i, p. 396.

KAIMANIS, MALAY. Cinnamon.

KAIME, COCHIN-CHIN. Tannind.

KAIM-MAKAM, ARAB., PERS., HIND. an occupant for the time being, a successor. At Mecca, equivalent to mehmandar of the Persia.—*Hamilton's Serai*.

KAI MOOLINGHI, TAM. A pot-vegetable, the upper and edible part of the plant has somewhat the taste of a radish; the root is not eatable.—*Ainslie; Agriculturists' Nomenclature*, Vol. ii, page 240.

KAIN, HIND. Ulnus campestris.

KAINAMANIS, MALAY. Cinnamon.

KAINGMA-MAING-MAING, see Shan.

KAIN KAPALA, JAV. A head-dress cloth, tied round the head like a turband. The Javanese never appear bear-headed. Kain-Rami, Linen; Kain-kalambu, gauze; Kain-layer, canvas; Kain-kipri, diaper; Kain-panas, flannel.—*Simm. Dict.* See Kabin.

KAINTH, Hind. of the hills, the wild pear, *Pyrus variolosa*.

KAINTHI, HINDI. Indigofera arborea, of the Panjab, &c., a shrub, with useless wood, fit only for fuel: the blossoms are used in food by the natives.

KAIOA ISLAND, is subject to Ternate. *Eclectus grandis*, the great red parrot of the Kaioa islands occurs here. The Kaioa people are a mixed race, having Malay and Papuan

KAIRA.

affinities, and are allied to the peoples of Ternate and of Gillolo. Their language is quite distinct from, though somewhat resembling that of the surrounding islands. They are now mahomedans.—*Wall., Vol. ii, p. 12*.

KAIPHAL, HIND. Myrica sapida, Box myrtle. See Kilioorum bark.

KAI-PADARU, a class of predial slaves in Kanara.—*Wilson*.

KAIR, TAM. Cordage, the fibre of the coconut, Coir.

KAIRA, a town in Guzerat, in which several ancient copper plates have been found, with inscriptions elucidating the condition of that country. One of these with an inscription in Sanscrit with gross errors of grammar and incorrectness of expression, is of date Samvat of Vikramaditya 1116, corresponding to 981 Salivahana, and to 446 of the era of Udyaditya, A. D. 1059. The character used in the inscriptions is almost modern Deva Nagari. It contains salutation to Ganesa, Parvati, Siva, with five faces! and mentions the Vedas, Swaha Meru, Sastra.

The kings or princes mentioned are raja Suravirak, of the Pavara (Powar?) line, Gondala, his son, Arevalamathana, son. Udayaditya, his son. Salivahana, his son. This inscription is of importance, as it discloses a new era, that of the family of Udyaditya, the probable founder of Oodypur, corresponding to the era of Vikramaditya 1116, and of Salivahana 981, and Kaliyuga, 4160. This would place the foundation of Oodypur A. D. 614. The raja's name is not in the chronological tables of the Sesodia Rajputs, or of any other dynasty. Arevalamathana went to Malava, and recovered his former kingdom of Madhyadesa. The inscriptions on another is in Sanskrit prose, each word having a double meaning. It is of date Samvat 380; A. D. 323; but, if the Balibhi era be used, three hundred and nineteen years must be added. It is engraved in the character in use before Allalabad No. 2, but not quite Lat. Four Veda are mentioned, but not one name of the Puranic gods. Prasanga Raja, grandson of Samanta Datta is mentioned. The grant is of a village; and the donees are designated "those who are versed in the four Veda;" and the term brahman is not used. The grant was for the worship of the five Jagna, Bali, Charu, Baiswadeva, and Aguihotra.

Another plate has an inscription in Sanscrit prose, each word having a double meaning,—and incapable of being closely rendered into English. Its date is Samvat 390, or A. D. 323, if the era be that of Vikramaditya, but if of the Balibhi era, then A. D. 640.

The character used in the inscriptions is

closely allied to the Kanouj Nagri, or Allahabad No. 2,—possibly a little earlier. The four Veda are mentioned; but not one word of brahmanical gods or brahmans; Raja Samanta Datta, his son, Vijaya Bhatta, or Vita Raja and his son, Prasanga Raja Datta are named. The Raja Prasanga, of the royal race of Gajjara, gives a village to those who are versed in the four Veda, not for the worship of Brahma, Vishnu, or Siva, or their offshoots, but for the worship of the five Jagna, Bali, Charu, Baiswadeva, and Agnihotra. Brahmaus, although alluded to, are not even named; even the writer, Rewa is not called a brahman.—*J. Ben. As. Soc.*, Vol. vii, p. 909.

KAIRATA, SANS. *Andrographis paniculata*.—*Wall.* See Chiretta.

KAIRO, Dye tree bark of Akyah, gives a yellow colour; with oil and plantain ash a red colour is made. Price 6 Rs. per maund.

KAIRWAL, HIND. *Bauhinia variegata var. purpurea*.

KAISAR, HIND. *Nyctanthes arbor-tristis*.

KAISER KHEIL, see Affghan, Kelat.

KAISEE GHIAUT, a ghaut, where, Krishna, while yet a mere boy, slew Kaissee, a devata of gigantic strength, sent by Kansa to take away his life. The anniversary of that exploit is still observed with great festivities.—*Tr. of Hind.*, Vol. ii, p. 60.

KAI SHAKU, amongst the Japanese, the friend who decapitates the victim in the Hara Kiri.

KAIT, HIND. *Feronia elephantum*, wood-apple.

KAITAN, HIND. Muslin.

KAI-TANH-YEN, COCHIN-CHIN. *Aristolochia Indica*.

KAITOON, a river of Tonk Rampore, passes near Seronje.

KAIT, see Hindu, Kayastha.

KAITU MAILLALU, MAL. *Vitex arborea*.

KAIUN, HIND. *Faba vulgaris*.

KAI-VANG-DI, COCHIN-CHIN. *Sassafras*.

KAI VARTAKA MUSTA, SINGH., or Tungamusto, TEL. *Cyperus hexastachys*.—*Rottb.*

KAIVERTTA—a fisherman, also pronounced Kaivart, or Kaibart, or Kaibartta.

KAIWAL, HIND, the Kelmung of Basahir and Kanawar, &c. *Cedrus deodara*, the deodar or Himalayan cedar.

KAI ZABAN, HIND. *Rhododendron anthopogon*.

KAJAH, MALAYALA. A tree which grows to about eight feet in height, and ten inches in diameter; its timber is very strong, and the crooks of it are used by carpenters for boat work.—*Edye, M. and C.*

KAJANG, MALAY. The leaf of the Nipa fruticans, written Cadjan, by Europeans in India.

KAJAR, the tribe to which the reigning family of Persia belong. They are one of the seven Turkish tribes which supported shah Ismail, one of the first kings of the Saffavean dynasty, about A. D. 1500, when he raised the sect of the shiah to importance and made their belief the national religion of Persia. Shiah means sect in Persian, and the name given them as a reproach he took as a title. The only material point of faith in which the shiah differ from the sunni, is their belief that Ali, the companion, son-in-law, and nephew of Mahomed ought to have immediately succeeded the prophet, instead of Abu-Bakr, Omar, and Osman. The greater number of the ancestors of shah Ismail had been Sufi's or philosophical deists, and Malcolm supposes that he raised the sect of Ali because he thought it necessary that the holy raptures in which the devotional men of his time and family indulged, should have some object more comprehensible to the mass of his countrymen than the abstract contemplation of the deity. The names of the other Turkish tribes who supported shah Ismail were Oostajaloo, Shamlloo, Nikalloo, Baharloo, Zalkudder and Affshar. Aga Mohammed Khan, 1794, was the first monarch of the Kajar dynasty, and at that time the tribe were principally settled in the neighbourhood of Astrabad, where they still remain. The Affghans in speaking of a nation, frequently designate it by the proper name of the tribe to which the sovereign belongs; thus they call the Persians, Kajar, the Kandaharians, Mohamedzye; the Sindians, Talpoora; the Sikhs, Runjit, &c.

The choga is a long great coat in use in Afghanistan, which reaches to the feet. The "postin," also an over-coat, comes down to the middle of the thigh. By wearing a turban, or a kajar cap, and a common chogah over ordinary clothes, European travellers in those countries avoid much annoyance. The Kajar have been distinguished during several generations among the tribes of Mazenderan, the ancient Hyrcania. But they have not been traced further back than A. H. 906; A. D. 1500; when Piri Beg, kajar, is mentioned in a MS. Mr. Foster says, the Kajar are an extensive tribe chiefly residing in Mazenderan and Astrabad; and that the word in the provincial language signifies rebel, or deserter. Like the Rajpoots of India, they devote themselves principally to the profession of arms.—*Ferrier's Journeys*, p. 24. *Ferrier's Affghans Malcolm's Hist. of Persia*, Vol. ii, p. 262; *Adventures of a Lady in Tartary, &c. by Mrs.*

KAJUR.

Hervey, Vol. 1, p. 356; *Tarikh Alam Arai*, Vol. i; *Ouseley's Travels*, Vol. ii, p. 59; *Foster's Travels*, Vol. ii, p. 198; *Chaitfield's Hindoostan*, p. xvi.

KAJARI, MAR. A caste who make glass bracelets.

KAJAWAH, boxes, panniers, or cradles formed of wooden frames, covered with cloth or leather, from three and a half to four feet long, by four feet high, in which those who travel upon camels are seated; they are partly open in front, and when fitted up with bedding, make a conveyance by no means contemptible in a cold night, for those who can sit for many hours together in the Asiatic fashion, with their legs doubled or crossed under them:—the traveller becomes soon accustomed to the measured motion of a camel's pace, and thus can enjoy both warmth and sleep, blessings most enviable during the long and wearisome nights of a winter's journey, and of which those who travel on horseback are totally deprived. Each camel carries two of these baskets, or cradles, which are hung like panniers one on each side. They are largely used in Balkh, by travellers, and Captain Burton describes them as greatly used by Scindian ladies, styling them a pair of gigantic ladle-shaped panniers. Mr. Rich mentions that in his journey to Kurdistan, the kajawah of Mrs. Rich's servants were slung on mules, Sir W. Ouseley, remarks that his kajawah consisted of two small and inconvenient seats, slung on a mule, and over them an awning of canvas, supported on slight wooden frames.—*Fraser's Journey into Khorassan*, p. 364; *Rich, Kurdistan*. *Ouseley*; *Tr. Vol. i*, p. 251; *Burton's Scinde*, Vol. ii, p. 241.

KAJIREH, BENG. *Carthamus tinctorius*.

KAJU, BENG., HIND., SINGH. *Anacardium occidentale*. Cashew-nut tree; Kajo-ka-tel, is the Cashew-nut oil; Kaju ke ghutle, is the Cashew-nut. This tree grows to about 10 inches in diameter, and covers a large surface. It is considered the best sort of wood for charcoal, and is fitted for this purpose only. With this, as a substitute for coals, the assistance of a sheep skin for bellows, and a hole in the ground for a forge, the native smiths of India produce any piece of iron-work that may be required for ship-work; iron knees and channel-work for large vessels; and the brass founder, any piece of metal, such as the pintles and braces for ships of 700 tons burden.—*Edye, Forests of Malabar and Canara*.

KAJU, GUZ. *Casearia elliptica*?

KAJU APPLE, ANGLO-HIND. Cashew-nut.

KAJUR, the date of *Elate sylvestris*, or Date tree, properly Khajur.

KAKAR.

KAK or **kok** of Kanawar, *Ficus caricoides*.

KAKA, CAN. *Cassia fistula*, *Linn.*

KAKA, HIND. A crow. See Cow, Lakshmi.

KAKA BIRA? *Hugonia mystax*, *Linn.*

KA-KA BOTANG, HIND. *Juglans regia*.

KAKA-CHINCHI. *Abrus precatorius*.

KAKA JEMBOO, SANS. *Calyptrothoe caryophyllifolia*.

KAKA KUMAU, SANS. *Eugenia caryophyllifolia*.

KAKA KALLI, TAM. *Anamirta cocculus*.

KAKA KALLI VEREI, TAM. Seeds of *Cocculus indicus* or *Anamirta cocculus*.

KAKAL or **Kalhal, AR.** Aloes wood

KAKALAS, SINGH. *Cyathocalyx zeylanicus*, *Champ.*

KAKA-MACHI, SINGH., or *Tella nelu-laka*, *TEL.*, *Solanum Indicum*, *Linn.*

KAKAMARI or *Kaki-champa*, *TEL.* *Anamirta cocculus*, *W. and A.*

KAKA MULU, TAM. *Pedaliu murex*, *Roxb.*; *Linn.*

KAKAMUSTE or *Ava*, *TEL.* *Sponia Wightii*, *Planch.*

KAKANDAKA-CONU-VEH, MALBAL. *Anamirta cocculus*.

KAKAO, GER. Cocoa.

KAKA PALA or *Verri-pala* or *Kuk-ka-pala*, *TEL.* *Tylophora vomitoria*, *Voigt*, also *Zizyphus glabrata*. Mr. Brown explains it by *Vata nārāyanāku*.

KAKA PALAM, TAM. *Tylophora asthmatica*.

KAKAPU, MALBAL. *Torenia cordifolia*, *R.*

KAKAR of Kangra and Salt Range, *Pistacia integerrima*, *H. f. & Th.* The *Kakar*, *kakar singhi*, or *kakru* tree is found chiefly on zemindars' lands. In some localities it attains a great height, and has a good girth. In the Goleir ilaka it yields fine broad planks and beams from 15 to 20 feet long, the price of a full-sized tree being Rs. 7 or 8. Its wood is light-red, somewhat resembling the teak, hard, fine grained, veined; polishes well, is well adapted for cabinet-making purposes. The gall is used medicinally.—*Mr. Barnes' Kangra Settlement Report*, para. 153; *Balfour, Timber Trees*; *Powell's Handbook*, Vol. i, p. 541.

KAKAR, HIND. A kind of tobacco grown in the Panjab, of small size, leaves roundish and a long stalk. In other species the blade is long and pointed runs down the leaf stalk close up to, and even over, the main stem. The "noki" tobacco has very large long-pointed leaves; desi tobacco is very similar in appearance, though stronger in flavor. Baghdadī tobacco has the largest leaves of all, and the leaf is waved and thin; it is the mildest of all, and is smoked dry occasionally.—*Powell*. See Tobacco.

KAKHRA.

KAKARA or *Ura kakara*, TEL. Momordica charantia, Linn.

KAKARIA KAIJA, MALEAL. Cucumis sativus, TAM. Cucumis momordica, Roxb.; W. & A.

KAKARNERI-RANG, HIND. Chocolate color.

KAKARA, HIND. One of the Cranes. The European terms Crane, Grus, Geranos, and the Hindoostani terms Saras, Kakarra, Karranch, all have reference to the loud trumpeting of these birds which form a very distinct group.

KAKAR-SINGHI or Kakrain of Kangra. Pistacia integerrima.

KAKA TODDALI, TAM. Toddalia aculeata.

KAKA TUNDAMU, SANS., TEL. Aquilaria, sp.

KAKA ULIMERA, also Nalla ulimera, TEL. Diospyros cordifolia, R. ii, p. 538.

KAKA VALLI, MALEAL. Mucuna gigantea.—DeC.

KAKA TANDUKA, SANS. Diospyros tomentosa, Roxb.

KAKA-TATI, TAM. Diospyros ebenum, Linn. Ebony. Diospyros ebenaster, Kæn.

KAK-BA, a tribe dwelling in the valley of the Mek-hong river, south of the Lelur tribe, in lat. 22° 14' N.

KAK-DOOMOR, BENG. Ficus oppositifolia.

KAKE, CAN. Fruit of Cathartocarpus fistula.

KAKE, KARN. MALEAL. The Khounne tree.

KAKEI, also Kakhash, HIND. Pteris aquilina.

KAKELAH-SEGHR, PERS. Cardamom.

KAKER, the country of this tribe is in the head-waters of the Lora, wild and inaccessible. It forms a square of about 180 miles between the Achtik-zye country, the Spin Terin, the ranges of Suliman and Baluchistan. But a Kaker race named Kasia, also occupy in part the valley of Shal. The Punni clan, in Sewi and Sewistan is Kaker. Their manners and habits vary. See Kakar.

KAKHRA, the Aryan designation of the modern Khorassan, which was the twelfth settlement of the Aryan race in their migration (xiii, verse 17.) Kakhra is held by Spiegel and Lassen to be the district of Kihrem mentioned in Firdousi. Haug identifies it with the cities of Karkh in Khorassan. The evil done here, to the Aryans, by Ahriman, was the burning of the dead. This therefore was an illegal practice, like the sin of the Arachosians, who were so profane as to bury their dead. All this implies the organization of

KA-KHYEN.

an hierarchical power in Sogd and Bactria, although not a sacerdotal caste.—Muller.

KAKHUR or Kakhura, also Kachura, BENG., GUZ., HIND. Zedoary Curcuma zedoaria, Roxb., also Curcuma zerumbet.

KA-KHYEN or Kakoo, as they call themselves, are a wild section of the great race of Sing-pho who inhabit hilly tracts on both banks of the Irrawaddy from Bamo upwards. They are said to be predatory, vindictive and indolent. They are, however, good blacksmiths, are remarkably athletic, hardy men, and it is not uncommon to see them six feet high. Their language has only seventeen per cent. of Karen words. They have not the appearance of Tartars, but have long faces, and straight noses, with a disagreeable expression about their eyes, and totally different from the surrounding Shan, Burmese and Chinese races. Part of the tribe occupy the left bank of the Irrawaddy near Bamo, between the 24 and 25th of North Lat. The Ka-Khyen to the east of Koung-toung and Bamo, are described as perfect savages in appearance. They have long faces and straight noses, and the very disagreeable expression about the eyes, is rendered still more so by their lanky black hair being brought over the forehead so as entirely to cover it and then cut straight across in a line with the eyebrows. They are found to the north of Bamo, as far apparently as the Shu-mai-kha, and amongst the Sing-pho hills between the Moung-Khung and the valley of Hu-Kong. They have predatory habits. They are probably prior to the Shan, Burman and Sing-pho.

The Ka-khyen lying to the east of Bamo are supposed to be the ordinary Sgau Karen found in the lower country and all over Pegu. If not identical now, they may have been originally either a branch or stock of the great Karen family, now split up into many different tribes. The Ka-khyen appear to have the same habits as those of the lower country. They manufacture a spirituous liquor called "Sham-shoo" and all drink of it, as a part of their religious duty. After they embrace christianity, this habit is of course abandoned by those living under British rule. Different from the Karen of Pegu, the Ka-khyen are said to have slaves, which would imply that they were sufficiently strong in themselves, to maintain a sort of independence. If they had been a race, subject to the Burmese, they could hardly have held supreme possession of slaves, kidnapped on the Chinese frontier. The Ka-khyen hills run N. S., about 12 miles to the east of Bamo, The Taping river issues from them about 16 miles E. N. E. of Bamo, and meanders gently through a flat fertile plain to fall into the

Irrawaddy, a mile above Bamo. Its banks were formerly thickly dotted with large towns and villages, and the adjacent plains are well cultivated for rice. The sites of old villages are still marked by the garden trees and the old cultivation by bunds, among the grass jungle, that has sprung up in the place of rice. There are still many populous villages, every one fortified in some simple rough manner, and every man leaves the village for the field with a sword (dalwey) or a musket or both. In the villages near the mountains such as Ing-tha, the men all sleep and watch by turns in little two-storied watch towers, inside the village fence, while the women and children only remain in the houses.

Near Ingtha is a "Chinese bazaar" or settlement of about fifty Chinese households, who distil arrack and sell salt. The arrack is bought by everybody, the salt is taken to the Kakhyen country. Troops of donkeys and ponies come down from the hills and go back laden with salt, while their owners and attendants carry with them a good store of arrack. These Ka-khyen bring down a little cotton, and this is all the trade, that now exists between this part of Burmah and the eastward, by the Ta-ping routes. Between this and Maing-mo there is some trade, the Shan taking from this cotton and salt.

The Ka-khyen tribes are all armed and have immense numbers of muskets and matchlocks. The latter are 3 Rs. and 4 Rs. each and are serviceable weapons. There are very many separate Tsau-bwa independent of each other and frequently at feud. None of the routes pass through fewer than three or four of these separate states. All the chiefs have to be propitiated and the little men must also be given small presents. Many of the Tsau-bwa are rich from collections of toll from the China merchants.

The Ka-khyen all drink arrack, use opium and tobacco. They have great numbers of slaves among them, Chinese and Shan, and frequently sell them again to people in the plains of Burmese territory. The Chinese slaves bought from the Ka-khyen are all invariably fat, saucy, and apparently happy.

Mr. Kincaid identifies the Ka-khyen tribe with the Siamese term Singh-pho, which the Burmese pronounce Thing bau, and is a term applied by the Shan and Burman to all the tribes dwelling north of Mo-goung. They are nominally tributary to the king of Ava. They bear a strong resemblance to the Karen, to whom they yield a nominal tribute, but have never been subdued, and the people of all the region to the east of Bamo live in great dread of them on account of their savage ferocity in kidnapping and selling into slavery

the neighbouring tribes with whom they are constantly at war. The Karen regard them as a tribe of B'ghai. They are of a handsome figure, but dark and slender. The women wear a long frock like the white Karen, but of a dark-red colour.

The Ka-khyen are divided into septs, each of which is headed by a Tsau-bwa who is independent, except in so far as a dread of the Burman king can influence his conduct. The next in rank to the Tasubwa is called the Paw-my-ne. Both offices are hereditary. In a Ka-khyen village, the houses are elongated bamboo sheds, with a portico allotted for the cattle and poultry. Half the house is set apart as sleeping cells for the family; the other, forming an open hall running along the whole length of the house, is a public lounge. Here the stranger is admitted to Ka-khyen hospitality. Ka-khyen beer is put before the guests and the natives help themselves liberally. The beer is drunk, when fresh brewed, in plantain-leaf cups. The women wear a picturesque jacket ornamented with lines of silver plates, chased and enamelled. The lower garment is a single cloth ornamented according to the taste and ability of the wearer. In the evening, the villagers assemble and dance to an accompaniment of sticks, stepping off the side "crab-fashion." When a villager dies, his friends dance round the body to propitiate the spirits called Nat and to drive away the soul from its former habitation. The Meet-way or priest works himself into a devotional mood by tearing his hair, groaning, kicking and stroking his head and face. When unpossessed, the Ka-khyen Meet-way is an ordinary layman. As an initiatory rite, to show his fitness for the priestly office, the novice must climb a ladder with sword-blades, sharp-edge uppermost, for steps, and set himself upon a platform thickly studded with the sharpest spikes. Like the non-Aryan tribes on the Eastern frontier of Bengal, there is no restriction on intercourse until marriage, but after that unchastity of the female is punished by death, mirrors, beads and trinkets attract crowds of women.—*Mason, Burm*, pp. 97, 641; *Yule*, p. 146. See Anam, India, Singhpo.

KAKI, SINGH. Ape, monkey.

KAKI, JAPAN. *Diospyros kaki*: China date plum.—*Bennett's Wanderings*.

KAKNUJ, also Kakri, PERS. *Physalis angulata*.

KAKO-DUMBARI, Gmelina arborea, *Roxb. Cor. Pl.*

KAKOHI, HIND., of Hazara, *Acacia leucophloea*.

KAKOLI, SANS. A drug so called, from its colour, which is black like that of the crow; according to some, also a perfume. The hindoos enumerate in their medical works a class of eight substances, which they denominate the *Ashta varga* or class of eight; they are all roots—and appear to come chiefly from Nepal and the countries skirting the Himalaya mountains. They may be employed either singly or collectively and are described as cool, sweet, fattening, and aphrodisiac, promotive of digestion, sanative, lactiferous and tonic. They are farther said to possess great efficacy in urinary and phthisical affections and in removing the sequelæ of fevers. Their names are Jivaka, Pisanabha, Meda, Mahameda, Kakoli, Kshira kakoli, Riddhi, and Vriddhi. The substance amongst these termed Kakoli is generally connected with the one subsequent to it in the above list or Kshira-kakoli, and these two drugs are procured from Morung and the adjacent districts. Kshira-kakoli resembles the root of the Pivari (*Asparagus racemosus*) and is of a white colour, a fragrant smell and full of milky sap. The Kakoli is of similar form and character, but of a dark hue. They are both sweet and cooling, they remove fever, and correct a vitiated state of the blood and bile; the root of the Vidari (*Batatas paniculatus*) and the Aswagandali (*Physalis flexuosa*) are severally substitutes for the Kakoli and Kshira-kakoli."—*Wilson's As. Res.*, Vol. xiii, p. 410, 4to.; *Elliot, Flor. Andh.*

KAKO MATI, Modern Greek, evil eye.

KAKOOL, the tufts of hair left on both sides of the head, the middle part being shaved from the forehead to the neck.

KAKOON, *Panicum Italicum*.

KAKOONA-GASS, SINGH. *Canarium Zeylanicum*, *Blume*.

KAKORA, HIND. *Momordica muricata*.

KAKOSCHNIKA, a head-dress, worn by the Russian women.—*Turnerelli, Kazan*, Vol. i, p. 32.

KAKOTA-KA-PHAL, HIND. *Canna indica*.

KAKOUT PALA, *Nymphaea lotus*.

KAKRA, PANJ. *Cucumis momordica*, *Roxb.*

KAKRAI of Chenab, PANJ. *Acer creticum*, also *Acer cultratum*, *Linn.*

KAKRAIN of Kangra and Salt Range, also Kakra, Kakkangeho of Kanawar, *Pistacia*

KAKUR.

integerrima, *H. f. & Th.*, ban-kakra, is *Podophyllum emodi*.

KAKRA-SINGHEA, is official at Lahore both with hakims and hindoo doctors. In the *Materia Medica* of the latter, its use has been handed down from olden times. The kakra-singhea are vegetable excrescences and probably on that kind of *Rhus* which is found in abundance in the north-west of Hindoostan. These excrescences, formed probably in consequence of the deposition of the ova of some insect, have long constituted a famed article of hindoo medicine; they are found in the Deyra Dhoon and everywhere in the hills, at moderate elevations. Dr. Royle refers the specimens contained in his collection, which are identical with the above, to *Rhus kakra-singhea*, but it has been doubted whether these galls are produced by a species of *Rhus*, as they are nearly identical with those found on *Pistacia terebinthus*.—*Thirty-five years in the East, Dr. Hongt, p. 335; Cat. Ex. 1862.*

KAKREZI-RANG, *HIND.* Liver-colour.

KAKRI, *HIND.* *Cucumis pubescens*, *Willd., W. & A.*, also *C. utillissimus*, also *Capparis spinosa, Linn.*

Gwal kakri, is *Bryonia umbellata*.

Kanwal kakri, is *Nelumbium speciosum*.

Gul kakru, is *Podophyllum emodi*.

KAKRU of Kumaon, *Rhus acuminata, DC.*

KAKSA, *HIND.* *Coruus macrophylla*.

KAKSHAMA, *HIND.* *Serratula anthelmintica*.

KAKSHIVAT, whose hymns are found in the first and ninth mandala of the *Rig-veda*, is said to have been a Kshatriya. Professor Lassen is of opinion that his father Dirgha-Tamas, was one of the earliest brahmani missionaries in the southern parts of Bengal, among the Auga and Kalinga.

KAKTUNDI, *HIND.* *Asclepias curassavica*.

KAKU, *PANJ.* *Flacourtia sapkila, Roxb.*

KAKUA, *HIND.* *Gougheia holosteoides*.

KAKUDA, see *Inscriptions*.

KAKUI and *Kakua* tribes, are occupants of both sides of the Me-Khong. A tribe of wild Kakui, dwell on the Man-lo-ho river, in lat. 22° 20' N., a tributary of, and flowing from the west to, the Me-Khong river. They have the Lilun and Kak-bal on the east. See *India*.

KAKULA or *Ebil*, *AR.*, also *Kakule-saghar*, *PERS.* *Elettaria cardamomum, Wh. & Mat.*

KAKUPALA, *TFL.* *Zizyphus glabrata, Heyne.*

KAKUR, a dark-coloured, spare and sinewy, migratory race, in the centre of the penin-

KALA.

sula of India, who are usually regarded as identical with the *Pindars* that overran the south of India. They are found residing in most of the villages north of the Tumbudra river. They possess small active ponies, on which they bring the grass that they cut in the jungles, and otherwise act as carriers, but they might, at any moment, become active marauders. They are also screen or tattimakers, and a few have become agricultural or engage in horse dealing. They elect a chief, to whom they give the rank of *rissaldar*. They are all mahomedans and they use a dialect to which they give the name of *Lahaura-ha-noche*.

KAKUR, the rib-faced or barking deer, *Cervulus aureus* of *Ham. Smith*, is generally distributed over the lower and cultivated tracts of the Himalaya, being seldom met with at elevations exceeding from 8,000 to 9,000 feet above the level of the sea. The prevailing colour is a reddish-brown above, white underneath, inclining to ash on the inside of the legs of males, which have two short canine teeth in the upper jaw resembling those of the musk-deer, but not so long.—*Adams, Jerdon*. See *Cervus*, *Deer*, *Mammalia*.

KAKUSANDA, the third Budha, previous to Gotama.—*Hardy's East Monach., p. 437.*

KAKWI, *GUZ.*, *HIND.* Molasses.

KAK-WULIMIRA, *TSL.* *Diospyros cordifolia, Roxb.*

KAKYNNAMA, *SINGH.* Cinnamon.

KAL, *SANS.* Time, age. See *Siva*.

KALA-BAGH.

Kala-purusha, SANS., from kala, black, and purusha, a man.

Kala-ratri, SANS., from kala, dark, and ratri, night.

Kala-sutra, SANS., from kala, time, and sutra, a thread.

KALA. In Burmah, is a term applied to a native of India, but, more extensively, to any western foreigner, such as an Arab or a European. Major Phayre supposes it to have been derived from a name given to the aboriginal races of India, which is still traceable in the scattered tribes of Kol, Kuli, &c. &c.

KALA AJA, BENG. *Ehretia serrata*, Roxb.

KALA BACINAK, DUK., Hymenodyction excelsun, Wall.

KALA-BAGH, in Lat. 32° 57' and L. 71 29'E., in the Panjab, on the right side of the Indus, on the western part of the Salt Range. The mean height of the town, 790 ft. above the sea; Kalabagh peak, above 2,357 ft.; Mari, opposite Kalabagh above 609 ft.; Mari peak above 1,221 ft. Here the Indus is compressed by mountains into a deep channel, only three hundred and fifty yards broad. The mountains on each side have an abrupt descent into the river, and a road is cut along their base, for upwards of two miles. The first part of this pass is actually overhung by the town of Kalabagh, which is built in a singular manner upon the face of the hill, every street rising above its neighbour. The Hon'ble Mount Stuart Elphinstone, found the road beyond cut out of solid salt, at the foot of cliffs of that mineral, in some places more than one hundred feet high above the river. The town is famous for its salt which is hard, clear, and almost pure. In the hills south of Kashmir, and west of the Jehlum to Attock and Kalabagh on the Indus, are found Gukker, Goojer, Khatir, Awan, Junjoh and other tribes, all of whom may be considered to have, from time to time, merged into the Hindoo stock in language and feelings. Of these, some, as the Junjoh and especially the Gukker, have a local reputation. Gold is obtained from the sands of the Indus and between Attock and Kalabagh, about 300 persons are employed in washing the sand for gold, which occurs in small flattened grains in sand, washed down in greater or less abundance by the rivers of the Panjab. A Murree correspondent of the *Delhi Gazette*, however, said that while sinking an experimental shaft in connexion with the proposed tunnel, on the banks of the Indus, a veritable gold mine was discovered. Under the stratum of slate a deposit of rich auriferous quartz was found, and Dr. Cleghorn mentions that a little gold-dust is brought across the higher range through Chilas from

KALAI.

the valley of the Indus where gold-washing is carried on to a considerable extent.—*Elphinstone's Kingdom of Caubul*, p. 36; *Hist. of the Panjab*, Vol. i, p. 43—45; *Cleghorn's Panjab Report*, p. 178; *Papers of East India Caubul and Affghanistan*, 1859, p. 21. See Khuttuk; Raien.

KALABANDA, TEL. *Aloe Indica*.—*Royle*, also *Aloe perfoliata*.—*Linn.* *Aloe vulgaris*, D'C. *A. Barbadosensis*? *Royle*, III., 390; *Rheede*, xi, 3.

KALABANTHA, TAM. *Agave Americana*.—*Linn.*

KALABATUN, HIND. Gold wire and silver wire for making gold and silver thread and tinsel: the silver is called "safaid" Kalabatun and the gold "surkh" Kalabatun.

KALABHANGRA, HIND. *Sonchus olerensis*.

KALABIS or Kalabisa, Hind. of Kaghlan, buckthorn, *Hippophae salicifolia*, also *H. rhamnoides*.

KALADANA, HIND. *Pharbitis nil* or *Ipomœa cœrulea*.

KALADASA, a celebrated poet, his drama relates how a Kshatrya prevailed on a brahman's daughter to yield to him, under a promise of marriage, and he gave her his ring as a pledge of his troth. He then went to his own city leaving the girl behind. She soon found that she was to become a mother, and she then set out to her husband but lost the ring on the road, and he refused to recognise her until it was found. The story of Judah and Tamar, Gen. xxxviii. 12 to 26, similarly hinges on a ring.—*Wh. H. of L.*, p. 50.

KALA DIATURA, BENG. *Datura fastuosa*.—*Mill.*, *Roxb.*

KALADGHI, 16° 12' 9"; 75° 29' 9", a military station in the Dekhan, in the district of Belgaum. The Dâk bungalow is 1,744 ft. above the sea, and the level of the Gatparba is 1,653 feet. The rocks of the neighbourhood are stratified clay slate.

KALADI, MALAY. *Colocasia antiquorum*, also *C. esculenta*, *Schott*.

KALADONG, the river at Akyab.

KALA DROOMA, SANS. *Terminalia moluccana*, *Willde*.

KALAGORU, TEL. *Stereospermum cheilonoides*, also *Stereospermum suaveolens*, *W. Ic.*

KALA-GARU, MALAY. Aloes wood.

KAL'AH, see Mesopotamia.

KALAHANDA, the Sowrah race occupy the hill ranges of the Northern Circars—mostly those hills near Chicacole, near Kalahanda and southwards as far as Bradachellum, and they bury their dead with their weapons.

KALAI, TAM. Branch of a tree.

KALAI, TURK. Tin.

KALAI, HIND. Whitening, also, slaked lime.

KALAI or **Kilai**, HIND. Towards the Dhauladar range is the *Cedrus deodara*, Himalayan cedar or deodar.

KALAI GAR, HIND. A tin-man.

KALAI-KA PATHAR, HIND. Name given to a soft gray marble of Karnal, used for lime burning.

KALA KANTALA, SANS. *Agave Americana*, Linn.

KALA KASTURI, GUZ, HIND. *Abelmoschus moschatus* : Musk okro.

KALA-KAT, HIND. *Prunus padus*.

KALAKKAR, TAM. A low caste, the same as the Paleyar, hunters and fowlers.

KALA-KUCHOO, BENG. *Colocasia anti-quorum*.

KALA KOOTKI, a drug in use in India, by some supposed to be hellebore, but the term is also applied to other drugs.

KALA KUDU, HIND., MAHR. *Wrightia tinctoria*, R. Brown.

KALAL or **Kalar**, a distiller, a vendor of spirituous liquor, a palm-wine drawer.

KALA LOBIA, HIND. *Dolichos lablab*.

KALAM, HIND., or **Karam**, PANJ. *Nau-clea parvifolia* ; also a species of *Glochidion* Papal Kalam is the *Viburnum cotinifolium*.

KALAM, TAM., TEL. *Calotropis gigantea*.

KALAM, AR., HIND., PER. A pen. Kulmdan, a pen and ink-stand, Kalam-band, reduced to writing.

KALAM. Arabs divide their spoken and even written language into two orders, the "Kalam Wati," or vulgar tongue, sometimes employed in epistolary correspondence, and the "Nahwi," a grammatical and classical language. Every man of education uses the former, and can use the latter. And the korau is no more a model of Arabic, as it is often assumed to be, than "Paradise Lost" is of English. Kalam is the Word. Animus, in Latin, is the breath of life breathed into man's nostrils, is the Rauch of the Hebrews, the Ruh of Arabia, and among the Greeks and Romans, Animus, Anima and Spiritus. In their designation of the various prophets, mahomedans style Moses, Kalam-allah, the word of God, Abraham the Kalil-allah, friend

of God, and Jesus Christ is the Ruh-Allah, the Spirit of God.—*Burton's Pilgrimage to Meccah*, Vol. iii, p. 330. See Languages.

KALAMAH, ARAB. The mahomedan creed, consisting of five sections, Taib ; Shahadat ; Tamhid ; Tauhid and Rad-i-Kufr. The Taib is their La-illaha-il-Ullaho-Mahomed ur-Rasul Ullah, there is no deity but God and Mahomed is the prophet of God. The Shahadat is I testify there is no deity but God alone, without companion—and I testify that Mahomed is his servant and prophet. The Kalamah is not found in the Koran.

The words in Arabic are :—

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

أول كلمة طيب

لَا إِلَهَ إِلَّا اللَّهُ مُحَمَّدٌ رَسُولُ اللَّهِ -

دویم کلمه شهادت

أَشْهَدُ أَنْ لَا إِلَهَ إِلَّا اللَّهُ وَحْدَهُ لَا شَرِيكَ لَهُ وَأَشْهَدُ أَنَّ مُحَمَّدًا عَبْدُهُ وَرَسُولُهُ -

سیوم کلمه تمجید

سُبْحَانَ اللَّهِ وَالْحَمْدُ لِلَّهِ وَلَا إِلَهَ إِلَّا اللَّهُ وَاللَّهُ أَكْبَرُ وَلَا حَوْلَ وَلَا قُوَّةَ إِلَّا بِاللَّهِ الْعَلِيِّ الْعَظِيمِ -

چهارم کلمه توحید

أَشْهَدُ أَنْ لَا إِلَهَ إِلَّا اللَّهُ وَحْدَهُ لَا شَرِيكَ لَهُ لَهُ الْمُلْكُ وَلَهُ الْحَمْدُ يُحْيِي وَيُمِيتُ وَهُوَ حَيٌّ دَائِمٌ قَادِرٌ قَاهِرٌ لَا يَمُوتُ أَبَدًا أَبَدًا وَالْجَلَالُ وَالْإِكْرَامُ بِيَدِهِ الْخَيْرُ وَهُوَ عَلَى كُلِّ شَيْءٍ قَدِيرٌ -

پنجم کلمه رد کفر

اللَّهُمَّ إِنِّي أَعُوذُ بِكَ مِنْ أَنْ أَشْرِكَ بِكَ شَيْئًا وَأَنَا أَعْلَمُ بِهِ وَأَسْتَغْفِرُكَ لِمَا لَا

KALANDURA.

أَعْلَمَ بِهِ تَبَتَّ عَذَّةً وَأَنَا بَرِيٌّ عَنْ كُلِّ دِينٍ
مُؤَلِّي دِينِ الْإِسْلَامِ وَرَجَعْتُ إِلَيْ دِينِ

KALANDAR, a sect of the Kadiri fakir or darvesh. A kalandar is defined to be a Sufi, who has no Murshid or religious teacher, but works out his salvation by himself. The orthodox Sufi sect blame the order, but cannot help owning that it has produced some very distinguished saints. The kalandar does not, however, refuse to take Murid, or followers. —Richard F. Burton's *Sindh*, p. 401. See Faqir.

KALANDAR ZATAR, HIND. *Thymus serpyllum*.

KALANDE, SINGH. A goldsmith's weight in Ceylon, about 73½ grains equal to 24 of a large red seed used for its sub-divisions.

—Simmond's Diet.

KALANDURA, SINGH. *Cyperus hexastachyus*, Roull.

KALUNG.

KALANEMI, in hindoo theology, a Daitya of some celebrity and one of Ravana's attendants.

KALANG, a people who reside among the inhabitants of the Teng'ger mountains. The Kalang are said to have been at one time numerous in various parts of Java, leading a wandering life, practising religious rites different from those of the great body of the people, and avoiding intercourse with them; but most of them are now reduced to subjection, are become stationary in their residence, and have embraced the mahomedan faith. Whenever the Kalang move from one place to another, they are conveyed in carts, having two solid wheels with a revolving axle and drawn by two or more pairs of buffaloes, according to the circumstances of the party. —Raffles' *History of Java*, Vol. i, p. 329.

KALUNG or Coolen of India, is the common European crane, *Grus cinerea*, now a most rare bird in England, but still breeding somewhat plentifully in Scandinavia, and a winter visitant in large flocks in many parts of India. There are four species of cranes in India, all principally or solely winter visitants. But the word crane, like many other vernacular appellations, is often misapplied, and properly appertains to an exceedingly well-defined group, noted for their loud trumpeting cries. Hence the European names Crane, *Grus*, *Geranos*, &c., including the Hindoostani designations *Saras*, *Kakaria*, *Kulung* or *Karruuch*, and others that might be collated. The voiceless 'Adjutant' is erroneously termed 'the Gigantic Crane.' In Australia the Egrets or white 'Paddy-birds,' are designated 'Cranes,' while the veritable Crane of the country is known as the 'Native Companion.' The cranes belong to the anciently known hemisphere, or major continent, save one or perhaps two species in North America (a still disputed point), and the fine Australian species. About fifteen species are known, of which one division is very distinct, and founded on the two beautiful Crowned Cranes of North and South Africa respectively. Besides their singular bristle-like coronal plumes, constituting quite a unique crest, they have comparatively a very short beak, and an anatomical peculiarity, or rather we should say that the rest of the Cranes have a more important one. This consists in the trachea or wind-pipe entering a hollow in the crest or ridge of the breast-bone, as in the Trumpeter Swans of northern regions. The Crowned Crane have nothing of the kind; but they—or at least the northern species,—have still this singularity, that the long tendinous vocal muscles of the trachea, which in other birds are attached at their nether ends to the corners

of the sternum or breast-bone, are—in one (if not both) species of Crowned Crane—connected with the first pair of true ribs. The rest of the Cranes, with one exception only (the Kakarra or Demoiselle), are more or less bare about the forehead, crown, or even some distance down the neck as in the Indian Saras; and they mostly have the tertiary plumes of the wing lengthened, in one African species (*G. paradisea*) even down to the ground, while in the Kalung or European Crane those feathers are curled in a remarkable manner. In the three species which inhabit Africa, one of which (the Kakarra) is also Asiatic, the tertiary feathers are more elongated than in the rest; and two of them have been separated from the rest by the strange name *Anthropoides*, the distinction however being unimportant. A better division among them was instituted by the Prince of Camino, who detaches a group *Antigone*, founded on the Indian Saras (*Grus antigone* of Linnaeus) and a few others, with longer and pink legs, more extended naked skin about the head, and less developed tertiaries; but this division is also much less marked than that of the Crowned Cranes, though likely to be generally adopted. It would seem that they are much less gregarious than the others. As a whole, the Gruidæ or Cranes are widely distinct from any other group of birds, and link off into no other—*Indian Field*.

KALANI GANGA and Kala Ganga, rivers on the western coast.

KALA-NIMAK, HIND. An artificial black salt, made by pounding together five seers of saji khar, two seers of dried anola fruit, and one maund of common salt, adding water, and boiling for some time: is considered to promote digestion: is much eaten: used in many mesalili.—*Gen. Med. Top.*, p. 111. See Bit laban.

KALANKARI, HIND. Chintz.

KALANTAN, a district with 65,000 souls, separated from Tringam by the Batut river and by the Banara river from Pataui.

KALAPA, JAV., MALAY. *Cocos nucifera*. Cocoa-nut palm.

KALAPASIKA and Dandapasika, in ancient hindoo times, officers of justice, the bearers of the noose of death and of punishment.—*Hind. Theat.*, Vol. ii, p. 167.

KALA-PATTA, HIND. The Jhareja princes, in making patta or grants, appear never to have had an idea of claiming any reversionary interest: there are no distinctions, as in Mewar, of "Kala patta" or "Chor-utar" estates, that is, those for life, or resumable at pleasure, of which there was in Mewar a large class. A great moral crime is the sole corrective of this political error;

and it is to prevent the destruction of families by following the supreme law of sub-infeudation, that the first law of nature and of God is violated, infanticide not being confined to female victims. Mr. Elphinstone, in his report on Cutch, confirms this; adding that it accounts for the number of single heirs male in families.—*Tod's Travels*, p. 488.

KALAPNATH, also Maha Tita, BENG. Chiretta.

KALA-PRIYA-NATH. Who this deity was, is not known to the Pandits of the present day. Malanka takes no notice of the name. Jagaddhara is content to say it is that of a divinity worshipped in that country. It is probably the appellation of a Siva Linga. In the Varaha Purana, Kala Priya is said to be a form of the sun worshipped to the south of the Yamuna, and Kala-priya Nath, his lord or god, implies a Linga, the construction of which is attributed to the sun. The more usual word in these compounds is Iswara, as Someswara, Rameswara, Visweswara, &c.; but Nath is the term more especially employed by a particular sect, that of the yogi or Pasupata, the oldest sect probably now existing amongst the hindoos, and with whose tenets and practices, Bhava bhuti appears to have been thoroughly acquainted.—*Hind. Th.*, Vol. ii, p. 10.

KALA-OJA, *Ehretia serrata*.

KALARI, MAHR. One-eighth of a paw or quarter, the paw being a quarter.

KALASA, MALAY. Carpets.

KALASA, see Lat.

KALA SANKALITA, see Yojana.

KALASOKA, king of Magadha, reigned from B. C. 428 to B. C. 400. See Bhattacha.

KALA-SARSON, *Brassica juncea*, *Brassica eruca*.

KALASIE. See Simiada.

KALAT, name of a town and province. The town with its 800 houses is in a narrow valley having on the east the hills of Kach Gandava. The population of Kalat consists of many Dehwar, Brahuis, hindoo and slaves, and the entire suburb is occupied by Afghans. See Kehat, Kabul, p. 433.

KALA TIL, HIND. *Guizotia oleifera*.—D'C. Gingelly seed. See Oil.

KALAT NOTHEE, a plentiful tree in the Akyab and Ranree districts. Grows to a large size. Wood used in house-building.—*Cal. Cat. Fr.*, 1862.

KALATO A ISLAND, is of considerable size, in lat. 7° 12' S, long. 120° 43' E. It is mountainous.

KALA TOPE, a great forest near the sanatorium of Dalhousie, in the Baree Doab.

KALA TRUMBA, HIND. *Fagopyrum esculentum*. Buckwheat.

KALGHAN.

KALATT, HIND. *Dolichos uniflorus*.

KALGAM, the Great Wall of China. See
Kalka.

KALGAN, RUS. Galaugal.

KALGHA or Kalgı, HIND. A crest, a
plume, a crest of feathers; khod, crest for a
helmet. Kalgı are plumes made of the black
feather of a kind of heron called onkar,
peculiar to Kashmir.

KALGHAN, a pass leading into China,

KALI.

through which the Mongol races have in-
variably invaded China.

KALGHARI BECHNE-WALA, see Jogi.

KALHAM, HIND. of Panjab, *Nauclea par-*
vifolia, Roxb.

KALHIYA, see Semitic races.

KALHARAMU, SINGU. *Nymphaea edu-*
lis, DC.

KALHORA; a dynasty of Sindh, whose rule
first began about A. D. 1740, the aristocracy
of Sindh, as in most oriental lands, was purely
one of rank conferred by office, and in Sindh
consisted either of Sindhi or of Jat.—*Burton's*
Sindh, p. 235. See Kallora.

KALI, the name of the maritime plant
from the ashes of which soda is obtained by
lixivation; and from the name of this plant,
with the Arabic article *al*, is derived that of a
class of substances possessing peculiar prop-
erties, which are called alkalies. Kali was
also formerly employed to designate the alkali
potash.—*Eng. Cyc.*

KALI, one name is Silambu a mountain,
also Parvati, the mountain nymph who capti-
vated Siva from a course of ascetic austerities.

KALI, ARAB. Barilla, the common Kali
salsola, *Linn.*, grows in great plenty along the
Arabic Gulph, and in the isles.—*Niebuhr's*
Travels, Vol. ii, p. 346.

KALI or Kavili mulian, TAM. *Stapelia*
virgata.

KALI, a goddess of the hindoos, whom their
mythology recognizes as a form of Parvati,
called also Maha-Kali, Durga, Bhawani, and
Devi. Kali is the consort of Siva, in his des-
troying character of Time. As such, she is
painted of a black or dark-blue complexion. In
Calcutta, her images are usually seen of the last-
mentioned colour. In plates, she is shown
(as the personification of Eternity) trampling
on the body of Siva (Time). In one hand she
holds the exterminating sword, in another a
human head; a third points downward,
indicating, according to some, the destruction
which surrounds her, and the other is raised
upwards, in allusion to the figure of regenera-
tion of nature by a new creation. Mr. Ward,
however, is of opinion, which he has ex-
pressed respecting others of the deities, but
which appears to be much at variance with
the character of Kali, who is here annihilating
Time itself, viz., that of the two last-men-
tioned hands, one is bestowing a blessing, the
other forbidding fear. Whatever her gestures
may import, the image of this goddess is truly
horrid, as are the devotional rites performed
in honor of her. Her wild, dishevelled,
hair reaching to her feet, her necklace of
human heads, the wildness of her countenance,
the tongue protruded from her distorted
mouth, her cincture of blood-stained hands,

and her position on the body of Siva, altogether convey in blended colours so powerful a personification of the dark character which she is pretended to portray, that whatever may be thought of their tastes, we cannot deny to the hindoos full credit for the possession of most extraordinary and fertile powers of imagination. A model of this goddess has the body of a dark-blue, the insides of the hands are red, as is also the circlet of hands round the waist. The heads which form the necklace have a ghastly appearance. Her tongue is protruded from her mouth, the sides of which are marked with blood. Her head-dress and other ornaments are splendidly adorned with gems of various kinds. The body of Siva is white. Kali is also called the goddess of cemeteries, under which form she is described dancing with the infant Siva in her arms, surrounded by ghosts and goblins (likewise dancing) in a cemetery amongst the dead. A paragraph appeared sometime ago in a Calcutta paper, which stated, that her images, under this form, were now worshipped by the hindoos as a propitiation against the destructive ravages of the cholera. To this ferocious goddess sanguinary sacrifices are made. The Kalika Purana which details, in due order and with much precision, the different descriptions of animals that are to be sacrificed and the length of time by which this insatiate goddess will be gratified and kept in good humour by each, ordains that one man (or a lion) will please her for a thousand years, but that by the immolation of three men she will graciously condescend to be pleased one hundred thousand years. The sacrificer must repeat the name Kali and pay her the compliment of saying, "Hrang, hring, Kali, Kali ! O horrid-toothed goddess ! eat, cut, destroy all the malignant, cut with this axe ; bind, bind, seize, seize, drink blood, spring, secure, secure, salutation to Kali !" Immense sums of money are annually spent in the worship of this terrific deity. There is a celebrated temple dedicated to her at Kali-ghat in the vicinity of Calcutta, or the city of Kali, and impure sacrifices are offered to it ; and on the occasion of the festivals of Kali, her temples are literally swimming with blood. An adequate delineation of the scene, and of the horribly disgusting appearance of the executioners and other attendants of the place is scarcely possible, but would indeed afford information to the christian reader. So late as 1859, the July No. of the *Calcutta Review* (p. 423) remarks that " in Bengal, in the worship of the bloody Kali, all castes mingle together and, after a libation of ardent spirits to the goddess, drink spirits, and eat flesh,

as their fathers did in the Vedic times, which is a practice also to this day in the foul and secret rites of the Tantra, too abominable for christian ears. A festival held in honour of Kali is called also Kali-puja, as the Dasra in honour of the same deity, under the name of Durga, is called also Durga-puja and Durgotsava. Of the many names of this goddess, those of Parvati, Bhavani, Durga, Kali, and Devi, or the goddess, are the most common and are used almost indiscriminately in the writings and conversations of the hindoos. Although in the present age, human sacrifices are no longer openly made, by the more settled people, there can be no doubt of the existence of the practice formerly, and many of the uncivilized Khond still follow the rite, it would appear they were chiefly offered to Bhavani, in her character of Kali, and no religious rite can be more minutely ordered and detailed than this is in the Kalika Purana, the sanguinary chapter of which has been translated by Mr. Blaquiere and given in the fifth volume of the *Asiatic Researches*, Art. xxiii, and the ceremonies, the implements, prayers, &c., used on these horrid occasions, are minutely described and recited. In this article, premising that Siva is supposed to address his sons, the Bhairava, initiating them in these terrible mysteries, occurs the passage, "The flesh of the antelope and the rhinoceros give my beloved (i. e. the goddess Kali,) delight for 500 years. By a human sacrifice, attended by the forms laid down, Devi is pleased one thousand years, and by a sacrifice of three men, one hundred thousand years. By human flesh, Camachya, Chandica, and Bhairava who assume my shape, are pleased one thousand years. An oblation of blood which has been rendered pure by holy tests, is equal to ambrosia : the head and flesh also afford much delight to the goddess Chandica. Blood drawn from the offerer's own body is looked upon as a proper oblation to the goddess Chandica. Let the sacrificer repeat the word Kali twice, then the words Devi-Bajreswari, then Lawha Dandayai, Namah ! which words may be rendered—Hail, Kali ! Kali ! hail, Devi ! goddess ! of thunder ; hail, iron-sceptred goddess ! Let him then take the axe in his hand and again make the same by the Calatritya text." Different mantra are used, in reference to the description of the victim to be immolated : females are not to be immolated, except on very particular occasions : the human female never. Although as is evident, human sacrifices were formerly legal, they are nevertheless most pointedly prohibited in very ancient books ; such prohibition is, indeed, a fur-

ther proof of the existence of the practice. In the *Brahma-Purana* every *Neramedha*, or man-sacrifice, is expressly forbidden; and in the fifth book of the *Bhagavat*, sir William Jones has pointed out the following emphatical words. Whatever men in this world sacrifice human victims, and whatever women eat the flesh of male cattle, those men and those women shall the animals here slain torment in the mansions of Yama; and, like slaughtering giants, having cleaved their limbs with axes, shall quaff their blood. (*As. Res.*, Vol. iii, p. 206.) Sir W. Jones has addressed hymns to Durga and Bavani, two names of Prakriti, or created nature (*As. Mis. and Works*, Vol. xiii). Iswara or Isa, and Isani or Isi, are, he says, unquestionably the Osiris and Isis of Egypt. Iswara, Siva or Hara (for these are his names among nearly a thousand more), united with Isi, represent the secondary causes, whatever they may be, of natural phenomena, and principally those of temporary destruction and regeneration. But the Indian Isis, in her many characters, appears in those of Parvati, Kali, Durga and Bhavani, which bear a strong resemblance to the Juno of Homer, to Hecate, to the armed Pallas, and to the Lucretian Venus. The name Parvati took its rise from a mild poetical fiction. Himalaya, or the mansion of snow, is the name of the vast chain of mountains that limit India to the north, and embraces it with its eastern and western arms, both extending to the ocean: one named Chandrasekhara, or a Moon's Rock; and the other which reaches westward to the mouths of the Indus, was called by the ancients Montes Parvati. The mountain Himalaya, being personified, is represented as a powerful monarch, whose wife was Mena; their daughter is named Parvati, or mountain-born, and Durga, or of difficult access. She is said to have been married to Siva in a pre-existing state, when she was named Sati; but we are informed by this illustrious author, in another place, (*As. Res.*, Vol. vi, p. 144), that she bore no children till she became regenerate in the person of Parvati. Sir W. Jones (*As. Res.*, Vol. iii, p. 14) says, that "the learned works of Selden and Jablonski, on the gods of Syria and Egypt, would derive more illustration from the little Sanskrit book entitled Chandi than from all the fragments of oriental mythology that are dispersed in the whole compass of Grecian, Roman, and Hebrew literature." If published with notes in the style of the Gita or Iti-padesa, it would greatly extend our information on the copious subject it embraces. Parvati, as mentioned, means mountain-born, Durga, of difficult access. The former word

in the Mahratta countries pronounced Parbat, or Parvat, is used as a name for hills, one is near Poona, commonly called Parbat, on which is a temple of the goddess. In the other name of Durga we trace the origin of the names of hills forts in Mysore, and other countries of the Dekkan; such as Chitteldroog, Rai Droog, Doorri Droog, &c. In the Tamil dialects this termination is changed into Dur-gam. The bright half of the month Aswini, the first of the hindoo lunar year, seems peculiarly devoted to Durga. The first nine nights called Navaratriam are, with appropriate names, allotted to her decoration; the fifth is for the preparation of her dress, on the sixth she is awakened; on the seventh she is invited to a bower formed of the leaves of nine plants, of which the Bilwa is the chief. The seventh, eighth, and ninth are the great days; on the last of which the victims immolated to her honour must be slain, as particularly directed in the Kalika Purana. The sacrificed beasts must be killed by one blow, with a broad sword or sharp axe. The next day the goddess is reverently dismissed and her image is cast into the river, which finishes the festival called Durgotsava and Dasera. On the fifteenth day, at the full moon, her devotees pass the night in sports and merriment, and games of various sorts: it is unlucky to sleep, for, on this night, the fiend Nicumbha led his army against Durga, and Lakshmi descended, promising wealth to those who were awake. On this night Kavera and Indra are also worshipped. The festival of Durgotsava, and that of Bilwa or Bilva, the Crataeva marmelos of Linnæus. The Huli, Sir W. Jones decided to relate to the autumnal and vernal equinoxes; and the sleep and rise of Vishnu to the solstices, (*As. Res.*, Vol. iii, Art. xii, p. 258,) but Mr. Colebrook, (*ibid.*, Vol. viii, p. 87) thinks, that the Huli had not, in its origin, any connexion with the vernal equinox, or with the close of the year but with the close of winter, and the beginning of Vasanta or the Indian spring. This goddess is supposed to have inspired Sivajee to murder Afzul Khan, the general of the emperor of Delhi. At a conference, Sivaji struck Afzul Khan with a wag-nak and finally despatched him with the beautiful Genoese blade called Bowani which he always wore. That sword, down to the time of the British supremacy, had a little temple for itself, in the palace of Sivaji's descendants, and it was annually worshipped by them and their household, not as a mere act of veneration for their ancestors' trusty sword, but because it was the chosen instrument of a great sacrifice, and the attendant who watched it used to say that no doubt some of the

KALIANI.

spirit of Bhawani must still remain in. Many towns and rivers are named after Bawani. Kali Koil, or temples of Kali are scattered over the Carnatic, and by tradition a human sacrifice was made at the foundation of each of them, for this female energy of Siva is worshipped by bloody sacrifices. In the most terrific form of Kali her colour is black; face horrible; the teeth are fangs; she is represented as delighting in blood, and, when drunk therewith, dancing for joy. To this terrific form, human sacrifices which were once publicly and extensively offered are still said to be secretly though rarely made. This worship passed from Phenicia or Egypt into Greece and reached India either from Egypt or Assyria. It is only practised by a class of Saiva. I. Samuel xxiv. 12, says, 'the Lord judge between me and thee,' and when one hindoo is complaining to another of an act of injustice, he frequently says, 'God will judge between us;' or, 'the gods will judge between us;' or, 'Mother Kali will judge.' Kali was unknown in the Vedic periods of hindoo life.—*Taylor; Cole. Myth. Hind., p. 94.* See Lakshmi, Osiris, Chinna Mustuka, Durga Daruka, Hindoo, Kerari, Maha Devi, Parvati, Siva, Kasyapa, Chamunda, Devi, Kali.

KALI, SANS. Black; from kala, time.

KALI, a river which separates Kumaon from Nepaul.

KALI, see Gipsies, Zingarri.

KALI, see Magur.

KALIAN, a city of great commercial and political importance, at a very early period. It is frequently noticed by Arrian, in the Periplus, from whose work we may infer that it was a fief of Balaokouras, or the Balhara sovereigns of Balabhi, in the second century, and its extent is attested by the ruins described by Orme, in his "Fragments."—*Tod's Travels, p. 168.* See Inscriptions.

KALIANA KATTIRI-KAI, TAM. Brinjal. Egg-plant. *Solanum melongena.*—*Linn.*

KALIANA MURUKAI, TAM. Erythrina Indica, *Lam. Roxb., W & A.*

KALIANA POOSNIKAI? Cucurbita hispida.

KALIANI, a fortress in the Dekhan, west of Beder on the borders of the Kanarese, Tiling and Mahratta nations. The Chalukya dynasty of Kaliani disputed the sovereignty of the Dekhan with the Chola dynasty who held the Ceded districts and came in contact there with the Chalukya dynasty of Kaliani. The Chalukya rulers of Kaliani were overthrown by the establishment of the Lingayat or Jangama religion. The Kalinga Chalukya capital, was at Rajahmundry, and they ruled throughout the Northern Circars. Sassanum,

KALI-CHITRASWARI. Chitpore, in Bengal, on the Hooghly, is so called from the Kali-chitraswari in that village, one of those old images to whom many a human sacrifice has been offered under the regime of the brahmins. It is said of her, that a party of boat-men was rowing up the river to the sound of a melodious strain. Heightened by the stillness of the night, the plaintive carol came in a rich harmony to the ears of the goddess. She then sat facing the east, but, turning to hear the song of the boat-men as they passed by her ghât, she had her face ever since turned towards the river.—*Tr. of Hind., Vol. i, p. 2.*

KALID, see Jews.

KALI-DASA, a poet and dramatic author, who probably lived a little before the christian era. His best dramas are Sakontala or the Lost Ring, Vikramorvasi, and Megh-duta. The long poetical descriptions of Kalidasa's dramatic works have led to the supposition that these plays were written for reading rather than representation; but such was not the case, as the MSS. which have come down to us contain full directions as to the proceedings on the stage. Wit is scarcely cared for by the hindoo, whose great delight is to portray the delicate loves of innocent and bashful youths. In this art, none has excelled Kalidasa, who seems to have lived in the time of Vikramaditya the Great, A. C. 56. No poet is so celebrated and highly esteemed in India, to none have so many poems, epic, lyric and dramatic been ascribed. His play, Sakontala, is considered the gem of Oriental literature and received the rapturous applause of Goethe. Professor Wilson's list of the hindoo theatre, contains the names of only sixty pieces. Of these not more than six belong to the classical age, and two of these are the works of the famous Kalidasa. The most interesting, though it has not the beauties of the Sakontala, is the Mrichchhakati or Toy Cart, and it is the only play from any part of India which has been acted on a European stage.—*Taylor.*

KALIKA PURANA, see Kali, Tantra.

KALI KASTURI, DUK. *Abelmoschus moschatus*.

KALI KATKI, HIND. *Helleborus niger*.

KALIKI, SUNDA, MAD. *Palma christi*; *Ricinus communis*.

KALI KIKAR, DUK. *Acacia arabica*?

KALIK-KA-TAWA, an iron plate on which wheaten cakes are toasted, or the kalik collected.

KALI KULTI, HIND. *Phaseolus radiatus*.

KALI-KUTKI, HIND. *Pterorhiza kurroon*, in most books on Indian medicine, kali kutki, is termed *Helleborus niger*, but it is, in reality, exactly similar to "kaur," the produce of the *Pterorhiza*, while the "asarum," which, even in the native name, attests its resemblance to the *Asarum Europeanum*, is probably a species of valerian—*Powell's Hand-book*, Vol. i, p. 318.

KALI MATTI, HIND, black earth.

KALI MORT, HIND. *Desmodium tiliaefolium*.

KALIMUNG, HIND., BENG. *Phaseolus mungo*, Linn.

KALI MUSLI, HIND. See Moosli.

KALI NADDI, a river running near Khasgunj in the Allyghur district, the boundary between Delhi and Canouj was the Kalinadi, or "black stream," the Calindi of the Greek geographers. Delhi claimed supremacy over all the countries westward to the Indus.—*Tod's Rajasthan*, Vol. ii, p. 9.

KALI NADDI, a river of the plain of Dharwar, lat. 15° 33', long. 74° 47'. It runs south, 61 m.; west 30 m. into Indian Ocean. Length, 91 m. Navigated by the largest patimar boats for 20 m. from Mullapoor to Shendashegur, rendered easy by uniformity of channel. The words mean black stream, spelled variously, "Cali," "Kali." There are many "black rivers" in India.

KALI NAGA, see Calya.

KALINDI RIVER, see Hindoo, Kali-naddi.

KALINDRA, HIND. *Acer cultratum*.

KA-LING, BURM. A tree which grows twenty or thirty feet high, generally wild. The fruit is the size of a child's marble, used more as medicine than food.

KALINGA.

KALINGA, a name applied in the Purana, to the sea-coast at the summit of the Bay of Bengal. Its meaning is, a country abounding with creeks. The ancient kingdoms of the Carnatic were the Pandya, Chola, and Kalinga, and B. C. 75, an expedition left the eastern side of the peninsula, from ancient Kalinga, and formed a colony in Java. The Kalinga kingdom was on the eastern coast of the peninsula of India, at its upper end. The dynasty ruled at Rajahmundry and in the Northern Circars. The town of Kalingapatam alone remains to indicate the rule of that dynasty, but the term Kling or Kalen used in Burmah, to designate the people of the west of Burmah and the hindoo religion of the Javanese, seem to have come from them.

The Gaja-Pati, was a sovereign race that ruled in Orissa, but little is known of them. The name means "lord of the elephant." In the Northern Circars, Chicacole and Rajahmundry were the capitals of the Andhra sovereigns, who ruled anterior to the christian era. A more exact knowledge of these and of the early buddhist princes of Vegi or Vengi Desam, who reigned at Dara Nagara on the Kistna, near Amaravati and at Vengipuram, the exact site of which is not yet known, is an important desideratum, and only likely to be obtained from an investigation of their monumental and architectural remains.

The Kalinga Chalukya power ruled at Rajahmundry, and throughout the Northern Circars. Extant sassanams and sculptured remains exhibit several alternations of superiority between them and the Gajapati of Orissa.

The Ganapati or Kakateya dynasty ruled at Warangul. Though near the frontier, and now in the Nizam's territory, it was once the capital of great part of the N. Circars.

Of the Reddi rulers of Condavir little is known.

The succession of the buddhist rulers by the Chalukya of Rajahmundry, the subsequent sway of the Ganapati, Vema Reddi and Rayel of Bijanagar, together with their contests and the various relations between them, are little known and may yet be amply elucidated by existing remains. See Inscriptions. Kakshivatu, Chalukya, India. See Kalinga, Krishna, p. 546.

KALINGA or Uvva chettu, TEL. *Dilenia speciosa*, Thunb.

KALINGAMU, TEL. *Wrightia antidysenterica*, R. Br.

KALINGAPATAM, a sea-port town in the district of Ganjam, in long. 8° 15' E., and lat. 18° 14' N.

KALINGA RAJA, see Inscriptions.

KALINGA RASITRA GADDA or

Dumpa rashtrakam, TEL. *Globba*, *sp.* Perhaps *G. bulbifera*, *R. i*, 78, which is common in the hills of the Circars.

KALINGU, MALEAL, TAM. Any tuberous root.

KALINGULA, TAM. A sluice, a weir, or waterway, constructed in the bunds or dams of tanks to permit the escape of surplus water and thus guard against the accumulating waters overflowing the softer parts of the dam. Chadr is the Hindi name for thus.

KALINJAR, a fort in Bundelkund, see Inscriptions.

KALINJI, HIND. *Nigella* seed.

KALI-PUJA, see Kali.

KALI RAI, GUZ., HIND. Mustard seed.

KALI RATHI, see Mahā Devi.

KALI KING, PANJ. *Quercus dilatata*, Lindl.

KALI SALSOLA, *Herba salsola kali* (Sueda, *spec.*), grows plentifully at Lahore, where it is officinal.—*Dr. Honigberger*, p. 294.

KALI SARSON, HIND. *Sinapis dichotoma*.

KALISH in his commentary on Leviticus xxiii, has treated fully on human sacrifices. Though there is no apparent connection between serpent-worship and human sacrifices, these have usually co-existed.

KALI SIAMBALI, DUK. *Gendarussa vulgaris*.

KALI SIND comes from Rangri, and its petty branch, the Sodwia from Raghoo-ghur. There are four rivers called Sind in India, first the Sind or Indus; the Little Sind; the Kali Sind, or "black river;" and the Sind rising at Latoti, on the plateau west and above Seronge.

KALI SIRIN, PANJ. *Albizia lebbek*, Benth.

KALISJAM, HIND., or *Wodier marann*, TAM. *Ocina wodier*.

KALI-SIWAL, HIND. *Amarantus anardana*.

KALI SURDH, a river of Gwalior.

KALITHI NAB, TAM. ? A fibre from a species of *Ficus*.

KALI TORI, HIND. *Luffa acutangula*.

KALI TULSI, HIND. *Ocimum basilicum*.

KALIUM, also Kali metall, GER. Potassium.

KALIUN, HIND. *Chamærops ritchiana*.

KALIUN, HIND., of Salt Range, &c. See Kilu.

KALIVE CHETTU, TEL. *Carissa diffusa*, *R. i*, 689, *W. Ic.*, 427.

KALI VEEM, DUK. *Stizolobium altissimum*.

KALIYA, SANS. A serpent; from *kala*, to move.

KALI YOGA, the iron or fourth age of the hindoo, begins, according to some, 3101 years before Christ. It is estimated by Bunsen, to have commenced B. C. 986 or 866, by others is supposed to have begun on Friday, 18th February, 3102 B. C., and is to last altogether 432000 years, when all existing forms having become delineated are to be dissolved; of 432000 years, 3101 had expired on the 14th March A. D. 1. The Kali yoga of the hindoo is the present age of the world. The actual period of the world's existence, according to the astronomical calculation of the hindoo, commenced 3102 years before Christ, on the 20th February, at 27 min., 30 seconds past two o'clock. Kali yuga year, according to Wilson and Lassen, commenced B. C. 3102. "The Kali Yuga, or Iron Age, has now, lasted for five thousand years. The Purana and other Shastra, have stated that during that age there will arise many new persuasions and religious systems, which must all be regarded as spurious heresies. The sect of the Wulabhacharya is only four hundred years old. It has thus originated within the Kali age, in the same way that the followers of Dadu and of Sadhu, the Ram-snehi, the Ram Nandi, the Schejanandi, and other sects have all arisen within the Kali age, and must all, in accordance with the declarations of the hindoo Shastra, be declared heterodox."—*Wilson*; *Bunsen*, Vol. iii, pp. 511 and 547; *Warren*.

KALIYA DAMANA, SANS. From *kaliya*, the name of a snake; and *damana*, subduction.

KALIZAR, DUK., also *kawa tunti*, HIND., *Clitoria ternatea*.

KALIZAR-KI-JAR, HIND., the root of *Clitoria ternatea*.

KALI ZEWAR, HIND. *Bupleurum marginatum*.

KALI ZIRI, DUK., GUZ. *Nigella indica*. Fleabane, also *Vernonia anthelmintica*, or *Serratula anthelmintica*, also *Aplotaxis candicans*.

KALJANGA, HIND. *Aquila navia*, *Gmel.*

KALA, GER. Lime.

KALKALIN, HIND. *Rubus biflorus*.

KALKAS, ARAB. *Colocasia antiquorum*, *Schott.*

KALKA. The country of the Kalka is ancient Mongolia. Mr. T. W. Atkinson's wanderings led him to the Gobi, whose vast steppes, sandy deserts and high mountain chains give a peculiar character to this region. In a few situations he observed the bare poles of the conical yurt of the Kalka—indicating their hunting stations. The small and picturesque lake of Ikeougoun lies in the mountains to the north of Sanghindalai, and is held in great veneration by the Kalka. They erect a small wooden temple on the shore and by offering up milk, butter and the fat of the

animals, which they burn on the little altars. The large rock in the lake is with them a sacred stone, on which some rude figures are traced. The yourt of these people are constructed like those of the Kirghis, and covered with felt; but the internal arrangements differ. Opposite the doorway, a small low table is placed, on which stand copper idols and several small metal vases. The Mongol are divided into several aimak or tribes. The largest that of Kalka, is divided between four khans, who bear the following titles:—

(a) Tushtu khan, living on the banks of the Upper Selenga.

(b) Tsetsen khan, living to the east of Kiakhta, near the river Keroulan.

(c) Jassaktu khan, residing on the southern foot of the Altai mountains, on the banks of the Jabakan.

(d) Sain Noin, living in the Steppe of Gobi to the south of Ourga.

The Mongol, like the Bashkir, the Kalmuk and Kirghis, drink mare's milk, and some even camel's milk. Bergman observes, that the excessive use of mare's milk causes pain in the eyes. The country about lake Koko Nor is inhabited by the Eleuth, Torgat, Kalka and Khoit. This country is to the west of the Chinese province of Kan-son; on the west it is bounded by Tibet; on the south, by the Chinese province of Szu-tcheuan; on the north by Sou-tcheou and Ngan-si, and is about 2,000 li in extent. From the principal encampment to Peking, is 5,700 li. The Mongol of Koko Nor came from the north-west; they dwell in felt tents, and lead a nomade life. They sow but little corn; their flocks supply them with meat, which is their principal food. Selingsky, a district of the Russian empire, is situated upon the frontiers of China immediately adjoining the district of Po-la, of the division Che-ling-tchappoo, of the country of the Kalka. It is above two hundred li in extent; the country hilly throughout, but there are no very high mountains. The Mongow or Mongol are a numerous people, and occupy a large extent of country, from Selingsky to the Kalgan, which signifies the everlasting wall, or the great wall of China. From this wall they stretch themselves northward as far as the river Amoor, and from the Amoor westward to the Bekall Sea or lake, where they border with the territories of the Kon-ta-sha, (Tsevang-Rahdan or prince of the Black Kalmuk.) On the south they are bounded by a nation called Tongut, among whom the Delai-Lama has his residence. In former times the Mongol were troublesome neighbours to the Chinese, against whose incursions the great wall was built. Kam-hi, emperor of China,

was the first who subdued these hardy Tartars, which he effected more by kind usage and humanity than by the sword, for these people, are great lovers of liberty. Chao-mo-to, a place signalized by the final defeat and extirpation of the rebel Koeur-tan (Kal-dan) is the Chao-me-do of D'Anville. This battle between the Chinese and Eleuth, under the Kaldan, uncle to Tse-vang-Rahdan, the reigning prince, occurred in 1696, and is related by Moyriac de Milla in his *Histoire de la Chine*. Staunton's translation tells that the Kalka Tartar formerly composed a numerous tribe consisting of more than six hundred thousand families, inhabiting to the north of the Mogul Tartar. The Kalka live under tents along the banks of the rivers which water their country, that of Kalka-pira, though one of the smallest, and at present one of the least frequented, has given its name to the whole nation. The war which the king of the Eleuth, (the Kaldan, uncle to Tse-vang-Rahdan) carried on in 1688, against the Kalka, almost destroyed the whole nation. To avoid the pursuit of a superior enemy, they begged the assistance of the Chinese arms and offered to submit to the empire. Kang-hi undertook their defence, conquered [defeated] the king of the Eleuth, and kept the Kalka Tartar under his dominion, after having conferred upon their princes different titles of honour. Tse-vang-Rahdan was the chief of the most considerable branch of the Eleuth or Kalmuk Tartar; and although it suited the emperor of China's policy to speak slightly and even contemptuously of him, he was undoubtedly one of the most powerful princes of Asia, and in the war which soon after broke out between the Kalmuk and the Chinese, he appears to have been completely successful. The hostilities were renewed under his son and successor. The glory of a final conquest over this powerful and warlike tribe, which Kang-hi and his successor sought in vain, was however reserved for his grandson, the emperor Kien-long, who, in the year 1759, reduced them into complete subjection, and as the Turgut tendered a voluntary submission a few years after, the whole of the Kalmuk or Eleuth tribes may, with little if any exception, be considered as included within the limits of the Chinese emperor ever since that period.—*T. W. Atkinson, Oriental and Western Siberia*, pp. 441, 443, 445; *Timkowski's Journey to Peking*, Vol. i, pp. 42 to 52; Vol. ii, pp. 269 to 271; *Staunton's Narrative*, pp. 9-10, 22 to 43.

KALKASUNDA, BENG. *Cassia sophora*, Linn., *W. & A.*

KALKI. In this avatar of Vishnu he is to appear in the form of a white horse. It has not yet occurred.—*Moor's Pantheon*. See

KALLINJI.

Acasanavi, Avantara, Hindoo, India, Inscriptions, Kama, Krishna, Kurma, Man-Lion, Narasingha, Rama, Ramisseram, Sakti, Tripati, Vamana, Varaha, Vishnu.

KALKOLI or Kankol of Kaghan, Eleagnus conferta.

KALKOON or Turkey Isles, lie to the northward of the Kangean group, and extend to lat. 6° 10' N.

KALKOOR, see Bazeegar; Nut.

KALKUT, HIND., of Kaghan, Viburnum foetens.

KALL-ALIN, TAM. Ficus infectoria.

KALLA, HIND. Toddy: Kallal, Toddy-drawer.

KALL-ALIAM, TAM. Ficus infectoria, *Willde.*

KALLA BANS, HIND. Bambusa arundinacea.

KALLA BANTRU, see India.

KALLADI or Kallari. Predial slaves of Malabar. See Polyandry.

KALLAGOUK ISLAND, in lat. 15° 34' 12" N., long. 97° 38'; in the opening of the gulf of Martaban, is a small island, rising about 150 feet above the sea, with few trees and with a small skirting shore, with indenting bay, in which mangroves grow. It has also the name of Curlew island, when the Editor visited it in 1863, it had only, as inhabitants, the labourers' quarrying stones for the light-house at Cape Negrais. Its rock is granite.

KALLAL? Palm-wine drawers, from the TEL., Kallu, palm wine.

KALLAMI, see Japan.

KALLANU, KARN., thieves, the Collierie of the early English writers.

KALLAR, HIND. Saline impregnation of soil.

KALLA RAVI, or Ravi, TEL. Ficus religiosa, Linn, a syn. of Aswattha. Kalla, signifies eyes.

KALLEKKA, see Katiow.

KALLI? Cynanchum viminalis.

KALLI, TAM. Euphorbia tirucalli.

KALLIAN, see Kallian, Koli.

KALLI CHEMUDU, TEL. Euphorbia tirucalli, Linn.

KALLIG-IKON, one of the names given by Ptolemy to the Promontory of Koru, or Kalli medu, opposite Ceylon.

KALLI MALAIAN, TAM. Caralluma adscendens.

KALLI-MEDU, TAM. Lit. Cactus eminence, is the Point Calimere of the English.

KALLINJI, a weight used in Ceylon for pearls, supposed, like the chow, to contain 320 fractional parts. One kallinji is equal to 20 manjadi, each containing 7½ grains troy. — *Simmond's Dict.*

KALMUK.

KALLI NUDDY, a river near Deobund in Saharunpoor, runs past Booldundshahr, near Gangherree in Allygurh, near Danpoor and near Khodagung in Futttehghur. See Kalinadi.

KALLI SINDH river runs near Peeplia in Schore, near Tappah in Gwalior, and near Surkairlee in Kotah. See Kali; Sind.

KALLIYON, a Persian pipe, in which the smoke is drawn through water, by means of a stalk about two feet long, instead of a pipe or snake of twelve or fourteen, as with the Indian hookah. These, however, are of two sorts; the Kurnyee and Dastah, or snake and hand Kallyun; the one having a long pliant snake, similar to the hookah of India made of leather; and the other being, as its name denotes, held in the hand, and smoked through a short tube, often made of gold or silver, and beautifully enamelled. — *Fraser's Journey into Khorasan*, p. 62; *Pottinger's Travels in Beloochistan and Sinde*, p. 210. See Kallyan.

KALLOO, TAM., TEL. Palm wine.

KALLOW MOW, MALAYALA. A tree which grows to above sixteen inches in diameter and twenty feet in height. Its nut is food for monkeys and other forest animals, the wood is used for various purposes, but is of little value. — *Edye M. & C.*

KALL PASHI, TAM. Lichen rotundatus.

KALLU, TAM? Dolichos uniflorus, Lam.

KALLUI, see Kilat

KALLU-KUTIGA, KARN., a stone-cutter, a stone mason.

KALLUMATADA-AYYA KARN., a Lingamite priest.

KALLU WANDERU, Presbytes cephalopterus.

KALL VALEI MUNNI, TAM. Canna Indica.

KALLYAN, HIND. of Kashmir, a sort of hukka corrupted from ghalian, Arabic for a hukka. See Kalliyon.

KALKACHCHAN, MAL. Stone-cutter.

KALM, HIND. Grus cinerea, the crane of Europe and India. See Kalang.

KALMAH, ARAB. The mahomedan creed. Mahomedanism comprises five divine commands, 1st—Kalmah parhwa, or confession of faith; 2nd—Namaz karna, or prayers; 3rd.—Roza rakhna, or fasting; 4th—Zukat dena, or alms-giving; 5th—Makkay ka haj karna, or pilgrimage to Mecca. See Kalamah.

KALMIS WURTZEL, GER. Sweet flag.

KALMUK, an Uzbek Tartar tribe who returned at the close of the last century from the Black Sea to their original seats on the frontier of China. Many of the inhabi-

KALMUK.

tants of Turkistan described to Lieut. Burnes their mode of travel. The migrants, reported at 100,000 families, advanced with their herds and flocks, occupying in the breadth of the advancing column a journey of no less than three days, forced its way through all opposition to the Dasht-i-kipchak north of the Jaxartes and reached the primeval seat of their ancestors at Yarkand and Eela. The mahomedans of Bokhara captured about 1,500 and made them slaves. The Kalmuk and the Uzbek are said to have sprung from one tribe, and this change of habitations has now mixed it with the Kazzak, a great tribe that once lay to the eastward of it; and Kalmuk, Kazzak and Karghis are now mingled together. Other instances of such voluntary and forcible migration have occurred in Afghanistan within the nineteenth century though on a smaller scale than the above. After the English mission had left Herat, the vizier Yar Mahomed pressed Ibraliim khan of Gour, who had 7,000 families of Taymuni under his rule, and after having completely devastated the country which they occupied, Yar Mahomed removed them to Herat where he established some in the city and the remainder in the suburbs. Subsequently to this, in the beginning of 1846, when Yar Mahomed marched with his army in the direction of the Murghab, on the banks of which river some Hazara Zeidnat were encamped, they decamped into the Persian territory, and Asof-ud-Dowlah gave them the village of Karez on the frontier of Herat. After the removal of Asof-ud-Dowlah, however, at the close of 1846, Yar Mahomed marched against the small Uzbek khanats in the north of Khorasan, and attacked and defeated the Hazarah chief Karim Dad khan, in the open country of Killah-nun. Yar Mahomed encamped upon the field of battle, and in the space of eight days collected ten thousand families of the Hazarah Zeidnat whom he removed from their native soil to that part of the district of Herat, reaching from Obek to Goian, where he settled them on the banks of the Herri Rud. By these forced migrations of the Taymuni and Hazarah, the Herat principality became more populous than it had been previously to the siege of Herat in 1838, and Yar Mahomed obtained the further advantage of keeping under his eye the most turbulent inhabitants of his dominions. He made excellent soldiers of these Einnak, and by their amalgamation with the Affghans it became almost impossible for the former to betray him.

As another, though more remote instance, it may be mentioned that the dynasty which founded Ahmedabad, erected it out of the

KALORA.

ruins of Chandravati, and not only eclipsed it, but also Anhulwarra, the more ancient capital of Guzerat. When Ahmed, the grandson of the apostate Jaka, better known in history under his mahomedan name of Wujeh-ul-Moolk, determined to immortalize himself by a new capital, the site he chose was the residence of a Bhil community, whose marauding exploits were the terror of the country; in order to commemorate its extirpation, he disregarded its local disadvantages, and the city rose upon an uninteresting, unhealthy, low flat, on the banks of the Sabermaty. Not content with transporting the materials of Chandravati, he resolved that its soul as well as body should migrate, that the population should follow the spoils of the temples and the dwellings. Another general migration was once attempted by Mahmud, the Ghiliji, who resolved that Delhi should take root on the Vindya hills, but Mandoo and Ahmedabad shared the like fate.—*Ferris's Hist. of Affghans*, p. 486; *Tod's Travels*, p. 129; *Cunningham's History of the Sikhs*, p. 258. See Kalka, Mongol, Kazzak, Jews, Vikrumajita, India.

KALNA, see Linga.

KALNEII, M. de Breeses, one of the Presidents of the Royal Academy in Paris, supposes that Kalneh stood on the side of Ctesiphon.—*Mignan's Travels*, p. 73.

KALNEII, an ancient town on the Khabar river.

KALOO-HABARALEYA-GASS, SINGH. *Macreightia buxifolia*, Pers.

KALOE of Sumatra. China grass.

KALO JAM, also Kalo-jamun, BENG. *Eugenia jumbolana*, Lam.

KALOO-KADOOMBAIREYA-GASS, SINGH. *Diospyros oppositifolia*, Thw.

KALO-KERA, BENG. *Capparis brevispina*, D.C.

KALON, or Kelu, HIND., of Chamba, Chenab and Ravi. *Cedrus deodara*, deodar or Himalayan cedar.

KALONJA, HIND. *Nigella indica*.

KALOOCHIA, URIA? A tree of Ganjam and Gumsur, of extreme height 25 feet, circumference 2½ feet, and height from group to the intersection of the first branch, 12 feet. It is used for posts and ploughshares and is burnt for firewood.—*Captain Macdonald*.

KALOO-MIDEREYA-GASS, SINGH. *Diospyros quæsita*, Thwaites.

KAL OOWARA GASS, SINGH. *Diospyros ebenum*, Linn.

KALORA, a dynastic title of former

KALINA.

rulers in Sind. They sprung from Adam shah, a Beluchi religious man of A. D. 1450. They received a jaghire from Aurungzeb in 1705, and were made naibs of Tatta in 1735. They were transferred to Persia by the treaty with Nadir shah. The dynasty ended in 1788 by the succession of the Talpur. According to Captain Postans, the Kalora were a tribe of wandering religious mendicants, who for nearly three centuries had been settled in Sind and about the year A. D. 1450. Adam shah, a Baluch of this tribe, obtained fame as a devout man, and from him the dynasty arose. They were overthrown by the Talpur in 1768, (or 1788.)—*Burnes; Postan's Personal Narrative*, pp. 164-5.

KALO SHIM, BENG. *Canavalia virosa*, W. & A.

KALO TULSI, BENG. *Ocimum sanctum*, Linn.

KALOVI, SUMATRA. China grass.

KALPA, SANS., the bright half of a day of Brahma. A creation or formation, a cycle of years. In hindoo theogony, at the end of every Kalpa (Creation), all things are re-absorbed in the deity, who, in the interval of another creation, reposes himself on the serpent Sesha (duration), who is also termed Ananta (endless). In hindoo astronomy, a Kalpa is an age of time : a day of Brahma, 4,320 millions of years. Amongst the buddhists of Ceylon, it is the period of a mundane revolution.—*Wilson; Warren, Kala Sanhita; Hardy's East. Mon.*, p. 437.

KALPA, HIND? *Andrographis paniculata*, also *Portulaca oleracea*.

KALPA DRUMA, see Indra.

KAL PASHI or Kalpasi, TAM. A valuable diuretic, identified by Ainslie with the Lichen rotundatus of Rottler? It is the Pathar-ka-Phul, Hind., or rock flower, and Henna-Ui-Koresli, Arab. Its value as a diuretic is especially when applied as a poultice over the kidneys.

KALPA SUTRA, see Jain.

KALPA-TREE, amongst the buddhists a magical tree, that gave whatever was desired.—*Hardy's East. Mon.*, p. 437.

KAL'R, HIND. A saline efflorescence : the reh of Hindoostan, detrimental to cultivation. It is also a saline earth yielding saltpetre ; also earth impregnated with reh, but also means a soil which remedies the reh, used by dhobies for washing.

KALRATHI, HIND. Gujranwalla rohi is land mixed with kankar.

KALRI-LUN, HIND. Salt reduced in the process of making saltpetre.

KALTHAUN, HIND. *Bignonia suaveolens*, also *Ehretia serrata*.

KALTINA, a river of Lucknow.

KALUSA.

KALU, a pass in the Hindu Kush 13,400 miles above the sea, near Bamian. That a city was here situated in ancient times is proved by the position of Bamian, on the high road from India to Bactria,—lying as a valley at right angles to the path, and between the two passes of Kalu and Ak-rohat,—two passes in the Hindoo Koosh, between which runs the pass of Bamian.

KALU, GUZ. Oyster.

KALU, BENG. A maker and vendor of oil by caste.

KALU ATTANA, SINGH. Thorn apple.

KALUCHO, HIND. *Ilex dipyrrena*.

KALUDUMUM, TAM. A tree with remarkably heavy and very close grained wood, much resembling English pear tree wood ; it grows to about eighteen inches in diameter, and from twelve to fifteen feet long : it is used for purposes where strength is required. Edye imagined it to be not very durable, or that it is not to be procured in any quantity, as it was but little known.—*Edye, Forests of Malabar and Canara*.

KALU DURU, SINGH. *Nigella* seed.

KALU GACHCHA or Bhavanji chettu, TEL. *Psoralea corylifolia*, L., Br.

KALUGORU, TEL. *Stereospermum chelonoides*, W & A.

KALUGUDU or Garugu chettu, TEL. *Garugu pinnata*, R.

KALUI, SUMAT. *Bœhmia nivea*.

KALUI RIND, see Kelat.

KALUKA, see Kyan.

KALU-KRANUGA, TEL. The name means "stone or rock Pongamia."

KALU-MAWUL ATIYA, SINGH. *Guilaudina bonduc*, Linn., W & A.

KALUMB of Mozambique. Colombo root.

KALUMBI, SANS. *Basella alba*.

KALUMEDERIYE, SINGH. Calamander wood. *Diospyros hirsuta*.

KALUNA, HIND. Hardy rice, sown in unirrigated land.

KALUNGI, HIND. *Nigella indica*.

KALUNGU, MALAY. Tin.

KALUNJEN, DUK., HIND. *Nigella sativa*.

KALUPNATH or Maha Titu, BENG., HIND., great bitter *Andrographis paniculata*.

KALURANA, SINGH. *Helleborus niger*.

KALUSA. On the first night of the Dassara festival at Parvatty, the Kalasa, or sacred water jar, is cleansed, and consecrated by the officiating brahmins ; this vessel being considered as a symbol of the goddess, for the principal object of worship during the Dassara, and bears three curious signs, according to the three principal castes of brahmins ; these are hieroglyphic figures, denoting the character and attributes of Doorga, and so truly are their

forms Egyptian that many learned writers have engaged, from their coincidence, to prove the identity of the hindoo ceremonies of the Dassara, with those which celebrate the inundations of the Nile.—*Postan's Western India*, Vol. ii, pp. 165-6.

KALUWI, SUMATRA. The nettle *Bœhmeria nivea*, of which excellent twine, called pulas, is made. It grows to the height of about four feet, has a stem imperfectly ligneous, without branches. When cut down, dried, and beaten, the rind is stripped off, and then twisted as we do the hemp. Dr. Roxburgh introduced it into India and expressed the opinion, that so soon as a method should be discovered of removing a viscid matter found to adhere to the fibres, the Kahuwi hemp or pulas, would supersede every other material.—*Marsden's Sumatra*, p. 91.

KALZANG, HIND. *Chrysanthemum Indicum.*

KAM, HIND. *Nauclea parvifolia.*

KAM, see Kanya.

KAMA, amongst the hindoo deities, takes the place of Cupid. Ananga is a poetical epithet of the hindoo Cupid, literally incorporeal; from a, privative; and anga, a body. This hindoo deity appears evidently to be the same with the Grecian Eros and the Roman Cupido: but the Indian description of his person and arms, his family, attendants, and attributes, has new and peculiar beauties. According to the mythology of the hindoos, he was the son of Maya, or the general attracting power, and married to Reti, or Affection; and his bosom friend is Vassantha or Spring. He is represented as a beautiful youth, sometimes conversing with his mother and consort in the midst of his gardens and temples; sometimes riding by moonlight on a

parrot or lory, and attended by dancing girls or nymphs, the foremost of whom bears his standards which are a fish on a red ground. His favourite place of resort is a tract of country around Agra, and principally the plains of Matra; where Krishna also, and the nine Gopia, who are clearly the Apollo and Muses of the Greeks, usually spent the night in music and dancing. His bow of sugarcane, or flowers, with a string formed of bees, and his five arrows, each pointed with an Indian blossom of a heating quality, are equally new and beautiful. He has at least twenty-three names, most of which are introduced in a hymn by Sir W. Jones, that of Kam or Kama, signifies desire, a sense which it also bears in ancient and modern Persian. And it is possible, that the words Dipuc and Cupid, which have the same signification, may have the same origin; since we know that the old Etruscans, from whom great part of the Roman language and religion was derived, and whose system had a near affinity with that of the Persians and Indians, used to write their lines alternately forwards and backwards, as furrows are made by the plough. The Indian Maya, or, as the word is explained by some hindoo scholars, 'the first inclination of the godhead to diversify himself,' such is their phrase, by erecting worlds, is feigned to be the mother of universal nature and of all the inferior gods, as a Kashmirian informed when he was asked why Kama or Love was represented as her son. But the word Maya, or delusion, has a more subtle or recondite sense in the Vedanta philosophy; where it signifies the system of perceptions, whether of secondary or primary qualities, which the deity was believed, by Epicharmus, Plato, and many truly pious people, to raise by his omnipresent spirit in the minds of his creatures, but which had not, in their opinion, any existence independent of mind. Maya or Ada Maya, is a name of Lakshmi: she is thus the general attracting power; the mother of all; the Sacti, or energy, of Vishnu, the personification of Spirit, she, as attraction, unites all matter, producing love in animated nature, and in physics, the harmonization of atoms. Kama or Love, is her offspring, and is united in marriage to Reti, or Affection, the inseparable attendant on the tender passion; and in friendship to Vassantha, (commonly pronounced Bassantha,) or Spring, denoting Love's season, but literally in regard to the time when most animals are impregnated and vegetables burst into existence, and metaphorically touching the early portion of man's passage through life. There is an allegory of Kama being an avatara or son of Krishna, by Rukmeni, other names of Vishnu and Lakshmi, and this is a

farther instance of the correspondence of that goddess with the Roman Venus, the mother of Cupid. His riding or dancing by moonlight, allude to the love-inspiring serenity of the time ; such nights, about Agra, and in the southern parts of India, affording after the heat and tumult of the day, a delicious quiet feeling of happiness not easily communicated nor conceivable by the mere experience of the unsettled cloudy skies of northern latitudes. The banner of Kama, a fish on a red ground, and his vahan or vehicle, a parrot or luri, have doubtless their allusions, the former possibly to the stimulating nature of that species of food, stirring the blood to aid Kamdeo's ends ; and, perhaps, the ensanguined colouring and extreme beauty of the lori, and like the fish (and the dove of western mythology) its supposed aphrodisiac tendency as food, may have had a share in guiding a selection of attributes for the ardent deity. The soft affection and fabled constancy of the dove may have weighed with the Greeks, although constancy may not, perhaps, be, in strictness, a striking characteristic of love. Kama's five arrows are each tipped with the blossom of a flower, which is devoted to, and supposed to preside over, a sense : the flowers are of a heating, inflaming quality ; and are named, and well described, in these lines of the hymn, by Sir William Jones, which paint Vasanta preparing the bow and shafts for his mischievous friend :

'He bends the luscious cane, and twists the string
With bees, how sweet ! but, ah ! how keen their sting !
He with five darts tips their ruthless darts,
Which through five senses pierce enraptur'd hearts :
Strong Chumpu, rich in odorous gold ;
Warm Amer, nurs'd in heavenly mould ;
Dry Nagkeser, in silver smiling ;
Hot Kittleum, our sense beguiling ;
And last, to kindle fierce the scorching flame,
Loveshaft, which gods bright Bela name."

The Chumpu, or Champa, more classically called Champaka, is the *Michelia champaca* of European botanists : it is of two sorts, white and yellow, small, and in its foliage like an expanded rose-bud. Gardeners make, and expose in the shops, chaplets and long strings of the blossoms, with which the hindoo women, on the supposition that its fragrance excites favourable sensations in the votaries of Kama, decorate their hair and wear round their necks ; its potency is, however, so great, that nerves unaccustomed to it can scarcely bear its odour within doors. Another flower, commonly called mugri, or mogri, is of the same description, and may, perhaps, be one of these classically named in the hymn. The fragrance of the Chumpu is so very strong that bees refuse to extract honey from it, a circumstance that could not escape the keen eye of the hindoo poets ; and they

accordingly feign the Chumpu to be sadly mortified at this neglect. They have, however, afforded it consolation, dedicating it to Krishna, the black deity, as they, contrary to some European poetical naturalists, consider the union of yellow and black peculiarly beautiful. Krishna is mostly seen profusely decorated with garlands of flowers. The Chumpu is farther consoled by the preference it has obtained in bedecking the glossy locks of black haired damsels, as just noticed, also in the following stanza, literally translated from the Sanskrit :—That thou art not honoured by the ill-disposed bee, why, Oh ! Champaka ! dost thou so heavily lament ? The locks of lotos-eyed damsels, resembling the fresh dark clouds adorning the sky ; let these embellish thee—(*As. Miscellany*, Vol. ii.) We will here add another couplet, from the same works, a translation from the Brij dialect ; premising, that hindoo ladies sometimes wear a little mirror, called chury, of polished metal, in a ring on the tomb, and that the lotos is the emblem of female beauty. Krishna, who had concealed his passion from the parents of a damsel whom he secretly visited, unfortunately chanced to find her in the midst of her relations ; how great his distress ! He was averse to departing without expressing his passion, words were debarred, both were embarrassed, love prompted :—

"He, with salute of deference due,
A lotos to his forehead prest ;
She rais'd her mirror to his view,
And turn'd it inward to her breast."

The Amer, mentioned in the extract from the hymn, is also called Amra, and Amla, and is said by some to be the mango flower. Dry Nagkeser is also called Kesara : it is a handsome flower, with yellow and white petals. The Bela is a beautiful species of jasmín. Among a refined people, advantageously situated in a low latitude, we naturally expect to find love, in its vast variety of relations, no inconsiderable portion of their occupation and amusement. Books and tales on amatory topics are very abundant ; and, in common life, allusions are constantly occurring to Kama and his excitations. It will be recollected, that Kama is the son of Krishna ; who being Vishnu, is called, Madhava.—(*The Hindoo Pantheon*, pp. 449 to 451.) Whether we consider this universal deity (alike, through all ages and all climes, the object of the hero's, the blockhead's and the wise man's invocation), as Anteros with his leaden arrow ; or as the beautiful Eros with his golden dart ; as the Egyptian Horus with the wings of the Etesian winds, or as the hindoo adored Kamdeo, with bee-strung bow and flower-tipped arrow, whether we con-

KAMA.

sider him as the son of Jupiter, or Mars and Venus ; of Porus, the god of counsel, and Penia, the goddess of poverty ; of Cœlus and Terra, or of Zephyrus and Flora ; or as the son of Brahma, or of Vishnu, or Krishna, or which, heaven forefend, of Maya or illusion, this we know,

"Whate'er thy seat, whate'er thy name,
Seas, earth, and air thy reign proclaim.
Wreathy smiles and roseate pleasures,
Are thy richest, sweetest treasures.
All animals to thee their tribute bring,
And hail thee universal king."

The image of this god is represented as a beautiful youth, riding on a lori or parrot with emerald wings. He is supposed to be accompanied by his consort Reti, or affection :

"Thy consort mild, affection ever true,
Graces thy side her vest of glowing hue."

As with all hindoo deities, Kama's genealogy is traced upwards to the sun, who is Brahm. Lakshmi, in a divine and mortal view, both as Maya and Rukmeni, is his mother, she is Vishnu's wife, and is, his Sacti, or energy : Vishnu, or Krishna, Kama's father, is the sun, the source, literally and figuratively, of warmth and union, affection and love.—(*Moor*, p. 437.) Professor Wilson tells us that, in hindoo theogony, the same sentiment was evinced in the creation of the world in Brahma and in Siva. Kama was scarcely created before he thought proper to make Brahma enamoured of his own daughter. Inspiring Siva with love for Parvati was a more dangerous feat, and the archer god, although he succeeded, was reduced to ashes by the object of his triumph—(p. 21.) The Makara which Kama bears on his banner is an aquatic monster something like the sign of the zodiac Capricornus.—(*Hind. Theat.*, Vol. ii, p. 84.)

What potent god, from Agra's orient bow'rs
Floats through the lucid air, whilst living flowers
With sunny twine the vocal arbours breathe
Hail power unknown !

* * * * *
Know'st thou not me ? * * * * *
Yes, son of Maya, yes, I know
Thy bloomy shafts and cany bow,
Cheeks with youthful glory beaming,
Locks in braids ethereal streaming,
Thy scaly standard, thy mysterious arms,
And all thy pains and all thy charms.
God of each lovely sight, each lovely sound,
Soul-kindling, world-inflaming, starry crown'd,
Eternal K'ama ! Or doth Smara bright,
Or proud Ananga give thee more delight ?
What'er thy seat, whate'er thy name,
Seas, earth, and air, thy reign proclaim ;
Wreathy smiles an roseate pleasures,
Are thy richest, sweetest treasures.
All animals to thee their tribute bring,
And hail thee universal king.
Thy consort mild, Affection ever true,
Graces thy side, her vest of glowing hue,

KAMADENOU.

And in her train twelve blooming girls advance,
Through golden strings and knit the mirthful dance,
Thy dreaded implements they bear,
And wave them in the scented air,
Each which pearls her neck adorning,
Brighter than the tears of morning,
Thy crimson ensign, which before them flies,
Decks with new stars the sapphire skies.
God of the flow'ry shafts and flow'ry bow,
Delight of all above and all below !
Thy lov'd companion, constant from his birth,
They'n clep'd Bessent, and gay Spring on earth,
Weaves thy green robe and flaunting bow'rs,
And from thy clouds draws balmy show'rs,
He with fresh arrows fills thy quiver
(Sweet the gift and sweet the giver !)
And bids the many-plumed warbling throng
Burst the pent blossoms with their song.
He bends the luscious cane, and twists the string
With bees, how sweet ! but ah, how keen their sting !
He with five flow'rets tips thy ruthless darts,
Which thro' five senses pierce enraptur'd hearts :
Strong Chumpa, rich in od'rous gold,
Warm Amer, nurs'd in heav'nly mould,
Dry Nagkeser, in silver smiling,
Hot Kiticum our sense beguiling,
And last, to kindle fierce the scorching flame,
Loveshaft, which God's bright Bela name.

In the Tamil country, this hindoo deity is usually called Manmatha, or heart agitator. Manasija or heart-born, Ananga or the bodyless. The last days of spring are dedicated to Kamadeva, the hindoo god of love. There is no city in the east where the adorations of the sex to Kamadeva are more fervent than in Udyapura "the city of the rising sun." On the 13th and 14th of Cheyt they sing hymns handed down by the sacred bards : "Hail, god of the flowery bow ? hail warrior with a fish on thy banner ? hail, powerful divinity, who causeth the firmness of the sage to forsake him !" "Glory to Madanna, to Kama, the god of gods ; to him by whom Brahma, Vishnu, Siva, and Indra are filled with rapture. Kamadeva's arrows are tipped with the flowers of Mesua ferrea ; Pandanus odoratissimus : Mangifera indica. Calotropis gigantea.—*Tod's Rajasthan*, Vol. i, p. 255 ; *Sir W. Jones' As. Res.*, Vol. i, p. 221 ; *Sir W. Jones' Hymn to Camdeo*, Vol. xiii, pp. 237-9. See Grecian Mythology, Inscrptions, Osiris, Vahan, Canu, Brahmadica, Kameiri, Koel.

KAMACHI KASSUVU, also Kamachi Pillu, Tam. Andropogon citratus ? A. schænanthus, *Linn.* Lemon grass.

KAMADENOU, signifies the desirable cow, she gives all the nourishment that can

KAM ALOO.

be wished for; according to Sonnerat her picture is placed in the temples of Vishnu where she is represented with wings, having the head of a woman, three tails, and a little calf, which she suckles.—*Sonnerat's Voyage*, p. 18. See Kama-dhenu.

KAMA-KAMPA. To render the analogy perfect between the vessels emblematic of the Isis of the Nile and the Ganges, there is, amongst the hindoos of India, a festival sacred to the sage Agastya, who presides over the star Canopus, when the sun enters Virgo (Kaniya). The "Kamacumpa" is then personified under the epithet Kumbhayoni, and the votary is instructed to pour water into a sea-shell, in which having placed white flowers and unground rice, turning his face to the south, he offers it with this invocation: "Hail, Kumbhayoni, born in the sight of Mitra and Varuna (the sun and water divinities), bright as the blossom of the cusa (grass), who sprung from Agni (fire) and Maruta."

KAMADHENU, a wonderful cow, in Swarga, the world of the gods.

KAMAKHYA, SANS. From kama, desire, and akhya, an appellation.

KAMAKSHI, (Lust Eye) the sakti of Ekambeswara.

KAMAL, HIND. *Nelumbium speciosum*, Willd., the lotus, amongst hindoos, the emblem of female beauty.

KAMAL, MALAY. *Tamarindus indica*, Linn.

KAMANAN also Manan, MALAY. Frank-incense.

KAMANCHI CHETTU, TEL. *Solanum rubrum*, Mill.

KAMANCHI GADDI or Chippagaddi, TEL. *Andropogon schoenanthus*, L., a fragrant grass.

KAMAND, HIND. *Saccharum officinarum*.

KAMAON, a British province, situated in the tract of hills lying between the western branch of the Gogra, known as the Kali-Naddi, and the river Ram Ganga. Kamaon and all the provinces to the west were ceded to the British on the 15th May 1815, by a capitulation signed by Umr Singh, by which the Sikhs retired to the east of the Kali-Naddi or Gogra. Kamaon district extends from lat. 28° 40' to 31° N., and from L. 78° to 81° East. For some time, the town of Almora was recognised as the capital, but formerly Champawtee enjoyed that distinction. The face of the country is similar in character to that of the neighbourhood, but it is less savage and rough than Gharwal. The hills are less lofty, and the valleys more susceptible of cultivation, and better cultivated. The people are said also to differ from the inhabitants of Gharwal and the states to the westward, they are of a softer and more effeminate nature, inclined to indolence, and are meek and enduring. It is further stated that the men are more engaged in domestic occupations while the agricultural labours are conducted by the women—an unnatural division of duties which is said to have induced polygamy in a very prevailing degree, every one being anxious to secure for himself as many field labourers as possible. In general they seem to have made a much farther progress towards refinement, than their neighbours in their manners and customs, even in their dress they approach more to the people of the low countries than those of the neighbouring hills. They generally wear cotton garments, and on their head a cotton cap instead of the low country turban; but those in the low parts seldom wear any of the woollen or hempen manufactures of the country. Kamaon has, as its rivers, the Kalee, Gooree, Bishungunga, Ramganga, Kosee, Dubhka, Gurra, Surjoo. Its chief towns are Hurdwar on the Ganges; Nujeeabad, Mo-

KAMATHI.

radabad; Rampoor on the Kosee; Keeorar on the Nubul nuddy, Mularee on the Geertee, Sreenugur on the Bishungunga; Kaasheepoor; Sunkhot, Almora; Chumpawut, Pelee-bheet on the Garra river. All the rivers of Kumaon abound in gold-dust, and this precious metal is sometimes found in large pieces. There is a gold mine at Dango Bookpa, twelve days' journey S. E. of Mansarowar, and very lately they say one has been discovered between Goongeoo and Mansarowar, which was immediately shut up by orders from Lhasa. The people told Captain Gerard that after the sand of the river is washed so as to be free from all the lighter particles, it is mixed with quicksilver, and the gold is detected by observing the pieces tinged by that metal, which is afterwards evaporated by heat. The Rawat of Kumaon, lead a wandering and uncivilized life in the forests on the eastern borders of the district.—*Fraser's Himala mountains*, p. 537; *Capt. Gerard's Account of Koonawur*, p. 155; *Wils. Gloss.*

KAMARKHAS, HIND. *Butea frondosa*, Roxb.

KAMBA, HIND. *Careya arborea*, Roxb.

KAMBAN, a celebrated Tamil poet, the writer of the Ramayanum in Tamil.

KAMARTHI, HIND. A person who carries the water of the Ganges to distant places in vessels cased in basket-work.—*Wils.*

KAMARAL-NEEBOO, HIND. Citrus acida.

KAMARAN, an island in the Red Sea, midway between the ports of Lohiaia and Hodaida. It is about 11 miles long, and from 2 to 4 broad, and one mile distant from the main land. Its occupants are engaged in the pearl and turtle fisheries, and vessels often touch there for wood and water.

KAMBIA, *Can. Carey a arborea*.

KAMBING, *Malay.* A goat. In Malay, the goat has two names, Kambing and Bebek, the latter, being also, the name for the domestic duck in the Javanese language.—*Crawford's Dict.*, p. 143.

KAMBING UTAN, *Malay.* *Nemarrhedus sumatrensis*, *Ham. Smith.*

KAM-BINJ, *Pers., Pusht.* A water melon of Candahar.

KAMBI PISINI, *Tam.* Gum of *Gardonia lucida*.

KAMBLE PALAM, *Tam.* *Morus indica*.

KAMBO, *Tam.* *Gardonia lucida*.

KAMBOJIA, a small kingdom lying between Siam and Cochin-China, containing about 500,000 people of whom 4-5ths are the native Kho. It contains the four provinces, Potisat, Kampong Suai, Kampong and Kam-pot Son. Cambodia, Kamboja, or Cambodia, was anciently called Kam-phu-chu, its modern name is Khmer. The chain of mountains which divide Siam from Cambodia is little known, but where it has been seen or visited the elevations are found to be of a moderate height, and are clothed with vegetation. Communications with Cambodia, are for the most part tardy and difficult. It was formerly an independent kingdom, extending from $8\frac{1}{2}$ to 20° of N. lat., but for the past three centuries its influence has been on the decline, Cochin-China on the one side, and Siam on the other, having appropriated large portions and only four provinces, two landward and two maritime, now remain to it. Its commerce is in rice, ivory, silk and cardamoms. The whole of the coast from Kamas, in Cambodia, quite up to what is called by the Siamese Lem Sam-me-san, the Cape Liaut of Europeans, is an uninterrupted archipelago of beautiful islands. Sovereignty over the kingdom of Cambodia, is now claimed both by Siam and Cochin-China, and the Cambodian prince, unable to resist either of the sovereigns pays tribute to both. The Kambojans are no longer a distinct and independent nation, the eastern part of their territory having been subjugated by the Cochin-Chinese and the western fully taken possession of by the Siamese, and the latter, with the co-operation of the Kambojan's under their rule, have retaken Pen-nom-pen and held the occupancy of it, for several years. This place is situated on the great river called Mé-Kong. From this place north, to the sources of the river, it is believed, the Cochin-Chinese have no possessions on the west side of the river, and it may be stated that the Mé-Kong is the

western boundary of Cochin-China and consequently the eastern boundary of Siam. The only part of the continent of Asia, the Malay peninsula excepted, in which the Malays have settled and to which their language has extended, is Cambodia, correctly Kamboja, which appears to be a Malayan word. In that country, they seem to have established a little independent principality called Champa, well known both in Malay and Javanese story. Both the Malays of the peninsula and the Javanese appear to have carried on a commercial intercourse with Champa, and the same commerce still goes on between Champa and the British settlement of Singapore. The Cambodians who are subjects of Siam occupy the southern districts of the Mé-kong down to the frontiers of Cochin-China. Up to the latitudes 12° to 13° N., tribute is said to be regularly paid especially by the fertile province Bataleang. The river Mé-Kong of Kamboja is one of the largest in Asia. It is said to have its origin in a lake within the Chinese province of Yu-nan, and to be navigable for boats even before it enters the kingdom of Laos, between the twenty-second and twenty-third degrees of North latitude. It falls into the sea by three mouths, between the ninth and eleventh degrees. These three embouchures are known to European navigators by the names of the western or Basak river, the eastern or central branch, and the northern or Japanese river. The first of these is the largest, and the more suitable for navigation, and is said to have from fourteen to eighteen feet water on the bar at its mouth, at high-water spring tides. Besides the Annam race, the inhabitants of the present dominions of Cochin-China consist of several other races. The principal of these are the Kambojans, whose name in their own language, is Kammer or Khmer, but who are called by the Siamese, Kammen; by the Cochin Chinese, Komen; by the Chinese, Tang-po-cha, and by the Malays, Kamboja; which last is, no doubt, the word which has been borrowed by Europeans, and most frequently written Cambodia. The ancient territory of the Kambojans appears to have embraced all the country lying west and south of the river of Saigon, extending on the Gulf of Siam as far north as the twelfth degree of latitude, and in the interior, at least to the fifteenth. The Kambojans speak a language distinct from those of all their neighbours; but in physical form, manners, laws, religion, and state of civilization, they bear a closer resemblance to the Siamese than to any other people. A few of its people have embraced christianity. In Cambodia, is the great temple of Na-khon-Vat. It seems to have been

KAMEEL.

built in the tenth century. It is 600 feet at the base, and in the centre 180 feet high. Every angle of the roof, every entablature, and every cornice bears the seven-headed serpent. Ujong is the capital of Kambojia. The Anam, Kambojan, Siamese, Mon, Burman and the other Ultra-Indian languages, are all characterised by strong complex sounds. The Anam and Siamese abound in complex vowel sounds and the Burman family in complex consonantal sounds which are harsh in Singpho, less so in Rakhoing, and much softened in Burman. The Anamese group amongst whom are the Moy, are found in Cochin-China and Tonkin. They are a section of the division to which the Chinese belong. Two thousand years ago, or two centuries before Christ, the Chinese found the Anam race in possession of the basin of Sang Koi.

In physical appearance, the Anam race, in size, form of the head and person, expression and temperament, have a close resemblance to some Indonesian tribes. The Javan group has a larger admixture of the Anam type than the Sumatran or Borneon. Anam heads are common in eastern Java and especially among the Bawian and Maduran peoples. The Malay and western Javan have frequently a more Siamese form. The Anam race want the large straight faces, flat occiput, lowness of the hairy scalp, comparatively small and firm mouth, hard staring eye and grave expression of the Siamese. Anam is Cochin-China: Laos and Ahom belong to Anam.—*Bowring's Siam*, Vol. i, p. 683; Vol. ii, p. 464; *Crawford's Emb.* p. 459; *Lubbock Origin of Civil*, p. 243. See Kia, Khong, Kho, India.

KAMBOI, SINGH. See Comboy.

KAMBOJA, a people of ancient Arachosia. See Kabul.

KAMBO PISIN, TAM. Gum of *Gardenia lucida*, Roxb.

KAMBU, TAM. *Pencillaria spicata*.

KAMBU KARA, TEL. *Caryota urens*.

KAMBURANI, see Kamarani, Kelat.

KAMBYSES, one of the ancient kings of Persia, of the Kaianian dynasty, and father of Cyrus. He conquered Egypt B. C. 525 to 522. He took Memphis by storm, and he visited the tomb of Menes.—*Bunsen, Egypt*, ii, 610; iii, 237; iv, 288; v, 740. See Fars, Persian kings.

KAMDANO, a river near Niampoor in Comillah.

KAM-DHENU, among hindoos, a cow, which gives milk without breeding, and is worshipped for its copiousness, *Tr. of Hind.* Vol. i, p. 38.

KAMEEL, GER., a camel, a dromedary.

KAMESHWARI.

KAMEELA, GREEK, *Daphne mezereum*.

KAMEEL-HAAR, GER. Camel's hair.

KA-MEEN-THA, BURM. A tree abundant all along the sea coast near Tavoy and Mergui, maximum girth 2 cubits, maximum length 25 feet. When seasoned it sinks in water. It is used for posts and planks of houses; is very heavy and durable, but easily split.—*Captain Dance*.

KAMEII, see Jelallabad, Kaffir.

KAMEL, a botanist, who lost the credit of many discoveries, from having sent them to others to describe.

KAMELA, also Kamil, or Kamila, HIND. *Rottlera tinctoria*. Gol kamila, is a species of *Glochidion*.

KAMELOS, GR., a camel.

KAMELOT, DUT. GER., Camel.

KAMEL PAARD, DUT. Giraffa camelopardalis, *Sundev*.

KAMEL'S DORN, GER. *Hedysarum alhaji*.

KAMENOE, RUS. Coal.

KAMEPII, the Egyptian name of *Æsculapius*.

KAMERA, HIND. In the N. W. P. a hired agricultural labourer, sometimes located for successive generations on the same estate, although quite free to remove.—*Wilson*.

KAMEREDHA, according to the Vendidad the head of the evil-spirits of the ancient Parsi. Vaghdhaua, is the head of the good spirits.

KAMERI. This appellation of the cuckoo is derived from Kama, the god of love, whose emblems are peculiarly appropriate, being a bow and arrow, the latter tipped with the champa, jessamine, and other flowers in which the hindoo poet allows no thorn to lurk. The bird of Kama, says Colonel Tod, from an unbragging peepul, poured forth his monotonous but pleasing notes, amidst the stillness of a lovely scene, where the last tints of sunset illuminated the dark hues of the surrounding woods. At another place, he says, the cuckoo accompanied us as far south as Cheerasani: the Kol race call this bird Suk'hi or ease-giving—perhaps as expressive as Kameri, the bird of love. In his hymn to Kamdeo, Sir W. Jones observes, that "the strong aromatic scent of the gold-coloured champa, *Micheilia champaca*, is thought offensive to the bees, who are never seen on its blossoms; but their elegant appearance in the black hair of the Indian women is mentioned by Rumphius, and both facts have supplied the Sanscrit poets with elegant allusions.—*Tod's Travels*, pp. 79, 138. See Coel Koi.

KAMERYKSDOCK, DUK. Cambrie.

KAMESHWARI, styled Kamikhya, situated within the town of Gohatti, originally a buddhist temple, is now a hindoo temple,

KAMI-MOSARA.

dedicated to the Yoni. The Yoni is here represented by a tri-kou-akar jantra or triangular stone, known in buddhist mythology as Prajna Devi, the universal mother.

KAMETTI, MALEAL. *Excoccaria jamettia*, Spreng.

KAMFER, DUT. Kamfora, RUS. Camphor.

KAMGAM, see Berar.

KA-M'HOUNG of Akyab, *Bignonia stipulata*, Roxb.

KA-MI, Ku-mi, Ki-mi, Ku-mwi, Khu-mi, or Ka-mi-mi, signifying man, is a Burmese tribe in Arracan on the Koladyn river who assert that they once dwelt on the hills now held by the Khyen. Their name seems the same as that of the Khu-mia of Chittagong. The Ka-mi seem to be two divisions of a race who dwell in the hills bordering the Koladan river, and probably arrived there in the middle of the 18th century, expelling the Mru or Myu. They are divided into several clans. See *Kami-no-mi-tsi*.

KAMI, JAP. Seems to be a generic appendage, to the names of the men of a certain rank in Japan, just as in England, all noblemen between the ranks of Marquis and Baron are styled Lord. Kami, means noble,—not princely. The governor of Nagasaki and Hako-date style themselves Kami; but it is doubted if they have the right to do so. It is like a Frenchman using a "de," or a German a "von," to ennoble himself. In former days a Ka-mi was one of the Japanese Pantheon, but as a title it was at least either hereditary or only given to very great worthies; but now all the ministers, governors, and princes have usurped the title.—*Hodgson's Nagasaki*, p. 156, *Oliphant*. See Kurilian.

KAMIA, an agricultural laborer of some low caste: in south Bahar he is sometimes considered as a predial slave, either for a term or for ever: in the south-west provinces he is usually a bondsman or bond-slave who has sold his services for life, and may be transferred or sold himself, his children are free: one kind, the Bandhak-Kamia is a slave only until he can repay the money advanced to him for his services.—*Wilson's Gloss., Indian Terms*. See Kamin, Sevak.

KAMI-DANDA, SANS. ? Vigne gives this as literally alms-giving, applied in Kashmir to a hindoo woman who, having lost her husband and being unable to re-marry, is devoted to the service of the gods.—*Vigne*.

KAMILA, HIND. Red powder from the fruit of *Rottleria tinctoria*.

KAMILING, MALAY. *Camirium cordifolium*, Gærtn.

KAMI-MOSARA, or Gurugudu. *Casearia tomentosa*, R.

KAMMARI-KAMU.

KAMIN, in the north-west provinces is the term applied to the artificers and servants of a village. In the Panjab, they are persons who are kept employed in cultivation without being actual hired laborers like the mulazim.—*Elliot; Powell; Wilson's Glossary*. See Kamia.

KAMIN, see Naksh-i-Rustoom.

KAMINAN, also Kamaya manan, also Minan, MALAY. *Frankincense*, Benjamin.

KAMINI, BENG. Ash-leaved Murray's tree, *Murraya exotica*, also *M. paniculata*.

KA-MI-NO-MI-TSI, the original, national religion of Japan, is called Sinsyn; from the words Sin, (the gods); and syn, (faith); and its votaries are denominated Sintu. Dr. von Siebold, however, says that the proper native name of this religion is Ka-mi-no-Mi-tsi, signifying "the way of the Kami," or gods; that the Chinese translated this compound word into Shin-Tao, and that the Japanese adopted the Chinese term, and according to the genius of their language, softened it into Siu-tu. According to Siebold, the Sintu have some vague notion of the immortality of the soul, of a future state of existence, of rewards and punishments, of a paradise, and of a hell.—*McFarlane, Geo. and Hist. of Japan*, p. 207.

KAMIRI, JAV. *Alouretes triloba*, Forst. *Camirium cordifolium*, Gærtn.

KAM'L, HIND. A blanket. See Kamli.

KAMLA, HIND. *Berberis aristata*, *Gymnosporia spinosa*.

KAMLA, also Kambal, of Salt Range, *Odina woderi*, Roxb.

KAMLA NIBU ? BENG. *Citrus aurantium*, Linn.

KAMLI, DUK., GUZ., HIND. Small blanket. Natives use the Kamly, as a wrapper, in one piece. Coats are made of the finer sorts, and look very well; much resembling camlet in appearance. The stuff is made of sheep and goat hair—in warm climates the covering of sheep can scarcely be called wool.—*E. M. Hindoo Infanticide*, p. 176.

KAMLOT, RUS. Camlet.

KAMMAL, HIND. *Berberis aristata*.

KAMMALAR, also in the singular, Kammalan, artificers. They are divided into five classes: stone-cutters, carpenters, blacksmiths, goldsmiths and braziers. Amongst the hindoos, the five artizan castes, all wear the sacred cord. See Kamsalar; Kansalar.

KAMMA REGU, TEL. *Artocarpus lacoocha*, R. iii, 524, *W. Ic.* 681.

KAMMARI-KAMU, TEL. An agricultural caste called Kammavadu, plural Kammavaru, TEL. A numerous caste of Telinga sudra, commonly called kammavar, chiefly engaged in agriculture.

KAMPTEE.

KAMME, GER. Kammen, DUT. Combs. KAMMERAKU, TEL. Chavica betel, Mig., *Roxb.*, *W. Lc.* A strong smelling species of betel. The word means rough-leaved betel.

KAMBERTUCH, GER. Cambric.

KAMMI MARAM, TAM. Gmelina arborea.

KAMMON, HEB. Cummin seed.

KAMMYA-BUN, near Goverdhun, the famous scene of the incidents of the Vana purva of the mahabarat, is really a classic spot for the reminiscences of the Pandava brothers. Here they were visited by their great friend Krishna, and beguiled by holy sages with the consolations of their philosophy. None of its ancient features is retained by the place, but while its name lives in the verse of the poet, the pilgrim will bend his steps to Kammyabun.—*Tr. of Hind.*, Vol. ii, p. 115.

KAMODH, HIND. A kind of rice.

KA-MOI, or Moi, on the opposite side of the Mé-Kong, occupy the broad expansion of the Anam chain towards Kamboja, and appear to extend northwards along these mountains, marching with the Lau on the westward. They are said to be black savages, with negro features. The Kambojan style them Kha-ien. They are the Kho-men of Leyden and the Kha-men of Gutzlaff. See Kurilian.

KA-MOUNG ? a tree of Akyab, grows to a large size and is plentiful. Wood used for planks, posts, &c.—*Cul. Cat. Ex.* 1862.

KAMPA, that portion of Thibet lying between the southern bank of the Tsanpo river and the snowy ridges which separate Thibet from Bhutan.

KAMPA, capital of Anga, taken by Bimbisara, the king of Maghada.

KAMPALLAM, or Kampu allum, TEL. Zingiber, *sp.* Kampu means "stinking" or "bad."

KAMPFER, GER. Camphor.

KAMPFER, landed on the shores of Siam on the 7th of June 1690—*Bowring's Siam*, Vol. i, p. 99. See Kämpfer.

KAMPHATIR, see Porcupine.

KAMPHUCHA, see Kambogia.

KAMPILAN and the Kris, made in Borneo, Sooloo, Tampassuk, Malludu Bay, are swords used by the Illanun pirates.

KAMPIRA, MALEAL. Semicarpus auncardium, *Linn.*

KAMPONG, MALAY A house enclosure or grounds, the Anglo-Indian word, compound.

KAMPONG SUAI, a province of Cambodia.

KAMPOT, the principal harbour of Kamboja. Ujong harbour is the capital of Kamboja.

KAMPOTSON, a province of Gambodia.

KAMPTEE, in lat. 21° 16', and 79° 11' E.

KAMRUP.

in Berar, a large station on the right bank of the Kanhan river, immediately below the junction of that river with the Pench and the Kolar. The open place near the church is 996 ft. above the sea. It is nine miles from Nagpore, and was formerly a small village, but being selected for a British military cantonment, has grown into a town of 60,000 people.—*Schl.*, *Ad.*

KAMPU IRUGUDU CHETTU, TEL. Dalbergia, *sp.*, an inferior kind from ku "inferior," Simsupa is the "Sissoo."

KAMPULE KIRAY, TAM. *Ærua lanata*, *Juss.*

KAMPU TUMMA, TEL. *Vachellia far-nesiana*, *W. & A.*

KAMR, AR. The mountain.

KAMB, AR., PERS., HIND. The waist. Kamr-hand, a girdle.

KAMRAK, HIND. Acid fruit of *Averrhoa carambola*.

KAMRAKAH, HIND. *Averrhoa caram-bola*.

KAMRAN. Timur's titles, in the height of his power were Sultan Kamran, Amir, Kutb-ud-Deen, Timur, Kur-khan, Sahib-i-Karan. Sultan means "lord;" Kamran, "successful;" Amir, "commander;" Kutb-ud-Deen, "polar star of the faith;" Timur, "it shall shake;" Kur-khan, "of the lineage of sovereign princes;" and Sahib-i-Karan, "master or lord of the grand conjunctions." The easterners believe that in all the great conjunctions of the planets, there is a great revolution in the world. Thus Abraham, Moses, Zoronster, Christ and Mahommed, came into the world in a grand conjunction. Kayomurs, Solomon, Alexander, Zengis and Timur, were each in their turn, Sahib-i-Karan, or "masters of the conjunctions," and of all the great events during their respective reigns.—*D'Herbelot; Markham's Embassy*, p. 47.

KAMRANGA, BENG. Carambola-tree, *Averrhoa acida*.

KAMR-UD-DIN, killed in action against the Abdalla A. D. 1748. He was wazir (vizier) of Mahomed shah, whose death followed as the result.—*Orme*.

KAM-RUK, HIND. *Averrhoa carambola*, *Linn.*

KAMRUP, BENG. *Ficus benjamina*, *Linn.*

KAMRUP. Assam is a great valley stretching from the head of the Bay of Bengal to the north-east, towards China. It is the ancient Kamrup, and its history ('Assam Buranjī') by Huliram Dhaikiyal Phukan, of Gohati, after bringing down the genealogies to the Kshatriya dynasty of Dravir (Dharmapala) says he invited brahmins from Gaur to his court, north of the Brahmaputra. See Assam.

KAMSALAR or gold-smith caste, perform marriage of their daughters both before and after the age of puberty. See Kammalar.

KAMSCHATKA, on the extreme N. E. of Asia, contiguous to Siberia. It is inhabited by different nations. Some who live about the middle pay a contribution to the Russians, but others living more north are their professed enemies.—*Hist. of Japan*, Vol. i, p. 21.

KAMSIN, a dust storm of N. Africa.

KAMTSCHATNUA SALFFTKI, Rus. Damask.

KAMTZ, see Lightning Conductors.

KAMUD BIJ, HIND. Nymphaea alba.

KAMUGA, TAM. Areca catechu, Linn.

KAMUJAY TREE OIL, a small bottle, priced Rupees 6½ from the Canara district, was a dark gelatinous mass, of the consistence of blanc-mange.

KAMUL, HIND. Rottlera tinctoria, Roxb.

KAMUL, Komul, or Kamil, the Hani of the Chinese, is the station at which the routes eastward from the north and the south sides of the Thian Shan converge, and from which travellers generally start to cross the desert before entering China. The people of Kamil were all buddhists in Marco Polo's time. In 1419, Shah Rukh's envoys found there the mosque and buddhist temple side by side. *Polo*, ii, 36; *Benedict Goes in Yule, Cathay*, Vol. ii, p. 394.

KAMUL, see Kocch, Dhimal.

KAMUN, or Kemun, AR. Cumin seed.

KAMUNING, a wood, of Java, of a brownish colour and very fine grain, used for hilts and sheaths. Tayuman resembles it and is very much esteemed:—the Wunistelago affords a reddish wood.—*Raffles' History of Java*, Vol. i, pp. 40, 42.

KAN, BURM. A shrub, three or four feet high, yielding a valued fruit which resembles a sweet grape.—*Malcolm*, Vol. i, p. 52.

KAN, HIND. Saccharum spontaneum. S. sara. See Kana.

KAN, see Krishna.

KAN, a liquid measure in Batavia of 91 cubic inches: 33 are equal to about 10½ gallons; 388 Batavia kan make one leagner or 160 English gallons.—*Simmond's Dict.*

KANA, according to hindoo law, a person blind of one eye is incompetent to succeed. Kana is the nickname given to a person labouring under this personal defect, which term is merely an anagram of anka, 'the eye.' The loss of an eye does not deprive an occupant of his rights—of which there was a curious example in the siege of the imperial city of Delhi, which gave rise to the remark, that the three greatest men therein had only the complement of one man amongst them:

the emperor had been deprived of both eyes by the brutality of Gholam Kadir; the besieging chief Holcar was kana, and so was the defender, Sir D. Ochterlony. Holcar's name has become synonymous with kana, and many a horse, dog, and man, blind of an eye, was called after this celebrated Mahratta leader. The hindoos attach a degree of moral obliquity to every individual kana, and appear to make no distinction between the natural and the acquired defect; though to all kana they apply another and more dignified appellation. Sukracharya, the Jupiter of the hindoo astrology, which very grave personage came by his misfortune in no creditable way,—for, although the gurn, or spiritual head of the hindoo gods, he set as bad a moral example to them as did the classical Jupiter to the tenants of the Greek and Roman Pantheon.—*Tod's Rajasthan*, Vol. ii, p. 269.

KANA, HIND. Conmelina obliqua.

KANA, HIND. Saccharum sara. See Kan.

KANA, see Tanah.

KANACHI, HIND. Rubus rotundifolius.

KANADA, see Veda.

KANAE KYA-THA, BURM. Artocarpus echinata, Roxb.

KANAGACHA, or Kana kaciu, HIND., the moral of Kashmir or elsewhere.

KANAGA CHETTU, Pongamia glabra, Vent, W. & A., W. Ic. Galedupa Indica, R. iii, 239.

KANAGALU, MAHR. Dillenia pentagyna, Roxb.

KANAGAN, Predial slaves of Malabar supposed to be a sub-division of the palayar.

KANAGAVUH, MALEAL. Memecylon tinctorium.—*Ken*; Willd.

KANAGI, TEL. Barringtonia acutangula, Gaertn.

KANA GOBAKA, SINGH. Hebradendron gamlogioides.

KANA-HOODY, see Koh.

KANA-IRAKA, SANS., purple ficabane.

KANAIT, an agricultural race in the Simla hills and east of the Sutlej. They are a local tribe holding most of the land on the Simla hills. They are inferior in position to Rajpoots, more perhaps of the level of the Kurini and Lodhi, but they are often educated, and are generally ministers to the Rajpoot chiefs. Their women are very nice looking, and all the tribe who are not (in the upper hills) in contact with Tartars are quite Arian, though not very large. In certain places is a partial and local practice of polyandry among them, but it is not the general custom of the tribe.—*Campbell*, pp. 88, 97, 123.

KANAK, HIND. Wheat; lal Kanak, red wheat, Triticum aestivum; bar kanak or pambhan kanak, is HIND. Triticum durum.

KANAPA TIGE.

KANAK, HIND. *Sageretia oppositifolia*.
KANAKA, see Buddha, Topes.
KANA KACHU, HIND. Morel.
KANAKKAN, TAM. MAL. An accountant.
KANAKAN, MAL. Predial slaves in Malabar, also designated *Kanaka charma*. According to one account, they are a subdivision of the Palayar. See *Kanagan*; *Kanchara*.
KANAKKAR, a tribe of people. They are divided into many sections or classes as *Meal hattu Kanakkar*, *Súr Kanakar*; *Sarathe Kanakkar*.
KANAKAMBRAM, or *Erra vadámbram*, TEL. *Crossandra infundibuliformis*, *Nees*.—*var. β aurantiaca*.
KANAKA PATA, or *Konda ámudum*. *Baliospermum polyandrum*, *R. W.*—*lc.* 1885.
KANKATCH, see Sikh.
KANA KUCHOO, HIND. Fungi; mushrooms.
KANAL, HIND. A division of land, about one-eighth of an acre—8 kanal make one ghomao.
KANALA, BENG. *Gynandropsis pentaphylla*.
KANAM, see Kudawar.
KANAMBU, MALEAL. Fibre of *Crotalaria juncea*.
KANANA, SANS. *Ormocarpum senoides*.
KANANA (SHIGRU), SANS. *Hedy sarum senoides*.
KANANA CUNDA, SANS. *Dracontium polyphyllum*.
KANANA HERUNDUM, SANS. *Jatropha curcas*.
KANANA-IRAKA, or *Kanana ziraka*, SANS. *Vernonia anthelmintica*, *Fleabane*.
KANANA MALLIKA, SANS. *Jasminum*.
KANANGA, MALAY. *Uvaria Cananga*, *Linn.* The perfume of the *Kananga*, (*Uvaria*;) *Champaka*, (*Michelia*); *Melur* (*Jasminum*), and many other plants of Borneo, are all pleasing. The flowers of the *Uvaria cananga* are of a greenish yellow, scarcely distinguishable from the leaves, among which the bunches hang down in a peculiar manner. About sun-set, if the evening be calm, they diffuse a fragrance around that affects the sense at the distance of some hundred yards.—*Low's Sarawak*, p. 63; *Marsden's Hist. of Sumatra*, p. 103.
KANANG KIRAI, TAM. *Commelyna communis*, *Linn.*
KANAPA CHETTU, or *Kanigi chettu* TEL. *Barringtonia acutangula*, *Gertn.*
KANAPA CHETTU BADANIKE, TEL. *Vanda Roxburghii*, *Roxb. Br.*—*W. lc.* 916.
—Cymbidium tessaloides, Roxb. iii, 463.
KANAPA TIGE, or *Ijadi gadda*, TEL. *Roxburghia gloriosoides*, *Roxb.*

KANAVAR.

KANAPE TIGE, or *Kádépa tige*, TEL. *Vitis carnosá, Wall.* *Cissus carnosá*.
KANAR, a river near Duttoda in the Iudore territory.
KANARA, a district on the west coast of India. It has the river *Kalinuddi*, which disembogues at *Sedashghur*, also the *Tuddery* river, the *Gangáwati* which disembogues at *Honore*, and there is a marine lagoon at *Mangalore*. Population 1,056,300. See *Canara*.
KANARA, Stylocoryne *Webera*.
KANA-RAJ, HIND. *Bauhinia cannabina*, *B.*
KANA RAJA, BENG., HIND. *Bauhinia candida*, also *Bauhinia nitida*.
KANARAK, see Inscriptions.
KANA REGU, Flacourtia *sepiaria*, *R. iii*, 835.
KANARI, MALAY. *Aleurites triloba*, *Forst.* A tree of the Indian Archipelago, a native of the same country as the sago palm, and found to the westward, though it has been introduced to Celebes and Java. It is a large handsome tree and one of the most useful productions of the Archipelago. It bears a nut of an oblong shape nearly the size of a walnut, the kernel of which is as delicate as that of a filbert, and abounds with oil. The nuts are either smoked and dried for use or the oil is expressed from them in their recent state. It is used for all culinary purposes and is purer and more palatable than that of the cocoanut. The kernels mixed up with a little sago-meal are made into cakes and eaten as bread.—*Crawford, Simmond's Comm. Products*, page 546.
KANARI, caves in the island of *Salsette*. See *Caves, Karli*.
KANARY ISLANDS, in the *Pitt* passage are an extensive chain of flat woody uninhabited islands stretching along the N. coast of *Mysole*.
KANAT. Shiraz is supplied with water by means of *Kanat* and *Karez*, which are subterraneous conduits and trenches or artificial water-courses above ground. And the best of these is the *Karez* which *Ruku-ud-Doulah Hassan ebn Buiah*, a prince of the *Dilemite* race, first caused to be made; this *Karez* is denominated the water, or stream, of *Ruknabad*.—*Ouseley's Travels*, Vol. ii, p. 7.
KA NAT THA, BURM. A tree of *Moulmein*, its wood is used for ordinary house-building purposes.—*Cal. Cat. Ex.* 1862.
KANAUCHA, HIND. *Mucuna prurita*, *Salvia, sp.*
KANAUI, a district or province in *Hindoostan*, known also as *Kanya kubyá*.
KANAVAR, TAM. Hillmen, hunters, shepherds.

KANAWAR, between L. 31° and 32° N., and L. 78° E., produces great quantities of fruit, and from many other places men may be met travelling downwards with kiltas or long baskets full of apples of very pleasing appearance, large and well-coloured, but though sweet, their flavor is deficient. In the upper valleys of the Sutlej, in Spiti, and Kanawar, are mixed races exhibiting much Tibetan blood, and in religion apparently, more Buddhist than hindoo. The Tibetan colony at Mohasoo just above Simla, are powerful ruddy-looking people entirely unlike Indians, their women are industrious but very unattractive. —*Powell*; *Campbell*, p. 146. See Bara-Lacha, India, Kunawar, Polyandry.

* **KANAWAT**, see Baba.

* **KANAYO**, BURM. *Pierardia sapota*.

KA-NA-ZO, BURM. *Heritiera minor*; *Lam.*, also *H. littoralis*, *Ait.* Soondri-tree. See *Heritiera*.

KANCH, GUZ., HIND. Glass.

KANCHANA, or *Kasana*, TEL., MALEAL. *Bauhinia acuminata*, L., *Bauhinia tomentosa*, Linn.

KANCHANAMU, SINGH., or *Sampenga chettu*, TEL. *Michelia champaca*, L., but applied also to other golden-colored flowers.

KANCHANI, HIND. A dancing girl by caste and profession.

KANCHAN CHAKTA, BENG. *Bauhinia acuminata*, Linn.

KANCHARAVITA KARU, a mendicant belonging to the five classes of artificers.

KANCHARI, MAHR. *Kanchkar*, HIND. A caste working in glass and crystal.

KAN-CHEE, a ceremony.

KANCHELIA, see Hindoo.

KANCHELIYA, a sect of saiva hindoos, worshippers of the Sakti; who are said in their rites to have a community of women without regard to natural ties.

KAN-CHEW. There is here a recumbent figure mentioned by Hajji Mahomed. Such colossal sleeping figures, symbolising Sakya Muni in the state of Nirwana, are to be seen in Burmah, Siam, and Ceylon. —*Tennent's Ceylon*, ii, 597; *Mission to the Court of Ava* in 1855, p. 52; *Bowring's Siam*; *Yule Cathay*, i, p. 203.

KANCH-HARI, HIND. *Cardium nutans*.

KAN-CH'HAYDANA, boring the ears.

KANCHI, the native name of Conjeveram. It is a holy city of the hindoos, almost 45 miles west of Madras, and has two great hindoo temples, one of the saiva and one of the vaishnava sect. The former is poor and neglected, having been plundered by dacoits about the year 1850. Conjeveram pagoda was taken by Clive on the 29th August 1751, and again in December, and

again in 1752. It is known in the south as Kanchi. It is celebrated as one of the holiest of the hindoo cities of the peninsula of India. Conjeveram was the capital of the Chola kingdom, which held sway in the south of India, from the eighth to the seventeenth centuries, when Shah-ji the father of Sivaji totally annihilated every vestige of their once great power. It was one of the most ancient and prolonged of all the Indian dynasties. See Hindoo; Sri Sampradaya.

KANCHI CHIKKUDU KAYA, *Dolichos ciliatus*, W. & A. *D. prostratus*, R. iii, 310. Abundant in hedges, whence its name, from *kanchi*, a hedge.

KANCHIL, MALAY. *Tragulus kanchil*, Gray.

KANCHI MARAM, TAM. of Ceylon, *Ulmus integrifolia*, Roxb.

KANCHINJINGA, a mountain in the Sikkim Himalaya, in Lat. 27° 42' 9" N., and Long. 88° 8' 1" E., its west peak is in L. 27° 42' 1", L. 88° 8' 0", and the top of the peak is 28,156 ft. above the sea. So far as was known in 1861, this peak is only exceeded in height as yet by the Gaurisankar in Nepal, and the Dapsang peak in the Karakorum chain. The latter peak, marked by the G. T. S. K. 2, in Lat. N. 35° 41', Long. E. Gr. 76° 48', attains a height of 28,287 ft. Kanchinjinga forms a central and predominant object in the Sikkim panorama of the snowy range. Kanchinjinga presents itself from Falut under a vertical angle of 4° 51' 10", and even the lowest point of the junction between Kabru and Kanchinjinga (the curve seen just below the eastern peak) has still in the panorama an angular height of 3° 36'. The peak is 181,632 feet distant from Falut. —*Journal of the Asiatic Society of Bengal*, 1860, No. 1, p. 21; *Schl.*, *Herm.*

KANCH KE MANKE, HIND., DUK. Glass beads.

KANCH-KURI, DUK. *Mucuna prurita*, Hook.

KANCH-KURI, HIND. *Tragia cannabina* Linn.

KANCHU, see Sudra.

KANCHUGAR, a worker in mixed metals.

KANCHUN, also *Kanchun chukta*, BENG. Taper-pointed mountain ebony, *Bauhinia acuminata*.

KANDAHAR, a city of Afghanistan, said to be older than Kabul, and by some said to have been founded by Lohrasp, a Persian king who flourished in times of very remote antiquity, and to whom also the founding of Herat is attributed. It is asserted by others, with far greater probability, to have been built by Secunder Zu-ul-kurnin; that is by Alexander the Great. The traditions of the Persians here agree with the conjectures of European geographers, who fix on this site for one of the cities called Alexandria. The ancient city stood till the reign of the Ghilji when shah Hossein founded a new one under the name of Hosseinabad. Nadir shah attempted again to alter the site of the town, and built Nadirabad; at last, Ahmed shah Sado-zye founded the present city, to which he gave the name of Ahmed Shah and the title of Ashraf-ul-Belad, or the noble of cities; by that name and title it is yet mentioned in public papers, and in the language of the court; but the old name of Kandahar still prevails among the people, though it has lost its rhyming addition of Dar-ul-Karar, or the abode of quiet or the city of stabilities. Ahmed shah himself marked out the limits of the present city, and laid down the regular plan which is still so remarkable in its execution. He surrounded it with a wall, and proposed to have added a ditch; but the Durani are said to have objected to his fortifications, and to have declared that their ditch was the Chaman of Bistan, a meadow near Bistan, in the most western part of Persian Khorassan. Kandahar was the capital of the Durani empire in Ahmed shah's time, but Timur changed the seat of government to Kabul. At the foot of the old town of Kandahar is one of the most celebrated reliques of antiquity belonging to the eastern world. It is neither more nor less than the water-pot of Fo or Buddha. It was carried to Kandahar by the tribes who fled in the fourth century from Gandharra on the Indus to escape an invasion

of the Yu-chi, who made the irruption from Chinese Tartary with the express purpose of obtaining the pot. It is the holiest relique of the buddhist world, and still retains among the mahomedauns of Kandahar a sacred and miraculous character. It is called the Kashgul-i-Ali or Ali's pot. It is formed of stone and may contain about twenty gallons. The new town is surrounded by a ditch, flanked with a citadel, but the place is commanded on several points by rocky hills, the last slopes of which come up to the ditch of the fortification to be buried amongst gardens, orchards, and plantations of beautiful shrubs, through which flow streams of the clearest water. In these gardens, are many little hillocks and rocks, on the slopes of which the inhabitants have cut slides on which they amuse themselves on gala days. Fruits and vegetables grow here luxuriantly; some better than any where else in Afghanistan; the pomegranates have not their equal in the world. The sweetmeats and grapes also require to be noticed; and the tobacco, which is produced in abundance, is much esteemed. The cereal produce is of superior quality, more especially the wheat: its whiteness and beauty are rare. All the necessaries of life are sold here surprisingly cheap; and with these advantages it has that most valuable one, an agreeable climate. The town of Kandahar is an oblong with nearly a parasang of area. It is surrounded by a high and thick wall of earth, protected by a deep but not very wide ditch. The citadel is situated on the north of the town, and contains a very good residence, which Kohun-dil klan inhabited. The fortifications were put into a good state by the British, and are capable of resisting the attack of an Afghan army; they also built large barracks on a great space situated outside the Herat gate; were uninhabited, but in good condition, in 1845. The town is divided into many Mahalla, or divisions, which belong to the numerous tribes and nations that form the inhabitants of the city. The population of Kandahar is one-fourth Afghan, of the tribe of Baruk Zye, one-eighth Afghan of the tribe of Ghiljie, one-eighth Afghan, of various other tribes. Dooranee. Half Parsivan and Hindoo. One large quarter of the town, however, the N. E. is entirely inhabited by the Berdurani tribe. From the remotest times, Kandahar must have been a town of much importance in Asia, as its geographical position sufficiently indicates, it being the central point on which the roads from Herat, Seistan, Gour, India, and Kabul unite, and the commercial mart of these localities. Some authors consider Kandahar as an Indian, others as a Persian

KANDAHAR.

town; the Affghans themselves include it in Khorassan, to which province they assign the Indus (called also the Attok and the Sind,) as the limit. According to them India commences only on the Eastern side, and to the south of this river, from the point in which it receives the Sutlej, that is to say, north of the territory of the Mahratta and Mogul. The Panjab comprehending Kashmir and the country of the Sikh, and Zables-tan, comprehending Guzni and Kabul, form another country called by them Hindoostan. The inhabitants of India they call Hindi, and those of Hindoostan, Hindoostani. Kandahar is said to have been called so from the Gaudharra (Greek Gandaridae) who migrated to the westward from the Gandharra of the Indus in the fourth century. Kandahar was taken from the Moguls by the Persians in 1642, during the reign of shah Abbas the second. To the conquests of Herat and Kandahar, Nadir was not long in joining that of Kabul, and thus became master of the whole of Affghanistan, by great political ability, and more especially by the generous manner in which he treated the people and their chiefs. The city of Kandahar was considered the capital of Affghanistan during the reign of Ahmed shah, but he only resided there during the autumn and winter; he went to Kabul in the spring and summer, alternately changing his place of abode from one city to another, that he might constantly enjoy an agreeable and temperate climate. His son Timur shah, altered this state of things; for he withdrew the title of capital from Kandahar and transferred it to Kabul, which was subsequently the royal residence during the whole period that the dynasty of the Suddozye occupied the throne of Affghanistan. The early campaigns of the Arabs against Kandahar are given at length in the work of Beladeri, in M. Renaud's *Fragments of Arab History*, published at Paris about 1843. The city of Kandahar is regularly built, the bazar being formed by two lines, drawn from opposite directions, and intersecting in the centre of the place. It is consequently composed of four distinct quarters. The authority of Kandahar is acknowledged over a considerable space of country, and the Khaka tribes of Toba, with the Terin, and other rude tribes in that part, confess a kind of allegiance, allowing no claim on them, however, but that of military service, which was also rendered to the Sirdars by Khan Terik, the chief of the Ghilji tribe of Tereki. Mehrab khan of Kalat, the late chief of Baluchistan, was compelled to pay a tribute, of one lakh of rupees, of Kalat base coin. The revenue of the Kandahar sirdars was

KANDA MANNI.

about twelve lakhs of rupees. A celebrated grotto, known by the name of Ghar-i-Jamshid is situated sixteen miles south-west of the city, in the range of the Panj Bai hills, which overlook the left bank of the Arghandab river. The whole of its roof is beautifully carved as if it were artificial. 4,200,000 may be considered, but approximately only, as the amount of the population in Affghanistan, in the province of

Herat,	300,000	Affghan and	600,000	Parsivan or Eimak.
Kandahar,	600,000	do.	800,000	do. Belooch.
Kabul,	1,600,000	do.	800,000	do. and Kuzil-bash.
Total,	2,500,000		1,700,000	

The Affghan, properly so called, are at present the dominant race, and in Kandahar, Kabul and Herat, hold the Tajik in subjection. The Tajik are the descendants of the ancient conquerors of the country, and may be sub-divided into the Parsivan or inhabitants of towns, speaking Persian, and the Eimak or nomades.

Professor Lassen supposes four Greek kingdoms existed in Affghanistan, viz., that of Bactria: one eastern, under Menander and Apollodotus, comprehending the Punjab and valley of the Indus, with Kabul, and Arachotia or Kandahar added in times of its prosperity. Another western, at Herat and in Seestan. A fourth central of the Paropamisus, which latter region, Mr. Prinsep is inclined to give to Bactria, because of the bilingual as well as the pure Greek coins of Heliccles and Antimachus, kings of Bactria. The people of Kandahar are supposed to be the ancient warlike Gandhari, a cognate race with the Kshatrya, who fought in the army of Xerxes B. C. 480, armed with bows of bamboo and short spears. Kandahar is still held by the chief of Kabul, and its rulers profess homage if they do not at all times exhibit it. Their advanced position to the west, places them in jeopardy, from Herat and Persia.—*Elphinstone's Kabul*, Vol. ii, p. 129, *Ed. Ferrier Journ.* p. 318; *Ferrier Hist. of Affghanistan*, pp. 23, 67, 118 to 122; *Mason's Journey*, Vol. i, pp. 286, 288, 294; *Mohun Lal's Travels*, p. 307; *Herod*, Vol. vii, pp. 64-66; *Wh. H. of I*, p. 71; *Papers, East India*, (*Kabul and Affghanistan*), 1859, p. 67. See Kabul, Inam, Koh, Kelat, Kajar, Kazzilbash, India, Jet, Khyber.

KANDAI, HIND. *Flacourtia sapida*.

KANDALANGA, TAM. *Xylocarpus granatum*, *Kan*.

KAND BARINGI? TELINGO-DUK? species of *Clerodendron*?

KANDE, HIND. *Coriaria nepalensis*.

KANDEH RAO. Traditions state that Siva became incarnate in this personage for the purpose of destroying an oppressive giant named Manimal, at a place in the Carnatic, called Pehmer. The giant Manimal made a most desperate defence against KandeH Rao, but was at length slain: whereupon all the oppressed subjects of this giant paid adoration

KANDESH.

to KandeH Rao, to the number, as the story goes, of seven crore of the people, whence this avatara is called Yehl-khut: Yehl, in a dialect of the Carnatic? being seven, and Khut, or Koot, being a Mahratta pronunciation of (100,00,000) a hundred lakh, or ten millions. A handsome temple, dedicated to the worship of this avatara, is at Jejuri, a town of some extent, about thirty miles to the south-east of Poona. It is situated in a beautiful country, on a high hill, and has a very commanding and majestic appearance: the temple, walls around, and steps up to it, are well built, of fine stone. The murlidar musical girls attached to it, were said to exceed two hundred in number. A great many brahmans reside in and about the temple, and many beggars. KandeH Rao, about Poona, is called Kandoba; and it is not an uncommon name with brahmans and other hindoos, for instance, Lakpat Kandhi Rao.—*Moor*, p. 424. See Jejuri, Kandoba, Murli.

KANDESH, a province in the Bombay presidency. The Kokurmundah Pehta jungles occupy a considerable area and are flanked on the north and west sides by the Sagbarah, Gorwallee, and Mutwar forests. The three latter are in independent states, all the forest produce of which passes through the Kokurmundah Pehta jungles, by way of Tulloa and Shejda. These latter forests contain large quantities of jungle-wood and some teak. The Sagbarah jungles also contain timber trees. In 1849, in the KandesH forests, was a sprinkling of older teak and Sissoo trees, but the active burnings annually carried on by the Bheel population, for the purposes of the chase and of cultivation, effectually stop the shooting up of any seedling trees while the practice of baring the valley heads, from whence the rivers of Bauglan take their rise close to the edge of the ghauts, has the visible effect of lessening the supply of water in the streams which feed the rich garden grounds of Bauglan. Its western talooka is Bauglan. KandesH is traversed by the Taptee river in its mid-course. Adjunta, in KandesH, is celebrated for its numerous caves, excavated out of the mountain. The period of this gigantic labour seems to have been towards the decline of buddhism in the peninsula of India, before or about the eighth century. The subjects are buddhist; one of the inscriptions commencing with the formula, "Ye dharma." The language is Pali, and the character used is intermediate between those of the Lat and Allahabad. But, there is one resembling the Balibhi and one in the Seoni parallelogram headed character, which is of the eleventh and twelfth centuries. These inscriptions

KANDESH.

appear to be of different ages, from variations in the character. The figures of three Chinese are represented in some of the fresco paintings in the caves. The paintings are admirable for their spirit and variety of subjects. In some, the sculptures and paintings evidently represent royal personages and royal doings. One of the numerous inscriptions is of interest from the character resembling that of Wathen's Balibhi inscription, which with others show the gradations of the character upwards into antiquity. The caves are remarkable for their paintings as well as sculptures. They were first described by Lieut. Alexander in the *Royal Asiatic Society's Transactions*, Vol. p. 558) and afterwards copied by Captain Gill. Some of the many fresco paintings in these caves, are still very perfect having escaped the observation of the mahomedans when they invaded the Dekkan early in the fourteenth century and destroyed similar paintings in the buddhist caves of Ellora. Though their date is uncertain, the series may extend from the first or second century before Christ to the fourth and sixth century of this era. One large picture represents the coronation of Sinhalu, a buddhist king. He is seated on a stool, crowned with a tiara with necklaces, armlets and bracelets of gold, and girls are pouring corn over his shoulders. Naked to the waist, he wears a striped dhotee covering from the waist to the knee with one passed across his chest and over his left shoulder; most of the men attendants are similarly clothed with dhotees reaching from the waist to the knee. The soldiers present, spearmen and foot and horse, and groups of soldiers, with long oblong shields and curved swords, have short waist cloths only, tied like a kilt. All the women are naked to the waist. Another picture of two male figures, seemingly discussing something and wearing dhotees only, is skilfully drawn. In a picture of two holy men, seemingly Greeks, one has a long robe reaching to his feet, with loose sleeves, the other with a nimbus round his head. A large picture represents the introduction into Ceylon, of buddhism, and all the figures of men and women in it have only short waist-cloths or kilts. Another graceful picture represents a holy buddhist being carried through the air by two naked women, and in a representation of buddha teaching, his right arm is naked, and female figures stand, in different attitudes, around, all naked, but have necklaces, ear-rings and bracelets, and one has a girdle of jewels round her loins. Ajunta in the province of Aurungabad, is celebrated for its buddhist and jaina vihara or monastery and caves. The Chaitya cave is supposed to be the oldest in India. One

KANDESH.

of the Chaitya caves there has the dagopa perfect, with the three umbrellas in stone. The great structural dagopas are generally shorn of this appendage, which is the origin of the three and nine-storied towers of China. One of the vihara at Ajunta looks more like the brahmanical caves at Ellora than a buddhist vihara. Its pillars have similar cushion capitals to those in Elephanta and at Ellora. The Ajunta, are the most complete series of buddhist caves in India, without any mixture of brahmanism and contain types of all the rest, some are elaborately carved. The Ajunta caves are in the northern face of a ravine, which has a westerly direction parallel to the face of the ghats as they overlook Kandesh. There are many ravines or kora near; one of these commences at the town of Ajunta and winds to the south and west for about three miles opening there into Kandesh. Near its mouth is another ravine taking a westerly direction, for two miles with several windings, at one of which, on the northern face of the rock these caves have been excavated. This ravine nowhere exceeds 400 yards from brink to brink, above five hundred yards at its bottom. Ajunta is the only town of any size near but it too is quite a small place, walled, with gates, and a bridge. Major R. Gill of the Madras Army, continued drawing and photographing these caves for nearly 30 years, sometimes residing in a cave for days. He built a house at Tardapoor, now with a traveller's bungalow, but latterly he resided at Ajunta. The natives call the caves yerrula, the same name as they give to those which Europeans call Ellora. The hindus call them also Lena, and both terms mean drawings. The caves are about 25 in number, several of them have fallen in, many have been injured by the percolating water, and all have a noisome damp smell, with the nauseous odour of bats, which in the larger caves are multitudinous. The ordinary form is a central hall, with a walk around the wall, separated from the hall by pillars. A single doorway leads to the interior, and opposite it is a recess, in which buddha is seated preaching. In that are numerous figures seated in almost similar attitudes. The walls also have sculptured figures and arabesques, as have also the lintels of the doors, and the tops of the pillars. There are innumerable figures of men and women standing upright, and sitting, and those on the tops of the pillars are represented soaring. In the ghat of the Taptee at Baug, on the north side of the valley of the Taptee, are three ancient buddhist caves. The excavations in the Ajunta ravine are the most important of the buddhist caves, are entirely

KANDOBA.

buddhistic, and do not serve to illustrate the jain and brahminical cave-temples. The Ajunta caves were described by Dr. Bird and Mr. Fergusson along with those of Bajah and Beera *Bom. As. Trans.*, 1842, Vol. i, 438. *Account of Baugh in Malwa, by Captain Dangerfield, in Bom. Lit. Trans.*, Vol. ii, 194. *Hamilton's Account of Keneri, in Description of Hindoostan*, Vol. ii, 171. *Mr. Erskine on the Temples of western India in Bom. Lit. Trans.*, Vol. ii, Dr. Bird's *Account of Cave Temples*, Vol. i, Plates, Bombay, 1848. Dr. Stevenson on *Elephanta in Bom. As. Trans.*, 1852. *Surgeon Gibson's Bombay Forest Report*, 1849 to 1856, p. 68, also *Report of 1857-58-59-60*, p. 24; *Ed. Rev.*, June 1867, pp. 131-2; *Taylor's Mackenzie, MSS. B. As. Soc. Journ.* See Mahratta Government, Kol, Koli, Kabul, p. 434.

KANDHAR an isolated rock in the plain between the Kandhar confluence of the Parbutty and Chumbul, and the famous Rin-chumbor. Sagarji held the fortress and the lands of Kandhar. His descendants formed an extensive clan called Sagurawut, who continued to hold Kandhar till the time of Sowaie Jey Sing of Amber, whose situation as one of the great satraps of the Mogul court enabled him to wrest it from Sagurji's issue, upon their refusal to intermarry with the house of Amber. The great Mohabat Khan, the most intrepid of Jehangir's generals, was an apostate Sagurawut. They established many chieftainships in Central India, as Omri Bhadora, Gumesgunge, Digdoli.—*Tod's Rajasthan*, Vol. i, pp. 331, 355.

KANDHARA, incorrectly Kundra-Urieja, the Khond mountaineers.

KANDI, HIND. A peopled tract along a river where villages are.

KANDI, HIND. In Dera Ghazi Khan and Sind, *Prosopis spicigera* P. stephaniana.

KANDIARA, HIND. This name is applied to the following plants:

<i>Astragalus multiceps</i> ,	<i>Zizyphus vulgaris</i> ,
<i>Rubus lasiocarpus</i> ,	<i>Acacia jacquemontii</i> ,
<i>Carthamus oxyacantha</i> ,	<i>Cousinia calcitrapæformis</i> ,
<i>Bibb.</i>	<i>Solanum gracilipes</i> ,
<i>Argemone mexicana</i> ,	<i>S. xanthocarpum</i> ,
<i>Gymnosporia spinosa</i> ,	<i>Ballota limbata</i> .

KANDIL, MALAY. Candles.

KANDLE, TAM. of Ceylon, a tree which grows to about fourteen inches in diameter, and twenty-four feet high. Its wood is used at times in house-work.—*Edge on the Timber of Ceylon*.

KANDO, HIND. *Cæsalpinia sepiaria*; *Hippophae rhamnoides*.

KANDOBA, a male deity at Jejuri in the Dekhan between Sassoor and Satarah. About the beginning of December on the 6th of Margashirsh a great festival and fair are held,

KAND-SIYAH.

to which pilgrims come from a great distance. Bhandar and champa flowers are sacred to Kandoba and exercists shout Elkot and give Bhandar. Kandoba, next to Wittoba, is the most popular object of worship among the Mahrattas, and his most famous temple is at Jejuri, near Poona. Byroba, the local deity of herdsmen, is as largely worshipped in the Dekhan as is Kandoba, the deified hero of shepherds. The chief objects of Mahratta worship are certain incarnations, or images of deified mortals, known as Etoba or Wittoba and Kandoba, at Panderpoor, Jejuri and Malligaon, but the village deities receive a large part of their attention in times of sickness or peril. Brahmins state that Siva became incarnate in Kandeh Rao for the purpose of destroying an oppressive giant named Manimal, at a place in the Carnatic, called Pehmer. The giant Manimal made a most desperate defence against Kandeh Rao, but was at length slain: whereupon all the oppressed subjects of this giant paid adoration to Kandeh Rao, to the number, as the story goes, of seven crore of people, whence this avatara is called Yehl-khut: yula in Tamil meaning seven, and khut, or koot, being a Mahratta pronunciation of (100,00,000) a hundred lakh, or ten millions. A handsome temple, dedicated to the worship of this avatara, now known as Kandoba is at Jejuri, a town of some extent about thirty miles to the south-east of Poona. It is situated in a beautiful country, on a high hill, and has a very commanding and majestic appearance: the temple, walls around, and steps up to it, are well built, of fine stone. The mural, or musical girls attached to it, are said to exceed two hundred in number. A great many brahmins reside in and about the temple, and many beggars. Kandoba is not an uncommon name with brahmins and other hindooes for instance, Lakpat Kandhi Rao.—*Chow Chow*, p. 262; *Moor*, p. 424. See Kandehrao.

KANDOO, of Cuttack, is the abloos or obony tree. The darkest shade of the wood is the heart of the tree. It is a very handsome fancy wood; and its price per cubic foot is 12 annas or 1s. 6d.—*Cal. Cat. Ex.* of 1862.

KANDRA or Khandra? a class of slaves in Cuttack of an impure caste.

KANDURI, HIND. *Coccinea Indica*.

KANDY, in lat. 7° 17', Long. 80° 49', one of the principal towns in the interior of Ceylon. Bellungallee village, S W. of Kandy, is 2,259 feet; Matina patin, S. of Kaudi, is 3,201 feet, *Fras.*; Peredenia is 1,650 feet, Kandy is a table land with a chief town of same name, in the interior of Ceylon, conquered by the British after the battle of Meyda Maha Nowera, 18th February 1815, where the sovereign Vikrama Raja Singa was taken prisoner and removed to Vellore where he died. The British entered the Kandian country, 11th January 1815. When coffee-planting first came in vogue, the Kandyan people flocked in hundreds to the great distribution of rupees, but this source of labour was soon found to be insufficient and of too precarious a nature to be relied on, even had there been a superabundance. The Kandyan was able to live on the produce of his rice fields, &c., &c., before European capital was introduced, and he has such a reverence for his patrimonial lands, that were his gain to be quadrupled, he would not abandon their culture, it was only therefore during a portion of the year that he could be induced, even by the new stimulus, money, to exert himself, besides, working for hire is repulsive to their national feelings, is looked upon as almost slavery, and is galling to them. The Singhalese from the maritime provinces have a stronger love of gain, a liking for arrack, and rooted propensity to gamble. In 1841, 1842 and 1843, thousands of these people were employed on estates.—*F. Layard*; *Busche's Ceylon*. See Ceylon, Gahalaya, Rhodia, Polyandry, pp. 110, 326, India.

KANDYARI, HIND. *Solanum indicum*.

KANERA, HIND. Dharmasala paper made from *Daphne oleoides*, also *Skirmmia laureola*.

KANERKI. At the close of the first century of our era, when the supposed Ario-

KANFURRA JOGI.

Parthian dynasty ceased to reign in Kabul and the Panjab, a new race of Scythian kings appeared, who issued gold and copper money of quite a different device and style from anything before current. These bear a title of Kanerkes, at first with the title of Basileus Basileon, but afterwards with the Indian title of Rao Nano Rao. The number and variety of the Kanerki coins indicate a long dominion of kings of the race. The only characters on their coins are Greek, but these become at last so corrupt as to be quite illegible. On their obverse is the king standing, or in bust to the waist, in a Tartar or Indian dress, with the name and titles in a Greek legend round; while on the reverse are Mithraic representations of the sun or moon with ΗΑΙΟΣ, ΝΑΝΑΙΑ, ΟΚΡΟ, ΜΙΟΡΟ, ΜΑΟ, ΑΘΡΟ, or some other mystical name of these luminaries, also in Greek letters. And on all the Kanerki coins, is the same monogram as the Kadphises dynasty used, and which was borrowed apparently from the nameless Soter Megas. This would seem to indicate that the Kanerki dynasty, though interrupted as Mr. Prinsep supposes by the intervention of Ario-Parthians, was yet a continuation of the same tribe and nation as its predecessors of the name of Kadphises. The state religion seems to have been mithraic, whence derived, not known; but on their coins the Siva bull device is also found on the reverse, the bull's head being to the left,—in the coins of the Kadphises being to the right. A list of their kings, cannot be framed, but their power seems to have lasted for more than two centuries. The style and device of the Greek, of the gold coins especially, of the coins both of Kadphises and the Kanerki, was carried on till it grew more and more corrupt, and was at last, entirely lost, through the deterioration of art, under the princes of hindoo race, who succeeded to the more energetic Greeks and Scythians.—*On the Historical Results deducible from recent Discoveries in Affghanistan*, by H. T. Prinsep, Esq. See Inscriptions, p. 372, Kabul, pp. 436, 438, 439.

KANER, HIND., DUK. *Nerium odorum*, *Ait.*

KANG, Chinese bed-places, built of brick to admit of fires being made inside during the cold weather, ranged round the walls, leaving the middle of the room vacant.—*Frere's Antipodes*, p. 312.

KANGHUR, MAHR. *Garuga pinnata*, Roxb.

KANGI, HIND. *Flacourtia sapida*, also *Lycium europæum* or *L. Edgeworthii*, also *Euphorbia dracunculoides*.

KANGIARI, HIND. A blight on sugarcane, in which barren sapless branches grow out.

KANGI-KA-SAG, HIND. Leaves of *Malva rotundifolia*.

KANGLA, CHENAB. Ravi, *Acer creticum*, Linn.

KANGLU, HIND. *Pyrus Kumaonensis*.

KANGNI, HIND. *Pennisetum italicum*, or *Panicum italicum*, a grain much eaten by the poorer classes.

KANGRA, in lat. 32° 5' 2" N.; Long. 76° 14' 4" E., in Chamba, a civil and military station, with large tea plantations in the

KANGRA.

environs; Officers' bungalow is 2,558 feet. Hot spring of Thatvam near Kangra is 1,602 feet above the sea. Kangra is also called Kot Kangra. It is about 20 miles from Jawala mukhi, and has been famed for centuries for the skill of its people in restoring the noses by the rhino-plastic operation, instituted by Budyn, a physician of the emperor Akbar, to whom Akbar granted a jaghir at Kangra. The Kangra people are sturdy, honest, and independent. The Kangra district has a great export trade in rice, of which the most esteemed kind is the "basmati." In the Kangra district also, are grey limestone, sandstone of two sorts, both good for building and granite. Kangra fort is a short way within the outer ranges of the Himalaya. Kangra is situated in lat. 31° 57'; Long. 76° 4'. It is a British station, and the hills around it are extensively planted with tea. The Gaddi are a hill shepherd race about Kangra and elsewhere. The following elevations are determined:

	Ft.		Ft.
Noorpoor.....	1,665	Nari Ghaut....	2,009
Kotila.....	1,370	Rajahpoor do....	2,500
Kangra.....	2,647	Sekunder do....	5,430
Joala Mukhi.....	1,805	Jaintri do....	5,632
Tira.....	2,470	Gogar pass.....	3,900
Mundi.....	2,637	Tiri do.....	6,484
Sultanpoor.....	4,584		

In Kangra and Kulu, there is a crab or wild apple, called "ban mehal" (*Pyrus baccata*) also a quince (*Cydonia vulgaris*) and the Kangra district produces wheat, barley, gram, lentil, rape seed, safflower, mustard and flax among the spring crops; and rice, maize, millets, buck wheat, cotton, sugar-cane, opium and tobacco are in the produce of the autumn harvest. Wool, tea, sugar, salt, ghee, honey, bees' wax, soap, timber, iron and slates for roofing are among the staples of the district. The Kangra people are sturdy, honest and independent. Most of the traders of the snow valleys have some members of their families residing at Daba or Gyani on the Nuna-khar lake. The great body of the hillmen are Rajpoots, there are a few villages of brahmans, their residences are respectable, and occupy the more elevated portion of the village site, the huts of the Dom or Hali being on a low range. The Dom are hereditary bondsmen to the Rajpoots. Basgi also dwell there, and are, both men and women, singers at the temples. The men of all castes in the hills are short and of poor physique; they look worn and get deep-lined on the face at a comparatively early age. The young women are often extremely pretty, those living in the higher and colder villages, having, at 15 or 16, a complexion as fair as many Spaniards or Italians, and with very

KANGRA.

regular features. But they grow darker as they advance in years, and become very plain. The Dhurmsalla sanitarium, is situated in the Kangra district in E. Long. 76° 20', and in N. Lat. 32° 13'. The houses are built progressing up the hill, so that they are at very different elevations, the lowest being at an elevation of 4,000 feet, the highest 7,000 feet. The height of the Cutcherry is 4,876 feet, that of Major Fein's house and McLeodgunge Bazar, 6,180 feet. The sanitarium is on one of the spurs, running south from the great range of "Dhaoli Dhar." This range runs east and west, at a height of from 13,000 feet to 19,000 feet, and forms a great wall on the north; it is due to this range, that the climate of Dhurmsalla is so mild and has such a heavy rainfall. Kangra, is the most beautiful district in India, excepting Cashmere. It is a most lovely fertile valley, surrounded by lofty mountains, interspersed with undulating hills and situated between the rivers Ravee and Sutlej. On one side it has the territories of Cashmere and Chumha, on the other the wild but romantic hunting fields of Kulloo, Spiti and Ladak. Various races of men, belonging to distinct types of the human family, and speaking different languages, are distributed over its surface. Here are hills just raised above the level of the plain, and mountain crests higher than any peak of the Andes. Every tone of climate and variety of vegetation, is here to be met with, from the scorching heat and exuberant growth of the tropics, and barren heights destitute of verdure and capped with perpetual snow. Hills dissolve into gentle slopes, and platforms of table-land, and valleys, become convulsed and upheaved, so as no longer to be distinguished from the ridges which environ them. No spot in the Himalaya can compete for beauty with the Kangra valley, and its overshadowing hills, (13,000 feet) no scenery presents such sublime and delightful contrasts. Below lies the plain, a picture of rural loveliness and repose. The surface is covered with the richest cultivation, irrigated by streams which descend from perennial snows and interspersed with homesteads buried in the midst of groves and fruit trees. Turning from this scene of peaceful beauty, the stern and majestic hills above Dhurmsalla confront us. Their sides are furrowed with precipitous water-courses. Forests of oak clothe their flank, and higher up give place to gloomy and funereal piles. Above all are wastes of snow or pyramidal masses of granite too perpendicular for the snow to rest on. Dhurmsalla, stands in the bosom of those mighty hills, circular in its outline, and commanding a view unequalled in the world perhaps, of

KANGU VITTU.

the placid and beautiful valleys of Kangra and the noble hills behind. Dhurmsalla is divided into two stations, the lower and the upper, the one the residence of the civilians and visitors from all parts of Panjab, and the other occupied by the officers' houses and lines of a regiment.—*Schl. H. f. et. Thom.*, pp. 190, 203, 208; *Journal of the Asiatic Society of Bengal*, pp. 409, 580, No. 202, April 1840; *Ann. Ind. Adm.*, Vol. xii, p. 112; *Indian Annals*, No. 227, 1870; *Dr. W. P. Dickson*, 1870; *Paharee*. See Khunniara, Kohistan.

KANG-SI, a lexicographer of the Chinese language. The Chinese lexicographers, hitherto, have not done much more than translate the meanings given in Kang-si's Chinese Dictionary.—*Meadow's Desultory Notes*, p. 26.

KANGTAR, HIND. *Spiræa Lindleyana*.

KANGTISEE. The general direction of this range is north and south, and it is said to connect the Himalaya and Mongolia, as by a cross-bar. It runs to the east of the Mansarowar and Rawan Rud Lakes, its highest point is said to exceed in elevation any portion of the Himalaya, and four large rivers have their sources in different parts of the range, viz., the Singh Khawab or Indus, the Langehoo Khawab which runs through Ladak, the Marchæ Khawab which is known as the Gogra, and the Tamchoo Khawab or Yaroo, the great river of eastern Tibet.

KANGU, PANJ., *Flacourtia sapida*, *Roxb.*

KANGU, SANS. *Pencilaria spicata*.

KANGUE. Punishment xviii of the Tcha is that usually called by Europeans the Kangue, and is a common punishment in China for petty offences. It consists of an enormous tablet of wood, with a hole in the middle to receive the neck, and two smaller ones for the hands of the offender, who is sometimes sentenced to wear it for weeks or months together. He is suffered, provided his strength will enable him, to walk about, but the burden is so great, that he is generally glad to seek for a support of it against a wall or a tree. If a servant, or runner of the civil magistrate, take it into his head that he has rested too long, he beats him with a whip made of leathern thongs till he rise.—*Macartney's Embassy*, Vol. i, p. 23.

KANGUNI, SANS., or Korralu, TEL. *Setaria italica*, *Kuntz.*

KANGU VITTU, the Malayala name of a tree which grows to about sixteen feet high, and eight inches in diameter. It is one of the jungle-trees of the coast.—*Edye, M. and C.*

KANGWEL, DUT. *Nelumbium speciosum*.

KANHA BICHU, HIND. *Morchella semilibera*.

KANHEE, a valley situated to the west of, and which runs parallel to, that of Quetta, but extends further south. Its length is about 30 miles, and breadth 5 or 6. It is bounded on the east by the great Chah'tan range, which separates it from the valley of Quetta, and on the west by a parallel range of much less height, which, towards the north separates it from the valley of Pishin. See *Kelat*.

KANHUN, a river near Kamptee.

KANI, TAM. A land measure, a rice measure in Chittagong.—*Wilson*.

KANIA BIAN, BURM. Sulphuric acid, **KANI**.

KANI-ATCHI. Tondaimandalam, is an ancient name of a tract in southern India extending from Nellore to the Coleroon river, and including N. and S. Arcot and the Chingleput collectorates. It is described as having been an ancient wilderness known in the Ramayanum as the Daudacaranyam "the forest of the punisher, and was inhabited by the Kurambar, a pastoral and half-savage race who had their own chiefs residing in Kot or forts. They were conquered by an invader of the Vellalar from the western portion of the peninsula in the reign of Adanda Chakravarti, in an age supposed prior to the Christian era. The Vellalar race found the clearance of the forest a task of such difficulty that some withdrew; and the others who remained had the peculiar privileges conferred on them by Adanda Chakravarti, which are called the Kani-atchi, meaning acre-permanency. They have served through the political changes of centuries and are highly valued in a large portion of the old Tondai-mandalam.

KANI-ATCHI-KARAN, see Myarasi.

KANIA-DANAM, literally, virgin-giving; a ceremonial in the marriage customs of the hindoos, the giving away of the bride. See *Hindoo*.

KANI-AMMA, a goddess of the non-aryan races in the peninsula of India. See *Hindoo*.

KANI APA TIGE, or *Edakula mandula mari* and *Kadepa-tige*; *Vitis pedata*, *Wall.*; *Vitis carnosa*, *Wall.* This name is often applied generally to the genus *Vitis*. *Kani*, like *kadi* means "a yoke."

KANIAR, HIND. *Cathartocarpus fistula*.

KANIDE, HIND. of Ravi. *Coriaria nepalensis*.

KANIGA, TEL. *Pongamia glabra*, *Vent.*

KANIGI, PANJ. *Flacourtia sapida*, *Roxb.*

KANIGI CHETTU, or Kanapa chettu, *Barringtonia acutangula*, *Gærtn.* Piddington writes it Kaniti and applies it to *B. speciosa*.

KANIGORAM, see *Kohat*.

KANIL, DUT. Cinnamon.

KANIRA, HIND. *Nerium odorum*.

KANIRAM, CAN. *Strychnos nux vomica*.

KANITI VERU, TEL. Root of *Eugenia racemosa*, *Linn.*

KANIURU, SUTLEJ. *Hedera helix*. The Ivy.

KANIYA. Krishna, familiarly Kaniya, also called Ileri, and written Crishna, Krishn, Kisn, Kistna, and Krishna, was of the tribe of Yadu, the founder of the fifty-six tribes (Chahpau-kula Yadu) who obtained the universal sovereignty of India, and was descended from Yayat, the third son of Swayambhuma Manu, also called Vaiva-swata-manu or the man, Lord of the earth, whose daughter Ella, (Terra) was espoused by Budha (Mercury) son of Chandra, the moon, whence the Yadu are styled Chandravansi, or children of the moon. Budha was therefore worshipped as the great ancestor, Pitriswara, of the lunar race, and previous to the apotheosis of Krishna, was adored by all the Yadu race. The principal shrine of Budha was at Dwarica, where he still receives adoration as Budha Trivikrama, the triple energy, like the Hermes Triplex of Egypt. Krishna or Kaniya lived towards the conclusion of the brazen age, calculated to have been about 1100 to 1200 years before Christ. He was born to the inheritance of Vrij, the country of the Suraseni, comprehending the territory round Mathura for a space of eighty miles, of which he was unjustly deprived in his infancy by his relative Kans. From its vicinity to Delhi we may infer, either that there was no lord paramount amongst the Yadu of this period, or that Krishna's family held as vassals of Hastinapoor, then with Indraprestha or Delhi, the chief seat of Yadu power. There were two princes named Surasen amongst the immediate predecessors of Krishna: one, his grandfather, the other eight generations anterior. Which of these was the founder of Surapoor on the Yamuna, the capital of the Yadu, is not known, but we may assume that the first gave his name to the region around Mathura, described by Arrian as the country of the Suraseni. Alexander was in India probably about eight centuries after the deification of Krishna, and it is satisfactory to find that the inquiries he instituted into the genealogy of the dynasty then ruling on the Yamuna, correspond very closely with those of the Yadu of this distant period; and combined with what Arrian says of the origin of the Pandu, it appears indisputable that the descendants of this powerful branch of the Yadu ruled on the Yamuna when the Macedonian erected the altars of

Greece on the Indus. That the personage, whose epithet of 'Krishna-Sham designates his colour as the Black Prince,' was in fact a distinguished chief of the Yadu, there is not a shadow of doubt; nor that, after his death, they placed him among the gods as an incarnation of Vishnu or the sun; and from this period, we may deduce the hindoo notion of their Trinity. Arrian enumerates the names of Budæus and Cradevas amongst the early ancestors of the tribe then in power, which would alone convince us that Alexander had access to the genealogies of the Puranas; for we can have little hesitation in affirming these to be Budha and Kroshtdeva, ancestors of Krishna; and that "Mathoras and Clisobaras," the chief cities of the Suraseni, are the Mathura and Surpoor occupied by the descendants of Sursen. Fifty-seven descents are given, both in their sacred and profane genealogies, from Krishna to the princes supposed to have been contemporary with Vicramaditya. The Yadu Bhatti or Shamah Bhatti (the Asham Betti of Abul Fazil), draw their pedigree from Krishna or Yadunath, as do the Jhareja of Kutch. When Arungzeeb proscribed Kaniya, and rendered his shrines impure throughout Vrij, rana Raj Sing offered the heads of one hundred thousand Rajpoots for his service, and the god was conducted by the route of Kotah and Rampoor to Mewar. An omen decided the spot of his future residence. As he journeyed to gain the capital of the Seesodia, the chariot-wheel sunk deep into the earth, and defied extrication; upon which the Sookuni (Augur) interpreted the pleasure of the god, that he desired to dwell there. This circumstance occurred at an inconsiderable village called Siarh, in the fief of Dailwara, one of the sixteen nobles of Mewar. Rejoiced at this decided manifestation of favour, the chief hastened to make a perpetual gift of the village and its lands, which was speedily confirmed by the patent of the Rana. Nat'h-ji (the god) was removed from his car, and in due time a temple was erected for his reception, when the hamlet of Siarh became the town of Nat'hdwara, which now contains many thousand inhabitants of all denominations, who, reposing under the especial protection of the god, are exempt from every mortal tribunal. The site is not uninteresting, nor devoid of the means of defence. To the east it is shut in by a cluster of hills, and to the westward flows the Bunas, which nearly bathes the extreme points of the hills. There are seven celebrated images in Rajputanah, viz: Nonita, or Nonanda, the juvenile Kaniya, his altar separate, though close to Nath-ji. He is also styled Bala-mokund, 'the blessed child,'

and is depicted as an infant with a péra, or comfit-ball in his hand. This image, which was one of the penates of a former age, and which, since the destruction of a shrine of Krishna by the mahomedans, had lain in the Yamuna, attached itself to the sacerdotal zone (zunu) of the high-priest Balba, while he was performing his ablutions, who, carrying it home, placed it in a niche of the temple and worshipped it: and Nonanda yet receives the peculiar homage of the high-priest and his family as their household divinity.

Of the second image, Mat'hura Nath, there is no particular mention; it was at one time at Kamnorh in Mewar, but is now at Kotah. The péra of Mat'hura can only be made from the waters of the Yamuna, from whence it is still conveyed to Nonanda at Nat'hdwara, and with curds forms his evening repast. The fourth statue, that of Gokul-Nath, or Gokul Chandrama (i. e., the moon of Gokul), had an equally mysterious origin, having been discovered in a deep ravine on the banks of the river: Balba assigned it to his brother-in-law. Gokul is an island on the Jumna, a few miles below Mat'hura, and celebrated in the early history of the pastoral divinity. The residence of this image at Jeipoor does not deprive the little island of its honours as a place of pilgrimage; for 'the god of Gokul' has an altar on the original site, and his rites, at the early part of the 19th century, were performed by an aged priestess, who disowns the jurisdiction of the high-priest of Nat'hdwara, both in the spiritual and temporal concerns of her shrine. The fifth, Yadu-Nath, is the deified ancestor of the whole Yadu race. This image, now at Surat, formerly adorned the shrine of Mahavan near Mat'hura, which was destroyed by Mahmud. The sixth, Vitul-Nath, or Pandurang, was found in the Ganges at Benares, Samvat, 1572, from which we may judge of their habit of multiplying divinities. The seventh, Madhan Mohana, "he who intoxicates with desire," the seductive lover of Radha and the Gopi, has his rites performed by a woman.

The precise period of Balba Acharya, who collected the seven images of Krishna now in Rajast'han is not known; but he must have lived about the time of the last of the Lodi kings, at the period of the conquest of India by the Moguls. Damodra, the pontiff, at the beginning of the nineteenth century, was his lineal descendant; and whether in addressing him verbally or by letter, was styled Maharaja or 'great prince.' As the supreme head of the Vishnu sect, his person is held to be Ansa, "or a portion of the divinity;" and it was maintained that so late as the father of the present incumbent, the god manifested

himself and conversed with the high-priest. What effect the milder rites of the shepherd god has produced on the adorers of Siva cannot be ascertained, but assuredly Eklinga, the tutelary divinity of Mewar, has to complain of being defrauded of half his dues since Kaniya transferred his abode from the Yamuna to the Bunus; for the revenues assigned to Kaniya, who under the epithet of "yellow mantle," has a distinguished niche in the domestic chapel of the Rana, far exceed those of Siva. In all ages and countries the rights of sanctuary have been admitted, and however they may be abused, their institution sprung from humane motives. To check the impulse of revenge and to shelter the weak from oppression are noble objects, and the surest test of a nation's independence is the extent to which they are carried. From the remotest times sirna has been the most valued privilege of the Rajpoots, the lowest of whom deems his house a refuge against the most powerful. When Moses, after the Exodus, made a division of the lands of Canaan amongst the Israelites, and appointed six cities to be the refuge of him who had slain unwittingly, from the avenger of blood, the intention was not to afford facilities for eluding justice, but to check the hasty impulse of revenge; for the slayer was only to be protected until he stood before the congregation for judgment, or until the death of the high-priest, which event appears to have been considered as the termination of revenge. The infraction of political sanctuary (sirna torna) often gives rise to the most inveterate feuds; and its abuse by the priests is highly prejudicial to society. Moses appointed but six cities of refuge to the whole Levite tribe; but the Rana of Mewar assigned more to one shrine than the entire possession of that branch of the Israelites, who had but forty-two cities, while Kaniya has forty-six. The motive of sanctuary in Rajast'han may have been originally the same as that of the divine legislator; but the privilege was abused, and the most notorious criminals deemed the temple their best safeguard. Yet some princes were hardly enough to violate, though indirectly, the sacred sirna. Zalim Singh of Kotah, a zealot in all the observances of religion, though he would not demand the culprit, or sacrilegiously drag him from the altar, forced him thence by prohibiting the admission of food, and threatening to build up the door of the temple. It was thus the Greeks evaded the laws, and compelled the criminal's surrender by kindling fires around the sanctuary. Hindupati, vulgo Hinduput, chief of the hindoo race, is a title appertaining to the ranas of Mewar. It has, however, been assumed by chieftains scarcely

superior to some of his vassals, though with some degree of pretension by Sevaji, who, had he been spared, might have worked the redemption of his nation and of the Rana's house, from which he sprung. There was an ancient law of Athens analogous to the Mosaic, by which he who committed "chance-medley," should fly the country for a year, during which his relatives made satisfaction to the relatives of the deceased. The Greeks had asyla for every description of criminals, which could not be violated without infamy. Gibbon gives a memorable instance of disregard to the sanctuary of St. Julian in Auvergne, by the soldiers of the Frank king Theodoric, who divided the spoils of the altar, and made the priests captives: an impiety not only unsanctioned by the son of Clovis, but punished by the death of the offenders, the restoration of the plunder, and the extension of the right of sanctuary, five miles around the sepulchre of the holy martyr. Kaniya is the Saint Nicholas of the hindoo navigator, as was Apollo to the Grecian and Celtic sailors, who purchased the charmed arrows of the god to calm the troubled sea. As the destroyer of Kalinga, 'the black serpent,' which infested the waters of the Yamuna, Kaniya has the character of the Pythie Apollo. He is represented dragging the monster from the 'black stream,' and bruising him with his foot. He had, however, many battles with his hydra-foe ere he vanquished him, and he was once driven by Kal-yamun from Vrij to Dwarica, whence his title of Rinchor. In this myth, we have the old allegory of the schismatic wars of the buddhists and vaishnava. Diodorus informs us that Kan was one of the titles of the Egyptian Apollo as the sun; and this is the common contraction for Kaniya, whose colour is a dark cerulean blue (nila); and hence his name Nila-nath, who, like the Apollo of the Nile, is depicted with the human form and eagle-head, with a lotus in his hand.—*Tod's Rajasthan*, Vol. i, pp. 548, 549, 550, 526, 527; *Numbers*, Chap. xxxv, vs. 2, 25, p. 12; and *Joshua*, Chap. xx, v. 6.

KANJAN KORAI, TAM. Basella alba.

KANJAR, a race amongst the Mahrattas, who make baskets and sellstrings of cotton and hemp. They are the yerkal vadu of Telingana.

KANJAR, HIND. Acer cultratum.

KANJAR or Amaltas, HIND. Cassia fistula.

KANJARA, TAM., MALAB. A Malabar and Canara tree which grows to about two feet and a half in diameter, and from twenty-five to thirty, in height, of little use or durability. Its fruit is very intoxicating, and is used medicinally.—*Edye, Forests of Malabar and Canara*.

KANKROWLEE LAKE.

KANJARA, Sans. *Daucus carota*.
KANJAROM, an ash-coloured wood of Travancore, used for common building.—*Col. Friih.*

KANJERAM VER, MALEAL. Root of *Strychnos nux-vomica*.

KANJI, HIND. *Rhus vernicifera*.

KANJIR, HIND. Artichoke.

KANJIB, HIND., PERS. *Cynara scolymus*, *Linn.*

KANJKI, a running footman attached to the court of the Bhawalpur Daoodputra.

KANJRU, HIND. *Ilex diphyrena*.

KANJU, HIND. of Panjab. *Ulmus integrifolia*.

KANJUA, HIND. *Guilandina bonduc*.

KANJUR, HIND. *Cæsalpinia sappan*.

KANJURA, DUK., HIND. *Commeryua obliqua*.

KANJUREA, TAM. A Ceylon tree which grows to about sixteen inches in diameter, and ten or fifteen feet high. The natives use it at times in house-work. It produces a fruit which is used medicinally.—*Edye, Ceylon.*

KANK, see Sankasura.

KANKADU CHETTU, TEL. *Sapindus emarginatus*, *Vahl.*

KANKAR, BENG. ? Kakri, *HIND.* *Cucumis utilissimus*, *Roxb.*

KANKAR, HIND. A calcareous concrete, one sort is called "Rewasa," another "Chappar harsaru," is a particular kind of concrete in the Delhi district. Kankar consists of irregular and fantastically-shaped pieces of calcareous concrete. In some parts of India it forms the principal material for road-making. From Calcutta to the Kahibar frontier the road is made from Kankar; this mineral yields when burnt, an excellent lime for mortar. Professor Ansted's analysis of it is 72 per cent carbonate of lime, 15 per cent silica, 18 per cent alumina.—*Proc. Geol. Soc. of London*, 1863, p. 8, in *Powell's Hand-book*.

KANKARI, DUK. *Cucumis sativus*, *Linn.*

KANKELI, SANS. *TEL.* *Jonesia asoca*.

KANKIURA, BENG. *Hydrolea zeylanica*.

KANKI PUTRI, or Kouki, TEL. *Pisonia villosa*, *Poir.*

KANKOL also Kankoli, *HIND.* *Elæagnus orientalis*, *Elæagnus conferta*.

KANKOL MIRCH, HIND. Fruit of *Celtis caucasica*, *Elæagnus* is called Kankoli in some parts of the Himalaya.

KANKOOMBALA-KATTEYA-GASS, SINGH. *Pygeum ceylanicum*, *Gertn.*

KANKRA, HIND. *Pavetta indica*, *Linn.*

KANKRA, BENG. *Bruguiera rheedii*, *l'Herit.*

KANKROWLEE LAKE, also called Raj Samund was formed by Rai Singh, rana of Mewar, at a cost of £1,150,000. It was

KAN-NOUL.

commenced in A. D. 1661, during a period of famine and was finished in 1668. It was formed by erecting a bund or embankment, of white marble across a small river, the Goomtee, near Oodeypore.

KANKUR, also Karkti, *BENG.* *Cucumis utilissimus*, *Roxb., W. & A.*

KANKUSHTAM, SANS., TEL. *Euphorbia, sp.* The original Sanskrit word is a mineral like mica used in medicine. The sanscrit synonyms, however, are Tikta dug-dha, signifying lit. "bitter milk," and *Vijri*, a "Euphorbia."

KANLI, HIND. Paugi, *Abies smithiana*. Himalayan spruce.

KANNA, HIND. *Commelyna Bengalensis*.

KANNA, HIND. the flower stalk of the moonj grass, *Saccharum munja*.

KANNANG-KIRAY. *Commelyna communis*.

KAN-NA-KOSHI, BURM. *Croton oil*. *Croton tiglium*.

KAN-NAN THA, BURM., or Crab Tree. A tree of maximum girth 4 cubits, and maximum length 30 feet. It is abundant on Pielo Island near Mergui, but scarcely procurable in Moulmein. The wood is used for houses, zynats, &c., is very durable and of handsome grain. Of this wood, there are two kinds, red and white; when seasoned, the red variety sinks and the white floats: the latter lighter than the former, likely to answer for helves; the former too heavy for that purpose. Both woods very good for turning purposes.—*Captain Dance.*

KANNARI, on the western coast of India celebrated for its buddhist caves. The Salsette or Kunnari caves, in the island of Salsette, are also purely buddhist, but very inferior to the former. The Kaunari caves are excavated in a hill situated in the midst of an immense tract of forest country, and Mr. Fergusson supposes their date about the 9th or 10th century of christian era. See Budd'ha; Caves; Kewneri; Karli.

KANNA-TSO, BURM. A Tavoy wood, very tough, close-grained.

KANNEA, see Hot Springs.

KANNEII, the cave emporium of the Romans, the modern Makullah. See Canneh.

KANNE KOMALI, Boerhaavia stellata, R. W. Lc., 875.

KANNEM, or Edakula mari. *Vitis pedata*, *Wall.*

KAN-NOUL, CAN. *Syphestides auritus*, *Latham.*

KANOUJ.

KANNU TAKU, TEL. Evil eye.

KANOBA, the idol at a temple near Poona. The head of the temple is styled a Bhagat : on the Jan'm Ashtami, he works himself up into a hysterical state, and the people believing him then to be possessed by Krishna, worship him with incense and prostration, and present to him sick people to be touched and cured. See Bhagat.

KANOCH, HIND. of Kulu, *Fraxinus xanthoxyloides*. Crab ash.

KANOCHA, HIND. *Salvia indica*.

KANONEN, DUT. Kanoen, GER. Cannon.

KANOJ, seed of a small tree brought from Pali and Delhi : considered heating and constipating ; taken as a condiment and also given as a medicine in diarrhœa : one seer sells for two rupees.—*Gen. Med. Top*, p. 141.

KANOJEE ANGRIA. See Angolam.

KANON, Sw. Cannon.

KANON, Kot kasun, Rewapee, Patody, and part of the Baraitech jaghire, form a tract of country called Beeghota, occupied by the Ahir and the Chouhon rajpoot.

KANONEN, DUT., GER., Sw. Cannon.

KANO-RAJ, BENG. *Bauhinia candida*, var. *Bauhinia variegata*, *Linn.*

KANOUT, a river of Shajehanpooor.

KANOOR. Sheathing bases of the leaves of *Crinum asiaticum*, or toxicarium.—*Ben. Phar.*

KANOR, HIND. *Pavia indica*.

KANOUIJ, or Canoge, this town in an early part of the christian era, was the capital of Hindoostan ; or rather of the principal kingdom along the Ganges, and the ruins are at present of great extent. It is now reduced to the size of a middling town. It is situated on the right bank of the Ganges, near the place where the Calindi river (or Kali-nuddi) joins it ; and is possibly the place meant by Pliny for Calinipaxa. This once mighty city was of thirty miles circumvallation, had thirty-thousand betel-shops, and sixty-thousand public dancers and singers. Kauouge is the Kanyakubja of Puranic geography ; the earliest mention of it is found in Menu, as identified with Punchala. The limits of its kingdom as assigned in the Mahabarat nearly agree with those assigned in the 'Rajasthan.' It was an important city in the age of Budd'ha, who had preached here a lecture on the instability of human existence. To commemorate this event, Asoca had built a stupa or mound, 200 feet high. It is then noticed by Ptolemy in his Geography. Fa Hian and Hwen Thsang next visited it, the one in the beginning of the fifth, the other in the middle of the seventh century. Though in Hwen Thsang's time there reigned a rajah by the name of Harsha

KANRAJ.

Vardhana, ruling from Cashmere to Assam, and from Nepaul to the Nerbuddah, the city had not then been of a larger size than three and a half-miles in length, and three-quarters of a mile in breadth. It was surrounded by strong walls and deep ditches, and was washed by the Ganges along its eastern face. Two hundred and fifty-years later, Kanouj is spoken of by Abu Zaid, as a great city. In A. D. 915, the well-known geographer, Masudi, speaks of it as 'the capital of one of the four great kings of India.' Just a century afterwards, the historian of Mahmud relates that he there saw a city which raised its head to the skies, and which in strength and structure might justly boast to have no equal. In another hundred and seventy-five years, it attained a still greater splendour and opulence, and became that overgrown city of a luxurious and effeminate people, which fell an easy prey to the Ghorian, when with the fall of Kanouj ended hindoo independence. The last scion of the Rhatore departed to found a new kingdom far away in Marwar, and deserted Kanouj, and, as described by Ibn Batuta, only a hundred and fifty years later it had dwindled to a small town. Up to the middle of the seventh century, Kanouj was more a buddhistical than a brahminical city. There were three great monasteries to the south of the town, in one of which was a vihara, or chapel, wherein the tooth of Budd'ha had been preserved in a casket adorned with precious stones and raised on a high pedestal. Only two brahminical temples are spoken of by Hwen Thsang, and these were dedicated to Siva. Near a mosque had stood a broken image of Shusti, the goddess of fecundity, and a pedestal bearing date A. D. 1136. The thirty miles of circumvallation seems to be an exaggeration of the hindoo writers. The thirty-thousand betel-leaf shops is also very suspicious. Kanouj brahmins make no objection to eat fish at their meals.—*Rennell's Memoir*, p. 54 ; *Tr. Hind.*, Vol. i, pp. 352, 354, 357, 358, 360.

KAN PADA, TAM. Evil eye.

KAN-PHATA JOGI, or Sonari jogi, a religious mendicant or jogi, distinguished by wearing large metal ear-rings ; thence named kan phata, split-eared. See Jogi Yogi, Kanpharra Yogi.

KANPHU or Khanfu, was properly only the port of Hangchow or Khansa, called by the Chinese Kan'ph'u (a name still preserved as that of a town half a league north of the old site), and by Marco Polo, Ganfu (i, 74). *Yule Cathay*, Vol. i, p. 80.

KANS, HIND. A grass. *Saccharum spontaneum*.

KANSA, see Inscriptions.

KANSA, the maternal uncle and enemy of Krishna. See Kanya Krishna.

KANSALA. In the south of India, the five artizan classes are called Kammalan, Kamalar or Komsalar, and Professor Wilson thinks the last word may be derived from the Sanscrit and Hindi, kans, Bengali, kansya, a mixed metal. They form the five left-hand castes of Madras, but the Kansala is the goldsmith, and chief of the five the other four are the kauchari or brazier; kammari or blacksmith, kadlangai or carpenter, kasi or stone-mason. These intermarry and eat together, and all wear the zunar. The distinction of right and left-hand castes is peculiar to the south of India. It is supposed by Professor Wilson to be of modern origin and to have been introduced at Conjeveram, as a part of civil policy to divide the people and modify their power. But Sir Walter Elliot is of opinion that the separation into right and left-hand castes had its origin in the violent conversion of the ancient races from buddhisim to hindooism, and he has been shown a figure of buddha, which the artizan caste worship. At present they seem to worship Viswakarma, but the bulk seem to worship Siva; they all bury their dead in a sitting posture like that of Buddha sitting with the head of the dead close to the surface, and the dislike to the brahmins is severe. It is amongst the Tamulian people that the right and left-hand sections appear.

KANWA DYNASTY, reigned 45 years. The first was B. C. 66. Kanwa named Vasudeva, usurped his master's kingdom.—*Wilson; Thomas' Prinsep's Antiquities, Vol. ii, pp. 240, 468.* See Magadha.

KANWAL, HIND. Nelumbium speciosum, also Saussurea obvallata.

KANWAL GATTIA, Nelumbium speciosum.

KANWAR, DUK. Aloe Indica, *Royle.*

KANYA. Krishna, familiarly called Kaniya, also called Heri, was of the celebrated tribe of Yadu, the founder of the fifty-six tribes (chah-pan-kula-yadu) who obtained the universal sovereignty of India, and descended from Yayat, the third son of Swayambhuma Manu, also called Vaiva-swata-manu or "The Man, Lord of the earth", whose daughter Ella (Terra) was espoused by Budha (Mercury), son of Chandri, (the Moon), whence the Yadu are styled Chaudravansi, or "children of the moon." Budha was therefore worshipped as the great ancestor, (Pitriswara) of the lunar race; and previous to the apotheosis of Krishna, was adored by all the Yadu race. The principal shrine of Budha was at Dwarka, where he still receives adoration as Budha Trivikrama, the triple energy, like the Hermes Triplex of Egypt. Krishna or Kaniya lived towards the conclusion of the brazen age, calculated to have been about 1,100 to 1,200 years before Christ. He was born to the inheritance of Vrij, the country of the Suraseni, comprehending the territory round Mat'hura for a space of eighty miles, of which he was unjustly deprived in his infancy by his relative Kansa. From its vicinity to Dehli we may infer, either that there was no lord paramount amongst the Yadu of this period, or that Krishna's family held as vassals of Hastinapoor, then, with Indraprestha or Dehli, the chief seat of Yadu power. There were two princes named Surasen amongst the immediate predecessors of Krishna: one, his

KAQ-LIN.

grandfather; the other, eight generations anterior. Which of these was the founder of Surapoor on the Yamuna, the capital of the Yadu, we know not, but we may assume that the first gave his name to the region around Mat'hura, described by Arrian as the country of the Suraseni. Alexander was in India probably about eight centuries after the deification of Krishna. See Kania, Krishna.

KAN-YA, mother of Krishna. She was daughter of Yasuda.

KANYA, SANS. A maiden, a virgin, a girl.

KANYA-DANA, SANS. The giving away of the bride.

KANYA-KABJA, SANS. The town of Kanauj. The words mean a hunchback maiden, and the name is given in a hindoo legend.

KA-NYENG KYAUNG KHYAY, BURM. A Tavoy wood, used for boat, ship, and house-building; not attacked by insects; yields an oil.

KA-NYEN-NI, BURM. Dipterocarpus lœvis, *Ham.*

KA-NYENG PYAN, BURM. A heavy, grey wood of Tavoy, used for handspikes.

KANZHA CHIL, LEP. Linnaëus nipalensis, *Hodgs.*

KANZRU, HIND. Acer cultratum.

KAOL, is the Chinese name of Corea or Korea. The people use rice, barley meal, flour of millet. The Koreans were driven out of east Tartary into the Peninsula which they now occupy. They have since been conquered by the Japanese. Their country was subsequently invaded by the Mongol, on which occasion the Siogoun Yoritomo defeated Kublai Khan. The Koreans have flat faces, oblique eyes, broad cheek-bones, strong black hair, and scanty beard, they are strongly made, their skin varies from tawny or yellow to brown, wheat or straw colour, and reddish yellow. They have a mixture of the Chinese and Japanese physical features. Their religion is buddhist; their alphabet and language differ from the Chinese. The Mantchu call the Koreans Solgo. There exist probably two populations intermixed.—*Latham, Yule Cathay, Vol. ii, p. 268; Adams.*

KAQ-LIN, CHIN., Porcelain clay. This is very abundant in southern and eastern Asia, produced by the decomposition of felspar. It occurs in Ceylon: an analysis, in 1867, showed pure Kaolin 70, Silica 26, Molybdena and

KAOUJI.

Iron Oxide 4 = 100. Kaolin is procurable in great abundance in southern India, at Ahtoor in Salem : near Chingleput : also near Little Mount, and at Trivatoor and Nuttum in Chingleput, at Tripputty in North Arcot : at Bangalore, Cuddapah, Chittoor, Dindigul : Bellary, Neilgherries, Bimlipatam ; Travancore ; between Vellore and Arnee. Madras : Coringa ; Madura, Chicacole :—

Dirty yellowish white Near Chingleput.
Fawn-coloured..... Near Salem.
Felspathic In Trivatoor, Chingleput and Tripputty Hill.
Fine white..... In Travancore.
Greenish yellow..... In Bangalore.
Magnesian kaolin..... Near Vellore, in Chingleput and Bellary.
Pink..... In Neilgherries.
•Pucc-coloured..... In Bangalore.
Red Near Salem.
Silicious..... Near Nuttum, Chingleput, the Little Mount, Madras.
Talkose kaolin Near Bimlipatam.
White kaolin composed At Ahtoor near Salem ; of decayed ice spar and soap stone
Cream-coloured In Ahtoor, Salem and Neilgherries.

KAORWA. This singular tribe of Rajpoots, whose habits, even in the midst of pillage are entirely nomadic, is to be found chiefly in the thul of Dhat, though in no great numbers. They have no fixed habitations, but move about with their flocks, and encamp wherever they find a spring or pasture for their cattle ; and there construct temporary huts of the wide spreading peelo, by interlacing its living branches, covering the top with leaves, and coating the inside with clay : in so skilful a manner do they thus shelter themselves, that no sign of human habitation is observable from without. Still the roaming Sehrai is always on the look-out for these sylvan retreats, in which the shepherds deposit their little hoards of grain, raised from the scanty patches around them. The restless disposition of the Kaorwa, who even among their ever-roaming brethren enjoy a species of fame in this respect, is attributed to a curse entailed upon them from remote ages. They rear the camel, cow, buffalo, and goats, which they sell to the charuns and other merchants. They are altogether a singularly peaceable race ; and like all their Rajpoot brethren, can, at will, people the desert with palaces of their own creation, by the delightful uml-pani or opium water, which, in Rajputanah, the universal panacea for ills both moral and physical. —*M. C. B. ; Tod's Rajasthan.*

KAOUJI, PERS. The dancing and singing girls of Persia are termed Kaouli ; a corruption of Cabuli or “ of Cabul ;” which

KAPILA.

denotes the quarter from whence they came.—*Malcolm's History of Persia, Vol. i, p. 117.*

KAOYA, BENG., also Kah-wa. Coffee tree, *Coffea arabica*, also *Garcinia mangostana*.

KAPHIO, see Karen.

KAPHUR ? Camphor.

KAPI KOTTE, or Kappi Kottai, *TAM., Coffea Arabica.* Coffee.

KAPILA, a very eminent literary character ; founder of a philosophical theory, called the Sankya, similar in many points to the Italic school : thus, corresponding in character and doctrines with Pythagoras. His followers are numerous, and they pay him some divine honours under the name of Vasudeva, affirming that one of Vishnu's secondary incarnations, sometimes said to be fifteen in

KAPPITTIA.

number, was in the person of Kapila. The Saiva sect, in like manner, honour a founder of one of their systems of theological doctrines, Sankara Charya, with an apotheosis, maintaining that Mahadeva incarnated himself in that furious person, and inspiring him with his intolerant spirit, sent him forth to coerce the unlightened into conformity, or in default of faith, to smite them with his holy sword, and exterminate them in the name of the deity. Kapila taught that all things proceeded from an invisible, eternal, plastic principle.—*Moor*, p. 338. See Brahman, Manu, Veda.

KAPUR, BALI, CHIN., DUK., GUZ., HIND., JAP., PERS. Camphor. In the Malay tongues the varieties of camphor are distinguished as Kapur Barus, Kapur Japan, &c.

KAPURDIGIRI, a town, with buddhist remains near Peshawar. The valley of the Ganges was the cradle of buddhism; which, from its rise in the sixth century before Christ, gradually spread over the whole of India. It was extended by Asoka to Kashmir and Kabul shortly after Alexander's invasion, and it was introduced into China about the beginning of the christian era by five hundred Kashmirian missionaries. In A. D. 400, when Fa Hian visited India, buddhism was still the dominant religion, but the Vaishnava were already rising into consequence. In the middle of the seventh century, although the pilgrim Hwan Thsang found numerous temples of the saiva sect, whose doctrines had been embraced by Skanda Gupta, and the latter princes of Pataliputra, yet buddhism was still the prevailing religion of the people. But the faith of Sakya was evidently on the decline, and though it lingered about the holy cities of Benares and Gaya for two or three centuries later, it was no longer the honoured religion of kings and princes, protected by the strong arm of power, but the persecuted

heresy of a weaker party, who were forced to hide their images under ground, and were ultimately expelled from their monasteries by fire. In 1835, Major Cunningham excavated numerous buddhist images at Sarnath, near Benares, all of which had evidently been purposely hidden under ground. He found quantities of ashes, also, and there could be no doubt that the buildings had been destroyed by fire. Major Kittoe, who subsequently made further excavations, was of the same opinion. The buddhist remains now existing may be divided into four distinct classes; 1st, Cave Temples, containing Topes, Sculptures, Paintings, and numerous inscriptions; 2nd, Vihara, or monasteries; 3rd, Inscriptions on rocks and pillars; 4th, Topes, or Religious Edifices. Major Gill, of the Madras Army, was long employed at Ellora and Ajunta in copying paintings; but the volumes of inscriptions in the caves of Nasik, Junir, Kanari, and Karli, still remain to be copied. In Dr. Bird's learned "Historical Researches on the Origin and Principles of the Buddha and Jaina Religions," there are several plates of inscriptions from the caves of Kanari, Karli, Ajunta, Ellora, Nasik, &c. The Vihara or monasteries, are of two kinds:—1st, Cave Vihara, of which several magnificent specimens have been published by Mr. Fergusson; and 2nd, Structural Vihara, of which some specimens still remain at Sanchi, but in a very ruinous condition. The inscriptions on the pillars at Delhi and Allahabad, and on the Tirhut pillars at Mathiya and Radhiya were deciphered and translated in the early part of the nineteenth century by the remarkable ingenuity of the late James Prinsep. The inscriptions on the rocks at Junagiri in Gujrat, and at Dhauli in Cuttack, were also interpreted by him. A third version of the rock inscriptions (but in the Arian-Pali character), which was found at Kapurdigiri, near Peshawar, has been carefully collated with the others by Professor Wilson. Many short inscriptions from Gaya, Sanchi, and Birat, as well as from the cave temples of southern India, have also been published at different times, but, with the single exception of the edicts in the rock inscriptions, which contain the names of Antiochus, Ptolemy, Antigonus, and Magas, the inscriptions in the able work of Major Cunningham are of greater interest, and of much higher importance, than all that had before been published. The Kapurdigiri inscription is on a rock, on the side of a rocky and abrupt hill, near a village of that name in the district inhabited by the Yuzufzye. The mode of reading it was discovered by Mr. E. Norris. It reads from right to left, is in the

Arian or Bactrian character, and is nearly a transliteration of that of Girnar; and the language, he says, was in use for several centuries throughout that extensive line of country over which the Seleucids and their successors held dominion,—that is to say, from the Parapamisus or Caucasus to the upper part of the Panjab, including all Bactria, Hindoo Kush and Afghanistan.

Dr. Moore remarks that at least two classes of people employed the language expressed in this character, the one using the Arian or Bactrian of Bamian, Kapurdigiri, &c., the other using the Budh or Lat character, found on the Girnar rock and on the pillar and in the cave temple inscriptions: and that these two classes of people seem to be the Getæ and Saka, the so-called Arian character being that used by the Getæ, while the so-called Lat character was that of the Saka. The Lat character occurs rarely in the southern part of the peninsula; still it is the only one used on the sculptures at Ameravati, which have been described by the Rev. W. Taylor, and while in charge of the Government Central Museum at Madras, the Editor despatched to England, a large collection of its marbles which have since been described by Mr. James Fergusson in his Tree and Serpent-worship. Inscriptions in the Arian and Lat characters are engraved on rocks at Kapurdigiri in Afghanistan, and at Cuttack, at Delhi on a pillar, also on pillars at Allahabad, Betiah, Mutiah or Mathiya and Radhia or Radhiya.

One Delhi pillar is square with its faces to the cardinal points. On each face is a framed inscription. Another pillar near Delhi, has been called the pillar of Feroz, because it stands on the summit of a large building supposed to have been erected by Feroz shah who reigned in Delhi A. D. 1351 to A. D. 1388. It is 37 feet high, is a single stone, hard and round. Its circumference, where it joins the building, is $10\frac{1}{2}$ feet, it has a more ancient inscription and one with a more recent character, below, in Sanscrit, to the effect that raja Vignah or Visala Deva had, in 1169 A. D., caused this pillar to be inscribed afresh to declare that the said raja who reigned over the Sikambhari, had subdued all the regions between the Himavat and Vindhya. This pillar was erected to enjoin the doctrines of Buddha, but the reading of it somewhat differs from that of the others. Though resembling the Girnar inscription in general purport, these inscriptions differ considerably in the structure of certain sentences. The Delhi Feroz pillar was found in a temple, and both Mr. James Prinsep and Professor Wilson have attempted translations of it. In

a work by Dr. George Moore, M. D., on the "Lost tribes," published in London in 1861, the author mentions that he has translated all these rock and pillar and cave inscriptions, after transliterating them in Hebrew, and that this one is a lamentation to the Almighty on ruin and calamity, but his views are not adopted.

The same Lat or Bud'h characters found on the pillars at Delhi, Allahabad and elsewhere, are also found engraved on rocks. The ancient Bud'h alphabet is really the simpler and more elegant form of the refined Sanscrit.

The Allahabad inscription is similar to that at Delhi, but has four short lines additional, which, according to Dr. Moore's mode of translating, treat on Ruin, Vanity, Equality, and the Wrath of God.

There is a stone now lodged in the Museum of the Asiatic Society at Calcutta, which was found at Bairath near Blahra, between Delhi and Jeypur, and has an inscription in the Bud'h character.

The same character is also found in two inscriptions at Junir, of which one is on the Naueh ghat. It is in keeping with the inscription on the Delhi pillar and on the rock at Ginnar. The Ginnar inscription was supposed by Mr. James Prinsep to be in the Pali language. But Dr. Moore states that it is in Hebrew and has allusion to some calamity or catastrophe. It is said also to contain the doctrine of Sakya, and in the first section to make mention of the Arab, of the Greek in the fourth section, and of the Getæ in the twelfth, as all involved in the same trouble. See *Buddha, Inscriptions, Lat.*

KAPUR KACHRI, HIND. *Hedychium spicatum*: its roots are pounded up with tobacco and smoked.—*Powell's Hand-book, Vol. i, p. 300.*

KAPUR KITCHILI, TAM. *Curcuma zedoaria, Rose.*

KAPURU, SINGH, Camphor.

KAPURRIMBA, MAL. Manna.

KAP-WI, a small rude tribe near the source of the Irrawadi. See India.

KAPYANG. The 'miuak kapayang' is an oil held in esteem amongst the natives of Borneo for cooking, it is produced by a tree called by botanists *Pangium edule*. The tree grows to about forty feet high, and is not found wild; but has been planted by the Dyak race.—*Low's Sarawak, p. 47.*

KARA, in many of the languages of the south and east of Asia, means black: Kara, in Mahratta, a prison; also a form of oath; Kara, Karnatica, a blacksmith.

KARA, TURKI. Black, as Kara-papak, or black-caps, a warlike Turkoman race. The Kara koionuli or black shepherd clan with

the Ak koionuli or white shepherd clan, under the Seljuk dynasty, long ruled over western Asia: they reside near Alajah Dagh.

KARA-ANGOLAM, MALEAL, *Alangium hexapetalum, Linn.*; also *A. decapetalum, Lam.*

KARABAGH, see Juniper.

KARA BELA, also Arma-Bel of Arab authors, the modern town of Bela, the chief town of Lus, in Beluchistan, which is built on a strong and rocky site on the northern bank of the Purali river. It is now decayed, has about 300 houses, but coins, trinkets and funereal jars are found near, and in the neighbouring hills are numerous caves and rock cut temples now ascribed to Farhad and fairies, but are the earthly resting abodes of former chiefs and governors: there are also old mahomedan tombs near. One-third of the houses are occupied by hindoos. Supplies of common necessaries are procurable, but articles of luxury are scarce, and consequently high-priced.—*Elliot's History of India; Masson's Journeys, Vol. ii, p. 28.* See Kama, Kelat.

KARABUK, see Khuzistan; Arabistan.

KARA-CHI or Kara-tchi, a people in northern Persia who resemble gypsies in many respects, besides the use of a particular dialect or jargon among themselves. They are said to love an erratic and idle life, preferring tents to houses, to pilfer eggs, poultry, linen and other things, with great dexterity, to tell a person's fortune by inspecting the palm of his hand, and to be nearly or perhaps altogether without any religion. A man, with whom Sir W. Onseley conversed, acknowledged that most of his tribe had not any certain form of worship or system of faith; but, some mohammedans being present, he loudly thanked God, that he was, himself, a true believer, a very orthodox disciple of their prophet. The Tartars or Turkish couriers from Constantinople, hap- pening to enter the room, immediately recognised this man and his companions to be a Chingani or Jingani, a race of whom the men they said, were all dishonest and the women unchaste, and Mustafa, who had been in England, whispered to him that they were the same as the gypsies: they confessed that with respect to the name, those Tartar couriers had given a correct account, as the people of their tribe were denominated Jingani by the Turks. Porter tells us that the words mean Black-race and is the name given to gypsies in Persia. The women, he says, came out in vast numbers, crowding about us, to beg, and cunningly implying that a little touch of their palmistry would give us a peep into the stars. The men stood rather aloof, finely limbed,

erect in port, and with countenances sufficiently bold and watchful of what was going forward. The complexions of both sexes appear much darker than the native Persians, while their features are of an equally regular cast with the most perfect in this country, though showing an entirely different character. Indeed he adds their physiognomy generally seemed to agree with that of most of their brethren and sisters, he had met wandering about in various parts of Europe. The encampment he met, was composed of two tribes, both mahomedans, but of the rival sects, sunni and shiah. These people live, here, the same vagabond life their brethren do in Europe. The men steal, make sieves, hair-ropes, &c., from the produce of which they pay an annual tribute to the government of two tomanis per family, or tent. The women, when not occupied in the little domestic affairs of their canvass household, beg and tell fortunes; the latter being generally muttered over a few torn leaves from a Faringi book, or the blade bone of a sheep, and accompanied with the thread of your life. The general expression of their faces, both in men and women, is that of deep thought, interrupted with rapid turns of observation, flashing from their bright and powerful eyes. This extraordinary people are found in little bands, scattered over most of the provinces of Persia. Indeed, like the Jews, they appear an ungathered nation, disjointed by some curse, and dispersed everywhere. The Karachi tribes in some parts of Persia, called Kaulee and Soosman—wander about the country, and their habits are the same as those of this singular people elsewhere. The men are tinkers, basket-weavers, dealers in cattle, sheep-stealers, and thieves; but their women, in one respect, differ widely from gypsy females in Europe. Mr. Barrow, in his account of this extraordinary race—has commended the strict chastity of the gypsy women; but the Karachi women of Persia are quite independent of any such rigid virtue; and one and all earn money in other ways than by telling fortunes.—*Onseley's Travels*, Vol. iii, p. 40; *Porter's Travels*, Vol. ii, pp. 528, 529, 530.

KARACHI, a sea-port town in Sindh. The Crocodile-pond, or "Mugger-peer," as it is called, lies to the north-west of Kurrachee. The greater pond is about 300 yards in circumference, and contains many little grassy islands, on which the majority of the crocodiles (*Crocodylus palustris*) bask; some are to be seen asleep on its slimy sides, others half-submerged in the muddy water while now and then a huge monster raises himself upon his diminutive legs, and waddling for a few paces,

falls flat on his belly. The water in the pond feels cold, although fed from two hot springs, one of which is of so high a temperature that a visitor cannot retain his hand in it; yet animal life exists in it, for where the water bubbled up from its sandy bottom, and in the little lade running to the tank, abundance of a species of small black spiral shell, which Mr. Woodward reported to, be "very like some in the British Museum, named *Melania pyramis*, an allied species of which frequents the river Jordan. The crocodiles dig deep in the sand under the neighbouring date-trees and there deposit their eggs. Quantities of deciduous teeth of various sizes, are strewn along the slimy sides of the pond. A guide, taking piece after piece of flesh, dashed it on the bank, uttering a low growling sound at which the whole tank became in motion, and crocodiles, of whose existence Dr. Adams had been before ignorant, splashed through the shallow water, struggling which should seize the prize. The shore was literally covered with scaly monsters, snapping their jaws at one another. They seize their food with the side of the mouth, and toss the head backward, in order that it may fall into the throat.—*Adams*.

KARACHIIL, a corruption of the Sanskrit Kuvera-chal, a name of Mount Kailas, where, according to hindoo mythology, lies the city of Kuvera, the Indian Pluto.—*Yule, Cathay*, Vol. ii, p. 411.

KARACHO, CAN. *Hardwickia binata*, *Roxb.*

KARA-CHOLAN. The fleece of its flocks are reckoned very productive; those of other parts of the country are finer and more silky.—*Rich's Koordistan*, Vol. i, p. 227.

KARA-CHUNE, TAM. *Tacca pinnatifida*, *Lin., Forsk.*

KARADAGH. This mountain runs up to Derbend-i-Bazian, and thence, after running a little way straight like a wall, it runs a little west and forms the hill of Tchermala, thence it turns more west and forms that of Khalkhalan. The Karadagh diminishes in height all the way from the Seghirmeh, which is very high, and towers above all the other mountains in the distance.—*Rich's Residence in Koordistan*, Vol. ii, p. 6.

KARADI, TAM. A bear.

KARADLU, PANJABI. HIND. of Kotgarh. *Acer levigatum*, *Wallich.*

KARAFS, HIND. *Apium involucratum*, the *Pimpinella involucrata*, *W. & A.*, and *Ptychotis Roxburghiana*, *D.C.*

KARAFTO, see Kurilian.

KARAGHIL, MALAY. Aloes-wood.

KARA-GHUZLU. In Persia, the eastern Punch.

KARAKASH.

KARAIH, HIND. An open large iron vessel or bowl.

KARAIH-LENA. The ordeal of taking a piece of gold out of a pot of hot oil. If the accused do so without being scalded he is deemed innocent. Karahi-lena is common in India.—*Richard F. Burton's Sindh*, pp. 390, 404; *Tod's Rajasthan*, Vol. i, p. 71; *Wilson*.

KARAI-CHIEDDI, TAM. *Canthium parviflorum*, Lam.

KARAI MARUDU MARAM, TAM. *Terminalia glabra*.

KARAI MUNTIA KIRE, TAM. *Stellaria media*.

KARAIN, Hind. of Gujrat and Kashmir, the small field pea, *Pisum arvense*.

KARAITA, HIND. *Verbena officinalis*.

KARAK, PANJ. *Celtis orientalis*, also *Cordia vestita*, *H. f. et T.*; *Linn.*

KARAKA, DUK., TEL. *Sterculia colorata*, Roxb.

KARA-KAI, TAM. *Myrobalan* of *Terminalia chebula*, Retz.

KARAKAI CHETTU, TEL. *Terminalia chebula*, Retz; *W. & A.* The tender buds of this tree are formed into galls which are much prized as an astringent medicine and also as a mordant in dyeing. In this state they are called Kāraka mogga or buds, the perfect galls are Karaka puvvu or flowers, and the seed Karakkāya or fruit—*Bhāvana karakkāya*, Br. 597, is a peculiar medicinal preparation.—*Elliot, Fl. Andh.*

KARA KALPAK. This race moved from the mouth of the Jaxartes, into the Khanat of Khiva, in the beginning of the 19th century and are only met with there. In appearance and dress they are intermediate between the Kirghis, Kasak and Kalmuk. They are tall vigorous men, with more powerful frames than any of the Central Asian tribes, but clumsy and with coarse features. They have large head, flat full face, large eyes, flat nose, slightly-projecting cheek bones, a coarse and slightly-pointed chin. The Kara-kalpak are considered dull and foolish. They are even less warlike than the Kirghis; they have seldom appeared as conquerors and are even less employed as mercenaries. They are largely occupied as cattle breeders and they are active, benevolent and faithful.

KARAKA MARAM, TAM. *Zizyphus glabrata*, Heyne.

KARA-KANIRAM, MALEAL. *Andrographis paniculata*, Wall. *Chernita*.

KARA KARNAY KALUNGU, TAM. *Tacca pinnatifida*, Linn., Forsk.

KARA-KARTAN, TAM. *Clitoria ternatea*, Linn., Roxb., *W. & A.*

KARAKASH, a river, which flows from

KARAKORAM.

Pumgal to Suget in a westerly direction, then takes a sharp turn to the north, and then flows, for the most part, in an east-north-easterly direction. In its valley are very large quarries and mines, from which is dug the yashm or jade stone, and which are resorted to by people living at great distances, as this stone is much valued throughout Central Asia.—*Report on the Proceedings of the Magnetic Survey of India*, p. 3.

KARAKITA, the name given to four or five islands on the N. E. of Celebes.

KARAKOKLA, HIND., of Kashmir, &c., a kind of China tea.

KARAK-OLAY, SINGH. See Olay.

KARAKONILU TRIBE, see Hyderabad.

KARAKORAM, the name of the southern crest of the great range in Central Asia, which bounds the high table land of Thibet. Belur Tagh, part of that mountain range is the principal mountain from which the great rivers of that region have their origin. It is the slopes of the Belur Tagh, in the highland of Pamir, between the 40° and 37° of North Lat. and 86° and 90° of East Long. that Ch. Bunsen indicates as the *Uttara-kuru* of the Arian hindoos. The Belur Tagh is called also Belut Tagh or cloud mountain. Belur Tagh is also one of the many names given to the Kouen Lun chain, part of which forms the northern boundary of western Thibet, is not less elevated than the Himalaya, and is covered throughout a great part of its length with perpetual snow. Dr. Thomson reached its axis in the Kara Korum pass, elevated 18,345 feet. Captain Cunningham regards Belur Tagh or Bulut Tag, as synonymous with the Balti mountains. It is also called Mustang, Hindoo Kosh and Tsun-lung or onion mountains, because of a species of *Allium* growing there. Its continuation is the Pamer range. This mountain range is of great interest in examining the origin of nations. The vast climatic change which took place in the northern countries is attributed in the Bible to the action of water. But, by the Vendidad, the sudden freezing up of rivers is the cause assigned. Both of these may, however, have resulted from the same cause, the upheaving of the land by volcanic action, elevating some portions and depressing others into basins, such as the Caspian sea. Ten months of winter is at the present day the climate of western Thibet, Pamer and Belur, and corresponds with that of the Altai country, and the district east of the Kouen-Lun, the Paradise of the Chinese. The country at the sources of the Oxus and Jaxartes, therefore, is supposed to be the most eastern and most northern point whence the Arians came. Wherever the Indians may have fixed the

dwelling places of their northern ancestors, the Uttaru-kuru, we cannot venture to place the primeval seats of the Arians anywhere but on the slopes of the Belur Tagh, in the highland of Pamer, between the 40th and 37th degrees of N. latitude, and 86° and 90° of E. longitude. On this western slope of the Belur Tagh and the Mustagh (the Tian-Shang or Celestial Mountain of the Chinese) the Haro-berezaiti (Albordsh) is likewise to be looked for, which is invoked in the Zendavista, as the principal mountain and the primeval source of the waters. At the present day, the old indigenous inhabitants of that district, and generally those of Kashgar, Yarkand, Khoten, Turfan, and the adjacent highlands, are Tajik who speak Persian, and who are all agriculturists. The Turkoman either came after them and settled at a later period, or else they are aborigines whom the Arians found there, but its slopes are the primeval land of the Arians. Extensive plateaux are to be found on both sides of Kara Koram, but they are most extensive to the north and west of the Pass. Eastward, the plateaux terminate completely in the longitude of Chang-chen-mo, where we meet again with valleys and ridges, both well defined. A similar succession of ridges and valleys is also the general character of Ladak (in which plateaux are generally not met with.) The mean height of the plateaux to the north and west of Kara Koram is 16,800 to 17,000 feet. The point where the plateaux reach the greatest mean elevation, and probably the loftiest plateaux in the world, lays a little to the north of the sources of the Shayok. To the south of this region, between Kara Koram and the Nubra valley, is a second region of a great general elevation, in which some single peaks seem to attain the greatest absolute height. One peak of the Kara Koram range, towers to 28,290 feet. The Kara Koram Pass, in L. 35° 46' 9" N; and 77° 30' 4", is in Nubra-Turkistan, leading from Ladak to Turkistan. The top of the pass is 18,345 ft., *Schl.*, according to Rol., and 18,200, feet according to Dr. Thomson. The Kara Koram mountains are covered with wild leeks to the height of 17,000 feet, thus justifying the Chinese name of Tsung-Lung or onion mountains. North of this mountain range lie the Chinese districts of Yarkand, Khotan and Kashgar, peopled by mahomedans with the exception of the Chinese functionaries and Tartar soldiers. Kara Koram, is a Turki word, signifying the black mountains. To the north of Balti, it is known as the Bolor range, this being the name given to Balti by all the races of Dardu origin. The pass is rarely entirely free from snow. It will thus

be seen that the Kara Koram chain of mountains is variously called by the surrounding nations, Mustagh, Kouen-lun, Hindoo-Kush, Tsung-lung, Belur-tagh, and Bulut-tagh, the Belur-tagh according to Cunningham being synonymous with "Balti" mountains and its continuation forms the Pamir Range west of Yarkand. The Bulut-tagh of Captain H. Strachey means cloud mountain; Belur-tagh means ice mountain, and Tsung-lung is onion mountain. Where it forms the northern boundary of western Tibet, it is not less elevated than the Himalaya, and is covered through a great part of its length with perpetual snow. In western Tibet, the axis of the chain is in general distant about 150 miles from the Himalaya, and the country between the two, consists of a complication of ranges of lofty and rugged mountains, separated from one another by stony valleys, which on the higher parts of the courses of the rivers expand at intervals into alluvial plains. The axis of the Kara Koram is probably continuously upwards of 18,300 feet of elevation, and its main ramifications are equally lofty. The axis has never been crossed by any one, but has been reached by Dr. Thomson at 18,345 feet. The valleys enclosed between the ramifications extend for many miles at 16-17,000 feet, and numerous peaks in all parts rise to 20-23,000 feet. The passes in this range may be compared with others, the south of India, where the highest pass is the Sigur, in the Nilgiris, 7,204 feet. The Rang-bodde pass, in Ceylon, 6,589 feet, is little inferior in height. Of the numerous passes, occurring in the western Ghats, the Bapdeo and the Katruj, both exceed 3,000 feet, the former being 3,499 feet, the latter 3,019 feet, and the Ram-glhai is upwards of 2000 feet.

In December 1845, when the Chinese fought a battle near Tirthapuri, in Gnari Khorsum, the garrison of Takla Khar fled across the pass near the head of the Kali river. Even in this unopposed fight, one-half of the men were killed by frost, and many of the remainder lost their fingers and toes, the flight was most disastrous.

In the Karakoram, the snow-line is so elevated, and the absolute quantity of snow falling so small, even in winter, that the passes are never entirely closed. The Kara Koram can thus always be crossed even with horses, and the caravan road from Ladak to Turkistan accordingly remains passable throughout the year, though during the cold season, in order to avoid the Sassar pass, one of the most difficult parts of this route even in summer, the merchants prefer going up to the Kara Koram along the Shayok river. In the Kouen-lun, all passes above 15,000

KARAKORAM.

feet, are closed in winter by the heavy snow-fall. The following are the principal passes in southern Asia, in America and in Europe.

1.—Dekhan.

Name.	Feet.
Bapdeo	3,499
Katruj	3,019
Par	2,098
Nagcherri	2,645
Navi	2,617
Salpi	2,478
Pochama	2,446
Nana	2,429
Jam	2,328

2.—Malva.

Name.	Feet.
Malsej	2,062
Tal	1,912
Bhor	1,798
Pendera	3,498
Silva	1,928
Mandla	1,620
Poppers	1,560
Gumba	1,563
Singrapur	1,437

3.—Kanatik, Nilgiris and Ceylon.

Sigur	7,204	Kodur	2,401
Sispara	6,742	Gantvarpilli	2,373
Rangbode	6,589	Kisnagherri	2,160

4.—In the crest of the Himalaya from Sikkim to Kaitwar.

Ibi Gamin	20,459	Lipu	17,670
Donkia	18,488	Uta Dhura	17,627
Janti	18,529	Birukanta	17,615
Parang	18,500	Klungar	17,331
Mana	18,406	Niti	16,814
Nelong	18,312	Vallauchun	16,756
Klobrang	18,313	Pulling	16,726
Uma	18,123	Shinku La	16,084
Langpia	17,750	Bara Lacha	16,186
Mayang	17,700		

5.—In the crest of the Kara Korum from Long. E. Gr. 76° to 79° 30'

Mustagh	19,019	Kara Korum	18,345
Chang-chen-mo	18,800		

6.—In the crest of the Kouen-lun from Long. E. Gr. 78° to 80°

Elchi	17,379	Yurungkash	16,620
-------------	--------	------------------	--------

7.—In the Andes.

Alto de Toledo	15,590	Assuay	15,526
Lagunillas	15,590		

8.—In the Alps.

St. Theodule	11,001	Old Weisssthor (a)	11,871
New Weisssthor (a)	12,150		

(a) These two passes cannot be used for practical purposes.

Chang-chen-mo gives its name to a route of about 16 marches between Ladak and eastern Turkistan, said to be the easiest from India to Upper Asia, much easier than the more westerly Kara Korum route traversed by Schlagintweit and Mr. Johnson. The heights vary from 19,000 to 21,000 feet, but the mountains are generally rounded, and fuel and grass are abundant save at one stage. Gumah is equidistant between Ilchi and Yarkand, and the Kara Korum route meets this route at Shadula. The existence of glaciers in western Tibet was first made known by Vigne, who alludes to them in his *Travels in Kashmir*. Colonel Richard Strachey was the first who proved their existence in 1847 in the Himalaya. On the northern side of the Kara Korum and in the Kouen-lun there are glaciers having forms identical with those of the Alps. Some of them are considerably larger than the glaciers in Europe. In the Himalaya, the lowest glaciers go down to 11,000 and even 10,500 ft.; the Pindari ending at 11,492 ft., the Timtunna at 11,430 ft., the Tsoji at 10,967 ft., and the Chaia at

KARA KUNDAL.

10,520 ft. In western Tibet they descend to about the same elevation; thus, the Mustagh to 11,576 ft., the Tap 11,508 ft., the Tami Chuet 10,460 ft., the Bepho glacier near Askoli even to 9,876 ft. The latter is worthy of notice as a remarkable case of low termination. In the Kouen-lun, the glaciers end probably at heights not much differing from those in western Tibet; at least so we may infer from the height of the snow limit as also from the general appearance of the upper part of the glaciers. The glaciers on both flanks of the Elchi pass present, however, no instances of particularly deep descent.—*Ch. Bunsen, Vol. iii, p. 406; Report on the Proceedings of the Magnetic Survey of India, p. 5; Cunningham's Ladak, 1854, p. 553; Vignes' Travels in Kashmir, Vol. ii, p. 285; Thomson's Travels.* See Arian, Cush, Indus, Kaffer, Ladak, Mahaban, Sikh, Tsung-Lung, Yak.

KARA KORUM, the chief place successively of the khan of Kerait, and of the Mongol khan, till Kublai established his residence in China. Bishbalik, i. e., "pentapolis" lay between Kara Korum and Almali; and had anciently been the chief seat of the Uigur nation. It is now, according to Klapproth, represented by Urumtsi.—*Yule, Cathay, Vol. ii, p. 506*;

KARA-KUL, a small district in the valley of the Samarcand river, N. W. of Bokhara, of which it is a division, occupied by Turkoman and Uzbek shepherds. Large supplies of lamb-skins are sent from it to Tartary, China, Persia and Turkey. They are highly valued in Persia, and are used for caps, which have a beautiful shape, and are much better than those of the Tartars. The rich men of Persia who are fond of showy dress, generally kill a pregnant sheep, the skin of the young of which is afterwards taken off, and covered with cloth and cotton, to prevent the effects of the sun and air. The skin of such a young lamb is delicate, soft and light. The finest lamb-skin cap is valued in Teheran, and other places in Persia, at thirty rupees. The caravan of Bokhara which frequents Mashad during the course of the year, brings considerable quantities of the skins. The shawls of Kirman, and the sugar of Yazd are most important articles of sale in Mashad.—*Burnes; Mohan Lal's Travels, p. 193.*

KARAKULI, HIND. Skins.

KARA KUNDAL, MALEAL. Lumnitzera racemosa, Willd. Thus tree grows in the Malabar and Travancore forests to about sixty feet in height, and two feet in diameter. It is used by Arabs for the masts of the dow, baggerow, doni, and pattamah. It is very strong, and is said to be durable; but must

KARA MIN.

be considered heavy for the purposes to which it is applied.—*Edge, M. & C.*

KARAL, HIND. *Bauhinia variegata*. Karalin of Kanga, is a fibre of a species of *Bauhinia*.

KARAL, PANJ., or Kachuar, HIND., variety of *Bauhinia variegata*, L. which grows to a good size, the trunk to the first branch being 10 or 12 feet, and girth 6 feet. Its wood is light-red, soft, subject to rapid decay and to worms; used by zemindars in the wood-work of their houses. The flowers are used as an article of food, and the leaves as fodder for cattle.—*Powell's Hand-book*, Vol. i, p. 541.

KARA-LINGI. Saiva mendicants, who go naked, and to mark their triumph over desire, affix an iron ring and chain, on the male organ. These ascetics were the persons who attracted the notice of Bernier and Tavernier and other of the earlier travellers. Since the beginning of the nineteenth century, they have rarely, if ever, been seen, by European.—*Wilson*. See Hindoo.

KARALLA, HIND. *Falconeria insignis*.

KARALLI, HIND. *Bauhinia variegata*.

KAR ALI or Kara valli, TEL. *Carallia lucida*, R. The words mean "hill Memecylon" from the resemblance of the shining leaves to that plant. It is found on the Nagari Hills under this designation, whence Roxburgh took his generic name.—*Elliot, Fl. Andh.*

KARALSANA, TEL. *Phaseolus rostratus*, Wall.

KARALUM, DUK. *Stapelia buffonia*.

KARAM—? Dyes.

KARA-MUREN, MONGOL. The Black River, called by the Chinese Hoang Ho, or the Yellow River. The embankment of the river is said to date from the twenty-second century B. C. Its regulation has ever been a source of anxiety to the Chinese government, and there used to be a tax on the Hong merchants at Canton expressly on account of this object. The will of the emperor Kea King, who died in 1820, has the following passage:—"The Yellow River has from the remotest ages, been China's sorrow. Whenever the mouth of the stream has been impeded by sand-banks, it has, higher up its banks, created alarm by flooding the country."

This seems to have been eminently the case in 1855 or 1856, when the stream of the Hoang Ho near the debouchment of the great canal was reduced to a few yards in width, the northern banks having given way far up, and the inundations poured over Shantung. On this occasion, much of the water was reported to have escaped into the gulf of Pecheli, which the Chinese believe to have been the original exit. During the reign of the last Mongol emperor, a project was adopted for restoring this channel. The discontent created by this scheme assisted in exciting the movement for the expulsion of the dynasty.—*Davis, Vol. i, pp. 137, 190; De Guignes, Vol. iv, p. 216; J. R. G. S., Vol. xxviii, p. 294; see also Biot in Jour. As. Ser., iv, Vols. i and ii; Yule, Cathay, Vol. i, p. 125.*

KARAN, HIND. *Morus parvifolia*.

KARAN, see Kuristan.

KARANA, HIND. A doer of anything, hence the curium or village accountant, and the terminal syllable of such words as kudrikara, a horsekeeper. The Karana is also a mixed caste, following writing and accounts as an occupation. Hence the Anglo-Bengal word Kerani, a clerk.—*Wilson*. It is from the Sanscrit Kri to do.

KARANASCHU, Rus. Blacklead pencils.

KARANCHILLY, a Travancore wood, of a dark colour, specific gravity 0.519. Used for buildings and small boats.—*Col. Frith*.

KARANG, MALAY. Coral.

KARANGAL, HIND. Cathartocarpus fistula.

KARANGALLE, TAM., of Ceylon. Ebony. On the Malabar coast this tree is named Karu Mara. It grows to about ten inches in diameter, and from fifteen to twenty feet high, but the black heart of it does not exceed seven inches in diameter. In the north part of Malabar, in Canara, it is named Acha Maram, by some of the Kanataka Nuga-gha. The natives use the young buds, leaves, and flowers of this tree in cases of flux and in inflammation of the liver, for the cure of which it is said to be most useful.—*Edye, Ceylon.*

KARANGALLY MARAM, TAM. Aca-cia sundra, DC.

KARANG BOLLONG. This district is situated in the residency of Bagelen; division Ambal, on the southerly sea coast between the rivers Chinching-golong and Djetis, both of which have their embouchure in the sea. Generally speaking, the place may be considered salubrious. The thermometer at 6 A. M., from 70° to 74° F., at noon, from 82° to 85°, and at 6 P. M., 77° to 79°. 4,000 able-bodied men, of the district Karang Bollong, find their livelihood by gathering birds' nests, in the cultivation of sawa, and in fishing. The women on their part keep themselves busy in weaving cloths, which are everywhere in good demand, and are much sought for in the capitals of the residencies, Surakarta and Djekjekoarta. Karang Bollong furnishes annually an important produce of birds' nests, but the collection is made with much danger to life. The gathering takes place three times a year under the name of Uduau kesongo, in the end of April, Tellor in the middle of August, and Kapal in December. The yearly produce is commonly between 50 and 60 picul. When the time for gathering approaches, six nests are collected to be compared with the sample of the previous year and according to old custom, a Thursday is always chosen to make beginning with the preparation of what is needed for the feast. The next morning the buffaloes are killed, and two hours afterwards some pieces of flesh, tongue, entrails, &c., from the slaughtered animals, are placed on small bowls woven of bamboos called sadjen, and are offered to Bollong Watu Tumpang, and at the cliff of Medjeungklek a he-goat is offered with incense. The festival must, by old custom, always take place on a Friday, which by the natives is called Ngaderan. In the afternoon of the same day a Wayang generally a piece of seven acts, is performed in the Bollong, while the necessary flowers, fruits, ointments,

KARANG BOLLONG.

sir, pinang, &c., and what is further required for the offerings, are prepared by the Tukan Kembang. All these materials are placed on the before-mentioned bamboo bowls, and in the evening at $\frac{1}{2}$ past 5 o'clock, are brought by a servant into the Bollong near the Seroot tree. The origin of this tree is ascribed to a Javanese named Kial who is buried there and above whose grave the tree has risen; and the natives declare that the tree has sprung from the navel of the dead. They likewise make offering on the burial place, at the waringin tree, and in the room, the pantry, kitchen and other places in the dwelling of the overseer. After the wayang-players have returned from the Bollong, the bed placed near the entrance of the godown, known under the general appellation of devils-bed or bed of Nyai Ratu Kidul (which has existed from time immemorial) is put in order by the Tukan Gedong and ornamented with some silk and other cloths. Nobody but this woman is allowed to do this. Every Thursday during the time of the collection this bed is cleaned and offerings are made to it. After everything has been made ready the small lamps are lighted and the small bamboo bowls with flowers, fruit, &c., are placed with particular marks of honor by the Tukan Gedong before the bed on a small conch made for the purpose. At the same time she says in high Javaese, as if addressing some distinguished person, "By order of Mijlneer (meaning the overseer) I here bring wherewithal for you alone to eat." After this speech the Tukan Gedong, herself answers, "Yes, mother Tukan Gedong, say to father Mijlneer (the officer) that I return my thanks for the food which he has sent me." After this ceremony is finished the Tukan Gedong remains sitting on the bed, and further asks Nyai Ratu Kidul (who is supposed to be present in the bed) "if it be agreeable to her that the birds' nests should be collected, and if it shall take place without mischance," which request is ordinarily answered with "yes" (ingee.) During this time the wayang is kept up till the next morning. During the day the toppeng-play is maintained. In the evening the toppeng-play being finished, the Karang Bollong feast begins, on which occasion the gamilang and two or three dancing girls make themselves heard. At the first seven acts the dancing girls turn their heads towards the birds' nest warehouse in honor of Nyai Ratu Kidul, and it is a general custom in the district of Karang Bollong wherever a feast is given to dedicate the first seven songs to the honor of Nyai Ratu Kidul. After the feast on Sunday morning the headmen take their departure for their rocks, and, collect

six birds' nests, which, are again compared with the musters. If the nests are of proper bulk, the work is continued by making stages and ladders and fastening them to the rocks into which the collectors have to descend. All these operations being completed in five or six days, the inhabitants of the nearest dessa go to the cliffs Dahar and Gedee with the men belonging to these cliffs, accompanied by gander and sontona who carry with them the requisite bags to contain the nests which may be gathered.—*Journ. Ind. Archip.*

KARANG COTTAY, TAM. *Ixora parviflora*, Vahl.

KARANGELY, TAM., Karakili, MALEAL. A very tough whitish coloured wood, used for general purposes; many of the planks of the native boats are of this wood, and the edges are sewed together with koir, with wadding on the seams, and yarus crossing the joints, for the purpose of making the boats pliable in the surf, as it would be useless to fasten them with nails, &c., for the services for which they are required.—*Edge, M. & C.*

KARAO, marriage of a widow with the brother of a deceased husband, as practised among the Jat, Gujar, Ahir, and other tribes, in the N. W. provinces of India; it is looked upon as disreputable, and the term is also applied to concubinage. See Jat: Marriage.

KARA OGHIAN, ruins about half a mile S. E. of Kifri in Kurdistan, from which Rich excavated a quantity of earthen jars varnished black in the inside, and perfectly resembling those found at Seleucia and Babylon. He obtained, also, a small earthen lamp like that now used by the villagers. Gold and silver coins are also frequently found here, which the villagers immediately melt down. The jars, or sepulchral urns, refer to the Sassanians. Farther up the torrent, on the N. N. W., are some excavations in the block, called Ghiaour houses, and others of

the same kind are in the hills, ten minutes' ride from the S. extremity of the ruins, consisting of excavated sepulchral chambers, with very low doors, and, in the inside, three places to lay out bodies, but of small dimensions, about five feet long. The plan of these excavations resembled the Achaemenian sepulchres at Naksh-i-Rustam, but there was no writing or carving of any description about them. Farther on, about three miles from the ruins, on the top of a hill, are some vestiges of building, which the people call Kiz Kalasi, or the Girl's Castle. Here urns and bones are found; the place is nearly opposite Oniki Inaum. S. W. of Kifri is an immense mound like the Mujalliba of Babylon. Rich dug about it, and found immense quantities of small pieces of human bones, and fragments of urns, all of which had a black varnish on the inside: but the pottery was of different quality, some coarse and unornamented. The soil, as deep as he could discover by means of a ravine, was impregnated with black unctuous mould, fragments of urns, and small bits of bones. On the centre of the mound is a burial-place of Arabs; and the mahomedan now confounds his dust with that of the fire-worshipping Persian; for that this was a Sassanian place of exposing the dead, Rich had no doubt from its appearance and character, and the style of the fragments found.—*Rich's Residence in Koordistan*, Vol. i, pp. 18-21.

KAREN, are divided into the Sgau, B'ghai, Pwo and Shan Karen, and have nine distinct

KAREN.

dialects. Karen, is a Burmese word applied to most of the mountaineers in Pegu and southern Burmah. Some of them are known as the white, red and black Karen, from the colours of their clothes ; also Burmese Karen and Talaing Karen, as dwelling amongst these nations. They are not a prior race in Burmah. The Shan call them Yang, pronounced in the different parts of Burmah as Yen, Yein, Yen-ban and Yen-seik. The red-clothed Karen call themselves Ka-ya, and some of the B'ghai clans, Kay-ay. They describe themselves as having come from the north, and crossed the great sand desert that separates China from Tibet. They believe that formerly they had books. The name Karen embraces several distinct tribes, speaking widely different dialects of one language. But all the Karen family between the mouths of the Tenasserim and sources of the Sitang arrange themselves into the Sgau tribes, the Pwo tribes and the B'ghai tribes. The Karen people are found within the British, Burmese, Siamese and Chinese territories, and extend from 28 to 10° N. L. According to Dr. Bowring, the eastern Karen, are separated from those of the Burmese, or western frontier, by the valley of the Menam, and the great part of the native Thay population, occupying Korat and the foot of the mountains that form the water-shed of the Mekhong. These Karen may be so merely in name. The Karen between Burmah and China are independent, with a patriarchal constitution, and reckon themselves by families not by villages or tribes. They are agricultural. The Burmese and the Mon of Pegu assert that the Karen of Tenasserim are the prior occupants of that territory, and a tradition of their own makes them come from the north. Their language is Burmese with Singhpo affinities. Some of the tribes are buddhist, but two of them, the Sgau and Pgho are pagan. Karen is a Burmese term and is often pronounced as Khyen, the native name is Pgha-Ken-yan = *man*. The Bukho, a priest and physician, has considerable influence. The Wi is a shaman, a poet, a soothsayer or prophet: their local personal and individual genii are called Kelah. Plu is their Hades, and Lerah their hell. They have also gods of the elements and atmospheric phenomena. A perverted christianity seems to exist among them, and they have evinced a readiness in adopting the tenets of that faith. Those within the British territory, the true Karen, are about 62,326, of whom 25,615 are under christian influence. The red Karen or Kaya, eastern and western, are estimated at 200,000 souls. There are fourteen tribes of the Ka-ya or mountain Karen in the highland country lying between the

KAREN.

rivers Sitang and Salwin, the majority of whom have forsaken their ancient savage customs. Karen, Dr. Mason tells us, is a Burmese word applied to most of the mountaineers of Pegu and southern Burmah. There are White Karen, Red Karen and Black Karen so designated from the prevailing colour of the dress. Burmese Karen and Talaing Karen from the nations with which they are associated. Karen is thus a name applied to several distinct tribes united by the common bond of having one language though spoken in widely differing dialects. But all the Karen tribes dwelling between the mouths of the Tenasserim and the sources of the Sitang, resolve themselves into three classes—the Sgau tribes, the Pwo tribes and the B'ghai tribes, who may be thus arranged :—

Sgau proper,	Bghai ka-ten,	Pwo proper,
Maune Pgha,	Bghai mu hitai,	Shoung khie,
Paku,	Bghai ko hita,	Kaya or Ka,
We wa,	Lay may,	Taru or Kho thu,
	Manu manan,	Mopgha,
		Hashu,
		Toung thu,
		Kyen.

The Rev. Dr. Mason tells us that the eastern Bghai, Bghai-mu-hay or red Karen, call themselves Kaya, their term for man, and are called by the Burmese Kayenni ; by the Shan, Yen-laing, or red Karen, from the colour of their dress, which was originally all red, as it even yet occasionally is, but a mixture of black garments is now commonly seen. Colonel Yule says, it is generally believed that they are not in any way closely allied to the Karen proper of Pegu and Tenasserim, but that they are rather a Shan race, but Dr. Mason has not been able to find any proof of the latter kindred, other than their being a “gens braccata,” and this proof fails, he adds, when it is known that we have trouser-wearing Karen living in sight of Toungthoo. The men wear short red trousers with perpendicular narrow black or white stripes. Sometimes the trousers have a black ground, with red or white stripes. Below the knees are black bands, several inches in diameter, formed of twisted thread. A shawl or sheet of white, with red or black stripes, is wrapped around the body with or without a Shan jacket. A bright red turban is worn on the head, and an ornamental bag is hung across the shoulders. Every man carries a short knife in his belt, many have swords ; and those who have not muskets or matchlocks, carry from one to three light spears, which are used in warlike javelins, and thrown from the hand. Every man has a pony, so that in time of war they form a body of light cavalry, when all turn out to service and the cultivation is then carried on by the women exclusively.

The women's dress is peculiarly picturesque, though every garment is only a rectangular piece of cloth. The head dress is a large red or black turban, wound up to form a small tower on the top of the head. There is no gown; but a cloth like the Roman toga is tied by two corners on the right shoulder, and the left arm is sometimes kept covered, but more often it is thrown out above the garment. A second piece of cloth like the first is kept in the hand like a loose shawl, or wound round the body. These garments are usually one black and one red. For a petticoat, another rectangular piece of cloth is wrapped two or three times around the person, and is kept in its place by a wampum belt, some half dozen inches in diameter. Another enormous band of beads is worn below the knees, and on the ankles are large silver bangles. Both sexes wear silver bangles on the wrists, and the women a profusion of silver necklaces, formed of ingots of silver, or coins, to which are added a dozen or more strings of beads. Ear drops are worn by both men and women, and the latter add silver ear-plugs of an inch or more in diameter. Beads are as numerous among the women, though all imported, as among the American Indians; and the profusion of silver ornaments to be seen indicates anything but poverty. He adds, "the female instinct for ornaments above all other things, is strikingly illustrated while I am writing. A girl stood in the crowd while some boys were going over their spelling lessons, and she was asked to study. "If I do," she replied, "must I put off these?" pointing to her ornaments; and on being told she must, the decided answer was, "Then I won't yet."

The country inhabited by the Red Karen is the finest in the interior of Burmah. After fourteen days' travelling from Tounghoo, Dr. Mason found himself on the summit of a mountain some four or five thousand feet high, about the twentieth that they had crossed on their way, when the land of the red Karen opened suddenly before them, and a more beautiful prospect he says he never beheld. Mountains in two massive ranges run down, like the sides of a triangle, with the apex at the south near where he stood, and in the interval was spread out what appeared to be an immense plain, bounded on the north only by the horizon. It seemed to be pillared on mountains two or three thousand feet high, like a gigantic altar on which to offer sacrifice to God, or to build a temple for his worship. Its scant shrubbery and bare red soil, contrasted strongly with the dark mountain sides, covered with heavy timber. The picturesque

summits of the almost perpendicular walls that supported this expanse, indicated them to be, as they proved, of mountain limestone. On entering the country, however, he found it far from being the plain it appeared in the distance. It is a rolling country with long dry ridges and deep hollows in which the water sinks, as in Kentucky, to arise as perennial springs in other places. The village in which he was, had no water for its fifteen hundred or two thousand inhabitants, except what one of these springs supplies. The country with the mountains around it, resembles both Scotland and Vermont; and the inhabitants are only what the highlanders were in the days of the Wallaces and Bruces. They are governed by a Saubwa, and have occupied their present locality for forty generations, having been driven down from the north by the Burmese, and separated at upper Pagan from the Chinese, with whom they were then associated. Here, on the high table-land, they have lived, a terror to both Burmese and Shan, plundering, kidnapping, and killing, as opportunity offered, and selling the slaves they did not need to the opposite nation, Shan to Burmese, and Burmese to Shan. The eastern red Karen are said to be three times as numerous as the western, and these must amount to fifty or sixty thousand. Mr. Mason was told there are ninety-four large villages and several smaller ones. He found the people with all the savageness which is imputed to them, by far the most civilized Karen known. They are better clad, provide themselves with better food, are better skilled in the arts, are more vigorous, active and laborious, than any jungle tribe he met. They make their own knives, axes, swords, spears, hoes, bangles, silver ornaments and earthenware, bits and bridles, saddles and stirrups. Every foot of land they cultivate is hoed with a heavy hoe of the Western form, such as is never seen among either Burmese or Karen, but is used by the Chinese. They have cattle in great abundance, which are trained to carry panniers as donkeys are in Europe, and which bring their produce from the fields to the villages. There are seen growing here, the Jack, tamarind, mango, guava, oleaster plums, limes, citrons, and plantains, and other fruits are seen in all their villages. Millet is cultivated in great abundance; beans of several species, vegetables, eggs, gourds, pumpkins, leeks, sugar-cane and yams abound. Cotton flourishes here better than in any other locality in Burmah; and various dyo-plants are cultivated. Their houses are kept in much better condition than among other Karen, and they fence in their yards and grounds,

and have stiles and bars to take down and put up on their cross roads. They make both a spirituous and fermented liquor, the use of both which, it is said, is almost universal. But he did not see any intoxicated Karen, while drunken Shan, whose religion forbids the use of such drinks altogether, passed his house daily.

A considerable portion of the population are slaves; but slavery here exists in its mildest form. There seems to be very little difference between master and slave.

From all Dr. Mason saw of them he found it difficult to believe the stories that were told of their ferocity. They are civil, good-tempered and intelligent. When sick, they make offerings to evil spirits. Every one pleads his own cause, and offers his present to the judge without the charge of bribery. The men often talk very loud, the people seem strongly devoted to making offerings to evil spirits; yet they have very distinct traditions of the true God, whom they denominate Eapay. Eapay, they say, created the heavens and the earth, and man and all things. He associated with men, at first; but when they ceased to obey him, he left them, and is now in "the seventh heavens." When sick they often pray to God saying, "O Lord Eapay, have mercy on me, I am sick, I am suffering, O Lord Eapay." They have long traditions in poetry concerning God. A small canticle is in lines of ten syllables, to which they have tunes adapted, a measure he never before met in Karen poetry. Like the rhymes of other dialects, it abounds in repetitions, as

The earth at its origin, Eapay created.

The heavens at their origin, Eapay created.

Man at his origin, Eapay created.

The sun at his origin, Eapay created.

The moon at its origin, Eapay created.

The grass at its origin, Eapay created.

The trees at their origin, Eapay created.

The bamboos at their origin, Eapay created.

The Red Karen plateau is the great table-land which stretches from the Chinese frontier to the parallel of Shawaygeen, and is held by the Shan tribes and the independent red Karen. The Salween river, for about 200 miles from its mouth runs in a northerly direction. Above that point, however, it bends slightly but perceptibly to the north-east. Like the Irawadi it has two high ranges of hills running parallel all along its course. The plateau between them has an elevation of about 2,500 feet, and extends from about 30 miles south of Toung-hoo to the mountains of China. The plateau is level and fertile with a climate like that of southern Italy, and peopled by a race as industrious and as addicted to commercial pursuits as the Chinese.

The southernmost portion of this plateau, a triangle of about forty miles each way, is inhabited by a race who, from their dark colour, are styled the red Karen, who must not be confounded with the Karen of Pegu, from whom they are distinguished by race, language and characteristics. The name was given them by the Burmese, but they call themselves Yan or Yangal, and they differ as much from the tribes of the same name as from the Shan. Originally, it is believed, they were a race of hillmen in Siam, remarkable for their ferocity and spirit of savage enterprise. About seventy years ago they suddenly quitted their mountains, drove out the Shan from the neighbourhood of the Salween, and settled down upon their present locality. From that time to this, though menaced both by Burmah and Siam, and an object of bitter hatred to the Shan, they have contrived to hold their own. Though steady and even industrious cultivators, they fly readily to arms, and their habit of life retains in them a ferocity to which they probably owe their continued independence. They are the slave-dealers of Siam. Every few months, or even oftener, if opportunity offer and money is required, they organize a slave hunt. Several hundred men are rapidly collected, and commence operations by sacrificing a buffalo. Its body, cut into small portions, is cooked and eaten, and then the whole band, mounted on the hardy ponies of the region, commence the expedition. They march night and day, frequently accomplishing fifty miles in the twenty-four hours, attack the weakest Shan villages, carry off the women and children, and retreat with the same matchless celerity. The points of attack are usually far in the interior, for the villages on the frontier, taught by repeated experience, pay an irregular black mail to the Karennee chieftains. These captives are speedily conveyed southwards, and find a ready market in the dominions of Siam. The Siamese, protected by a belt of jungle from similar incursions, afford every facility to a trade, essential to the comfort of the richer portion of the community. A large part of the population of Zimtay is thus composed of captives or their descendants. The success of these forays is greatly facilitated by the structure of the country. The plateau is a natural fortress, the passes being few and narrow, and totally inaccessible to any force which the owners of the plains can bring to bear upon the mountaineers.

Though addicted to this horrible traffic, the population appear by nature inclined to a settled commercial life. In number about 200,000, they have built some twelve hun-

KAREN.

dred villages, containing, some thirty-five thousand houses. They also constructed one large town, Gwey-toung, which serves as a rallying point for the tribe, and a depot for its very considerable trade. They raise two crops a year, and understand the practice of artificial irrigation. They sell timber from the Salween, cutch and stick lac, in large quantities to the traders at Maulmein. In return they receive European goods, more especially muskets, which may be seen in almost every Karen's house, and which are sold at a large profit to the wilder tribes. They bring down, moreover, cattle and the little ponies so well-known in Bengal, and levy a tax on all the articles brought by the Shan, and which cannot pass except by their permission. The people therefore are usually well off. They have no priests, their religion consisting chiefly in offerings to spirits, and in some vague idea of a future state of eternal bliss. If the slave trade could be stopped, they would in all probability settle down finally into a race of bold and hardy traders. This can be effected only by the co-operation of the Court of Bankok. An order from the kings of Siam would at once destroy their market and remove the temptation to the crime.

The Karen burn their dead, but rescue from the ashes a portion of the skull, which they suspend from a tree, with the clothes, ornaments and arm of the deceased. They dance, singing beautiful songs, around those relics, which the elders afterwards convey to the foot of distant mountains and there inter them. The Karen in the teak forests of Pegu, cultivate small patches of the forest, and after taking two or three crops from the same soil, shift their habitation to another locality. The Ze-being or Ye-bain, who inhabit the valley of the Sitang above Tounghoo, are described by the Burmese to be Burman Karen, a dirty people who rear the silk-worm and manufacture silk.

The Karen race are scattered throughout the Burmese, throughout all the wildest and most secluded parts of Pegu and Martaban as well as Tenasserim, and the western parts of Siam. Of the two tribes known, one call themselves Sho, but are called by the other tribe "Pwo," and by the Burmese, Meet-khyen or Talain Karen. The other tribe call themselves Sgau, but by the Burmese are designated Meet-ho, or Burman Karen. They are most populous in the Bassein district, where they form the great bulk of the agricultural population, the Burmese and Talain being principally small traders, fishermen and mechanics. After the cession of Arracan to the British the Karen

KAREN.

spread largely over the hills into the district of Saudowa. In the northern parts of Pegu, on the side of the Irawadi, the Karen are few and sparse, and they have not been heard of further north in Burmah than the district of Tsa-len.

The Karen also preceded the Burman in the delta of the Irawadi, and are the joint occupants with the Mon. They are also found in the lower plains of the Saluen, the deltas of the So-tang and Irawadi, the middle basin of the So-tang as far as Tounghoo, and in Tenasserim. In Martaban there is also a remnant of an allied tribe, the Toungh-thu. Both the Karen and the Toungh-thu belong to the Yuma branch of the Tibeto-Burman family.

The long and narrow hill tract between the valley of the Irawadi and the Sa-luen as far north as 23°, is occupied by cognate tribes called Ka-ren-ni (Red Karen) who are said to speak a very ancient dialect of the Yuma family. This branch has a parallel range on the western side of the Irawadi, and in their traditions they assert that they preceded the Burman as the dominant people of the basin, and they seem from very ancient times to have occupied the whole of the valley southward from the valley of the Banak on the west to the borders of Yunnan.

Black Karen who dwell in the Shan country north of Mohya, wear a black dress.

The Karen dialects of the lower Irawadi and Tenasserim, are more closely assimilated with the Yuma languages than with the Burman. Karen has been more assimilated to the Burman phonology, but it has remarkable affinities with the Mon Anam, or Mon Lau alliance. Glossarily it is mainly Tibeto-Ultra-Indian of the earlier form or that which characterises the Yuma and Naga Manipuri languages. Mr. Logan writing in the *J. I. A., Feb. and March 1853*, observed that no information has yet been obtained respecting the languages of the Ka-ren-ni or Red Karen, the Ka-kui, the Kua, the Ka-du, the P'hwon, the Pa-long, the Ka-Khyen, the Lawa and the Khu-nung of the Irawadi and the Salwin basins. Karen is said to mean wild man. They are found in small communities scattered over twelve degrees of latitude and ten of longitude, from the tableland of Tibet to the banks of the Menam, and from the province of Yunnan in China to the bay of Bengal. Their whole number has been estimated at five millions. Dr. MacGown includes amongst them, the Ka-Khyien, Khyien, Kemmi; Ka-ren-ni or Red Karen, the Pwo and Sgau Karen, who possess characteristics so much in common as to justify them in being regarded as divisions or fragments of one nation. They possess a Cauca-

sian class of features with long faces and straight noses. They are remarkable as free from idolatry. A few have become budhists, and atheists are met with. They have no priesthood. They have nevertheless a religion of extraordinary purity. They are addicted to a considerable extent to Nat-worship, demonolatory or pneumatolatory. To propitiate the spirits of the rivers, hills, plains and trees, they sacrifice buffaloes, swine and fowls. A portion of them worship their ancestors and make offerings to their manes. They commonly burn their dead. Those under the Burmese sway are less favorably circumstanced than the Siamese. They are drunken and filthy, but they are truthful, continent, hospitable, kind and religious. Their traditions of the deity, creation and sin, are those of the Old Testament, and they anticipate great temporal prosperity under a new coming king. Their traditions point to an Israelitish origin, and they are by some supposed to be an Israelite band, though they do not practice circumcision. The first convert to christianity was Ko Thah Byu, who was baptised at Tavoy in 1828,—but before his death in 1841, there were 1,300 native disciples. The missionaries amongst them have been Mr. Boardman, Miss Macombe and Messrs. Mason, Wade, Bennet and Abbot, and in 1851 the converts were estimated at 20,000. Several of their dialects have been reduced to writing, some in Roman, some in Burman character, and the scriptures have been translated.—*Jour. Arch.*, June 1851. Dr. Moore (*On the Lost Tribes*) mentions that they call themselves also P'lai. On the river Salween, they maintain a degree of independence, but in all other parts of Burmah are in a depressed condition. Karen are high in domestic condition. Their women are on an equality. They regard polygamy as a sin. Their morality is superior. But they are intemperate in honor of visitors and at festivals. Their hospitality to strangers of every class is extremely generous. They have reception, cooking and sleeping apartments. They raise large produce from the soil. Their personal appearance and dress are Jewish. They wear the beard, which the Burmese pluck from the roots. The men and women wear a tunic, that of the men embroidered in the loom, that of the women by the needle. Their clothing is wholly dissimilar from that of the Burmese. A fourth of their words are Burmese, the rest like Singpho and Pli. Their words terminate in a vowel. This connects them with the Pali, and also with the Bhotani and Ahom, whose language is likewise so distinguished. Their word for

the deity is Yuwah. Javo is the word in Tibet and Bhotan for the Supreme Being. But the lamas of Bhotan also use Ow-ah-n'-chu. They propitiate evil spirits. There are two sects, one sacrificing hogs and fowls to evil spirits, but the other, called Purai, will not sacrifice to evil spirits and regard hogs with detestation. They say that formerly they sacrificed oxen.

The Karen employ wizards to curse their enemies. They have a knowledge of the creation, of the introduction of sin and death, and of eating the fruit of the tree of death similar to the Jewish. They look for a Saviour. Their moral code forbids idolatry. They are remarkably prepared for evangelization. They bury their dead, but a bone is taken to represent the person, and at a convenient season it is carried to some stream and the assembly sing a dirge around it. A bangle is suspended from a string and omens are drawn. The Karen paint the two posts of their doorways, the one red the other white. Karen walk round the dead to make a smooth path like the Bhotani in procession round the shrines of Buddha and like the Jews who walk seven times round the coffins of their friends. The Jewish priests in offering oblations, Ps. xxvi. 6, walked round the altar seven times. The Assam hill tribes like Karen consider the touch of the dead pollution, as in Numbers xix. 13, "Whosoever toucheth the dead body of a man and purifieth not himself, defileth the tabernacle of the Lord, because the water of separation was not sprinkled upon him, he shall be unclean." Karen are smaller than the Burman, but are said to differ in separate localities. They are said to be handsomer as a race than the Mon, according to the European standard. Karen are interspersed with the Burman race from lat. 20° N., on the east of the Arracan range, in the valley of the Irawadi to the Sitang river, the valley of the Salween, from lat. 19° to its embouchure at Moulmein; in the valley of the Tenasserim river, in lat. 14° N. to the eastward of Tavoy. Another portion is mixed with Lawa at the source of the Sesawat river. The Red Karen, occupying the mountains in the north of the Tounghoo district, are many of them under independent chiefs. According to their traditions the Red Karen came down from near Ava, first to Tounghoo, along with the B'ghai whom they recognise as their brethren. The Karen believe that every object of nature has its god, as the god of the sun, or the moon, or the earth, or the ocean. The Karen and Yajbayne, who inhabit the forest tracts in Pegu have no cattle, their cultivation being performed by manual labour, and as their numbers are small, labour is scarce, and in

KAREZ.

the case of the Yaibayne, directed chiefly to mulberry and rice cultivation, while that of the Karen is limited to rice and cotton, in barely sufficient quantity for their own consumption. With respect to the Karen, it is remarked in the observations referred to, that as they occupy remote forests difficult of access, where timber is useless and land of no value, the inconvenience arising from their Toungya is not likely to be felt, or in other words, is not so pressing as the evils arising from the Toungya of the Yaibayne, and more especially of the Burman inhabitants of the plains.—*Select Records of Govt. of India, Foreign Dept., No. ix, p. 111. Friend of India, Feb. 7, 1856.* See India, Pegu.

KARENFUL, ARAB. Caryophyllus aromaticus. Cloves.

KAREN POTATO, Dioscorea fasciculata.

KARENSE, SANS. Pease.

KAREO OF N. W. Pro., Albizzia elata.

KAREOVAM, MALEAL. A tree of Malabar which grows to about eight inches in diameter, and twelve feet long. Its wood is generally curved, and used for the frames of native vessels, and for agricultural purposes.—*Edye, M. and C.*

KARE PAK, DUK. Corrupt. of TEL., karaeve-paku leaf of Bergera konigii.

KARER, HIND. Rosa brunonis, also Rubus biflorus.

KARET, HIND. Plantago major.

KARETTI, MALEAL. Guilandina bonduc, Linn.

KARE VE PAKU, TEL. Leaf of Bergera konigii.

KAREYAPELA, MALEAL. Bergera konigii, Linn.

KAREZ, a Persian well or a series of wells, connected to each other by an underground aqueduct, and leading the water to the place required. There are several very valuable karez at Ahmednuggur in the Dehkan. Pottinger mentions that, but for the karez or aqueducts, the natives of many parts of Beluchistan could not possibly exist. According to General Ferrier, a karez is an underground watercourse or aqueduct, with shafts at intervals for the convenience of repairing it. They are met with in great numbers in all the plain country of Persia and Afghanistan. Those of Hezekiah, II. Kings, xviii, v. 17, seem to be of this kind. Aqueducts in south-eastern Asia are known only as those under-ground tunnellings, designated throughout Persia, Beluchistan and India as the Karez. These aqueducts are made by a succession of small wells at the distance of a few yards, or a few hundred yards from each other, and of such depth as the

KARIANG.

level and soil require: they are connected with each other at the bottom by a channel, large enough for a man to pass to clear it. These wells commence at a spring and join with such as are found in the course of the canal: they are common through all Persia where the water they convey is applied to irrigation.—*Pottinger's Travels in Beluchistan and Sind, p. 220; Ed. Ferrier's Journ., p. 227; Malcolm's History of Persia, Vol. i, p. 14.* See Kalmuk; Kuuat.

KARFENKEL, GER. Caruncle.

KARGAM, HIND. of Paugl, Celtis caucasia, Willd. Nettle tree.

KARGA-SHAPNA, HIND, the Scythian adoration of the sword is continued amongst the Rajpoot races as the Khanda-worship, part of the ceremonies of the Nou-ratri, or nine days dedicated to the god of war. The Scythians worshipped their god of war under the form of an iron scimitar. The Fresian Frank adhered to this practice. Charlemagne styled his sword Joyeuse. The Khanda is a double-edged scimitar.—*Tod.*

KARGH, Karrak or Carrack, is an island about 50 miles long and two broad, the greater portion of it is well-cultivated.

KARGHIS, see Kalmuk; Kirgis.

KARHA, HIND. of Hazara. Acacia speciosa, var. mollis also Albizzia odoratissima, Benth.

KARHAM or Kadham, HIND. Nauclea parvifolia. This tree is of good size. Its wood is light, white and soft, not strong and subject to worms; used by zemindars for the wood-work of their houses and for agricultural implements; leaves useful as fodder for cattle.—*Balfour, p. 178; Roorkee Proceedings Papers on Superior Timber, p. 30; Powell's Hand-book, Vol. i, p. 541.*

KARLI.

KARKUWA, TAM. *Zizyphus glabrata*, Heyne.

KARLA, HIND. *Urtica heterophylla*.

KARLI. Here, as also at Junir on the ghauts, and Kuden or Korah in the Concan, as also at Kanheri and Nasik, are caves containing inscriptions in Deva Nagari, known as Sahyadri. These contain inscriptions, indicating that they were excavated, at various dates, from before Christ 200 years to A. D. 460, the oldest, being those at Karlen, and the newest, those at Kuden, in the Concan, the seven centuries during which buddhism flourished in western India, while the modern hindoo system was silently moulding itself into its present form, and preparing to take the place, at a somewhat later period of the religion of Buddha, and to exhibit that compound of Vedic pantheism and Buddhistical tenderness for animal life and indigenal superstition that is now current in India. Karli, is in L. 18° 45' N., and L. 73° 28' E. in the Dekhan, E. of the Bhor-ghat. The Dâk bungalow is 2,012 feet, *Schl., Rob.*; or 2,016 feet, *Buist*; above the sea. Karli caves are 2,531 feet, *Buist*; top of the hill at Dhutra near Karli, is 3,635 feet. Karli is celebrated for the numerous inscriptions in its caves, in the Pali language, of date B. C. 543, by Dr. Wilson, but, if the Salivahana era be intended, then the date is A. D. 176, Dr. Stevenson. The character used in the inscriptions is slightly modified, Lat. The religion, or divinities or sages mentioned are buddhist; the invocation is to the Triad; no doubt meaning Buddha, Dharma, Sanga. The kings or princes mentioned, Dr. Wilson says, are Vijaya, but Dr. Stevenson, says Arodhann, lord of India; Garga, ruler of the Shaka. Of the numerous buddhist inscriptions in the cave temple at Karli, Drs. Wilson and Stevenson are not quite agreed about the reading. Garga, the "ruler of the Shaka" (Sakya, Buddha's tribe), is mentioned, Dr. Stevenson mistakes the language for Sanskrit, which Mr. Prinsep proved to be Pali, from copies sent by Col. Sykes. The excavation of the temples, and gifts by individuals in aid, are mentioned. The Karli caves are close to the high road from Poonah to Bombay, about half-way down, on the right-hand side of the valley as you proceed towards the sea. They are not so extensive as those of Ajunta but they are purely buddhist. The largest and most splendid chaitya cave temple in India, which could be selected for reproduction by art is the principal excavation at Karli, and it is also interesting as the oldest Indian work of the kind known to exist. The cave temples, in the southern part of India, are classed by Mr. Fergusson into

(a) the Vihara or monastery caves, which consist of (1) natural caverns or caves slightly improved by art. These are the most ancient, and are found appropriated to religious purposes in Behar and Cuttack; next (2) a verandah, opening behind into cells for the abode of priests, as in Cuttack and in the oldest vihara at Ajunta; the third (3) has an enlarged hall supported on pillars. The most splendid of these caves are those of Ajunta; though the Dherwarra at Ellora is also fine, and there are some good specimens at Salsette and Junir.

(b) Buddhist Chetya caves form the *second* class. These are the temples or churches of the series and one or more of them is attached to every set of caves in western India, though none exist on the eastern side. Unlike the vihara, all these caves have the same plan and arrangement, and the Karli cave is the most perfect in India. All these consist of an external porch or music gallery, an internal gallery over the entrance; a central aisle, which may be called a nave, roofed by a plain waggon vault, and a semi-dome terminating the nave, under the centre of which always stands a Dahgopa or Chaitya. In the oldest temples, the Dahgopa consists of a plain central drum surmounted by a hemispherical dome crowned by a Tee, which supported the umbrella of state, of wood or stone.

These two classes comprehend all the buddhist caves in India.

The *third* class consists of brahmanical caves, properly so called. The finest specimens are at Ellora and Elephanta, though some good ones exist also on the island of Salsette and at Mahabalipur.

In form, many of them are copies of, and a good deal resemble, the buddhist vihara. But they have not been appropriated from the buddhists, as the arrangement of the pillars and position of the sanctuary are different. They are never surrounded by cells as all vihara are, and their walls are invariably covered or meant to be covered with sculpture, while the vihara are almost as invariably decorated by painters, except the sanctuary. The subjects of the sculpture of course always sets the question at rest.

The *fourth* class consists of rock-cut models of structural brahmanical temples. To this class belong the far-famed Kylas at Ellora, the Sivite temple at Doonnar, and the Ruth at Mahabalipur. This last is cut out of isolated blocks of granite, but the rest stand in pits.

The Indra Subha group at Ellora should perhaps form a fifth, but whether they are Brahmanical or Jaina is undecided.

The *fifth* or true Jaina caves occur at Khandagiri in Cuttack and in the southern parts of India, but are few and insignificant. In that in the rock of Gwalior fort, there are cut in the rock a number of rude colossal figures, some 30 to 40 feet high, of one of the Thirtankara, some sitting, some standing. Their dates are about the tenth century before Christ.

The Behar caves are in the neighbourhood of Rajagriha. The Milk-maid cave and Brahman girl's cave have inscriptions in the Lath character. They are about 200 n. o. and are the most ancient caves of India. The Nagarjun cave and Haft Khaueh or Satghar group, are situated in the southern arm of the hill at some little distance from the Brahman girl and Milkmaid's cave. Another group is the neighbouring Karna Chapara and Lomas Rishi caves.

The caves of Udyagiri and Kandagiri hills, about twenty miles from Cuttack and five from Boban Esvara, are next in antiquity to those of Behar. They are built on the hills of Udyagiri and Khandagiri, the former are buddhist and the older, the latter probably Jaina. Many of the inscriptions are in the Lath character, and this gives their age as anterior to the christian era. The frieze sculpture in the Ganes gumpha is superior to any in India and resembles that of the Sanchi tope at Bhilsa. In it, there are no gods, no figures of different sizes nor any extravagance. In the buddhist caves here, there are no figures of Buddha, nor any images. In a Jaina cave on Khandagiri, the 24 Thirtankara with their female energies, are sculptured.

The Ajunta, are the most complete series of buddhist caves in India, without any mixture of brahmanism and contain types of all the rest, they are in a ravine or small valley in the ghaut south of the Taptee.

At Baug in a ravine or small valley in the ghaut on the north side of the valley of the Taptee, are three ancient buddhist caves.

Those of Karli are not so extensive as the Ajunta, but still purely buddhistical, and contain the largest and finest chaitya cave in India.

The Salsette or Kannari caves in the Island of Salsette, are also purely Buddhist, but inferior. The Kannari caves are excavated in a hill situated in the midst of an immense tract of forest country, and Mr. Fergusson supposes their date about the 9th or 10th century of the christian era.

Dhumnar, about 40 miles S. E. from Nee-much, but close to Chundwassa, contains buddhist caves with a brahmanical rock-temple behind.

KARMATIA.

Those of Dhumnar and Ellora contain a strong admixture of brahmanism, and those of Elephanta are entirely brahmanical, though perhaps of the same age as those of Ellora.

The Ellora caves are excavated in a porphyritic green stone or amygdaloid.

The Elephanta caves are cut in a harder rock than those of Ellora.

Mahabalipuram or Seven Pagodas, between Covelong and Sadras, south of Madras, have been described by Dr. Babington, Messrs. Chambers, Gubbins, and Goldingham. They are entirely brahmanical and have been excavated after all the other series were finished.—*Dr. Stephenson in Bom. As. Soc. Jour. No. xiv, Vol. v. of 1854; Bom. Cat.; Babington, Vol. ii, Trans. R. A. S., p. 258; Messrs. Chambers & Goldingham in A. R., Vol. i, p. 145; Mr. Charles Gubbins in Bengal As. Soc. Journal, Vol. i, p. 69; Fergusson's Rock-cut Temples of India, Vol. iii, p. 449; Rangoon Times, Feb. 2, 1860.*

KARM, HIND. A sort of cabbage eaten by the Kashmiri and at Lahore, &c.

KARMA, SANS. Is any act, religious or otherwise.

KARMA BRES, HIND. Fagopyrum esculentum.

KARMA DEVA, see Inscriptions.

KARMANNUE TASCIIASU, RUS. Watches.

KARMANTARA, the end of a funeral ceremony which continues for sixteen days.

KARMAR, HIND. Syringa enodi.

KARMATIA. The Druse sect adored Hakim, the Fatimite Khalif of Egypt as a god. In the year A. D. 1032, Muktana Baha ud-Din, the chief apostle of Hamza, and the principal compiler of the Druse writings was in correspondence with the Karmatian schismatics in Sind, his letter being addressed to Shaikh Ibn Sumar, Rajah Bal in particular. The Karmatians, after successive defeats and subsequent persecution in Arabia, as refugees from Bahrein and Al Hasan, sought protection in Sind, where their progress amongst the hindoos was rapid. The Karmati, one of the Beluch clans preserves the memory of its heresy. Independent of the general dissemination of Shia sentiments in the valley of the Indus, which favoured notions of the incorporation of the godhead

KARNA.

in man, the old occupants of the soil must, from other causes, have been ready to acquiesce, in the wild doctrines of the heretics, who now offered themselves for spiritual teachers, as well as political leaders. Their cursing of Mahomed; their incarnations of the deity; their types and allegories; their philosophy divided into exoteric and esoteric; their religious reticence; their regard for particular numbers, particularly seven and twelve; the various stages of initiation; their abstruse allusions; their mystical interpretations and their pantheistic theosophy, were so much in conformity with sentiments already prevalent amongst these willing disciples, that little persuasion could have been required to induce them to embrace so congenial a system of metaphysical divinity of which the final degree of initiation, however cautiously and gradually the development was concealed, undoubtedly introduced the disciple into the regions of the most unalloyed atheism. So susceptible, indeed, must the native mind have been of these insidious doctrines, that Hammer-Purgstall and others, who have devoted much attention to these topics, have very reasonably concluded that the doctrines of these secret societies, such as the Karmatian, Isma'ilian or Assassins, Druses, Batini, and sundry others, which at various periods have devastated the mahomedan world, and frequently threatened the extinction of that faith, though originally based upon the errors of the Gnostics, were yet largely indebted to the mystical philosophy and theology of eastern nations, and especially of India, where the tenets of transmigration and of absorption into the deity were even more familiar both to budhists and brahmans than they were to these miserable schismatics.—*Elliot's History of India, p. 497; Tr. of Hind., Vol. i, p. 431.*

KARMBRU, also Karimru of PANJ. Albizzia odoratissima, Benth.

KARMIN, GER. Carmine.

KARM KALLA, HIND. Sinapis brassica.

KARMYN, DUT. Carmine.

KARMORA of Kaghlan, Hedera helix. The Ivy.

KARMRU, HIND. Albizzia odoratissima.

KARNA-CHAPARA. The Haft Khanah, or Satgurh group of caves is one of the Behar caves in the neighbourhood of Rajagriha, amongst the most ancient caves in India, being about 200 B. C. The others are the milkmaids' cave, the brahman girls' cave, the Nagarjun cave, and in the neighbourhood are the Karna-chapara and Lomas Rishi caves.

KARNA, a king of the Sudra race, famed for his liberality.

KARNATIKA.

KARNA, see Inscriptions.

KARNAH, HIND. Orange flowers. Kar-na-tel, orange scented oil.

KARNAH, HIND. Citrus limonum seed.

KARNAH-KAMARKAS, East Indian kino, the gum of *Butea frondosa*.

KARNAL, 29° 42' 3" ; 76° 58' 3" in Hindostan, a large station 6 miles W. of the Jumna. Mean height of the cantonment 966 feet.—*Ger*.

KARNARA VETTE, TAM. A Malabar and Canara wood which the native carpenters use for boat-work and small vessels. It grows only to twelve inches in diameter, and about fifteen feet high. It is not of much consideration as to quality, quantity, or durability.—*Edye, Forest of Malabar and Canara*.

* **KARNATA**, see Nrapati.

KARNATAGARAH, TAM., MALEAL. This Malabar tree has a close-grained firm wood ; when old it resembles the Vitte Maran, or Bombay black or rose wood. It grows from twenty-five to thirty-five feet long, and two feet in diameter ; it grows straight, and is found in patches on the ghats, east of Cochin. It is used for furniture and house-building.—*Edye, M. and C*.

KARNATIKA, CAN. Properly the Kannadi or Karnataka, a language spoken in the peninsula of India. It is bordered by the Tamil and the Telugu on the east, spoken throughout the plateau of Mysore and in the southwestern districts of Hyderabad in the Dekhan as far north as the village of Murkundah lying 30 miles west of Beder. Also, it is much spoken in the ancient Tuluva country on the Malabar coast, now long designated as Canara, a name which it acquired from having been subjected for centuries to the rule of Canarese princes. But in Canara, the Malayalam, the Konkani and the Tuluva, are also spoken though less extensively than the Canarese. The Canarese character differs slightly from the Telugu, from which it has been borrowed, but the characters used for Tamil, Malayalam and Telugu are quite distinct from each other. The ancient Canarese character, however entirely differs from that of the modern Telugu, and the Canarese language differs even more widely from the Telugu than it does from the Tamil. There is an ancient dialect of the Canarese language current, as well as modern, the latter differing from the former by the use of different inflexional terminations. The ancient Canarese dialect, however, has no connection with the Sanscrit character to which that name has been given, in which, viz., the Hala Kannada, many very ancient inscriptions in the Maratha country as well as in Mysore are found. Dr. Caldwell estimates the people who speak the

KARPASAMU.

Canarese language, at five millions. This includes the Coorg people, but he has no means, he says, of calculating the numbers in the Hyderabad country, where Canarese, Marathi and Telugu are spoken. The Urdu or Hindustani language is merely known to the mahomedans there, the hindoos and Kaets from Northern India, the resident population using it as a lingua franca. The Wakkaloo of Karnatic, are cultivators. See India.

KARNAVEN, the head of a family community or tarwaad, living in the form of Marumakatayam or descensus ab matrice. See Polyandry.

KARNDOL, HIND. *Ficus cunia*.

KARNENE-WAEH, TAM. A Ceylon tree which has a very close-grained and heavy wood, used for the frames of native vessels, and considered a good strong wood. It grows to eighteen inches in diameter, and twelve to fourteen feet in height.—*Edye on the Timber of Ceylon*.

KARNFULI, the river on the banks of which Chittagong is built.

KARNGURA, HIND. *Prinsepia utilis*.

KARPURA, TAM. Camphor. *Dryobalanops camphora*.

KARPURA BENDA, TEL. *Abelmoschus moschatus*, *Mæsch?* There is no authority for the botanical name, but it seems a probable application of the Telugu term Karpura.

KARPURAM, TAM., TEL. Camphor.

KARPURA VALLI, TEL. *Coleus amboinicus*, *Lour.*; *C. aromaticus*, *Benth.*; *Plectranthus arom.*, *R.*, *Vol.* iii, *p.* 22. This plant has much the appearance of *Kuruveru*, but it is easily distinguished by the aromatic fragrance of all its parts, a quality which in *Kuruveru* is confined to the exuberant roots alone, *Rottl.*, *Vol.* ii, *p.* 170, erroneously explains Karpuravalli as being *Anisochilos carnosus*.

KARPU VERUUM, TAM. Lamp black.

KARRA, HIND., PERS. Fresh butter. This is seldom used by the natives of India; it is generally kept till it turns rancid, and then clarified by repeated boiling and is then called "roughun" in Persia, and "ghee" in India.—*McCull.*

KARRA, TEL. Timber.

KARA ANTINTA, TEL. *Dicerna pulchellum*, *DC.*; *W. & A.*, *p.* 709; *Le.*, *p.* 418; —*Hedysarum pul.*, *R.*, *Vol.* iii, *p.* 361. So called from the legumes sticking like burrs. *Antita* means anything that catches or sticks to cloth.

KARRABIRA, SANS. *Nerium odoratum*.

KARRACHEE, a sea-port in Sind, celebrated for its salubrity; the heat being at least twenty degrees less on an average throughout the summer hereabouts than in Upper Sind. Moreover, there is a regular sea breeze, and this, together with the heavy dews, tends materially to mitigate the fierce temperature of a climate seldom cooled by rain. It is in twenty-five degrees north latitude, on the verge of the tropic. The dry soil, the deposit of the river, and the debris of the rocks, are free from that fearful miasma which arises from the jungly swamps near the embouchures of the Indus, and renders the delta a formidable rival to the Pontine marshes. Karrachee harbour is the most westerly part of India, and it is the only land locked harbour between Bombay and the Persian Gulf. Though it is a bar-harbour, it has 17 to 18 feet at high water of ordinary tides, and from 20 to 22½ feet at springs. It is easy of access to large ships, by night or

KARRIB.

day, even during the monsoons. The value of the goods imported and exported amounts to nearly two millions sterling annually, the principle exports being wool, indigo, ghee, saltpetre and piece goods. Karrachee is comparatively a delightful climate to the sensation, always possessing a cool sea-breeze. —*Burton's Scind*, *Vol.* i, *pp.* 62-3. See Karachi, Kurachi, Indus, Peer Muggun.

KARRA CHIKA, or *Karu sikaya*, *TEL.* *Acacia pennata*, *Willd.*

KARRACK ISLAND, the *Icarus* of *Arrian*, was surveyed by Captain Goodfellow, of the Bombay Engineers.—*Kinneir's Geographical Memoir*, *p.* 18.

KARRIL, MALEAL.? of Rhede. *Vitex leucoxydon*.

KARRIPAK KA JIAR, HIND. *Bergera konigii*, *Linn.*

KARRI VEMBU, TAM. *Garuga pinnata*.

KARRIR. The *Chensu* *Karrir* are mentioned by *Buchanan* as a migratory race residing in the hilly tracts near *Coimbatore*. They are described as without houses or cultivation, but by snares or with the bow catch birds or larger game which they dispose off for rice: the white ant is said to be used by them for food. They approach their game under the shelter of a cow or buffalo, which they have taught to stalk. Their language is a dialect of the Tamil with a few *Canarese* words intermixed. Those near towns learn the use of *Telugu* words. A *Tamular* is unable to

KARSHA.

understand their language. A few reside in little huts on the outskirts of villages and have a little blanket, but their ordinary clothing is a loin cloth and in the denser forests they dwell in caves or hollows of trees or under the shelter of a hut made of branches of trees, and use only a few leaves for covering. They describe the Animalai as their original country.

KARRON-GAS, SINGH. *Prosorus indica, Dalz.*

KARRU MARAM, MALEAL. *Dalbergia latifolia.*

KARRU PALE MARAM, TAM. See *Putranjiva*.

KARRU VENGAI, TAM. *Acacia odoratissima.*

KARS, the Charsa of Ptolemy, is one of the strongest places in that part of the Turkish dominions, it is the very key of Armenia towards the north, has stood a variety of sieges, and endured every change from the varied events of war. Amurath III, restored the principal fortifications to the state in which we now see them; and a pentagon redoubt was added about the close of the eighteenth century.—*Porter's Travels, Vol. ii, p. 648.*

KARSII, HIND. *Quercus dilatata.*

KARSHA, the mountain temple of Karsha of Shekavati, has an inscription in grammatical Sanserit, but with some unusual terms, and some inexplicable words. It was erected A. D. 961, finished A. D. 973. The character used in the inscription is more modern than that of the Kanouj Devanagari, or Allahabad inscription, No. 2. It mentions the mythology of the Purana, Siva, the Pranahtes, Muni and Yati are called immortal. Indra, Kuma, Nandi, the Naga, Rama, Balarama, Vishnu, Krishna, Sambhu and Visvakarma. The portico of the temple is graced with the presence of Gaya, the holy Asura. Gayatri is called the wife of Brahma. Of the kings and princes mentioned are Gavaka of the Chauhan family, A. D. 800; Chandra Raja, his son, A. D. 830. Gavaka, his son, A. D. 860; Chandra, his son, A. D. 890; Vakpata, his son, A. D. 920. Sinha Raja who appears to have lost his kingdom of Shakavati, A. D. 961. Vignraha Raja of the solar race not related to Sinha Raja, and probably of Kanouj. Vakapata appears to have had a hostile opponent, Tantra Pala, whom he defeated; his younger brother was Durlabha. The

KARTELANIA.

inscription is at a temple of the Linga (Siva), and Dr. Mill says, the character furnishes a definite standard from which the ages of other monuments, of similar or more remotely resembling characters, may be inferred with tolerable accuracy. The temple was built to commemorate the destruction of the Asura, or demon Tripura, who had expelled Indra and the god from heaven; and, on the mountain, Siva was solicited by the gods, whence the name Karsha (joy). The princes are but donors and benefactors; the brahmins are represented as the real builders; their spiritual genealogy is traced; one of them is made an incarnation of Nandi, similar in splendour to the great deity himself, and they are called "Lords of the Earth." Indra is called Bharata in the inscriptions. Siva is identified with his phallic emblem, and he is, also called the eight formed one. The sandal-wood of Malabar is mentioned. Nudity, clotted hair, and ashes, characterize the brahmin teachers. The revenues of numerous villages are given for the support of the temple. It is singular that Ganapati, the son of Siva, is not mentioned; seeming to indicate that his worship was not yet established.—*Beng. As. Soc., Vol. iv, p. 367.*

KARSHAGNI. The hindoo expiatory ceremony of Karshagni is obtained from the use of the cow-dung for the cremation of the living. On one occasion of its performance it happened, according to a legend, that a crow, named, from her friendly disposition, Mitrakaka, was present, and immediately flew and imparted the welcome news that a hindoo who performs the karshagni, goes to heaven. This expiation consists in the victim covering his whole body with a thick coat of cow-dung, which, when dry, is set on fire, and consumes both sinner and sinner. Until revealed by the crow this potent expiation was unknown: and it has since occasionally been resorted to particularly by the famous Sankara-charya. The friendly crow was punished for her indiscretion; was with all her tribe forbidden to ascend to heaven and was doomed on earth to live on carrion.—*Nilford.* See Cow, Lakshmi.

KARSHU, HIND. *Quercus semecarpifolia.*

KARSI, HIND. of Spiti. A kind of gypsum.

KARTAS, ARAB., TAM. Paper.

KARTELANIA, a province in Georgia, the ancient Iberia. Ptolemy describes it as bordered on the north, by the Sarmatian mountains; to the south, by a part of Armenia; to the east, by Albania; and to the west, by Colchis, the present Immeretia. He mentions many of its towns and villages. Strabo, who

KARTIKEYA.

travelled in these countries, speaks of this being a flourishing, and even luxurious state. — *Porter's Travels*, Vol. i, p. 101.

KARTEN, GER. Cards.

KARTICHEY PU, TAM. Gloriosa superba.

KARTII, RUSS. Cards.

KARTIKA, SANS. One of the lunar months of the hindoo, the eighth month of the hindoo year, October and November, when the sun is in Kritika or Pleiades. During the months Ashvini, Kartik and Phalguna, hindoo perform four kinds of sacrifices to the Viswadeva and to Varuna. The sacrifices are called Vaiswadeva, Varuna praghosa, Sakamedha and Sunasuriya. The attributes of sacrifice consist of roasted cakes of rice-flour to Viswadeva, with two figures of sheep made of flour, to Varuna, with vegetables to Agni, and the fourth to Indra. On the 2nd of Kartik, hindoo women entertain their brothers in commemoration of Yamuna entertaining her brother Yama.

Kartik Ekadasi, is the 11th, in some years, the 12th, day of the light half of the month Kartik, or about the 8th November. On this day, Vishnu is supposed to rise from his four months' sleep, and this has reference to the sun being at the winter solstice.

Kartik Purnama, occurs about the 11th November, in the full moon of the month Kartik, when Siva is said to have gained a victory over a monster called Tripurasura, seemingly three cities of the Assyrians, presents (of money) dakshina, or of lamps (dip-dan) are made to brahmins. Bhrathi-dwitaya, SANS., is a hindoo festival on the 2nd of the hindoo month Kartik, when hindoo sisters entertain brothers in memory of Yamuna entertaining her brother Yama. *Wilson's Gloss.* See Kartik, Yama, Dharmarajah, Vishnu.

KARTIKEYA. This hindoo deity is the son of Siva and Parvati, produced in an extraordinary manner for an extraordinary purpose. He is the leader of the celestial armies. He is sometimes represented with one face; and sometimes with six faces; possessing two, four, or six arms, holding various instruments in his hands; of a yellow complexion, and riding on a peacock, his vahana or vehicle. According to Sir William Jones, "Kartikkeya, seems to be the Orus of Egypt." The Iswara and Isi of the hindoo are the Osiris and Isis of the Egyptians. The Bull of Iswara seems to be Apis or Ap, as he is more correctly named in the true reading of a passage in Jeremiah. The god Agni, often called Pavaca or the "Purifier," answers to the Vulcan of Egypt, where he was a deity of high rank. Kartikeya, of the

KARTU TODA.

hindoo theogony, has the leading of the armies of the gods, delegated by his father; and his mother presented to him her peacock, which is the vahana of this warlike divinity. According to Colonel Tod, but seemingly erroneous, he is called Kartika or Kartikeya, from being nursed by six females called Krittika, who inhabit six of the seven stars composing the constellation of the Wain, or Ursa Major, and thus the hindoo Mars, is, like all other theogonies, an astronomical allegory. There is another legend of his birth. — *On the Gods of Greece, Italy and India; Asiat. Researches* pp. 252, 253, 263, October, Lond., 1801; *Ousley's Travels*, Vol. i, p. 91; *Tod's Rajasthan*, Vol. i, p. 590. See Durga, Mungula, Parvati, Vahana, Sacti, Krishna, p. 548.

KARTINE VALLI? Bryonia umbellata.

KARTOFFEL, GER. Potatoes.

KARTSE, on this river, Adams observed the red-billed curlew, *Ibidorhynchus struthersii*. — *Adams*.

KARTTA, Maker, Lord, a name given to the Supreme Being.

KARTTIK-MAR, a very low caste of hindoo, whose business is that of killing animals and selling the flesh; the hindoo butcher.

KARTTIKA DIPA, the name of a hindoo festival celebrated in the month Karttika, in honor of Subhramanya, when lights are placed at the door and other parts of the house and fires kindled on hills. Karttikeya is a name of Subhramanya, as having been nursed by the Karttika, i. e., the Pleiades.

KARTTAVIRYA, a king who stole the cow of the gods, and was killed by Parasurama.

KART TUT, HIND. *Morus serrata*.

KARTUMA, TAM. A Ceylon tree which is considered to be the wild mango tree. It grows to about two and a half or three feet in diameter, and twenty-four feet high. It is used for canoes, native boats, &c. The fruit is very acid, and is sometimes made use of by the lower class of natives in cookery. — *Edge, Ceylon*.

KARTU NEDENARI, TAM. A Ceylon tree which grows to about fourteen inches in diameter, and fifteen feet high. It is used by the natives for their huts. It is not very durable, and is of little value. — *Edge, Ceylon*.

KARTU TANGI, TAM. In Ceylon the jungle cocoanut tree, it grows to about twenty inches in diameter, and twenty-five feet in height. The fruit is of no use, and the trunk is of little value. — *Edge on the Timber of Ceylon*.

KARTU TODA, TAM. In Ceylon the wild or jungle orange tree; it grows to from ten to sixteen inches in diameter, and ten

KARUDU.

feet in height. It has a very handsome yellow wood, its fruit is of no use.—*Edye, Ceylon.*

KARU, HIND. *Capparis aphylla*, Roxb.

KARU ALACHANDA, TEL. *Phaseolus rostratus*, Wall. ; *Ph. alatus*, R. Kol. iii, p. 288.

KARULLAMU, TEL. *Caralluma adscendens*, R. Br. ; *Stapelia ada*, R., Cor. 30. Allam is "ginger," Karu allam "wild ginger." This is evidently a misnomer of Roxb. which has been perpetuated by R. Brown, who has formed his genus on Roxb.'s mistake.

KARU ALLAMU, TEL. *Zingiber cassumunar*, R., Vol. i, p. 42. This name is universally known in the hilly parts of the Circars. It is also applied to other wild species.

KARU AMUDAM DUMPA, TEL. *Jatropha tuberosa*, Elliot. This name means simply wild Ricinus and is applied to various species of wild Croton.

KARU ANGULAM, TAM. *Alangium hexapetalum*.

KARUA PATTE, TAM. Cinnamon.

KARUATAGARAH, TAM., MALEAL. This Malabar and Canara tree has a close-grained firm wood, when old it resembles the "Vitte maram," or Bombay Black or Rose-wood. It grows from twenty-five to thirty-five feet long, and two feet in diameter, it is used for furniture and house-building: it grows straight, and is found in patches on the ghauts east of Cochin.—*Edye, Forests of Malabar and Canara.*

KARUBA, HIND. Amber.

KARU BACHCHALI, TEL. *Basella alba*, Linn.

KARU BANTI, TEL. A composite plant, not identified.

KARU BOPPAYI, TEL. *Erythropsis Roxburghiana*, Lindl. ; *Sterculia colorata*, R., Vol. iii, p. 146 ; Cor., p. 25 ; W. & A., p. 233. Wild Papaya, a doubtful name used by the Konda Dorulu at Simlachalam.

KARU CHAMMA or Adavi chamma, TEL. *Canavalia virosa*, W. & A.

KARU CHIKKUDU or Erra chikkudu, TEL. *Dolichos glutinosus*, R.

KARU CHIYA or Paru jatam, TEL. *Nyctanthes arbor-tristis*, Linn. ?

KARU CHODI, TEL. *Eleusine indica*, Gaertn ; R., Vol. i, p. 345. This plant in Telugu, according to Dillwyn, is *Cynosurus cava*.—*Ham.*

KARUCUE WAEH, TAM. A Ceylon tree which has a very close-grained and heavy wood. It has a good strong wood, used for the frames of native vessels. The tree grows to eighteen inches in diameter and twelve to fourteen feet in height.—*Edye, Ceylon.*

KARUDU, TAM. A Ceylon tree, the wood of which the natives use in boat-work. It is not durable, and is of little value.—*Edye, Ceylon.*

KARU MAN.

KARU GILI GICHCHA, TEL. *Crotalaria hirta*, Willd. ; *C. chinensis*, R., iii, 268.

KARU GUGGILAM, TEL. *Gelonium lanceolatum*, R., Vol. iii, p. 831.

KARU JAPHARA or Konda jap'hara, TEL. ; *Rottlera laccifera*, Voigt. ; *R. dicocca*, R., Vol. iii, p. 829 ; *Croton lacciferum*, W. L., 1915. Jap'hara, the name of arnotto is sometimes applied to *Rottlera tinctoria*. Hence this is called Karu or Konda, i. e., "wild arnotto."

KARUK, HIND. *Cordia vestita*, or *Gynaion vestitum*, H. F. and Th.

KARU KANDI or Erra chikkudu, TEL. *Dolichos glutinosus*, R.

KARU KOLLI CHETTU, TEL. Kolli is *Pharbitis nil* ; karu or "wild" Kolli should be a cognate species.

KARU KUA, TEL. *Zizyphus glabrata*, Heyne.

KARUM, PANJABI. *Euonymus simbricata*, Wall.

KARUM or Karam, TAM., also Punhir, HIND. Soda.

KARU MAN, TAM. Karuvan, MAL. Black-smith.

Amongst the hindoos, the names of the five artizan castes are :

Tel.	Konsalavadoo.	Karamaravadoo, Kumaryavadoo.	Cuncharavadoo.	Chilpeevadoo, Rayaloo.	Sukaravadoo.	Vudlavadoo.
Tam.	Tattian.....	Karuman ..	Kuman.....	Kultuchan.....	Tachan.....	
Sanscrit.	Soovurnakarakha.....	Lohakarakha.....	Loolayaha.....	Chilpee.....	Thukshaha.....	
Hindustani, Mahr.	Sinar.....	Lohar.....	Tambagar, Kasar.....	Sangtrash.....	Barhai Sutar.....	
English.	Goldsmith	Blacksmith ..	Coppersmith ..	Stone-cutter ..	Carpenter	

KARUMANAL, TAM. Literally, black-sand, a small village on the Pulicat lake, first taken possession of by the Dutch, which Europeans call Coromandel.

KARU MARUDA, TAM. *Pentaptea tomentosa*.

KARUMBU, TAM. *Saccharum officinarum*, Linn.

KARUM CHEMBAI, TAM. *Sesbania aegyptiaca*, Pers.

KARUMCHI, BENG. *Carissa carandas*, Linn.

KARU MINUMULU, TEL. *Phascolus radiatus*, L. not R.; W. & A., 753.

KARUM JUTI, CAN. *Strychnos nuxvomica*.

KARUMNASSA, a tributary to the Ganges. It rises in the Kymore range, in lat. $24^{\circ} 38'$, lon. $83^{\circ} 11'$, and runs N. N. W. into the Ganges, near Ghazcepoore, after a length of 140 miles.

KARUM OVAR MANNU, TAM. Soda.

KARU MUNAGA or Munaga, TEL. *Moringa pterygosperma*, Gertn.

KARUN, HIND. *Euonymus fimbriata*.

KARUN RIVER, in Khuzistan, is met with in proceeding eastward from the Dizful river. It rises according to Kinneir (who is followed by Major Rawlinson), at Correng in the Koh-i-zard, or Yellow mountain, at about 40 miles south-west of Ispahan, and runs west by north through a mountainous country. Again at about 40 miles further, in the previous direction of west by north, and at nearly 20 miles from Shuster, it makes an abrupt bend towards the S. S. W., as it finally breaks through the Zagros range, and pursues its onward course towards that city, a little way short of which and near the upper extremity of the well-known bund of Shuhpur, a temporary bifurcation takes place, so as to insulate the town. The branch last mentioned, which is called the Old Karun, after washing the eastern side of Shuster, becomes navigable for boats of considerable size. The bed of this branch is still to be traced at a spot about a mile and a half below the town, and it appears to have come from the north-west. At this place, which is $2\frac{1}{2}$ miles short of Karabuk, the Karun becomes exceedingly tortuous, and continues thus, for a distance of 20 miles, in the general direction of south, 33° west, to Ahwaz. The course of the Karun then becomes less tortuous; and for 29 miles to Ismaili, it runs in the general direction of south 22° west, making a sweep more westward before it reaches the latter place. From hence the river again curves to the westward, previously to forming a great bend in the contrary direction. After this last bend, the windings become more mode-

rate and so continue as far as the castle of Sabla which is situated on the left bank, at $60\frac{1}{2}$ miles by the river, south 5° west of Ismaili. The ancient bed of the Karun was followed by the officers of the Euphrates expedition for some distance towards the sea, on which occasion they found it to be about 200 yards broad, running in a south-easterly direction, or nearly parallel to the Bah-a-Mishir, and with every appearance of having contained a large body of water in former times. From Sabla, the main trunk of the Karun pursues a course south 65° west for $10\frac{3}{4}$ miles, by the Hafar canal, to the Shatt-ul-Arab, through the rising commercial town of Mohammerah; but $7\frac{1}{2}$ miles distance, and before it reaches the town just mentioned, the derivation called the Bah-a-Mishir takes place. This is a large navigable branch, running 31 miles from the Karun, in the general direction of south 25° east, to the Persian gulf, but making a gentle curve a little eastward of this line; which is, in fact, nearly parallel to that of the Shatt-ul-Arab.—*Chesney's Euphrates Expedition*. See Euphrates; Khuzistan or Arabistan, Luristan, Mesopotamia.

KARUNA, MAL., also Karunay Kilangu, TAM. *Amorphophallus campanulatus*.

KARUNCHIA, HIND. *Convallaria*, used for salad.

KARUN CHEMBAI, TAM. *Sesbania aegyptiaca*, Pers.

KARUND, HIND. Corundum; also Carissa carandas

KARUND, a town in the south of Persia: the inhabitants are Ali Illahi, worshippers of Ali, whom they consider as god, they eat pork, drink fermented liquors, never pray, never fast in ramzan, and are cruel and savage in their habits. Although almost always in revolt against Persia, it is scarcely possible to subdue them: therefore feuds are compromised and never thoroughly repressed by force; Rawlinson says the religion of the Ali Illahi sect bears evident marks of Judaism, singularly amalgamated with Sabæan, Christian, and Mahomedan legends. The tomb of Baba Yadgar, in the pass of Zardali, is their holy place; and this, at the time of the Arab invasion of Persia, was regarded as the abode of Elias. The Ali Illahi believe in a succession of incarnations of the godhead, amounting to 1001, Benjamin, Moses, Elias, David, Jesus Christ, Ali, and his tutor Salman, a joint development, the Imam Hussein, and the Haft Tan (the seven bodies) are considered the chief of these incarnations: the Haft Tan were seven pir, or spiritual guides who lived in the early ages of mahomedanism and each, worshipped as the deity, is an object of adoration in some particular part

of Kurdistan. Baba Yadgar was one of these. The whole of the incarnations are thus regarded as of one and the same person, the bodily form of the divine manifestation having alone changed; but the most perfect development is supposed to have taken place in the persons of Benjamin, David, and Ali. The Spanish Jew, Benjamin of Tudela, seems to have considered the whole of these Ali Illahi as Jews; and it is possible that in his time, their faith may have been less corrupted. Amaria also, where the false messias, David Ellias appeared, was certainly in the district of Holwan.—*Journal of Royal Geographical Society, Vol. ix, p. 36; Ed. Ferrier, Caravan Journeys, p. 19.*

KARUNDA, HIND. *Carissa carandas*. Its acid fruit is used for making jolly.

KARUNDA-CATHIN-CATCHEL? *Amirita cocculus*.

KARUNG, BURM. *Pongamia glabra*, Vent.

KARUNGA? HIND. *Galedupa arborea*.

KARUNJUKA, SANS. *Galedupa indica*.

KARUN PATTAN, a slave-class in Malabar. The Karimeyan of Canara are a slave race, a division of the Dher or Pariah.—*Wils. Gloss.*

KARUN-PHUL, BENG. *Clausena heptaphylla*.

KARUN TUTI, TAM. *Sida retusa*, Linn.

KARU NUCHI, TAM. *Gendarussa vulgaris*.

KARU NUVVULU, TEL. *Sesamum prostratum*, Retz., also *Artauema sesamoides*, Benth.? This name is applied to two different plants, but of the identity of the second there are doubts.

KARU PASUPU also Jongra, TEL. *Curcuma montana*, R., Vol. i, p. 35.

KARU PATTI, TEL. *Hibiscus vitifolius*, L.; R., vol. iii, p. 203.

KARU PENDALAM, TEL. *Dioscorea nummularia*, Lam.; R., vol. iii, p. 803.

KARU PENDALAM DUMPA, TEL. *Dioscorea*, L. This name is applied to any less known wild species.

KARUPU ULANDU, TAM. Black variety of *Phaseolus max*.

KARUR, HIND. *Berchemia*, sp, also *Hedera helix*, the ivy.

KARURA or Karur, a town in Coimbatore, which in Ptolemy's lists is mentioned as ruled over by the Cerobothirus (Chera-putra) son of Chera.

KARU SIKAYA, or Karra chika, TEL. *Acacia pennata*, Willd. *Mimosa torta*, R., Vol. ii, p. 5.

KARU TUMMI, TEL. *Dysophylla tetraphylla*, R.

KARU TUNGA, TEL. *Lipocarpa triiceps*, Nees; *Tunga triiceps* R., vol. i, p. 183, applied also to various other Cyperi.

KARU UDA GADDI, TEL. *Panicum mucronatum*, Roth.? *P. brizoides*, L. not R.?

KARU ULAVA, or Konda ulava, TEL. *Cantharosperrum pauciflorum*, W. & A., 787. *Dolichos medicaginus*, R., vol. iii, p. 316. "Wild gram," also applied to various kinds of *Desmodium*, *Glycine*, &c.—*Elliot, Flora Andhrica*.

KARU UMATAY, TAM. Thorn apple. *Datura*. *Datura fastuosa*, Mill.; Roxb.

KARU VAGU, TAM. *Pterocarpus*.

KARU VAGAI, TAM. *Albizzia odoratisima*, Benth.

KAR VADU, TAM. Salted fish.

KARUVA PILLAI MARM, TAM. *Bergera konigii*.

KARU VELUM, TAM. *Acacia arabica*; Karu Velum Pattai, MALEAL. Its bark; Karu Vellam Pisin, TAM., its gum.

KARU VERU, TAM. *Anatherum muricatum*.

KARUWA PATTAI, TAM. *Laurus cinnamomum* bark. Cinnamon.

KARVEI, JAV. The gossamer of Arenga *saccharifera*, Labill.

KARVILA, HIND. *Capparis horrida*.

KARWA, HIND. *Picrorhiza kurrooa*.

KARWA BADAM, HIND. *Amygdalus amara*.

KARWALA, HIND. *Cathartocarpus fistula*.

KARWAN, PERS. Caravan.

KARWA OWLEEA, a mahomedan saint.

KARWAR, see India, Papuan.

KARWAREI, HIND. *Rubus fruticosus*.

KARWAT, CAN., MAHR. *Antirrhinum innoxia*, Blume.

KARWA TURAI, HIND. *Luffa tenera*.

KARWILANDI, MALEAL. *Smilax ovalifolia*, Roxb.

KARY MATTI, HIND. Chalk, white earth; pipe-clay.

KAR-ZAHRA, HIND. *Nerium oleander*.

KAS, a term applied to several regions in the N. W. Himalaya. Kas-Mer, is not the country of the Kas, but the Kasia Montes (mer) of Ptolemy: the Kha (mer) Kas, or Caucasus. Mer is mountain in Sanscrit, as is Koh in Persian. Kas was the race inhabiting these; and Kas-gar is the Kasia Regio of Ptolemy. Gar is a Sanscrit word still in use for a region, as Cutch-wala-gar, Goojurgar, the region of the tortoise race, the country of the Gujar race.—*Tod's Rajasthan, Vol. i, p. 303.*

KAS, HIND. *Cannabis sativa*, also *Saccharum spontaneum*.

KASA, son of Rama.

KASAMARDAKAMU.

KASA, TEL. A son by a female slave.

KASAB, HIND. A profession, a trade.

KASA-CHIEDDI, TAM. Memecylon tinctorium.—*Kan., Willd.*

KASA-GAHA, SINGH. Casuarina equisetifolia.

KASAGHINNI, SANS. *Tragia cannabina*.

KASAI, HIND. Butcher.

KASAK, a nomade, pastoral race, of Central Asia, known in Europe as the Cossack and the Kirghis, but the people only style themselves Kasak. They are extended through the northern desert lands of Central Asia. Like all the Turkoman, they have many subdivisions with branches, families and lines, but the European classification into Great, Little and Middle Hordes is unknown to them. Love of travel and war have often brought together the most distant branches, and whether on the shores of the Emba, or of the sea of Aral, whether in the environs of the Balkash and Alatau, there is little difference to be found in the dialects spoken by them. Shades of differences are perceptible amongst them, scattered as they are so extensively through the northern desert lands of Central Asia. In manner of life and language the Kasak is hardly to be distinguished from the Burut. In colour, the Kasak women and young men have a white, almost a European, complexion, which darkens by exposure. The Kasak have the short neck of the Turanian race, so different from the long-necked Iranian, and they have thick set powerful frames with large bones; head not very large, crown round, and more pointed than flat: eyes less almond shaped but awry and sparkling; prominent cheek bones, pug noses, a broad flat forehead, and a larger chin than the Burut. Beard on chin thin, only hairs on both ends of the upper lip. They deem the Kalun Kasak women more beautiful than their own. The men in summer wear the Kalpak head dress, and in winter the Tumak cap of fur covered with cloth and flaps. They are almost all mahomedans, but like all nomade tribes are lax in their observances, for they retain much of the shamanist belief which they held prior to their conversion some centuries before. Chironmancy, astrology, casting out devils, are common to all mahomedans, but the Kasak draw omens from the burnt sacrifices of the shoulder-blade and the twisting of the entrails.

KASA KASA, TAM, TEL. *Papaver somniferum*, *Linn.* Poppy seed.

KASAL KIRE or Kashlikire, TAM. *Hibiscus surattensis*.—*Linn., Roxb., W. & A.*

KASAMARDAKAMU, SANS. *Cassia sophora*, *Linn., W. 220.* According to Sk, it is *C. occidentalis*. *Br. 224*, gives both names.

KASBI.

KASAMBA, see *Kasambi*.

KASAMBI, an ancient city of Hindustan, which appears as the capital of Vatsa. According to the Ramayana, it was built by Kasamba, the son of Kusa, a descendant of Brahma. Buchanan, upon the authority of the Bhagavat, ascribes its foundation to Chakra, a descendant of Arjuna; but neither the Bhagavat nor Vishnu Purana state that Nimi Chakra built Kausambi. They only say that when Hastinapura shall be washed away by the Ganges, Nimi Chakra will reside at Kausambi. From which it is to be inferred, that Kausambi existed at the time that Hastinapura was destroyed. The site of Kausambi, Buchanan supposes to have been that of the ruins ascribed to Hastinapura, but it was more probably lower down in the Doab, bordering upon Magadha on one side, and Kosala on the other. It is elsewhere intimated that it was possibly about Kurrah, which, according to the inscription found there, was comprised within Kausamba-mandal, or district of Kausambi. The city so termed was probably not far from Allahabad.—*Hind. Theat., Vol. ii, p. 69; Oriental Magazine, Calcutta, No. I, p. 67; Asiatic Researches, Vol. ix, p. 433.*

KASAMM, HIND. *Avena fatua*.

KASANA, or Kanchana, HIND. *Bauhinia acuminata*, *L.*

KASARA-KAYA, *Luffa tuberosa*, *Roxb., Vol. iii, p. 717.* *Cucumis tuberosus.*

KASAR-CANGAR, MAHR. A man of an inferior caste whose occupation is working in brass, making pots and pans, and armlets and anklets of mixed metal.

KASAULI, HIND. Hops.

KASAUNDA, HIND. *Cassia occidentalis*.

KASAURI, Gagli of Sutlej. *Colocasia antiquorum*, *Schott.* *Arum colocasia.*

KASAWHA, MALEAL. A Malabar and Canara tree, which grows to about eighteen inches in diameter and twelve feet long; its wood is heavy and close-grained, it produces a small berry much like pepper, which, as well as the wood, is not of much use.—*Edge, Forests of Malabar and Canara.*

KASBA, a small town, or large village, a market town.

KASBAL, HIND. *Aplotaxis gossypina*.

KASBAR, HIND. of Sutlej, tomentum of the leaf of *Onoseris*.

KASBIHARA, HIND. Workers in mixed metals, braziers, also melters and casters in moulds. There are in Hindustan various divisions of these people, and they have a conventional or tribal dialect peculiar to themselves.—*Wilson's Glossary.*

KASBI, HIND. A dancing girl, a prostitute; literally a professional person.

KASHGAR.

KASBI KORAWA, a branch of the Korawa, addicted to prostitution.

KASB-UL ZARIRA, HIND. *Agathotes*, sp.

KASDIM, see *Arpaksad*, *Arrapakhtis*.

KASE, GEN. Cheese, also

KASERI-KAI, HIND. *Pulyche kire* and *Sime-Kashli-kire*, TAM. *Hibiscus sabdariffa*, Roselle.

KASERU, HIND. *Cyperus tuberosus*.

KASH, HIND. *Eriophorum comosum*.

KASHI, or *Khas*, or *Kas*, a frequently recurring prefix in India, is supposed by Mr. Campbell to have its origin from the *rishi*, *Kasyapa*, who gave his name to Kashmir, Kashgar, and to the people originally called *Kasha* or *Kassia*.—*Campbell*, p. 58. See *Kas*. *Kashbin*.

KASHI, BENG. *Saccharum spontaneum*, Linn.

KASHA MARAM, TAM. *Memecylon tinctorium*.

KASHIAN, a city of Persia, still tolerably flourishing, standing in one of the plains, northward of Isfahan, about half-way between Isfahan and Tehran, and also about half-way between Sultaniah and Yezd, long noted for its brocades and velvets, and also for its scorpions. It was founded by Zobeid. It contains a palace by Abbas the Great, a fine college, and upwards of 30,000 inhabitants, who are chiefly employed in the manufacture of copper utensils, or silk and cotton stuffs.—*Yule Cathay*, Vol. i, p. 51; *Col. Chesney*, *Euphrates and Tigris*, p. 213.

KASHIANDA, TEL. *Cassia occidentalis*, Linn.

KASHIBIN, an inland country, mentioned by early Arab authors, described as a desert country full of mountains, perhaps the modern *Catch Bhoj*, or the *Kazvin* of the present day. Possibly the small and poor kingdom of *Hintrunje* was the chiefdom of *Satringa-Pali'hana*, still famous.—*Tod's Travels*, pp. 162-63. See *Kas*, *Kash*.

KASHIEB, see *Kashmir*.

KASHGAI, a wandering tribe, in the south of Persia, between Shiraz and Darab.

KASHGAR, a small district near Deer, north of Peshawar. The ascent from Yarkand and Kashgar, westward to the table-land of Pamir, is almost imperceptible: and when that lofty position is gained, where the average elevation is probably as much as 15,000 feet above the sea, a vast open plain is seen, which stretches from the valley of the Jaxartes in one direction, across the head streams of the Oxus, to the top of the Kashgar or Chitral valley in another. This plateau may be 700 or 800 miles in extent. It is studded throughout with lakes, and from it descend four great river systems. The Naryn, which

KASHGUL-I-ALI.

is the main stream of the Jaxartes, runs through a long, luxuriant valley, between the culminating ridge and outer range of the Thian Shan, and drains all the northern range of the plateau. The Oxus, rising in the Sari Kul or Yellow lake of Pamir, at least 300 miles to the south of the Jaxartes, receives from its right bank a multitude of small streams, which run to the south through rugged valleys, on the south-western face of the Pamir uplands. The western face of Pamir between the Jaxartes and the Oxus, is far more precipitous than the eastern. Ridges run out as far as Samarcand and Karshi, and the streams from the upland which twine amongst these ridges form the Zafshan and Karshi part of the water system of the Oxus, though before they reach that river they are entirely consumed in irrigation. In the 16th century, Moghul armies penetrated from Kashgar and Yarkand, through Thibet and the valley of Kashmir as far as the frontier of the Punjab. According to Lassen, the old original inhabitants of Kashgar, Khoten, Turfan and Yarkand, and of the adjacent highlands are the Tajik who speak Persian and are all agriculturists. The Swedish chronicles bring the Swedes from Kashgar, and the affinity between the Saxon language and the Kipchak is great.—*Bunsen*; *Tod*. See *Kashgar*, *Karakoram Mountains*, *Kirghis*, *Kokau*.

KASHIGAR, name of an animal of Pamir, called *Russ* by the Kirgis, who hunt and shoot it, and by whom its flesh is much prized. It is said to be larger than a cow, but smaller than a horse.

KASHIGOI, a Turkish nomade tribe of about 12,000 families, whose chief is the *Il-Khani* of Fars, one of the most influential personages in that province. They arrive, in spring, on the grazing of Isfahan, where they are met by the wandering *Bakhtiari*, from their warm pastures of Arabistan near the head of the Persian Gulf. At the approach of winter both the tribes return to their respective garmsair or wintering lands.

KASHIGUL-I-ALI or *Ali's Pot*, a sacred buddhist relique, the water-pot of Fo or Buddha. It was carried to Kandahar by the tribes who fled in the fourth century from Gandharra on the Indus, to escape an invasion of the Yu-chi who made an eruption from Chinese Tartary for the express purpose of obtaining it. It is now at the foot of the old town of Kandahar, and is one of the most celebrated reliques of antiquity belonging to the eastern world, and still retains amongst the mahomedans of Kandahar, a sacred and miraculous character. It is formed of stone and may contain about twenty gallons. See *Kabul*, *Kandahar*.

KASHMIR.

KASHI, Sans. From kash, to appear.

KASHI, the hindoo name for Benares.

KASHIFI, Hussain-bin-Ali-ul-Vaiz, surnamed Kashifi. He translated the fables of Bedpai into Persian prose from the Arabic of Ibn Makaffa and named them Anwar-i-Sohaili or lights of Canopus. Kashifi, lived about the middle of the twelfth century (1150) in the time of Bahram Shah.

KASHI-KATTI, TAM., MAL. Gambier. Catechu of Areca.

KASHILI-KIRE, TAM. Hibiscus surintensis.

KASHIN, or Masham, HIND. Narthex assafœtida.

KASHIN, HIND. of Kanawar. Rhus semialata, also Rhus buckiamela.

KASHKAI, HIND., PUSITU. Indigofera arborea.

KASHISWARA, see Inscriptions.

KASHIVAT, a rishi of the hindoos. See Polyandry.

KASHIYA, BENG. Saccharum spontaneum.

KASHKAN, see Kirghis.

KASHIKAR, see Kas, Kashgar, Kush, Cush.

KASH KATTI, MALAY., TAM. Catechu. Areca catechu.

KASHMAL, HIND. Berberis lycium, Royle.

KASHMIR, a province in the N. W. frontier of India, with a capital in lat. 34° 4' 28" N., in a valley which has ever been a favorite resort of those conquerors of India, who came from the north west. It is the commonly received opinion that south of the Himalaya, the Aryans were first in the Panjab and Kashmir, and afterwards in Sind, Guzerat and Delhi, and that the seat of Vedic power, faith and learning was between the Jumna and the Indus. But Chevalier Bunsen, who does not accept the ordinary calculation as to the age of the world, and regards the stated years of the patriarchs to refer, not to the duration of their lives, but to certain cycles or eras then in use, gives B. C. 10,000 to 8000 as the date of the Arian emigration from the north-east of the primitive land,—as the close of the great plutonic disturbances of the earth and its climatic changes, and of the formation of the stem of the Arian languages in its most general sense. From B. C. 8000 to 5000, he gives as the period of the gradual separation of the Arian races, German, Slave, Palasgian : B. C. 5000 to 4000 as the date of the gradual extension of the Irano-Arian race in Central Asia. B. C. 4000 as that of the Arian immigration into the Indus country, and B. C. 3000 as the age

KASHMIR.

of Zoroaster's reform. According to Chevalier Bunsen the emigration of the Aryan race from Sogd to Bactria and beyond it, after they separated from the rest of the Arian people who shaped their course, westward, took place prior to B. C. 5000, consequently before the age of Menes. The same author is of opinion that it was B. C. 3000 that the schism took place amongst the Arians, when all India beyond the Sutlej adopted brahmanism, and the religious views, forms and habits of Bactria, were for ever abandoned. That they entered India as conquerors some centuries before Christ, and long swayed the fortunes of the northern part of it, is clear, but the greatly prior dates ascribed by Chevalier Bunsen, require further investigation. It is agreed that the Vedic immigrants, called themselves Arians : Indra, say the rishi, has given the land to the Arians. Aria proper lay north-west from India, about the Arian lake latterly, but the eastern Medes and Parthians were its distinctive people. Latterly, Medes, Persians, and the tribes between the Medes and the Indus, were to a certain extent amalgamated under one rule, and Arians stretched loosely from the Indus to the Caspian sea. The Arian races, in one part of their immigration, seem to have worshipped the elements but to have modified their tenets as they journeyed to the south, introducing amongst other matter, a large amount of hero-worship. It is, however, admitted that the vedic Arians dwelt chiefly on the banks of the Indus and its confluence as high up as Kashmir, and as low down as Kutch and northern Guzerat. Aria-vartha, the Arian's portion, as defined even in later times, was the country south of the Saraswati and north of the Drishadvati. The only Sanskrit composition, however, yet discovered, to which the title of history, can with any propriety be applied, is the Raja Taringini, a history of Kashmir. It was composed in A. D. 1125, but it gives a general historical account of Kashmir from B. C. 1182. It commences with the statement, that the beautiful valley forming that kingdom was originally a vast lake, called Satisaras. The draining of the water from the valley is ascribed to the saint Kasyapa, the son of Marichi, the son of Brahma, the Casheb or Kasheb, of the mahomedan historians, according to some of whom, he was not the hindoo seer, but a deo or jan, the servant of Suliman, by whose orders he effected the desiccation of Kashmir. The method of doing this was opening a passage through the mountain at Baramouleh, by which the water passed off. Its king Sagara drove the Mlechha, foreigners, and Saka into Nepal, Assam and Bhutan and endeavoured

to re-institute brahmanism. The chief Abisares, who with rich presents conciliated Alexander as he approached the Indus, is supposed to have ruled about Kashmir. The rajahs of Kashmir of the line of Kuru in the Lunar race, were worshippers of the Naga or Snake. The early chronology of Kashmir is full of doubts, though Professor Wilson, Captain Troyer and Major Cunningham all coincide in regard to the proper period of the initial date of the Naga dynasty. The line is taken from the Raja Tarangini which commences with an account of the desiccation of the valley by Kasyapa muni : supposed to allude to the deluge. Kashmir was colonized by Kasyapa B. C. 2666. There were many dynasties of Kashmir kings of the Kaurava race for 1,266 years, with one of whom, Gonerda, authentic history commenced in B. C. 2448. Lavan in 1709 B. C., was the Loo of mahomedan historians.

Kashmir was annexed to the Moghul empire under Akbar in A. D. 1586 : it has since been ruled from Afghanistan, by the Daraul and Barukzye chiefs, but was taken from them in 1819 by Ranjet Singh, and is now held by a Dogra Rajput, the chief of Jammu, who holds sway over Kashmir, Jammu, Kishtwar, Zangskar, Ladakh, and Balti. Abul Fazl says that Kashmir has "Puckoli and Krishnagunga on the west." Krishnagunga or Kissengunga, is the name of a river (said in the Ain-i-Akbari to contain gold dust) in the district of Pehkely or Puckely. Mr. Forster travelled these regions in 1784. Rennell takes Pehkely to be the Pectya of Herodotus, as well as the Peucelotis of Arrian from whence Scylax set out to explore the course of the Indus under the orders of Darius Hystaspes. But this is wrong, as the Peucelotis of Arrian was west of the Indus, and Pakhale is on the east.

The Kashmir territory, as at present formed, comprehends Jammu, Kashmir, Kishtwar, Zangskar, Ladakh and Balti. Gholab Singh was invested with the title of maharajah of Kashmir at Amritsir on the 15th March 1846. Kashmir long belonged to the Kabul kingdom, but it never was in any degree colonized by Affghans, and it is singularly free from any modern intermixture of foreign races. It never belonged to the Affghan nation, but was always a crown appanage of the kings, who were very jealous of admitting into it subjects whom they might be unable to dispossess. Vigne estimated the population of the city at 80,000, and of the whole valley at 120,000. The revenue in Akbar's time was £330,000, and Jubbar Khan, brother of Dost Mahomed, collected £400,000. The author of the Ayin-i-Akbari dwells with rapture on the beauties

of Kashmir, whence we may conclude that it was a favorite subject with his master Akbar, who had visited it three times before Abul Fazil wrote. Other emperors of Hindoostan also visited it and seemed to forget the cares of government, during their residence in this happy valley.

The Lake or Dal of Kashmir lies to the north of the town, stretching from the base of two hills to the more lofty mountain range which bounds the valley on the north. It is nearly circular and four or five miles in diameter, but is only open in its northern half, the end nearest the town being occupied by large islands, with narrow channels between them, in some of which there is a good deal of current. Its waters are discharged into the Jelam by a considerable stream, which, flowing from its south-east corner, runs to the westward in a course nearly parallel to the southern margin of the lake for nearly a mile, when it turns abruptly south to enter the Jelam in the middle of the town of Kashmir. The province of Kashmir consists of an extensive plain surrounded on all sides by lofty mountains. It is the upper part of the basin of the Jelam, and is separated from the valley of the Chenab on the south by rugged and often snowy ranges, and from the basin of the Indus on the north by the main axis of the western Himalaya. The mountains on the north are for the most part bare and rugged on their southern face, while those which lie to the south appear from the plain to be magnificently wooded with forests of pines and deciduous-leaved trees, descending almost to their base. The valley of Kashmir is traversed in its whole length by the river Jelam, which rises at the east end of the valley, and winds from one side of the plain to the other, at one time washing the base of the northern hills, at another receding to a considerable distance from them. The Jelam flows with a tranquil stream, and being for boats of considerable burden, navigable throughout the whole of the level country as far up as Islamabad, is the great highway for the traffic of the country, in which, notwithstanding its being perfectly level, wheel carriages are unknown. From all times the valley has been the retreat from the heats of India for the conquering races, and it is not improbable that bands of their followers may have preferred to remain in the valley.

The passes from Kashmir to Tibet, are the Baramula ; Punch or Pakli ; Gul Murg, Tosi Maidan ; Sang-i-Safed or Chanz ; Pir Panjal ; Nundan Sar ; Sedan ; Kuri, Kolnarawa or Kuligam ; Banihal ; Sir-i-Bul ; Mir Bul ; Nabhug-nyah ; Pahalgam or Umur Nath ; Duras or Hemb Baf or Bab ; Koh-i-Yamon ; Bandrupur

Lolab and Kurnawar. The ridge which separates Kashmir from Great Thibet, and Kashgar from Little Thibet (the true Imaus, or Himmaleh), appears to incline, in its northern course, towards the continuation of Hindoo Koh, and even to join it. The term Hindoo Koh, or Hindoo Kush, is not applied to this ridge, throughout its whole extent; but seems confined to that part of it, which forms the N. W. boundary of Cabul: and this is the Indian Caucasus of Alexander: to the north-west of Kashmir is Dayamar, 20,000 feet high. It is the last great peak of the western Himalaya, and beyond it, the chain dips rapidly to the Indus. Dras, adjoins Kashmir, the intercommunication being by the Zoji pass, a remarkable depression of 11,300 feet, through which the moist winds of Kashmir flow and Dras is the most humid and fertile province of Tibet. From the top of Mochpura, above the Dunggulli bungalow, there is a fine panorama of the Kashmir hills, the valleys of the Jelam and Indus, Swat, the whole of Hazara, with the Hindoo Kush, bounding the view to the west.

The whole country of Central Asia between India and Tartary is one broad mountain range, the Himalaya forming the southern crest, and the Kuen-luen the northern. The interior has other lovely valleys besides Kashmir, but it is more usually broken into rocky ravines, through which the affluents of the Indus force their way towards the plains; or else stretches away in those vast treeless uplands, which are one of the chief characteristics of the range through its whole extent. Kashmir valley is the upper part of the basin of the Jhelum. It is about 90 miles from north-west to south-east and varies in breadth, from two to thirty-five miles, bounded on the N. by the axis of the Himalaya, averaging 14,000 feet, over which a remarkable depression, the Goji pass, elevated 11,300 feet, leads into the Tibetan valley of Dras. To the south, the Pir Panjal, averaging 12,000 feet, and Banihal ranges separate Kashmir from Rajouri and Jammu, and on the east, it is separated from Kishtwar by the Wardwan range. The general level of the valley of Kashmir is about 5,500 feet above the sea, but the Wular lake and gardens of Srinuggur is only 5,146 feet. The chief town, Srinuggur, in L. 34° 46', and L. 74° 48' on both banks of the Jhelum, has 40,000 people. The temples of this province are of the Arian order of architecture. The Kashmirian sacred buildings have a grace and beauty quite peculiar to themselves. They are not, like the hindoo temples, a sort of architectural pasty, a huge collection of ornamental fritters, huddled

together with or without keeping. Nor are they, like the temples of the Jain religion—the intermediate eclectic system between brahminism and buddhism—a vast forest of pillars, made to look as unlike one another as possible by some paltry differences in petty details. They are, on the contrary, distinguished by great elegance of outline, massive boldness in the parts, and good taste in decoration. Lofty pyramidal roofs, trefoiled doorways covered by pyramidal pediments, and great width of intercolumniation, are among the principal features of the Kashmirian temple. The material generally found to have been used is a blue limestone, capable of taking the highest polish, to which circumstance Captain Cunningham refers the beautiful state of preservation in which some of the buildings exist. The great wonder of Kashmir is the temple of Martand, or Matan, about three miles from Islamahad. Its exact date cannot be determined, but it is somewhere between the years 370 and 500 A. D. Captain Cunningham describing its majestic position says he can almost fancy that the erection of this sun-temple was suggested by the magnificent sunny prospect which its position commands. It overlooks the finest view in Kashmir, and perhaps in the known world. Beneath it lies the paradise of the east, with its sacred streams and cedar glens, its brown orchards and green fields, surrounded on all sides by vast snowy mountains, whose lofty peaks seem to smile upon the beautiful valley below. The vast extent of the scene makes it sublime; for this magnificent view of Kashmir is no petty peep into a half-mile glen, but the full display of a valley sixty miles in breadth and upwards of a hundred miles in length, the whole of which lies beneath “the ken of the wonderful Martand.” The dress of the poorer classes of women, alike in Kashmir, Ladak, and Kashtawar, is most scanty. One woollen garment like a night-gown in shape, loose and wide, coming down a little below the knee, is the only dress they wear. In Lahoul, the attire of the women is different. There it consists of two blankets, worn much in the fashion of the Kooloo fair ones. The upper blanket is fastened by a brass or iron pin, of a peculiar shape and fashion; some of them have two of these pins, united by a small chain of metal. The lower blanket is wound like a petticoat round the lower part of the figure, and fastened at the waist; or one end is brought over the right shoulder. The men fasten their woollen wrappers in the same manner; they wear a sort of jacket or blouse, besides the wrapper. The richer Lahouli wear silver and even gold pins. This refers to those parts of

Leh, near Kashmir, on the side of Leh. At Leh itself and among the wandering Tartar tribes the women dress quite differently : with woollen or variegated petticoats, and tanned sheep or goats' skins as mantles. Scattered amongst the races from Kashmir to the extreme south of India, are the brahman people, belonging to the Arian family. In the more southern and central parts of the peninsula, amongst the Tamil, Telugu and Canarese nations, they are comparatively few, and do not possess lands, nor are they agricultural, but are engaged in religious avocations or as servants of government, and have till lately been the acknowledged social aristocracy of those districts. In Malabar, the Konkan, in Maharashtra, Guzerat and Orissa, they have been more numerous. As Mr. Campbell mentions (pp. 56-67), brahmins are one of the most numerous castes in India, and probably follow the greatest variety of avocations. In addition to the priesthood, in the north of India, in Hindustan, they pursue agricultural pursuits, and in the south they are clerks and accountants. There are brahmins in the hills north of the Punjab, in the extreme north-west corner of India, occupying both the valley of Kashmir and the hills immediately to the west and south of it. Kashmir itself is a brahmin country : all its people, though long since converted to mahomedanism, having been of the brahminical race. The educated class who maintained their own tenets and are still very numerous, are known as pundits and form quite an aristocracy. They are all educated, are exceedingly clever, and are an excessive and somewhat oppressive bureaucracy, which has ruled Kashmir under every successive government, and has sent out colonies to seek their livelihood in northern India. The features of the Kashmir brahmins proclaim them to be one of the highest and purest races in the world. They are of quite high Arian type, very fair, handsome, with chiselled features. In many, the nose is high and slightly acquiline, but not Jewish, but in others the nose is straight. Their brow is a little more raised and their nose more arched than in the Greek statues. The ordinary Kashmiri has a strong, athletic figure, but none of them are martial, and the brahmins in these respects correspond, they rule by the brain and pen. They have a greater refinement and regularity of feature than the Afghans and others of a rougher type, with, however, a less manly-looking physique, a colour less ruddy and more induced to a somewhat sallow fairness. The Kashmir brahmins eat meat and are excluded by the Indian brahmins, alike from the five Gaur and from the five Dravid, and form a separate brahmin-

ical class, being more similar than the ordinary brahmins of Hindustan and the Deccan, than whom they are altogether looser in their observances. The Kashmiri pundits are known all over northern India as a very clever and energetic race of office-seekers ; as a body they excel in acuteness the same number of any other race with whom they come in contact. Almost all the secular pundits use the Persian character freely ; they are perfectly versatile, and serving abroad will mount a horse, gird on a sword and assume at a push a semi-military air. The lower classes of Kashmir have long since been converted to mahomedanism, but they seem to be ethnologically identical with the brahmins, and tradition asserts that they are of the same race. The brahmins of Kashmir are regarded by those of Bengal as of an inferior order, and the agricultural brahmins on the Saraswati banks are similarly regarded. Brahmins are numerous in Kumaon and Garhwal, where education is more advanced and the Nagri character used. People of brahminical origin, approximating to the Punjabi, but in language, habits, manners and dress quite different from the Kashmiri, dwell in the hills between Kashmir and the Panjab, but they have abandoned the hindoo religion and are now partly Sikhs and in part mahomedans. Their language is a dialect of the Punjabi, they are good soldiers. Mr. Campbell thinks (pp. 50, 60, 121) that the brahmins of the frontier hills are even handsomer than those of Kashmir, the people in general of these hills being the handsomest of the human race. The Bamba race dwell in the hill frontier, beyond the Jhelum. They are of brahminical origin, but now profess mahomedanism, and on the eastern side of the Jhelum the hills are shared with other races, and by a numerous tribe of Sikhs, converts from brahmins. Their brahmin ancestors became converts to the Sikh religion before it became a political power, and entirely threw off their hindooism. They are very useful soldiers and servants. Its language, for the common affairs of life, contains Paro-pamisan and Hindi elements. Its religion is shia and suni mahomedan. The people are stout of limb and prolific, but tame of spirit and loose in morals, they have much mechanical skill but are very poor. They speak a hindi dialect known as Kashmiri. Amongst them also are several wandering tribes who seem distinct from the settled population, viz : *Chaupan Pal*, or Palal of Kashmir, shepherds who tend the flocks of other people. *Wattal*, in Kashmir, a gypsy kind of tribe which supplies dancing girls and prostitutes. The women are among the handsomest of the valley.

Chibh.—A tribe lying south of Kashmir, but little reclaimed from barbarism either by hindoo or mahomedan conquerors.

Nim-shah.—A half-bred race, on the southern slope of the Indian Caucasus, between the Affghans and the higher peaks. They speak a language related to the Indian tongues, but possessing some curious affinity to Latin. In the lower country, the people near the debouchure of the Kashgar river, speak a mixed tongue called Lughmani. The people in Kashgar submit quietly to their rulers. From all times the valley Kashmir has been the retreat from the heats of India for the conquering races, and it is not improbable that bands of their followers may have preferred to remain in the valley. The Guluwan of Kashmir are horse-grazers. Probably owing to the circumstance that the valley has so often been the resort of pleasure-seekers, the morals of the people are not at a high standard. A satirical Persian couplet runs,

"Dar jahān ast do taifah be pir

"Sunni-i-Balkh, Shiah-i-Kashmir"

which may be rendered that there is not an honest man among the sunni of Balkh or the shiah of Kashmir. The Kashmiri spoken in this small district has decided affinities with the Dard tongue. In one hundred words of this language, according to Vigue, 25 are of Sanscrit origin, 40 Persian, 15 Hindi, and 10 Arabic. The beggars of Kashmir are celebrated in Sind'h for audacity and importunity. From Kashmir, eastwards all the easily accessible portions of the Himalaya are occupied by the Arian hindoo as far as the eastern border of Kumaon and the Kali river separating Kumaon from Nepaul—the Thibetans being here confined to the valleys about and beyond the snow. People of Thibetan blood have migrated into Nepaul, throughout its whole length, and have formed mixed tribes whose appearance and language is more Thibetan than Indian, but whose religion and manners are hindoo. East of Nepaul, in Sikkim and Bhutan the hindoo element almost disappears, and the Thibetans are altogether dominant. Eastward of Kashmir, are the Bhot race in Bulti and Ladak. Bulti includes Hasora, Rongdo, Rong-yul, Shagar, Skardo, Bulti, Parkuta, Tolti, Khartaksho, Kiris, Khaybalu and Chorbati. Ladak or the Bot-Pa, includes Spiti, Zangskar, Purik, Suru, Hembako (Dras), Ladak proper or Le, Nubra, Rong, Rupshu and Hanle. The language of the Bhotiahs of Tibet, the Bhutiah or Thibetan, is also that of Bhutan and is a connecting link between the polysyllabic and monosyllabic languages. Garhwal is to a large extent Bhot. The revenue of Kashmir in Akbar's time was £330,000, and Jubbar Khan, brother of

Dost Mahomed, collected £400,000. The Kashmir trade, including the produce of Yarkand and Khutan, and other remote provinces, comes by the route of Le, &c., and also the imports from Ladak and Lahaul. The trade between Kashmir and Jammu is estimated at £384,850. Between Kashmir and the Panjab several practical routes exist, but the most frequented is by mount Jammu and Banihal, over 10,000 feet. Kashmir imports yearly £184,000 worth of the produce and manufactures of India and Europe. In Kunawar, the greatest height at which rice that requires water has been observed, is 6,600 feet. There are other kinds, which are not watered, that grow at 8,000 and 9,000 feet, but what is produced in Kashmir, which forms the chief subsistence of the inhabitants requires the fields to be laid under water, as in Bengal. Jacquemont describes the climate and vegetation of Kashmir as very similar to those of Lombardy. The deodar is abundant, and is extensively employed in the construction of houses, temples, and bridges. The forests also contain *Pinus longifolia* and *excelsa*, *Abies webbiana*, walnut, the quality of the wood for gun-stocks and furniture being little inferior to that of Britain, maple, poplar, willow, yew, and a species of juniper. The oriental plane, "*Chunar*," (*Platanus orientalis*), is probably found nowhere more abundant or luxuriant than in Kashmir, though it is not indigenous. The absence of oaks, *rhododendron*, *Andromeda* and *Pinus gerardiana* is remarkable. By order of the Mogul emperors, a grove of chunar and poplar was planted near every Kashmirian village; these were protected by a heavy fine on every tree felled, but the Sikhs destroyed many of them. Fruit of all kinds abounds in Kashmir. There are four varieties of walnut, one of which grows wild in the forest and the others are cultivated. The former is very tiny, and the scanty kernel is encased in a thick shell. One of the horticultural species is very much superior to the others; it is called "*Kaghuze*," (from "*Kaghuz*" paper,) because the shell is as thin as paper, and can easily be broken by the hand. The superiority of this species is attributed to its having been originally engrafted, but though now raised from seed, it does not become deteriorated. The Kashmirian use the walnut as a dye for black and green colours; the former, from the ripe fruit, is a "fast" or permanent dye, and the latter is furnished from the walnuts which fall to the ground while they are still green. The latter colour is not permanent. From the kernel an oil is extracted, which is used, not only for burning in lamps, but also

KASHMIR GHAR.

for culinary purposes. It is said also to be made the medium for extracting the perfume of the jessamine, the yellow rose, and the narcissus. One-fourth of flower is added to three-fourths of oil, and the whole is well corked up in a jar or bottle. It is then exposed to the sun for five or six weeks, by which time the oil is found to be sufficiently impregnated. Walnut oil forms an extensive and profitable article of export into Thibet and Yarkand. Kashmir is the only part of India where wine is made from the juice of the grape, a fact to be attributed rather to its ascescent quality than to any scarcity of the fruit. It is described by Foster as resembling that of Madeira, and, he presumes it would be found to improve greatly in quality by age. To the proper radiation of the heat in this elevated region, and its vicinity to the lofty mountains of Thibet, it may be reasonably concluded, much of the acidity would be found in all the fruits which so greatly adds to their taste and flavour in the temperate climates of the north. As there is a limit beyond which the vine cannot pass, or rather where the acid properties exceed the limits necessary to the perfection of the fruit, there is also an excess of the saccharine principle in tropical countries, which precludes the application of the fruit to the manufacture of wine. In such instances, the vinous particles are concentrated, and fruit of every kind is fit for spirituous liquor only. The breeding season is much later in the valley of Cashmere than in the Panjab. Birds begin to pair and build about the middle of March in the plains, whilst it is May before they commence at the altitudes of from 5,000 to 7,000 or 8,000 feet. — *Rajah Taringini, or Chron. of Kash.*; *Calcutta Review*, Jan. 1871, No. 61, p. 424; *Prinsep's Antiquities* by Thomas; *Herodotus*, lib. iv; *Arrian*, iv; 22; *Cleghorn's Panjab Report*, pp. 169-170, 190; *H. et T.*, 224; *Adventures of a lady in Tartary*, &c., Mrs. Hervey, Vol. i, pp. 255-6, 278-9; Vol. ii, p. 121; *Richard F. KASHMIR GHAR. The cave called Kashmir Ghar, is situated in the territory of

KASHMIR SHAWLS.

the Baboorye, on a mountain which cannot be ascended but by a steep passage, hewn in great measure out of the rock. This place is also called Pelley, and is sixteen coss from the town of Soukhor.

KASHMIRI-PATR, HIND. *Rhododendron campanulatum*.

KESHMIRJA, HIND. See *Aucklandia costus*.

KASHMIR SHAWLS. Mr. Moorcroft estimated the annual value of the Kashmir manufacture of shawls at £300,000, but this seems a small estimate if the raw material be worth £75,000 alone, that is, 1,000 horse loads of 300 pounds, each pound being worth five shillings.

In the 11 years, 1850-51, to 1860-61, the quantities and values of Kashmir shawls exported from India, were as under:—

Years.	Pieces.	Value.	Years.	Pieces.	Value.
		£			£
1850-51	13,405	171,709	1856-57	?	290,640
1851-52	10,591	146,270	1857-58	?	227,618
1852-53	16,711	215,059	1858-59	?	310,027
1853-54	?	170,153	1859-60	?	252,828
1854-55	?	197,890	1860-61	?	351,093
1855-56	?	209,279			

Of the above, 90 per cent. was shipped from Bombay ports, and 80 per cent. to the United Kingdom, Suez, the Arabian and Persian gulfs,—America, France and China taking the remaining part. The Central Committee, Lahore, reported that this is now by far the most important manufacture in the Panjab; but thirty years ago it was almost entirely confined to Kashmir. At the period alluded to, a terrible famine visited Kashmir; and, in consequence, numbers of the shawl-weavers emigrated to the Panjab, and settled in Umritsur, Nurpur, Dinanagar, Tilaknath, Jellapur and Loodianah, in all of which places the manufacture continues to flourish. The best shawls of Panjab manufacture are manufactured at Umritsur, which is also an emporium of the shawl-trade. But none of the shawls made in the Panjab can compete with the best shawls made in Kashmir itself; first, because the Panjab manufacturers are unable to obtain the finest species of wool, and, secondly, by reason of the inferiority of the dyeing, the excellence of which in Kashmir is attributed to some chemical peculiarity in the water there. On receipt of the raw pashm or shawl wool, the first operation is that of cleaning; this is done generally by women; the best kind is cleaned with lime and water, but ordinarily the wool is cleaned by being shaken up with flour. The next operation is that of separating the hair from the pashm; this is a tedious operation, and the value of the cloth subsequently manufactur-

KASHMULLA.

ed varies with the amount of care bestowed upon it. The wool thus cleaned and sorted is spun into thread with the common 'churka' or native spinning-machine. This, is also an operation requiring great care. White pashmea thread of the finest quality will sometimes cost as much as £2 10s. a pound. The thread is next dyed, and is then ready for the loom. The shawls are divided into two great classes: viz., Woven shawls, called 'Teliwalah,' and Worked shawls.

Shawls of the former class are woven into separate pieces, which are, when required, sewn together with such precision that the sewing is imperceptible. These are the most highly prized of the two. In worked shawls, the pattern is worked with the needle upon a piece of plain pashmea or shawl-cloth.

A woven shawl made at Kashmir of the best materials, and weighing 7 lbs., will cost in Kashmir as much as £300. Of this amount, the cost of the material, including thread, is £30; the wages of labor, £100; miscellaneous expenses, £50; duty, £70.

Besides shawls, various other articles of dress, such as the choga, or outer robes, ladies' opera cloaks, smoking-caps, gloves, &c., are made of pashmea.

Latterly great complaints have been made by European firms of the adulteration of the texture of Kashmir shawls; and there is no doubt that such adulteration is practised, especially by mixing up Kirmani wool with real pashm. In order to provide some guarantee against this, it has been proposed that a guild or company of respectable traders should be formed, who should be empowered to affix on all genuine shawls a trade-mark, which should be a guarantee to the public that the material of the shawl is genuine pashm, especially as the Indian Penal Code provides a punishment for those who counterfeit or falsify trade-marks, or knowingly sell goods marked with counterfeit or false trade-marks.

At Delhi, shawls are made up of pashmea, worked with silk and embroidered with gold lace. A very delicate shawl is made of the wool of a sheep found in the neighbourhood of Ladak and Kulu: the best wool is procurable in a village near Rampur, on the Sutlej; hence the fabric is called 'Rampur Chuddor.' The other woollen manufactures in the Panjab and Peshawar are choga, made of the wool of the Dumba sheep, and of camel's hair, and choga made of Patti, or the hair of the Cabul goat.—*Moorcroft's Travels*, Vol. II, pp. 165, 194; *Cunningham's History of the Sikhs*, p. 4.

KASI, a name of Benares.

KASI, HIND. *Pandanus odoratissimus*.

KASIA, a race occupying the hills south of the valley of the Brahmaputra, in lat. 25° 20' N., and long. 91° 30' to 92° 20' E., between Cherrapoonjee and the Shillong mountain. The Kasia are the ablest-bodied of the borderers of Assam. Their tribe or race differs very little from that of the Garo. They are arranged in petty rajahships, in the Kasia hills. Nat-worship seems the culture of the Kasia. They dread snakes. They build their houses on piles. They trap fish, like the people in Java, Borneo and Sumatra. They distil and drink intoxicating liquors, and between Ringhot and Cherra, and in other places they have bridges of the fibres of the India rubber tree. Groups of erect oblong pillars, hewn or unhewn, from 3 to 13 in number, are common. The Kasia is distinguished from all the surrounding languages, Indian, Ultra Indian and Tibetan, by its direct and prepositional ideology. They have the Mongolian type of features in the highest development. Colonel Yule mentions that porters of the Kasia nation used often to carry down from the coal mines of Cherra Punji to the plains, a distance of eleven miles, loads of two maunds or 165 lbs. of coal. Their strength and bulk of leg were such as he had never seen elsewhere. A most peculiar and striking aspect is thrown over almost every scene in the upper parts of the Kasia country, by the various remarkable monumental stones, which are scattered on every wayside. These are of several kinds, but almost all of them recall strongly those mysterious solitary or clustered monuments of unknown origin, so long the puzzle and delight of antiquaries, which are seen here and there in all parts of Europe and western and southern Asia. The most common kind in the Kasia country is composed of erect, oblong pillars, sometimes almost quite unhewn; in other instances carefully squared and planted a few feet apart. The number composing one monument is never under three, and runs as high as thirteen, generally it is odd, but not

always so. The highest pillar is in the middle (sometimes crowned with a circular dish) and to right and left they gradually diminish. In front of these is what English antiquaries call a cromlech, a large flat stone resting on short rough pillars. These form the ordinary roadside resting place of the weary traveler. The blocks are sometimes of great size. The tallest of a thick cluster of pillars in the market-place of Murteng in the Jaintia country rising through the branches of a huge old tree, measured 27 feet in height above the ground. A flat table stone or cromlech, near the village of Sailankot, elevated five feet from the earth, measured thirty-two feet by fifteen, and two feet in thickness. In other instances the monument is a square sarcophagus, composed of four large slabs, resting on their edges and well-fitted together, and roofed in by a fifth placed horizontally. In Bell's Circassia, may be seen a drawing of an ancient monument existing in that country, which is an exact representation of a thousand such in the Kasia hills, and nearly as exactly a description of them, though referring to relies on the eastern bank of Jordan, may be read in Irby and Mangles's Syrian Travels. The sarcophagus is often found in the form of a large slab accurately circular, resting on the heads of many little rough pillars close planted together, through whose chinks you may descry certain earthen pots, containing the ashes of the family. Belonging to the village of Ringhot in the valley of Mausmai, deep in the forest is a great collection of such circular cineraries, so close that one may step from slab to slab for many yards. Rarely you may see a simple cairn or a pyramid some twenty feet in height and sometimes one formed in diminishing stories like the common notion of the tower of Babel, or like the pyramid of Saecara in Egypt. But the last is probably rather a burning place than a monument, or at least a combination of the two. The upright pillars are merely cenotaphs, and if the Kasia be asked why their fathers went to such expense in erecting them, the universal answer is, "To preserve their name." Yet to few indeed among the thousands can they attach any name. Many of the villages, however, seem to derive their appellations from such erections as may be seen from the number commencing with man, which signifies a stone; e. g., mausmai, the stone of the oath; mau-lulu, the stone of salt; mau-floug, the grassy stone; maumlu, the upturned stone, and a score more. Mausmai, the oath stone, suggests that these pillars were also erected in memory of notable compacts. On

asking Umauz, a faithful and intelligent servant, the origin of the names, his answer was a striking illustration of many passages in the Old Testament: "There was war," said he, "between Cherra and Mausmai, and when they made peace and swore to it, they erected a stone as a witness," (Sakhi ke waste, was his expression). Genesis, xxxi, 45, "and Jacob took a stone and set it up for a pillar." Genesis, xxxi, 47, "and Laban called it Jegarsahadutha, but Jacob called it Galeed, (both signifying the heap of witness). Genesis, xxxi, 51, "and Laban said to Jacob, behold this heap, and behold this pillar, which I have cast betwixt me and thee. This heap is a witness and this pillar is a witness, that I will not pass over this heap to thee, and that thou shalt not pass over this heap and this pillar to me to do me harm, &c." See also Joshua, xxiv, 26. The name of maumlu, the salt-stone, is probably of kindred meaning, as the act of eating salt from a sword-point is said to be the Kasia form of adjuration. These large stones are also frequently formed into bridges for the passage of brooks, and most picturesque they often are, there is at Nurteng a bridge of this kind, consisting of one stone, thirty feet in length. It is stated by Pemberton, that Kai is the real name of the people, and Kasia the title bestowed on them by the Bengali. But 'Kasi' is the only name which they acknowledge as that of their country and race.—*Latham; Journal of the Indian Archipelago*, Nos. iv and v, April and May 1853, p. 186; *Yule Cathay*, Vol. ii, p. 518; *Journ. of Beng. As. Society*, Vol. xiii, pp. 618-9; *Postan's Personal Observations*, p. 15. See Assam, Kasia, Khasiya, India, Kaker, Mikir.

KASIBEK. The natives in this neighbourhood are of the Ossi tribe; a people of mixed persuasions, christian, mahomedan, and pagan. The village of Kasibek, as well as a few others in its immediate vicinity, is inhabited by christians professing the same faith and observances as the Georgians.—*Porter's Travels*, Vol. i, p. 77.

KASIEL-BLUMEN, DUT. Cassia buds.

KASII, HIND. Hordeum hexastichum.

KASIM-BAZAR, formerly the great silk mart of Bengal, is now three miles from the river, and a wilderness. The Dutch, the French, and the English, all had factories here in the eighteenth century.—*Tr. of Hind.*, Vol. i, p. 69.

KASINA, amongst the buddhists of Ceylon, an ascetic rite, practised to free the mind from all agitation. Kasina mandala is the circle used in the performance of kasina.—*Hurdy's Eastern Monachism*, p 437.

KASR.

KASINDA, TEL. *Cassia occidentalis*, *Linn.*; *W. & A.*

KASIPRASAD GHOSE, see *Indra*.

KASIR of Panjab. *Albizzia stipulata*, *Boiv.*, also *Cornus macrophylla*, *Wall.*

KASI RATNALU, TEL. *Quamoclit phœniceum*, *Ch.*; *Ipomœa phœniceum*, *R.*, *Vol. i.*, p. 502.

KASIS and *Kahi*, are earths containing iron in the form of an anhydrous protosulphate of iron in white satin-like crystals and in the form of a sesquisulphate. They are obtained from bituminous shales, and are found extensively mixed with the alum shales, at Kalabagh and at Pind Dadan Khan; they form a considerable article of internal trade being much used for dyeing purposes, and in medicine as a styptic and astringent. These are almost the only mineral products of the plain districts of the Panjab.—*Powell's Handbook*.

KASI USTE, or *Rameswara uste* and *Rasagadi manu*, TEL. *Solanum pubescens*.

KASJAVA MARAM, TAM. *Memecylon tinctorium*.

KASJI KALANGA, MALEAL. *Dioscorea alata*, *Linn.*

KASKASA, HIND. *Suaeda fruticosa*.

KASKEI, HIND. *Indigofera heterantha*.

KASKUSRI, HIND. *Grewia Rothii*

KASNIR, SYLHET. *Ficus elastica*, *Roxb.*

KASPAT, HIND. *Polygonum fagopyrum*.

Kaspat and *Ugla* are two triangular seeds, evidently of the same kind; seemingly the *Polygonum fagopyrum*, used principally as food in the Himalaya hills.—*Powell's Handbook*, *Vol. i.*, p. 320.

KASPIAN, see *Kasyapa*.

KASR or *Al-Kasr*, ruins in the vicinity of Baghdad. According to *Arrian*, *Mesambria* was the name of a peninsula or Chersonese, forming a district or territory. Within a few leagues of this, he places *Taok* near which was a palace of the Persian kings. (*Hist. Ind.*, c. 39.) This Greek name would well express the Arabic, "tak", which signifies a vault or arch; as that palace of the Persian *Khusru* (*Chosroes*, and his descendants) near Baghdad is still called *Tak-i-Kesra*, the principal chamber, being arched or vaulted. *Ptolemy* however assigns two *Taok* to the province of Persia. The ruin called by the Arabs "*Al-Kasr*" is much smaller than the *Mujallibah*, but is, nearly similar in character. The tower of *Ninrod* is visible from the spot. Here is supposed to have been the site of *Ctesiphon*, and on the opposite shore are similar heaps where *Seleucia* stood. Half a mile from the former is the front of an extensive building, called by the Arabs "*Tak-ul-Kesra*," or the

KASRA-I-SHIRIN.

arch of *Chosroes*; it possesses no remains of extraordinary taste or ornament, but, in the name it bears, speaks of splendour and of power now eclipsed by a simple tomb standing close to it, to which thousands flock in honour of the memory of a barber. *Mr. Jackson* when proceeding up the *Tigris*, in 1797, passed by the ruins of *Ctesiphon* which that river had considerably undermined. "The banks being near ten feet perpendicular, he saw above the surface of the water, the foundations of several ancient buildings, which were chiefly of brick, and so strongly cemented together, as often to overhang the water. There were also visible a great many earthen jars; some half-exposed, others ready to fall into the river; and some of them of singular construction. Captain *Mignon* dug into the sides and bases of many of the mounds at the *Tak-i-Kasra* and found their foundations invariably composed of the fire-burnt brick. The sack of the place, by the *Saracens*, as related by *Gibbon*, took place in A. D. 637. The capital was taken by assault, and the tumultuous resistance of the people gave a keener edge to the sabres of the *mahomedans* who shouted with religious transport, 'This is the white palace of *Chosroes*! this is the promise of the Apostle of God.' The sack of *Ctesiphon* was followed by its desertion and gradual decay. The *Saracens* disliked the air and situation of the place; and *Omar* was advised by his general to remove the seat of government to the western side of the *Euphrates*. A mile to the north of the *Kasr*, or full five miles distant from *Hilla*, and nine hundred and fifty yards from the river bank, is the last ruin of the series, which has been described by *Pietro della Valle*, who determines it to have been the *Tower of Belus*, an opinion adopted by *Rennell*. The natives call it *Mugallibe* or, according to the Arab pronunciation of these parts, *Mujalibe*, meaning overturned.—*Jackson, Journey from India towards England*, &c., p. 86, *London*, 1799; *Geog. Lib.*, vi, c. 4; *Onseley's Travels*, *Vol. i.*, pp. 193, 223; *Skinner's Overland Journey*, *Vol. ii.*, p. 247; *Mignon's Travels*, pp. 74, 77; *Rich's Ruins of Babylon*, p. 28; *Ptolemy, History of India*, c. 39. See *Mujallibah*, *Babylon*.

KASRA-I-SHIRIN, a small village of twenty-eight houses, with a *caravanserai-shahi*, in pretty good condition. It is situated on the side of a mountain, at the foot of which flows the *Dialla*. General *Ferrier* hazards the opinion, that the ruins of *Kasra-i-shirin* might be those of the city of *Oppidam*, which is placed by ancient authors in the *Zagros* mountains, between *Opis* and *Ecbatana*, and was founded by a colony of *Bactrians*, who

KASTURI MANJAL.

followed Xerxes into Persia.—*Ferrier's Caravan Journeys*, pp. 12-13.

KASSA, properly Khassah, PERS., anything reserved or approved; also a fine kind of catechu in cakes, made from the nuts or seeds of the *Areca catechu*.—*Simmond's Diet.*

KASSAN, see Kidder.

KASSAVOO, TEL. *Andropogon muricatum*, Retz.

KASSI, an Affghan tribe affined to the great Saffi clans, resident in Shall and its villages.—*Masson*. See Kelat.

KASSERI KIRE, TAM. *Hibiscus cannabinus*, Linn., Roxb., W. & A.

KASSI, HIND. A small matchlock used in the hills in lieu of the "kahi" of the plains.

KASSIA, a race, and their language in the mountains skirting the valley of the Brahmaputra. The Kassia is distinguished from all the surrounding languages, Indian, Ultra-Indian, or Tibetan. It is a fragment of the Mon Kambojan formation of languages, and is a remnant of an older formation which preceded the Burma-Tibetan in northern Ultra-India. See India, Kasia, Khassya.

KASSIEN RINDE, GER. *Cassia lignea*, Cinnamon.

KASSOW, DUK. *Elæocarpus oblongus*. At Kassowlee and Kanawar, the contractors, for fire-wood, supply principally "chir" (*Pinus longifolia*), which grows wild in the adjoining hill sides, and splits easily. The only forbidden wood is "behul" (*Grewia oppositifolia*), which emits an offensive smell in burning. The villagers use as fuel the withered stems of *Euphorbia pentagona* and thorny bushes.

KASTAMEN, GER. Chestnuts.

KASTERE of Trans-Indus. *Cleome ruta*, Dne.

KASTIN, HIND., of Kanawar *Indigofera arborea*.

KASVINI, the name by which Amir Yahia is known, as he was a native of Kasvin. He wrote *Labbat-ul-tuarih*. Died A. D. 1552.

KASYA, a princely race alluded to in the *Harivansa*.

KASYAPA, in hindoo mythology, was a sage, the son of Marichi, the son of Brahma, and one of the prajapati or progenitors of created things. His share in creation was an unimportant one, as he was the father of the gods and demons, beasts, birds, reptiles, and man. He is supposed by some modern writers to be a personification of the remains of the antediluvian race, who took refuge in the central Asiatic chain, in which traces of his name so plentifully abound, as in the Koh-i-Kas or Caucasus, the Kaspian, and Kashmir. It is asserted that the thirteen gotra or families of brahmins owe their origin to as many divine sages called after their names. Kasyapa is one of the number. The *Aswayana Sutra* of the *Rig Veda* contains the enumeration of the gotra and their sub-divisions, but in a very involved and unintelligible style. The popular enumeration of them, however, is now wholly confined to the south of India, where several of the reputed representatives of these tribes yet exist; especially about Gooty and Condavir. Nandavaram, it is said, was a grant to the thirteen gotra by the sovereign of India, Nanda, in the year of Kali 980; but if there be any foundation for the grant, it is of much more recent date, Nanda having lived in the fourth century before the Christian era. In hindoo mythology, Agni is the son of Kasyapa and Aditi. His consort or sacti is Swaha, a daughter of Kasyapa. Swaha, the sacti of Agni, resembles the younger Vesta, or goddess of fire, of the Romans, who had no images in their temples to represent her. Thus Ovid has said,

"No image Vesta's semblance can express,
Fire is too subtle to admit of dress."

Neither do we meet with an image of Swaha. Those of Agni are usually seen in pictures. Some legends make Garuda the offspring of Kasyapa and Diti. This all-prolific dame laid an egg, which it was predicted would produce her a deliverer from some great affliction: after a lapse of five hundred years, Garuda sprung from the egg, flew to the abode of Indra, extinguished the fire that surrounded it, conquered its guards, the devata, and bore off the amrita (ambrosia), which enabled him to liberate his captive

KASYAPA.

mother. A few drops of this immortal beverage falling on the species of grass called *Kusa* (the *Poa cynosuroides*), it became eternally consecrated; and the serpents, greedily licking it up, so lacerated their tongues with the sharp grass, that they have ever since remained forked; but the boon of eternity was ensured to them by their thus partaking of the immortal fluid. This cause of snakes having forked tongues is still popularly, in the tales of India, attributed to the above greediness; and their supposed immortality may have originated in some such stories as this; a small portion of amrita as in the case of Rahu, would ensure them this boon. *Kasyapah*, is supposed to be the same as *Lamech* of the race of Cain. He married two wives, *Diti* and *Aditi*; from the former the *Danava* or *Daitya* proceeded, and from the latter, the *Deva*, two races, oftener at war than at peace. The *Daitya* all perished in the flood. The *Daitya* seem to be the Titans of Greek mythology, who fought with the gods. The Hebrew sons of god and daughters of men seem to be the men of the *Deva* and the women of the *Daitya*. According to Bryant, the Greeks, known in later days as *Danaoi* (*Danava*) termed themselves the sons of men. — *Hind. Theat.*, Vol. ii, p. 11; *Cole's Myth. Hind.*, pp. 115, 117; *Taylor*. See *Aditi*, *Agni*, *Arians*, *Brahmadicas*, *Buddha*, *Guruda* or *Guruda*, *Raja*, *Taringini*, *Kasyapa*, *Sakya muni*, *Serpent*, *Surya*, *Topes*, *Vedas*.

KASYAPA, the successor of *Gotama Budha* as ruler of the buddhist priesthood. As the champion of religious liberty and social equality, *Sakya Muni* attacked the brahmins in their weakest and most vulnerable points; in their impious assumption of all mediation between man and his Maker, and in their arrogant claims to hereditary priesthood. But his boldness was successful, and before the end of his long career he had seen his principles zealously and successfully promulgated by his brahman disciples *Sariputra*, *Mangalyana*, *Ananda*, and *Kasyapa*, as well as by the *vaisya* *Katyayana* and the *sudra* *Upali*. At his death in B. C., 543, his doctrines had been firmly established, and the divinity of his mission was fully recognized by the eager claims preferred by kings and rulers for relics of their divine teacher. His ashes were distributed amongst eight cities, and the charcoal from the funeral pile was given to a ninth, but the spread of his influence is more clearly shown by the mention of the numerous cities where he lived and preached. Amongst these are *Champa* and *Bajagriha* on the east, *Sravasti* and *Kausambi* on the west. In the short space of forty-five years, this wonderful man succeeded in establishing his own peculiar

KATAUR.

doctrines over the fairest districts of the Ganges, from the Delta to the neighbourhood of *Agra* and *Cawnpore*. This success was perhaps as much due to the early corrupt state of brahmanism, as to the greater purity and more practical wisdom of his own system. — *Hardy's Eastern Monachism*, p. 437; *Taylor*.

KAT, HIND., PANJ. A bedstead, a cot.

KATA, HIND. of Panjab, a variety of sugar-cane.

KATADI, or *Katkar*, see *India*.

KATAF, ARAB. The specific name of a species of *Balsamodendron* of Arabia, yielding a myrrh.

KATAI, MAHR. A caste or individual of it, workers in leather.

KATAJ, HIND. The leaves of *Celastrus paniculata*, *Willde*.

KATAK, see *India*.

KATAKA, also *Katake*, SANS. *Katakámu*, or *Chilla chettu*, TEL. *Strychnos potatorum*, *Linn*.

KATH.

KAT-BAWA-SAHIB, the name of a saint.
KAT BEL, BENG. *Ferouia elephantum*,
Corr.

KATCHAEE, see Nicobar Islands.

KAT CHANDAN, HIND. *Santalum album*, *Linn.*

KATCHANG BOTOR, MALAY. The flour used in making cakes.

KATCHANG EJOU, MALAY. Green pea.

KATCHANG MERAH, JAVA., MALAY. Red pea.

KATCHANG TANAH, MALAY. Groundnut. Much cultivated in the neighbourhood of the sugar plantations where the refuse, after the oil has been extracted, is used as a manure. The oil is in general use for burning and, among the poorer natives for frying food.

KATCHANG TUNGAH, MALAY. Used as a vegetable.

KATCHERA, in Bombay, a root sold, as an article of food.

KATCHI KATTI MARAM, TAM. ? *Lagerstræmia microcarpa*.

KATCH-KULA, B. and A. *Musa paradisiaca*.

KATCHU, GER. Catechu.

KATEEMOOL, HIND. ? A yellowish-coloured wood, heavy, but not strong, found for about forty miles, in the Santhal jungles from Rancebahal to Hasdiha, but not very plentiful. It is used by the natives for building purposes.—*Cal. Engineer's Journal*, July 1860.

KATELA, HIND. *Solanum xanthocarpum*.

KATELA ? also Kastila, MALAY. *Batatas edulis*, *Choisy*.

KUT-EL-AMARAH, see Chaldea, Tigris.

KATELI, also Blat kateya, HIND. Argemone mexicana, also *Solanum xanthocarpum*.

KATELLA, MALAY. A vegetable in use at Bawcan.

KAT-ELLE-MICHA MARAM, TAM. *Atalantia monophylla*, *DC.*

KATERH, the ancient Rajput name of Rohileund, given as a jaghir to Rohillas. —*Campbell*, 88.

KATERIA KULI, also Kur Kutila, HIND. *Sterculia mrens*.

KATH, also Ka'tha, CAN., GUZ., HIND. Catechu, extract of the *Acacia catechu*. It is manufactured in Burmah, Canara, Behar, in the Dekhan, and in Northern India, where the manufacturers move to different parts of the country in different seasons, erect temporary huts in the jungles, and selecting trees fit for their purpose, cut the inner wood into small chips. These they put into small earthen pots, which are arrayed in a double row along a fire-place built of mud ; water is then poured in until the whole are covered ; after a considerable portion has

KATHALAY.

evaporated, the clear liquor is strained into one of the neighbouring pots, and a fresh supply of material is put into the first, and the operation repeated until the extract in the general receiver is of sufficient consistence to be poured into clay moulds, which in the Kheru Pass and Doer, are generally of a quadrangular form. This catechu is usually of a blood-red colour, and is considered there to be of the best quality. It is conveyed to Saharunpore and Moradabad, whence it follows the course of commerce down the Ganges, and meets that from Nepal, so that both may be exported from Calcutta. There are many varieties of catechu in the markets, the *Acacia* catechu and the *Gambir* catechu being the best. Catechu has long been employed in India for tanning skins ; its tanning properties are stated to be so great that skins are tanned by it in five days. It has also been used in India to give a brown dye to cotton ; and catechu has lately been very extensively employed in the calico-printing works of England. The salts of copper with sal-ammoniac, cause catechu to yield a bronze colour, which is very permanent. The proto-muriate of tin produces with it a yellowish brown. A fine deep bronze hue is also produced from catechu by the perchloride of tin, with an addition of nitrate of copper. Acetate of alumina gives a brown ; and nitrate of iron a dark-brown gray. For dyeing a golden coffee-brown, catechu has entirely superseded madder, one pound of it being equivalent to six pounds of that root. But under the name of catechu, *Katha* and *Kueh'h* or *Cueh'h*, various extracts from the wood, bark, leaves and fruit of plants are known in commerce, viz., from the wood of the *Acacia* catechu, the betel nut or seed of the *Areca* catechu and the *Uncaria gambir*, the latter being known as *Gambir*.

KATHA, HIND. A story, a fable ; a public recitation about the gods.—*Wilson*.

KA-THIA, BURM. *Syndesmis tavoyana*, *Wallich*.

KATHAGIJI, HIND. *Adelia serrata*.

KATHA-KAMBU, TAM. A kind of catechu obtained from the betel nut.

KATHALAY is the Tamil term applied to the *Agave vivipera*, the manufacture of fibres from which has been successfully accomplished. The name of "silk grass," also, is applied to these fibres as well as to those of the *A. yuccæfolia*. The fibres of the *A. vivipera* are said to equal in strength the best hemp. The *A. cantala* of Roxburgh is supposed to differ little from the *A. Americana*, and its fibres could be equally turned to use : it is called *Pita*, also *Pita Kalabuntha*, and *Cantala*. The *Fourcroya gigantea Ventenat*,

KATHAY.

known as the Sheemay Kathalay, is not an aloe, although its fibre is usually so denominated. These are not natives of India, but have mostly been introduced from America. They are capable of enduring a great variety of climates, and are all rapidly extending over India, but they are not yet sufficiently abundant, the *Foucrera gigantea*, especially, to yield the fibre in large quantities. *F. gigantea* produces a fibre five or six feet long, somewhat finer than that of the Agave fibres, but possessing similar properties. The *F. gigantea* is less abundant than the Agave, but is as easily propagated, and its leaves attain a length of ten feet.

KATHIAMMAN, a smaller species of the "jaman," from which it differs in the size and shape of its leaves and fruit. A decoction of the bark is used as a gargle for sore mouths.—*Powell's Hand-book*, Vol. i, p. 541.

KATHA-PATHARIA, HIND. *Hippocratea arborea*.

KATHAR, a clan of Thugs.

KATHAVEN NAR, MALEAL. Fibre of *Styrchnos potatorum*.

KATHAY. The empire in the extreme east of Asia, known to Europe by the name of China, is called by the western Mongol, Kathay; by the Mantchu Tartar, it is called Nikan Korum, and by the Chinese, Tehoung-koué; the last name meaning the Central Kingdom. According to M. Hue, the Chinese also give to their country the names of Tehoung-hoa, or, flower of the centre; of Tien-chao, the celestial empire, or heaven's empire; and of Tien-hia, the "Beneath Heaven," or the world, as the Romans called their dominions Orbis. The most ancient name given to their country by the Chinese, and that most in use is Tehoung-koué, that is to say, the Empire of the Centre. It is also, however, called by the natives Tang-shau, the hills of Tang (the name of one of the most celebrated dynasties); the present reigning family has given it the name of Ta-tsing-kwo, the empire of great purity. In government proclamations, especially in those addressed to other nations, and who all are styled Barbarians, it is often called T'ien-chaou, the "Celestial Empire." The natives call themselves Chung-kwo-teih-jin, men of the middle kingdom, or Han-jin. The Portuguese first visited a part of China in 1514, and the adventurers on this occasion sold their goods to great profit, though they were not allowed to land. In 1517 took place the trading expedition to Canton under Andrada, carrying the unfortunate ambassador Perez, who died in fetters in China. Cathay had been the aim of the first voyage of the Cabots to the north-west in 1496, and it

KATH-GULAB.

continued to be the object of many adventurous English voyages to the north-west and north-east till far on in the succeeding century, though in the later of these expeditions China no doubt had assumed its place. At least one memorable land journey, too, was made by Englishmen, of which the investigation of the trade with Cathay was a chief object, viz., that in which Anthony Jenkinson and the two Johnsons reached Bokhara from Russia in 1558-9. The country regarding which they gathered information at that city is still known in Central Asia only as Cathay, and its great capital is still, as in the days of Polo, called Cambalu and not Peking.—*Duhalde, Hist. of China*, p. 1; *Huc, Chinese Empire*, Vol. i, pp. 349-350; *Pule Cathay*, I, pp. cxli, cxlii.

KATHI BADAM, BENG., fruit of *Terminalia catappa*.

KATHI CARAHI, HIND. A kind of sugar-cane.

KATHI-BEL, also Kath bel ka gond, HIND. Leaves and fruit and gum of the *Feronia elephantum* or Wood-apple tree.

KATHIBEL, BENG. *Jasminum hirsutum*.

KA-THEE, the Burmese name for the state and people of Munnipoor called by themselves Moite.

KA-THEET-NEE, BURM. In Amherst, a timber employed for house posts, boats and carts. It is a heavy, hard, grey wood, rather liable to injury from insects.—*Capt. Dance*.

KA-THEE-THA, BURM. This tree is found in abundance all over the provinces of Amherst, Tavoy and Mergui. Its bark is used by the Karens in lieu of betel, and could probably be put to use in turnery.

KA-THEET-THA, BURM. A timber tree in Amherst, Tavoy and Mergui, of maximum girth 4 cubits, maximum length 22 feet; not very abundant.—*Capt. Dance*.

KATHEI, the Katheri of Diodorus Siculus, the present Khetri tribe. See Affghan, Kabul, Khetri.

KATHEI, HIND. Tin.

KATHERI of Diodorus siculus, see Kabul, Katheri.

KATESWARI, the local tutelary deities of the non-Aryan races, in the peninsula of India, are the Ai of the Mahrattas, the Amman of the Tamil races, and Amma-varu of Tilingana. The tutelary deity of a village, the Gramma Deva is in many places a shapeless stone, in northern India called Kateswari, Hanwat, Bhum Sen, Hari-Ram.—*Wils.*

KATHEWAT, HIND. *Indigofera heterantha*.

KA-THE-YU-WA, see Ruby mines.

KATH-GULAB, BENG. *Rosa indica*.

KATH-GULAR, HIND. *Ficus cunia*.

KATHI.

KATHI or **Katti**. Several peoples, or branches of the same? people, are known by this name. At present, the peninsula of Guzerat is divided into numerous chieftainships, and although the Kathi hold but a small portion, yet, this Indo-Getic tribe has given its name to the entire peninsula, and the modern name of Kattyawar has completely superseded the ancient title of Saurashtra. There was, however, an intermediate term used to designate it before the irruption of the Kathi, a term familiar to the author of *Almagestum*, as well as to the hindoo geographers, and this was *Lar-des*, from the tribe of *Lar*, whence the *Larica* or *Larice* of the Greeks. Col. Tod tells us that the Kathi, the ancient foe of Alexander, are a tall robust race, not only fairer than those around them, but blue eyes are met with amongst them, indicative of their northern origin. Another writer tells us that the Jun and Kathi, are tall, comely and long-haired races, who have vast herds of camels and black cattle, from which the towns are furnished with ghee or clarified butter, and the people themselves provided with libations of milk. Amongst the various branches of this nomadic race, the most celebrated is the *Koman-kathi*. *Abulgazi* describes a famous tribe in *Kharezm*, the ancient *Choras-mia*, called *Comani*, the remains of which were expelled by *Chengis Khan*: and the royal author adds, "Urgens was not always the capital: and *Abulfeda* tells us *Cath*, also spelt *Kath*, in 41° 45' N. lat., was formerly the metropolis." What affinity there was between these, the people of *Cathay*, and Alexander's *Cathi*, it were now vain to ask: it is sufficient for our purpose to trace the Kathi from the *Five Rivers*, and to observe that the name of their first settlement in Kattywar, was *Cath-kote*, from which, as stated, they were dislodged by the first *Jhareja* colony from *Sind*. It is said of them, that they repeat couplets describing their migration from *Mooltan*, and temporary settlement in the tracts called *Pawin*, north of the *Run* and of *Megum Roa*, their leader, conducting the first Kathi colony across the gulf into *Saurashtra* eight hundred years ago; and so predominant was their power that it changed the ancient name of the peninsula to *Kathi-war*. At an interval of 1,300 years, two conquerors, *Alexander* and *Mahmud*, were opposed by a race of this name. In A. D. 1000, *Mahmud* entered *Hindustan*, but in the course of eight years, he made no further progress than *Mooltan*. The people of *Mooltan*, who were the *Malli* and *Catheri* (that is the *Khetry* or *Rajpoot* tribe) of *Alexander*, must have preserved their ancient spirit, to be able to

KATH-KOTE.

oppose, for so long a time, such formidable armies headed by so furious an enthusiast. In 1008, we find the confederate hindooos defeated: and *Mahmud's* first essay towards effecting the downfall of their religion, was the destruction of the famous temple of *Nagarkote*, in the mountains bordering on the *Panjab* country. His next expedition, being the sixth, was in 1009; when *Tanwasar*, a more celebrated place of hindoo worship, on the west of *Delhi*, experienced a like fate with *Nagarkoto*; and the city of *Delhi* itself, was taken at the same time. In 1018, he took *Kanoge*, and also destroyed the temples of *Matra*, or *Matura* (the *Methora* of *Pliny*). His twelfth expedition, in 1024, was fatal to the celebrated temple of *Somnat*, in the peninsula of *Guzerat* adjoining to the town of *Puttan*, on the sea coast; and not far from the island of *Diu*, now in the hands of the *Portuguese*. The Kathi, or Katti tribe, supposed to be the nation which so manfully opposed *Alexander*, was then located about *Mooltan*, at this period occupied by the *Lunga* race. The *Charan* race, in western and Central India, are the bards, heralds and genealogists of the Kathi race. The *Kachili Charan* are carriers of grain, salt and groceries. The *Maru* or desert *Charan* do not engage in trade; their becoming personal security for an agreement is sufficient. They are analogous to the bard of *Europe*. The Katti claim descent from the *Balla*, an additional proof of northern origin, and strengthening their right to the epithet of the bards, "*Lords of Mooltan and Tatta*." They are the ruling tribe in *Kattiwar*, into which according to these traditions, they immigrated from the banks of the *Indus*, in the eighth century. They are divided into three principal families, the *Wala* or *Wara*, the *Khachar* and the *Khuman*. They continued till the early part of the 19th century to be turbulent.—*Tod's Travels*, pp. 205, 455-7; *Rennell's Memoir*, Vol. xiv, p. 46; *Tod's Rajasthan*, Vol. ii, p. 246; *Wilson's Gloss.* See *Kathi*, *Kattyawar*, *Jun*.

KATINGE RUMI, ARAB. ? *Pistacia terebinthus*.

KATIOR-POT—? *Hodgsonia heteroclitia*.

KATIOW, an oil is expressed from the seed of this Borneo tree which is much valued for cooking, but is yet unknown to Europe. The tree is not found in Sarawak. The seeds are oblong, pointed, and of a shining rich brown colour; the oil which they produce, on compression, is of a yellow colour, with a perfume precisely resembling that of almond oil; and, as it is very cheap and abundant in the places where it grows, it would perhaps be serviceable to soap-makers and perfumers. It is a very fine oil for lamps, burning with a bright and clear flame, at the same time emitting an agreeable odour; it is produced chiefly on the Sadong Lingah, and Kullekka rivers, and exported to Sarawak and other places under the name of Miniak Katiow.—*Low's Sarawak*, p. 47.

KATIRA, PANJ. *Salix babylonien*, *Linn.*

KATIRA, HIND. A kind of wheat.

KATIRA, HIND. Gum of several plants, viz., of *Cochlospermum gossypium*; *Eriodendron anfractuosum* and *Stereulia urens*. It is often substituted for tragacanth. The gum of *Cochlospermum gossypium* is semi-transparent, white, in striated pieces, very much twisted and contorted and is known as false tragacanth. It is much used as a demulcent in Upper India.—*Birdie; Powell's Handbook*, Vol. i, p. 397.

KATISHI, PANJ. *Cornus macrophylla*, *Wal.*

KATIWAR, Saurashtra or Soreth, the good land, is the peninsula of Guzerat, which is almost cut off from the main-land by the two Rann. It is about 150 miles long and the same in breadth, and contains an area of 22,000 square miles. Its mountain features are the Barda Hills which end in the south in the Alich range and the Oshum. The lofty and holy mount of Girnar overlooks the ancient fortress of Junagarh (old fort) and a tract in the south, called the Geer, stretching 50 miles east and west and 30 miles north and south, consists of ridges and hills covered with dense forest trees and jungles and full of almost inaccessible fastnesses which for ages have given shelter to robbers, outlaws and the aghori, a sect of wild fanatics reputed to be cannibals. The name is also written Kat'hiwar or Katiywar it may be arranged into five northern districts, viz. Jhalawar, Machu-Kanta, Hallar, Burda and Okhamundil; and five southern, viz., Soreth, Babriawar, Und Sarwaya, Go-

KATJANG TANAH.

helwar, and Kattiawar proper. It abounds in jungle fastnesses, its population is habitually armed to the teeth and largely intermixed with mercenaries from Mekran, Arabia, Sind and Beluchistan. The climate is equable and temperate, and the coast is balmy with the soft breath of ocean breezes blowing fresh from the south pole. During the seventh century, in A. D. 770, Wallebhipur, the present Wallah, which had the most brilliant court in India, fell before an eruption from the north, supposed by Mountstuart Elphinstone to be Persians under Noshirwan the great, by Colonel Tod to be Scythians, and by another authority to be Indo-Bactrians, and the inhabitants fled and founded new cities in Malwah. The old temple of Somnath is in the city of Deo-Pattan. In 1808, Colonel Alexander Walker, then Resident at the Gaikwar's court, was able to arrange for payment to the Gaikwar, from the Rajput chiefs, of a certain fixed sum as suzerainty. When the Peshwa was overthrown in 1817, the British succeeded that power in the chief control of Guzerat. The gross revenues are estimated at a million sterling; out of that, £100,000 is paid as annual tribute in the proportion of $\frac{1}{3}$ to the British government and $\frac{2}{3}$ to the Gaikwar. The population is $1\frac{1}{2}$ millions. The tributaries are called talukdars, of whom there are 224, each of whom possesses exclusive jurisdiction in his own district, and only the Grassia and Mul Grassia are allowed to litigate with their ruling chiefs. These are sprung either from cadets of the ruling tribe or from proprietors of lands which they have originally seized, and now defend with all the proverbial tenacity of the Rajput, who freely gives and takes life for acres. The principal talukdars are their Highness the nawab of Junagurh, — the jam of Navanaggar, and the rawal of Bhownaggar: also the rana of Porebandar, the raj of Drangdra and the thakur of Murvi. Junagurh, the most important, is held by a descendant of Sher Khan Babi, a soldier of fortune who seized it in the general anarchy which preceded the subversion of the Mogul. The term Bah'rwatiah (bah'r, out and wat a road) is applied to Kattyawar Rajpoots, who on some dispute with their landlord, quit their villages, which thus lie waste, and occupy the neighbouring fastnesses from whence they make inroads until hunted down, or a compromise or settlement occur. In the Jhalawar district, property stolen, or the thief must be produced, and the Paggi who trace the Pag or foot-prints, are there the most famous. See Kattywar.

KATMANDU. This town, the capital of Nepal, is situated at the junction of the Bhagmutty and Bishmutty, and contains a population of 50,000 inhabitants. A tradition is current in Nepal that the valley of Katmandu was at some former period a lake, and it is difficult to say in which character it would have appeared the most beautiful. The valley of Nepal is almost unrivalled in its fertility, supporting in comfort and plenty a population of 400,000 inhabitants, being 300 persons to the square mile. Throughout its whole length and breadth not a stone is to be found: it is well-watered; its temperature is delightful, the thermometer in the hottest month seldom reaches 75°, in the coldest never falls below 30°. — *Oliphant's Journey*, pp. 85—87.

KATTADIA, the devil-priest of Ceylon. There is a class of demi-gods, who are supposed to inhabit the waters, and dwell on the sides of Mount Meru, and who are distinguished not only for gentleness and benevolence, but even by a veneration for Buddha, who, in one of his earlier transmigrations, was himself born under the form of a Yakshyo. The malignant spirits of Ceylon are Yakka, who are the authors of indefinite evil, and the Singhalese have a demon or Samne for each form of disease, who is supposed to be its direct agent and inflicter, and who is accordingly invoked for its removal; and others, who delight in the miseries of mankind, are to be propitiated before the arrival of any event over which their pernicious influence might otherwise prevail. Hence, on every domestic occurrence, as well as in every domestic calamity, the services of the Kattadia or devil-priest are to be sought, and their ceremonies performed, generally with observances so barbarous as to be the most revolting evidence still extant of the uncivilized habits of the Singhalese. Especially in cases of sickness and danger, the assistance of the devil-dancer is implicitly relied on: an altar, decorated with garlands, is erected within sight of the patient, and on this an animal, frequently a cock, is to be sacrificed for his recovery. Another kind of demon-worship in Ceylon is a debased form of hindooism, where the priest or kapua is the performer.—*Tennant's Christianity in Ceylon, p. 232.*

and worshipped.**

KATTHA, HIND. *Acacia catechu.*

KATTHI, or Katti, of Kattyawar proper,
immigrated into their present site in the
eighth century from the banks of the Indus,
and are supposed to be of Scythian origin.
Their religion is hindooism, mixed with a
sun-worship. While the Rajpoots have a
modified primogeniture, the Katti inherits by
equal divisions. They are innately turbulent,
and of all the tribes have ever given great
trouble. The Komani, are a branch of the
Katti tribe of Saurashtra, whose pallia, or
funeral monumental pillars, are seen in
groups at every town and village. The
Katti were one of the early German tribes.
The Katti, claim descent from the Balla.
This tribe or race has given its name to the
province of Kattiwar; according to another
tradition, they came originally from the
Jamuna, and did not reach their present site
till the fourteenth century. They are divided
into three principal families, named Wala or
Wara, Khachar and Khunan, of each of which
there are other sub-divisions. They are a
tall, robust race, sometimes having light hair
and blue eyes, and until of late years, were
distinguished for their turbulence and fierce-
ness, and aversion to the pursuits of a peace-
able life; latterly they have subsided into more
orderly habits and follow agriculture. All
the genealogists of Rajasthan and Saurashtra,
concur in assigning this people a place amongst
the thirty-six royal races of India. It is one
of the most important tribes of the western
peninsula, and which has effected the change
of the name from Saurashtra to Kattiwar.
Of all its inhabitants, the Katti retains most
originality: his religion, his manners, and his
looks, are all decidedly Scythic. He occupied,
in the time of Alexander, that nook of the
Punjab, near the confluent five streams. It was
against these, Alexander marched in person,
when he nearly lost his life, and where he
left such a signal memorial of his vengeance.
The Katti can be traced from these scenes to
his present haunts. In the earlier portion of
the annals of Jessulmer, mention is made of
their conflicts with the Katti; and their own
traditions fix their settlement in the Peninsula
from the south-eastern part of the valley

KATTU. ATTI.

of the Indus, about the eighth century.
In the twelfth century, the Katti were
conspicuous in the wars with Prithivi raja,
there being several leaders of the tribe attach-
ed to his army, as well as to that of his rival,
the monarch of Kanouj. Though, on this
occasion, they acted in some degree of subser-
vience to the monarch of Anhulwara, it would
seem that this was more voluntary than forced.
The Katti, up to the middle of the 19th
century, continued to adore the sun, scorn-
ed the peaceful arts, and was much less con-
tented with the tranquil subsistence of in-
dustry than the precarious earnings of his
former predatory pursuits, when the Katti was
never happy but on horseback, collecting his
black mail, lance in hand, from friend and foe.
Captain Macmurdo says the Katti differs
in some respects from the Rajpoot. He is
more cruel in his disposition, but far exceeds
him in the virtue of bravery; and a character
possessed of more energy than a Katti does
not exist. His size is considerably larger
than common, often exceeding six feet. He
is sometimes seen with light hair and blue-
coloured eyes. His frame is athletic and bouy,
and particularly well-adapted to his mode of
life. His countenance is expressive, but of
the worst kind, being harsh, and often desti-
tute of a single mild feature. The Katti, are
herdsmen in the districts of Pawur, Puchur
and Parkur.—*Tod's Rajasthan, Vol. i, pp.*

 KATTYAWAR, the ancient Saurashtra or Soreth, the good land, is the peninsula of Guzerat, which is almost cut off from the mainland by the two Runns. The Kattywar peninsula lies between 20° 42', 23° 10', L. N., and L. 69° 5', 72° 14' E., area, 19,850 square miles. Kattywar peninsula is generally undulating, with low ridges of hills, running in irregular directions. The land in the middlemost part is the highest, and here all the rivers take their rise, disemboguing themselves respectively into the Runn, the gulf of Catch, and the gulf of Cambay. The Gir, as a succession of ridges and hills, of some 1,000 feet of elevation diminishing towards the north. Girnar, is a granitic peak, 3,500 feet. Palithana mountain is 1,500 feet. A group near Poorbunder, 2,000 feet. A low ridge running from Choteyla to Gir, 400 feet. The centre of the peninsula is the highest, and here all the rivers take their rise. Caverns, deep ravines, and other fastnesses, are very numerous in the Gir. The base of Girnar mountain is clothed with jungle, diversified with black rocks, which appear through vegetation. After this, the mount rises, an immense bare and isolated granite rock, the face being quite black, with white streaks; and the north and south sides nearly perpendicular scarps. The peninsula is about 150 miles long, and the same in breadth. Its mountain features are the Burda Hills which end in the south in the Alich range, and the Oshum. The lofty and holy mount of Girnar overlooks the ancient fortress of Junagarh (old fort) and a tract in the south, called the Goer, stretching 50 miles east and west, and 30 miles north and south, consists of ridges and hills covered with dense forest trees and jungles, and full of almost inaccessible fastnesses which for ages have given shelter to robbers, outlaws and the aghori, a sect of wild fanatics reputed to be cannibals. Kattywar may be arranged into five northern districts, viz., Jhalawar, Machu-Kanta, Hal-lar, Burda and Okhamundil; and five southern, viz., Soreth, Babriawar, Und Sarwaya, Go-

helwar, and Kattyawar proper. It abounds in jungle fastnesses, its population is habitually armed to the teeth and largely intermixed with mercenaries from Mekran, Arabia, Sind and Beluchistan. The climate is equable and temperate and the coast is balmy with the wet breath of ocean breezes blowing fresh from the south pole. Kattyawar has an interesting history. During the seventh century, in A. D. 770, Wallebhipur, the present Walleh, which had the most brilliant court in India, fell before an irruption from the north, supposed by Mountstuart Elphinstone to be Persians under Nosliurwan the great; by Colonel Tod to be Scythians, and by another authority to be Indo-Bactrians, and the inhabitants fled and founded new cities in Malwah. The old temple of Somnath is in the city of Deo-Pattan. Another conqueror, Mahmud, left Ghazni, on his expedition against it, in September A. D. 1024; his numerous army was accompanied by crowds of volunteers, the flower of the south of Turkestan. Ajmir and Anhilwara fell before him. Advancing against Somnath, for two days, his most devoted followers were beaten headlong back by the valour of the Rajpoots, fighting for hearth and altar. On the third day, Mahmud led a furious charge in person, five thousand hindoos lay dead and the day was won. When he entered the shrine of Som-Iswara, he beheld a superb edifice of hewn stone, its lofty roof supported by pillars curiously carved and set with precious stones. In the adytum, to which no external light penetrated and which was illuminated only by a lamp suspended from the centre by a golden chain, appeared the symbol of Som-Iswara, a stoue cylinder which rose nine feet in height above the floor of the temple and penetrated six feet below it. Two fragments of this object of idolatrous worship were, at the king's order, taken off, that one might be thrown at the threshold of the public mosque and the other at the court gate of his own palace of Ghazni. Other fragments were reserved to grace the holy cities of Mecca and Medina. It is related that, while Mahmud was thus employed a crowd of brahmans offered an enormous ransom if the king would desist from further mutilation:—Mahmud hesitated: but after a moment's pause, he exclaimed that he would be known by posterity not as the idol-seller but as the destroyer. The work of destruction then continued and was rewarded by the discovery in the vaults below the adytum of untold treasures. Thus fell Somnath. Its gates were taken to the mosque of Ghazni from which they were removed when the British troops returned from the re-occupation of the

country in 1842. On this occasion, the Governor-General, Lord Ellenborough, issued a proclamation to all the princes and chiefs, and people of India, whom he addressed as "My brothers and my friends." His intention was to restore Somnath to them. But the gates never reached their destination. Public opinion stopped them en-route. An interesting account of the position and history of the temple of Somnath is given in a note to *Malcolm's History of Persia*, Vol. i, ch. ix. The author says: the temple stood in the country of Soreth; a province of the peninsula of Guzerat, which is now more generally known under the name of Kattyawar; and which is celebrated in the Puranas for containing five inestimable blessings. First, the river Goomptee; second, beautiful women; third, good horses; fourth, Somnath; and fifth, Dwarka. Among the many places in Soreth that are held sacred by the hindoos, Somnath or Somnath Pattan, as it is more generally termed, has always been one of the most remarkable. It stands one or two miles from the sea, at the junction of three rivers, the Hurra, Kupula, and Sersutty, at a distance of three miles to the east of the port of Belawul. The idol itself "Somnath, is one of the twelve symbols of Mahadeo, which are said to have descended from heaven to the earth. The holy image was, according to mahomedan authors, destroyed by Mahmud, and in late years Ahela Bhaee, the widow of a prince of the Mahratta family of Holkar, erected a new temple on the exact site of that which was demolished. A symbol of Mahadeo has been placed in this temple, which is deemed peculiarly propitious to those who desire offspring. Not far from this, the hindoo pilgrim is shown a solitary peepul-tree, on the bank of the Sersutty river, which he is assured stands on the exact spot where Krishna, or the Shree Krishen received the mortal wound from an arrow that terminated his incarnation.

Amongst the tribes of Kattyawar are the Miana of Mallia in Muchakanta on the banks of the Muchu river, the real masters of Mallia. They have a thakur but own allegiance only to their own Chawhattia or heads of tribes. They are turbulent, take service as soldiers in the neighbourhood and in every boundary fight, a Miana or two is killed.

Okhamandal a sterile jungly tract in the extreme west of the peninsula, contains about 13,000 inhabitants. These are the Wagher. Their only important places are the holy hindoo site of Dwarka on the west coast and Beyt a small island a few miles to the north with shrines boasting of scarcely inferior holiness. Okhamandel, as also Umreyli in

Kattyawar proper, and Korinar in south Kattyawar, are under the direct rule of the Gackwar, and are the Alsatia of Kattyawar. Thrice, viz: in 1803, 1858, and October 1859, they repulsed British troops, and at length in 1860, were seemingly dispersed or surrendered. On a former occasion, the rapidity and severity of the vengeance, in the escalade of the strong-hold of the Wagher pirates of Dwarka by the British force under the Hon. Colonel Lincoln Stanhope induced Singram the chief of the Badhail of Beyt to sue for terms, and he agreed to surrender Beyt, and to live at Arunra on a stipend furnished by his suzerain, the Gackwar. These Wagher of Dwarka, who with the Badhail of Arunra, were so long the terror of these seas, are a spurious branch of the Jhareja family of Bhooj, one of whom, called Abra, with the cognomen of Moolchwal or the whiskered, from a tremendous pair of these adjuncts to the face, came from Cutch in the time of Kinna Sowah, in whose family he intermarried, and from whom he held in charge the tha'na, or garrison of the castle of Goomtee, or Dwarka. His son had offspring by a woman of impure caste, and they assumed the name of Wag'her, with the distinctive office of Manik, or gem. The last four chieftains of this race were Mahap-Manik, Sadool Manik, Sameah-Manik, and Muloo-Manik, who with all his kin and motley company of Wag'her, Badhail, Arabs, &c., after a desperate defence, was slain in the storm, or attempted retreat. Throughout the sea-coast of Saurashtra, at Gogo, and Mandavie, are seamen who call themselves hindooes, but who keep entirely distinct from all other classes. Some of them claim a descent from the mariners of the Arabian shores, but still as hindooes.

The district of Din is Portuguese. The town has been repeatedly besieged by rulers of Guzerat and the Dekhan, but it has continued in the power of the Portuguese.

The fortified port of Jafferabad or Muzufferabad is held by the Siddi of Zanjira.

The rana of Porabunder, styled Pancheria, represents the Jetwa, one of the four ancient races still extant in the peninsula. In the days of Mahmud, all the west and north of Kattyawar belonged to the Jetwa Rajputs but the foreys of the Jhala and Jhareja have confined them to their present district, the shaggy range of hills called Burda.

The Jhala, who own the raj of Hulwud Drangdra as their chief, are supposed to have sprung from an offshoot of Anhilwarra, on the extinction of which dynasties they obtained large territorial aggrandisement.

The Thakur of Murvi is a Jhareja and was the first in Colonel Walker's time to abandon

infanticide. He has possessions in Cutch. The Jhareja are a Rajput race in Guzerat, and Cutch with a branch in Kattyawar. The tribes of Rajputana have a political system similar to the feudal practice of Europe. On the demise of a chief, the members of his family would be entitled to a certain appanage of his demesnes, and every district so acquired would constitute a distinct principality subject to a similar subdivision at the decease of each subsequent holder. Each minor tributary thus possesses a body of kinsmen who are collectively termed the Bhaia or brotherhood. The Jharejah of Guzerat, were, till lately, addicted to female infanticide. In 1818, Captain McMurdo estimated the members of Jarejahs in Cutch at about 12,000 persons, of whom only about 30 were women. The Jharejah killed their daughters to avoid paying for them heavy marriage portions. The Jharejah of Cutch are stated by Mrs. Elwood to be a branch of the Sindh Summa stock, of Arabian extraction, descended from a child of a mahomedan zamindar by a daughter of a petty chief in Cutch, whose descendants settled in Powar and Patcham. They marry daughters of the Jhalla, Wagel, Sodha and Gohil Rajputs.

The Kat'hi, of Kattyawar proper, immigrated into their present site in the eighth century and are supposed to be of Scythian origin. Their religion is hindooism, mixed with a sun-worship. While the Rajputs have a modified primogeniture, the Katti inherits by equal division. They are innately turbulent and of all the tribes, have ever given the greatest trouble. Several people, or branches of the same? people, are known by this name. At present, the peninsula of Guzerat is divided into numerous chieftainships, and although the Kathi hold but a small portion, yet, by some conventional process, this Indogetic tribe has given its name to the entire peninsula, and Kattyawar has completely superseded Saurashtra. There was, however, an intermediate term used to designate it (before the irruption of the Kat'hi) a term familiar to the author of *Almagestum*, as well as to the hindoo geographers, and this was Lar-des, from the tribe of Lar, whence the Larica or Larico of the Greeks. Colonel Tod tells us that the Kat'hi, the ancient foe of Alexander, are not only fairer than those round them but blue eyes are met with amongst them, indicative of their northern origin. Another writer tells us that the Jun and Kathi, are tall, comely and long-haired races, who have vast herds of camels and black cattle, from which the towns are furnished with ghee or clarified butter, and the people themselves provided with libations

of milk. Amongst the various branches of this nomadic race, the most celebrated is the Koman-kathi. Abulghazi describes a famous tribe in Kharezmi, the ancient Chorasmia, called Komani, the remains of which were expelled by Cheugis Khan: and the royal author adds, "Urgens was not always the capital: and Abulfeda tells us Cathi, also spelt Kaht, in 41° 45' N. lat., was formerly the metropolis." What affinity there was between these, the people of Cat'hay, and Alexander's Cat'hi, it were vain to ask: it is sufficient for our purpose to trace them from the Five Rivers, and to observe that the name of their first settlement in Kattyawar, was Kat'h-kote, from which, as stated, they were dislodged by the first Jhareja colony from Sind. It is said of them, that they repeat couplets describing their migration from Mooltan, and temporary settlement in the tracts called Pawin, north of the Runn, and of Megum Rao, their leader, conducting the first Kat'hi colony across the gulf into Sausrashtra eight hundred years ago; and so predominant was their power that it changed the ancient name of the peninsula to Kat'hi-war. The mahomedans, who had only gained a partial authority over the Rajputs of Kattyawar, were succeeded by the Mahrattas in 1755, who could only collect the revenue by means of troops in Mulkein or circuits. But, in 1808, Col. Alexander Walker, then Resident at the Gaikwar's court, was able to arrange for payment to the Gaikwar, from the Rajput chiefs, of a certain fixed sum as suzerainty. When the Peshwa was overthrown in 1817, the British succeeded that power in the chief control. The gross revenues are estimated at a million sterling; out of that £100,000 is paid as annual tribute in the proportion of $\frac{1}{3}$ to the British Government and $\frac{2}{3}$ to the Gaikwar. The population is $1\frac{1}{2}$ millions. The tributaries are called Talukdars of whom there are 224, and each of whom possesses exclusive jurisdiction in his own district, and only the Grassia and Mul-Grassia are allowed to litigate with their ruling chiefs. These are sprung either from cadets of the ruling tribe or from proprietors of lands which they have originally seized and now defend with all the proverbial tenacity of the Rajput, who freely gives and takes life for acres. The principal Talukdars are the nawab of Junagurh,—the jam of Navanaggar, and the rawal of Bhownaggar: also the rana of Porebandar, the raj of Drangdra and the thakur of Murvi. Junagurh, the most important, is held by a descendant of Sher Khan, Babi, a soldier of fortune who seized it in the general anarchy which preceded the subversion of the Moguls.

The jam of Navanaggar is the head of the Kattyawar branch of the great class of Jhareja Rajputs which surged into the country from Sind about the middle of the 15th century, and another stem of which is represented by the Rao of Cutch.

The rawal of Bhownaggar is at the head of the Gohil Rajputs, a race driven in from Marwar by the Rathor in A.D. 1200. He is descended from Mokheraju, a sea-rover, who in the 14th century occupied Perim island at the mouth of the gulf of Cambay, and whose shade is to the present day propitiated by the passing mariner. The people are deeply engaged in commerce.

The rana of Porebunder, styled Puncheria, represents the Jetwa, one of the four ancient races still extant in the peninsula. In the days of Mahmud, all the west and north of Kattyawar, belonged to the Jetwa Rajputs, but the forays of the Jhala and Jhareja have confined them to their present district, the sluggish range of hills called Burda.

The Jhala, who own the raj of Hulwud Drangdra as their chief, are supposed to have sprung from an offshoot of Auhilwarra, on the extinction of which dynasty they obtained large territorial aggrandisement.

The thakur of Murvi is a Jhareja and was the first in Colonel Walker's time to abandon infanticide. He has possessions in Cutch.

The fortified post of Jafferabad or Muzafferabad is held by the descendant of an African rover, the Siddi of Janjira.

The term Bah'rwallah (bah'r, out and wadda road) is applied to Kattyawar Rajpoots who, on some dispute with their landlord, quit their villages, which thus lie waste, and occupy the neighbouring fastnesses from whence they make inroads until hunted down, or a compromise or settlement occurs.

In the Jhalawar district, property stolen or the thief must be produced, and the Paggi who trace the Pag or foot-prints are there the most famous.

Lions are still found in the Geer jungles, but there are no tigers, and Captain Postans observes that while Kattyawar abounds with the tiger and lion species, Cutch, the neighbouring province, is free from this terrible infliction. The rao of Cutch, at one period, had several dens filled with wild beasts.

The district of Geer, in Kattyawar, is full of almost inaccessible fastnesses, which for ages have given shelter to outlaws and robbers.

In A. D. 770, Wallabhipur, the present Wulch, fell before an inroad from the north of a race whom Mount Stuart Elphinstone supposes to have been Persians under Nowsherwan the great; but supposed by Colonel

KATU-UREN.

Tod to have been Scythian, and by another authority, to have been Indo-Bactrian.

Aramra, in Kattyawar, is held by the Badhail race who, along with the Wagher of Dwara, were long the terror of the neighbouring seas. It is probably the Aramraw of the maps, in long. 69° 15' E., and lat. 22° 27' N. — *Tod's Travels*, pp. 205, 220, 440 1, 456-7; *Postans' Western India*, Vol. ii, p. 158; *Calcutta Review*; *Townsend's, Outram and Havelock*, p. 49; *Malcolm's History of Persia*, Vol. vi, ch. ix; *Mrs. Elwood's Letters*, Vol. ii, p. 113.

KATU, SINGH. Hebradendron gamboides, *Graham*.

KATU-ALU, MALEAL. Ficus citrifolia, *Lam*.

KATU-BALA, MALEAL. Canna indica, *Linn*.

KATUBI, SANS. Solanum pubescens.

KATUCA, SANS. Pandanus odoratissimus.

KATU-IRIKI, SINGH. Asteracantha longifolia, *Nees*.

KATU-JERU, Holigarna longifolia, *Roxb*.

KATU KABUA, MALEAL. Cinnamon.

KATUKA, TEL. Sulphuret of autimony.

KATU KAROGANI, TEL. ? Helleborus niger.

KATU-KATSJIL, MALEAL. Dioscorea bulbifera, *Linn*.

KATU KATU, HIND. Fagopyrum esculentum.

KATU-KAPEL or Cadenaco, Sansevieria zeylanica.

KATU KALANGU, MALEAL. Dioscorea aculeata, *Linn*.

KATU KITTUL, SING. Caryota horrida, *Gardn*.

KATU KOLEE, TAM. Gallus sonneratii, *Temm*.

KATA-KURKA, Anisochilos carnosum.

KATUMBAR, MALAY. Coriander.

KATU MELLALLU, MALEAL. Vitis altissima, *Roxb*.

KATU-MUREN-KALANGU, Dioscorea pentaphylla.

KATU MURUNGA VAYR, TAM. Hedysarum sennoides.

KATU NIRURI, MALEAL. Phyllanthus multiflorus, *Willd*.

KATU-PITS-JIGAM MULLA, MALEAL. Root of Jasminum angustifolium, *Vahl*; *Willd*.

KATUPPATTAN, a low tribe of Nair.

KATUROHINA, also Katuroun, SANS. Helleborus niger.

KATU TANDALE KATTE, MALEAL. Crotalaria, *species*.

KATU-TSJIREGAM-MULLA, Jasminum hirsutum.

KATU-UREN, Sida cordifolia.

KAURA.

KATUVAGE, TAM. Acacia speciosa, *Willd., W. & A*.

KATYAYANA, an author who completed and corrected Panini's grammar, he lived about 300 to 400 years B. c.—*Muller*.

KAUBAR, see Coir.

KAUCH also Kauch-gurgur, BENG. Coix lacrima.

KAUCH-KULA, BENG. Musa paradisiaca.

KAUCHRA, BENG. Hydrolea zeylanica.

KAUDESEQU CHECKE, a drug.

KA-UGAN ? A tree of Akyab, which grows to a great length, and is plentiful in the Ramree and Sandoway districts. The wood is used for planking.—*Cal. Cat. Ex.* 1862.

KANGU PRIYANGU, SANS. Millet.

KAUL DODA or Kanwal doda, HIND., the nut or fruit of Nelumbium speciosum : the lotus fruit.

KAULFUSSIA AMELLOIDES, a small annual plant with bright blue flowers, the florets of which curl back after they have been expanded a short time, it requires a light soil and the seed may be sown at the end of the rains.—*Riddell*.

KAULI, see Gipsies, Zingarri.

KAULL, HIND. Populus nigra.

KAUMARI, see Sacti.

KAUNA, TAM. A Ceylon tree, which grows to about fourteen inches in diameter, and six to ten feet in height. Its wood is strong and durable, used for boat crooks, knees, &c., and the tree produces a fruit which is similar to the cocoanut, and is used by the poorer natives as food.—*Edye, Ceylon*.

KAUNCHKURI, DUK. Cowhage.

KAUNDUM, TAM. Loadstone.

KAUNGMHOO, Dipterocarpus, *sp*.

KAUNI, HIND. Pennisetum italicum.

KAUNTUM, SANS. Loadstone.

KAUR, next to the Jushpur Oraon, the Kaur are the ugliest race Colonel Dalton had seen, being dark, coarse-featured, with wide mouths and thick lips. They are a very industrious, thriving people, about Korea and Udipur, in the extreme west of the Chota Nagpur agency, of Nagpur proper. They speak Hindi. They are considerably advanced in civilization, but are very black, with broad noses and thick lips. They eat fowls and do not reverence brahmins, but worship Siva. They bury their dead. They claim to be descendants of the Kuru who fought the Pandu.—*Campbell*, pp. 22, 40; *Col. Dalton*.

KAUR, HIND. Capparis spinosa, or European caper; also Linum trigynum, Roylea elegans, Chamærops ritchiana and Picrorrhiza kurroa.

KAURA, HIND. Bitter, pungent, strong, as tobacco.

KAUBA, *HIND.* *Acer cultratum*, also *Pandera pilosa*.

KAURAVA, sons of king Dhritarashtra, by Gandhari; the Kaurava and Pandava, therefore, were cousins german. The Bharata dynasty of India known as the Bharatids was finally overwhelmed by the Pankala. Their last ruler was Samvarma who was driven by the Pankala westward. Under this name, Bunsen supposes two historical accounts. The first Bharata, a supposed son of Bhumanya, he thinks is the name of the primitive race, who settled in Central Hindoostan, the Madhyadesa or Aryavarta. The Bharata kingdom seems to have been established between B. C. 2600 and 2200. The country was overwhelmed by the Pankala, and it was followed by an interregnum B. C. 589. Wheeler says that Bharata, son of Dushyanta was of the Aryan race, and established the Bharata kingdom in Hindoostan, amidst a preceding people. Some authors of Europe have lately endeavoured to apply the term Bharata, to the entire of India, but the extent of the kingdom formed by the Bharata is extremely uncertain. It seems however to have had tributary kings or kingdoms in alliance, and it probably varied in extent with the usual fortunes of nations. A slokam in the Sanskrit work, the Amara-kosha,

Aria vartaha punia bhumi'hi,

Mad'hiam Vindhya Himava Yoho,

i. e., "The Arian country, the sacred land, between the Vindhya and the Himalaya," indicates the ruling race and the boundaries of the kingdom held by them at the period that Amara Sinha wrote the Amara-kosha. Duryodhana, son of rajah Draupada of Panchala aided the Kaurava in the battle at Kurukshetra, as also did the king of Magadha. The poem of the Mahabharata contains 100,000 verses, each verse containing 32 syllables. The groundwork of the poem, the Kaurava and Pandava war, contains 24,000 verses. This leading story commences with Atri, a flash of light from whose eye produced the moon (which in Sanskrit is male), and that being was the ancestor of the lunar dynasty of kings. One of these kings was Paruravas, whose love for the heavenly nymph Urvasi, is detailed in Kalidasa's drama *Vikramorvasi*:—his descendants in a direct line where Ayas, Nabusha and Yagati, the last becoming the father of Puru and Yadu. The line of Yadu acquired celebrity through Vasudeva and his sister Kunti or Pritha, and also through his sons Krishna and Balarama, who have become reputed as incarnations of the god Vishnu. Puru's son was Dushyanta, who married Sakuntala, and their son was

Bharata. From Bharata descended successively Hastin, Kuru and Santanu. Santanu married Satyawati, already the mother of Vyasa, but their children died without offspring, and Satyawati then asked her son Vyasa to marry her widowed daughters-in-law, by one of them he had Dhritarashtra, born blind, and by another, Pandu, born a leper or an albino. Dhritarashtra married Gandhari, and amongst their many children was Duryodhana also called Suyodhana and Duhsasana, these were the Kaurava. Pandu married two wives, viz., Pritha, sister of Vasudeva and aunt of Krishna and Madri. By Pritha, he had three sons, Yudhishtira, Bhima and Arjuna, by the latter twins, Vakula and Sahadeva and these were the Pandava. Both the Kaurava and the Pandava were related to Krishna, but the Pandava more nearly so, owing to their mother Pritha being aunt of Krishna. Vyasa, the compiler of the Mahabharata, is the reputed grandfather of both the Kaurava and the Pandava. It is the series of events, which happened in the lives of the Kaurava and Pandava, that forms the groundwork of the great epos of the Mahabharata, and they may thus be briefly related.

Santanu had resided in Hastinapur, the ancient Delhi, and after his demise, Dhritarashtra was by seniority entitled to succeed. But as he was blind, he resigned the throne in favour of his brother Pandu. The latter became a powerful monarch, but, after a while, having become tired of his regal duties, he abdicated and retired to the forests of the Himalaya, to indulge in his favourite sport, the chase. His brother Dhritarashtra, then resumed the reins of government, but being blind, his uncle Bhishma governed for him and conducted the education of his sons. After a while Pandu died and his widow Pritha and her five sons returned to Dhritarashtra's court to be educated along with his own children, their cousins. But the Pandava brothers were superior lads, and their cousin Duryodhana out of jealousy tried to destroy them, first by poison, then at trials of arms: subsequently, Drona, a brahman, who had taught the Kaurava, brought about a reconciliation, and the relatives unitedly attacked Drupada, king of Panchala, who, principally by the Pandava's aid, was defeated. On this, the blind king Dhritarashtra resolved to pass over his son Duryodhana and named his nephew Yudhishtira, the eldest of the Pandava, to the throne, and their cousin Duryodhana made another effort to destroy them, by burning them alive. This, also, they escaped, but they considered it advisable to conceal themselves, which they did by assuming the character of mendicant brahmans and retired to the

forests. After some time they were informed by Vyasa that Drupada, king of the Panchala, would make his daughter Draupadi, queen of a tournament, to be won by the most successful competitor, and she was won by Arjuna. On this occurred a civil commotion, in which Drupada nearly lost his life,—but Draupadi went with the Pandava brothers and became their joint polyandric wife.

At that time, chastity prior to marriage does not seem to have been adhered to, for Satyawati, who married Kuru, had previously born a son (the celebrated Vyasa); and, to an impetuous son, Pritha, aunt of Krishna, who subsequently married Pandu, had previously born a son Karna, in some miraculous manner: and, both Krishna and Bal Rama are said to have associated with their sister before she was married to Arjuna, as his second wife. After the tournament, the Kaurava and Pandava made peace, the former to reign at Hastinapur, the ancient Delhi, and the Pandava at Khandavaprastha, the modern Delhi. Yudhishtira the eldest of the Pandava reigned so successfully that he resolved to declare himself emperor, by the performance of the Rajasaya sacrifice. This was accomplished with much splendour, but Yudhishtira was afterwards involved by his cousin Duryodhana, in a game at dice, and Yudhishtira lost everything, kingdom, wealth, and his joint wife Draupadi. Duryodhana offered to restore their kingdom if they would exile themselves for thirteen years. In these thirteen years, they all took service with king Virata of Matsya and ultimately defended him against an attack of Duryodhana. On this account, Virata gave his daughter Uttara in marriage to Abhimanya, son of Arjuna by Subhadra. In claiming restoration to their kingdom, at the close of the thirteen years, the Pandava first tried negotiations, offering to be content with five small towns, and they ultimately resolved to fight it out on the plain of Kuru-kshetra, the rules of battle being duly laid down. In the battle that ensued, and which lasted eighteen days, the Kaurava lost successively all their chiefs, Bhishma on the tenth day, Drona on the fifth day, Karna on the second day, and their last commander, Satya, was killed on the first day of his command. In these battles some foul play was practised on both sides. After the close of the battle, Yudhishtira was elected heir apparent of the old blind king Dhritarashtra. But the latter, subsequently, abdicated and led the life of a recluse, along with his wife Gandhari, Pritha the mother of the Pandava and their uncle Vidura. Vidura soon died and all the rest of the royal exiles perished in a forest conflagration. The grief of the

Pandava, for this, was great, and they too after hearing also of Krishna's death and of the destruction of Dwarka, resolved to abdicate, and they all set out for Mount Meru, but all save Yudhishtira perished before reaching it. According to the story, Yudhishtira ultimately entered Indra's heaven and there found all the Kaurava relatives and his brothers.

The Mahabharata contains, as an episode, the Bhagavadgita, a discourse on the Yoga philosophy. Both Professor Lassen and Mr. Wheeler consider that the Pandava story in the Mahabharata conveys a history of India.

Kritavarmam, Aswatthama and Kripa were the three surviving Kaurava warriors, after the battle of Kurukshetra.—*Westminster Review*, April 1868; *Wheeler's History of India, the Mahabharata*; *Bunsen's Egypt's place in Universal History*, Vol. iii, pp. 558, 559, 689.

KAURAVA. There were many Kaurava dynasties of Kashmir;—kings of the Kaurava race ruled for 1266 years, with one of whom, Gonerda, authentic history commenced in B. c. 2448.

Lava in 1709 B. c., was the Loo of mahomedan historians.

Shrendra, B. c. 1600, was contemporary of Bahman of Persia.

The Goneridhya dynasty, 1013 years, or 378 years after adjustment, *W*.

The Aditya dynasty, 192 years.

The Goneridhya Line restored, 592 years, or 433 adjusted.

The Naga or Karkota dynasty, 260 years, five months.

KAVANCHI or Syamali, TEL. *Helicteres isora*, Linn.

KAVARA, MAL. A tribe in north Malabar, who make and sell bamboo mats, &c.

KAVAROO, TAM. *Elensine coracana*.

KAVATAM PILLU, TAM. *Andropogon citratus*, also *Andropogon schœnanthus*, Linn.

KAVERA, also Kashmir juman, SANS. *Crocus sativus*, Linn.

KAVI. The great work of Baron Humboldt, on the Kavi speech, has afforded the important result that the resemblances known to exist between the languages of the nations of the islands in the Pacific Ocean termed Polynesian, and the tribes of the Indian Archipelago, Malacca and Madagascar, are not, as some persons have thought, the effect of casual intercourse, but are essential affinities, deeply rooted in the construction of these languages. The proofs of this assertion, and the ultimate fact in ethnology which results upon it, viz., that the races of people are themselves of one origin, are shown in Humboldt's work. The Papua languages, or those spoken by the black and woolly-haired nations, are, for the most part as yet unexplored, but the dialects of the Papuan races often partake more or less of the Polynesian. Whether this arises from the adoption by the Papua of the Polynesian vocabulary has not been determined, though most persons incline to this last opinion. It is, however, now well known that some black nations have Polynesian dialects. The idiom of the Fijian islanders, for example, is properly a dialect of the Polynesian language.—*Dr. Prichard in Rep. Brit. Ass.*, 1847, pp. 241-250.

KAVIAR, GRÆ. Caviare.

KAVILE, TEL. A book made of palms.

KAVILE, or Erra puniki chettu, Cavel-

KAWRIS, *GER.* Cowries.

KAWTHA, *MAHR.* *Feronia elephantum*, *Corr*.

KAWUL-GUTTI, *Nymphaea lotus*; the seeds of the lotus, much used in medicine: they are tasteless mucilaginous: said to check vomiting, six massee are a dose: also roasted as food.—*Gen. Med. Top.*, p. 143.

KAW-WAS, or Cavass, *TURK.* A police officer. This word literally means an archer, reminding us of les archers de la sainte Hermandade, some spell the word Kawas.—*Burton's Pilgrimage to Meccah*, Vol. i, p. 29.

KAY, or Ka, a tribe who dwell east and north of the Shoung, calling themselves Ka, but Kay by the Bghai, the red Karen calling them Pahtoung, and the Burmese Gay-kho. They are a pugnacious race. They rear the silkworm and weave and wear silk. When a

KAYA NAN.

chief or owner of slaves dies, one slave is said to be buried with him, to be his attendant in the next world. They dwell on both sides of the boundary at Tounghoo, separating British Burmah from the Ava territory. They speak a dialect of Pwo.—*Mason, Burmah*, pp. 92, 642.

KAYA, *HIND.* A compound metal of zinc, tin and copper.

KAYA, or Ka, see Karen, Kaya.

KAYAI-GYEE, *BURM.* *Barringtonia speciosa*, *Linn*.

KAYAN KAYO, *BURM.* *Aglaia spectabilis*.

KAYANN, *TAM.* A Ceylon tree, about ten inches in diameter, and fourteen in height: it produces a fruit which is of no value.—*Edye, Ceylon*.

KAYAN? A tree of Mehra forest, Abbottabad, Hazarah.—*Cal. Cat. Ex.*, 1862.

KAYAN. The Kayan, according to Mr. Dalton, amount to 270,000 souls, and they were greatly addicted to head-hunting. This people inhabit the north-west of Borneo, in the interior of the country comprised between the rivers Baram and Rajang, which, with the small rivers intervening, allow the Kayan access to the ocean. The mongrel Malays occupy the coast, and the country between them and the Kayan is occupied by eleven other tribes in number, each about 500, the majority of whom are subject to the Kayan. The Kauawit tribe closely assimilate to the Dyak of Saribas, whose neighbours they are. The tribes Punan, Sakapan and Kajaman are the chief collectors of camphor and birds' nests. The Kayan are a nation of prostitutes, they are not so passionately fond of skulls as to bequeath them as fortunes to their children as is said of the Dyak. They continue human sacrifices, but to a less extent. The Kayan name for God is Tanangan, whom they hold to be invisible and supreme. The coal and iron fields of the Balawi or Rajang are more extensive than any yet discovered on the island. From the river Baram, coal is traced to the upper parts of the Bintulu, and thence southward to the Rajang river, on the left bank of which at Tujol Nang, there is a seam exposed upwards of thirteen feet in thickness.—*Mr. Burns in Feb. 1849, No. of Jour. Ind. Arch.* See Kyann.

KAYA NAN in Tavoy, Kaiyah in Moulmein, Tavoy red-wood, *Syndesmonus Tavoyana*, is of maximum girth 20 cubits, maximum length 15 feet. Very abundant on the sea coast, from Amherst to Mergui: also on banks of rivers in the province of Martaban near the sea. When seasoned it floats in water. It is one of the best woods in

KAYAT:

the country for helves; tough, light, very durable, plentiful: long in the fibre, neither liable to split nor to warp nor to break readily. Used by Burmese for planes, spears, boats, stocks of guns and all kinds of purposes. This wood is of a most beautiful colour, a combination of pink, cream colour and red, and takes a very high polish. Recommended for helves, handles of tools, handspikes and spokes of gun-carriages, and timber wheels; also for gun stocks and planes.—*Captain Dance*. See *Kyanan*.

KAYAN-YANG, MALAY. A shrub at Bawean, the fruit of which sells at Java at 30 florins per picul.

KAYA PENDALAM, TEL. *Dioscorea crispata*, *R.*, iii, p. 802.

KAYASTH, Kayast'ha, Kait or Kaest, has twelve divisions, of which the Gaur Kayasth is one. They are clerks and copyists, their habitual language is the Persian, they are largely employed as clerks and accountants about native courts. They say that they spring from Chatrgoputr, the secretary of Dharma-raja. They are hindoos, generally worshippers of Siva. They allow their daughters to grow up before wedlock. Many of them drink to excess. Their features, physical form and colour are more varied than those of any other section of the people called hindoos. The Kait is acute in business, active and painstaking. In northern India, they have adapted themselves to the British forms of administration and are useful servants. They have become in places considerable landed proprietors. In Bengal, they are more numerous and form an aristocratic class, have proprietary rights in the soil and cultivate a great deal. The Chandrasena Kayasth of Bombay and Poonah claim to be Kshatrya or descendants of rajah Chandrasena, a rajah of Malabar. This the brahmans deny, and declare them to be of menial origin. They have, however, the honorific name of Puroob (Purvoe, Probabu or master,) and are distinguished as Patavi and Dawani Prabahu. The Kayastha or Kayth race of India, are usually employed by the Indian princes in the collection and records of their revenues, and their character for a spirit of extortion became proverbial. They appear to have been particularly obnoxious to the brahmans. Kayastha is the Sanscrit name, but is pronounced in the dialects of India as Kayasth, Kayath, Kait, or Kayat, corruptly Koit. Among the Maratha people, the Kayastha is said to be distinguished from the Kait by locality, the latter being peculiar to the north.—*Wils. Glos.*; *Toy Cart*, p. 92.

KAYAST'HA, SANS. From *kayu*, the body, and *st'ha*, to be situated.

KAYAT? a servile caste in the countries

KAYN.

east of Bengal, less impure than the Chandala.

KA YAU, also Ta-Yau, BURM. *Excoecaria agallocha*, *Linn.*

KA-YAU, BURM. *Congea velutina*, *Wight*.

KAYE, Sir John William, for many years occupied an eminent position in the world of English literature, as a writer on Indian subjects. He went to India as a lieutenant of artillery. Within a comparatively short time he wrote and published two novels. He became then a regular contributor to a weekly literary journal issuing from the *Hurkaru* press, and not long after he was installed an Editor-in-chief of the *Bengal Hurkaru*, retired from the army, and, during the remainder of his sojourn in India, continued its editor. In the course of his researches he met with much which he knew could not always be met with elsewhere. This suggested the idea of keeping a common-place book for noting all that was noteworthy, and making extracts with data and authorities, some of which appeared in the early numbers of the *Calcutta Review*, in the papers entitled the "English in India," and some other essays of the same interesting series. He projected the *Calcutta Review*, of which he was proprietor and editor, with the active co-operation of such men as Dr. Dutt, Mr. Marshman, the late Dr. Mackay, Henry Lawrence.—*Mofussilite*.

KAYIN, Kayin-kapus. MALAY. Calico, ENG.

KAY-KHE, COCH-CHIN. Millet.

KAY-KHOAICA, COCH-CHIN. *Aristolochia indica*.

KAYLA, HIND. *Musa paradisiaca*, plantain.

KAYLULAH, ARAB. The half hour's siesta about noon. It is a sunnat, and Mahomed said of it, "Kiln, fa inna sh' Shayatna la Takil,"—"Take the mid-day siesta, for, verily, the devils sleep not at this hour." "Aylulah" is the sleeping after morning prayers, which causes heaviness and inability to work. Ghaylulah is the sleeping about 9 A. M., the effect of which is poverty and wretchedness. Kaylulah (with the guttural kaf) is sleeping before evening prayers, a practice reprobated in every part of the east. And, finally, Taylulah is sleeping immediately after sunset, also considered highly detrimental.—*Burton's Pilgrimage to Meccah*, Vol. ii, p. 49.

KAY-ME, COCH-CHIN. Tamarind.

KAYN, adjoining Herat, is the first Persian province to the west of Furra, and lies on the frontiers of the kingdom. It is entirely inhabited by mahomedans of the shiah sect which has led the Toorkman tribes to seek for slaves in it during their chupao or forays. The inhabi-

KAYU BALIAN.

tants are a timid race, and live in small forts, the number of which is very great. The Kayn country is badly watered, and the ber tree, as in all arid countries, is common. Birjind and Kayn are the principal places, and the district is ruled by a governor of its own, whose subjection to the king of Persia, however, is complete, since he furnishes a quota of 3,000 or 4,000 infantry when called upon. —*Papers East India, Cabul and Affghanistan*, p. 135.

KAYOMURS, see Kamrau.

KAYPHAL, Guz., HIND. Nutmegs.

KAYSAR. The Takht-i-Suliman, or Kayser mountain, is in the Sulimani range. It extends high and bold, and seems a collection of inaccessible precipices. The mountains of Kalabagh, containing the salt mines, are on the south, their isolated tops alone being visible above the horizon. On the north, the Sulimani range is finished by the Pahar, or hills of Koh-i-Tak, and to the north-west is Koh-i-Kondi, which at times has a little snow upon its summit. The Kay-sar mountain arises in front, in a southern direction. The Shirami hills appear to descend into the plain, near Dhera Ghazi Khan. The heat on the plains under the Sulimani range is excessive. —*Vigne's A personal Narrative*, p. 36.

KAY-TANII-YEN, COCH-CHIN. Limes.

KAYTH, see Kayastha.

KAYU, MALAY, but also spelled Kaia; wood: timber, a tree.

KAYU-API-API, MALAY. *Rhizophora gymnorhiza*. Mangrove.

KAYU AMBALLO, MALAY. A timber tree of the Archipelago, in Bawean.

KAYU-ARANG, MALAY. Charcoal.

KAYU BALIAN. This wood, the most esteemed amongst the natives of Borneo, on account of its hardness and durability, is called by them balean or kayu balean, the term kayu, which means wood, being always prefixed to the names of timber trees. The balean is a tree of the largest size, and although its wood is so hard as to be almost incorruptible, the tree is of quick and vigorous growth: it is found most abundantly in the low damp forests in the neighbourhood of the sea and of large rivers. It is much used by the natives for posts of their houses, which amongst the Dyak, are handed down from father to son, for many generations. Many specimens which must have been in the river for ages, are as hard when cut as those fresh taken from the forest, and this timber is rarely seen in a state of decay. The water worm (Teredo) is the only insect which attacks it when in the water; and though its channelling the wood must necessarily much weaken the post, the water being admitted

KAYU DUNGUN.

into it does not cause it to rot. On land or under the earth it equally resists the effects of the atmosphere and white ants, so destructive in tropical countries to most other kinds of wood. This valuable timber was formerly an article of export, sought after by the Chinese; and in those ports which they still frequent, continues a source of considerable trade. —*Low's Sarawak*.

KAYU-BESSE, see Tin.

KAYU BIDARRU, MALAY. A yellow wood of Borneo, of a very agreeable odour. It is plentiful, and being of a very hard and durable nature, is much esteemed for posts of houses and other purposes under ground: its perfume will ultimately rescue this beautiful wood from its present degradation. —*Low's Sarawak*.

KAYU-BIN? BURM., MALAY. *Terminalia chebula*, Retz.

KAYU BINTANGUR. Several kinds of the poon of India grow in Borneo to perfection, they are called by the natives bintangur, and are well known for their value in ship-building. One seems to be *Calophyllum inophyllum*. —*Low's Sarawak*.

KAYU BOKA, MALAY. Kayu-boca wood, Amboyna wood, a valued ornamental wood, and another, the Lingoa wood of commerce, are the produce of the same tree, the *Pterospermum indicum*. The tree throws out knotty excrescences or burrs, which are sawn off in slabs, 2 to 4 feet long and 2 to 8 inches thick, which are much esteemed for such fancy articles, as small boxes, writing desks, and other ornamental work. Of late years, its estimation seems to have decreased in Europe, but it is still much valued by the Chinese. It is brought from Ceram, New Guinea, Arru and other islands of the Moluccas. It resembles the hue of the yew, is very hard and full of curls, the colour being reddish brown, varying to orange. In Singapore it is sold by weight.

The Lingoa wood is also known in commerce as Amboyna wood, and very large slabs are obtainable from the lower part of the tree by taking advantage of the spurs or lateral growths. They can thus sometimes be had as large as nine feet in diameter. It is very durable, takes a considerable polish, is very abundant and may be had in any quantity. —*Great Exhibition of 1851, and M. E. Juries' Report*. See Amboyna wood, Lingoa wood, *Pterospermum indicum*.

KAYU BUNG NGAT? COCHIN-CHIN. *Emblie myrobalan*.

KAYU DUNGUN, grows on the banks of rivers, and though the timber is soft, the large buttress-like supports at the base of the tree are very hard, and are valuable for

KAYU MARANTI.

gun carriages and other purposes : they would doubtless be useful in turnery.—*Low's Sarawak.*

KAYU GAHRU, MALAY. Eagle wood, Aloes wood, *Aquilaria agallocha*, *Roxb.*, *Agallocha* wood. This is the Lignum Aloes, Agala-wood, Eagle-wood, and Calambak of commerce. If of good quality, it should melt in the fire like wax, yielding an agreeable odour. A very high artificial value is placed on the better qualities of this product by the natives of the east ; the first quality selling at £40 16s. 8d. per 133½ lbs. avoird. at Malacca, the second quality at £25 10s. 0d. per 133½ lbs., and the third quality at £3 2s. 0d. per 133½ lbs. See Aloes wood, *Aquilaria*, Eagle wood.

KAYU-JELU-TONG, is a large growing tree of Borneo, with verticillate leaves, and a bark which, on being wounded, emits plentifully a white milk, which is inspissated by boiling, but has not yet been discovered to be of any use. The timber it produces, though large, is not esteemed by the natives, on account of its early decay when exposed to the rain and sun ; it is white, and being very soft, and easily worked, it is much used by the poorer Malays for the sides of their houses, which are protected from the rain by the overhanging roofs.—*Low's Sarawak.*

KAYU KAPUR, a close-grained and durable timber of Borneo, much valued by the natives, for boat-building purposes.—*Low's Sarawak.*

KAYU KAPUR BARUS. The timber of the Kapur barus, or true camphor tree, is also highly esteemed : excepting when charged with the valuable drug, it does not emit the camphor smell, as does the timber of the *Laurus camphora*, of which the Chinese manufacture trunks and boxes, which preserve whatever is put into them, from the attacks of insects of all kinds, particularly of the small ants, which are so troublesome in hot countries.—*Low's Sarawak.*

KAYU KUDRANG, a wood of Malacca. furnishes a yellow dye, sells at 12s. 6d. per 133½ lbs.

KAYU LAKKA, or Kayu lakah, of Singapore, a red dye wood, applicable to the same purpose as red sanders wood

KAYU LAKKAR and Kerta Ambuk are woods of Malacca, burned as incense.

KAYU-LEGI, MAL. *Cassia lignea*.

KAYU-MANIS, JAV. *Cassia lignea*, Bark of *Cassia lignea*.

KAYU MARAKA, SANS. *Nerium tinctorium*.

KAYU MARAM, TAM., properly Koia maram. *Psidium pyrifera*, the guava tree.

KAYU MARANTI, MALAY. A quick-

KAYU-YNDHAN.

growing timber tree of Borneo. In grain it resembles cedar, and, like it, is of a reddish colour. It is much valued for making packing-cases, planks for the sides of houses, &c., and when protected from the weather it is a good and useful timber.—*Low's Sarawak.*

KAYU MENCABANG or Mencabang Pinang, is one of the trees which produce the vegetable tallow : it is plentiful in the forests, but would be more profitable for its fruit (which is small and produces good oil) than its timber, though for this it is also held in high esteem. The wood is close-grained, hard, of a reddish colour, easily worked, and very durable. This tree differs from the others which produce the vegetable oil, in growing to a much greater height.—*Low's Sarawak.*

KAYU MERBAU, is a fine durable timber, very useful in ship and house-building, being easily worked and very durable.—*Low's Sarawak.*

KAYU MIDDANG BUNGA, a fawn-coloured wood of Singapore, not durable if exposed.—*Cameron.*

KAYU MUNGRIS, is, while fresh, nearly as hard as the iron-wood, and more difficult to be worked, though it is very durable, but not so much so as the balcan, or iron-wood, but is a large timber and a very fine tree.—*Low's Sarawak.*

KAYU NERI, is a very hard wood, growing with the mangrove in salt swamps, its timber, which has a reddish appearance, is not large but very abundant.

KAYU-PUTEH, MALAY. White wood, Arbor alba of Van Rumph, the Cajaput tree or Kayaputi tree ; *Melaleuca cajaputi*, *Mason & Roxb.* Kayaputi-ka-tel, *HIND.* Kayaputi-tailam, *TAM.* Cajaputi oil.

KAYU RASAK, a wood of Borneo ; which resembles the bintangur, is close-grained, strong and tough, and is used for rudders, masts, and oars for the trading boats.—*Low's Sarawak.*

KAYU RUNGAS, a red wood, handsomely veined, which takes a fine polish, and is much used at Singapore for the purposes of furniture-making ; like the ebony, it is only the old wood in the centre of the tree which is of a useful colour.—*Low's Sarawak*, p. 61.

KAYU SAPPAN, MALAY. *Cesalpinia sappan*, *Linn., Roxb., W. & A.*

KAYU SONA, MALAY. A timber tree of the Archipelago, much used at Bawean in prahu and house-building.

KAYU UMUR PANJAONG, MALAY. Literally, Tree of long life, grows on Dempo hill in Sumatra, it is about 6 feet high.

KAYU-YNDHAN, or Kayhundahn, COCH-CHIN. Sandal wood.

KAZAN.

KAY-VANG-DEE, COCH-CHIN. Sassafras.

KAY-VERU; Kelwa-Bagu, Kaywuru, or Keveru, TAM. Eleusine coracana, *Gart., Rozb.*

KAYU WALI KUKUN, a wood of Java, is equal to the kusambi in weight, and exceeds it in hardness: it is employed for anchors, naves of wheels, machinery, &c.

KAYU WRANG, or Bayur, a light and tolerably durable wood, is employed for masts and spurs of small vessels; but the surface must be well covered with resinous substances to prevent it splitting.

KAY YOOB, BURM. A tree of Moulmein. Its wood is used as an ordinary building material.—*Cal. Cat. Ex.* 1862.

KAYU-NDIIAN, COCH-CHINA. Santalum album.

KAZ, HIND. Goose.

KAZA GADDA, TEL. *Urginea coromandelica*, R., *W. Ic.* *Scilla indicæ*, *Cor. R.*, Vol ii, p. 147. The same name, however, is applied to *U. Indica* and to *Ledebouria hyacinthoides*, which all grow abundantly together, on the sands near Masulipatam.

KAZAK, HIND. A free-booter, one who plunders in a gang. See Kazzak.

KAZAMEEN, a town, three miles north of Baghdad, and on the western bank of the Tigris, inhabited at the beginning of the nineteenth century by about eight thousand Persians, who had been induced to settle there, on account of its being the burying-place of imam Mousa Kassim (the father of imam Raza) and imam Mahomed Touky.—*Kinneir's Geographical Memoir*, p. 252.

KAZAN, the ancient capital of the Tartar monarchs. The Tzeremish resemble the Tartars in their external appearance, and they also wear their hair short; but their language is totally distinct, and they spring from a different origin. They are the original inhabitants of the province of Kazan and O-so-ta-our-han or Astrachan. After the Russians had made themselves masters of all these places, this people still continued to occupy the country near Kazan, and they have now been in subjection to the Russians for many years. Kazan consists of two distinct and separate towns, the one inhabited by the Russians, the other by the Tartars. The Germans are very numerous in Kazan, and have a club frequented exclusively by numbers of their own nation. The Pagan tribes, called the Tcherimiss and the Morduin, constitute a very considerable portion of the population of the province of Kazan, and supply the town with wood hewn in the recesses of their native forests. Kazan is reputed in the Tartar annals as having been

KAZWINI.

the haunt of huge and monstrous serpents, some even with two heads; and to the present day these reptiles still swarm in the fens and forests of this province. On the banks of the river Kanzauka, rises a mountain, the seat of an ancient monastery; it is called Zilantoff, a corruption of the Tartar words *jilan*, the serpent, *taou*, mount. A Tartar legend informs us that this mountain was formerly the place of retreat of a winged dragon. The fragments of nations that people Kazan and Astrachan, the Russian, Tartar, Tchouvash, Tcherimiss, Mordon, Votiack, Kalmuk, Kirghis, Bashkir, Nogai, and Kossack, each speak a language peculiar to its own tribe.—*Turnerelli's Kazan*, Vol. i, pp. 1, 3, 4, 31, 34, 35, 72; *Staunton's Narrative*, p. 126.

KAZEROON, once a considerable place, now in decay, lies in a valley on the road from Bushire to Shiraz. The entire southern region of Fars, bordering on the Persian Gulf, is called the Garmsair or "hot region." It extends from the sea to the latitude of Kazeroon, and runs parallel with the Persian Gulf, from the banks of the Tab to the confines of Luristan and from Bushire, eastward, as far as Cangoon, the tract is named the Dusstistan or "land of plains." The Tungistan, commonly pronounced Tungistoon, or "narrow land," is a small tract of land east of Bushire. The greater portion of the people of the whole Garmsair, consists of an independent and lawless set, many of the tribes being robbers by profession. A huge wall of mountain separates the Garmsair, or low region, from the Sardsair, or high tableland of Persia. One of the most conspicuous of these, is an abrupt lofty hill, named Hormooj; where coal is said to have been found.—*Yule Cathay*, Vol. ii, p. 487.

KAZI, or Kadi, ARAB. The chief clerical judicial officer of mahomedans.

KA-ZONG-OO, BURM. *Batatas edulis*, *Choisy*.

KAZWIN, Kasbin or Kushwin, a celebrated town of Persia, a little to the west of Tcheran. The inhabitants are chiefly descended from those Turkish tribes which have long pastured their flocks on the plains in the vicinity of that city. They almost all either cultivate the soil, or employ themselves in commerce with the people on the shores of the Caspian.—*Malcolm's History of Persia*, Vol ii, p. 6. See Sava or Saveh.

KAZWINI, an author so named from his native place, Kazwin or Kasbin in Persia, who lived and wrote between A. D. 1263 or 1275 (A. H. 661 or 674). His name was Zakariya, son of Mahomed or Mahmud. He wrote the *Ajaib ul Makhlukat*, also the *Asar ul-Bilad*, and according to M. Renaud, also

KAZZAK.

the Ajaib ul Bakkan, written in Arabic and translated into Persian. . But Kazvini often names Mis'ar-bin-Muhalhil, a traveller into China, as the author of Asar-ul-Bilad. Kazvini, died about 674 Hijra (or A. D. 1275.)—*Elliot's History of India*; *Onseley's Travels*, Vol. ii, p. 367.

KA ZWON, BURM. *Batatas edulis*, *Choisy*.

KAZZAK, a great Tartar tribe now mingled with the Kalmuk and Kirgis, but the Kirgis and Kazzak seem much the same people differing only in location. The Kazzak pass the summer in the neighbourhood of Russia and repair in winter to the neighbourhood of Bokhara where they sell their sheep. The name Kazzak, written also Cossack, has been variously derived, and some authors indicate a similar word in the Tartar language, meaning an armed man. Others go farther eastward for a root, and make it a robber. But in either sense it will suit the character, the original mode of warfare of these armed men being that of robbery, or plundering their enemies. In time of war the real term of military service, with the hereditary warriors of the Don serving under Russia, ceased only with their lives or their capability; but, in times of peace, four years was the regular period of duty with a regiment. Twenty-five years is the nominal extent of a Cossack's military service; but the martial spirit and custom, make every man a soldier, when war either approaches his country, or requires his arm to keep it at a distance. A Cossack finds his own arms, clothing, and horse. During the campaign of 1812, and for nearly four years afterwards, almost all the population of the Kazzaks of the Don, capable of bearing arms, were called forth; and about fifty thousand may be computed to have fallen in that space of time. The quota of force which this branch of the Cossack nation furnished to Russia, for European and Asiatic service, amounted then to eighty regiments, each regiment numbering from five to six hundred men. That of the Attaman, which is the elite of the country, is calculated at twelve hundred men. The men of the Don are mostly well-favoured, being robust, fair, and handsome. This happy exterior is a type of their hearts; hospitable, brave, honourable, and scrupulously religious. The Cossack women seem far inferior to the men in mental ability and in personal endowments, also, certainly plain. The usual female appearance is short stature, faces of strong Tartar feature, with eyes, however, almost invariably large and dark. The style of dress is decidedly fashioned from the east. A sort of chemisette (or small shift) of coloured linen, buttoned round the neck, and with sleeves to the wrist. A pair of trowsers,

KAZZILBASH.

of a similar stuff, are covered by a silk caftan, reaching as low as the ankles. This upper garment is fastened, from the neck to the bottom of the waist, with buttons of small pearls, in form and workmanship like those in gold or silver from the Brazils. The waist is bound with a girdle, also ornamented with pearls, and frequently clasped by a diamond buckle. The heads of married ladies are adorned with, literally, a silken night-cap, which is wrapped about with a gaily-coloured handkerchief, in the form of a fillet. The unmarried (like the damsels in Russia of the lower class) wear the hair in a long plait down their backs; but with this difference from the Russian girl, instead of a bunch of ribbons at the termination of the plait, the handkerchief, with which the head is bound, twists round the braid nearly to its end, something in the manner of the Corsican caps.—*Porter's Travels*, Vol. i, p. 33.

KAZZAKI, HIND. A daka or burglary, or highway robbery.—*History of the Panjab*, Vol. i, p. 143.

KAZZILBASH, a term applied in Kabul and Herat to a Turk race, principally of the tribe of Jawaushir, who were fixed in the country by Nadir shah. Under the kings of Kabul they served as body-guards and still retain their own language. In the town of Kabul there are perhaps ten or twelve thousand Kuzzilbash. Their history has been often written. When Nadir shah marched towards Delhi, he had twelve thousand fighting Kuzzilbash with him. When he quitted that city, on his return, he left behind him three hundred of these, who with other troops, were directed to bring away his treasure, and follow him. They passed through Kabul; but when within two days' march of Kandahar, they heard of his death—and, a few days afterwards, Ahmed shah, Nadir's lieutenant, arrived himself, attended by five or six hundred Durani,—he seized the treasure, and took the Kuzzilbash into his service; and his kind treatment of them induced others to come from the neighbourhood of Tabriz, Meshid, Kerman and Shiraz, in Persia; where the true Kuzzilbash exercise the profession of horse-breeders, shepherds, and cultivators. There are now perhaps about ten thousand Kuzzilbash in the city of Kabul, who are ever ready to draw their swords as mercenaries. Their leaders are by far the most wealthy, the most intelligent, and the most influential men at Kabul. The Tajik are the aborigines of the Kabul country, and are not Affghans. Alexander probably found them there, as fire-worshippers, speaking Sanscrit or Pehlevi. The Hazara, or Hazarajat, are so called from the innumerable taifah, or

tribes, into which they are divided—hazar signifying in Persian a thousand. They occupy the whole range of the Parapamisus, or the mountains extending between the Hindoo Kush, or Caucasus, and the city of Herat, to within a few days' march of Kandahar. In appearance, they very much resemble the Ghurka; they have the same high cheek-bones, the same small eyes, very little beard, and no doubt are of Tartar origin. The Ghurka, however, are hindoos; whilst the Hazara are shiah mahomedans. General Ferrier tells us that the Persians inhabiting Kabul known by the name of Kuzzilbash, form part of one or more of the seven Turkish tribes that embraced the party of shah Ismail, the founder of the tribe of Saffavi. This sovereign, to distinguish them from the others, gave them a kind of red cap; hence their name of "Red head," Kuzzilbash. These seven tribes were Oustajalu, Chamlu, Nikaloo, Baharlou, Zoolkadder, Kajar, and Afchar. Another writer, Mohun Lal, relates that the houses in Herat are numbered at 400, and they contain about 6,000 people. The major part are Bardurrani, one of the sunni sects. Those of Shamlu, Afshar, Reshvand, Jami, Islu, Yallo, and Takulbe, who follow the principles of Ali, are small in number, and undergo many hardships from misgovernment. Qizal, he says, means in Turki 'red,' and Bash, 'head.' In the reign of shah Ismail, the Qizal Bashi divided themselves into the seven different sects mentioned above. The papers laid before Parliament however relate that in the beginning of the 18th century, the feebleness of the Persian monarchy excited the cupidity of the Affghan race, who overran the fairer portion of that kingdom, and possessed themselves of Ispahan. Their successes called forth the energies of Nadir, who not only drove the 'Affghans from Persia, but annexed the whole of their own territories to his empire, and, turning their swords against India, with a mixed army of Persian and Affghan, sacked it. During these wars the conqueror deemed it politic to fix some native tribes in the lands he had subdued, and to this policy we owe the colony of Persians now settled in Cabool, which, when first located, amounted to less than 2,000 families. The people composing it consist of three divisions: 1st, the Juwansheer; 2nd, the Ufsheer; and 3rd, the Moorad-khanee, the whole being designated by the general name of Ghoolam Khanee, or Ghoolam-i-shah, servants of the king. The Juwansheer are a clan of Toork from Sheesha. There are various divisions included among them; such as the Koort, the Shah Sumund,

the Syah Munsoor, &c., and they form the principal portion of the Kuzzilbash. They consist of 2,500 families, and occupy a separate quarter of Cabool, called the Chandoul, which is surrounded by high walls. The Ufsheer are also Toork, and of the tribe to which Nadir himself belonged. There are 300 families of them who live in a strong fort about three miles from Cabool. The last division, the Moorad Khanee, is comprised of all the Persians who have from time to time settled in this country. 1,500 families of them reside together under chiefs. Besides these, there are 700 others, a division of the tribe in the fort of the Byat. There were about the year 1838, 4,000 Kuzzilbash families in Cabool, from which a force of from 4,000 to 5,000 men could be levied on an emergency for the purposes of war. The number has been generally considered greater than this detailed statement, but the whole of the shiah population in and about Cabool is then included in the calculation, and among these the Huzara would furnish twice as many men as the Persians. On Nadir shah's assassination, many of the Persians fled from Cabool to their native country, but Ahmed shah, Dooranee, who succeeded to the authority of Nadir, conciliated a portion of them whom he retained in his pay and found of eminent service throughout his active reign, in which they became an organised body, acting under a Khan who was directly responsible to the shah, while the Kuzzilbash themselves only acknowledged their own chief. Matters seem to have continued in this state for about 53 years, during which the Persians acquired such power that the kings found it necessary to favour them by large stipendiary allowances, granted, in some instances even to minors; and, as the Sudozye monarchy declined, their support became indispensable to the personal security of the king. In the reign of Shah Zaman, the chief of the Juwansheer was put to death, and from that time a want of confidence in the kings of Cabool, on the part of the Kuzzilbash, is to be traced, till they almost cease to appear as a body in the affairs of the state. The superior intelligence possessed by all Persians readily befits them for employment among the Affghan, and from war many became secretaries (weerza) and stewards (nazir) to the different chiefs; others took to agriculture and merchandise, and some are at present shopkeepers in Cabool. It would at one time have been dangerous to entertain any Persian without their khan's permission; but with the loss of military employment, or rather withdrawal from it, their pay ceased,

and the growing wants of many, drove them to the occupations stated, though a portion have always continued in the service of the ruler of Cabool. Since the whole of the Persians in Cabool are shialis, and the national persuasion of the Affghan is soonee, the position of the Kazzilbash was full of danger; it was at any time possible to turn political dispute into religious difference, and there are various instances in the history of the Cabool monarchy, in which these have threatened their very existence. At one time they were not afraid to live outside of the city, but common interest has now led the whole of the Persians to congregate together as the best means of warding off danger. They would have willingly left the city of Cabool and fixed themselves at a distance like the Ufsheer, in a detached fort. The Persian themselves are therefore intently bent in adding to their own strength by intrigues around them, and though their military influence has declined, their power in this way is more considerable than before; since every man of rank has Persians for his secretaries, and all the home and foreign correspondence is in their hands, by which their influence ramifies in every direction. The Baharloo are one of the seven Turkish tribes that supported shah Ismael, one of the first of the Suffavean kings of Persia, about A.D. 1500. They wear the red cap, and are part of the Kazzilbash.—*Vigne's Personal Narrative*, pp. 167-169; *Ferrier's Hist. of Affghans*, p. 70; *Mohun Lal's Travels*, p. 265; *Papers East India, Cabool and Affghanistan*, 1859, pp. 40-41. See Kajar.

KBARRA, HIND. Capparis spinosa.

KCHUR, HIND. Cornus macrophylla.

KDRUM of Bahar. Ambari, Hibiscus cannabinus.

KE. The whole of the great island of New Guinea, also the Ke and Aru islands, with Mysol, Salwatty, and Waigion are inhabited almost exclusively by the typical Papuan, and the same Papuan race extends over the islands east of New Guinea as far as the Fiji Islands. The people on the coast of New Guinea are in some places mixed with the browner races of the Moluccas. In the typical Papuan, the colour of the body somewhat varies: generally it is a deep sooty brown or black, somewhat approaching, but never quite equalling, the jet-black of some negro races, but it is occasionally a dusky-brown. The hair is harsh, dry and fizzly, growing in little tufts or curls, which in youth are very short and compact, but afterwards grow out to a considerable length forming the compact frizzled mop, which is the Papuan's pride and glory. The face has a beard of the same frizzled hair, and the arms, legs and breast are

also more or less clothed with hair of a similar kind. In stature, the Papuan is superior to the Malay, and the equal or superior of the average European. The legs are long and thin, and the hands and feet larger than those of the Malay. The face is somewhat elongated, the forehead flattish, the brows very prominent, the nose is large, rather arched and high, the base thick, the nostrils broad with the aperture hidden, owing to the tip of the nose being elongated. The mouth is large, the lips thick and protuberant. He is impulsive and demonstrative in speech and action, his emotions and passions express themselves in shouts and laughter, in yells and frantic leapings. Women and children take their share in every discussion. The Papuan has much vital energy? In the Moluccas, Papuan slaves are often promoted to places of considerable trust. He decorates his canoe, his house, his domestic utensils with elaborate carving. They are often violent and cruel towards their children. The Papuan is black-skinned, frizzly-haired, bearded and hairy-bodied, long-faced, has a large and prominent nose, and projecting eyebrows, bold, impetuous, excitable and noisy, joyous, laughter-loving and displays his emotions. If the tide of European civilization turn towards N. Guinea, the Papuan like the true Polynesian of the farthest isles of the Pacific will no doubt become extinct. A warlike and energetic people who will not submit to national dependence or to domestic servitude must disappear before the white man. A race identical in all its chief features with the Papuan, is found in all the islands as far east as the Fiji. Mysol and Waigion are Papuan, mixed partly from Gilolo partly from New Guinea. *Paradisea rubra*, the rare red paradise bird, and *Ptilonopus pulchellus*, a lovely little dove, occur here. Alfura is written Alfora, Alafora, Arafura and Ilalafora. According to Mr. Crawford it is from the Arabic al and fora. Mr. Bickmore says that the Alfura people of Ceram have crisp but not woolly hair like the Papuans, and he regards them as a division of the Malay. He states that at Ceram the custom of head hunting prevails amongst the Alfura.—*Wallace, Vol. ii, pp. 277, 284; Bickmore, p. 204.*

KEA, BENG. Green-spined screw-pine. *Pandanus odoratissimus*. Kea-phool, is the flower.

KEADIE, or perhaps, Headie, the Malay-ala name of a tree in the forests of Canara. It grows from eighteen inches to two feet in diameter, and from thirty to fifty feet high. It is a close-grained wood, and is said to be durable; but it is rather scarce.—*Edge, M. and C.*

KEA KAIDA, BENG. *Pandanus odoratissimus.*

KEANG-WHANG, CHIN. Turmeric.

KEANG-SE is the eastern portion of the ancient province of Keang-nau, or Nan-kin, as known to Europeans; this ancient province was estimated to embrace a surface of 81,000 square miles, and its population was seventy millions. Keang-se, in extent, is about three-fifths of the ancient province, and its population is upwards of thirty-seven millions. The imperial canal traverses the whole extent from north to south, and the Yang-tsze-Kang from east to west, affording ready means for the transmission of merchandise, to and from all parts of the empire. Another estimate is 27,000 sq. miles, and its population upwards of thirty millions.

KEAOU-CHING. The Chinese division of the day is as simple as the English and not much unlike it. The Chinese begin the day an hour before midnight, and divide the twenty-four hours into twelve parts of two hours each. Instead of numbering their hours they give a different name to each period of two hours; the names and corresponding time, according to the English mode, are as follows:—

Tsze.....11 to 1	Morning.	Woo.....11 to 1	Afternoon.
Chow.....1 to 3	"	We ... 1 to 3	"
Yiu.....3 to 5	"	Shin .. 3 to 5	"
Maou....5 to 7	"	Yew ... 5 to 7	"
Shih.....7 to 9	"	Seo ... 7 to 9	"
Sze.....9 to 11	"	Hae .. 9 to 11	"

The word Kenon is added when the hour of each period is intended, and Ching for the last. Thus, Keau tsze is 11 at night, and Ching tsze 12 at night; Kenou Chow 1 in the morning, Ching Chow, 2 &c. &c. The word K'hih "quarter," is used after the hour with the numerals yih 1, urh 2, or sau 3, to subdivide the hours into quarters, which is the smallest division commonly employed: example, ching maou yih k'hih, a quarter past 6; kenou woo urh k'hih, half past 11.

KECO, BENG., HIND. *Costus speciosus.*

KEDAH or Quedah, called in Siamese Muang Sai or the Sai kingdom, occupies from the 5th to the 7th degrees of north latitude and has the Straits of Malacca on the west. The purest Malay is written and spoken in this state, being often, in the Archipelago, influenced by mixture with other tongues. It extends from the Trang river in 7° 20' N. to the Krian, in 5° 10' N., which separates it from Perak. The Trang formerly divided it from Siam. Interiorly, is a chain of mountains, running down the middle of peninsula. The water on the Quedah coast is very shallow and ships must keep a considerable offing. The highest detached hill on the Quedah main is Guong Gerai, or Quedah Peak,

a mass of granite, whose summit is estimated at 5,000 feet above the level of the sea. According to Dr. Ward, north of Quedah Peak is an immense plain, almost level with the sea, covered near the coast with rising mangroves. Kedah is interesting to ethnologists from the several tribes within its limits. Of these, the Semang and Udaï are found in the forests of the north; the Rayet Utau, the Jakun, Sakkye, Halas, Belandas and Besisik in others to the south; while the Akkye or Rayet Laut (lit. people of the sea) dwell upon the shores and islets of the peninsula. Wherever scattered, they live totally apart from the Malays, and differ from them widely in person, habits and religion; in short, are of a much lower grade in the scale of civilization. The Malays themselves sometimes class the various tribes under one general and expressive appellation, that of Orang Benua—men of the soil. They denominate the four original chiefs of the Benua "Nenek" or our ancestors: many of their own chiefs derive their descent from them, and bear a Benua title. The elders of the Benua exercise considerable influence over the elections of the Malayan panghulu. The panghulu of Rumbowe is chosen alternately from a Jakun tribe (the Bodoanda Jakun) and a Malay tribe: the names of inland places are chiefly Benua terms. There is a striking resemblance in feature, between the Benua and the Malay, and scarcely less in their respective languages. Opinions, as to their identity in favour of the affirmative hypothesis are entertained by many of the Benua and Malay themselves. But from what branch of the great family of mankind the Benua spring, tradition is almost silent. Their general physical appearance, their lineaments, their impatience of control, their nomadic habits, a few similarities in customs, which will be cursorily noticed as we proceed, all point to a Tartar extraction.

The Udaï tribe is little known—many Malay believe they are a class of Jakun; while others affirm that they are a colony from some foreign country: the Tuanku Puteh of Rumbowe informed Newbold that the Udaï are a race of savages, thinly scattered over the states of Jellabu, Pahang, Tringanu and Quedah, and resemble in feature, the darker variety of Jakun. Their size is represented as smaller, and their habits more savage. According to Sir S. Raffles and Mr. Anderson, the Semang of Quedah has the woolly hair, protuberant belly, thick lips, black skin, flat nose, and receding forehead of the Papuan: this is a little at variance with the statements of the natives, who affirm they differ but little, as just mentioned, from

KEDARNATH.

the Jakun. Mr. Anderson describes the Semang of Perak, as resembling those of Quedah in personal appearance, but speaking a different dialect. They possess, he says, the same curling black hair, are a little darker in colour, and have not the thick lips of an African: they subsist by hunting, and make huts of the branches, and cloths of the bark of trees, shunning the haunts of more refined beings. They are numerous in Quedah, and reside generally on or near mountains, such as those of Jerrei and Juru, and are found in Tringau, Perak, and Salangore. They live in rude huts, easily removed from place to place, constructed of leaves and branches. Their clothing is a scanty covering made of the bark of trees: sometimes a cloth obtained from the Malays. Birds and beasts of the forest, wild roots and yams, constitute their food: they worship the sun. The Malaya have an idea, that, when a Semang dies, the body is eaten, and nothing but the head interred; a custom, which, if it exists, reminds us of one prevalent among the Issedoues, a tribe of ancient Scythians, who after feasting on the body of the deceased, preserved the head, carefully removing the hair. The Semang women like those of the ancient Massagetæ, and the more modern Tartar Kie-Kia-sse tribes, are said to be in common like their other property. They have chiefs, or elders, who rule the different tribes. Kedah is a flat and fertile country on the peninsula, famous for its breed of turtle-doves, delicious food for the epicure. When the Kedah prince ceded Pinang to the British he represented himself as independent, and as such was treated by the English. At the base of a range of hills which bound the broad valley of Quedah on the north, the river Perlis discharges itself over a bar into the Indian ocean. The river at its mouth is divided by a small island half a mile long, into two branches. This island is called "Pulo Quetam," or Crab Island, by the natives. Kedah peak is 3,897 feet high. Mr. Logan informs us that the elevations given by Newbold for these peaks (5,693 and 5,705 feet) are mere guesses.—*Osborne's Quedah*, p. 95; *Hooker and Thomson's Flora Indica*; *Ind. Arch.*, Vol. p. 58; *Newbold's British Settlement*, Vol. ii, pp. 362-379; 2, *Sonnerat*, Vol. ii, p. 177; *St. John's Indian Archipelago*, Vol. ii, p. 107. See Papuan.

KEDANGU, MALEAL. *Sesbania Ægyptiaca*, *Pers.* *Æshynomene sesban*, *Linn.*

KEDARIVATA, a fast for women in honor of Isvara.

KEDARNATH, a hindoo shrine devoted to an incarnation of Vishnu and situated

KEELING ISLAND.

within the Himalaya. Its rawal, like him of Badarinath, is a Malabar brahman. Pilgrims were wont to devote themselves to destruction here, by precipitating themselves from the summit of a small rock or, by penetrating within the Himalaya until overwhelmed with snow. It is at the source of the Kalee-Gunga, a stream far smaller than either the Bhagiruttee or Alacnunda, which joins the latter at Rooder-prague.—*Fraser's Himalaya Mountains*, p. 381; *Dr. H. H. Wilson's Hindoo Sects*.

KEDAWUNG, a wood of Java, whitish and moderately hard.

KEDER, ARAB. *Pandanus odoratissimus*.

KEDGEREE, a hamlet on the left bank of the Hooglee river in L. 21° 50' 8" N.

KEDR, Rus. Cedar.

KEDRON, a brook in Palestine, crossed by a bridge of one arch, leading to the garden of Gethsemane. Kedron is a Hebrew word, signifying "darkness or sorrow." Gethsemane is another Hebrew word, signifying "wine-press." On passing over the brook Kedron, and, leaving the Valley of Jehoshaphat on the right hand, the visitor ascends the Mount of Olives.—*Robinson's Travels Palestine and Syria*, Vol. i, p. 121; *Skinner's Overland Journey*, Vol. i, p. 210.

KEDISII of Gallilee was a bást or refuge city. See Bást.

KEE, BURM. *Syndesmis tavoyana*, of Wallich.

KEEAH-NAN, BURM. In Tavoy, a strong crooked wood, used for stocks.

KEEHAR? URIA? A tree of Cuttack, a hard useful wood for mallets, pounders, rammers, and such like articles, and would, perhaps, make up strong furniture.—*Cal. Cat. Ex.* 1862.

KEKRA, HIND., are the carapace shells of crabs, properly Kenkra, a crab.

KEEKUR GUM, produced by *Vachellia farnesiana*—a variety of Gum Arabic.

KEEL, HIND.? Tar, dammer.

KEELA also Mekh, Guz., HIND. Nail.

KEELING ISLAND, in the Indian ocean, south of Sumatra. Here, Mr. Darwin found evidence of subsidence, earthquakes have been repeatedly felt: on every side of the lagoon, in which the water is as tranquil as in the most sheltered lake, old cocoanut trees were undermined and falling. The foundation posts of a stone house on the beach, which the inhabitants said had stood, seven years before, just above high water mark, were then daily washed by the tide. Keeling island is also called Cocoanut island. The Cocoanut crab, the *Birgus latro*, hermit or robber crab of the Keeling islands, is a kind of intermediate link between the short and long-tailed crabs, an

bears a great resemblance to the Paguri. It dwells in deep burrows. Mr. Darwin observed their habits in the Keeling islands, and found that they live on the cocoanuts that fall from the trees. The story of their climbing these palms and detaching the heavy nuts is merely a story. Its front pair of legs are terminated by very strong heavy pincers the last pair by others, narrow and weak. To extract the nourishment, it tears off the fibrous husk, fibre by fibre, from that end in which the three eyes are situated, and then hammers upon one of them with its heavy claws until an opening is effected. It then, by its posterior pincers, extracts the white albuminous substance. It inhabits deep burrows, where it accumulates surprising quantities of picked fibre of coconut husks, on which it rests as on a bed. Its habits are diurnal, but every night it is said to pay a visit to the sea, perhaps to moisten its branchiæ. It is very good to eat, and the great mass of fat accumulated under the tail of the larger ones, sometimes yields, when melted, as much as a quart of limpid oil. They are esteemed great delicacies and are fattened for the table.—*Figuiet; Bikmore, p. 149; Darwin, Voyage.*

KEEMNA, BURM. *Laurus, species.*

KEEMUKO? *Coccolus palmatus.*

KEENA, SINGH. *Calophyllum burmanni, Wight.* Keena oil is obtained from the seeds of different species of *Calophyllum*.

KEERTAR HILLS, running parallel with the Juttel, more to the west, between 25° 50', 26° 40', and about 67° 40'. The average height is probably below 2,000 ft.

KEERTEE CHANDRA, SANS. From keertee, fame, chandra, the moon.

KEERTANA, SANS. From kreet, to produce harmony.

KEESHOORIYA? *Wedelia calendulacea.*

KEESHOORIYA, *Eclipta erecta.*

KEESNEE, a river 13½ miles from Muzfarnuggur.

KEESU, HIND. *Butea frondosa.*

KEFFI, a green and yellow-striped kerchief worn on the head by the Jehen tribe of Bedouin Arabs at Yambavi.—*Mrs. Ellwood's Letters.*

KEFFING ISLANDS. This little group, in the Molucca sea, is encircled by very extensive reefs projecting into deep water, rendering it difficult of approach. The Cachelot or spermaceti whale abounds in the ocean, and might support an extensive fishery. Some of the islets are low, sandy, girdled by reefs, and, as in Ghissa, with a lagoon in the centre, absolutely swarming with fish, while the shores are peopled by ducks and snipes. Keffing is also called Pulo Manok or Bird Island and lies midway between Ceram and the Serwatty group. It is a high solitary mountain, resting on the bosom of the sea, with a truncated cone, desert, and the refuge only of myriads of birds, which deposit such vast quantities of eggs, that many of the natives of the neighbouring isles visit the place and subsist for whole days on this wholesome food. Sulphur is also found on the rocks. The little communities existing in these scattered groups present curious phases of social life. Dwelling in houses erected on posts, they in many instances surround their villages with rough walls of coral, occasionally carrying a similar fortification all along the shore. Many indications among them prove the existence of piracy, besides calico and china-ware. Slaves, nutmegs, trepang, tortoiseshell, and edible birds-nests, are bartered for powder, shot, muskets and small cannon, and betray the inclination of the people to the use of arms. Many of them, apparently peaceful traders, are secretly addicted to piracy, though some bear a character for innocence and love of industry altogether inconsistent with this pursuit. Among these are the inhabitants of Motir, a gentle, tranquil, sober tribe, following the occupation of potters, and supplying the neighbouring islands with vessels and utensils of various kinds made of red clay elegantly moulded and of good quality. These compete in the markets of the Molucca sea, with the plates and pans brought by the traders of Keffing from the Ki Islands.—*Kolff's Voyage of the Daourga, pp. 220, 345; Darwin's Coral Reefs; Crawford's Ind. Arch., Vol. iii, p. 447; Temminck, pp. 111, 307; As. Journ., p. 336; St. John's Indian Archipelago, Vol. i, p. 142.* See Kei.

KEG-FIG, *Diospyros kaki.*

KEHJOOR, HIND. Properly Khajur, the date tree, *Phoenix dactylifera*, also the date.

KEHL-KANG, SINGH. Plantain.

KEI, this group of islands adjoining the Arru islands, is inhabited by the Arafura race, and the word Key, Kei or Ki is prefixed

KEIM.

to the names of all their villages. The great Kei is about the size of Tanakeka, an island near Macassar. The men profess mahomedanism, but eat hog's flesh, and the islands produce Maratigo and Banyaro woods, well adapted for masts. In the island of Dori, the Papuans are called Myfore. The are about 5 ft. 3 inches high, few attain 5 feet 6 inches. They wear their crisped hair its full length, and generally uncared for, which gives them a wild, scared appearance. The men, not the women, wear a comb. Amongst the Arafura or Papuan of Ke, the women are not secluded, the children are merry, noisy, and have the nigger grin, and amongst the men is a noisy confusion of tongues and excitement on every occasion. The Ki are a group of ten islands, forming the northern of the south-easterly islands. The natives are industrious and are great boat-builders. The *Carpophaga concinna* occurs there, also in Banda where it is called the nutmeg pigeon. The islands are covered with luxuriant forests. It is occupied by two races, one of them the Papuan who make cocoanut-oil, build boats and make wooden bowls. Their boats are from small planked canoes to prahus of 20 to 30 tons burthen. They build the skin first and afterwards fit in the knees and bends and ribs. Money is not used but every transaction is in kind. The Papuan wears a waist cloth of cotton or bark. The other race are mahomedans who were driven out of Banda and wear cotton clothing. They are probably a brown race, more allied to Malays, but their mixed descendants have great varieties of hair, colour and features, graduating between the Malay and Papuan tribes. The *Cyphogastra calepyga*, a beautiful species of the *Buprestidæ*, occurs here; also the butterfly orchis, *Phalaenopsis grandiflora*, and two large beetles, *Therates labiata*, and *Tricondyla aptera*. *T. labiata* is ever on the watch, and from time to time emits an odour like otto of roses. *T. aptera* of the Malay islands resembles a large ant more than an inch long and is of a purple-black colour. It is wingless.—*Bikmore*, p. 243; *Wallace*, Vol. ii, pp. 103, 114, 115. See Ke.

KEIBI, Pers. Ape.

KEIFIKT. The aba or camaline, as it is styled in the Persian Gulf and the Keifiet, are worn in Oman, by all classes. It is a broad kerchief, striped green, red, and yellow, having the sides hanging down, with knotted strings appended to them, serving by their motion to keep off the flies, which are here excessively troublesome.—*Wellsted's Travels*, Vol. ii, p. 210.

KEIGHWAD, see Tin.*

KEIM, HIND. *Nauclea parvifolia*.

147

KEKAR.

KEINT, HIND. *Pyrus variolosa*; Ban Keinti, HIND, is *Edwardsia mollis*.

KEIRRI, HIND. *Pinus excelsa*.

KEISH ISLAND is almost flat, and yielding a few date trees. The goats on this island were consecrated to Venus and Mercury, in the time of Alexander, when Nearchus, with the Grecian fleet, cast anchor here: for the Catana of his journal, (preserved by Arrian) is Keis or Keish in the nomenclature of oriental geography. It is, however, said to have been named Keish since the tenth century, when one Keis, the son of a poor widow, in Siras, embarked for India, with his sole property, a cat. There he fortunately arrived at a time when the palace was so infested by mice or rats, that they invaded the king's food, and persons were employed to drive them from the royal banquet. Keis produced his cat, the noxious animals soon disappeared, and magnificent rewards were bestowed on the adventurer of Siras, who returned to that city, and afterwards, with his mother and brothers, settled in the island, "which, from him, has been denominated Keis, or, according to the Persians, Keish." In countries widely separated, and in various languages, the same story has been related of different persons.—*Ouseley's Travels*, Vol. i, p. 170.

KEITHA, HIND. *Pyrus variolosa*.

KEIVAN, the Chaldee Saturn.

KEJ, the most western of the Kelat territories. Kej is called Mekran,—sometimes also Kej Mekran, and is supposed to be the Gedrosia of the Greeks. It is inhabited by many tribes of whom the Gitchki is the most numerous, but about half the population is of a sect of mahomedans called Ziggari. The maritime and fishing population of the little ports on the coast of Mekran from Sanmiani to Charbai, are denominated Med, and comprise four divisions, the Guzburi, Hormari, Jellar-zye, and Chelmar-zye. Although often overrun by armies from Kelat, its subjection has been more nominal than real. A treaty was made with the naib of Kej, faqueer Noor Mahomed, of the Bezunjo tribe, in 1862, by which he agreed for an annual subsidy to protect the Mekran telegraph which passes through his territories. The subsidy granted was Rupees 6,000, of which Rupees 1,000 are paid to the chief of Pusnee. If the term Kej was in use anciently, it is likely to have given rise to the name Gedrosia.—*Rennell's Memoir*, p. 183; *Treaties, Engagements and Sunnuds*, Vol. vii, p. 85.

KEJU, MALAY. Cheese.

KEKAR or Safed Kikar, HIND. *Acacia leucophloea*.

KELADY, MALAY. *Caladium esculentum*.

KELAH, see Karen, Tigris.

KELAT, a town in Beluchistan, the residence of a chief who has the title of Khan, and who is paramount amongst the various tribes who occupy that region. The inhabitants of Kelat and Beluchistan, may be comprised under four grand divisions, Brahui, Beluch, Dehwar and Babi, with a few hindoos engaged in commerce. The Beluch and Brahui form the bulk of the population of Beluchistan, the former inhabiting the skirts of the mountain ranges, and the latter the mountain districts especially in Sarawan and Jhalawan. The territories of the Khan of Kelat, comprised under the term "Beluchistan," are extensive and varied in character to no ordinary degree. They consist of lofty, rugged table land and level ground, and their climates exhibit the severest heat and the most intense cold. Viewing them geographically, they fall into the natural division of mountain and plain and may be considered under the following heads:—

1st.—The great central mountain range or table land running north and south which comprises the provinces of Sarawan, Jhalawan, and Lus.

2nd.—The mountain district extending eastward, inhabited by the Murree and Boogtee, situated to the south of Sind and Kutchee.

3rd.—The province of the plains, that is, the district of Kutch Gundava.

4th.—The province of Mekran, diversified by mountain and desert which stretches westward along the sea coast.

5th.—The great desert of Seistan to the north of the last named districts.

KELAT.

The first of these great divisions, or rather the portion of this comprised under the name of the province of Sarawan, may be thus described:

The mountainous table-land of Beluchistan extends from Cape Monze, on the south to the Affghan mountains north of Quetta, or from 25° to $30^{\circ} 40' N.$ latitude, and is consequently about 340 miles in length. In breadth it extends from the level plains of Kutchee eastward, to Nooshky on the borders of the Seistan desert westward, extending thus about 150 miles. But its breadth is by no means uniform: widest about the centre, it gradually narrows southward, until at Cape Monze, the range is only a few miles in diameter. The height also varies in the same proportion. The greatest altitude is attained at Kelat about 7,000 feet, where the climate is European; southward it rapidly decreases, until, in the province of Lus, the elevation is but a trifling degree greater than that of Sind. It decreases also northward, the height of Quetta being about 5,900 feet. This elevated district is composed of a succession of mountain ranges, which, rising from the plains of Kutchee and valley of the Indus, tower one above the other in successive steps, until having gained their maximum, they subside in lesser and lesser ranges westward. Their general direction is from N. N. E. to S. S. W., and this uniformity of strike is wonderfully preserved throughout. The mass is broken through at two points, viz: by the Bolan pass, at its northern extremity, and by the Moola pass near Gundava. Here the ranges are twisted out of their original direction, and run in a N. N. W. manner. Through these two great channels the principal draining of the country is effected producing the Bolan and Moola rivers. Lying in the bosom of the mountains are numerous valleys, having naturally a like direction to the ranges between which they run and varying in height according to their position; so that almost any desired temperature and climate may be obtained from the sub-tropical one of Sind to the temperate one of Kelat. The district is naturally moderately well watered by rivulets and springs and rivers, artificially so by wells and karez, but there are, as might be inferred, no rivers of any magnitude. The heights of the ranges are clothed with trees (Junipers), which yield excellent firewood and durable timber for building.

The valley of Quetta, or Shawl, is situated in $67^{\circ} E.$ long. and 30° to $30^{\circ} 20' N.$ lat. It is about 15 or 20 miles in length, and from 4 to 6 in breadth. It is bounded to the westward by the Chah'l-tan range, having a strike of S. S. W. by N. N. E.

KELAT.

The valley of Kanhee, is situated to the west of, and runs parallel to, that of Quetta, but extends further south. Its length is about 30 miles, and breadth 5 or 6. It is bounded on the east by the great Chah'l-tan range, which separates it from the valley of Quetta, and on the west by a parallel range of much less height, which, towards the north separates it from the valley of Pishing.

The valley of Moostung, is the principal and most extensive valley of the tract under consideration, and is situated to the south of the valleys of Quetta and Kanhee. It extends from about 29° 30' to near 30° N. lat., and its eastern boundary is nearly defined by the 67° of E. long. It is therefore about 40 miles in length, and varies in breadth from 5 to 8 miles, spreading out towards its upper end, and being gradually constricted towards its lower or southern extremity. It is bounded by parallel ranges, running N. N. E. by S. S. W., of medium height, probably from 500 to 800 feet. The range to the eastward is pierced by a pass leading to the Dasht-i-be-Daulat.

The Dasht-i-be-Daulat is an elevated valley or plain, situated to the N. E. of Moostung, at the head of the Bolan pass. Its diameter is from 15 to 20 miles, and of its boundaries some approach the Bolan pass. It has no towns or villages, but is occasionally dotted with the toman of the Kurd tribe. Some portions of it are cultivated in the spring and summer months; but during the winter it is a black, howling wilderness, destitute of trees, or any shelter; the snow lies deep on it and cold winds whistle over its frozen surface. It is subject to the depredations of the Kaka tribe of Affghans, and caravans are frequently plundered by them. In the summer it is clothed with the fragrant Turk plant, and its surface diversified by fields of waving grain. It has no streams, but one or two wells have been dug and water obtained with some difficulty; the cultivators are dependent on rain and heavy dews.

The valley of Mungochar, is situated to the southward of that of Moostung, more circular in form, and of much less extent; destitute of trees, save a few stunted mulberries.

The valley of Giranee, is situated south of Mungochar, and is distant about 8 miles from Kelat.

The valley of Ziaret, is situated to the westward of, and runs parallel with, the proceeding, is of considerable extent, well watered, and cultivated.

Valley of Chappar, lies westward of Ziaret and extends from the vicinity of Kelat to that of Mungochar. It is, therefore, of con-

KELAT.

siderable size; it contains the village of Chappar and other small hamlets.

The valley of Kelat is the most southern division of the province of Sarawan, and its chief town is Kelat, the capital of Beluchistan, and situated about its centre, in lat. 29° N., and long. 66° 40' E. Dr. Cook supposes, 1st, that the original inhabitants of the country were hindoos, who fled from the conquering mahomedans who invaded Sind, Lus, and Mekran, A. D. 93; 2nd, that the Brahui were Tartar mountaineers, who gained a footing in the country, and ultimately supplanted the former, becoming the ruling race; 3rd, that the Beluch came from the westward, but whether they were Seljuk Tartars, or Arabs from Aleppo, is a matter of doubt. Dr. Latham, however, classes the Belooch nation with the Persian, but considers them as a modified form. He says, "E. and S. E. of the proper Persians of Kirman, come the Beluch of Beluchistan. If Rask's great theory be the correct one, which makes all the fragments of nations speaking a Tamulian dialect parts of one great continuous whole, which spread in the earlier ages over India and Europe, underlying the more recent system of Celtic, Gothic, Slavonic, and classical nations, as the primary strata in geology underlie the secondary and tertiary, but cropping out, or being exposed here and there—as the fragments of nations—like the Lap, Finn, and Basque in Europe, and of the Cuchwaree, Colhatee, Toda, Ghond, Lar, and other mountaineers of India; if he says, this theory be the correct one, then the Brahui, being of the great Tamulian family, would be the aboriginal inhabitants of the country. Thus the Koord who inhabit the Dasht-i-Bedaulat, doubtless came from Kurdistan, probably amongst the followers of some mahomedan invader of India, and, perhaps, laden with spoil, preferring, on their return, to settle where they now are, rather than continue their march to their own country, made choice of the Dasht-i-Bedaulat. Again, many of the Jhalawan tribes are undoubtedly of Rajpoot origin; and until lately, the practice of infanticide was prevalent amongst them. Near Bagwana is a cave in the rock filled with the dried mummy-like bodies of infants, some of which have a comparatively recent appearance. The Sacre, who formed part of Alexander's army, and whose country is stated by Wilson to have been that lying between the Paropamisian mountains and sea of Aral, still exist as a tribe of the Brahui of Jhalawan. It is not improbable that they accompanied Alexander as far as the south of Sind, and returning with Craterus up the Moolla Pass, settled in their present position.

The Beloochee also have by no means a pure and unbroken descent from any one source. Adopting Pottinger's theory, that the main body were Seljuk Tartars driven out of Persia, as he describes, and that the Beloochee have no resemblance in any way to the Arabs, yet, undoubtedly, many are of Arabic descent. In many cases the outline of their physiognomy is very similar to that of the Arabs of Egypt and Syria; and if such a Belooch was dressed in the Arab dress, it would be exceedingly difficult to detect his nationality. Others are Sindians who fled to the hills on the invasion of their country by the mahomedans. The original hindoo inhabitants of the Murree and Boogtee hills were driven out by their present occupants, but the natives of Barkhan (the Khetranee) inhabiting the more mountainous district to the northward, were able to hold their own. The whole are nominally subject to the Khan as chief of all, but his power appears to vary with his popularity. The tribes especially the Brahui mountaineers, reside in tomans, or collections of tents. These tents are made of goat's hair, black or striped; the furniture is very simple—a few metal cooking-pots, a stone, hand-mill, and some rough carpets, and rugs, with a distaff for spinning wool, and a hookah, are all that are usually found in a Brahui tent. That of the chief may, perhaps, be better furnished, and he is richer than his neighbours in flocks and herds. The dress of the lower orders is made up of a long tunic, trousers loose at the feet, and a black or brown great-coat, or cloak, usually of felt, kummerbund and sandals. They wear a small cap, either fitting tight to the outline of the head, or dome-shaped, with a tassel on the top. Those of the higher classes are elaborately ornamented with gold thread. A few wear turbans, and the Belooch have them preposterously large, of white muslin. The higher classes are somewhat better dressed and carry loongees, or scarfs, which they throw around their shoulders in exactly the same manner as a Scotchman wears his plaid, and, strangely enough as the ancient Irish or Hyperboreans wore them ages ago. The men wear their hair long and flowing over the shoulders, whilst a luxuriant beard falls over the breast. The women tie theirs in a knot behind, brushing it smooth in front, and keeping it in place by a kind of fixture. The colour of the hair is frequently brown or red, and many of the natives have a European cast of countenance, in some cases strongly resembling the Irish. The women wear a long gown reaching to the feet and elaborately worked at the breast. Red is the fashionable colour. Where a blood feud exists, a man shoulders

his matchlock and stalks his enemy as he would an ibex, shooting him down whether he be armed or not, or working in his field. In the early part of the nineteenth century there was a feud existing between two tribes, in which one had already lost 300 men, and the other 120. In some cases, by making compensation either in money, land, or cattle, the difference may be settled.

At the commencement of the winter months, all emigrate to the plains, and many leave the hill country as early as the middle of September.

The Merdoe, a Brahui tribe living near Khozdar, obtain antimony and lead from the hills of Kapper. The lead is found native, in pieces the size of marbles, a fact extremely rare in mineralogy. The foregoing remarks have reference to the province of Sarawan.

In writing of Jhalawan, Dr. Cook, says the mountain range of Beluchistan is the great natural boundary of western India, and may be described, figuratively, as composed of a vast under-structure, surmounted by parallel rows of walls (represented by mountain ranges), cut through here and there by long and meandering passages.

The Merdoee tribe of Brahui, obtain lead-ore from many spots in their vicinity and reduce it. He visited a place called Soman about 14 miles distant in a southerly direction. It was situated amongst low sand-stone hills, black externally, with fragments and boulders of dark-blue limestone, and arenaceous nummulitic rock scattered around. Beneath the sandstone was a red, sandy clay, and in this is found pieces of red ore, carbonate of lead, in thin, flat, tabular masses, looking like a broken-up vein, which were covered externally with a layer of calcareous earth that prevented them from being easily detected. The place where this is found can hardly be called "mines" as the shepherds merely poke about with a stick, pick up any promising pieces, roughly estimate the specific gravity by the hand, and, if they have not the proper weight, reject them. At Khozdar the implements are very very rude. A rough furnace with four upright, square stones, and a hole below to insert the nozzle of a pair of bellows.

An extraordinary sect, the Dae, are met with at Gajer. They resemble the Brahui in appearance, and wear the same dress. Also, portions of certain Brahui tribes are Dae, such as the Sageter, Takee, Shadu, Laee, Marbrow, &c. They have a moolla or priest, and a book. They say that they originally came from the westward near Kej, where there is a city called Turbot. The sect abounds in Mekran, and has extended as far east as this. At the city called Turbot is

KELAT.

a little hill of circular form called by them Ku-Murad, on the summit of which is their principal musjid, where they meet at stated times to perform their rites.

Professor Wilson, in his "Ariana Antiqua," page 141, mentions the Dace amongst other Scythian tribes, as associated with the Massagetæ, and in a map attached to Digby's translation of Quintus Curtius, their position is fixed a little south of the Jaxartes. This coincidence of association with the Sageta and Sakæ, both then and now, is worth remarking.

The following heights were obtained by the boiling point of water :

• Route towards Mekran.

Return Route.

	Feet.		Feet.

Gajer ...	2,960		

The climate of Mekran generally, but especially at the level tract south of the mountains, is very unhealthy. Ghorbusta or Ghorbund, occur, structures at times almost bearing a resemblance to the Cyclopean remains of Europe. They are evidently traces of a people, who occupied or passed through the country long prior to the advent of the present occupants, who know nothing of the builders, or of the uses of the buildings, attribute them to Kaffirs or infidels. They are found usually in out of the way places, narrow valleys at present stoney and barren. They are placed always on declivities, or across the mouths of ravines. Their solidity and size are proportioned to the steepness of the declivity ; but, where there is only a gentle slope the walls are narrow, low and slightly built, but where the descent is great and the flow of water after floods and rains would be violated, they are of great thickness and height, and, as seen in the valley beyond Baghwana, supported and strengthened by buttresses or walls built at right angles. They always present a scarped face to the opposite side, which, when well-preserved, is levelled off with the surrounding and superior ground. Those built across the mouths or ravines are very solid, and high, and usually the builders have taken advantage of some mass of rock jutting out as a sort of foundation. Those in slopes are never seen singly, but always in numbers varying with the extent of the ground to be

KELAT.

covered, and placed in succession one behind the other. The intervening ground being levelled is thus formed into a succession of terraces. These facts can lead, only to one conclusion, namely, that they were connected with the irrigation of the country.

Those built across ravines were intended to form tanks for the preservation of the water that came down at irregular intervals in floods. Those on slopes, to economise the distribution of the water ; the surplus water of one terrace running over and flooding the lower one, depositing as it went a layer of surface soil. The ground thus levelled of course became more valuable, freed from the irregularity and roughness which characterise these narrow stoney valleys. They are almost confined to the province of Jhalawan, and are largest and most important in the southern and south-eastern portions of the province. That the ancient city at Gunjuck is of the same date, and constructed by the same people, Dr. Cook thinks extremely probable. From the numbers and position of these structures, the people who built them must have been extremely numerous ; must have felt that the country as existing by nature was utterly incapable of supporting them ; and they must have possessed an energy and ingenuity which the present races are totally without. It appears probable nay almost certain, that they must have swarmed eastward over the mountains from Mekran, making their appearance on the south-west portion of the table land. Gradually pushing eastward and northward, as their numbers increased, either rapidly by additions from without or more slowly by increase of the population from within, they ascended to the various valleys as high as Kelat, when, discovering the great eastern outlet, the Moolla pass, they found an exit by it into the plains of India. How long they remained on the table land ? from whence they originally came ? and over what countries they eventually distributed, are alike mysteries.

There are one or two points of slight resemblance between the "Pe-lasgi," the builders of the Cyclopean walls of Greece, Italy, &c., and the Ghorbusta builders, suggesting that they might have been a kindred people with kindred habits. The Pelasgi came from Asia, not from Asia Minor, not from Syria, not from Assyria, not from Persia, but probably from that birthplace of emigration the tract north and north-east of Persia. The Ghorbusta builders probably came from the same tract and were not Mekranes, nor Persians, nor Assyrians. The Pelasgi, existed only a few generations in Greece (about 250 years) before they were turned

KELAT.

out by the Hellenes; they must therefore have brought with them when they entered the country, their propensity for building massive walls, and commenced their work almost immediately on arrival. It was probably the same with the wall builders of Beluchistan, they only remained in the country long enough to allow them to extend northward as far as Kelat, when, meeting with the Moolla Pass, they debouched into the plains. Their art was a fully developed one, before they arrived here to carry it out. The Pelasgi arrived in Greece about 1800 B. C. This date seems to accord roughly with the advent of the unknown people into Jhalawan. The Ghorbusta buildings differ considerably, however; for when compared with the Cyclopean remains, they are slight, most roughly executed, and insignificant; yet they evince a like instinct and habit in two races which probably came originally from the same region. The races who now occupy the territory of confederate tribes, termed Beluchistan, are (1) Baluch tribes proper, viz.: the Brahui, the Rind and the Lomri; (2) Those not Baluch, viz.: the Dehwar of the capital, the Jet of Kach Gandhava, the races occupying the maritime provinces, the Afghan race of Shall and the hindoo residents of villages. Baluch is a term used by Ibn Haukal who says, "the Baloujes are in the desert of Mount Kefes, and Kefes, in the Parsi language, is Konje, and they call these two people Koujes and Baloujes." The Baluch race, extend from the eastern limit of Kach Gandhava to the confines of Persia, but include many tribes, speaking different dialects and of very different descent, as some have dark countenances and others very fair. The greater part of the country west of the Indus, from the parallel of Shikarpore to that of Sehwan, is held by Baluch tribes. In the Afghan district of Siwi, N. W. of Dadar, are the Baluch tribes of Khajah and Shilanchi, the latter, in Siwi, being neighbours of the Afghan tribes of Safi, Kurak, Margazari and Duppal. Also, in the hills east of Kahani, are the independent remote Husseni, Chucha, and Ketra tribes of Baluches. They border with the Pindari Affghans on the east. There are numerous Baluch east of the Indus, and those in Bawalpore and the Panjab, are said to be the Rind.

The countries west of the Indus, to which Europeans apply the terms Baluchistan and Afghanistan, are not known by these names to their inhabitants. Their inhabitants are, partly, dwellers in towns and, as indicated by their physical appearance, are of widely different races, who have pushed or been pushed forwards from the south, the west, and the

KELAT.

northwest, into their present sites. A considerable portion of Baluchistan is subject to the khan of Kalat, the four subdivisions of whose territories are given by Mr. Masson as—

Western.	Maritime.	Central.	Eastern.
Nushki Kharan Mushki Panchghar Kej Kolwah Jhow	Las Hormara Pessani	Saharawan Kalat Jhalawan	Kach Gandava Harand on the Indus Dajil "

The Zigger Minghal and Raskshani, who inhabit Nushki, have no proper towns or villages, but reside in tents, and are not migratory. Their river, the Kaisar, is useless for irrigation, and is lost amongst the sands. They cultivate wheat at the skirt of the hill ranges supporting the plateau of Saharawan. Snow seldom falls. The Zigger Minghal at one time occupied the Dasht-i-Guran near Kalat, but their increasing numbers compelled them to migrate into Nushki, dispossessing the Raskshani, of whom two tomons or clans still reside at Nushki. They have a good breed of horses, called Tarji. Their flocks are very numerous.

Kharan province, in which lies two small towns, is occupied by a tribe of Persian origin called the Nousherwani, of whom Alif Zye are one branch. They cultivate a little wheat and barley but insufficient for their own wants. The Nousherwani of Kharan, claim a Persian origin and descent from Nushirwan, similar to the Udupur Rajputs.

Mushki has several towns and castles, and is occupied by the Mehmasani, the Nousherwani and Mirwari tribes.

The Mirwari Brahui are located in Mushki Jhow and Kolwah. The Brahui entered from the west and point to Khozdar as the capital prior to occupying Kalat.

Mehmasani have branches in Seistan, and the hills of Luristan.

Kolwah, four or five days' journey from the coast, has several villages and castles, and is occupied by the Mirwari, Rodahi, Homerari and Nousherwani tribes, who interchange their commodities with the coast, sending wool, ghi, hides and bdellium.

Jhow has but one village, Nandaru, its tribes are the Mirwari and Halada, the latter Brahui and pastoral. Numerous mounds here called "daim" exist, where coins and trinkets are found, remnants of some former race.

Panchghar, has ten small towns, it is celebrated for its groves of date trees, is occupied by the Gitchki tribe of Brahui, of peaceful and agricultural habits.

Kej, the most western of the Kelat territories, is inhabited by many tribes, of whom the Gitchki is the most numerous, but above half the population is of a sect of mahomedans, called Zigger.

Las is separated from the Lower Sind and the Indus delta by the Hala mountains, and is occupied by the Lassī division of the tribe of Lumri or Numri. They have about twelve divisions or clans, one of which, the Jambut, furnishes their chief or Jam. They trace their origin to Samar, who founded Samarkand, and acknowledge a consanguinity to the Bhatta of Jesulmir. The Lumri are an active, hardy, pastoral, people, their wealth consists in flocks of goats, with fewer buffaloes or camels. They despise agriculture, wild Lumri are found grazing on the rocky banks of the Hab river. Their language varies little from that current in Sind. They manufacture coarse fabrics from the wool of their goats and camels. The Lumri eat meat almost raw and is greatly addicted to the use of opium. It has only two or three places for receipt of custom. Near one of these, Bela, are found coins, trinkets and funeral jars. Sunmiani contains numerous Melman, and part of the fixed population of Bela is called Jaghdal.

Hormara, a sterile district with a port of same name subject to Las. Near Jabl Malan, is a tribe called Gujur; at Garuki, the Sangur tribe, and at Hormara in Mekran, with 400 houses, is a tribe of this name. The Hormara tribe say they came originally from Sind.

Pessani, west of Hormara, is a small port of 200 houses.

Mekran: the maritime and fishing population of the little ports on the coast of Mekran, from Sunmiani to Charbai, are denominated Med, and comprise four divisions, the Guzbur, Hormari, Jellar-zai and Chelmar-zai.

The Saharawan territories are about 10,000 square miles. The population does not exceed 50,000. The borders of this elevated plateau, the more northern of the Baluch confederate provinces, run with the Affghan districts of Peshing and Toba, dependent on Kandahar, and is separated on the east by a range of hills, from Dadar and Kach Gandava. It has only the Bolan river, and few rivulets, but the climate is cool, and the rains ensure good grain harvests.

Shall is one of its districts where snow lies for two months of the year. The population consists of the Kassi tribe of Affghan who claim affinity with the Safi clans, but in spring and summer numerous toman of the Brahui range over its plains. Its capital,

called Shall by the Baluch, by the Affghan is called Quettah, an equivalent for Kot or fort.

Mustung has a healthy climate and fertile soil. It contains no Affghan, the fixed inhabitants are Dehwar, mixed with the Baisani, Sherwani, Mahomed shahi, Bangol-zye, Lari, and Sirpherra tribes of Brahui.

The Baisani the most respectable of the Saharawani tribes, (from "rais" Arab, a ruler), are able to raise 500 fighting men.

The Shirwani occupy exclusively Khad and Kishna, and reside with other tribes in Shall and Mustang. They take their name from their belief that they came from Sherwan on the Caspian.

The Mahomed shahi dwell chiefly at Mustang and Kuhak, but hold also Zir-dad, a village west of Bagh in Kach Gandava.

The Bangol-zye exclusively occupy Isprinj, but reside also at Shall and Mustang and in winter repair to Tull near Lebr.

The Lari, exclusively hold Nermuk, but reside also at Mustang and Shace, with other tribes.

The Sh Luss reside at the skirts of the hills west of Khanak.

The Sirpherra reside in summer in Ghurghina, and during winter in Kach Gandava.

Mangebar has a few dispersed hamlets. It is well irrigated with canals and the whole plain is intersected with bunds or dams to preserve the rain. The toman are scattered over the plain. Many brood mares are kept. It is separated from Mustang by a lengthened valley termed Khad, in which the Sherwani tribe of Brahui dwell. The Brahui tribes on the east, border with the Mandawari, Kuchik and Puzh Rind tribes and the Ghazgi Brahui, adjacent to Kach Gandava.

Besides these, Merv is held by the Kurds, Isprinj by the Bangol-zye; Kuhak by the Mahomed shahi; Nurmuk by the Lari Brahui; Lup by the Kalui Rinds; Kishan by the Sherwani. The fixed population of the several villages dispersed over this tract does not exceed 2,500. On the west of Saharawan, the country is held by pastoral tribes, the Sirpherra and their branch, the Bodani, Kurds of the Dhasht-i-be Dowlat: Sherwani of Khad, and the Baisani of Dolni and Khanak.

The Dhasht-i-be Dowlat belongs to the Kurd Brahui tribes. It is in the northern part of Saharawan, and west of the Bolan hills, is about 15 miles in length and breadth. In spring it is covered with lovely flowers and grasses and is then covered with the toman of the Kurd, who retire to Merv after the harvest of autumn, and then predatory bands of the Khaka roam over the ground and attack travellers.

KELAT.

The Kurd possess the Dhasht-i-be Dowlat and Merv, also Tikari in Kach Gandava.

Kelat, is the name of a town and province. The town with its 800 houses is in a narrow valley having on the east the hills of Kach Gandava. The population of Kelat consists of many Delwar, Brahui, hindoo and slaves, and the entire suburb is occupied by Affghan.

The plain of Dhasht Garan, south of Chap-par, is inhabited by the Sunari, a branch of the Jehri of Jhalawan.

Jhalawan with less elevation than Saharawani, is held by Brahui tribes, amongst whom are the Minghal, Bizunju and Samalari, in the hills. The fixed population in their little towns does not exceed 10,000, are greatly exceeded by the pastoral tribes. The great tribes of Minghal and Bizunji, giving them the preponderance.

The Minghal are of rude and predatory habits. They occupy the southern hills of Jhalawan from Khozdar to Bela in Las. They have two great divisions, the Shahi zye and Phailwan zye.

The Bizungi, of which are two great divisions, the Amalari and Tanbarari are west of, but on the same hills as, the Minghal. They are a violent people and much addicted to rapine.

Kach Gandava of which the capital is Gandava, is a great level tract, and is inhabited by three very distinctly marked races, the Jet, the Rind (including the Maghazzi,) and the Brahui. The Jet seem the original race, and occupy the centre of the province. The Rind with their lawless sub-tribes the Jakrani, Dumbaki, Bughti and Marri are a more recent intrusive race dwelling on the skirts. The Doda, a division of the widely dispersed great Marri tribe, for the last three centuries have occupied the hill ranges east of the plain of Kachi. The Marri are a brave race, and have long been distinguished as daring depredators.

Harand and Dajil, in Kach Gandava, but bordering on the Indus, are inhabited by the Gurchani tribe of Rind, who have the Muzari on their south.

The great Rind tribes are subdivided into 44 branches, though not Brahui are denominated Baluch. Their traditions affirm them to have immigrated ages ago, from Damascus and Aleppo. Their language is the Jetki in common with that of the other inhabitants of Kach Gandava and Mard-i-Rind means a brave man. The Rind of Kach Gandava are of the Utan Zye divisions.

The Utan Zye dwell at Suran.

" Dumbki } dwell at Lehari.
" Jakrani }
" Doda Marri " Kahan.

KELAT.

The Bughti dwell at the hills east of Lehart, Sing Saloh and Teriki.

" Homarari dwell at Tambu.

" Jamali " Rojan.

Of these Rind tribes, the Dumbki, Jakrani, Bughti and Doda Marri, have always been distinguished by their rebellious and predatory habits. They indulged these in the attacks on the British armies west of the Indus. The Marri tribe is considerable and inhabit the eastern hills of Kach Gandava, and a peaceful and obedient portion of the tribe are in the hills west of the province below Jell. A large portion are at Adam Marri, on the S. E. frontier of Sind. The Marri of Kach Gandava were long notorious for their lawless habits and made frequent inroads on the plains.

The following minor Rind tribes reside in the north eastern-hills of Saharawan :

Kallui at Lap.	Mandarari at Rodbar.
Kuchik at Kirta.	and
Pushh at Johau.	Bugh at Kajuri.

The Rind on the western banks of the Indus are two great tribes, the Gurchani, who inhabit Harand and south of these the predatory, but nearly independent, Mazari tribe.

The Maghazzi have only four families, the Butani at Jell, being the chief. They are the deadly enemies of the Rind, but are probably of the same race.

Lt. (Sir Henry) Pottinger states that the races occupying Beluchistan, are divided into two great classes, severally known by the appellation of Beluchi and Brahui, and that these again are sub-divided into an infinite number of tribes, who take their names from the chief under whom they serve, the district or country to which they belong, or the traditions whence they derive their descent. The Beluchee partakes considerably of the idiom of the Persian and at least one-half of its words are borrowed from that language, but greatly disguised under a corrupt and unaccountable pronunciation. The Brahui, on the contrary, is so dissimilar in its sound and formation, that he did not recollect to have marked in it a single expression in any way approaching to the idiom of the Persian. It contains, he says, a portion of ancient hindoo words. The contour of the people of these two classes is as unlike, in most instances, as their languages, provided they be descendants of a regular succession of ancestors of either ; but the frequent inter-marriages which take place amongst them have tended in some degree to blend together the peculiar characteristics of both, that in many families, and even whole tribes, they have ceased to exist. The Beluchee branch, in the first

instance, from the original class of that name, into three principal tribes, called Nharu, Rind, and Mughazi. The Nharui, principally inhabit that portion of Beluchistan, which lies to the westward of the desert, and there are likewise khel of them at Nooshky and in Seistan.

The Rind and Mughazi are settled in Kutch Gandava, to which fertile plain they have immigrated at different periods from the province of Mekran, and have become incorporated with the Jut, or cultivators of the soil, as the subjects of the khan of Kelat; a few of these likewise reside in the hills to the north-east of Kutch Gandava and skirts of the deserts north of Kelat. The sub-divisions of the Brahui tribes amount to about ten, and those of the Rind and Mughazi, each amount to double that number.

The Brahui are also divided into an indefinite number of tribes and khel, and are a still more unsettled and wandering race, always residing in one part of the country, during summer; and emigrating to another for the winter season; they likewise change their immediate place of resort many times every year in search of pasturage for their flocks—a practice rare among the Beluchee. They differ so much from the Beluchee in external appearance, that it is almost impossible to mistake one for the other. The Brahui, instead of the tall figure, long visage, and raised features of their fellow-countrymen, have short, thick bones, with round faces and flat lineaments; and Lieutenant Pottinger had not seen any Asiatics to whom they bear any resemblance, for numbers of them have brown hair and beards. The Kumburani, the chief tribe, regarding which there is a peculiarity, viz.: that of being divided into three distinct gradations of rank, called Ahmedzye, Khani and Kumburani. The first supplies the khan; the Khani are of the secondary rank of chiefs. The word Kumburani includes all the remainder of the tribe, but in common is applicable to the whole body. They receive wives from, but do not marry their daughters into, other tribes.

Of the original settlement of the Beluch and Brahui tribes in the country, he says, when Mahomed, the successor of Subktagin, the first sultan of the Ghaznavi dynasty, turned his arms towards India, he subjugated the whole of the level district, west of the Indus, to the very foot of the Brahui mountains. His son, Musaood, extended these conquests still more westerly into Mekran; he adhered, however, to his father's plan of not ascending the lofty ranges, and all subsequent invaders of Sind, seem to have been guided by their example. This is

ascribed to two causes. The Beluchee ascribe their origin to the earliest mahomedan invader of Persia, and are very desirous of being supposed to be Arabian extraction. They spurn the idea that they are derived from one stock with the Afghan. The affinity of the Beluchee to the Persian language affords of itself strong evidence in favor of this position, (viz., that they came from the westward) to back which, we still see that the majority of the Beluch nation still dwells on the western frontier; but as neither their features, manners, nor language, bear the slightest similitude to those of the Arab, he rejects them totally. In the beginning of the fifth century of the Hejira, the Suljuk Tartar appeared in Khorasan, and in the short space of ten years, wrested that kingdom from the house of Ghaznavi. It was ceded to Alp Arslan, and constituted a part of the Seljukide dominions, until the extinction of that race, about 150 years posterior to Toghrul Beg having assumed the title of emperor. In the lapse of time, the Beluchee are alluded to both by that general term and particular tribes, and as dwelling in the very districts which they people at this hour. We learn from the Greek and Asiatic historians that, as their armies became dismembered, either by the death of their generals or a defeat, the barbarians who composed them wandered over the country until they found an advantageous place to fix themselves, or entered the services of some more fortunate chieftain than their own as mercenaries. Such in his opinion, were the Beluchee, and that they are of Turkoman lineage, various circumstances go to prove. Their institutions, habits, religion, and in short, everything but their language, are the same; this last anomaly is easily explained. The Seljuk had long settled in Persia, where they naturally adopted the colloquial dialect, and brought it with them on their expulsion by the Kharazmian kings. The unremitting enmity of these kings forced vast hordes of them to fly from Persia after they had been colonised there for many years. The fugitives are said to have gone to Seistan and the neighbouring countries, which are those of Sind, Seistan, and the Brahui mountains.

The Rind, one of the principal divisions of the Beluch tribes, have a tradition that they came originally from Aleppo.

The Brahui appear to have been a nation of Tartar mountaineers, who settled, at a very early period, in the southern parts of Asia, where they lived an ambulatory life in khel, or societies, headed and governed by their own chief and laws, for many centuries; and at length they became incorpo-

rated, and obtained their present footing at Kelat and throughout Beluchistan. It is impossible to form more than a supposition, what was the nature of the region from which they emigrated, but their pursuits and way of domestic life afford the strongest reason for believing that they were originally mountaineers; and some amongst them affirm that the very name demonstrates this by its signification, being a compound of the affix, boan, and roh, a word said to mean a hill in the dialect still spoken in some parts of Thibet; such reasoning, however, is not entitled to any great dependence, though supported by the collateral evidence of the Beluchee, being called in one quarter of the country Nharui, which, if we admit the former derivation, means "lowlanders," *i. e.*, literally not hill-men, a name they received from the Brahui when they came amongst them, and evinced a preference for the champagne districts, low villages, and plains. The Brahui imagine themselves the aborigines of the country.

In another place he states, that he considers the hindoos to have been the first colonisers of the upper part of the Brahui mountains, and that the Brahui gradually settled amongst them. That the first hindoo rajah was named Sehwa, who called in the aid of these mountain shepherds against a hordo of depredators from the western parts of Mooltan, Shikarpoor, and Upper Sind; and that the Brahui, having defeated and driven off these invaders, deposed the rajah Sehwa, and seized the government for themselves—a chief of the name of Kubar becoming khan of Kelat, of whom the present khan is a lineal descendant.

The foregoing, says Dr. Cooke, would lead us to suppose:—1st, that the original inhabitants of the country were hindoos, who fled from the conquering mahomedans and invaded Sind, Lus and Mekran, A. H. 93; 2nd, that the Brahui were Tartar mountaineers, who gained a footing in the country and ultimately supplanted the former becoming the ruling race; 3rd, that the Beluch came from the westward, but whether they were the Seljuk Tartar or the Arab from Aleppo, is a matter of doubt.

Of the other classes mentioned as residing at Kelat town are the Babi and Dehwar. The first are merchants, who appear to have come originally from Afghanistan: they are considered a wealthy people. The Dehwar are, in all probability, the descendants of the Tajik of Balkh. Their language is nearly pure Persian, they inhabit the deh or villages, and do not emigrate; are an agricultural people, hard-working and poor. Kelat town,

in latitude 28° 53' N., and longitude 66° 27', is 6,000 or 7,000 feet above the sea. The town with its 800 houses is in a narrow valley having on the east the hills of Kach Gandava. The population of Kelat consists of many Dehwar, Brahui, hindoos and slaves, and the entire suburbs is occupied by Afghan races.

The Brahui are supposed by Dr. Caldwell to be a Dravidian race, and one tribe claim to have come from the shores of the Mediterranean. They are robust, large-made men. The Brahui language, spoken by the mountaineers in the khaship of Kelat, in Beluchistan, contains some Dravidian words and a considerable infusion of unquestionable Dravidian forms and idioms. Considered as a whole, this language is derived from the same source as the Punjabi and Sindi, but it unquestionably contains a Dravidian element, derived from a remnant of the ancient Dravidian race having been incorporated with the Brahui. The discovery of this element beyond the Indus river, proves that some of the Dravidian like the Aryan, the Græco-Scythian and the Turco-Mongolian, entered India by the north-west route. The Brahui state that their forefathers came from Halb, Aleppo. Of all the Dravidian languages, no two are so nearly related to each other as to be mutually intelligible to the people who speak them except in the simplest and most direct manner. Beluchistan comprises the extensive regions between the confines of modern Persia and the valley of the Indus. To the north, Seistan and Afghanistan; to the south, the ocean marks its boundaries. The products of the west find their way through the passes of the Bolan, Mulla and Guler. The first, or western section of Beluchistan comprises the sub-divisions of Nushki, Khuran, Mushki, Panjghur, Keej, Kobuah and Jow. The second or maritime section, includes the provinces of Las, Hormara and Pessani. The third, or central section, is formed of the great provinces of Saharawan and Jhalawan, to which are added the districts dependent on the capital, Kelat, and which are immediately situated between the two. The fourth, or eastern section, includes the provinces of Kach Gandava, Harand, and Dajil, the last two bordering on the river Indus.

Immediately to the north and north-east of Dadar, are hills, enclosing the valley of Sibi, the abodes of the Khinka, Kadjak, Shilanchi, Barru Zai, Marri, and other mingled Afghan and Beluch tribes: at a little distance from Dadar, a line of jabbal, or low hills, or rather a fracture in the surface, extends from east to west across the country, and separates the particular valley of Dadar from the great plain

KELAT.

of Kach Gandava. The road throughout the fissure is level.

In the hills, near Khozdar, in Beluchistan, lead is found, which, being easy of fusion, is smelted by the Brahui tribes to make bullets, but no advantage beyond this is taken or derived from the presence of the metal. Antimony is also said to occur. West by a little north of Khozdar, and distant about ten miles, is the small town of Khap-par, capital of the district inhabited by the Kaidrani tribe. Khozdar, figures in Persian romances, and was formerly beyond doubt a place of note. A considerable tappa, or mound lies north of the town. From Khozdar along the bank of the Rud khana, the soil is strewn with fragments of burnt brick and pottery, and further on, is a rude obelisk of mud, twenty to twenty-five feet in height, with its base of cemented stones.

All Beluchistan, to the south of Affghanistan and west of the Indus river, is a mountainous region, and its coast is craggy, but not elevated; in some places a sandy shore; inland, the surface becomes higher. The most remarkable features of Beluchistan, are its rugged and elevated surface, its barrenness, and deficiency of water. It may be described as a maze of mountains, except on the north-west, in which direction the surface descends to the great desert on the south, where a low tract stretches along the sea-shore. The latitude and longitude and elevation of its chief towns are as under:—

Kelat	28 53, 66 27	; 6,000 feet.
Sohrab.....	28 22, 66 9	; 5,800 feet.
Munzilgah	29 53, 67	; 5,793 feet.
Angera	28 10, 66 12	; 5,250 feet.
Bapow	28 16, 66 20	; 5,000 feet.
Peesee-Bhent	28 10, 66 35	; 4,600 feet.
Sir-i-Bolan	29 50, 67 14	; 4,494 feet.
Putkee.....	28 5, 66 40	; 4,250 feet.
Pacesht-Khanna.....	27 59, 66 47	; 3,500 feet.
Nurd	27 52, 66 54	; 2,850 feet.
Ab-i-goom	29 46, 67 23	; 2,540 feet.
Jungikoosht	27 55, 67 2	; 2,150 feet.
Bent-i-Jah	28 4, 67 10	; 1,850 feet.
Beebee Nancee.....	29 39, 67 28	; 1,695 feet.
Kohow.....	28 20, 67 12	; 1,250 feet.
Gurmab	29 36, 67 32	; 1,081 feet.
Kullar	28 18, 67 15	; 750 feet.

Lawless Beluch tribes cluster thick in the hills. In the Sungurh division of the Dera Ghazee Khan district, the Kusrance re-appear, but the most powerful tribe are the Bozdar. Under the Sikh rule, the fort of Mungrota was erected to check their depredations. After that the government built a fort there, south of Dera Ghazee Khan: the Boogtees and Murree carried their arms up to the very

KELLEK.

walls of Rajhan. The desolate state of the country in that vicinity is chiefly attributable to their depredations.—*Dr. Cooke in Bombay Medical Transaction, No. VI, New Series, 1860, p. 31; Lt. Pottinger's Travels in Beluchistan; Caldwell's Comparative Grammar; Masson's Journeys, Vol. i, p. 340; Vol. ii, p. 44. See Beluchistan, Daood Putra, Kelat, Khanazad, Kiang, Kerman, Khyber, India, Pisheen.*

KELLEK, is a raft in use on the Tigris and Euphrates, nearly as long as it is broad. It is composed of goat-skins blown up, and fastened close together by reeds; this is strengthened by cross pieces of wood, and over these again are laid others to keep the bales of merchandise out of the water. The only fastenings of this raft are twigs. The skins are repaired and blown up afresh every evening, and during the day care is taken to keep them continually wet, which prevents their bursting. The Kellek rafts are conducted by two long oars, the blades of which are made of pieces of split cane fastened together. The passengers arrange themselves as they can on the bales of goods; and if a person wish to be very much at his ease, he procures a wooden bedstead covered over with a felt awning, which stands in the middle of the Kellek, and serves him for a bed by night and a sitting-room by day. The historians of Alexander mention that the rafts on which this hero crossed the rivers of Central Asia were buoyed up with skins stuffed with straw; they were then, no doubt as now, inflated with air; and it is thus that the Euphrates, the Tigris, the Karoon, the Indus, the Oxus, and other rivers in Asia are crossed. Besides the Kellek, or raft, there is the Kufa, a round ribbed boat, or coracle, used on the Tigris and Euphrates, covered, not with skin, but bitumen. But of this, the only valuable article, is the bitumen; the ribs are of thin willow rods or the midrib of the frond of the date-tree, and are useless, if the boat be broken up. The rivers of the peninsula of India, the Kistnah, and Tumbudra, are usually crossed in basket boat, or coracles with a frame-work of ratan covered on the outside with skins. But, a single inflated skin, such as are used as buoys for nets, on the east coast of Scotland, or a dried pumpkin, or a bundle of dry rushes, is used by individual travellers. On the Godavery, a small double canoe is in use, the passenger sitting astride the connecting beam. The strata of rushes, are evidently of the same kind as the "vessels of bulrushes upon the water," alluded to by Isaiah, in chap. xviii, ver. 2. This peculiar mode of navigating that river is the same as was known to the ancients as the

"*Navigia Conacia*."—*Rich's Residence in Koordistan*, Vol. ii, p. 128; *Ferrier's Journ.*, p. 429; *Mignan's Travels*, pp. 23, 423.

KELI, HIND. of Kulu and Beas. *Cedrus deodara*, deodar or Himalayan cedar.

KELI KADAM, BENG. *Nauclea cordifolia*.

KELI-KAT'R, a migratory race in the Central Dekhan.

KELING, Tibet. *Cedrus deodarus*, *Lambert*.

KELINGAON, see India.

KELINGU, SINGH. Tamil, *kurung*. In planting the seeds or kernels of the palmyra fruit, the germinating plant, in the first stage of its growth is of the shape and dimensions of a parsnip, but of a more firm and waxy consistence. These are dried in the sun, and when dressed in slices, form a palatable vegetable: esteemed a delicacy in the south of Ceylon. The Kelingu is reducible to a farina, which in the time of the Dutch was so much prized for its delicacy that it was sent home as an enviable present to friends in Holland. It is an article of food chiefly in Ceylon and is cultivated for that purpose; the seeds being sown in six to eight layers, under loose sandy soil. When fresh they are roasted, boiled, or sliced and fired like the bread fruit. When it is to be kept so, the parchment-like covering is removed, and they are dried in the sun, and kept under the name of "Odial," and this when boiled is called "Poolooe Odial." When the odial is reduced to flour or meal, it is used to form the preparation of "Cool" of the Singhalese. The Singhalese also prepare from kelingoo meal, a dish called "Putoo," which is occasionally eaten with rice, and also with jaggery. It is made of prawns, or fish, scrapings of coconut kernels and unripe jack fruit. The people of southern India and Ceylon have for many hundred years been in the habit of eating this pulp or root, which is the first shoot from the palmyra nut, which forms the germ of the future tree, and is known locally as Ponnarn kelingu. It is about the size of a common carrot, though nearly white. It forms an article of food among the natives for several months in the year; but Europeans dislike it from its being very bitter. Recent experiments have proved that a farina superior to arrowroot can be obtained from it, prepared in the same way; and 100 roots, costing 2½d., yield one and a half to two pounds of the flour.—*Tennent*; *Simmond's Seeman*.

KELI also Kelmang kelu, HIND. *Cedrus deodara*. Chhota kelu is *Asparagus racemosus*.

KELISERAVA, KARN. A barber, a hair-dresser.

KELLA, ARAB. A dry measure, the fortieth part of the toman, and equal to 4½ lb.—*Simmond's Dict*.

KELLANGA MIN, TAM. Whiting fish.

KELLI COTTAH, a fort 15 miles E. of Trichinopoly.

KELMUNG, TIBET. *Cedrus deodarus*, *Lambert*.

KELON, of Kullu and Kangra, is the *Cedrus deodara*. The Kelon turpentine of commerce, is the oily product of *Cedrus deodara*, or Kelon ka tel, HIND., Turpentine.

KELONTER, a Persian magistrate. Qu. Kalantar? greater.

KELP, ENG. Barilla.

KELT. Ernest Curtius is of opinion that the ancestors of the people of India, and of the Persian, Greek, Italian, German, Slave and Kelt races, were originally one people dwelling in the uplands of Asia: and that the first to separate themselves from this united Arian or Indo-European family, and to push their way into Europe, was the Kelt, who were followed by the German, and these by the Slave and Lett. The next great swarm that deserted the hive and left behind them the progenitors of the Medo-Persian and the Indian, was composed of the common ancestors of the Greek and Roman.

KELU, *Cedrus deodara*, the Deodar or Himalayan cedar. Kelu grows on the north slope of Dhaola Dhar and in Kullu, and is a native of Kulu; but it is also found in the Boonghalla forests. It is a tree of fast growth, and grows to a great height. Its wood is fragrant, of a reddish-yellow colour, highly resinous and inflammable; very durable, yields valuable timber, it is also not subject to warp. A thin oil exudes from the roots of the tree which is held in much esteem as a cure for sores, it is also rubbed over inflated skins to preserve them. The wood is also used for flambeaux. In Kuuawar it is the most valuable timber tree. It grows to twenty or thirty feet in circumference, and Gerard measured two trees of thirty-three and thirty-four feet; and had seen trees 150 feet high, and they may be 200. He says it is astonishing what a quantity of this fine wood is wasted, even where it is scarce, for the saw is unknown; and to get a plank of any size, they split a tree into several thick pieces with wedges, and then fashion it with an adze, thus losing the greater part of it. He supposed it to be the Cedar of Lebanon, it doubtless is the *Larix deodara* of Royle. It is almost indestructible, and is therefore used for beams of houses, temples and especially granaries, as no insect touches it. An oil is made from the Kelu, which when rubbed on any other kind

KEMAON.

of timber, is a great preservative against vermin. This wood has an agreeable smell, and would be invaluable in the plains of India, as it resists the attacks of the destructive white ant.—*Capt. Gerard's Account of Kunawar*, p. 68; *quoting Balfour*, 75 and 189; *Mr. Barnes' Kangra Settlement Report*, para. 146; *Powell's Hand-book*, Vol. i, p. 540.

KELUMPIT, is a very large tree of Singapore, sections are employed by the natives for cart-wheels.

KELWA-RAGU, TAM. Eleusine coracana, *Gart.*

KEMAKII, see Mesopotamia.

KEMAL, HIND., the Kyamal of Murree hills, Odina wodier, also Berberis aristata, and Rottlera tinctoria.

KEMAMAN, see Jakun.

KEMANCHIEH, a musical instrument, the sitar of India, found in almost every Persian town. Those made at Shiraz, are of tut or mulberry tree wood; the body (about eight inches in diameter) globular, except at the mouth over which is stretched and fixed by glue, a covering of parchement. But they are of various materials; the body merely a hollow gourd; or every part is richly inlaid and ornamented. They are sometimes made of the girdu or walnut tree wood. See Kemengch.

KEMAON, a non-regulation district in the N. W. Provinces of India. The Himalayan districts of Kemaon, Garhwal and of Kote Kangra, abound in true hemp of the finest quality, cultivated both on account of its fibre and for the different preparations of Bhang. The fibre is sold among themselves for 2 rupees for 82 lbs., or about 5s. a cwt. Lord Auckland, when Governor-General of India, calculated that at the native rates it might be landed in Calcutta for £7-16 a ton, and hemp seed for £6 a ton. Major Corbet gives three estimates of the price, including all expenses, at which hemp could be delivered in Calcutta from Kotdwara, Chilkot, and Sunnea, the average of which is £15-2 a ton. Captain Kirke giving 5 rupees a maund for the hemp at Deyra Dhoon and calculated that it could be delivered for about £17-14 a ton. The culture is well understood in many parts of the hills, as they carefully prepare and usually manure the ground, thin the plants to within three or five inches, and cut the male plants, "phoolbhanga which flowers, but has no seed," a month or six weeks before the female plant, "goolanga or ghoolbhanga" which has seed, the latter being cut about the end of September. The preparation is also understood, the best way is to procure a clean and uniform article in long lengths, without raising or platting the ends up in

KEN.

any way and to resemble the Petersburg hemp, as nearly as possible. See Nepal, Bhot, Turai, Kamaon, Kumaon.

KEMAS WARRYATS, see Capree.

KEMBAL, HIND. Odina wodier, also Rottlera tinctoria.

KEMBALLY, CAN. Onion.

KEMBAT-TI, see Oryza sativa.

KEMBOO, SANS. Costus speciosus, *Roxb., Sm.*

KEMBU, also Segapu Kallu, TAM. Ruby.

KEMENGIEH, ARAB., a violincello of two strings. See Kemancheh.

KEMLU, HIND. Berberis aristata.

KEMMENDINE, a village near Rangoon, taken 9th Dec. 1824 by the Indian army. It is now a part of the Rangoon cantonment.

KEMMI, see India.

KEMMUM, TURK. Cummin seed.

KEMO, MALAY. Shells of Tridacna gigas, the great clam of the Archipelago.

KEMP also Kempty, the coarse rough hairs of wool, which are avoided by the manufacturer in his purchases of wool, deteriorating, as it does, the appearance of even common fabrics by their inferiority and harshness, and not taking dye readily. The kemp of Cashmere goat's wool is, however, made into coarse cloth,—*Simmond's Dict.*

KEMUDU? Glass.

KEMUN, ARAB. Cummin seed.

KEN or Caine, a river that in part bounds Bandah on the west.

KEN, an Egyptian goddess of Assyrian origin, the Astarte, Astaroth, and Mylitta of the Assyrians, Syrians, and Arabs. This divinity appears to have been introduced into the Egyptian pantheon in the time of the 18th dynasty, or at the commencement of the close connection between Assyria and Egypt. On comparing a representation of the goddess in the rock sculptures of Maltheighah, with an Egyptian bas relief in the British Museum, the mode of treating the subject is seen to be nearly the same. In both we have a female standing on a lion. The Egyptian figure holds two snakes and a flower, the stalks of which are twisted into the form of a ring; the Assyrian carries a ring alone. The flower resembles that borne by the winged figures in the place of Khorsabad, and is not found in the edifices of the first Assyrian period, where the flowers in the hands of a similar figure are of a different shape. For instance, the goddess Athor or Athy, Dr. Hinks reads the same name as that of the presiding divinity, on the monuments of Assyria. Mr. Birch admits, in his observations on the cartouches, that the introduction of the Assyrian gods, Baal and Astartae of Reuppu or Reseph, of Ken, and Anata or

KENDULI.

Anaitis, can be traced to the 18—19 dynasty and is coeval with the epoch of the great conquests of Egypt in Central Asia. On a tablet at Turin she is called Atah, or Adesh, the name of the chief city of the Khitae, a Mesopotamian people attacked by the Ramesids (Prisse. Mon. Pl. xxxvii.) She usually appears in a triad with Renpu and Khem or Chamno, also deities of Semitic extraction. The attempt to connect the names of many Egyptian and Assyrian divinities has been frequently made. The goddess Ken is one, whose Assyrian origin is generally admitted, and whose appearance on the monuments of Egypt affords important evidence in an inquiry into the date of the Assyrian edifice. The worship of the Sacti, seems to have been introduced into India from the Egyptians and Assyrians, and the image of the hindoo Doorga is unquestionably a modified type of Ken and Astarte. The image of Kali is an original of the hindoos, the worship of which is inculcated in the Upa-Poorans, written at a considerably later period than the Poorans, which first originated the idolatry of the hindoos.—*Layard, Nineveh, Vol. ii, p. 213; Tr. of Hind., Vol. i, p. 37.*

KEN, a long measure of Siam, the half of the vonah, and equal to $37\frac{1}{2}$ inches.—*Simmond's Dict.*

KEN, CHIN. A Chinese oil.

KENAWIT DYAK, see Kyau.

KEN-BWON, BURM. Acacia rugata, Buch.

KEN-BUNG, also Tsa-tha-khwa, BURM. Coccinea grandis, Voigt.

KENCIIWA, HIND. An intestinal round worm.

KENDAL, JAV. Cordia myxa, Roxb.

KENDH, a close grained, hard, wood of light red colour. The heart wood is quite black and hard, like ebony, which it somewhat resembles in every respect: it is plentiful in the Santhal jungles from Raneebahal to Hasdiha, over a space of about forty miles in length. Used by the natives for beams, &c., the fruit of the tree is also eaten by them.—*Cal. Engineers' Journ. July 1860.*

KENDU, BENG., HIND. Ebony. Diospyros montana, and D. tomentosa.

KENDULI, the birth-place of Jayadeva, the greatest lyric poet of Bengal, perhaps of the world. Lassen supposes Jayadeva to have lived about A. D. 1150. But he was a follower of Ramanand who flourished in the beginning of the 15th century. General Cunningham fixes the date of Ramanand in the latter half of the 14th century. Jayadeva was a great religious reformer, though he is now remembered only as a poet. It has been justly remarked, that what Melancthon was to the early Lutheran Church, that was

KENTH.

Jayadeva to the reformation in Bengal. The great charm of the Gita Govinda consists in its mellifluous style and exquisite woodland pieces.—*Tr. of Hind., Vol. i, pp. 56-57.*

KENERI, amongst the buddhist caves in India, those of Keneri on the island of Salsette are remarkable. They are purely buddhist, but inferior to those of Ajunta or Karli. They are excavated in a hill in the midst of an immense tract of forest country and Mr. Fergusson supposes their date to be about the 9th or 10th century of the christian era. A copper plate found in the relic chamber of one of the Kenneri caves contains inscriptions in Old Pali. It is of the 2nd century B. C., about 100 years of the reign of the Trukudaka dynasty, and No. 2 cave character is used in the inscriptions. The religion mentioned is buddhist with a salutation to Sarvajna, Bhagaven Sakya Muni and chaitya as mentioned. The king or prince mentioned is Trukudaka. Pushya Barma of the conquered country called Taromi, dedicates a chaitya. Mention is made of the forests around Bardhamana, a country noticed in the Prataprudra inscription.—*Vol. x, p. 97.*

KEN-FA, CHIN. Bambusa nana.

KENG-THEP-PHEOOT-KYAY, BURM.

A sound small wood of Tavoy, used in building.

KENG - THEP - GUYUNG - YWEPT, BURM. A light inferior wood of Tavoy used in building.

KENISSAT-UL-KIAMAT, the Church of the Resurrection, commonly called the Holy Sepulchre. By the Arabs it is called Kenissat-al-Komamat. This last word means "a lyaistall," in allusion to the place where the Holy Cross was found.—*Robinson's Travels, Palestine and Syria, Vol. i, p. 40.*

KENJA, BENG., HIND., also Kurunja, BENG., HIND. Galedupa indica, Lam.

KENKRA, HIND., DUK. Crab.

KENNA, SINGH. Crotalaria juncea, Linn. Sonn.

KENNEDYA, a genus of beautiful plants, belonging to the Leguminosæ, with lilac, and crimson coloured flowers, with short keels whilst the coccinea have long ones, they are propagated by seed, in any good soil.—*Riddell. See Leguminosæ.*

KENPONI, in the maps, is the province of King-po, to the east of Takpo, and its occupants are surmised to be the wild races who opposed the ascent of the English explorers in Assam.—*Latham.*

KENSHI, JAPAN. A sheriff or witness to an execution.

KENTAL, BENG. Artocarpus integrifolia, Linn.

KENTH, or Shegal, HIND. of Kanawar. Pyrus variolosa, wild pear.

KENTUCKY COFFEE TREE, or Hardy Bouduc. See Coffee tree wood.

KENWAL or Keoli, HIND. *Cedrus deodara*.

KEO, also Kaiun, HIND. A black pulse, black-seeded *Dolichos lablab*.

KEONJJI, HIND. ? A tree of Chota Nagpore with a soft red wood.—*Cal. Cat. Ex.* 1862.

KEONJUR, a tributary estate S. E. of the Kolehan.

KEONTHUL. After the Goorkha war of 1818, a portion of the territory of Keonthul was sold to the maharajah of Puttiala. The chief claims a Rajput origin. He is bound to render feudal service. In 1858 the chief was created a rajah, and received a dress of honor worth rupees 1,000 for his services during the mutinies. The revenue of the state is Rupees 30,000, and the population by census 18,083.—*Treaties, &c.*

KEOBRUNG, see Kunawer.

KEOR HIND, of Panjab, seed of *Holarhena antidiysenterica*, *Wall.*

KEORA, also Keori, HIND., BENG. *Pandanus odoratissimus*, *Linn.*, also a perfume or essence from the flowers of *Pandanus odoratissimus*.

KEORA, BENG. *Sonneratia apetala*.

KEORI, HIND. of Kulu and Beas, *Cedrus deodara*, *deodar* or Himalayan cedar.

KEPAK, see Cochlin-China.

KE-PIO-GYEE, see Karen.

KEPHIOS, also Kepos, GR. An ape.

KEPPEL'S ISLE, is from ten to twelve miles in circumference and distant from the mainland six miles. There are numbers of a singular fish of the genus *Chironectes* which leap with great activity over the mud, among the arched roots of the mangroves, among which are small crabs, Ocyпода and *Macrophthalmus*—*Macgillivray's Voyage*, Vol. i, p. 65.

KEPPING, a division of the Spanish dollar in Sumatra, which is divided into 400 kepping; eight therefore are worth about one shilling.—*Simmond's Dict.*

KER, HIND. *Urtica heterophylla*.

KERA, SANS. Coconut tree.

KERAFS, EGYPT. *Apium graveolens*, *Linn*

KERAI, see Khuzistan; Arabistan.

KERAIT, the royal dynastic tribe of Tartars to which Prester John belonged. Prester John's country appears to be the Tenduc of Marco Polo, which he states to have been "the chief seat of Prester John when he ruled over the Tartars" and also the residence of his descendants in their reduced and subordinate position. Marco Polo says the Great Khans often gave their female relations

in marriage to the kings of Kerait or Prester John's line. And other intermarriages were frequent, *c. g.*, the christian mother of Gayuk Khan, and Dokuz-khatun, the christian queen of Hulagu, were both princesses of the Kerait royal family, *i. e.*, apparently of Prester John's. The mother of Hulagu was of the same family, and Chenziz, as well as several of his sons, took wives from it. On the destruction of the kingdom of the Kerait, a Kouriltai, or general assembly of the chiefs of all the hordes was convoked.—*Marco Polo*, Vol. ii, p. 50, in *Yule Cathay*, Vol. i, pp. 146-7.

KERALA, an ancient district embracing Malabar and Canara. It was peopled by Parasu Rama with brahmins who emigrated into this province and introduced their religion amongst the inhabitants. The province was divided by them into 64 districts which were governed by an ecclesiastical senate presided over by a brahmin every three years. But on the arrival of the Portuguese in 1498 they found a hindoo ruler, designated Zamorin, ruling over one of the most important of the principalities into which the country had been divided in the 9th century. Kerala is also called Parasu Ram Kshetrom, and is a long narrow strip of country stretching from Cape Comorin to Gokurnom and was an ancient sovereignty. Of this, the tract of country below the ghats, from the rivers Canjarote pooyu, the original southern boundary of Canara to Travancore inclusive is now called Malayalam or the Malabar coast. Kerala from about B. C. 68 to A. D. 352 was ruled by 37 Peroomal or viceroys from the Chera or Salem rulers, and after them by the ancestors of the present nominal rajas. The western coast comprising the ancient kingdom of Kerala, offers an interesting field of research. The frequent mention of the principal places by the Greek and Arabian geographers, the ready access afforded by its ports to maritime enterprise, the Persian, Arab, Syrian and Jew colonies established there from the earliest times, may all receive important elucidation from an examination of existing remains of ancient sites. Although more subject to the operation of external influences than most other parts of India, it is here that the early hindoo institutions have been best preserved, and that we may look with the best founded expectations of enlarging our knowledge of aboriginal races and primitive customs. The remarkable tribes to be met with in the depths of the forests and mountains of the Syhadri range, the traditions of the polity of Parasu Rama and of the arrival of some of the present dominant classes, the Haiga, Chitpawan

KERBELA.

Namburi, Teer or "Islanders," &c., all afford curious sources of inquiry and speculation. According to the mythology of the hindoos the country of Kerala, which includes Malabar and Canara, was (together with the Concan) miraculously gained from the sea by Parasu Rama, the conqueror of the Kshetrya, and as miraculously peopled by him with brahmins. A more rational account states that, about the first or second century of our era, a prince of the northern division of Kerala introduced a colony of brahmins from Hindustan; and, as the numerous brahmins of Malabar and Canara are mostly of the five northern nations, the story seems to be founded in fact. However the population may have been introduced, all accounts agree that Kerala was, from the first, entirely separate from the Concans and was possessed by brahmins, who divided it into sixty-four districts, and governed it by means of a general assembly of their caste, renting the lands to men of the inferior classes.—*Dawson's Ancient India; Elphinstone's History of India*, p. 414. See India, Pandiya, Sankara Achari.

KERALEE, BENG. *Cryptocoryne ciliata*.

KERAN, a Persian silver coin worth about one shilling.—*Simmond's Dict.*

KERANOH, HIND. Charity Lands.

KERABI, Hindoo-worshippers of Devi, in her terrific forms, and the representatives of the Aghora Ghanta and Kapalika, who, so late as the 10th century, sacrificed human victims to Kali, Chamunda, Chinua Mastaka, and other hideous personifications of the Sakti of Siva.—*Wilson, Hindoo Sects.*

KERBECK SIAH, PER. *Helleborus niger*.

KERBELA or Meshed Hoosseini, is situated a short distance from the west bank of the Euphrates, and not very far from Hillah, the supposed site of Babylon. It is westward from Baghdad, is a place of pilgrimage to shiah mahomedans, and is surrounded by gardens and groves of palm trees which are watered by a canal from the river. The chief object of interest is the mosque, built in the reign of shah Abas the Great, on the spot where Hoosseini, the son of Ali, nephew of and son-in-law of the prophet, was murdered. It is a sacred place of pilgrimage and burial to the Persians who are shiah mahomedans, that is, who acknowledge the caliphate of Ali: by the Turks, however who are sunni mahomedans, and do not believe that Ali was the rightful kaliph, it is held in no peculiar veneration, hence though no christian is allowed to enter the precincts of the mosque, a Turk whose house overlooked the court, made no objection to a traveller going up on his roof and making a sketch. Kerbela fell into the power of the

KERK.

Turks when sultan Murad IV, took Baghdad A. D. 1636. The Persians frequently send their dead to be buried at Kerbela, from the interior of the country. On leaving Kerbela one traveller met nine mules laden with coffins, and while at Baghdad he often saw others passing to their last resting place near the honoured remains of the grandson of the prophet. The revenue arising to the hierarchy of Kerbela, from the drains on the purses of its visitors, are enormous; and must, more than sufficiently, pay for all the expenses of its state. Kerbela is about sixteen farsang from Baghdad; the city is large, and crowded with inhabitants, being respected as a bast or place of refuge. In India, Kerbela is the name given to a plain near a sea, river or tank, whither the mahomedans annually carry their taboot.—*Herklots; Porter's Travels*, Vol. ii, p. 281.

KERBUK, see Iran.

KERCHEK, EGYPT. *Calotropis gigantea*, *Brown*.

KERELEH, PERS. *Luffa amara*.

KERENFUL, properly Karn-ful, ARAB. Cloves.

KERGAI, see Kabul, Kafir.

KERLIA JARDONII, a sea-snake of Madras, one of the Hydridæ, see Hydridæ.

KERI or Kaur of Salt Range. *Capparis spinosa*, European caper.

KERIS, see Tibet.

KERITPUR, see Sikhs.

KERIVOULA, a genus of mammalia, belonging to the Cheiroptera, of which several species occur in India, viz: *Kerivoula formosa*, *K. Hardwickii*, *K. picta*, *K. Sykesii*, *K. trilatitoides*. See Cheiroptera, Mammalia.

KERK, a pirate race who occupied the shores at the mouth of the Indus and carried on their expeditions as far as Jeddah in the Red Sea. The name is written Kerk, Kurk, Karak, Kark, and Korak, and the race is now extinct, but Nearchus mentions Krokala, and at the mouth of the Indus, there is a large insular tract which bears the name of Kakra'la, corresponding to Arrians' description, "a sandy island about four miles from Cape Monzo." It is situated between the Wanyani and Pitti mouths of the Indus and, according to Captain Postans, extending to and including Karachi. The A'in i Akbari and other old works show that the Kakra'la tract has been so known for the last three centuries at least. There is, however, a place called Karaka, three miles below Hyderabad. To prevent the piratical inroads of the Kerk, the Persians threw large stones into the Tigris, to obstruct its navigation, and they built no city of any importance on the sea-board. Alexander, on his return from India, caused the stones to be

KERKOOK.

removed from the Tigris, with a view to further commercial intercourse. It is supposed that a portion of the Kerk tribe occupied the north-eastern shores of the Black Sea, where there were the tribe of Kerketæi or Kerketæ, with a bay of Kerketis: also the tribe of Kerketiki, and cities of Karkinitis Karkine and Kirkæum, a region of Kerketos, a bay of Karkinitis and a river of Karkenitis, also the tribe of Koraxi with the wall of Korax, and the Sindi are found in the same locality (Orphei Argonautica, Cribrelli versio.)

"Kerketi que, ferox ea gens,

Sindi que superbi,"

and Ptolemy, Strabo and Herodotus speak of tribes called Sindiani, Sindones, Sindos and Sinti, with a Sindicus portus, and town called Sinda, Sindica, and Sindos and a tract called Sindike, and Hesychius states the Sindi of the Euxine were in reality Indians. It is from this region that the Indian merchants must have sailed who were wrecked in the Baltic, and were presented by the king of the Suevi or Bateni to L. Metellus Celer, the pro-consul of Gaul.—*Elliot's Hist. of India*, Vol. i, pp. 510-512.

KERKAL (var). CAN. *Felis pardus*, Linn.; Temm.; Sykes.

KERKHEI is the ancient Choaspes, therefore Susa occupied the site of the ruins of Shus, and not the town of Shushter. The modern stream called Kuren is not the ancient Choaspes. Like the river Kurdistan which bears this name in its upper course, and Jerahi lower down, although it is a very deep, broad, and rapid stream, receiving many considerable tributaries before it reaches the Kuren, so, likewise, the Kerkleh (the Choaspes), one of the greatest rivers of Persia, is called Kara-su, near Kermanshah and Gumasab, near Nehavend. The Kizil-Uzen, which rises in Kurdistan, changes its name to that of Safid-rud, before it discharges itself into the Caspian Sea, in the province of Ghilan. Al Hid is a canal flowing into the Kerkha, near Hawizah, through groves of a species of calamus, growing luxuriantly in a low tract of country, between the Tigris and the Kerkha, inundated by the overflow of the Tigris.—*Mignan's Travels*, p. 251; Baron C. A. De Bode's *Travels in Luristan and Arabistan*, pp. 27, 341-42.

KERKOOK, the Korkura of Ptolemy, is two miles to the north of Baghdad. Baba Goorgoor is the name given to a spot three miles from Kerkook, where, in a little circular plain, white with naphtha, flames of fire issue from many places. There appears to be little doubt, as D'Anville conjectures, that this is the Korkura of Ptolemy. The people of Kifri say that on the eve of Friday, a

KERMANS SHAH.

little lamp is seen to burn of itself on the summit of the hills overlooking the plain: it is most probably a similar phenomenon to Baba Goorgoor. A celebrated doctor of mahomedan law, surnamed Azâm, or the honoured, is buried at this place.—*Rich's Residence in Koordistan*, Vol. i, p. 44.

KERMA, see Vaishnava.

KERMAN and Mekran, are peopled by Persians, principally,—but contain also Turk, Beluchee, Brahui and Affghan. Fars is bounded on the east by Kerman and Laristan. The province of Kerman, the ancient Carmania, is bounded on the E. by Seistan and Mekran; N. by Seistan and Khorasan; W. by Fars, Lar, and Irak; and on the S. by Mekran and the Persian Gulf. There appears to be no river worthy of remark in this province; and it abounds in deserts, the natural consequence of a scarcity of water. Kerman is sometimes called Serjan, and equalled at one period the proudest cities of the empire.—*Kinneir's Geographical Memoir*, pp. 194-7. See Khond Amir, Kuzilbash, Iran.

KERMANI, a clan in Kurdistan, who were originally from Pizhdar, near Sikoneh on the frontier of Persia. The Babbeh is the chief family of the Kurd clan of Kermani; the members of which are the hereditary chiefs of the clan; and hence their whole territory and the people are now called the government of the Bebbeh or Baban. The clan was originally established at Pizhdar in the northern mountains near Sikoneh or Sikeneh on the frontier of Persia.—*Rich's Residence in Kurdistan*, Vol. i, p. 80.

KERMANS SHAH, in lat. 34° 26' N. as it now stands, is a handsome city, exhibiting the glittering domes of mosques within, and the battlements and towers of lofty walls without. Being erected on a south-western slope of the mountains, it commands a wide view of the vale; it is famous for an excellent manufactory of fire-arms; and the villages in its vicinity, for carpets of the most beautiful colours and fabric. Luxurious gardens surround the town, abundant in fruits of all kinds, but particularly in grapes of an exquisitely delicious muscatel flavour. The population amounts to about 15,000 families, some few of which are Christians and Jews. The mountain of Takht-i-Bostan forms a part of the chain of Be-Sitoun; and, like it, is craggy, barren, and terrific. Its aspect, as approached, is of the most rugged grandeur; and its towering heights, lour dark over the blooming vale of Kermanshah. A little forest extends from the river's side, to a considerable distance over the plain; perhaps the green descendants of the woods that overshadowed the gay pavilions of

Khosroo, in his hunting parties ! The carpets of Kermanshah are a manufacture which adds much to the wealth of its province : none can be more rich, soft and beautiful, Persian carpets are justly celebrated for the beauty of the patterns, the fineness of the wool, and the durability of the colours—vegetable dyes, also a green not made elsewhere, conjectured to be saffron and indigo. Some of them fetch high prices as £6 or £8 for a carpet, two yards square, in the country itself. The finest are made at Sena, and there is a famous manufacture carried on at Ferahoon, near Teheran. Carpets of any size can be made there. The finest carpets of all used to be made at Herat, and there are some splendid ones in the Chahil Minar, at Ispahan, one of which is 140 feet long and 70 feet wide. Large numbers were exported to England through Trebizond up to 1855, and they were sold nearly as cheap in London as in Persia, owing probably to the course of trade. The Kermanshah province now only consists of five districts. Its revenues amount to, from the taxes 60,000 toman; from the customs 13,000 toman, making a total of about 35,000*l*.—*Porter's Travels*, Vol. ii, pp. 167 to 201 ; *Ed. Ferr.'s Jour.*, p. 26. See Zinguri, Sassanian Kings.

KEROWLEE. This petty state paid a tribute of Rupees 25,000 to the peshwa, which was ceded to the British government by the 14th Article of the treaty of Poona in 1817. The maharajah had made over the village of Machulpore and its dependencies to the management of the peshwa in lieu of the tribute. In 1825, when Bulwunt Sing, the legitimate heir to the state of Bhurtpore, was rebelled against by his cousin Doorjun Sal, the rebel was supported by the maharajah of Kerowlee. After several disputed successions, maharajah Mudden Pal succeeded in 1854. He rendered good service in the mutinies, in consideration of which the sum of Rupees 1,17,000 due by him to the British government was remitted. The maharajah of Kerowlee received the right of adoption. The area of his state is 1,878 square miles, and the population about 188,000. The revenue from all sources is only about Rupees 3,00,000. The whole military force of the state is about 2,000 men.—*Treaties, Engagements and Sanads*, Vol. iv, p. 99.

KERPAN or Serpah, BHOOtea. Neilgherry nettle.

KERRAGE, see Lead.

KERRAT, see Nepal.

KERREH SAIDEH, known in Arabian geography as Khanda Sabur, Shapur's ditch, is a bifurcation of the Euphrates, from near Hit, and after a course of several hundred miles, enters the Persian Gulf, by a separate

mouth, rendering culturable a vast tract of ancient Chaldaea, Shapur Dholactuf, in the fourth century, either cut or re-opened this channel. He is said to have intended it as a defence against the Arabs.—*Rawlinson*, Vol. i, p. 17.

KERULA, BENG., HIND. *Luffa amara*, Roxb.

KERZE, HIND. *Erum lens*.

KERZEN, GER. Candles.

KESARI RANG, HIND. A sort of saffron colour.

KESARIYA. To the north and north-west, distant 30 miles from Besârh and somewhat less than two miles to the south of the large village of Kesariya, stands a lofty brick mound capped by a solid brick tower of considerable size, supposed to be remains of ruins, occurring after the commencement of the Christian era. The Kesariah mound, is 20 miles north of Bakhra, in sight of the Gandak River. It has an inscription in Sanskrit, and is of about the date of the Bakhra image inscription. The character used in the inscription is the same as the Sarnath and Bakhra character. The avatars and the sakta hymn of the Rig Veda is mentioned but no invocation of hindoo gods named. Chandradatta, son of Suryadatta, is mentioned. The inscription is imperfect, but the everliving Chandradatta was born on the Sunday appropriated to the reading of the Sakta by his father Suryadatta. The Sakta has for one of its verses the holy "gayatri." At Lauriya Ara-Raj, between Kesariya and Bettiah, at the distance of 20 miles to the northwest of the Kesariya stupa, and one mile to the southwest of the hindoo temple of Ara-laj Mahadeo, there stands a lofty stone column which bears in well-preserved and well-cut letters several of the edicts of king Asoka.—*Beng. As. Soc. J. Vol. iv*, pp. 128 & 286, No. 32 of 1864.

KESAVA, see Krishna.

KESAVA SENA, see Inscriptions, Hindu.

KESH, a town, thirty-six miles south of Samarkand. Timur's famous descendant Baber, the first Great Mogul, tells us that in spring the walls and terraces of the houses

KESRA.

at Kesh are always green and cheerful. Timur and Baber both mention Kesh as *Shahr Sabz*, or the "verdant city."—*Markham's Embassy*, Vol. xiii, p. 120.

KESHUVU, SANS. From Keshu, the hair. See Kesa.

KESOSA NO ABRA, JAV. *Naphtha Petroleum*.

KESRA, or Kesri, a title which seems to have been indiscriminately applied to the later princes of the house of Sassan, and was probably derived from the Caesars of the Romans, or the Khursu or Chosroes of the Persians. The title was certainly given to two dynasties of Persia. The Tak-i-Kesra, is a ruined arch on the site of Ctesiphon, and is a magnificent monument of antiquity. To its right, are fragments of walls and broken masses of brickwork; to the left, and therefore to the south of the arch, are the remains of vast structures, which are encumbered with heaps of earth. The natives of this country assert that the ruins are of the age of Nimrod, of whom, in Scripture, it is said, "and the beginning of his kingdom was Babel and Erech and Accad and Calneh in the land of Shinar." The Babylonian empire was subverted by Cyrus, who took the capital, by turning the course of the Euphrates, and marching his troops along the bed of the river into the centre of the city. The walls and temple of Belus are said to have been demolished by Xerxes, on his return from the Grecian expedition; but this could not have been the case, as they were still standing in the time of Alexander. After the building of Seleucia and Ctesiphon, Babylon became gradually deserted; and we learn from St. Jerome that the space within the walls was converted by the Parthian kings into a royal hunting park. From this period we cease to hear of Babylon as a city, but notwithstanding so many ages of barbarism and ignorance have passed away, tradition still continues to identify both its name and situation. The town of Hilleh is said, by the people of the country, to be built on the site of Babel; and

KESRA.

some gigantic ruins still to be seen in its vicinity, are believed to be the remains of that ancient metropolis. Porter remarks that when we consider that so many centuries have passed since Babylon became a deserted habitation, and that it yet lay in the neighbourhood of populous nations, our surprise ought to be, not that we find so little of its remains, but that we see so much. From her fallen towers have arisen, not only all the present cities in her vicinity, but others which, like herself, are long ago gone down into the dust. Since the days of Alexander, we find four capitals, at least, built out of her remains. Seleucia by the Greeks, Ctesiphon by the Parthians, Al Modain by the Persians, and Kuta by the Caliphs, with towns, villages, and caravansaries without number. Ctesiphon was built by the Parthians out of the ruins of Babylon. Its ruins are to be seen on the eastern shore of the Tigris, eighteen miles south of Baghdad, and immediately opposite to it, the ramparts and fosse of the Grecian city of Seleucia, which afterwards becoming identified with the former, under the name of Coche,—they assumed, when thus united, the epithet of Al Modain, or the cities. Ctesiphon was most admirably situated on a sort of peninsula formed by a sudden flexure of the Tigris which must have embraced the greatest part of the town. Its foundation, however, can hardly be ascribed to any particular person, as it would seem to have increased gradually during a succession of many years, from a camp to a city. Pacorus, supposed to be Orodes, king of the Parthians, and contemporary with Anthony, is thought to be the first who surrounded it with walls, and made it the capital of the Parthian empire. It was sacked, together with Seleucia, by the generals of Marcus Aurelius, A. D. 165, and afterwards by the emperor Severus. It became the favourite winter residence of the powerful successors of Artaxerxes, from whom it was taken by Suid, the general of the kalif Omar, A. D. 637. The sack of Ctesiphon was followed by its gradual decay, and little now remains but that part of the palace of Chosroes called Tak-i-Kesra, the arch of Chosroes, a melancholy emblem of the glory of its master. It is seen from afar on the plain, and presents a front of three hundred feet in length by one hundred and sixty in depth, having in its centre a vaulted hall, a hundred and six feet in height to the top of the arch, the span of which is eighty-five. The Ali Capi at Ispahan and the gates of the palace of Delhi, sink into insignificance beside the Tak-i-Kesra. The city walls, which appear to have been of very great thickness, may also be traced to a considerable distance on both banks of the river. The

KETAPAN.

names of Seleucia and Ctesiphon are very frequently confounded by the early Christian writers ; but the cities stood on opposite side of the river Tigris, and were built at different periods.—*Mignan's Travels*, pp. 58 to 73 ; *Layard, Nineveh*, Vol. i, p. 242 ; *Kinneir's Geographical Memoir*, pp. 253-4, 273-4 ; *Porter's Travels* ; *J. B. Fraser's Travels*, p. 3. See Euphrates, Kalneh, Kasr, Kesra, Seleucia, Tak, Tigris.

KESRI, or Chosroes, see Sassanian Kings.

KESRU, or Hursingar, HIND. Flowers of *Nyctanthes arbor tristis*. The tubes of the corolla of the weeping nyctanthes, are brought from Mewar, considered heating given in medicine, one tola a dose, used chiefly to dye yellow : two seers for one rupee.—*Gen. Med. Top.*, p. 143.

KESRU, HIND. *Polygonum aviculare*.

KESSARI FLOWERS. The flowers of the *Butea frondosa*, *Roxburgh* ; they have been imported into England for experiments in dyeing. See Kesu.

KESSINA, SIAM. The Aloes-wood tree.

KESU, see Krishna.

KESTRIL. The kestrel, *Tinnunculus alaudarius*, and also the sparrow-hawk (*Accipiter virgatus*), are common in India. The former may be observed hovering over the plains, and at dusk, not unfrequently in numbers, perched on stones and tufts of grass. Both prey extensively on mice, lizards and beetles. The latter hawk is trained for quail-hunting. Two species of kestrel are common about Dugshai ; the lesser kestrel, *Tinnunculus cenchris*, is the more abundant, and may be seen in numbers hovering over the sides of the mountains and the little terraced fields in quest of beetles and large insects. Independent of size, the latter is distinguished from the other by the light colour of its claws which are black in the common kestrel.—*Adams*.

KESU, HIND. Flowers of *Butea frondosa*.

KESUN, BALI. Garlic.

KET, also Koet, HIND. *Feronia elephantum*.

KET, a river of China. Its source is at Fa-lo-ke, in the range of hills called Ma-fosse-ko ; after passing Makofsky, its course is north-west as far as the town of Na-li-mo (Narim), near which it falls into the river Obey (O-pu).—*Staunton's Narrative*, p. 74.

KETAKA or Ketaki, HIND., TEL. The strong odoured flower of the *Pandanus odoratissimus*, also *Pandanus odoratissimus*.—*L. fil.*

KETANGI or Wungu wood, is often used instead of teak : the grain is somewhat finer : when in full blossom, it is perhaps the most beautiful tree existing.

KETAPAN, JAV. A tree of Java.

KHABBAL.

KETEPING, JAV. *Amygdalus communis*.

KETGI, BENG. *Pandanus odoratissimus*.

KETI BARI, properly Kheti-Bari, HIND. Agriculture.

KETMI GANDBO, FR. of Mauritius. *Abelmoschus esculentus*, *W. & A.*

KETOEN, DUT. *Gossypium indicum*, *Lam.* Cotton.

KETOO, SANS. A sign, from kit, to dwell.

KETRA, see Kelat.

KETRI or Ketttri, See Khusetry, Zouar or Khetri.

KETSIOTH, HEB. Cassia bark.

KETTISOL, CHIN. Paper umbrellas, see Umbrella.

KETU, an imaginary planet, said to cause the eclipses of the sun and the moon. See Rahu.

KETUKI, BENG. Green-spined screw-pine ; *Pandanus odoratissimus*.

KEUFA, CHIN. *Bambusa nana*, *Roxb.*

KEUMMUL, also Brod-Kummel, GER. Carraway seed.

KEUN, HIND. of Kashmir, Flax.

KEUOO, BENG. *Costus speciosus*.

KEVONA ? *Sterculia acuminata*.

KEURA, also Keora, HIND. *Pandanus odoratissimus*. Keore ki put, DUK. Leaf of *Pandanus odoratissimus*. Kewore ka-phul, DUK., the flower of *Pandanus odoratissimus*.

KEVURU, TAM. *Eleusine coracana*, *Gært.*

KEW, GER. Hay.

KEWAR, HIND. A sweetmeat.

KEWN, BURM. Teak, *Tectona grandis*.

KEWRA-KA-JAR, GUZ, HIND. Orris root.

KEWSEW, see Kiu-siu.

KEWUN ? Kewanni, DUK. *Helicteres isora*, *Linn.* ; *Rh.* ; *Roxb.* ; *W. & A.*

KEYA-KANTA, BENG. Fœtid screw pine, *Pandanus foetidus*.

KEYNKRA, properly Khenkra, HIND. Crab.

KEYSUR, DUK. *Nyctanthes arbor-tristis*.

KEYSUR, DUK., Saffron.

KEZH VARUGU, TAM. *Elensine coracana*.

KEZIRAH, AR. Coriander seed.

KHA, see Khyen.

KHA, BURM. *Azadirachta indica*.

KHABAJI, also Chhota gul khairu, HIND. *Althæa alhugas*, Common mallow. The seed is used as the mallow.—*Gen. Med. Top.*, p. 143.

KHABARA, HIND. *Ehretia aspera*.

KHABARE, HIND. *Ficus caricoides*.

KHABAZE, also Anjil, ARAB. *Malva sylvestris*.

KHABBAL also Khabbar, HIND. *Cynodon dactylon* : moti khabbal, is *Digitaria sanguinalis*.

KHADIM.

KHABIUN, HIND. Rheum emodi.

KHA-BOUNG, BUAN. *Strychnos nux vomica*. A small wood, but as strong as oak. The fruit is used for rubbing on buffaloes to keep off flies.

KHABUR, a river which separates the pashaliks of Baghdad and Orfa.

KHA-CHAN-PA, TIBET. L'hasa. See Kha-chan-yul, Ladak.

KHA-CHAN-YUL, TIB. Snow-land or Ladak, is the A-Khassa regio of Ptolemy. It is supposed by Major Cunningham to be the Kie-Chha of the Chinese pilgrim Fa-Hian. Ladak is still known as Kha-pa-chan abounding in snow, or Kha-Chan or snow-land, and the people as Kha-pa-Chan-pa or Kha-Chan-pa, men of the snowy land.—*Cunningham's Ladak*.

KHACHER, see Rajput.

KHAD. The Shirwani occupy exclusively Khad and Kishna, and reside with other tribes in Shall and Mastung. They take their name from their belief that they came from Sherwan on the Caspian. See Kelat.

KHAD, HIND. A precipitous hollow, or ravine.

KHADI, TAM., a kind of coarse cloth.

KHADIM, ARAB. Servant; and, in Arabia, a term applied to the servile races, and thereby denoting that this race is politically and socially inferior to the native Arab. They are only to be found in Yemen in the same light as in fact, in that part of the country which included the dominions proper of the ancient Himyarite Tobba. Physically, they differ considerably from the Arabs, and bear a resemblance to the races which inhabit the African coast. They have smooth hair, with a very dark complexion; their nose is aquiline; their lips thick; their stature is greater than that of the Arab, the latter are thin and angular, the former rounded with a predisposition to obesity. They are considered in Yemen in the same light as are the Pariah of India. They are not admitted to eat with Arabs, nor can a Khadim marry an Arab woman. They are condemned to the most servile or ignominious occupations, such as musicians, blacksmiths, public criers, &c.; and their women have usually a lower stamp of character than the men; considerable numbers flock to Aden. Their origin is involved in obscurity. It has been suggested that they are the remnant of the ancient Himyarites, or the descendants of the Persian conquerors of Yemen, but the probability is that both these suppositions are erroneous and that the legend related to M. l'Arnaud, but which he discredits, is more

KHAGIN.

nearly in approach to the truth; it is as follows:—"When the Arabs succeeded in shaking off the Abyssinian yoke (which they did with the assistance of the Persians), a number of Ethiopian families were scattered over the country. The Arabs, in order to perpetuate the remembrance of their victory, condemned them to the condition of serfs. Their chief men were subjected to a more infamous degradation,—they became barbers from father to son."—*D'Arnaud's les Akhdâm de l'Yemen in Playfair's Aden*.

KHADIM, a servant of a tomb or mosque. Khadima, a woman-servant.

KHADIR, HIND. In the Panjab and Cis-Sutlej, low land, more or less subject to overflow of rivers, &c.

KHADIRA, also Khadiramu, SANS., TEL. *Acacia catechu*, Willd.

KHADRI, HIND. *Ribes rubrum*.

KHAF. Between Toorkish and Herat, and south of the road which leads from Meshid to that city, is the district of Khaf. It is a miserable tract, with a climate very uncongenial from high winds. It has been nearly depopulated by the Toorkman. The east Iranians are (a) the Segestani or Khafi;—(b) Char Aimak: (c) Tajik and Sart, each of which counts many sub-divisions. The principal number of the Segestan people occupy Khaf and its neighbourhood Buy, Tebbes, and Birjan. The people of Khorassan are greatly intermixed with Turko-Tartar elements. The language of modern Iran is laden with Arabic and Turkish words: but in the east, the language is much like that in which Ferdusi wrote his poem free from words of Arabic origin.

KHAGAN, see Kaghan, Punjab.

KHAGARWAL, HIND. *Momordica echinata*, also *Xanthium strumarium*.

KHAGESHWARU, SANS. Compounded of khaga a bird, and éshwara, greatness.

KHAGKHAN. The glen of Khagkhan, being often, only the rocky bed of the Nynsookh river, bounded on either side by precipitous mountains, does not deserve the name of a valley. It is a strong military position. The syed chiefs of Khagkhan were foremost among the supporters of Syed Ahmed, who met his death at Balakote, the outlet of the glen, opposing his hundreds of rude mountaineers to the bayonets of thousands of Sikh soldiers under Maharaja (then Kour) Shere Sing. The defile projects outwards in a north-easterly direction to the confines of Husorah and Chilas, whence the Nynsookh river takes its source.—*Rec. G. of India*, No. ii. See Koghan.

KHAGIN, HIND. *Clitorea ternatea*, Linn.

KHAGURA, BEN. A reed, the *Saccharum spontaneum*.

KHAIBAR, see Khyber.

KHAILNI, also Khillaoni, HIND. Toys.

KHAIM, or Phaldu, HIND. *Nauclea parvifolia*.

KHAIR, HIND., also Khaira and Khairaghach, BENG. *Acacia catechu*, Willd.; Khair-ka-gond, is the gun.

KHAIR POSH, HIND. *Villarsia nymphoides*; Gul khair, HIND., is *Lavatera cachemiriana*; and Gul Khaira, is *Althæa rosea*.

KHAISA GHAR, or the Takht-i-Suliman, is seen to the west of Dera. It is a magnificent hill, famed in traditional lore as the spot on which the ark rested, and for being the parent seat of the Affghan races. Its habitable parts are occupied by the Shirani, a lawless tribe, who also hold the inferior hills between it and the plains. They have for neighbours, the Mikrani, their colleagues in marauding expeditions, and of equally infamous reputation.—*Masson's Journeys*, Vol. i, p. 47.

KHAI YAH, BURM. A tree of Tenasserim, maximum girth $2\frac{1}{2}$ cubits, maximum length 22 feet. Scarce all over the province. Wood tolerably good, when seasoned it floats in water, it is very scarce.—*Captain Dance*.

KHAJAH, in Persian, signifies a bard, a teacher, and a merchant; it is sometimes prefixed to an individual's name, as the English word, Master, or is addressed to a person, as we should say, sir. It is the "Coja" of the "Arabian Nights." The Persian term Khajah, has not been much introduced into the Urdu or Hindustani language of India, and it is now, in India, only used as a prefix to the names of certain mahomedan saints and under the pronunciation of Khojah to all eunuchs.

KHAJAH, is a term applied, as a titular appellation to a small tribe of strangers settled in Sind, principally at Karachi, where there are about 300 families, who say that they emigrated from Persia. They are a sect of Ismaili mahomedans, are therefore heterodox shiâhs,—for, while the Ismaili believes only in seven Imam, the Khajah continues the line down to the present day, and in 1861 Aga Khan, who was a pensioner of the British Government, at Bombay, was then their Imam. They reject Abu Bakar, Umr and Usman, and reverence Ali, Hassan, Hussein, Zain ul Abidin, Mahomed-i-Baker and Imam Jafar-i-sadiq. They do not worship in a mosque but in a Kano or house prepared for the occasion. They probably fled from Persia, when Hulugu treated the Ismaili sect with such severity. They are in general illiterate, but have invented a written character for themselves, in which they have transcribed

the Koran. Sir Erskine Perry describes "the Kojah as a race in western India, who appear to have originally come from Sind or Cutch, and who by their own traditions, which are probably correct, were converted from hindooism about 400 years ago by a Pir named Sudr Din. Although they call themselves mahomedans, they evidently know but little of their prophet and of the Koran, and their chief reverence in the year 1850, is reserved for Aga Khan, a Persian nobleman whom they believe to be a descendant of the Pir who converted them to Islam." When reading this, however, it must be remembered that the shiâh branch of the mahomedan creed, when ever settled amongst anti-religionists, always hold as a tenet, and rigidly adhere to the practice called Takeyyah, i. e., the systematic concealment of everything that concerns their faith, history, customs, and, in a word, any peculiarities the disclosure of which might be attended with unpleasant consequences.—*Richard F. Burton's Sindh*, p. 412; *Bird's Eye Review*.

KHAJAH. The rulers of eastern Turkestan have always been mahomedan from the time of Taghalak Timur, who was, we are told, the first mahomedan sovereign of Kashgar of the lineage of Chinghis. Buddhism indeed was found still prevalent in the cities of Turfan and Kamil at the time of the embassy of Shah Rukh in 1419, and probably did not become extinct much before the end of the century. But, in the western states, mahomedanism seems to have been universal from an earlier date and maintained with fanatical zeal. Saintly teachers and workers of miracles, claiming descent from Mahomed, and known as Khaja or Khojah, acquired great influence, and the secretaries attached to the chiefs of these, divided the people into rival factions, whose mutual hostility eventually led to the subjugation of the whole country. For, late in the seventeenth century, Khojah Appak, the leader of one of those parties called the White Mountain, (having been expelled from Kashgar by Ismail Khan, the chief of that state, who was a zealous supporter of the opposite party or Black Mountain) sought the aid of Galdan Khan, sovereign of the Eleuth or Kalnak of Dzungaria. Taking the occasion so afforded, that chief in 1678 invaded the states south of the Thian Shan, carried off the khan of Kashgar and his family, and established the Khajah of the White Mountain over the country in authority subordinate to his own. Great discords for many years succeeded, sometimes one, sometimes another, being uppermost, but some supremacy always continuing to be exercised by the khans of Dzungaria. In

KHAJOUN.

1757 the latter country was conquered by the Chinese, who, in the following year, making a tool of the White party which was then in opposition, succeeded in bringing the states of Turkestan also under their rule.—*Yule Cathay*, Vol. ii, p. 357.

KHAJAH BAH-UD-DIN, of Nakshband, instituted a class of mahomedan mendicants, who go about with a lighted lamp in one hand and sing verses in honour of their prophet. They are called Naksh-bandi faqir.—*Wils.*

KHAJAH JAHAN, was the title of a Wazir of Delhi, and Ibn Batuta, mentions as an instance of the arrogance of Nasir-ud-din, a new sultan of Malabar, that he ordered his Wazir and admiral to take the title of Khajah Jahan.

KHAJA BANDA NUWAZ, the name of a saint.
